"One of the most important contributions ever made to our political history . . . Among the *chefs-d'œuvre* of philosophical history. . . . We must regard the author's opulence of historical learning as not the least admirable feature of his work. The numerous and pertinent notes that crowd his pages testify not only to his industry, but to his earnest desire for accuracy. . . . His narrative at certain stages of his work is as fascinating as a romance. The spirit of the work is deeply patriotic."—*The Literary World.*

"I am surprised, not to say more, at the vast extent of careful and thorough investigation and study evinced in almost every page which I have read; and I am sure it will introduce a new and happy era in the study of our national constitution from the point of nationality and unity rather than of separation and disintegration."—*Hon. Isaac F. Redfield.*

HISTORY OF THE SIEGE OF

Boston, and of the Battles of Lexington, Concord, and Bunker Hill. Also, an Account of the Bunker Hill Monument. By Richard Frothingham. With Maps and Plates. Fourth Edition. 8vo, cloth, $3 50.

Opinions on a former Edition.

"Excels anything that has appeared on insulated points of our history. It is the best of our historic monographs that I have seen. The author has been patient in research, very successful, and most impartial—has brought to excellent material a sound and healthy judgment."—*Bancroft*, 1850.

"It remains the most valuable contribution to Massachusetts history in our day."—*Bancroft*, 1858.

"The most complete and satisfactory work on the subject that I had met with. Full of interest to the American reader."—*Washington Irving.*

"The best text-book I know of the Revolutionary period—a most readable book, and one which gives a far wider picture of the period than the name would imply."—*Col. T. W. Higginson*, 1872.

LIFE AND TIMES OF JOSEPH

Warren By Richard Frothingham. 8vo, cloth, $3 50. Also,

RAY'S CONTRIBUTIONS TO MENTAL PATHOLOGY.

THE WEEK IN TRADE AND FINANCE.

MARCH 17, 1873.

ADVICES from Washington state that the currency has again been inflated to the extent of $1,059,000 up to Tuesday last; later in the week, $50,000 of this amount had been withdrawn. This further increase of the currency has been semi-officially explained by the Treasury authorities by the fact that the appropriation bills, passed by Congress, made immediate demand for a greater amount than could be met by the Treasury. The increased pay voted to themselves by members of Congress, before they left for their respective homes, took from the Treasury about $1,500,000 at one fell swoop.

The money market has remained stringent; the range of rates during the week being $\frac{1}{64}$ to $\frac{1}{16}$ in addition to the legal interest. The market for commercial paper continues to be affected by the monetary stringency upon call loans; the best names, having a short time to run, are quoted 9 to 10, and other paper of an inferior grade, but very good, sold as high as 15. An improvement in the condition of the money market can hardly be expected before the 15th of April, as considerable amounts of currency will be needed in Pennsylvania and other States during this interval.

The bank statement for the week shows no material change, the loss in legal tenders and specie being nearly offset by corresponding decrease of liabilities in the shape of deposits and circulation. The following are the statements for the past two weeks:

	March 8	March 15.	Differences.
Loans	$280,351,300	$278,028,600	Dec. $2,322,700
Specie	17,149,600	16,946,700	Dec. 202,900
Circulation	27,801,200	27,610,400	Dec. 190,800
Deposits	199,508,700	196,095,400	Dec. 3,413,300
Legal tenders	39,473,000	38,715,500	Dec. 757,500

The following shows the relation between the total reserve and the total liabilities:

	March 8.	March 15.	Differences.
Specie	$17,149,600	$16,946,700	Dec. $202,900
Legal tenders	39,473,000	38,715,500	Dec. 757,500
Total reserve	$56,622,600	$55,662,200	Dec. $960,400
Circulation	27,801,200	27,610,400	Dec. 190,800
Deposits	199,508,700	196,095,400	Dec. 3,413,300
Total liabilities	$227,309,900	$223,705,800	Dec. $3,604,100
25 per cent. reserve	56,827,475	55,926,450	
Deficiency in legal reserve	204,875	264,250	

The following table shows the respective condition of the National and State banks in the Clearing House:

	National.	State.	Total.
Loans	$240,145,200	$37,883,400	$278,028,600
Specie	15,546,600	1,400,100	16,946,700
Legal Tenders	34,915,500	3,800,000	38,715,500
Net Deposits	170,079,800	26,015,600	196,095,400
Circulation	27,567,400	43,000	27,610,400

The stock market has been dull, and the dealings to any great extent confined to a few speculative favorites. As we have said before, prices are too high and money is too tight to tempt the general public to enter the vortex of speculation. "Those who are outside don't want to get in, and those who are in can't get out," as the late James Fisk, jr., replied to a committee soliciting subscriptions towards fencing a cemetery in his native town. A decline has taken place in Boston, Hartford & Erie, the ostensible reason being the lawsuit going on between the bondholders and the company; probably the real reason is that some 40,000 shares of the stock were thrown upon the market on Thursday and Friday.

Rock Island advanced to 117⅜ on Tuesday, and the old reliable point, that the Pennsylvania Railroad Company was seeking to secure a controlling amount of the stock, was freely used to induce purchases at the advanced price. At the close of the week the price dropped to 114½, closing at 115¼.

The Milwaukee & St. Paul stocks have shown rather more activity, and prices have advanced to 56 for the common, and 76¼ for the preferred. The better feeling in these stocks is due to a proposition recently submitted to the managements of the Milwaukee & St. Paul and the Chicago & Northwestern Railroad Companies, to put an end to the disastrous fight which for some time has been going on between the two roads in their competition for business.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending March 15, 1873:

	Monday.		Tuesday.		Wed'day.		Thursday		Friday.		Saturday.		Sales Sh's
N. Y. C. & H. R.	104⅞	106¼	105½	106¼	105¼	106	105	105⅝	105¼	10?½	101⅜	105⅝	98,400
Lake Shore	94⅜	95⅜	94⅜	95¼	94⅝	95⅜	95¼	96	95¼	96¼	94¼	95½	162,700

Pacific Mail	56⅜	60¼	60	62	58	60½	56½	58¼	56⅜	57½	56⅜	57⅜	269,300

The following is a synopsis of the report of the Pennsylvania Railroad Company at its annual meeting of stockholders on Tuesday. The receipts for the year from the roads owned or operated by the Company, east of Pittsburg, were thus reported:

From the Pennsylvania Railroad	$22,012,000
Philadelphia	3,984,000
New Jersey Roads and Canal	10,452,000
Total	$36,448,000
Operating expenses on above	25,431,000
Net income	$11,017,000
The lines west of Pittsburg operated by the Pennsylvania Company paid a net dividend upon the stock of this Company owned by the Pennsylvania Railroad Company of	240,000
Net income	$11,257,000

The Company paid during the year:

10 per cent. on capital and taxes	$4,711,000
Interest and lease charges	4,171,000
Balance to surplus account	2,375,000
Total	$11,257,000

The Company contemplates laying two more tracks between Philadelphia and Pittsburg.

The Government bond market has been steady and dull, with the market at the close a fraction "off" from the highest quotations of the week. The Treasury purchased $500,000 5-20's on Wednesday at prices ranging from 113.36 to 113.46. $2,342,100 bonds were offered at 114.94 and under, gold being 115⅛ at noon. The entire amount offered was under par.

The chief feature in State bonds has been the activity and buoyancy of Tennessees, the prices since our last having risen to 85. Business in railroad bonds has been very small. The different Union Pacific bonds, particularly the Incomes, are stronger, and there is a more settled feeling in them.

The gold "clique" took advantage of the generally prevalent feeling that a further issue of greenbacks would be made, to sell out a large part of their holdings. It is not at all probable that all the gold held by the "clique" was sold, and a sharp upward movement may be engineered at any time for the purpose of marketing the balance. The Treasury sale of $1,500,000 gold on Thursday was made at 114.92 to 115.07, the price of gold at noon in the open market being 115⅛. The price during the week has ranged between 114¾ and 115¾; the closing price on Saturday was 115.

OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, March 19, 1873.

☞ The SIX PER CENT. GOLD BONDS of the CHESAPEAKE AND OHIO RAILROAD Company, being secured by a First Mortgage on a COMPLETED Road, which is one of the GREAT EAST AND WEST TRUNK LINES, commanding a large through business, and which, from the immense Mineral, Agricultural, and other valuable resources of the country it traverses, is assured of a very remunerative local traffic, are among the most substantial and satisfactory investment securities in the market; and, at the present price, 87⅜ and accrued interest, yield a liberal rate of interest on their cost.

They are in denominations of $100, $500, and $1,000, coupon or registered; interest payable May and November; principal and interest in gold coin in New York.

We also keep on hand, and buy and sell at current market rates, the WESTERN PACIFIC SIX PER CENT. GOLD BONDS originally negotiated by us, and now quoted at the Stock Exchange, and widely known as favorite securities in all the principal money markets. Coupon Bonds of $1,000; interest payable January and July; principal and interest payable in gold in New York. Price to-day, 94¾ to 95.

We also buy and sell GOVERNMENT and CENTRAL PACIFIC BONDS, receive deposits, on which we allow interest, make collections, and do a general banking business.

FISK & HATCH.

MASS. INSTITUTE OF TECHnology. Entrance Examinations June 2 and 3, and Oct. 1 and 2. For Catalogue, recent entrance examination papers, or further information, apply to Prof. SAMUEL KNEELAND, Secretary, Boston, Mass.

WILLIAMS COLLEGE,
BERKSHIRE CO., MASS.

The departments are all under charge of permanent Professors.

More than $5,000 annually distributed among indigent students.

For Catalogues or other information, address the President,

P. A. CHADBOURNE.

March, 1873.

BURLINGTON COLLEGE, N. J.
Rt. Rev. W. H. Odenheimer, D.D., President.

The location is healthy and accessible. The course of study is complete and thorough. Students received at any time. Terms, $450 per annum. No extras. For admission apply to the Rector.

Rev. FRANCIS J. CLERC, D.D.

The Nation.

NEW YORK, THURSDAY, MARCH 27, 1873.

The Week.

SEVERAL Senators tried, and some successfully, to shirk the responsibility of confirming Casey for the Collectorship of New Orleans, but a quorum was obtained. Mr. West, the only Senator now sitting from Louisiana, subsequently tried to obtain a reconsideration, but failed by three votes. The appointment is considered a great scandal in Washington, in view of Casey's conduct in office, the formal condemnation of it by a Congressional Committee, and his relationship to the President (brother-in-law), and the Liberal Republicans point to it as a proof that the President looks on his re-election, not only as absolution with regard to past offences, but as a plenary indulgence with regard to future ones. It may be that he does, but they have themselves to thank for it. They deliberately made up the issue for the late campaign, and if it did not contain the real points in the controversy, there is nobody else to blame. According to all appearance, the civil-service reform movement is gone by the board, though we believe the rules are enforced in the New York Custom-house. The "suspensions" of them everywhere else are so numerous as to make the "reform" a mockery and a snare. It reminds one of the Irishman who, having been invited by some wags to take a ride in a sedan-chair which had neither seat nor bottom, after trotting along inside for some distance, was asked by the bearers how he liked it, and replied that "if it wasn't for the name o' the thing, he'd as soon walk."

Quite as strong examples, or, at all events, strong enough examples of the kind of slap in the face which some of the appointments have given to all persons who believe in public services for public money, and public services by men of good character and repute, are furnished respectively by the appointment of the Rev. Dr. Newman and Mr. Holden. North Carolinians are to-day assigning as their reason for repudiating a part of their State debt, that it was imposed upon them by a railroad ring, of which then Governor Holden was one, and for being in this ring was impeached, convicted, and made incapable of holding any office. It may be imagined with what equanimity North Carolina legislators look on the appointment of Mr. Holden to the postmastership of their capital city. One would say that even if there were no equally honest and competent Republican to take office under the "civil-service rules," the comity which is supposed to exist between the National and State Governments might have dictated a better appointment than that. The other case to which we refer is the roving commission of Rev. Dr. Newman of Washington, the same who went to Utah and gave those Philistines an advantage. He is to "inspect consuls" in various quarters of the world, his means and abilities in the way of knowledge of business, and knowledge of languages, and knowledge of public law being all matters of conjecture. A possible justification that may be urged is that the relations of some of our consuls and countrymen to the heathen may need investigation, and the cause of religion be advanced by the round trip. Many Americans would not begrudge the six thousand a year in gold for the round trip should this be the case. But the fact is the presumption in the matter of appointments that have an ill look is not now in favor of the Administration. It is a very hard thing to say, and also it is an excessively trite thing; but there it is.

Latest returns from New Hampshire make the Congressional delegation stand two Democrats to one Republican, Mr. Bell, Democrat, being now understood to be elected by a majority of four votes. But this kind of news this year interests people in general about as much as next week's election in Connecticut does, and that attracts attention only so far as General Hawley is concerned. More interesting is the news concerning two of Mr. Bell's colleagues in the last Congress. While the election was pending, the "back-pay steal" was effected, and all three of the New Hampshire members stood out against it like "men of mould"; and, when they were on the stump, a week afterward, demanded credit and votes for their virtue. The particular attention of the Democratic press is requested to this fact, as it has a bearing on the question of how soon the people are going to take into favor the honest political organization which it represents, and also has a bearing on the question of whether the Democracy had better provide itself with another platform than its opponent's shortcomings. Of these gentlemen, one, Mr. Parker, a Democrat, was re-elected, and one, Mr. Hibbard, also a Democrat, was not, whereupon one of them, being dropped by his constituents, sent on for the wicked back-pay; and the other, being made safe for two years more in Congress, sent on for his back-pay, too. Anything is credible in these days—and, let us add, respecting such matters as these; for, thank Heaven, the political life is not the whole life of a country nor its better life—but if it were not that all things are credible, this would not be believed; and we may hope to hear the report contradicted by the men concerned. Yet, look at the hardened effrontery of Mr. Wilson of Indiana, who tells his constituency that had not the salaries clause been swallowed, the General Appropriation Bill would have failed. It only remains for the next Congress to pass a bill rescinding this salaries clause, and making it prospective, so as to take effect on the salaries of their successors in 1876. That would disgrace one more Congress, and would be one way of celebrating the anniversary of the Declaration of Independence.

In the *Nation* for December 12 of last year, we gave an account of the "Erie Reform" movement, headed by General Sickles, which ended in Gould's retirement from the directory. A committee of the Legislature is now engaged in investigating the whole subject, and has thrown more light on it. There are two or three names involved in the investigation which have been rather prominently before the public in connection with Erie, and as they are public property we propose to say a few words about them. In the first place, General Sickles, who was at the time Minister to Spain, was granted leave of absence to come over here and reform Erie. He was employed by Bischoffsheim & Goldschmidt. Bischoffsheim was at one time one of the members of the London Committee formed for the protection of the English stockholders, but he had another interest antagonistic to that of Erie reform, which lay in the possession of a quantity of the securities of the Atlantic and Great Western Road, a worthless concern, with an enormous debt, which the Bischoffsheim & Goldschmidt party wanted to saddle on Erie. As soon as this antagonism of interest became evident Bischoffsheim resigned (apparently being requested to do so) from the London Committee, and henceforward his party acted for itself. It was they who employed General Sickles, who came to this country. There were now two parties, both interested in getting control of Erie, both calling themselves reformers, both representing foreign stocks—one the Bischoffsheim-Goldschmidt-Atlantic-and-Great-Western-Sickles party; the other, that of the London Committee, generally known as the Heath and Raphael party, so-called after another London firm. The Heath and Raphael party were represented in this country by an agent named Swan, who retained as counsel the firm of Butler, Evarts, Southmayd & Choate.

As soon as the Heath and Raphael party began to move in the matter, they found that, under the laws of New York, no proceedings could be taken to remove the Gould directory unless by way of suit brought by the Attorney-General, and at first they were unable to

get such a suit brought, because the Attorney-General in power was on the Gould side. General F. C. Barlow, having been elected to the office of Attorney-General on the Reform ticket, undertook, at the request of the Heath and Raphael party, to bring such a suit. At the same time, he was applied to for the same purpose by the Sickles party, and both parties having the same immediate object in view, he agreed to act for both. The city judiciary being at that time in league with Gould, it was thought necessary to bring the suit at Albany, and to retain as counsel the lawyers there who had been most familiar with the previous Erie litigation. This was in December, 1871. One of the lawyers it was decided to retain was Mr. Henry Smith, who received a fee of $1,500. He expressed scruples as to taking this retainer, on the ground that he was probably going to be Speaker of the Assembly, and legislation might be needed to carry out the designs of the reformers. He was assured, however, that no legislation would probably be needed, and he took the retainer.

The money to pay these retainers came from Sickles, who tried to get General Barlow to take a fee himself; this General Barlow declined to do, although there seems to have been very good ground for holding that he might fairly have done it. Meantime the Sickles party had discovered what they had been probably trying pretty hard to discover all along, that it was a great deal easier to buy up Gould, and a number of the other directors, than it was to go through tedious proceedings in courts of law, and they found a convenient tool in Mr. F. A. Lane. By the payment of between seven and eight hundred thousand dollars they bought the resignations of a number of the directors, and then Sickles had his celebrated interview with Gould which resulted in the latter's "unconditional surrender." Gould got from Sickles a release of all claims on the part of the road, Sickles concealing from the new directors headed by Mr. S. L. M. Barlow that he had given any such release, and concealing from Gould the fact that he had no authority to give such release. With all these negotiations, and with this expenditure of money, whether for the purpose of influencing legislation or bribing directors, General Barlow had nothing to do, except in so far as receiving money from Sickles to retain counsel at Albany, and this money he has accounted for. In fact, he knew nothing of the Sickles *coup d'état*, which was carried on entirely in the dark, until it was all over. Throughout the whole case General Barlow's part has been that of a singularly honest and scrupulous man. As to Mr. Smith, we have on the one hand the statement of Mr. Southmayd and General Barlow, that they determined to retain him without any reference to the speakership, and without the slightest idea of influencing legislation, and on the other that of the New York *Tribune*, which says that it knows their motives were corrupt; though how it knows this, or why it should suppose that the paltry sum of $1,500 is enough to purchase the control of the body that was then sitting at Albany, we cannot understand. There is one thing, by the way, that we should like the *Tribune* to explain: why, if the Sickles Erie reform movement was in 1871, as appears from its columns, a grand moral effort, it is now in 1873, as appears from its columns also, a gigantic fraud.

Foster was executed on Friday, the last appointed day, the efforts to save him having been continued to the end. The latest consisted in a letter to the Governor from seven of the jurymen, declaring that they would not have found Foster guilty of murder in the first degree if they had not believed that a recommendation to mercy would save his life; that is, in plain English, they committed wilful perjury under a misapprehension as to the consequences of their act, and they call the confession of it "washing their hands of Foster's blood," which is a very fine name for it, but does not alter its character, particularly as it comes two years after the offence. Mr. Edwards Pierrepont made himself the transmitter of this appeal to the Governor, and supported it with a letter of his own—a proceeding, we think, really to be regretted on the part of so prominent a lawyer. Of course, if this revision of their verdicts by juries were permitted, few verdicts would stand, as Governor Dix pointed out in his letter to Dr. Tyng. Every criminal who had money at command would find the means of persuading some of the jurors to declare that they never would have agreed if they had not supposed, etc., etc., and as long as unanimity is required by law, the purchase of such a declaration from even one juror would be sufficient to throw the responsibility of not granting a pardon on the Governor. We would ask the Bar Association, apropos of this affair, whether they do not owe it to the public to put some formal limit to the part which members of the bar may play in procuring pardons. Lawyers are officers of the courts, and nothing can well be thought of better calculated to bring the administration of justice into contempt with the ignorant and unthinking than the public criticism or revision of the decisions of the highest tribunals, at the request of convicts, by members of the bar in high standing, or their public approval of attempts by jurors to upset their own verdicts, by appeals addressed to the public, which no judge would listen to. Counsel of eminence have heavy responsibilities to the community, and ought to consider the effect of their words on the general welfare as well as on the particular case in which their sympathies are enlisted.

General Dix is entitled to the warmest gratitude of the public for the firmness and courage which he displayed in this affair. He was decried in the canvass by the Greeleyites, on account of his advanced age; but it must be admitted he "puts his foot down" in a way which very few of the legs of younger politicians would bear. His letter to Dr. Tyng was a model of persuasive, dignified, and solemn explanation, a kind of paper which we have not seen from the hands of any man in public life for many a day. He has had, during the painful ordeal to which he has been subjected—an ordeal which domestic bereavement must have made all the harder—the sympathy of every thinking person in the community. But the responsibility which has been put on him is one which no one man ought to be asked to bear, and the pardoning power ought either to be committed to a council, if it is to be discretionary, or to a court, if it is to be regulated by rules. The President, by the way, has just pardoned a foul and bloody murderer, named O'Brien, in Washington, on the prayer of the Catholic clergy. No mere human eye could detect a palliating feature in the man's case, but he is safe, and the question is now raised again, whether the President has the power to commute, that is, whether his pardons are not absolute. We would warn the Protestant clergy that in the pardon business the priests will beat them utterly. Catholics commit a very respectable percentage of the national crimes, and if criminals are to be let off on account of their early piety or the piety of their relatives, we venture to predict that enough Catholic saints will turn up in the jails of our country to recall the days of Diocletian.

We are sorry to have to recall what we said a few weeks ago about the success of the Emma mine. The monthly dividends have stopped, and it now appears that a portion of them had been paid out of the capital. In fact, although there is no doubt that there is much silver in the mine, the representations on which it was sold were fraudulent. The concern is therefore a swindle—one more of the things which are blackening the American name in the markets of Europe, and aggravated greatly by General Schenck's share in it, which is that of what is, in London stock-jobbing parlance, called a "guinea-pig"—that is, a man with a title or official position, who lends his name to speculators to enable them to get up a company and "float" the stock. The stockholders are of course up in arms, and threatening vengeance.

A singular illustration of the amount of organization, skill, education, and capital which nowadays can be enlisted in the service of profitable crime is given by the recent forgery frauds on the Bank of England. The Bank of England takes the utmost precautions

against fraud, requiring an introduction from one of the directors before it will open a "discount account" even with a depositor. But there is a branch bank in Burlington Gardens, in the West End of London, for small local business, in which the regulations are not so strict, and to this bank the forgers went. One of the gang opened with the branch bank an ordinary deposit account, depositing a sufficient cash balance to make the thing look natural. Then for months he drew checks and made deposits, like any other customer of the bank, always keeping his balance at a good figure. After a time he deposited some bills. The bills were perfectly good. Still he moved with great caution, and continued his transactions until he acquired a good reputation with the bank. At length, the moment having come, a great quantity of forged bills—the signatures, acceptances, and endorsements being all forged—were offered, and the bills were discounted without hesitation, the gang receiving from the bank £100,000. The bills were drawn with the greatest ingenuity, due care being taken to imitate the kind of paper used by the firms whose names were signed, as well as the printed forms on the blanks. The paper was at three months, and, but for a singular oversight, the forgers might have gone off with their booty and got rid of it long before any suspicion attached to them. On two of the bills the acceptances were not dated, and on one of them something was wrong about a printed form. Enquiry was at once made, and the forgery discovered. The gang fled; their plunder, invested in United States bonds, was sent to this city, and has been seized; one of them has been arrested in England, one in Havana, and one in New York; and it seems as if the bank ought now to get back as much of their money as the lawyers, sheriffs, deputy-sheriffs, detectives, informers, telegraph companies, and other lovers of justice may not need for themselves.

The moral influence of the Washington Treaty is, we are sorry to say, gradually but surely disappearing. The first blow at it was struck by the Indirect Claims, which revived the old ill-feeling; then the Butler proposal with regard to the distribution of the damages has created the impression in England that the British have been overreached in the amount of the award; and now finally comes a move in Parliament, promoted by Mr. Gathorne Hardy, to do away with the force of the Three Rules by moving the Queen, when bringing them to the notice of other powers and inviting them to accede to them, as she is by the Treaty bound to do, "to express her dissent from the principles set forth by the Tribunal as the basis of their award—principles which, by unduly enlarging the rights of belligerent powers against neutrals, would discourage in future the observance of neutrality by states desirous of peace." We have more than once explained in these columns the peculiarly onerous character of these principles. Their force and bearing, and the possible consequences if carried into practice, have been ably described by Mr. J. N. Pomeroy, in the January number of the *Law Review*. The doctrine which the Tribunal broadly laid down, which Mr. Cushing and Mr. Evarts urged—that international law knows nothing of constitutional checks and limitations, and measures "due diligence" not by the lawful power of the neutral, but by the magnitude of the risk to the belligerent—is of course most momentous for all constitutional neutrals, and Great Britain, there is now little doubt, will refuse to be bound by it. We suspect the United States will also, when the emergency comes.

There is no foreign news of much importance. Mr. Gladstone has gone back into power, but with nothing new in his programme, except probably the abandonment of the Irish University Bill. The *Economist* offers him some consolation on this point, which is really valuable, viz., that there is no use in mourning over failure to satisfy the Irish Catholics in the matter of education, for the simple reason that they cannot be satisfied. To endow a Catholic University, which is what the bishops ask for, would be to set the state to teaching their religion, just after it has decided in the case of the English Universities that it will not teach its own religion, so that there is no chance even of a compromise. Mr. Gladstone's speech on returning to office contained nothing of much moment, and Mr. Disraeli gave no hint of a desire to do anything Mr. Gladstone was not doing and had not done. The South Wales strike, and the growing price of iron, are still the most prominent topics of thought and conversation, and the most serious.

The *Tribune* of March 21, in some comments on "the re-entry of Gladstone," treats the refusal of Disraeli to form a ministry, or to dissolve Parliament and appeal to the country, and his confession that he had no chance of success under any circumstances, as not only a violation of the rules of the party game, as played in England, but as a "serious injury to the unwritten Constitution of England," and a "precedent of the greatest importance in the development of democratic government in England," as bringing it nearer the model of an elective democracy, "choosing its rulers for fixed terms with limited powers." The fact is, that what has occurred in England within the last few days is neither unprecedented nor as important as it seems. In the first place, it is nothing new for the opposition to decline all responsibility whatever. The Whigs asserted their right to do this to the extent of seceding from the House of Commons in November, 1776, as a protest against the American War. They did this again in 1798, on the questions arising out of the French Revolution. Nor is it new for the opposition to defeat the ministry on a particular measure, and for the ministry to remain in power, accept the defeat, and change its policy. Lord John Russell defeated the government of the Duke of Wellington in 1828 on the Corporation and Test Acts; the Duke took his beating calmly, staid in office, and let the bill pass. Again, in 1845, Sir Robert Peel resigned on finding that he could not carry his party with him in the repeal of the Corn Laws, and Lord John Russell having failed to form a ministry, Sir Robert went back into office, and did repeal them in defiance of his own followers. In 1852, when the Russell ministry was overthrown, Lord Derby took office, but without a policy of any kind—that is, he was in exactly the position in which Mr. Disraeli is now, and was defeated at the elections, and had to resign; and the judgment of most English politicians and publicists was, and is, that he ought, under the circumstances, to have declined to form a Cabinet. "In the interest of his party," says Sir Erskine May, "he would have done well to decline the hopeless enterprise which had fallen to his lot," as Disraeli has done.

The Spanish Cortes has made a good beginning by abolishing slavery in Porto Rico, unanimously and by acclamation. The slaves, who number in all about 50,000, are emancipated at once, but have to serve somebody for three years in some sort of apprenticeship apparently, and in five years are to become Spanish citizens. The owners are to be indemnified, but the amount will be "charged," the cable says, "to the Porto Rico budget," whatever that may mean. "Charging" is easy enough; the important question is where to get the money. The other Spanish news is rather dismal. The abolition of the conscription has, it is now admitted, put the finishing touch to the disorganization of the army. Soldiers are mutinying or deserting in every direction, and the Carlists make headway slowly, but still they make it. To crown all, it is announced that "foreigners" have begun to arrive, with the view of "establishing the Commune" in Madrid. The Madrid Commune will have the advantage over its Parisian prototype of not having much to fear from soldiers. It is a sign of the times that so shrewd a man as Marshal Serrano has sent his family to France.

"GOOD MEN" AND CITY GOVERNMENT.

THE latest attempt to provide New York with a charter may not appear on the surface to have much interest for persons who do not live in the city, and yet it really is full of importance not only for all dwellers in cities, but for all citizens of the United States, because it affords a striking illustration of the change in the relations of the Federal to the State governments which the war has brought about, and which it must be the first aim of all true reform to undo. We tried to explain, a fortnight ago, how it was that the Federal officials in this city had come to represent the Republican party in it, and to be entrusted by the country Republicans, as well as by the Washington Government, with the charge of the party affairs here. In the early days of the party, however, the country majority tried honestly to do what seemed best for city interests, and listened respectfully to the advice of its leading city men. The various commissions which were organized by Albany legislation before the war did really seem, to a large number of our leading citizens, the best mode of securing life and property against the action of demagogues like Fernando Wood, who within the ten years after 1846 began to rise to the surface. That legislation did not always harmonize with the theory of popular government embodied in the State constitution; but it was an honest attempt to deal with evils which the framers of the State constitution had not foreseen, and was in the main approved of by the best men of the Republican party, here as well as elsewhere. It was only after the election of Mr. Lincoln and the passage of the Custom-house into Republican hands, that the very lowest grade of Republican politicians began to take charge of municipal affairs. During the war their minds, as well as those of other people, were filled with more serious matters, but after 1865 they gave themselves up completely to what they called "the reorganization of the party" on Manhattan Island, though it was not until after the election of General Grant that they attained the summit of their desires by securing the appointment of their cherished chief and leader, Mr. Tom Murphy, to the Collectorship. They were eclipsed for a year or two by the appearance of Tweed on the horizon, and compelled to "work" under him or in unison with him, and were a good deal crushed by his overthrow, but since the Reform storm blew over, they have been gradually reasserting their sway, and have finally gone to the length of drawing a charter for the city, and nearly forcing it through the Legislature.

At this writing it seems likely to pass the Senate, considerably altered it is true, but with its most objectionable feature—the exclusion of the Mayor from power and responsibility—retained, to all intents and purposes. Its promoters first tried to give the power of nomination to the Aldermen, leaving the Mayor to confirm if he pleased; and if he did not please, forcing him to take his seat with the Aldermen and exercise the valuable privilege of casting a single vote on the final decision by that body. The strong opposition they met with in the Senate forced them into a modification of this section, by which the Mayor got the nominating power; but if the Aldermen did not confirm within five days, the appointment was to go before another board composed of the Mayor and the Presidents of the Boards of Aldermen and Assistant Aldermen, in which, of course, the Mayor might and probably would be outvoted, or forced into a "compromise," whenever the Ring saw fit to call for one. Whether this scheme will be carried we do not know, but it appears pretty clear that the promoters of the Charter will offer no better terms. As it stands, it is condemned by all parties; even the Ring organ gives it up as a bad job. In weighing it, it ought to be remembered that for some weeks past it has been openly avowed that the object of the bill is to enable "the Republican party" to govern this city, and that the reason of it is "the distrust" felt by certain gentlemen of Mayor Havemeyer. Mr. Havemeyer has been an honored and useful citizen of New York for fifty years; it was his high personal character and the memory of his lifelong devotion to the best interests of the city, in and out of office, which caused men of all parties to vote for him last fall. Nobody "distrusts" him now that we know of except Messrs. Murphy, Gardner, Bliss, and Davenport, and a few dozen less-known men; and the persons we are asked to repose confidence in as genuine reformers, after the discovery of Mr. Havemeyer's treason, are——Messrs. Murphy, Gardner, Bliss, and Davenport.

Now it is to be hoped that Governor Dix, should the charter get through in this shape, will veto it, for reasons all of which do not appear at first glance, but which have for some weeks been present in the mind of nearly every thinking man in this city. We have arrived at a stage of badness in our municipal government which cannot last much longer without serious and it may be irretrievable injury to the city. Its growth and prosperity have, as we all know, been greatly retarded during the last ten years by the maladministration of its affairs. Fortunately for the country, though unfortunately for New Yorkers, it has no real monopoly of the business which has built it up. It got the start of Boston and Philadelphia and Baltimore at the beginning of the century in the means of communication with the West, and it has held the advantage which this gave it down to our day; but its hold on it is seriously shaken both by the opening of new lines of communication and by the shocking insecurity of property within its limits, and that it is not already lost is due largely to the strong and not unnatural expectation of property-holders that some radical change for the better will eventually take place. Under the Tweed Ring, a perceptible movement of capital and population to other places had already set in. It was stayed or arrested by the Reform movement, and it is of the last importance that it should not be set agoing once more by that greatest of all calamities—a widespread and settled conviction that even the great popular rising of 1871 had wrought no real change for the better. There is no despair like the despair which comes after we have done our very best and failed, because all share in it—the brave as well as the faint-hearted. To the question: If such a revolution as that of last year, brought about by unparalleled frauds, does not end in radical improvement, to what agency are we to look for it?—there is, therefore, absolutely no answer. It is essential that we get out of it some solid and substantial results—results visible to the carnal eye as well as to the eye of faith; and we say this while bearing in mind the reform which has been effected in the judiciary. But rejoicing over this is very like rejoicing over the forbearance of robbers who have plundered your house, in not taking your life. In congratulating ourselves on the overthrow of Tweed, we are sobered by the melancholy fact, that the State Senate has not to this day ventured to expel him or declare his seat vacant (though he has never occupied it) or hear any charges against him, for the very well-known reason that some of its members were his confederates and took his bribes, or, to use his own terse, homely phrase, because "if they touch him, somebody 'll get hurt."

Now, there are two essentials of any charter intended to turn over a new leaf in municipal politics and give us really a reformed government. One is, that the charter emanate from a respectable source, by which we mean a source which will command *general* confidence; the other is, that its machinery be of a kind to rouse public spirit, to make it seem to men of property and intelligence worth their while "to go to the polls" and give their attention to public affairs. The first of these is necessary in order to break up a tradition which is the cause of all our woes—namely, that the city government is the lawful spoil of whatever party wins in the State election, and that even the charter is simply an instrument for putting the victors in possession of their booty. Of course no charter formed on this theory can have the good of the city for its main object. The passage of every charter framed on it is now looked on by the mass of citizens as simply a redistribution of offices, in which they have no concern. They had begun to feel this even when Albany politicians were respectable men; they feel it tenfold more now that Albany politicians have become a bye-word for meanness, ignorance, and venality, and when they legislate in broad daylight under the guidance of paltry politicians sent up from this city. In old times they were seduced—if seduced—by men of ability and prominence; in our day they are

superintended at their work, and have their work cut out for them, by men who would not be entrusted by their fellow-citizens with the management of a successful beer-garden. Now it is hopeless, we believe all rational men admit, to get any charter to work unless the intelligent and influential portion of the community believe that it was made to work, and that they themselves can work it. This belief, and this only, will rouse and keep alive that general interest in municipal affairs without which they cannot be well administered. We cannot provide thieves to steal twenty millions every second year, so as to create a "revolution"; we must rely on the moral sense, and patriotism, and self-interest of ordinary men in ordinary times, attending day by day to their ordinary work. Such men, however, will not trouble their heads about any charter which emanates from a clique of politicians, and is avowedly intended to govern the city in the interest of one party. We have got far beyond the state of feeling in which that was possible. Ten such charters may be passed and no real change for the better will take place, and if we keep on passing them long enough we shall kill the city within the present century, and leave nothing but deserted streets and empty wharves for the aged Murphy and Davenport and Bliss to totter about in. The result of trying this system of party charters is simply that after one is passed by desperate efforts, the other party against which it is aimed goes vigorously to work either to overthrow it or to share in whatever "spoils" can be got out of it, and when it gets hold of the State legislature—as it is pretty sure to do in the reaction—it proceeds to make a new charter of its own, which redistributes the offices, and so on *ad infinitum*. Will Governor Dix lend himself to the enactment of another of these little farces? We think not. He knows perfectly well that a charter drafted by Federal officials in this city excites suspicion from the very outset, and that he could not find ten men —no, not even ten—of character, intelligence, and property in New York to-day, who, if asked whether they thought Messrs. Murphy, Bliss, Gardner, and Davenport were the persons to draw up a new scheme of city government at this great crisis in our municipal history, would not answer by a broad grin. That nobody else offered to draw one is of about the same value, as an argument, as the objection to raising the salary of the Chief-Justice of the United States, that men could be got to take his place at one thousand dollars a year. If nobody else offers to draft a charter at present, pray let us wait till somebody does who commands public confidence. Better by far live under the present one than throw away on a sham and subterfuge the present interest in reform, because, if you throw it away, you will not be able to rouse it again in twenty years.

To revive public spirit among us, or keep alive what there is, the machinery of the charter, too, must be such that plain people will understand it, and this means that there must be somebody on whom any taxpayer who feels aggrieved, and thinks things are going wrong, can lay his finger, and convict him of oversight or malfeasance, without any manner of doubt or difficulty. That is to say, the responsibility must be lodged in some person whom the average man can find, and who, when found, cannot wriggle out, and say that it is Smith or Jones in the Board of Aldermen who is to blame, and that it was all owing to "pressure" or "claims." That this person ought to be the Mayor, of course there is no question. We know all the objections that may be made to this. It may be said that this is "Cæsarism," and that the President of the United States has no such power, and that if you let the Mayor make the appointments he will "re-elect himself." To this last argument the reply is really the well-known one, "Trust the people"; if they have not enough comprehension and vigor to prevent a Mayor's keeping office when they do not desire him, a Cæsar is just the thing for them. In fact, they cannot get along without one, and the sooner they have one, the better; and though it is true that any such concentration of responsibility would be novel, it is also true that the situation here is novel, and cannot be dealt with by ordinary means. If we are to have the old distribution of checks and balances, and if every time the citizen complains of anything he is pointed to a table containing fifty thimbles, and is told before he can get redress he must guess which covers "the little joker," the government of the city will continue to be the game of a few charlatans, and not the deep and earnest concern of the community at large.

THE ARGUMENT AGAINST CAPITAL PUNISHMENT.

MR. MARTIN H. BOVEE is a gentleman who has taken an active and successful part in the effort to abolish capital punishment in various States, and has for some years made a practice of writing a letter to the New York *Tribune* whenever the subject was occupying public attention, reiterating the arguments against the death penalty, and citing the experience of such States as have done away with it. We always read these letters with interest, as likely to contain the latest views on the subject of those who pay most attention to it, but have never done so without being struck by the illustration they afford of the way in which the feelings of Transcendentalists and Sentimentalists—we do not use the words in any offensive sense —enable them to glide over the knotty points in political and legal problems. Of course, the main question in this controversy is the effect of the abolition of capital punishment on the number of murders committed within a given period; and it would be instructive to learn what the experience of the non-hanging States on this point has been, although it would by no means settle the matter for communities in a different condition. The relation between crime and punishment is not a constant one, because punishment is only one of the many restraints on crime. Others, such as sparseness of population, abundance of the means of subsistence, a high standard of education, and powerful social and religious traditions, exist in very different degrees of force in different communities, and there would, for this reason, be a certain absurdity in treating the experience of Michigan, for instance, as conclusive for New York. Nevertheless, we should greatly like to know, and it would be useful for us to know, whether murder has increased or diminished in frequency since the abolition of the death penalty in those States in which the abolition took place long enough ago to furnish anything in the nature of experience; and we began Mr. Bovee's letter, which appeared in the *Tribune* of Saturday, in eager expectation of this information. On this point, however, he absolutely tells us nothing. He evidently thinks he does, but he does n't. His mind is wholly occupied with showing that *convictions* of murderers are surer and more frequent when you imprison for life than when you hang, and that public opinion is running against hanging throughout the Union; but these things we knew already. There is no doubt that the lighter you make the penalty, the more ready will juries be to convict. If you were to enact that all persons guilty of homicide should be imprisoned for one month, and no more, we venture to say an acquittal would be unknown. No defects in the evidence would save a man. A jury would be ready to find everybody guilty who was found within five hundred yards of the corpse. What it most concerns the public to know is, not whether conviction is sure, but whether the penalty is a deterrent? We do not care particularly how many men are found guilty in any year. The question which interests us is, is their fate likely to be a warning? Are others likely to be prevented from killing or robbing us by the spectacle of their punishment? There has been so much difficulty of late years in obtaining convictions, and convictions have such close traditional associations with severe punishments, that district attorneys and anti-capital-punishment men have come to regard them as the great and only desiderata of criminal jurisprudence—not the means of punishment, but punishment itself—and when they get a verdict of guilty from a jury, or provide a penalty which juries are not likely to find objectionable, they turn round with an air of triumph, as if they had solved the problem of the defence of society against crime. There is a simplicity about some of their utterances on this subject which would be amusing if anything could amuse one in the discussion of so serious a subject.

For instance, Mr. Bovee produces with something like glee a list

of convictions for murder in the first degree in Michigan since 1846, when the death penalty was abolished. They are thirty in number, and tell us nothing whatever, although he bases on them the singular conclusion "that, under the benign operations of the present system, Michigan has proved to the world that society is just as safe and as well-governed without the gibbet as with it." Upon the essential point, whether murders are, in proportion to population, fewer in number now than before the abolition of the death penalty, he actually submits as "proof" of the efficacy of the new system the following statement from the State Prison Inspector, Mr. Clark:

"As to the question, 'Has crime increased since capital punishment was abolished?' I can only say that it is the opinion of the undersigned that it will be found on comparison with States of equal population where the death penalty is in force, that ours will compare favorably with them. We now have a population of not far from 700,000; and it is estimated by those who have the best means of judging, that of the whole number convicted of murder in the first degree since the death penalty was abolished, not half a dozen of them would have been convicted had 'hanging' been the penalty."

Here we have Mr. Clark's opinion that Michigan will "compare favorably" with other States of equal population (Michigan being an extraordinarily well-educated, prosperous agricultural State, settled mainly by New Englanders), and Mr. Clark's assertion that a certain indeterminate and unknown body of persons ("those who have the best means of judging") "estimate" that if these thirty men had been tried while the death penalty was in force, less than six would have been convicted. Mr. Bovee applied for information on this same point to the agent of the State Prison at Jackson, and got more "proof" of the same kind from him. He says frankly:

"I am unable to give you a comparative statement of the decrease of capital offences since the abolition of the death penalty. *I am fully confirmed in my own mind*, however, that society has not suffered in consequence of the abolition of capital punishment."

He applied again, two years later, to another agent of the prison, Mr. Bingham, but fared no better. To the question, "Has the crime of murder increased since the abolition of the death penalty?" Mr. Bingham replies: "I answer that, from the best data and information to be had, I am well satisfied that it has not." The "best data and information," however, are not forthcoming, and we strongly suspect they are very like those which satisfied Mr. Boutwell that Mr. Wells was wrong in his calculations about the crops, viz., his own observations from the car window as he rode to Washington. Mr. Bovee evidently feels that it would be well to have facts and figures on so important a point, but he is not disconcerted by not getting them. He also applied to the warden of the State Prison in Rhode Island, Mr. Nelson Viall, but failed again. Mr. Viall assured him "that the crime of murder had not increased since the abolition of the death penalty; that, on the contrary, considering the increase of population since 1852, it had diminished." How he knew this, he declined or neglected to state, but Mr. Bovee declares nevertheless that "the testimony as to Rhode Island is conclusive."

He then goes out to Wisconsin, his own State, and interrogates the Prison Commissioner of the State, Mr. Cordier, who calmly assures him that the abolition of the death penalty "has been productive of great good, rendering convictions more certain, and thus diminishing those crimes which under the old law could scarcely ever be punished." This is all he has to show on the very essence of a most important question, and he has evidently not the slightest suspicion that anything is wanting in his argument.

He has reached one other conclusion which we can hardly touch on without seeming desirous of holding a very worthy man up to ridicule. He finds not only that the abolition of the death penalty has been a good thing for society, but that murderers who are imprisoned for life are apt to be a very superior body of men. Mr. Bingham, of Michigan, reports to him that the general conduct of life-convicts "will average quite as good, or better, than those confined for the minor offences." Mr. Morris says that "there is not a more dependent, submissive class of convicts in the prison than those confined for murder, and they seldom give us any trouble by violation of prison rules or attempts to escape." Mr. McGraw, the State Prison Commissioner in Wisconsin, says "that as a general thing, those confined for murder are much better men, men of more integrity, on whose word I can place more reliance, who have better moral perceptions, and are altogether of a *higher order of being*, than those confined for the minor offences. The abolition of capital punishment cannot but have a beneficial effect. As I am of the opinion that like produces like, it cannot be otherwise than that the adoption of a Christian system by the State government must produce a Christian feeling among the governed." We thus see that the changing of the penalty of death into one of imprisonment for life elevates and ennobles all who afterwards commit the crimes to which it is annexed, so that a wilful murderer enters under its operation into "a higher order of being" than the man who commits a common assault. In view of this, would it not be well, we may ask, to make all offences capital, and then change the penalty into imprisonment, so as to bring all prisoners, and not the murderers only, under the influence of this extraordinary form of grace?

The fact is, as well as we can make out, that Mr. Bovee knows little or nothing about the value of the death penalty as a deterren against murder. What he does know, and what we all know, is that public opinion inclines against it, and that its abolition has been tried in various States—we cannot yet tell with what result—and that convictions are easier to obtain when the criminal's life is not at stake. To what this state of feeling is due, and in what manner it should be dealt with in legislation, are questions hard to answer, and which we shall not attempt to discuss this week. We call attention to Mr. Bovee's letter, as a fair specimen of the kind of argument and rhetoric through which a great many momentous political and legal changes have been worked during the last forty years, of many of which the fruits only now begin to be visible. The events of the past ten, however, have convinced a very large part of the public that the great problems of government are not to be solved by eloquence, and that the best instrument of happiness and prosperity is the habit of seeing things as they are, and that enduring societies must rest on facts rather than aspirations. The dreams of Messrs. Boutwell, Wilson, and their kind, in 1846, about the judiciary, gave us Barnard, McCunn, and Cardozo in 1866; and who knows what the dreams of many other good people, including Mr. Bovee, might give us in 1900?

CALDWELL AND CASEY BEFORE THE SENATE.

WASHINGTON, March 22.

THE debate on the Caldwell bribery case in the Senate has been a very instructive and useful one, not only by putting into clearer light the decline of political morals and the necessity of strong remedies, but also by giving public men of different parties, who have common objects in view, an opportunity to meet on a common ground. It is very curious to observe the groupings which have taken place in the Senate since the 4th of March. Mr. Morton, as Chairman of the Committee on Privileges and Elections, which had investigated the allegations of bribery connected with Mr. Caldwell's election, reported a resolution that Mr. Caldwell was not duly and legally elected, thus taking the ground, first, that the charges of bribery are proved, and, secondly, that an election controlled by bribery is illegal and void. This resolution is heartily supported by Morrill of Vermont, Morrill of Maine, Pratt of Indiana, Buckingham of Connecticut, Alcorn of Mississippi—Republicans; Schurz of Missouri, Liberal; and Thurman of Ohio, Norwood of Georgia, Stevenson of Kentucky, and Saulsbury of Delaware, Democrats—who hold that the Senate has the power to declare an election void on account of bribery, and that it is its duty to do so. The Democrats Bayard, Stockton, and Hamilton are in favor of expelling Caldwell from the Senate, holding that bribery has been proven in this case, but that it will only justify the punishment of the guilty person by expulsion, without invalidating the election as such, for the reason that the election of a senator is the act of a State in its sovereign capacity; that such an act, if performed by a legal legislature and in accordance with law, cannot be questioned by the Senate; and that, therefore, the Senate has no power to declare the election void on the ground of bribery. Ferry of Connecticut declares that he entirely agrees

with the constitutional theory of the first group, but, as he is in doubt whether Mr. Caldwell's majority in the election was entirely owing to bribery, he will only vote to expel Mr. Caldwell for the bribery actually proven. It must be observed that the resolution to declare the election invalid requires only a majority to carry, while the resolution to expel requires a vote of two-thirds. The third group is formed by those who go for Caldwell through thick and thin, who hold that the Senate has no power at all to declare an election void on account of bribery, be that bribery ever so gross and well proven, and that Mr. Caldwell ought not to be expelled because the charge of bribery has, in his case, not been sustained. Most prominent among them are Conkling and Carpenter, followed by such men as Logan, Stewart, Cameron, Chandler, and the whole host of Southern carpet-baggers and extreme partisans.

This division is very significant. There is evidently a break in the Democratic line with regard to the old extreme State-sovereignty doctrine. And there is a break in the Republican line on the question of public morals and the remedies to be employed to cure existing evils. Men of moral sensibility are growing impatient under the reckless leadership which has hitherto controlled them, while Mr. Conkling, by putting himself forward on every occasion as the champion of such worthies as Spencer and Caldwell, is said to be at work forming himself a sort of personal bodyguard out of that element, whose votes he will always command and who will look up to him as their great protector. In that way he expects to overcome Morton's competition for the leadership of the Administration forces. Whether it is a mere accident that Mr. Morton is found associated with the most respectable men in the Senate, remains to be seen.

There is a rumor to-day that the debate on this bribery case will find a sudden termination, not in a vote but in the resignation of Caldwell. But whatever the immediate result may be, it is universally felt here that the debate will in any event have a wholesome effect. The ordeal Mr. Caldwell has gone through was so terrible that candidates for the Senate will for some time be very careful not to expose themselves to an investigation. It has also become very probable that bribery at elections will be the subject of legislation next winter.

The leaders of the Administration party are determined not to permit the Louisiana election cases to come up during this extra session. They hope that before the next meeting of Congress the people of Louisiana will be so thoroughly subjugated to the Kellogg government as to abandon all further attempt to oppose that usurpation, and that then the admission of Pinchback to a seat in the Senate will follow as a matter of course. The triumph of that monstrous fraud will form one of the saddest and most dangerous precedents in our history, but the spokesmen of the Administration are determined to carry things with a high hand, if only to make the people feel that they *can* do what they please.

Those who entertained any hope that Gen. Grant's second Administration would lead to some reform of the civil service have now abandoned it. The distribution of the spoils is carried on unblushingly in the old way. There is not the least difference perceptible. When here and there a pretence is made of promotion according to the new civil-service rules, it looks like merely a cruel mockery. Senators and representatives are distributing offices among their retainers just as they did in the good old times when civil-service reform was not spoken of. The office-mongers' business flourishes as much as ever. Nor is there the least shadow of hope left that the President will do anything to stem the tide. When it became known here that Mr. George William Curtis was dissatisfied with the appointment of Mr. Sharpe to the Surveyorship of the port of New York, a derisive smile might have been seen on the faces of those high in influence. For when the President showed himself so utterly disdainful of the spirit of the civil-service rules as to reappoint those notorious characters Packard and Casey—men who had been "shown up" by a Congressional investigation not only as mere political strikers, but as corrupt men, notably so in Casey's case—the indecency of Sharpe's appointment dropped into utter insignificance. The scandal of Casey's appointment was so great that many expected the Senate would reject it, especially as it was known that Mr. West, the senator from Louisiana, would earnestly oppose its confirmation. But, as I have just learned, the Senate confirmed the appointment to-day, and it is now clear that nothing in that line will henceforward be impossible. If Mr. Curtis could listen to the current talk among Senators and Congressmen high in the confidence of the White House, if he could hear the contemptuous sneers and ridicule of which his civil-service rules are the subject, he would soon become aware that his disappointment in the Sharpe affair is by no means the worst snubbing he has received. To expect a genuine reform of the civil service from "that crowd" is simply absurd. We may set it down as a certainty now that the moral tone of General Grant's second Administration will not be a particle above the level of the first, and, if the people want reform, they will have to look to other agencies and influences.

In still another respect the President has disappointed the expectations of those who would be glad to aid him in anything calculated to benefit the country. It was announced shortly before the 4th of March that he would visit the Southern States and inform himself on the spot of the real condition of things. The Southerners here, of whom I have seen many, without distinction of party received that promise with the utmost satisfaction. They hoped that such a journey would be the starting-point of a more intelligent and just policy. But the President has now resolved, instead of visiting the South, to go to St. Louis and look after his property, which has been damaged by fire, and then, as soon as the most pressing business in Washington is disposed of, and the weather becomes warm, to transfer the scene of his labors to Long Branch and the neighborly companionship of Tom Murphy. There are various rumors floating in the air about annexation schemes, mainly referring to the West India Islands, but they cannot be traced to any authentic source. It is, however, by no means improbable that the President, during his sojourn at Long Branch, will be surrounded by the speculators who have made investments in the Samana Bay enterprise, and who will be ready to offer their advice as to the spreading of our language and the blessings of our institutions over foreign countries. Thus we may look for something in that direction.

On the whole, it may be said that the best men of the Republican party here are in a depressed state of mind. They look upon the developments of the last session of Congress as very disastrous, and find no consolation and assurance of improvement in the way in which things are being done now. For the present, they have only gathered courage enough to express their dissatisfaction and uneasiness in an undertone and before confidential friends; but it is not probable that the discontent which is growing every day can be long kept down. The next session will undoubtedly bring forth a crystallization of the elements which belong together, but which so far have been kept asunder by old party divisions.

ENGLAND—THE IRISH UNIVERSITY DEBATES.

LONDON, March 7, 1873.

I AM certainly not the first, and I presume I shall not be the last, newspaper correspondent to lament over the invention of electric telegraphs. We are in the position of spectators of a new drama, and my comments on the first and second acts of the performance will appear terribly stale when read by persons familiar with the catastrophe. It is not impossible that some doubt may be thrown upon my prophetic powers—and suspicion upon that subject touches one in a very tender point. I am, for example, obliged to write to you after the second evening's debate on the Irish University Bill. The next discussion will take place on Monday, and it seems to be improbable, though not impossible, that the division will be reached on that evening. Now, the change of opinion within the last few days has been so rapid that it is hard to conjecture what may be the result of a little further development of the state of affairs. All that I can do with safety is to endeavor to exhibit the present stage of our opinions, and to trace its history. You will know before you receive this whether, to use the illustration suggested by *Punch*, Mr. Gladstone has succeeded in clearing this last fence as successfully as he cleared the formidable obstacles of the Church and Land Bills, or whether the bold rider is doomed to come down with a crash. The prospect, which seemed to be cheerful on the first announcement of the Government scheme, has been growing gloomier ever since, and we hold our breaths as we watch the final result.

As I wrote in my last, the delight expressed by Radicals at Mr. Gladstone's first speech vanished on second thoughts. But their natural antagonists are not one whit better pleased. Never was a bill so vehemently condemned by the most hostile parties. The *Daily News* opposed it in the name of Liberal principles almost from the first. The Irish Roman Catholic bishops gave the signal for an equally uncompromising denunciation on the part of the Ultramontanes. Their opposition is too open and decided to pass as a mere feint intended to extort better terms. They tell us plainly that they reject the offer altogether, and will be satisfied with nothing less than an unconditional surrender. The *Times*, that admirable weathercock, has worked steadily round from a general expression of approval to a decided condemnation of the bill. All this was known before the debate on the second reading began; but it might be expected that the advocates of Government policy would be able to turn the tide by showing a bold front in the House. Any such expectations were signally falsified on the first evening. Amidst the general chorus of disapproval from all parts of the House, the most conspicuous opponent of the measure was Mr. Fawcett. He, as you may remember, had a scheme of his own, which was simply to

throw open Trinity College to men of all creeds. It was shelved with some trouble last session, but his study of the subject, and his position as an active professor at Cambridge, enabled him to speak with more than his usual authority. He made a number of good points, amongst which the most telling was perhaps the remark that Mr. Gladstone's measure would for the first time give the sanction of a Liberal government to the theory of the more bigoted Roman Catholics, according to which a mixed education is an impossibility. The Government bill, by proposing a maimed university, without professors of metaphysics or modern history, explicitly confesses that most important subjects cannot be taught to a mixed body of students. That is the very ground of the Catholic opposition, and its justice is thus granted by the so-called Liberals. By a most unfortunate arrangement, poor Lord Hartington was put up to answer the professor. Lord Hartington is one of the least impressive orators whom it has ever been my fortune to hear; every pause—and there are many—in his sentences seems to be filled by a contagious yawn. On the present occasion, his want of oratorical vigor was made more conspicuous by his obvious want of faith in the vitality of the measure, and he condescended to retorts of the schoolboy variety. He feebly suggested, by way of argument, that Mr. Fawcett was not the kind of professor who would be relished by the Catholic students. Nothing could be truer, in all probability, but the statement was ingeniously irrelevant. At the end of the evening, the general feeling was that the bill had received something like a deadly blow. The Government champions, such as they were, were simply knocked out of time; and their strongest argument had been that the bill must be a judicious compromise, because it displeased everybody. Nobody builds an argument for a measure on such a foundation so long as he has any plausible reason for denying that the foundation exists.

Last night the struggle began again, and people were curious to know whether Government would show any signs of yielding. Once more the stream of debate ran strongly against the measure. The two really powerful speeches of the evening were made by Mr. Horsman, who argued that the cry which Mr. Gladstone was vainly endeavoring to pacify came from the priests and not from the people, and by Dr. Playfair, who never speaks without weight, and who protested forcibly against the degradation of university teaching likely to result from the adoption of the bill. The champions of the Government were Mr. Chichester Fortescue, who produced little effect, and Mr. Lowe, whose oratory was not much better, though he threw out certain intimations calculated to appease his adversaries. Mr. Lowe is in rather an unfortunate position for defending schemes of university reform. Though himself a conspicuous and brilliant example of that kind of culture which is to be received at Oxford, he has an unfortunate disposition to take the cynical and sarcastic view of things. He has made himself rather notorious of late by advocating the purely pounds-shillings-and-pence view of education, and carrying to its legitimate conclusion Cobden's celebrated comparison of the relative advantage of an acquaintance with the Ilyssus and the Mississippi. He was therefore not well qualified to meet the objection that the proposed university, bound hand and foot, and deprived of a voice in order that it might say nothing offensive, would provide a really satisfactory scheme of higher education. He showed, of course, his usual logical dexterity, but labored most on a point on which he was most distinctly wrong and which is of serious importance—the supposed advantage, that is, of having a single university instead of allowing competition. He implied, however, that Government was likely to make two concessions: that it would not insist upon the so-called "gagging clauses," intended to prevent the professors from saying anything offensive to anybody, and that it would not allow every petty seminary in Ireland to be represented on the Governing Board. In spite, however, of these sacrifices, the general feeling was obviously that the debate had done more damage to a bill already sufficiently injured in public esteem. What, people are naturally asking, is the good of having a bill at all? It notoriously does not satisfy the Catholics, and, indeed, would merely give a new impulse to an agitation for confiscating Trinity College. It does not satisfy the Protestants, who regard it as a step towards concession to the priests. It does not satisfy those who wish to see the standard of Irish education raised, for the scheme is manifestly calculated to degrade rather than to elevate the standard. Why not leave the matter alone rather than force through Parliament a scheme which is absolutely without friends beyond the Treasury Bench?

All this may be changed during the remainder of the debate, but the symptoms now are decidedly unfavorable. Still, confident as is the language of the opposition, it would not be safe to calculate that the bill will be rejected, though there can be little doubt that it will be mangled. The great difficulty is that there is at present no plain alternative to Mr. Gladstone. If he says of anything that it must go through on pain of his resignation, he can exert a pressure sufficient to overcome most obstacles. For, after all, who is there to take his place? The bill, if thrown out, would be thrown out by a heterogeneous combination of Tories, Radicals, and Irish Roman Catholics. They would form no satisfactory basis for a new Government. Of course, a dissolution would follow, and members are already becoming refractory as they approach more nearly to the term of their official lives. But nobody can say what would be the result of a new election. The questions involved in the bill are not easily intelligible to a popular audience, and it is difficult to say what impression they would make on the hustings. It is doubtful which side would succeed in convincing the ordinary voter that it bore the true Liberal stamp. Probably the Conservatives are not particularly anxious to go to the country on such an issue, and it is rumored that Mr. Disraeli does not wish to see the bill completely rejected. The chances are that it will be mutilated and distorted, but that some kind of second or third edition will ultimately struggle through Parliament. It is not exactly a pleasant prospect. Whatever else it does, it is pretty plain that the bill, in any form, will not really satisfy anybody. Its passage can but be the opening move in a long and complicated struggle. And when we look forwards to the immediate future of politics, we can see little promise of anything but a confused and unsatisfactory war for some time to come. The party at present in power has accumulated, in one way or another, a considerable share of unpopularity, as was perhaps inevitable under the conditions of the case. Mr. Gladstone, indeed, in an after-dinner speech which he took the opportunity of delivering the other night by way of showing the exuberance of his powers, took credit for the fact as showing how many abuses he had put down and how many interests he had consequently arrayed against himself. That is the most flattering view of the position, and we need not ask whether it rests on a historical basis. But, be the explanation what it may, the fact remains. There is a good deal of rather sullen dislike to Government which may more or less take the form of a Conservative reaction. And yet it seems impossible to suppose that Mr. Disraeli and his friends can really represent the strongest feeling in the country. On the other hand, the Dissenters and the Radicals are gradually breaking away from their official leaders, though they do not seem to be capable of setting up any very effective leaders of their own. It looks, therefore, as if we were to have a complex triangular duel, in which no side can maintain a decisive superiority. For people who wish to see a course of serious and well-considered legislation on matters of real importance, the prospect is at present very discouraging; and, for this session at least, our great talking institution promises to throw out more discursive masses of talk than usual, with less practical result.

Correspondence.

BOUTWELL, BUTLER, AND DAWES.

To the Editor of the Nation:

Sir: In your statement of the various causes which contributed to the election of Mr. Boutwell and the defeat of Mr. Dawes in the Senatorial contest here, you omitted last week what I fancy was the real difficulty in the case. Mr. Dawes owed his defeat solely to himself. He was not equal to the occasion, and threw away his opportunities. The Crédit Mobilier business did not help him; he needed a chance to retrieve himself. Mr. B. F. Butler, his arch-enemy, offered him the chance—and such a chance!—on the "back-pay grab," and he didn't avail himself of it. What can you do for such a man? The back-pay robbery was committed on the night of the 2d, and Mr. Boutwell was elected on the 12th. There was time enough. Had Mr. Dawes, the leader of the House, fought and filibustered that measure as he well enough knows how to do; had he flung himself into the struggle like a man, and then gone to the State House on the issue, his friends would have had something to stand on. As it was—well! he is a good man, if he was only a little better at the pinch. That is his trouble—he just isn't equal to the emergency, and the Legislature felt it.

To-day, again, he and Butler stand face to face in this State. There will be a struggle, and the chances are heavy that Butler will drive him to the wall. There is just that tinge of vacillation about Mr. Dawes which gives to a blusterer like the soldier of Lowell an almost fatal advantage. Take again this back-pay theft. Butler fathered the scheme, boldly, shamelessly, noisily. Dawes voted against it, consistently, honestly, silently. Both, so far as we know, have accepted their shares of the plunder. Now in such a case as this the receiver of stolen money is not as bad as the thief; but yet Dawes will suffer more than Butler in popular estimation. For generations it has been a generally received truth that one man can steal a horse more safely

than another can look at one over a fence, and this back-pay theft and the distribution of the stolen goods will afford a new illustration of the fact. Any man of the stamp of Sumner, or Schurz, or Trumbull, or Dawes who touches the money will never hear the end of it; it will be made to burn in his pocket at every crisis of his political life. Meanwhile men of the Butler stamp will "pocket the swag" with effrontery, and, as in the Crédit Mobilier business, will make effective use of their opponents' questionable money transactions. Mr. Dawes has not a strong hold on Massachusetts. He never will have until he shows that he can cut out his work in deep, clear, strong lines. That he just failed to do so last winter elected the great "hole-in-the-sky" of impeachment memory senator, and will, I fear, greatly forward in the future the political schemes of the Attorney-General of New Orleans.

The game is a small one—hardly amounting to more than a struggle of men for place; but in its way it does not lack elements of quiet interest. The chief pity is that the performers are none of them either professionally very good or personally very interesting.

A Quiet Observer.

Boston, March 22, 1873.

THE UTILITARIAN VIEW OF THE DEATH PENALTY.

To the Editor of the Nation:

Sir: It can perhaps hardly be said too often that after conviction and sentence, in criminal cases, the question is not, as is always assumed by the Sentimentalists, the precise degree of the defendant's moral turpitude. Only Omniscience can tell exactly what were his motives and the true value of his moral responsibility—it is, at best, but a clumsy way to judge of motives by words and acts—and it may very well be that according to a standard of perfect justice the man may not deserve death, while it shall still be altogether wise and expedient that he be hanged. Men are not tried, convicted, and executed in order to punish them according to their deserts, but to protect society; and if it be a sound maxim of the law, that it is better that ninety-and-nine guilty men—*who have not been convicted*—should escape, than that one innocent man should suffer, it is equally true that, looking to the interests of the community, it is better that ninety-nine innocent men, unjustly convicted after a fair and impartial trial, should be hanged, than that one really guilty man, after such a trial, should be pardoned.

This view of the subject was well expressed by Chief-Justice Gibson when discussing the subject of circumstantial evidence in his charge to the jury in the case of *Commonwealth* v. *Herman*, which is reported in the 4th volume of Pennsylvania State Reports, pp. 269, 272:

"No human testimony is superior to doubt. The machinery of criminal justice, like every other production of man, is necessarily imperfect, but you are not therefore to stop its wheels. Because men have been scalded to death or torn to pieces by the bursting of boilers, or mangled by wheels on a railroad, you are not to lay aside the steam-engine. Innocent men have doubtless been convicted and executed on circumstantial evidence, but innocent men have sometimes been convicted and executed on what is called positive proof. What then? Such convictions are accidents which must be encountered; and the innocent victims of them have perished for the common good, as much as soldiers who have perished in battle. All evidence is more or less circumstantial, the difference being only in the degree; and it is sufficient for the purpose when it excludes disbelief—that is, actual and not technical disbelief; for he who is to pass on the question is not at liberty to disbelieve as a juror while he believes as a man. It is enough that his conscience is clear. Certain cases of circumstantial proof to be found in the books, in which innocent persons have been convicted, have been pressed on your attention. These, however, are few in number, and the wonder is there have not been more. They are constantly resorted to in capital cases to frighten jurors into a belief that there should be no conviction on merely circumstantial evidence. But the law exacts a conviction whenever there is legal evidence to show the prisoner's guilt beyond a reasonable doubt; and circumstantial evidence is legal evidence."

It is nearly thirty years since these words were spoken, but it may be doubted if the men of to-day are much wiser than men were then.—I am, Sir, etc.,

S. D.

Philadelphia, March 21, 1873.

Notes.

Harper & Bros. announce 'The Treaty of Washington: its Negotiation, Execution, and Discussions relating thereto,' by Caleb Cushing; Miss Beecher's 'Housekeeper and Health-keeper'; 'The Fishing Tourist,' by Charles Hallock; and 'Farm Ballads,' by Will Carleton.——J. B. Lippincott & Co. will publish 'In Search of the Castaways,' which we take to be a translation of Jules Verne's 'Children of Captain Grant.'——The *Athenæum* for March 8 devotes a full page to a plan of the Temple of Diana at Ephesus, as discovered by the sagacious labors of Mr. J. T. Wood. In a letter which accompanies the plan, Mr. Wood narrates the circumstances which led to this successful exploration, and reconstructs the famous building from its foundation. The Temple "is now proved to be octastyle, that is, having eight columns in front. It has eighteen columns on the sides, and the intercolumniation of the latter are chiefly three diameters, making the Temple diastyle. The statement of Pliny as to its having had one hundred columns (externally) is correct."——Matthew Arnold's 'Literature and Dogma' will be reprinted in this country by Macmillan & Co.

—The sale of the Perkins library, which will take place in May and June next, at Hanworth Park, near London, will give the bibliopoles such an opportunity of acquisition as is rarely met with. It is a collection of printed books and MSS. of the highest rarity, and was formed in the beginning of the present century. The wealth of the collection may be judged by its possessing two of the six known copies of the Mazarine Bible, the first book printed from metal types—one on vellum, and the other on paper, both in perfect condition; a copy of the first Bible printed with a date (1462), that which formerly belonged to the Vallière library; a copy of the first edition of the Bible in German (about 1460–62); one on vellum by Jenson (Venice, 1476), an admirable example of typography and in perfect state; and Coverdale's Bible of 1535, one of the finest copies known. In secular bibliography, there is Caxton's edition of the 'Polychronicon' and 'Confessio Amantis,' Pynson's 'Shyp of Folys,' Wynkyn de Worde's 'Vitæ Patrum,' perfect and only partially cut, and Copland's 'King Arthur.' Other books, on vellum, are the 'Vallisumbrosa Missal' (Venice, 1503), the 'Augsburg Missal' of Sebaldus Mayer (1555), and the 'Roman Missal' of Stephen Planck (1496)—all in excellent condition. There are the first, second, third, and fourth folio Shakspeares, all perfect, and in splendid condition. The MSS. are equally noteworthy. Lydgate's 'Siege of Troy' is the most splendid, with its seventy miniatures, one of the author presenting his work to Henry V.; a 'Cent Histoires de Troie de Christine de Pisan,' a superb MS., with a hundred miniatures, written and painted for Philippe le Hardi, Duke of Burgundy; 'Les Œuvres diverses de Jean de Meung,' including the 'Roman de la Rose' fully illuminated; a MS. Bible in two vols. in French of the beginning of the XIVth century, according to the translation of Guyar des Moulins, and as this was finished in 1295 this copy is likely to have been done under the superintendence of the translator—it has one hundred and thirty miniatures in the best manner of that time; and a Latin Bible of the XIIIth century in two volumes, with illuminations of an importance rarely seen. Another royal work is 'Les Epîtres and Evangiles de tout l'An,' executed for the Queen of Philippe de Valois (1336). There are a Lectionarium of the IXth or Xth century, magnificent in gold and ornamentation, and in singularly perfect state, an Evangelium of the XIIth century, and several others not equally remarkable, but still noteworthy, ending, as to date, with a MS. by Nicholas Garry (about 1660), illuminated, and bearing the royal arms. The Mazarine Bible on vellum is valued at £2,000. The complete catalogue will soon be issued by Ellis & White, London. Meantime, we have received from Mr. Bernard Quaritch, 15 Piccadilly, copies of his list of the principal articles in the collection, made after the late Mr. Henry Perkins's own notes.

—Some one (we guess it to be the lively author of 'Talk and Travel,' reviewed in No. 398 of the *Nation*) has sent us an 'Ethnological Map of the British Isles,' with table of European languages annexed. It is designed to show, by means of two colors, the broad division of the modern Britons into two component factors, the Celto-Latin and the Teuton. "It is useless for you," says our spirited guide, "to trouble your head as to what the Saxons called themselves and their language, or what they were called by others. Leave that matter to the antiquarians. It is enough to know that as sure as two and two make four, as water and spirits mixed make grog, as blue and yellow mixed form green, as sure (I may say) as a Germanic tongue fused with a Romance one make modern English, so surely do Teuton and Celto-Latin constitute the modern Englishman, and, by consequence, the American of the North." Again:

"To call by the same name (English) two things so different as the Anglo-Saxon and the modern English, is (as Marsh rightly says) a gross logical inaccuracy. French differs less from Latin, yet no one would think of calling Latin by the name of Old French, any more than he would call a chrysalis an 'Old Butterfly'; but it is likewise Old Polish, or Old Irish, or Old French. English, moreover, has the advantage of having a double nomenclature, *i.e.*, two names for nearly everything—one Latin, one Teuton, hence its richness."

The map is published by Edward Stanford, 6 Charing Cross, London. More minute (since it subdivides the Teutons) is the map of the settlements of the Celts, Saxons, Danes, and Norwegians in the British Isles and Northern France which accompanies Taylor's 'Words and Places' (third edition, Macmillan & Co.)

—Last summer we had to record the death of Mr. Richard D. Webb, of Dublin, a philanthropic friend of this country, and an associate of Mr. James Haughton, an eminent merchant of the same city, in many of the reformatory movements of the day. Mr. Haughton himself has now passed away, having died on the 20th of February, in his seventy-eighth year. He was the intimate friend and supporter of O'Connell, an earnest advocate of the repeal of the corn-laws, a generous ally of the American Abolitionists; and that he was followed to his grave by the most respectable citizens of Dublin, and by an unusual popular attendance, will not appear surprising after the following summary of his good works, which we take from *Saunders's News-Letter*:

"He took part in the anti-slavery agitation in 1837; he was a free-trader and advocated direct taxation; he was opposed to war and capital punishment; and for a long series of years he was a most strenuous supporter of temperance and total abstinence. He was a fellow-worker in the cause of temperance with the late Father Mathew and Father Spratt, and lectured week after week in the furtherance of these objects to the poorest inhabitants in the city. He was as much respected by the Roman Catholic poor amongst whom he labored as by the Protestant denominations, to one of which he belonged. The Dublin Mechanics' Institute, in Lower Abbey Street, mainly owes its existence to his efforts, and he took a leading part in the movement which opened the Zoölogical Gardens, Phœnix Park, to the poorer classes for one penny on Sundays. By his aid the Botanic Gardens were thrown open to the public on week-days and Sundays free of charge, and he was instrumental in having the Phœnix Park improved and the People's Gardens planted there. He contributed many papers on social questions to the Royal Dublin Society, and to the Statistical and Social Enquiry Society of Ireland, in both of which bodies he manifested a deep interest. His life was an exemplification of the principles he advocated. He was a total abstainer from spirituous liquors for thirty-five years, and a vegetarian for twenty-six years. Up to the time of his death he was President of the Vegetarian Society of the United Kingdom."

—Admirers of Thackeray may be referred to the last *Edinburgh Review* for a welcome notice of a writer who, for a favorite, is personally not well known to his readers—unless, indeed, considering him as revealed in his own pages, we are to call him a writer whose mind and heart are singularly well known. But the reviewer is able to tell some things about the personal history of his subject of which most of us have been ignorant, and about which there has been less information than misinformation. It has, for instance, been a current and commonly accepted story that Thackeray, becoming heir to a fortune, dissipated it by extravagant expenditure, and that his sketches of swindlers, sharpers, gamesters, and other disreputable characters we owe to his personal knowledge of such people, and his experience as their victim and their enforced associate. It would appear, however, that there has been much popular ignorance in regard to this assumed crop of wild-oats, and that it has very little more foundation than the fact that he was undeniably careless and desultory in his life and studies while at the university, which he left without having taken his degree. "His fortune and position in society," says the reviewer, "seemed to permit him to indulge his tastes and live as a gentleman at large. . . . It must be confessed that at Cambridge Thackeray gave no signs of distinguished ability. He was chiefly known for his inexhaustible drollery, his love of repartee, and for his humorous command of the pencil." But the fortune which in a manner justified the carelessness of his conduct he lost, not because he squandered it in riotous living, but, as we are now told, because a few months after attaining his majority he contracted a "sleeping partnership" which placed his property in the hands of a man who turned out to be insolvent. Plenty of imprudence he no doubt showed in this transaction; but so far from wasting his substance amid the vice and folly which his writings depict in so lively a manner, he lost his fortune before he had had time to enjoy it in any way. He was born in Calcutta in 1811, his father being Richmond Thackeray, a gentleman in the civil service of the East India Company. Richmond Thackeray was the son of William Makepeace Thackeray, also at one time a civil servant, and afterwards a Member of Council, who sat at the board with Warren Hastings. Thackeray's great-grandfather is here said to have been at one time Master of Harrow and afterwards an archdeacon. This statement of the novelist's descent, if correct, will necessitate alterations in most of the books of reference. Allibone, for instance, makes the grandfather to have been a Richard Thackeray, Rector of Hadley, Middlesex. As the reviewer is expressly engaged in correcting what he styles the erroneous accounts of Thackeray's birth and ancestry, we may with probability regard his own account as correct. In 1818, his father having died at the early age of thirty, the boy was sent home to be put at school, and the vessel aboard which were he and his servant touched at Saint Helena, where Thackeray saw Napoleon, whom he looked at with much interest, the colored gentleman having informed his charge that the ex-Emperor ate three sheep every day and as many children as he could get. "The joke figured years afterwards in one of Thackeray's sketches," as indeed did a countless number of other incidents that occurred to him, his novels being at once so full of faithful observation and so subjective. In 1828 he went to Cambridge, where he had for contemporaries Tennyson, Monckton Milnes, Carlyle's John Sterling, the Buller who figures in the 'Noctes Ambrosianæ,' if we are not mistaken, and others more or less known to fame, himself perhaps destined to the longest immortality of them all. Weimar—his 'Pumpernickel'—came next, and those visits to Paris, where his mother, a second time married and now Mrs. Carmichael Smyth, was residing, which in a manner made him free of that city, and of which he has made such pleasing records gustatory and other. At about this time he lost his fortune, and found himself without means and without a profession, and, to add to his difficulties, not without a leaning towards a profession which he was to try, and from which he was to recede of necessity. He was called to the bar, indeed, but painting was his chosen pursuit. As it turned out, literature was to be his occupation, and for this he had the admirable training—perhaps not so admirable nowadays—of a seven-years' apprenticeship to the press, and to that part of the press which made the most exacting requirements in the matter of literary skill. But we are giving too much of the article, which should itself be read. We may be permitted to express a hope that a suggestion which it makes may be complied with, and that the great writer's "accomplished daughter, who has shown by her writings that some at least of his gifts have descended to her by inheritance, should undertake a task no one else can fulfil with so natural and delicate a feeling of her father's genius," and should write his biography. That would indeed be a work of a thousand.

—*Good Words* has recently given an interesting and curious account of Paganini, which it would be worth the while of any one interested, as so many people are nowadays, in questions of "temperament" to read. It is common to talk about the artistic or poetic temperament as if there were no differences between one poet, painter, architect, or musician and another—the fact being that the differences of æsthetic temperament *inter sese* are almost as great as the differences between these again and all others. The temperament of a man, for instance, on whom physical causes act oddly and instantly at times, at others not at all; who travels with the greatest speed from place to place, taking care in the hottest weather to have the carriage windows closed; who delights to talk loudly while rattling over the roads; who resents being spoken to while waiting at inns to change horses; who, on arrival at his hotel, throws all the doors and windows open to take an "air-bath"; who is very fond of money, but carries papers of immense value in a pocket-book, mixed with concert-tickets and letters; who seldom notices scenery or cares for the sights of foreign towns; who cares little where he sleeps or what he eats or drinks, but when he goes out to dine generally eats so much as to bring on illness; who is in the habit of remaining taciturn for days, at other times, however, of joining in conversation "freely"; who after dinner habitually sits in his room in total darkness till half-past ten, when he goes to bed; who is continually mixing with men, but has no friends; who is faithful to both his parents, is at times very generous, and who if any one mentions music in conversation relapses into sullen silence or goes off into some other part of the room—what sort of a temperament is this, poetic, artistic, architectural, dramatic, or lunatic? It is none of these, it is the musical temperament, the traits having all been manifested by Paganini himself.

—The rivalry of Poles and Germans gave to the celebration of the 400th anniversary of the birthday of Copernicus a mundane interest quite remote from the heavenly contemplations of the great astronomer. All over Germany the newspapers, the gymnasia, the universities entered warmly into the dispute whether Copernicus came of a Polish or a German stock. Upon the one side are the facts that his father, Niklas Koppernigk, grew up as a merchant in Cracow; that before the birth of Nicolas, Thorn had placed itself under Polish protection as a resource against the misrule of the Teutonic Knights; and that on entering the university of Cracow the young Copernicus registered himself as a Pole. On the other side are alleged the facts that the parental Niklas migrated from Cracow to Thorn at a time (1462) when the Germans were yet jealous of the Poles; that in 1465 he was elected to the magistracy of Thorn; that he married Barbara Watzelrode, who belonged to one of the most noted German families of the province of West Prussia; and that these things could not have taken place had said Niklas Koppernigk been a Pole by birth or a Polish subject. It is argued that as the later adhesion of Thorn to Poland did not transform the father into a Pole, and could not affect the race-stock of the son, Copernicus should not be conceded to Poland, though at the time of his birth his native city was under Polish rule. It was natural that he should go to Cracow as the nearest university-town, and one in which his father had relatives and friends; and he entered himself as a Pole, as belonging to a Polish province, though by nature of a German stock. A vast amount of erudition has been expended upon this knotty question, with the average result of German speculations, theories, and parties.

—The ecclesiastical position of Copernicus admits of easier solution; he lived in the communion of the Church of Rome, died in her service as Canon of the Cathedral of Frauenburg, published his work at the instance of a cardinal, and dedicated it to Pope Paul III. But does this warrant the Romish hierarchy of to-day in claiming him as a son of a Church which is now represented by a Pope who denounces all science and culture as hostile to the faith? Copernicus was too much absorbed in his astronomical studies to mingle in the controversies which Luther had raised; but in his own sphere he was none the less a reformer against tradition and authority, and his very letter of dedication to Paul III. shows that he anticipated for his doctrine the fate which afterwards overtook it in the person of Galileo: "Si fortasse erunt *ματαιολόγοι* [brainless babblers], qui, cum omnium mathematum ignari sint, tamen de illis iudicium sibi sumunt, et propter aliquem locum scripturæ, male ad suum propositum detortum, ausi fuerint meum hoc institutum reprehendere ac insectari; illos nihil moror, adeo ut etiam illorum iudicium tamquam temerarium contemnam." Not even Professor Tyndall has gone beyond this in his contempt for such of the clergy as would pervert the letter of the Scriptures against the facts of nature. Copernicus asserted the independence of scientific investigation and the freedom of scientific thought, though its results "be difficult and inconceivable, and against the opinion of the majority."

—It is absurd for the Church of Roman Infallibility to claim a birthright in such a man. But the exigencies of the Roman Catholic controversy in Prussia led Roman bishops and Polish agitators to make the birthday of Copernicus the occasion of a demonstration against the Government in behalf of Polish nationality and the Romish Church. At Thorn, the birthplace of Copernicus, the Clerical party attempted such a demonstration, and succeeded in gathering deputies from Polish and Catholic universities to a distinctively Polish festival, and also in enlisting the enthusiasm of the common people for this titular saint. But this narrow perversion of a world-wide name was overruled by the good sense of the town and of its magistracy. The "Copernican Society of Science and Art" provided a celebration upon a scale which represented the catholicity and the universality of true science. The great universities of Germany sent deputations or official greetings; the universities of Rome and Padua appeared by Professor Occioni; that of Bologna by Professor Pellicioni; and the American Geographical Society was represented by one of its officers, now residing at Berlin. An admirable historical discourse by Professor L. Prowe, of Thorn, was followed by speeches in German, in Latin, and in English, from the several guests; there were banquetings, theatrical performances, floral decorations, illuminations, fireworks, balls, processions, and whatever could conspire to give *éclat* to a festival in which literary, artistic, social, official, and international elements and sentiments were combined to do honor to one illustrious name.

—A monument to Copernicus of permanent value to the scientific world has been secured through the enterprise of the Copernican Society of Thorn, and the munificence of the Prussian Government—viz., a superb edition of the astronomer's great work, 'Nicolai Copernici Thorunensis de Revolutionibus Orbium Cælestium, Libri VI., ex Auctoris autographo recudi curavit Societas Copernicana Thorunensis. Accedit Georgii Joachimi Rhetici de libris revolutionum narratio prima. Thoruni, sumptibus Societatis Copernicanæ, MDCCCLXXIII.' This edition is in royal quarto, of 494 pages, with 30 pages of preface, prolegomena, and index. It is printed in large type, upon thick smooth paper, with ample margins, with linear notations and foot-notes. The original autograph in the Nostizian Library at Prague has been followed throughout as the basis of the text; but all the variations of other texts are carefully given in the notes, with appropriate references. The painstaking accuracy of the editing, the learned criticism of the prolegomena, the completeness of the indexes, and the clearness and beauty of the typography, will make this the standard edition for the new century of Copernicus upon which we have now entered. The volume is appropriately dedicated to the Emperor of Germany, the Prussian Government having encouraged its publication both by official approval and by substantial aid.

—The *American Civil Law Journal* is the title of a new "monthly magazine devoted to the discussion of the principles of the civil law and to legal reform," edited by R. H. Chittenden, and published by J. R. McDivitt & Co., of this city. The editor announces it as his "conviction that an acquaintance with the principles of the Roman Law is the only sure basis of a legal education," and begins the number before us by an article on "the origin and development of the civil law." The rock on which, to judge by this article, the *Journal* seems in danger of splitting is superstitious belief in the finality of the Roman system which the renaissance of the study seems to have bred in some minds. What is needed in legal education now is application to the study, not of the Roman law or of the common law or the laws of Menu, but of law itself, and an appreciation of the fact that the Roman system was the organic growth of a particular period in the world's history, to be investigated in much the same way from the lawyer's point of view as a particular stratum of the earth's surface is from the geologist's. It cannot be too often insisted upon that the philosophy on which the Roman system was built up was wholly metaphysical, and that its practical merits ought to be separated entirely from its speculative foundation.

RECENT NOVELS.*

'BARRIERS BURNED AWAY' treats of religion, love, temperance, and true republicanism, as compared with atheism, coldness, self-indulgence, and haughty, aristocratic prejudice. The hero is a poor lad, whose father treats us to a deathbed scene in the first chapter. The boy, Dennis by name, goes to Chicago to earn a living; after a few rebuffs he gets a place in a "Temple of Art," which is owned by Mr. Ludolph, a free-thinking German aristocrat, with a beautiful daughter, Christine. Dennis's position is a humble one, but he discharges his duties without grumbling, and he even strains a point to blacken the shoes of those in authority over him. It is while he is engaged in this menial occupation that he is first seen by Christine, descended from a long line of German nobles, beautiful, rich, courted by all, and notably by Deacon Gudgeon's son, who made her acquaintance by meeting her on her way to school. That little love affair, however, had been promptly crushed by Mr. Ludolph, who was so well-born that he scorned the son of a fishmonger, and who was so steeped in infidelity that he had no love for deacons and their families. Christine comes to the "Temple of Art" in order to arrange more tastefully than could the uncultured clerks the statues and pictures. Dennis makes himself useful in this task and falls over head and ears in love with the cold beauty, who thinks too little of the tumult she is awakening in his heart. She invites him to take charge of "a rare and elegant entertainment consisting of music, tableaux, and statuary." He shares in the musical part and sings with a fine tenor voice, so that all admire him, and he falls still more deeply in love with Christine. That heartless miss, being piqued by a just criticism of his upon one of her pictures—namely, that it was painted by one who never felt or who was unable to feel the emotions there presented—leads on the harsh critic to make a declaration of love while she sits before her easel, brush in hand, and copies the varying expression of his agitated face. For this light conduct, however, she is deservedly punished: she learns what heart agony is while he has a brain fever. But, fortunately, Chicago burns up, and with it Mr. Ludolph and the other barriers between the young people. Christine gives up her infidelity and her desire to return to effete Europe, and the two are at last happy. In spite of all that is unnatural and artificial in this story, it is easy to see how it may be popular among those who dread the ordinary work of fiction. The author has profited little, however, by the labors of his predecessors, and we have found him exceptionally tedious and uninteresting.

We have said so much about 'The Strange Adventures of a Phaeton' while it was appearing in *Lippincott's Magazine*, that it is perhaps hardly necessary to go now into any prolonged discussion of its attractiveness. There is no complicated plot about it, but it affords a very pretty picture of love-making, with long descriptions of scenery (which, for a wonder, are not duller than agricultural statistics), with considerable humor thrown in, at times even laid on with a heavy hand and a trowel. We confess to having followed with the greatest interest the adventures of Bell, who may be vaguely drawn, but who leaves a most charming recollection on the susceptible heart, and that most attractive of German officers, Count von Rosen. Some may sympathize with the baffled Arthur, a down-trodden Briton, but political reasons forbid our giving him too much pity. We need only recall the conduct of

England during our late war, and be thankful that one Britisher has got his deserts.

'Never Again' is a closely printed volume of over 700 pages, and ought to be either very interesting or very instructive to justify so long a detention of the patient reader. It is a curious work, and, in a way, reminds one of the imported pomegranate: either you like it immensely, or you don't like it at all, according to the natural taste with which you were born. It may be set down to the credit of this production that no one could possibly go through it with simple indifference. It is, primarily, a New York society novel, and, secondarily, a prodigious romance. Neither the adventures of Thaddeus of Warsaw nor Thaddeus himself were more thrilling and unlike commonplace reality than Luther Lansdale and his proceedings. Never was hero better fitted out; "never again," perhaps, will there be another so well equipped. (One cannot help stopping now and then to make a guess as to the application of the mysterious title.) Luther has the beauty of an Antinous, a classical education, and the tastes and instincts of a gentleman and a poet, though born only a poor farmer's boy. He is also provided with as well assorted a lot of misfortunes as a trained romance-reader could desire; neither is one of them hidden under a bushel, or wasted merely in disciplining the mind in an abstract and private way. Each mishap or season of suffering is observed and noted by some member of a right-minded public, and the recompense in every case is so prompt and so handsome that one cannot but think a little regretfully of the defects of the system of rewards actually in operation among us. Could any young fellow who feels himself "misunderstood" at home, who longs to leave the paternal farm and go into a store, or in some way make a fortune in New York, dream more sweetly than this?—to be taken off down the Hudson by a devoted old captain; to be the hero of a neat collision and shipwreck, which throws him glowing and dripping at the feet of the rich, beautiful, and susceptible heroine; after having hunted work in vain among a host of hard-hearted employers, at last to fall in an interesting swoon in the front entry, and in the presence, of the identical damsel who had melted over his pathetic condition once before and had cherished his image ever since; to be provided at once with a good place in the counting-house of her wealthy father; and finally (we omit all the minor pieces of good luck of this fortune's favorite) to pick up an old woman fallen on a slippery pavement, who turns out to be immensely wealthy, and makes her rescuer her heir, besides proving to be the only person extant who could disentangle the mystery of the plot and make everything come out right at last. It is true that the plot of a story may be feeble, and yet the characters of it and the general treatment so good that one really cares but little for the thread on which the gems are strung. But a New York *Ledger* sensation plot is a drawback not to be overlooked, especially when its workings fill so large a proportion of the pages to be read through. That duly reprobated, however, we are left with nothing but what deserves at least respectful consideration. even from those who are not fond of pomegranate, and which has elicited from certain English quarters almost unqualified admiration. All the characters are drawn with great amplitude of detail and evident care and conscientiousness. The pictures of American life, whether in the drawing-rooms of the rich, in boarding-houses, in newspaper offices, or wheresoever, are just as elaborate and minute. One is conscious of an obligation to be grateful for so much painstaking, and a further obligation to admire the enormous ingenuity of the philosophizings, and the amazing fecundity of "notions," and the general pervading sense of brilliancy like that in the last scene of a spectacular performance. But there is a curious unreality about everything and everybody, like that which one feels after reading Gulliver's experience among the inventors. Then the *dramatis personæ*, copious as are their manifestations, and emphasized as are their peculiarities, are, after all, only one and the same man in a different dress. Captain Combings is Dr. Mayo as a sea-captain, talking with Dr. Mayo's knowledge of Montaigne, Plutarch's Lives, and Shakspeare. Mr. Boggs is Dr. Mayo as the society man. Uncle Shippen is Dr. Mayo as an eccentric and learned and clever old gentleman. Mr. Planly gives Dr. Mayo's odd ideas in the inventive line. Mr. Whoppers shows what this same versatile man could do as a punster. Even Joe, the black factotum, is Dr. Mayo as a "cullud brudder"—excellently well done, but never seen in real life, except perhaps among the minstrels.

There is enough invention and imagination and satirical commentary in the book to furnish better novelists, if less copious thinkers, with plenty of material for future works. The whole thing reminds us of some patent-office museum where models of unsuccessful inventions are preserved—a mine of suggestiveness to those who are ripe for a hint, and a striking example of the richness of the human intellect, but a reminder as well of how often certain great gifts are not sufficient to "make the thing work." In 'Never Again,' so much ideality calls for more ballast; such fertility and fluency for an equally great self-restraint. After this stage comes the mere *cacoethes scribendi*. It is hard to have to struggle between a sense of gratitude to a clever writer who has done his "level best," and a wish that paper was as expensive as in the time of Tacitus.

'Little Hodge,' like its predecessor, 'Ginx's Baby,' is a book with a purpose, but, unlike that sad book, it not merely states the problem, but attempts a solution. Like a wise man, however, the author is careful to disclaim any attempt at solving the whole problem, pointing, in the person of Jehoiachin Settle, the Yankee *deus ex machinâ*, to the experience of "old Dr. Jayne of Philadelphia," who, after inventing a "universal specific," was soon "obliged to come out with a *particklar cure for worms*." What we like about the solution here proposed is its naturalness and limitation. It is simply how the people of Coddleton Union solved their own problem—as friends and neighbors, landlords and laborers; and, if Mr. Jenkins will let us borrow his phrase, it is after all only carrying out the "state-in-which-it-has-pleased-Providence-to-place-you theory." What will be found most interesting to the American reader will perhaps be the vivid picture it presents, and from a wholly new point of view, of a condition of society altogether unknown to us in the North—although not without its distinct analogies with the present order of things in the South. We have plenty of descriptions of life among the rural aristocracy of England, and plenty of pictures of life among the English peasantry; but nowhere else, to our knowledge, is it brought out so clearly that the mutual relations of these classes are conditioned by the whole course of their history—the free village community transformed into the serfs of a manor, with a genuine patriarchal element, and then the whole distorted by the individuality and feverish competition of the nineteenth century. The unions and strikes among the agricultural laborers last year were the signal for the final dissolution of an order of things which had been living for centuries, but has been dead for years. Mr. Jenkins's pathos and picturesqueness are well known; the present work is certainly not inferior to his earlier one in these respects. It was not a bad idea to bring a Yankee upon the stage, but we are surprised to meet the traditional stage Yankee transformed into a practical philanthropist. "Telegram" as a verb is certainly not an Americanism. We will point to the events described on p. 124 as a very good illustration of what is meant by "class government"—a thing that we in this country find it so hard to understand.

Mr. Peterson's novel is one of a kind more in vogue twenty or twenty-five years back than it has been of late. It deals with scenes and characters belonging to the days of our Revolutionary War, and does so in a way which, if it were not conventional in the beginning, in the hands of those who first adopted it, has at all events become so by frequent reiteration. We do not know why the younger generation of novel readers, fed for the most part on English reprints and translations from the French and German, and possibly not over-fastidious in their requirements, might not find this story readable. John André is the hero of the tale, and he and an American friend, who gives the title to the novel, are depicted not only as skilful intriguers and gallant soldiers, but also as most ardent lovers. In this latter particular, at least, the story is far enough from pleasing us, and, if we had any young readers to whom it was desirable to impart a knowledge of the early days of the Republic, we should much prefer to see them supplementing the information of their school-books with Cooper's 'Spy' than with Mr. Peterson's historic novels.

'Times and Places' is a book of a kind which only people with more ambition than talent, and more spare time on their hands than either, are, for some inscrutable purpose, permitted to write. It consists of rather more than four hundred closely printed pages, which are filled with didactic and dreary tales, supposed to be written by stones. The first one, which, under the title of 'Three Venezuelan Heroes,' is devoted to biographical sketches of Bolivar, Paez, and Miranda, is told by a stone in the cathedral of Caracas. One of the foundation-stones of an hospital, another from a reservoir, an Australian pebble, and so on, contribute their quota to the work.

What between Queen Kate, Queen Elizabeth, Queen Margaret, Queen Helen McGregor, and the like, republican royalty, as exemplified in the various heroines of 'Queens,' has somewhat palled upon our taste. Possibly, it is from having met rather too frequently, in fiction, that peculiar variety of the American female who turns gracefully from dishwashing or other humble employment to shed a casual ray of information into the darkened mind of her lover, painfully stumbling over a Latin verb, or a problem in the higher mathematics, that we are growing a little critical in her regard. She is indubitably a noble specimen of what womanhood may attain to when once she has the coveted ballot, and has learned never to marry until it is absolutely certain that she has found the right man; but while she is painfully feeling the way to that far-off perfection, she is not, on the whole, an entirely cheerful object of contemplation. Her agonizing pangs of soul,

especially at the period when her early lover, now her husband, turns out a selfish tyrant, not half so capable of appreciating her as is his nearest male friend, are, above all, painful to witness. Nor are her views on dress, on amusements, on cookery—profound and far-reaching as all of them are—of a kind to make one believe that she has really come, as yet, into a tangible kingdom, ready though her adherents be to dub her a queen.

'The Yellow Flag,' by Mr. Edmund Yates, is a novel which we cannot praise. The author has taken great pains, apparently, to substitute for those qualities of a novel which make it improving, or at any rate harmless as well as entertaining, only such scenes as excite a morbid and unhealthy interest in what society is generally pleased to ignore if it cannot remove. The freedom from this fault has always been one of the principal merits of the English novel, although it is one that has never been maintained with scrupulous exactness. Mr. Yates would do better by adapting himself to the prevailing prejudice than by showing his readers what dirty corners there are in the world.

'Lady Sweetapple; or, Three to One' is the name of a poor imitation of a novel, by Dr. Dasent. In long and wearisome padded pages is described the rivalry of two women to win the stubborn heart of a lovely and fascinating youth. Both are disappointed; the prize is carried off by the poor governess.

Another of Mrs. Edwards's novels has been exhumed by her enterprising publisher, and we presume that many who have been entertained by her later stories will be inveigled into buying this her first one, 'Philip Earnescliffe; or, The Morals of May-Fair.' We can assure them, however, that they will be disappointed. Occasionally, it is true, we find a phrase that gives promise of the cleverness she has since shown, but such exceptions are rare; and we are put off with a very sensational story of a disagreeable kind—of the love, namely, between one married man and another's wife, all of which is told with a certain amount of force, but with a greater amount of crudeness.

That a writer who keeps her pen so busy as Mrs. Oliphant should write novels of varying merit is perhaps to be expected, but even one whose philosophy has approved of this maxim is tolerably sure to find unexpected corroboration of it in 'At His Gates,' which is, or was lately, her last novel. The same mind which produced the ingenious, pleasing, and wisely-humorous 'Miss Marjoribanks' has here descended to dreary dulness.

'On the Eve' is the last of Turgenef's novels which has been added to the "Leisure Hour Series." Under this name, those who are familiar with the story in the French and German translations, in which its title 'Hélène,' or 'Helena,' has reference to the heroine, will not at first recognize their old friend, now offered to the English-reading public. Of all Turgenef's works, this is most thoroughly a love-story, told with all the grace and beauty for which the author is famous. In the beginning we are introduced to two young men, Bersieneff and Shoubine, and the heroine, Ellen. Bersieneff is a shy, enthusiastic, timid, studious, unselfish young man; Shoubine a merry, pleasure-loving, sensitive young fellow, with artistic tastes. Ellen is a girl of a very quiet, reserved, but exceedingly ardent nature; and with her both of these young men are beginning to fall in love, each after his own fashion. Soon Bersieneff bethinks himself of a friend of his, Insaroff by name, a young Bulgarian, whom he invites to share his lodgings in the country with him. He introduces him to Ellen, having first spoken of his earnest devotion to his country and his hatred of the oppression of the Turks. Gradually Bersieneff sees Ellen's interest withdrawn from himself and turned towards his ruggeder friend. He is resigned to his bitter fate, and utters no murmur of complaint. At last, Insaroff, feeling himself entangled, and having made a vow to sacrifice love itself to his patriotism, determines to leave the country, without even bidding good-bye to Ellen. She suspects this, and, in the revulsion from a feeling of despair, with sudden energy rushes from the house to prevent him. She meets him, he acknowledges his intention, relents, and vows to take her for his wife. Soon (for this all takes place just before the breaking out of the Crimean war) political troubles require him to depart for Bulgaria; they are secretly married, much to the horror of Ellen's parents, who had been planning a most respectable match for her. They, however, adapt themselves, though reluctantly, to circumstances, and Insaroff, already in broken health, leaves Russia with his wife. They reach Venice, where they make a short stay, the description of which forms one of the most beautiful episodes of the book. We see them in that fascinating city, young, loving, and enjoying everything like young lovers, while behind all—beneath the merriment, the life, the beauty of the warm South—stalks the grim terror which Insaroff's delicate health arouses in both their hearts. It is their constant companion, which they can never forget. Just as they are about to leave the city, Insaroff dies suddenly. Ellen crosses to Bulgaria, writes a letter to her parents, saying they will never hear of her again, and disappears entirely. Such, in barren outline, is the story. No language of ours could adequately describe the masterly portrayal of the unselfish, self-sacrificing devotion of the half broken-hearted Bersieneff, the sad levity of Shoubine, the overpowering passion of Ellen, the reluctant but triumphant love of Insaroff. 'On the Eve' is a prose tragedy, whose great merit is that it is poetical. It shows us all the force of passion—how it may override every feeling and every law, and (for we live in this world after all) how it brings its own punishment; how nothing can be a law unto itself. It is perhaps this suggestiveness of the mutual dependence of all things which, while it leaves the story pathetic, saves it from being comfortless. Then, too, all the characters are true to themselves; they suffer, but—in the case of Ellen notably—they are ennobled by their sufferings; they prefer their distress, as would any unselfish person, to sordid, ignoble ease.

'A Twofold Life' is a novel translated from the German of Wilhelmine von Hillern, which treats a great deal more of various forms of profligacy than one cares to see in a book intended for the family circle. He who leads the twofold life is Heinrich von Ottmar, who, when on his good behavior, calls himself Heinrich, but when, as is very often the case, he abandons himself to evil ways, translates his name into the more appropriate French, and as *Henri* imperils the virtue of every woman near him. In general, the German novelist is notorious for stuffing a suit of clothes with some moral quality, and calling the product a human being, but here we have the clothes—the richest purple court-dress—stuffed with all sorts of immoralities, and the result is a bad and tedious representation of a bad life.

'Beechwood' is a story written in the form of a diary by a young girl. There is nothing, or rather there used to be nothing, when girls kept diaries, so sure to arouse the generally inert curiosity of young men about young women, as those frankly written journals containing an account of the doings of the day and the "heart thoughts" of the lovely creatures themselves. If this one is to be taken as a sample, it is easy to see why they were always kept so jealously guarded from the prying eye of youth; they would chill the most ardent lover. In 'Beechwood' "Nannie" falls in love with "Hal," they become engaged, but he, false man, flirts with "Sallie," so that Nannie breaks the engagement, but still forgiving the traitorous Hal. She went abroad, as is usual in such cases, to "bonnie Scotland, and spent days and weeks amid the enchanting scenery of the Highlands; came down to Edinburgh, replete with interest of the olden times; visited its castle and cathedral, and other places of historical interest; stood in silent awe in the audience and bed chambers of the beautiful but ill-fated Mary, Queen of Scots, and fancied we saw the fierce conspirators enter through the secret door behind the tapestry and drag from her royal presence the terrified Rizzio, who vainly clung to her for the protection that, queen though she was, she was powerless to yield. . . . From Edinburgh we went to Glasgow; from thence to Ayr, where lived and sung the immortal Burns; then through intermediate towns and cities to Stratford-upon-Avon, where sleeps the man whose wonderful dramatic genius towers aloft in the great world of literature." And so on through the greater part of Europe and the East. The man she marries is "Uncle Ralph," her grandfather's adopted son, whom she has always been fond of; and feminine justice is done her by her hearing from Nettie that "Sallie looks faded and broken, and is very languid and insipid, except when in a gay crowd, surrounded by gentlemen, when she is charming." She is also pained by seeing how worn and old Hal looked. "Ralph looked, as they stood together then, at least ten years the younger." Terrible indeed is the fate of those who bruise a loving heart.

A BATCH OF SCHOOL-BOOKS.*

A NEW Latin Reader, by Mr. R. F. Leighton, has some features to be approved, some that may be thought questionable. We entirely agree with the proposition in the preface that the first associations with any language ought to be such as to make it as far as possible like a living tongue. But we have withal a feeling that a book of selections might be made of a new book is needed—with no very violent patching, from ancient authors alone, without resorting to modern Latin. There is something, too, in the old-fashioned notion about the depth of early impressions. Eighteen hundred years ago, an experienced teacher thought that even the copies set in

'Human Anatomy, Physiology, and Hygiene. A Text-Book for Schools, Academies, Colleges, and Families. By Joseph C. Martindale, M.D., etc.' Philadelphia: Eldredge & Brother.

'First Book on Analytical Anatomy, Physiology, and Hygiene, Human and Comparative, for Common and Grammar Schools, and for Families. By Calvin Cutter, A.M., M.D.' Philadelphia: J. B. Lippincott & Co.

boys' copy-books should have *non otiosas sententias sed honestum aliquid monentis.* "These associations," he goes on to say, "accompany the learner to old age, and, imprinted on the tender mind, will tell even on character." As far as possible, we would have elementary books packed full of gems and nuggets from the rich treasurehouse of Greek and Roman wisdom. Now, a great many of the sentences in this book strike one as rather of the *otiosae sententiae* order, just a little bit like our aimless old friend Ollendorff. To take rather an extreme instance (p. 6): "*Suntne puellae in silva? In ripa sunt puellae, cum rosis rubris et albis.*" The aim is here to make Latin seem simple and natural and attractive, which is all very well. But the sentiment, the tone, is romantic, chivalresque, Germanesque, rather than classical; in fact, faintly savoring of the Byronic:

> "And peasant girls, with deep blue eyes,
> And hands that offer early flowers,
> Walk smiling o'er this paradise."

It is not such an idea as the boy will be likely to come across in reading real Latin, or will care to treasure up for profitable meditation against the day when the grasshopper shall be a burden.

Of course, not all the sentences in this book, nor indeed many of them, are like this. Still, for many reasons, the objection holds that it is not safe for boys to begin with modern Latin. As a means of instruction, writing Latin is invaluble. But studying modern Latin is a different thing. Of Latinists of a former age, very few excel David Ruhnken. But how often he and other eminent men of his day have gone astray, let the 800 pages of Krebs's 'Antibarbarus' testify. At this day two men, known wherever the Latin language is held in honor, are perhaps more thoroughly saturated with the spirit of Latinity than anybody else—John Nicholas Madvig and Frederic Ritschl. But Latin, despite its regularity and its formulas, is so subtle, so intricate, so skittish, so much like a trout, or a horse, or a woman, that it might well be held unsafe to use even the Latin of Ritschl or Madvig for elementary purposes.

There is another tendency in this book, of which it may be heretical to speak disrespectfully, but which we cannot help regarding as a mischievous one. In Germany, the complaint is rife that the teachers in the gymnasia are too ambitious to imitate university-teaching, too much inclined to lecture and teach glittering generalities, and to neglect the humbler rudiments. In America, the evil shows itself in what may be called outside etymologizing. In this Latin Reader, when the boy gets as far as Interrogative Pronouns (p. 30) he is initiated into the following mysteries:

"SYNONYMES.—*Mare* is *the sea* (from root *mar, to wear away*), as a desolate waste, in opposition to the land; *pelagus* (*pelazo, to glisten*), *aequor* (*aequus, level*), *the expanse of the sea when calm; pontus* (root, *po, to go*), *the deep sea* as the highway of nations."

What are we coming to? Is this making a living tongue of it? Had Lucretius any idea of "*mar, to wear away,*" when he wrote "*Suave mari magno,*" or Virgil of that very doubtful "*pelazo, to glisten,*" when he wrote "*Sic cunctus pelagi cecidit fragor*"? This is not looking at it with Roman eyes; this is the thing as seen through the silver-bowed spectacles of some myopic German. Seriously, a line ought to be drawn somewhere. After the boy has learnt inflexions thoroughly, it will be a great help to him to be taught the meaning of derivatives and suffixes; he should learn *ago*, for example, and with it *agilis, actus, actio, actuosus, actor, agito, actito*, etc., etc., and group details under general laws. When he has studied Greek a while, it will not be inopportune for him to see that *pater* is the same word with πατήρ and *mater* with μήτηρ; that *-men* in *agmen* corresponds to *-μα* in ποίημα and *-tus* in *factus* to *-τός* in ποιητός, and such other simple things as he can learn without getting confused. But here, in elementary education, it is well for him to stop. When he is man-grown, if he chooses to compare languages and to study ethnology and history and all that sort of thing, he may find his account in etymologizing. But this is a wholly different line of study, and with a totally different aim and scope; and, in the study of special languages, etymology is of very little account indeed. Suppose a French boy were studying English, it would help him precious little to know that *canvas* and *hemp* are both derived from *cannabis*, or that *wig* comes from *pilus*. He must learn the meaning of the words *canvas, hemp,* and *wig* by themselves, and inside the English language. And so with the Latin. Outside etymologies cannot teach much. Take, for instance, the synonymes for "sea" mentioned above. *Mare* is, of course, the common word, both in prose and poetry. But there is one very simple fact which writers on synonymes and etymology are apt to overlook: like many other words *mărĕ* is often metrically inconvenient, especially in the plural *mărĭă*; where a heavier word is required, a trochee or (before a consonant) a spondee, *pontus* is a great convenience; or again, *pĕlăgi, pĕlăgō, pĕlăgē*, etc., may serve in many cases to fill out the measure. Besides while Greek words are used sparingly by the best authors, πέλαγος and πόντος, words as old as Homer, bring with them a host of reminiscences, and in themselves give a poetical tinge to the sentence, which *mare* does not. But if the learner starts with the idea that *pelagus* is "the expanse of the sea when calm," because there is (or is not?) a "*pelazo, to glisten,*" he will hardly see why the early mariner

> qui fragilem *truci*
> Commisit *pelago* ratem

should have needed any oak and threefold bronze around his heart; and if he views the *Oceanus dissociabilis* as the highway of nations because there is a root "po," then the long and savage sea rolling between Rome and Ilion—

> Dum longus inter saeviat Ilion
> Romamque pontus:

will not be to his mind an obstacle like Achilles's οὔρειά τε σκιόεντα θάλασσά τε ἠχήεσσα, but the first opening to Suez Canals, California railways, and Pullman cars.

After saying so many ungracious things, rather of the mode of study which this book represents than of the book itself, it would be very unjust not to add that the specimens given can hardly be called fair specimens of the book, and that a beginner can learn a great deal from it after all. The questions for review will also be of use to teachers who may not use the Lessons as a reading-book. The dates and particularly the marks of quantity require a great many corrections.

Mr. Swinton's plan of a primary history is a good one, and it is fairly well carried out. Sense is more easily achieved than simplicity, and the author's rhetoric at times must, we imagine, prove obscuring either to the thought expressed or to the memory of the learner. "It is related [of Columbus] that when a lad he took to the water as though it were his native element," says a passage on page 3, with a marginal direction to the pupil: "Tell about him when a lad." The teacher need hardly be astonished on receiving in reply the statement that the young Columbus was very fond of swimming. Again, the pupil will readily answer "Yes" to the question pointing the moral of Columbus balancing the egg (p. 13), "which was a courteous but severe rebuke to the pretender, was it not?" But how intelligent will be his assent? Before we take leave of Columbus, we may remark that space might have been spared for the interesting fact that Columbus's remains, after having been interred in Hayti, the scene of his earliest settlement in the New World, now rest in the cathedral at Havana. And in place of the worthless portrait of him, a correct view of this cathedral would have better answered the purposes of illustration. Mr. Swinton teaches bad history when he writes (p. 29): "The Indian had not the rudiments of civilization in his character. He had no sense of the obligation of *law;* he had no capacity for settled industry. To try to civilize him was but to destroy his native virtues and to give him no others in their stead." This agrees neither with what is now taking place in the Indian Territory, nor with the actual condition of the tribes inhabiting Northern Ohio and Northern Georgia in the early part of the present century. On page 38, Capt. John Smith and Pocahontas perform their little melodrama as naturally as if critics had never been heard of. On page 112 we read: "Jefferson was the great *political philosopher* of the Revolution"; and when the child is asked what this means, he is expected to answer "that he was the ablest writer about the principles of our government." Wilkes Booth (p. 186) is said to have been probably insane. Except these erroneous or questionable teachings, we find little to object to in Mr. Swinton and a good deal to praise. He knows the value of maps, and does not spare them.

Hallam's 'Constitutional History of England' is far better suited to the 'Student's Series' than the 'Middle Ages' of the same author. The knowledge of mediæval institutions has made such vast progress since the publication of the latter work that it required far more vigorous excision than Mr. Smith gave it, and far more extensive additions than the few extracts from Freeman, Stubbs, Maine, and Mr. Hallam's own notes, to adapt it in any degree to the needs of the present day. With the later 'Constitutional History of England' it is different. Here the facts were all well ascertained, and the student could not have a better guide over this important ground than a writer of Mr. Hallam's learning, conscientiousness, sagacity, and wide liberalism. It must be added that in the few cases where important acquisitions of knowledge have been made since Mr. Hallam wrote, this volume is open to the same criticism as its predecessor. For example, it is understood that documents that have come to light since that day have given a quite new aspect to the vexed question of the guilt of Mary, Queen of Scots. If this is so, it is an injustice to students to turn them off with merely Mr. Hallam's note (p. 650), admirable and complete as the note is for the facts which he had at his command. Perhaps it would have swollen the volume to an excessive size, but it would have added greatly to its value,

to bring it down in some way to the present time, instead of stopping at the accession of George III., more than a hundred years ago.

Miss Hall's 'Our World' is a combined atlas, geographical manual, and condensed history, prepared with special avoidance of the too common and once universal fault of overloading the learner's memory with names and dates. Physical and descriptive geography is attractively presented, and, what with the narratives and the pictures and the not too crowded maps, we should suppose a class would eagerly look forward to each succeeding lesson as if "to-morrow to fresh woods and pastures new."

Two text-books on physiology call for brief remark. Dr. Martindale's is in the main a fair presentation of facts, somewhat drily told, with occasional inaccuracies; for instances of which see the definitions of organic and inorganic elements, and the lists of proximate and ultimate elements. Chilblain is "frost-bite, particularly of the feet." Scrofula is very poorly defined. The mortality from typhus and typhoid fevers is stated as being about one in twenty! The doctor tells us that tea taken in the evening has a tendency to induce sleep (p. 186). He neglects to speak of three most important points of hygiene, namely, the avoidance of excessive study; the desirability of a simple, abundant, and frequent supply of food to all young people; the intolerable unwholesomeness of the favorite diet of the American farmer and mechanic. There is, however, a great mass of useful information in the book. Dr. Cutter is already well-known as a writer of school physiologies. The present volume is attractively printed, and illustrated with a good many cuts descriptive of human and comparative anatomy and physiology. The work has a cheerful and taking air, and we recognize many of the anecdotes which gave interest, in our youthful opinion, to the author's former text-book upon physiology. The present seems to be a much abbreviated reproduction of its predecessor, with a good deal of matter upon comparative physiology and anatomy, which is well chosen.

The Foreigner in Far Cathay. By W. H. Medhurst, H.B.M. Consul, Shanghae. (New York: Scribner, Armstrong & Co. 1873.)—Some of the chapters of this little work were originally delivered as lectures in Shanghae before the author's return to England; and though his object in publishing is a serious one, each topic is treated in a manner appropriate to the *conversazione*, with no higher pretensions to thoroughness or profundity. The result is an entertaining if superficial view of the mode of living at the English settlements, of the relations between foreigners and natives, and of the Chinese character, habits, and disposition. Slight as the sketch is, it is based on no inconsiderable knowledge of the subject; and, as compared with so stuffed and elaborate a work as Mr. Doolittle's, is calculated to leave a clearer and more lasting impression on the mind of the reader. "Shop Signs," "Advertising," "Social Institutions," "Correspondence and the Press," "Use of the Written Character for Decoration," "Chinese Proper Names," "Travelling and Porterage," are among the inviting headings which one encounters in turning over these pages; while the moot points of this "Eastern question" are discussed in the "Position of Foreigners in China," "Character and Habits of Foreign Residents," "Missionaries," "Consuls and Customs Authorities," "Character of the Chinese," etc. Mr. Medhurst talks with great frankness and apparently without bias of his countrymen and the natives. After remarking that "the opinion prevalent at home that foreigners mingle in Chinese society generally is altogether a mistaken one. The conventional rules of the Chinese are so constituted, and their habits of thought and customs so peculiar, that there is little or no encouragement to court acquaintance on either part, even were the entire ignorance of each other's language not to present a serious bar in the way of an interchange of ideas"—he goes on to say: "There is perhaps no country in the world, frequented by the English-speaking race, in which merchants are so lamentably ignorant of the customs and resources of the locality in which they live as they are at this moment in China; and this is entirely to be attributed to a want of familiarity with the language." Of the Chinese he speaks with a degree of favor proportioned to the prevailing misconception of their character, and his account of them as cooks and servants particularly will cause many of his fair readers to sigh for the coming Chinaman. The delicate missionary problem is discussed in a fair and temperate spirit, and we shall close our review of Mr. Medhurst by quoting a single passage relating to it:

"In connection with the limited results of Protestant missionary teaching so far, I owe it to the Protestant missionary body to state that they themselves ascribe much of their want of success to the demoralizing effects of the opium trade, as well as to a failure on the part of foreigners generally to support them in their teaching by a conduct and example worthy of the Christian profession. It cannot be doubted that the opium traffic has much to answer for in the way of neutralizing missionary efforts, not only in its direct effects upon the victims themselves, but in the hatred and suspicion of everything foreign which it has engendered in the minds of the natives generally. But as regards the other counteracting influence which the missionaries plead in bar of success, I think they are apt to take up a too decided opinion. Residence in the East, and association with heathen and less civilized races, do not as a rule tend to elevate the moral and mental standard to which the European may have been schooled in his own country. But foreign residents in China are, I think, as little affected by this demoralization, if I may so term it, as perhaps any wanderers into Eastern climes; and if the Chinese take the trouble to study them at all, it is rather to contemplate with wonder their (in the Chinese idea) *bizarre* habits and notions than to draw any deductions from their conduct in a moral point of view. Individual instances no doubt do occur in which the missionary finds himself posed by allusions to laxity of conduct in his own countrymen; but I question whether the objection seriously presents itself to the minds of the masses as an argument against Christianity."

Fine Arts.

THE ART OF PHOTOGRAPHY.*

WHETHER photography is or is not one of the fine arts is a question often disputed, even with acrimony at times, amongst photographers, and the craft is divided not only in respect to the pretension but in the practice. One set, or sect perhaps, maintains in theory and method that a photograph may be designed as a picture, its parts separately produced in different negatives, and combined in the printing so as to give the appearance of having been taken from a carefully arranged *tableau vivant* or natural landscape, and by more or less retouching, as the combination printing was worse or better done, made so *vraisemblable* as to make it in general effect indistinguishable from a photograph of a completely realistic picture. This perfection of artifice is declared by its school to be substantially the same as art: it involves pictorial conception, they say, pictorial judgment and design (using the word in the sense of intention)—it is therefore art. Its value is not in the reproduction of facts, but in making pleasing pictures; it repudiates the supremacy of the scientific element and offers its labors to the idler muses.

The other, the older and orthodox, school of pure photography, with which Mr. Gordon holds, repudiates the pretensions of the combination printers, and sets its chief value purely in the faithfulness and completeness of the rendering of an individual scene or object, tastefully chosen if it may be, judiciously lighted; and beyond this, in good manipulation. To these photography is an art of record purely, and admits no sophistication beyond the remedying of the inevitable defects of a mechanical operation. The best that nature does for us is the best that can be dared by photography, and the limit of liberty with her which the purist school permits is the printing a cloud in a flat white sky when it was not possible to get one in the sky direct from nature—not as a thing to be proud of in the work, but as a regrettable expedient in a case where photography is almost inevitably at fault. This is undoubtedly the highest and therefore best and most correct view of the art-science, and there is in it a completely artistic side—taste in selection of subject and in its lighting, a perception of the happy accidents by which nature points to invention and composition, delicate sense of gradation in the subject and treatment of the photograph, so as to keep it broad and massive; and beyond this come the manual dexterity and judgment which grow out of long experience, as well as native delicacy of weighing the intensity of light and the qualities of the negative as finally affecting the print. In all these qualities Mr. Gordon stands amongst the first—in some the very first—of the English photographers, the leading amateur in a country where amateurs are perhaps the best photographers, and where for outdoor nature the photographers are the best in the world at this time.

The readers of the *Nation* will perhaps remember the account of a day with the "Field Club," an association to which and its members is due a large part of the English progress in practical photography as applied to outdoor work. Its winter meetings are occupied in examining the practical appliances of field-work, and those of the summer in a friendly competition in applying them. Of this organization Mr. Gordon is one of the leading spirits, and by general admission *facile princeps*—uncompromisingly of the purest school, ablest of dry-plate workers, and, in many respects, of living photographers. The publication of this collection of album photographs (their size is only about 7 x 5) will enable those who are interested in photography *per se*, as well as those who care for the lovely and pictorial landscape of England, to see what may be done in this charming art of record, and, so far as Mr. Gordon is concerned, for the first time, as his views have not before been published. Every one of them is a lesson not only in photography but in landscape rendering, so far as monochrome can go, careful in

* 'Twenty-five English Photographs, being a Selection of Views in England and Wales, photographed by R. M. Gordon, F.R.G.S., Member of the Amateur Field Club of London,' etc., etc. London: W. J. Stillman; New York: C. F. McKim.

choice of position, judicious in lighting of the subject to the best advantage, and full of light and tone to a remarkable degree. One is a view of Lynmouth, with a wooded hillside filling nearly the whole distance, which may be taken as the standard of rendering of distant foliage—curiously subtle and tender in gradation and chiaroscuro, every shadow full of detail, and every light as free from that chalkiness and glitter which make the despair of artists in the work of photography. "At Bettws-y-coed, North Wales" is equally remarkable for nearer foliage and for the perfect rendering of dreamy, tremulous water; while a "Cottage in South Devon" is a superb study not only of foliage but of local tone and luminous massiveness, the sun being almost at the back of the spectator and falling full on a picturesque thatch-roofed farm cottage. In "Near Shanklin, Isle of Wight," a broad shadow falls on a blackberry hedge at the left, while its counter-row is in full sunshine; but in the shadow, as well as in the light, every twig and leaf is brought out, subdued and yet illuminated, while far between the two the distance melts away with pale crossing shadows. This light-in-shade is the difficult and triumphant thing in photography, and Mr. Gordon is its master.

The skies in these views are mainly printed in by a second printing, but the whole is done with such care and unobtrusiveness that one hardly realizes more of the clouds than that they break the expanse. Every print is made with the care of a gem-cutter, and in one or two cases a whitewashed cottage wall, by its subtle gradation of light against light, and light against the sky, shows a triumph over technical difficulties hardly likely to be appreciated by an unpractised eye, but which a photographer will at once feel the measure of. One may be assured that, with its present resources, photography cannot do more before nature than is done in these views.

GERMAN AND FRENCH.

A SUCCESSFUL GARDEN.

PLAY AND PROFIT IN MY GARden. By Rev. E. P. Roe, author of 'Barriers Burned Away.' A record of experience, showing how a professional man, gardening for recreation, with two and a quarter acres, received in one season $2,000 from the sale of fruit and vegetables, beside an abundant home supply.

Will be published in April in 1 vol. 12mo. Price $1 50.

DODD & MEAD, Publishers,
762 Broadway, New York.

PARKER'S

NATURAL PHILOSOPHY.

REVISED BY PROF. PLYMPTON.

A School Compendium of Natural and Experimental Philosophy. By Richard G. Parker, A.M., thoroughly revised and enlarged by Geo. W. Plympton, Professor of Physical Science, Brooklyn Polytechnic Institute. 12mo, 456 pp., price $1 75.

The favor with which this book has, from its first appearance, been received by teachers has induced the publishers to offer to the schools of the United States a revision and enlargement of the previous editions. This combines such alterations of the text as the recent progress in physical science demanded, and the addition of an appendix of new matter with a number of new illustrations. In these additional pages the mechanical theory of Heat, the practical relation of Hydrostatics and Hydraulics to Mechanical Engineering, the later uses of compressed air, and the theory of the spectroscope, have received a due share of space. Prof. Plympton's high reputation is a guarantee of the excellence of the revision.

Examination copies furnished to teachers upon receipt of one-half the price by the Publishers,

COLLINS & BROTHER,
370 Broadway, New York.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

OUR WORLD
SERIES OF GEOGRAPHIES.
Complete in Two Books.

OUR WORLD, No. II.; or, Second Series of Lessons in Geography. By Mary L. Hall.

From LOUIS AGASSIZ, LL.D.,
Professor of Zoology and Geology, Harvard University.

CAMBRIDGE, January 1, 1873.

MY DEAR SIRS: I welcome 'Our World,' No. II., as a valuable contribution to the modern method of teaching geography. It is a very commendable and successful effort to add to the daily improving means of making geography more attractive in the school-room.

From Hon. GEO. S. HILLARD, LL.D.,

MY DEAR SIRS: I think Miss Hall's work one of great merit. It invests the study of Geography with the attractions that properly belong to it. It gives prominence to the facts, distinctions, and attributes which are permanent, and the work of nature, and does not burden the memory with those dry details of political geography which are variable and accidental.

From GEORGE B. EMERSON, LL.D.

GENTLEMEN: I have never seen a school-book which satisfied me more entirely. Its descriptions of regions and of states are admirable, clear, and characteristic, at once philosophical and picturesque, giving just what a child will rejoice to know and will easily remember.

From Prof. A. P. PEABODY, D.D.,
Harvard University.

CAMBRIDGE, January 8, 1873.

GENTLEMEN: I have examined Miss Hall's 'Second Series of Lessons in Geography,' and am prepared to pronounce it, in plan, in method, and in execution, very far superior to the school geographies previously in use. Its introduction would convert geography from the driest and dullest of school-studies into one of constantly fresh and vivid interest.

Halsey's Historical Chart.
Goodwin's Greek Grammar, Reader, Moods and Tenses.
Leighton's Greek Lessons, Liddell & Scott's Lexicons.

GEORGE ROUTLEDGE & SONS,
416 BROOME STREET, NEW YORK,
Have now ready
A New and Cheap Edition, complete in one volume,
OF
MEMORIALS OF A QUIET LIFE.
BY AUGUSTUS J. C. HARE,
Author of 'Walks in Rome.'
Crown 8vo, extra cloth, price $5.

"A book which will cause every right-minded reader to feel not only the happier, but the better. It contains the record and monument of features that are among the noblest, the truest, the most beautiful, the most elevating of English home life."—*Conservative.*

Also now ready.
THIRD AMERICAN EDITION
OF
WALKS IN ROME.
BY AUGUSTUS J. C. HARE.
Crown 8vo, 710 pp., extra Etruscan cloth, price $3 50.

"It is the most complete monograph for the traveller that has, we think, ever been published. It is a cyclopædia on the sights of Rome; it is of interest to those who are going and to those who have returned; to the one as 'guide, philosopher, and friend'—and now that it is written, no sight-seer should go to Rome without it—to the other as memento; but it is, further than this, so generally interesting that few will find it other than delightful reading."—*Evening Mail.*

WOOD ON BRIDGES. ROOFS.

JOHN WILEY & SON,
15 ASTOR PLACE,
Publish
A TREATISE ON THE THEORY
OF
THE CONSTRUCTION OF BRIDGES AND ROOFS.

TO TEACHERS AND SCHOOL OFFICERS.

McElrath's 'Dictionary of Words and Phrases used in Commerce, with Explanatory and Practical Remarks,' is the only work of the kind published in the English Language in such form as to render it available for ordinary book-buyers.

It is designed to be a Standard Work of Reference, and contains much information of practical value not to be found in other Dictionaries. Its value is permanent, and it ought to be placed in every Schoolroom and Library.

Where library funds are not provided, a slight effort among intelligent and liberal patrons will secure the means to purchase a copy for the school.

You can obtain it through the bookseller, or direct from the publishers by remitting post-office money-order or draft on New York.

We will send the book by mail, post-paid, on receipt of six dollars ($6).

The book is bound in Half Russia, which is the best and most durable leather, and the cheapest in the end.

We solicit your early orders for the work.

TAINTOR BROTHERS, *Publishers,*
678 *Broadway, New York.*

THE WEEK IN TRADE AND FINANCE.

MARCH 24, 1873.

THE week closes with an easy money market, the last quotations being from $\frac{1}{3}\frac{1}{2}$ and interest down to 4 per cent. per annum. It is probable that the banks have been selling some of the Government bonds which they hold in their loan account. Exchange was neglected and unusually dull, even for Saturday. Prime sixty-day sterling is quoted at 107⅞ to 108. The Treasury has withdrawn about $360,000 of the extra greenbacks.

The legislative examination into the affairs of the Erie Railroad reveals strange accounts of the doings of the Dix-Sickles combination at the time of Gould's surrender. It is stated that Gould himself brought about the re-election of the directors who came into power on the day previous to his defeat, and those who then resigned were purchased for the following sums: Lane received $67,500; Thompson, $67,500; Simons, $50,000; Archer, $40,000; Hilton, $25,000; Otis, $25,000. Gould's consideration was the well-known confirmation of a release of claims held against him. A few days before the election of the 9th July, 1872, the Erie directors put into the hands of Bischoffsheim and Goldschmidt consolidated bonds, the proceeds of which were $6,080,000. On account of these bonds, Bischoffsheim had paid to the Erie Company something over $4,900,000, leaving a heavy balance still due. Besides, the firm had charged a commission of 2¾ per cent. One of the witnesses exhibited photographs of vouchers and receipts which showed that large sums of money had been paid to Sickles, Crouch, Sharpe, and others. Among these vouchers was one for $35,000 expended for hotel bills of Gen. Sickles and his retinue.

The verdict in the case of David Scull *vs.* The Kensington Bank of Pennsylvania is of great importance as bearing on the responsibility of banks for special deposits. The plaintiff had been for thirty years a depositor in the bank, and, by permission of the cashier, had left a tin box containing bonds in the vault for safe keeping. He paid nothing for the privilege. The bank was robbed, and the plaintiff sought to recover on the ground that the bank had not used due diligence to secure the place. The jury returned a verdict for plaintiff for $37,000, the value of the bonds with interest.

Financial circles have been somewhat disturbed during the week by the discovery of forged certificates of Wabash and Fort Wayne stocks. These were happily detected before they had circulated to any great extent, and were traced to Oddie & Austin, stock brokers, by whom they had been pledged as collaterals. Mr. Austin has absconded. The loss is not believed to exceed $40,000.

The failure of the Bull's Head Bank, now in the hands of the United States Marshal, pending bankruptcy proceedings—an old State bank uptown—has occurred through defalcations. Its books and accounts have been found mutilated and partly destroyed, and no definite information has yet been furnished to the public. The last quarterly statement of the bank, Dec. 28, 1872, was as follows: capital, $200,000; surplus, $85,200; circulation, $6,000; deposits, $1,078,000; unpaid dividends, $2,600; loans, $1,116,800; stocks, $30,700; real estate, $61,100; due from banks, $83,000; specie, $6,000; legal tenders, $72,200; overdrafts, $2,700. Last year a dividend of sixteen per cent. was paid to the stockholders, and the stock has lately been quoted at 180. The bank cleared through the Metropolitan National, but this latter has escaped without loss.

The following is a comparison of the bank figures for the past two weeks; this statement including all the banks in the Clearing-House, State and National:

	March 15.	March 22.	Differences.
Loans	$278,028,600	$275,198,800	Dec. $2,829,800
Specie	16,946,700	17,472,300	Inc. 525,600
Circulation	27,610,400	27,613,600	Inc. 3,200
Deposits	196,095,400	194,623,500	Dec. 1,471,900
Legal tenders	38,715,500	38,304,200	Dec. 411,300

The following shows the relation between the total reserve and the total liabilities:

	March 15.	March 22.	Differences.
Specie	$16,946,700	$17,472,300	Inc. $525,600
Legal tenders	38,715,500	38,304,200	Dec. 411,300
Total reserve	$55,662,200	$55,776,500	Inc. $114,300
Circulation	27,610,400	27,613,600	Inc. 3,200
Deposits	196,095,400	194,623,500	Dec. 1,471,900
Total liabilities	$223,705,800	$222,237,100	Dec. $1,468,700
25 per cent. reserve	55,926,450	55,559,275	
Deficiency in legal reserve	264,250		
Excess over legal reserve		217,225	Inc. 481,475

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$237,727,300	$37,471,500	$275,198,800
Specie	15,394,800	2,077,500	17,472,300
Legal Tenders	34,518,900	3,785,300	38,304,200
Net Deposits	168,151,500	26,472,000	194,623,500
Circulation	27,570,600	43,000	27,613,600

An analysis shows that the National banks have $983,175 above the 25 per cent. requirement, against $1,050,550 last week, and that the State banks, which are not required by law to keep on hand 25 per cent. reserve, are this week $765,950 below the 25 per cent. line, against $1,314,800 last week.

This week's stock market has been dull. The decision of Judge Shepley, of the United States Circuit Court in Boston, refusing to grant an injunction restraining the holders of what are known as the "Berdell" bonds of the Boston, Hartford, and Erie Railroad Company from foreclosing the mortgage, had a disastrous effect upon the shares, which at once declined. Whatever claim to intrinsic value has been put forth from time to time for this stock has been based upon the belief that the mortgage could not be foreclosed, and that a reorganization, with the intention of destroying the shares and making a new issue of securities, was impossible. At present, then, there would seem to be no real value left in the old shares, and in a short time they must take their place amongst the things of the past, or be left, like Mariposa mining stock, with a mere nominal quotable price.

Rumor has been correct as to the consolidation of the different telegraph companies outside of the Western Union, and there will thus be a formidable opposition to the last, and managed, moreover, by its present rulers. It appears these persons sold out their stock in the much-watered Western Union, after having carried it since the price was between 35 and 40, and, in the present situation, they have no chance of re-election. Unwilling to buy back the stock thus sold at its present price—knowing that to be far above the actual value—they threaten to organize the opposition. From all this the community will be the gainer, at least temporarily, by the lower competitive rates on messages, and, with the great experience of the managers of the Western Union, there is no good reason why, in their new rôle, this public advantage from the coming enterprise should not be permanent.

Pacific Mail is again in a distressed condition, if that can be supposed to be indicated by market quotations of its shares. The stock is a dead load to carry, being entirely unavailable as security for loans; and the parties engaged in supporting the price are finding this out to their cost. The Company, which for years has taken no notice of progress, snapped its fingers at rivalry, squandered its subsidies and resources, frittered away its capital in useless assets (having only lately bought, from a defeated lobbyist, a fleet of old side-wheel wooden tubs lying idle in the Pacific), will soon be met in the trade between California, Japan, and China by a formidable rival—the new English Screw Steam Company, which is preparing its ships for the route, and will commence the trips during this year. If with a close monopoly and a Government subsidy the Pacific Mail does so ill, the appearance of such a competitor will not improve its condition.

In investment shares Chicago and Alton has been quite a feature, the price advancing to 113, owing, it is thought, to a contemplated early division of bonds and stock at a low rate among shareholders. This division is to represent money expended by the Company on some of its branch roads. In what manner the division is to be made we have no definite knowledge, but think it not unlikely it will be in shares at a price so low as to make a handsome dividend to stockholders, and at the same time supply the road with a little ready cash. It is rumored that the Panama Railroad Company will also make a stock dividend, doubling their capital, on which they will hereafter pay eight per cent. dividends. The prosperity of this Company is such that a cash balance of $900,000 is left on hand after the payment of the present quarterly dividend. It is understood that the Harlem Railroad will soon be leased in perpetuity to the New York Central, which last will guarantee eight per cent. dividends on the stock.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending March 22, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	100¼	100¼ 101¼	100¾ 101⅛	100¾ 101⅜	100¾ 100⅜	100⅜ 101¼	67,800

The Government list is strong, with a rise in the sixes of '81, and a sudden advance in the new fives to 113⅞. The currency sixes improved to 113⅞ under the relaxation in money.

The Nation.

NEW YORK, THURSDAY, APRIL 3, 1873.

The Week.

THOSE who have the interests of reform at heart will be glad to know that Mr. Curtis has resigned his position as member of the civil-service Advisory Board. As it was to Mr. Curtis's exertions mainly that the creation of the board was due, and mainly owing to his continued declarations of confidence in the President that the public gave their confidence as long as they did, it is gratifying, now that Casey is being reappointed at New Orleans, and Sharpe made Surveyor of this port, to find Mr. Curtis unwilling any longer to lend the strength of his name to what cannot, under the present Administration, be anything more than a pretence. If we suppose that the President really knew or cared anything about this reform, we should say that the treatment Mr. Curtis has received had been a series of insults; but it is every day becoming more evident that the trouble with General Grant is that he does not understand what civil-service reform or reform of any kind means. A number of his appointees holding high positions in the service have left their posts in New York, and are regularly encamped now at Albany, lobbying Mr. Thomas Murphy's charter through the Senate. The President does not give the slightest sign of perceiving that there is anything discreditable in this, although matters have come to such a pass that it now depends a good deal on General Grant's humor what is to be the future government of the city of New York. A long letter from Mr. Peter Cooper to the President on this subject is published, which is written in a positively imploring tone, begging him to call off his Custom-house appointees. And there is reason for it. It has come out, by the way, in the Erie investigation, that the employment of Sickles in the work of buying up the Erie directors for the Bischoffsheim and Goldschmidt party was due in great measure to his influence with the President, and that he actually got an order from Washington authorizing the examination of the Erie books, on the ground of a violation of the internal revenue law, which was so extraordinary that it was "overruled" by Mr. Boutwell, without any one's being bold enough to use it.

We may remark, by the way, as we are on the subject of President Grant's sincerity in reforming the civil service, that we have received from New Orleans a letter in which the writer, an office-holder under Kellogg, says that, to the best of his (very good) knowledge and belief, Casey would not have been removed "had he been no relative" of the President's, who out of delicacy removed him, though all the while thinking him undeserving of that mark of disapproval; and that he was reappointed because of the President's belief that Casey's opponents only wanted to remove him out of their path in order "to get a chance to steal the revenue under some such creature as Perry Fuller." As the population of New Orleans, three years ago, was rather above one hundred and ninety thousand souls, the President was not exactly restricted in selecting a collector of the port to a choice between Mr. Perry Fuller and his own brother-in-law, whether or not a brother-in-law with a revenue-cutter and a damaging Congressional report about his official conduct. As for the question of "delicacy," that we do not intend to discuss at present. Our correspondent's remark, that were Casey now to be removed the place would, "under the civil-service rules," go to Mr. P. F. Herwig, is a remark of a sort which up in this latitude is received with laughter or sighs and groans, according to the temperament of the auditor. Our correspondent also vouches for the "stainless character of J. M. G. Parker," "as the record shows." He says that Mr. Parker, General Butler's brother-in-law, did not seek nor receive any of the fifteen thousand dollars paid to arbitrators in the Water-works case, to which we referred last week. We can only say that we made our statement, that he was to have some of the money, on authority which we are forced to think as good as that of our correspondent, who seems unaware that no money at all was "paid" to the arbitrators—thanks to their roguery's luckily being found out—and whom it may be well to remind that what the record shows in the case of accused persons connected with General Butler may or may not be what the record ought to show. Meanwhile, all these honest gentry, with Mr. Kellogg at the head of them, are in straits for money, nearly every dollar of the property in the city and State being in the hands of the McEnery people, who withhold taxes, much to the dismay of the colored legislators, and appear to have struck their enemy at last in a joint of his harness. As there are rather less than a million of Louisianians, and rather more than sixty millions of State debt already, it is to be hoped that the people may be able to hold out till next winter, when there may be some chance of relief from Congress, the members of which ought certainly to get some instruction on this head from their constituents in the course of the coming nine months.

Mr. Caleb Cushing has written a book which he calls 'The Treaty of Washington: its Negotiation, Execution, and the Discussions relating thereto.' It is dedicated to Count Sclopis, "a man of large stature"—says the description of his person which our jurisconsult draws up—"of dignified presence; of the high breeding of rank, but without pretensiveness, and cordial and kindly in social intercourse," in which latter regard, as we soon learn, he is very different from another arbitrator to whom Mr. Cushing pays his respects further on. Count Sclopis's real greatness, like that of his master, "Vittorio Emanuele," is best understood if we "conceive and picture to the mind's eye the Alpine cradle of this adventurous and martial but cultivated race of Italianized Savoisian princes, nobles, and people"—"the fertile but ravaged valleys of the Rhone," etc., and "the passes of the Valaisian, Cottian, and Graian Alps," etc., where Vittorio Emanuele, Sclopis, Menabrea, Cialdini, were born and reared. The other arbitrators, as well as Count Sclopis, come in for a stroke or two of personal description. M. Staempfli, "with his deep-brown complexion, his piercing dark eyes, his jet black hair"; Mr. Adams, whose "attributes are his own"; the Viscount Itajuba, "with his fair complexion and air of gentleness and amiability," whom the uninformed beholder would take to have been born in "temperate and calm-blooded Europe," while M. Staempfli he would assign to "tropical and passionate America"; and finally, Chief-Justice Cockburn, for whose sake Mr. Cushing evidently has written his whole book, and whom he cuffs and kicks and pinches, and throws mud at, and makes faces at with a vivacity really wonderful in an elderly gentleman of threescore and thirteen.

Sir Alexander, indeed, had a mother, but she appears to have been a French lady, being described by Burke as such; and one of his uncles is that Sir George Cockburn whose services in American waters have "left some unpleasant traces or memories in the United States." In other words, Sir George helped to burn the city of Washington in 1814. Sir Alexander first attracted attention by "placing his lance with the devotion of a Dugald Dalgetty" at the service of Palmerston, regardless of the merits of the cause, on a certain disgraceful occasion, and was afterwards promoted "with unexampled celerity" to his present place on the Queen's Bench; but although he has for sixteen years presided in that and other courts he has "not been raised to the peerage"—"an unusual, if not unprecedented fact, on the reasons for which it is unnecessary to speculate," says Mr. Cushing. And whenever during his Chief-Justiceship Sir Alexander has made his appearance in the literature of municipal or public law, it has been in a way not such as "to invite respect at

home or attention beyond the courts of Great Britain." For instance, he published some years ago a monogram on the subject of naturalization, and it turned out to be an abridgment, very incorrect, of a report made by a board of royal commissioners who had some time before been ordered to investigate a similar subject. "Confused thought" is one of the Chief-Justice's traits, and others are "equivocation in matters of law," a "tendency to declamatory denunciation of adversary opinions," biliousness of temper, prolixity, a disrespect for the Tribunal, negligence, disingenuousness, fault-finding, imputation of bad motives, and half-a-dozen others equally vicious and unworthy, while his manners are, to say the least, not servile or courtly: almost before Count Sclopis had ceased speaking on the day when the Tribunal's decision was announced, and before the sound of his words had died on the ear, the Scot snatched up his hat, it seems, and "disappeared, in the manner of a criminal escaping from the dock," and without a word of farewell to his fellow-judges. On the whole, whatever Sir Alexander's behavior may have been, this record of it is conceived in admirable taste. It contrives to degrade Mr. Cushing and Mr. Cushing's employers at the same time that it abuses the other side and insults the Tribunal. It will tend to promote still further the good understanding which sanguine people once hoped would be the upshot of the negotiation.

The Special Session of the Senate adjourned on the 27th of March, after having confirmed a host of appointments, and done one or two sensational things which, rather than otherwise, tend to confirm the current theory that the Senate holds popular opinion in some contempt—as indeed, to look at both sides of the case, popular opinion not seldom makes it easy for the senator to do. We do not know, however, what excuse there was for letting Caldwell slip away by a resignation; for declaring that the charges against Clayton were not sustained, though his case is so notorious that the House turned out a Democratic representative from Arkansas who held Clayton's gubernatorial certificate of election, and turned him out on the ground that Clayton had fraudulently given it to him in consideration of his political aid. Probably it is a high estimate that sets down six men in the United States as believing Clayton innocent. Thirty-three senators voted that the charge was not sustained, and thirty-three were absent or refused to vote, the Democrats mostly declining on the ground that it was idle to vote on seven hundred pages of evidence, which a committee had had in hand two years and threw to the Senate a few days only before action on it was asked for. Six senators, however, all Southern men—Norwood (Ga.), Goldthwaite (Ala.), Davis (W. Va.), Cooper (Tenn.), Gordon (Ga.), Merrimon (N. C.)—and all aware, by woful experience, of the gifts and graces of the Clayton kind of man—voted against the committee's report and in favor of Mr. Norwood's minority report. The other committee senators said it was "due to the country, due to the Senate, due to the senator from Arkansas," that the charges should be taken up here, and now, and acted upon, and it was gravely voted to take them up; whereupon the others getting into the cloak-rooms and other places of retirement, the thirty-three votes were cast, and Senator Clayton is safe in his seat till 1877. Mr. Patterson got leave to print some observations on the Senate Committee's report in his case, but makes in them no new point. He was careless, and did not know at the time, or did not recollect afterwards, whether it was Crédit Mobilier stock or Union Pacific that he was dealing with Ames for. Undeniably there are men of whom things like this may be credited. One of Mr. Patterson's observations is a suggestion to senators to look about them and ask how many of them are not interested in iron works, wool manufactories, and similar industries to be counted by the score or the hundred, to which Congress regularly votes money. Pinchback, the mulatto gambler, the Senate did not admit, feeling probably that Louisiana, as a place for a senator to date his credentials from, is about as stable and firm as the late Rufus Choate's swarm of bees was for a surveyor's point fixing the southeast boundary of a certain lot of land. Perhaps the most generally acceptable thing done in the session was the ordering, at the urgent solicitation of the Western men, of a large select committee on transportation routes between the West and the seaboard.

A correspondent of the Chicago *Evening Journal* (date of March 27) supplies what was lacking in our comments on Mr. Martin Bovee's recent letter to the *Tribune* concerning capital punishment at the West. He accuses Mr. Bovee of dealing unfairly with his Eastern readers, leading them, for example, to believe that in Iowa the most beneficent results have attended the abolition of the death penalty; whereas it is notorious that "murder and brutal outrages have multiplied in fearful proportion." "And yet," he adds, "with all the increase of crime before them, the courts have doomed to imprisonment for life *only one murderer* since hanging was abolished." This, on the supposition that more than one murderer has been convicted during the period referred to, is, if true, in strong confirmation of the views we advanced as to the futility of life-sentences as a substitute for hanging. Moreover, continues this witness, the pardon system is so far from having fallen into disrepute in the State, that within three weeks the Governor of Iowa has "been compelled to exercise all his firmness" in resisting the importunities made for the pardon of two criminals sent to the penitentiary for placing obstructions on a railroad track. The result of all this is a growing feeling in favor of the revival of capital punishment; and the correspondent declares that the "determined effort to restore the gallows" which, according to Mr. Bovee, "met with an overwhelming defeat at the hands of the last Legislature," really "showed a most remarkable and healthy change in public sentiment," one symptom of which was the recent hanging of a wife-murderer by a vigilance committee. In Wisconsin, "the pardoning power has for a long time past been grossly abused, and convictions are slowly secured and by no means with certainty," Mr. Bovee to the contrary notwithstanding. Finally, when Mr. Bovee wrote cheeringly that capital punishment was "practically abolished" in Illinois, "he must have known that McNultee had been hanged at Peoria not many weeks preceding; that Driver was to be hanged in this city (Chicago) on the 4th, and that Osborne was to be hanged at Knoxville on the same day; that Governor Beveridge has given the public every reason to believe that he proposes to save no murderers from the gallows; and that the press and people of the State are almost a unit in demanding their execution."

From before Andrew Johnson's time till now Presidents' pardons have not been of a kind to gratify hard-hearted persons, and to the consideration of such we commend the following case, which we find stated at length in the Boston *Advertiser* as a hypothetical case, every one of whose bad features has been exemplified in one and another case which has actually been in court. A young gentleman, employed in a post-office not a thousand miles from Boston, is discovered, we will suppose, in the act of opening letters and taking money out of them. He got his clerkship through the political influence of friends, and when he is caught, these friends beg the prosecuting attorney to indict him for the minor offence of robbing the mail without the aggravation of its being the act of one "officially entrusted," etc., etc., so as to allow of a lower penalty. This the district attorney does, reluctantly indeed, but still he does it, because he felt constrained to refuse the previous modest request, that inasmuch as the young man had enjoyed every advantage of home and school and church and society, he should not be proceeded against at all. Sentence follows in due course, and it is light because the judge is bound by the record as made up, and because there is no one to suggest that the offence has been long continued, that in consequence of it business has doubtless suffered, friendships may have been broken off, ties of love weakened or snapped, and reputations injured or ruined, and all in order that a peculiarly heartless young thief might filch the means of self-indulgence. There are persons present, however, to speak of a sudden yielding to overpowering temptation. The crime not being aggravated, nor a crime of violence, the judge consigns the prisoner not to States-prison, or the House of Correction, but to a county jail,

the keeper of which, finding his educated prisoner rather good company in a dull court-house town, "lets him ride round town in his buggy, and go to the station, and shops, and the post-office." The glee club of which the young gentleman was formerly a member visits the jail and serenades him, and he comes out "and takes his old tenor part" and "partakes of the viands." In a month or two a Quaker of demure countenance is hired to secure signatures to a petition for pardon, the more names the more pay being the condition of his service. The old political influence is brought to bear on all the gentlemen who took money to procure the young man his clerkship; they sign; others sign because of the Quaker's seemly and righteous appearance; others because they never yet said no when asked to sign a petition. Of course nobody ever gets up a counter petition. The governor of the State declines to interfere, but nearly all the other officials write letters on State-house paper, "with the shield, and the Indian, and the *ense petit* at the top," and armed with these and the petition the Quaker and the prettiest Niobe among the prisoner's relatives go on to Washington; and by-and-by we read in the evening paper that the President has seen fit to pardon Mr. So-and-so, recently convicted of tampering with the mails, and in the morning paper that a suspected post-office clerk has been "arrested with more than thirty letters concealed on his person, only a few of which had he had time to open." The moral is to be drawn by all pardoners, and petitioners for pardon, and all opponents of all penal punishment generally.

The latest move in the charter game at Albany was a compromise adopted by a Republican senatorial caucus on Wednesday night, providing that Commissioners Van Nort, Stebbins, and Smith should be retained in office, together with Mr. E. Delafield Smith, the new district attorney, that Green should go out of office, and all the rest of the appointing power given to the Mayor, subject to approval by the aldermen. Of the five officials we have named, Mr. Green is the one who has given the best evidence that he knows what reform means. During the past year and a half he has stood guard over the treasury of the city, and really saved a million and a half of people from organized plunder. For this he is to be turned out. The contest is not over yet, and it is impossible to predict how it will end. The struggle is one for the offices altogether, the Custom-house men representing that unless the offices are given to them the Democrats will certainly come in at the next election, and the Anti-Custom-house Republicans being afraid that giving the offices to the Custom-house men will lead to the same thing. The Assistant Aldermen have been abolished, and spring elections defeated. The charter, except as it deals with the appointing power, possesses no interest for any one, the instrument being read section by section to the Senate, without comment of any kind, until the twenty-seventh is reached, when there is a general "movement," and the harangues begin. As we go to press, everything looks like a triumph for the New Ring, though it does not float to its success on the full tide of which they were so confident at the beginning of the session. Whether Governor Dix will treat Mr. Murphy to what he would call a set back, and veto the charter, is not stated. He could not better please a majority of the taxpaying citizens of the city of New York.

The first appearance of Mr. Richardson in Wall Street made things lively for borrowers of money, who were very glad to supply their wants at the rate of ¾ of 1 per cent. a day on Monday and Tuesday, which, ciphered down, means 270 per cent. per annum for the use of money—rates which, under the expansion policy of the Treasury, are quite up to the days when Mr. McCulloch was contracting the currency at the rate of $4,000,000 per month. Mr. Richardson's apparent attempt to keep gold down met with a serious opposition from Mr. Gould and his friends manipulating the gold market. The publication of the Treasury programme on Monday for a time seemed to stagger the "bulls" in gold, as the price fell off a fraction from the closing quotations of Saturday; but their forces were very soon rallied, and in the space of an hour the price was carried from 116¾ up to 118½, at which point there was a general selling out. The impression in Wall Street is that the gold market is in such a position that the leading operators for a rise could have kept the price at 118½ had they been so disposed; the poverty of the Treasury being such that the Secretary can hardly increase his gold sales with safety beyond the advertised amount. At the same time, the currency balance is low, and this may, at any time, cause Mr. Richardson to reissue a portion of what Mr. Boutwell used to call his "reserve legal tenders."

There are rumors in every direction of all kinds of strikes. Some of them have already begun. In Boston, for instance, the horse-shoers refused to work, and the horse-railroad companies proceeded to replace the strikers by fresh men. One of the strikers has been arrested and committed for trial for assaulting one of the new men. In Brooklyn the "Carpenters of Kings County" had a large and spirited meeting last Tuesday week, which was addressed by Dennis S. Griffin of the Stairbuilders' Union of this city. From Mr. Griffin's remarks we understand that what the men object to is that they are made to work ten hours a day when eight is a legal day's work, and that the German Cabinetmakers, who undersell their American brethren in the labor market, are, in so doing, doing very wrong. The resolutions adopted demand an increase of wages ($3 50 instead of $3) from the 7th of April for eight hours' work, and recommend a strike if the demand is refused. The fact about the trades connected with building, as our readers hardly need to have pointed out, is that, in the spring, work being very pressing, and delays dangerous to the capital invested in building contracts, the workmen have their employers on the hip; during the rest of the year, the advantage is the other way. The true mode of solving the difficulty, and it is a wonder it is not urged, is for Congress to give the American-born carpenter a little protection—the "pauper labor of Europe" being none the less pauper labor for being wilfully done on these shores.

News comes, as we go to press, of the greatest disaster known to the records of steam communication between this country and Europe. Early on Tuesday morning, the *Atlantic* steamship, of the White Star Line, struck a rock on the coast of Nova Scotia, and sank almost instantly, with a loss of more than seven hundred lives. The *Atlantic* was short of coal, and had left her proper course, in order to make Halifax. Till the passenger-list reaches this country by another vessel, the full extent of this dreadful calamity can only be guessed. The suddenness of it robs it of those heart-rending features which distinguished the sinking of the *Northfleet*. But among the two hundred and fifty survivors, not a woman or child is saved.

The week's news from Spain, pending the elections for the Cortes, is of the gloomiest description. Insubordination in the army continues to spread unchecked; two great cities, Barcelona in the north, and Malaga in the south, defy the Government; and the national finances are in a hopeless condition. Germany, Russia, and Austria refuse their recognition to the Republic, and Olozaga, its minister to France, has resigned. The Carlist operations are still confined to a small area near the frontier in Catalonia, but are daily becoming bolder on account of the defection in the regular army. A levy *en masse* to meet them has proved a failure, Barcelona, whose garrison is in open mutiny, demanding a postponement, and calling for 15,000 of the rifles promised for arming the people. The small towns of Ripoll and Berga have been occupied by the Carlists, with outrages in which petroleum is said to have played a part; the effect of which on the people of Barcelona has been to cause them to burn churches and threaten the lives of priests in true Communist fashion. In Cadiz, the municipality has suppressed religious instruction in the schools. In Malaga, ten thousand armed citizens keep the peace and the city, refusing admission to Government troops, interfering with the receipt of customs, and "taxing the wealthy" *ad libitum*. Such is the doleful picture of Spain during the past few days, as transmitted by Cable.

A NEW PARTY.

THE *Anglo-American Times*, a very capable journal, reviewing the present state of our politics and political parties, arrives at the conclusion that "the day has come in America for men, not measures." It is a conclusion which seems plausible, and in support of which a great deal might be said; but we doubt if it is not more plausible than sound. Undeniably it is true that neither of the two great parties is at present satisfying that minority of thoughtful people whom eventually a party must satisfy if it is to continue in power. The Democratic party, it is evident, now inspires no one with confidence, and appears daily to have less and less faith in itself. Its last State Convention, in Michigan, expressly declared the other day that in the judgment of the delegates a new organization has become necessary. Its principal Congressional leaders are reported to be conferring with former political opponents as to the best method of uniting under some new name, or on some new platform, the elements of opposition to the so-called Republican party. In a State so Democratic as New Hampshire, the Democratic voters, though they might have been supposed to be encouraged by the exposures of Republican corruption, in which one of their own local political enemies, Mr. Patterson, was deeply involved, staid away from the polls last month in great numbers, and gave two of their Congressional seats to the Republicans. Looking West, then, or East, or to Washington, an observer may well think himself justified in predicting that, so far as the Democracy, at any rate, are concerned, it is not upon "measures" such as those with which that party has been occupied of late years that American politics are to turn in the immediate future. But is it to be Democratic "men," as those have been recently known to us? The question answers itself.

As for the Republicans, not to go back to the Cincinnati movement, which, though abortive at last was once threatening, there is no doubt that, despite the Republican party's success in the last of our quadrennial elections, it no longer inspires enthusiasm, and has lost the confidence of a large part of the thinking minority of the country. As in the case of the Democracy, the recent election in New Hampshire is a proof of this; and evidence of the same purport is to be found in the local elections in this State and in Connecticut. But, indeed, specific proofs are not needed. It is self-evident that among a people like ours the revelations of legislative corruption that have been made at Washington, the various disclosures of bribery, public robbery, and centralizing violence, must have disgusted multitudes of persons who care for public decency and do not care for office. No reasonably intelligent man need do more than speak of these things to two of his intelligent and reasonable neighbors in order to find that there are at least three men of his acquaintance seriously beginning to ask, "Who will show us any good" in politics, and what shall be done to bring the present state of affairs to an end, or to some hope of an end? "We Republicans have abolished slavery," they say, "and the *World* and the Democratic platforms all over the country pronounce that result of the war 'a great and unquestionable boon, the moral and material effects of which could hardly be overestimated,' or at least a result which has been acquiesced in, and to overthrow which is a physical and moral impossibility; we have established the equality of all men before the law; we have prevented the dissolution of the Union. All these things we have done, and done so thoroughly that we really have more fear of the negro's becoming a shameful and costly tyrant in South Carolina than of our ever being compelled to liberate him again from slavery, and have more to dread from Judge Durell and his United States troops in Louisiana than from another John Slidell and a new unfurling of the Pelican flag. Everywhere in the South we see rather more danger of black than of white contempt for law and order, more of fraud that disgraces the American name than of violence of which the African and the loyalist have any apprehension." In spite, then, of the almost military organization of the so-called Republican party, in spite of its regimental rolls in every town and its company roll in every school district, and in spite of the money with which the great corporations and the professional office-holders keep its army-chest overflowing, there are plenty of indications that, so far as the Republicans are concerned, it is not the "measures" with which that party has occupied itself for the past twelve years upon which future American politics are to turn. And if not the party's "measures," surely not the party's men, if one considers for a moment what men are in the party and controlling it, and what men, formerly its founders and leaders, are out. "Republicanism," esoterically understood, every day comes more and more to "mean 'biz,'" as the slang of the street goes. That is to say, the party machinery is now worked for the aggrandizement of a certain small number of persons who make politics a profession, and for the pecuniary benefit of a certain other small number of persons who hire and keep politicians, or who go into politics themselves for the purpose of legislating money into their own pockets. Witness Oakes Ames working "for his own hand" in Congress, and Twichell—two of many.

But is the great body of the people, forsaking old "measures," going to seek out "men," selecting them because of the goodness of their characters merely, and elevate them into office, as some of us believe? Everybody knows that the people is well enough disposed to do so, if it knew exactly how to get its will carried into action. It is, sure enough, axiomatic that the people prefers honesty in its public servants; that it neither wants to steal public money, railroads, and public lands itself, nor to let its Congressmen and collectors steal them; that it has no liking for monopolies; and that in all ways it prefers public virtue and efficient service to incompetency and dishonesty; but it is equally axiomatic that the people finds it difficult to make effective its desires in these respects. That is a matter which is not settled when it is shown, never so clearly, that the country has been for years and still is a long way from being satisfied with one of the two great political parties, and begins to be greatly disgusted with the other. We ourselves suppose that the cure which begins to be sought will be accompanied by the substitution of another set of men for the men who now control the Republican organization, and that of the new leaders some will be men who have been Democrats and some Republicans; but we believe, furthermore, that the substitution will be not merely a change of men but a change to men selected by new criteria, and that these criteria will be supplied by a new platform of principles. In other words, we believe it is to be new "measures" most certainly, as well as new men. The new order, when it comes, will assuredly be found to have come in part, indeed, because of the aroused moral thoughtfulness which has often been so potent in our politics, and which is at the moment strongly moved, but which it is always difficult to focus, so to speak. We may as well "doubt truth to be a liar" as doubt that there are many thousands and tens of thousands of voters who are to-day contemplating the latter-day saints and statesmen of the party in power with a sincere contempt, which bodes ill to somebody sooner or later. But, as we have said, this is a feeling which only after some time and labor organizes itself for political activity, and to be very useful it must crystallize "measures."

What the new measures are to be and how soon they are to be triumphant, or how soon they are to begin making an appearance of any formidableness in practical politics, it would be hard to say; but some indications, or what we take to be such, are already here and there visible, and of these as significant as any is this following resolution, which was passed on the sixteenth of last month by a company of very indignant Illinois farmers. The measure it appears to point at very directly is that known as free trade, although what the Earlville farmers, and indeed the farmers throughout the entire central West, are specifically enraged about, is the fact that the corn for which they get about 20 cents a bushel is sold in New York for about 67, the forty-odd cents being used up in paying transportation charges:

"We insist that the duty on iron, steel, leather, lumber, woollens, tin, railroad rails, plush, velvet, and all material used in building railroads, engines, cars, and steamships, ought to be at once repealed; that the interests of the laborers and artisans of Pennsylvania and New England, as

well as the farmers of the West, require absolute free trade in these materials; that it is quite as essential that such materials shall be imported free of duty as that railroads should obey the laws; that free trade would enable the railroads to make a tariff of prices conformable to law."

From demanding a repeal of the taxes and materials entering into the construction of railroads and railroad cars, the step is not a long one to demanding the repeal of taxes that compel the farmer and mechanic to pay toll on every article that he uses—from his hoe and his molasses to the bunting that patriotically flies from his Town-hall on Fourth-of-July days—and to pay it for the most part into the pockets of a few thousands of ingenious fellow-citizens whose prosperity and wealth are nothing to him, except indeed as they increase his poverty. And if once the farming classes come to see that their natural though unwitting and unwilling enemy is not the railroad owner or the railroad maker alone, but every man who is engaged in business with the United States as a partner in the firm—and a partner whose share of the funds invested came out of the taxpayer's pocket—we shall have a political "measure" in the field which will forthwith produce a greater number of clean Congressmen than we should be likely to see were every caucus manager in the thirty-seven States to set about selecting pure men for the Syracuse saltmakers to buy and sell, or swap off for men bought by the Rhode Island calico printers.

The same resolutions which point to this step of progress imply, as does the agitation of which the resolutions are a product, that another measure which may speedily make its advent into the political field is a measure restraining and curtailing the power of the great corporations, railroad and other. We suppose we do not overstate the case when we say that not a single new railroad enterprise of any magnitude has been set on foot of late years without the commission of penitentiary offences, in the way of giving and taking bribes by corporators and members of the State and National Legislatures. "We bought them," a railroad director said of a recent Arkansas Legislature, when he was asked how the members came to consent to an enactment particularly favorable to the shareholder who asked the question. And a committee which the other day made its report to a Missouri company remarked with some feeling that the expenses of procuring a charter might seem great, but they assured the stockholders that "your committee" had never before done so much work and so much dirty work—(buying up a "Radical Legislature" which did not care to incorporate a conservative corporation anyhow)—and hoped and intended never, if they could help it, to act as "your committee" again for anybody. They really showed heartfelt disgust, and perhaps may be safely counted on for a new measure which shall help to give the country new men.

Revenue reform; economy in the disposal of public lands, which our bribed Congressmen and careless Congressmen fling about by provinces or indeed by kingdoms; civil-service reform; a cessation of the war policy of strengthening our two national houses of legislation at the expense of every local legislature, and a return to our traditional policy; an equalization of the burdens of taxation—these are some new measures to which we suspect the country looks with a daily increasing suspicion that only by the adoption of some such policy as they indicate shall we get the new men whom there is general confession, outside of South Bend and North Easton, that we need. How the desired changes are to be effected, and how soon, are questions which will bear pondering by everybody who thinks that we have been wandering in dangerous paths. That the persons who are satisfied with things as they are will not fail to attend to the matter we may be perfectly sure. There is not a saltmaker or a quinine importer in the country who does not thoroughly understand both branches of his business—the home branch and the Washington.

SHALL THE CABINET HAVE SEATS IN CONGRESS?

MR. GAMALIEL BRADFORD, a gentleman who has given a good deal of attention to what may be called "systematic politics," has recently delivered a lecture in Boston in which he has painted in black but true colors some evils of our existing politics. "It is not to be denied," he says, "that men are beginning to hesitate as they speak of ours as the best government the world ever saw." On all hands the most urgent demands are made for reform in the civil service, in the tariff, in the currency, in the government of the South, in the management of corporations, and in special legislation. Year after year the public and the press reiterate these demands, yet session after session of Congress, six months at a time, is passed in buncombe speeches and personal abuse, and each year business is resumed at precisely the same point, and given up with the same absence of progress. Between this condition of the public business and the "committee system" of legislation, Mr. Bradford easily traces a connection. The mainspring of the action of the framers of the American Constitution was "dread of executive power." In their dread of executive power, they determined to place all legislative authority in the hands of the popular representatives. As soon as the popular representatives discovered the vast proportions which their work was likely to assume, they began to assign to standing committees different classes of subjects, and to establish the rule that no business should be considered without having passed the proper committee. These committees practically sit in secret, for the country knows nothing of what they are doing. Mr. Bradford might have added that a body of ten or twelve men is so compact and so easily managed, that even when it nominally holds nothing but public sessions, it may in a dozen private ways—conversations in hotel parlors, quiet walks in the country, casual meetings at dinner—arrive at conclusions on which its public deliberations throw no light. What is the result? A dozen men, appointed on a committee from their acquaintance with—that is to say, from their private interest in—the special subject, sitting in secret, dictate what measures shall and what shall not be passed by the National Legislature. Meanwhile, the thing is made worse by the total absence of definite responsibility. Committees are not responsible, because it is Congress, and not the committees, by which bills are passed. Congress is not responsible, because it has not time to examine into the merits of three or four thousand bills at each session, and has entrusted this work to the committees; and the Executive cannot be held responsible for laws which it had no hand in making. "Such complete chaos and confusion are fatal to intelligent and systematic legislation."

Mr. Bradford then goes on to enquire "what are the springs of action in the committees." The members, he says, have a "direct and strong local" but "very feeble national interest." Most of them, too, having an interest in the business before other committees, there is a strong temptation to "trade."

> "Again, as the business of committees is to suit the Houses rather than the public (for the Speaker, who is chosen by the House, has the appointment of committees), their reports are much more likely to be made acceptable to those bodies than with a view to their effect upon the national interest. Real debate in the House has been suppressed, and in the Senate amounts to nothing. The basis of legislation having been arranged in committee, no individual is strong enough to create effective opposition in the Houses, while all are freed from responsibility by following committee reports. There is no one who is bound by his position or interest to look after the national interest, or who, from a position of authority, can appeal to the nation against private or local jobs. In the matters of private interest, votes are secured by lobbying or trading; in those of public, by party whipping-in."

While this is the condition of the Legislature, what is that of the Executive? Absolute impotence. The President is powerless even to appoint a cabinet according to his own notions of public duty, being compelled by force of party tradition to distribute the cabinet offices geographically, giving one to New England, one or two to the Middle States, and so on. His enormous patronage in the civil service, too, is really nil, because his appointments are made for him by the local Congressman or Senator. To sum up the whole, we have the political power of the country lodged in the hands of an irresponsible Congress, elected by office-holders, to whom they are bound; the President who appoints these office-holders, under the thumb of the Congressional majority. In this vicious circle American politics revolves. "Thinking men look aghast at each other as they talk of these things, asking what they lead to in the future."

That these are serious evils no one will deny. The question is how to remedy them. Mr. Bradford thinks that the true way is to give cabinet ministers seats in Congress. His idea is that by this means we can secure what is so much needed, "national representation"—that is, the presence of an able body of men devoted not to the interests of a particular district or State, but to those of the nation at large:

"Suppose," he says, "that a Secretary of the Treasury were to bring in a comprehensive and detailed scheme for the management of the finances and the tariff, and for the reform of the civil service, the Secretary of the Interior for the mode of treatment of the Southern States, the Secretary of State for the reform of the diplomatic service, the Secretary of the Navy for the restoration and improvement of our shipping, the Postmaster-General for the management of the telegraphs—the attention of the country would at once be arrested. And if these plans were conceived, as they would naturally be, from a national point of view as against private and local interests, it is safe to say they would meet a response from the country which would require Congressmen to appear before their constituents in a very different attitude from anything which we now see."

Continuity in legislation would also be gained by the constant presence of the Executive; another advantage would be that the "constant test of individual ability would develop prominent candidates for high executive office," and still another, the improvement of "the tone of Congressional debate." We should also have increased administrative responsibility, and at the same time a more effective opposition. The opposition could interrogate the Government on important public questions, and in most cases force them to answer. This would prevent such a disgraceful business as that of the legal-tender decision, in which the Chief-Justice of the United States, having originally, as Secretary of the Treasury, secured the passage of the law on the ground that it was necessary for the suppression of the rebellion, upset it on the ground that it was unnecessary.

These are the chief advantages which Mr. Bradford thinks are certain to flow from the adoption of the English plan of giving cabinet ministers seats in Congress, and certainly if there is any chance that we can achieve them so easily, it is well to begin to look into the matter at once. We do not ourselves believe that the change proposed would produce any sensible alteration in our condition, for the following reasons:

In the first place, the scheme is by no means radical enough. If we wish to introduce the English system of a "responsible ministry," we must not only give Messrs. Richardson, Fish, Creswell, and the rest seats in Congress, we must also establish a rule that if the policy they advocate become obnoxious to the majority, they must resign, and the President must select advisers from the majority. To give them seats, and nothing more, would, instead of giving them power and influence, merely subject them to a series of "interpellations" of all sorts, which, if the Government were compelled to answer, could lead to nothing except a further debilitation of the executive power, and which, if the Government did not answer, would lead to nothing at all. Suppose that during the rebellion the Secretary of War had had a seat in Congress, and been forced to reply publicly to questions relating to the position of troops or the condition of the Quartermaster's Department, can any one doubt that the difficulty of carrying on the war would have been increased tenfold? It is to be observed that his presence in Congress would not have given him a particle of voting power. He would only have been able to explain his policy, and explaining one's policy in public is not exactly the thing which leads a war to a successful issue. Again, what would have been the result if Mr. Fish, during the very delicate negotiations that resulted in the Treaty of Washington, had been daily interpellated as to the progress of the negotiations? We may be pretty sure that with the inflamed state of feeling on the subject there would have been no Treaty of Washington.

In fact, this plan, which aims at securing both power and responsibility for the Executive, secures, if anything, responsibility alone. To take Mr. Bradford's own case, let us suppose Mr. William A. Richardson, or, not to trifle with serious subjects, Mr. Richardson's improved successor, were "to bring in a comprehensive and detailed scheme for the management of the finances and the tariff, and for the reform of the civil service," what would he do with it more than he can now do in cases where the majority are opposed to him? for, of course, where the majority are on his side he has no need to do more than have it put to a vote by the chairman of the committee of ways and means. He could explain it, but if his explanations proved disagreeable to the majority, what does Mr. Bradford suppose the majority would do? Listen to them? On the contrary, they would do just what they would do with any one whose opinions are disagreeable—move the "previous question." We have not heard much of the previous question lately, merely because the times are not so hot as they were a few years since, but we may be sure we should hear of it very soon and very often if the cabinet had seats in Congress.

Again, there is this serious objection to the proposed panacea that, instead of being a natural growth of the American system, it is an attempted graft from a foreign stock, grown under entirely different conditions, which may or may not "take." The English ministry was not a shrewd invention of constitution-makers. It is a branch of the government which is unknown to English law, and which gradually acquired power and responsibility with the decline of the royal prerogative and the increase of the power of the House of Commons. The veto power having gone long ago, patronage having disappeared with the reform of the civil service, and foreign affairs having of late, through the "non-interference policy" of recent governments, been reduced to a minimum of importance, the only real power is centred in the House of Commons. But the House of Commons cannot govern the British Empire directly, and it therefore selects out of the ablest of its majority for the time a number of men to do its governing for it. These delegates perform the executive functions which in theory belong to the crown, the king or queen being in reality a mere dummy. Meantime, the elections, or other causes, reverse the majority in the House of Commons, and the new majority chooses (not of course by ballot, but by the voice of public opinion) a new executive.

What is this all but that same "government by committee" to which Mr. Bradford so vehemently objects? All late English constitutional writers speak of the English ministry as a "committee" of the House of Commons, and a committee it undoubtedly is, though the process of selection is peculiar. As a government by committee it works well enough; but why any one should suppose it would work if the ministry were really appointed by the crown, and had seats only in the Lower House, we cannot understand.

The essential feature of the English system is that the ministry is forced to go out of office whenever the legislative majority thinks best that it should. To import the system without this part of it is to import a mere name. In the same way, the reason why the "interpellation" of the ministry by members succeeds in England is that the ministers know that if they persistently decline information on the subjects enquired into, they daily offend more and more members, and at last find a hostile majority. The information they furnish is one of their means of keeping alive public confidence in themselves. But suppose that Mr. Richardson has a seat in the House, and Mr. Dawes rises to enquire what the Government proposes to do about the legal-tender reserve, and whether the rumors are true that the whole amount is to be reissued, all Mr. Richardson would be obliged to do would be to say either that the interest of the public service made it impossible to answer, or he might, if he pleased, deliver an oration on the subject; or, for that matter, he might signify his opinion of the interpellation by appropriate gestures of contempt and derision. Whatever he did, no immediate practical consequences would follow; he would not lose his seat. There has been, by the way, during the recent controversy over the reissue of greenbacks, just as much publicity given to the position of the Government as if Mr. Boutwell himself had appeared on the floor of Congress—first through the newspapers, second through the report of the Senate Finance Committee. So far from this publicity producing the reforming effects which Mr. Bradford would lead us to expect, Mr. Richardson goes on issuing greenbacks as if not a single word had been said.

In conclusion, let us say that the results of the experiment of representative democracy in the three countries in which it has been tried all seem to point to government by committee as one of the inevitable consequences. In France it came almost at once; in England and America it has come more slowly. The first result of the democratization of a country is to throw all the power of government into the hands of the people's representatives, who redistribute it among smaller bodies of their own selection. The executive is shorn of its power, and perhaps, as in this country, the judiciary also. The next step—which we have taken—is to throw the patronage into the hands of the representatives, and the result of this is to throw the power of the government into the hands of secret caucuses of officeholders, municipal rings, and custom-house gangs. To suppose that the mighty social forces which produce such changes as these can be affected by giving cabinet ministers the opportunity of making a few Congressional speeches, seems to us very like supposing that the geological forces which gradually crumble down lofty mountains could be modified by the planting of a few high trees on their tops.

LAW REPORTS AND REPORTING.

THE Bar Association of this city has resolved that the present system of preparing, editing, and publishing reports of judicial decisions in this State requires amendment. It is only astonishing that the matter has been allowed to drift until this time, and that the lawyers of this State have been content to sleep upon a subject which so closely concerns themselves. The fact is a fresh illustration of the want of unity and power in the American bar. More than fifteen years ago, the subject of reform in law reporting engaged the attention of the bar of England, and it is now about eight years since a radical change was effected and a comprehensive and satisfactory system adopted. Furthermore, there is no country in the world where lawyers have to buy so many reports as in the State of New York, nor where a volume of reports contains so little law. The expenditure, therefore, of money in acquiring the books, and of time in examining them, constitutes an extraordinary burden, both injurious to the individual and prejudicial to the administration of justice.

There are now seven series of New York reports published yearly. But the evil by no means stops here. There are three series of United States reports, and there are thirty-six other States each with its one or more volumes of reports per annum. The New York lawyer is not expected to add all of these State reports to his library; but nevertheless the business relations of New York with the other States are constant and close, and though he may not buy he must sometimes examine, and then comes the expenditure of that which is more precious than money, time. The immense mass of matter and rubbish bound up in these books necessarily requires analysis, which comes in the shape of railroad cases, criminal cases, leading cases, annotated codes, etc., etc. We may also note here illustratively that the Code of Procedure was adopted to simplify practice, and yet there were never such volumes of practice reports required before as there have been since; and there is not, we believe, in the world a statute so embellished and re-embellished with explanatory and constructive decisions as this same code which, it was expected, "would make every man his own lawyer." The evil also spreads in another direction; for innumerable reports require a further analysis and give rise to "new elementary works." Modern elementary works are little more than statements of what modern courts have decided, and each author regards his hundreds of "authorities" as the highest evidence of his diligent research. In the course of a few years, though the "text" of these books remains substantially the same, the "notes" become greatly amplified, and the active practitioner must buy new editions merely to procure new lists of latest authorities. Finally, let it be noted that the modern reporter is usually a professional bookmaker. His highest idea of his work is that it shall be "complete"; that is, that he shall have gathered into his net all the fish, big and little, which floated in his legal current. It is also for his self-interest to make as many volumes as possible; for ordinarily he is paid by the volume. If he can swell the decisions of a single year into two volumes instead of one, he is like another man doubling the products of his own industry—that is to say, he doubles his annual income.

These being some of the sources of the supply, it is desirable that some attention be given to the causes of the demand, for law reporting having become in one sense a mercantile pursuit, it is governed by the well-known mercantile rule for demand and supply. In the first place, our modern practice of having cheap judges has given us for judges lawyers who were not at the head of their profession, and this want of ability we aggravate by want of stability and experience. The modern American judge has manifestly felt the want of authorities. In the early English cases, every position is usually fortified by a reason. Where it is said that "in Plympton's case it was holden" thus and so, it is pretty surely followed by "because," etc., etc. But in our modern cases the judge seems to feel that his unsupported enunciation of the law will have little weight with anybody, and in the stead of reasons he fortifies his position with authorities. Our lawyers, too, have learnt the necessity of having authorities for everything. It is not the fondness of displaying their erudition that leads them to elaborate the simplest "points," but experience, which teaches them that they can never tell when or where the knowledge of an inexperienced second-class judge will give out. It is said that Lord Cairns and Lord Selborne (Sir Roundell Palmer) when they were at the bar have been known to argue the law points of a case six hours without citing a single authority. But we have now before us a printed brief of an American lawyer who cites more than fifty cases upon one point and more than sixty upon another, each point being nothing more than a statement of an elementary principle of law. A third demand for authorities is occasioned by the fashion into which American judges have universally fallen of writing voluminous opinions. Instead of saying that a case presents only a couple of points, and that such an authority disposes of the one, and some other authority of the other, they proceed to write a history of the case, and an essay upon the law, half the time ending with the conclusion that every point has been determined by previous decisions. It is also clear that our modern custom of having printed briefs has occasioned a great demand for authorities. Modern English practice has been so simplified that printing papers is unnecessary, and at this time there are no papers printed in any law court in England short of the House of Lords. With us the printing of papers in all of the courts of this country must have an enormous sum total, to say nothing of the great expenditure of time as well as money which printing always involves. A lawyer who has to print his points generally puts as many authorities after each as he can find, caring very little apparently about the courts from which they are gathered, and feeling pretty confident of his case if he can largely outnumber his opponent.

The business of law reporting, or rather the control of it, should be transferred from professional bookmakers, and from the judiciary to the bar, who are primarily and chiefly interested in it. The first advantage will undoubtedly be a reduction in the number of the reports. But there are other advantages which we think will be found equally important. The Bar Association should not only seek to reduce the quantity of reported matter, but to improve its quality. To understand this, it is necessary only to compare modern reports with old ones and to contrast present reporters with their predecessors.

The early common-law reports were merely notes of cases written out by eminent and industrious lawyers for their own use, which, having been copied and passed from hand to hand, finally (and generally after their author's death) came to be printed and published. In the progress of events reporting grew into something resembling a system, but it remained in the hands of learned lawyers whose reputation gave character to their reports. Of late years this has changed, and reporting has passed into what may be termed official hands, and the character of the reporter has measurably fallen. If the present reporter is not a mere bookmaker, he is pretty sure to be the mere agent of the judges. The earlier reporters were men of such legal ability that they could authoritatively point out in what particular a case was new, what fresh ground it occupied, and what novel point it determined. They also had that power of analysis—as every successful lawyer must—which enabled them to extract and state in their syllabus the legal principle involved in the case, and to classify it in their index under the title to which it properly belonged, and in a practical manner, which would enable other working lawyers to find it when they wanted it. The present reporter is rarely a working lawyer. His business is principally to display all the learning and eloquence of the court. His syllabus bears little reference to the facts of the case—to the actual legal point decided, but is made up of condensed quotations from the opinions. His knowledge does not enable him to say that this case is in accordance with a former case, or irreconcilable with a third one; and if he should say so, his standing is not sufficient to give weight to his criticism. Being merely the court's organ of publication, he cannot exercise the further analysis of rejecting, for he is employed to publish everything that the judges desire to see in print. When he comes to his index, he lacks that practical knowledge which actual practice only gives, and places cases where they do not really belong, and varies their position, so that precisely similar cases appear one year under one title and the next year under another. Thus, when the Court of Appeals was established, an able lawyer, Judge Com

stock, was appointed reporter. He was followed by another able lawyer, Judge Selden, and by a third, Mr. Kernan. Upon the next vacancy happening, a very able lawyer, Judge Potter of Schenectady, was recommended by the bar, and, if we are not misinformed, would have accepted. But a young and unknown lawyer, Mr. E. Peshine Smith, since become somewhat famous as the legal adviser whom the State Department commended to the Government of Japan, was preferred by the judges of that court. It is needless to say that such a reporter is a mere clerk of the judges, and that his selection by them exempts their work from everything in the way of rejection or criticism.

We are aware that there are certain disadvantages in assigning the reporting to lawyers in full practice. The reporter has more or less access to the judges, and more or less knowledge of their deliberations, and may procure or be supposed to procure certain advantages over other members of the bar. His time being pretty well occupied with his own practice, he cannot carry along the publication with the promptitude of a man who has nothing else to do. His time being valuable, he will probably leave the details to his students. There is in the index of one of Chitty's works the title "Great Mind." Referring to the page cited, it will be found that Lord Eldon or some other judge said in the course of an opinion: "I have a great mind to order" thus and so. The eminent author, who was somewhat of a professional bookmaker, handed over the indexing of his works to his students, and one ingenious young gentleman thus extracted the legal principle of Lord Eldon's decision. But all of these disadvantages do not warrant the abandonment of law reporting to incompetent persons. The present English system seems to combine the advantages of our earlier and our later systems. It consists of a council of the most eminent members of the bar to direct and control, with competent assistants to carry out and execute. The working details of the system can readily be procured, with doubtless practical suggestions. If it can be put into successful operation in this State, it may not only accomplish its immediate objects, but do much toward securing the unity of the bar, and arousing members of the profession to the proper assertion of its dignity and of the dignity and purity of the judiciary. As was recently said by Mr. Justice Blackburn of the Court of Queen's Bench (see *Nation*, No. 383, p. 277): "The only real, practical check on the judiciary is the habitual respect which they all pay to what is called 'the opinion of the profession.' And the same powerful body forms a real and the principal check on the abuse of patronage by the Government." Whenever the American bar shall be aroused from its condition of apathy to the active exercise of the latent influence which it undoubtedly possesses, the movement will be found, we think, to the advantage of the public and the judiciary, as well as of the profession.

MADEMOISELLE DE SCUDERY.

PARIS, March 14.

WHAT the French call *esprit de société* is only imperfectly translated by the word sociability, inasmuch as sociability is an attribute of all mankind, while the habits and instincts which form the *esprit de société* may be called essentially French. All the books which can give an insight into the formation and development of this spirit have for a Frenchman a peculiar charm, and have almost, for a foreigner, a historical interest. Mademoiselle de Scudéry, for instance, may be said to belong to French history; and I do not hesitate to recommend to your readers the beautiful volume just published on her life by MM. Rathery and Boutron. The name of Scudéry had for a long time fallen almost into disgrace since Boileau in his satires had criticised the novels of the 'Grand Cyrus' school. Cousin, in his enthusiasm for the *grand siècle*, was almost the first who tried to rehabilitate (to use a modern expression) the novels which had charmed the remarkable men and women of Louis XIII.'s and of Louis XIV.'s reign. But he did not undertake the biography of the Scudérys. Mademoiselle de Scudéry will ever be connected with her brother. They were both born at Havre, and were very young when their parents died. Madeleine de Scudéry was educated by an uncle. Conrart in his memoirs (it is the same Conrart of whom Boileau said:

"J'imite de Conrart le silence prudent")

gives an account of her education, which shows that girls at that time were not only very well read, but learned gardening, cooking, the fabrication of many remedies, perfumes, etc. Madeleine learned also the Spanish and Italian languages, which had become very fashionable since the kings had married Princesses of Medicis and of the house of Spain. The novels she read were 'Théagène et Chariclée' and especially the 'Astrée,' which seems so unreadable now, but which she still perused at the age of ninety-two years, so powerful are the impressions of youth. Her brother George entered the army and could write afterwards: "I can better put soldiers in order than words, and better square battalions than periods." He left the army after several years, and began to write plays for the theatre. There is some force in his verses, but an uncontrolled force and a perpetual grandiloquence, as well as *preciosity* (I must here refer to the 'Précieuses ridicules' of Molière, as I cannot find an adequate word for the literary character of Scudéry's works).

Mademoiselle came to join her brother in Paris, and they not only lived but wrote together. The sister became, so to speak, the corrector of the brother's bad taste. She was very plain, as is well shown in the portrait annexed to the present work, and set up not as a coquette, as a Célimène, but as a *précieuse*. She was admitted to the famous Hôtel de Rambouillet. Roederer in his admirable work, now so rare, on the *Société polie*, says that she was accepted less as an author than as a well-bred girl, sister of a well-known literary man, and also as a person not well favored by fortune. This is a not small eulogium, and shows that there was nothing vulgar in a society which was so full of consideration for well-bred poverty. In her correspondence we see that this poor and ugly girl entered into close acquaintance with Chapelain, Balzac, who were the literary grandees of the time, with the Duc de Montausier, with Madame de Sablé, Madame de Motteville, Madame de Clermont, etc. In 1642, Scudéry obtained through the Marchioness of Rambouillet the government of Notre Dame de la Garde of Marseilles, a small fort built over the old port of Marseilles. It was very hard to leave the agreeable society of the Hôtel Rambouillet. The journey was long and seemed at that time almost an enterprise. Such was already the absorbing character of Paris that Mademoiselle de Scudéry felt in exile, like Ovid away from Rome, and she finds only, she says, in Marseilles, six or seven ladies who speak French, which means probably that they did not speak at Marseilles the jargon of the *précieuses*. Her friends in Paris missed her also, and tried at one time to make of her a governess for the three handsome nieces of Cardinal Mazarin, just arrived from Italy, but the place was given to the Marquise de Senecey.

Madeleine and George returned, however, to Paris after three years of absence. George was named a member of the French Academy, and his sister continued to live with him. During the Fronde they both sided with the "Grand Condé" and the Duchesse de Longueville. Condé and the Duchess were indeed the heroes of the 'Grand Cyrus,' which had appeared (1649–1653) in ten volumes or numbers. Cyrus was the conqueror of Rocroy and Lens; his sister the fair Mandane; all the beauties of the Court were described as inhabitants of Ecbatana, of Sardis, of Babylon; the Hôtel Rambouillet was the palace of Cléomire. There is in all ages a peculiar local color, applied to all works of art. The eulogies on the generals or the beauties of the Fronde would have seemed in bad taste if their names had been given; the fantastic oriental names gave more delicacy to the praise, and, the conventionality once accepted, the interest of the novel seemed quite as great. I have once in my life seen a tragedy of Racines, performed as it was under Louis XIV.: the Roman ladies wore hoops and powder; the Romans had perruques. It is wonderful how quickly the mind accepts this false local color; it seemed to me even that the attention being more forcibly turned on the thoughts and the verses, the literary pleasure was more intense. The 'Grand Cyrus' was really the mirror of the best society of the time—of a society which had still something heroic, but which, after the troubles of the civil war, was entering on the great reign of Louis XIV. So much beauty, and genius, and wit was perhaps never condensed at the same time and in the same country; the Corneillian spirit still animated a society which had not felt the weight of a long oppression. It is hardly possible now to read the 'Cyrus' as a novel. The story, as we commonly say, is nothing; but the drawing of the characters is like those beautiful outlines left by the great masters: the style is often *outré*, but it has a solidity, a robust force, which marks a really great period. M. Cousin will have it that George composed the story, the incidents, and that Madeleine wrote the long sentimental and intellectual disquisitions, which are the only merit of the work. I am rather inclined to adopt this view.

Mlle. de Scudéry made the acquaintance of Pellisson, and they became soon engaged in what would be called now a flirtation; it was not love, but it often appeared like love; there was to be no dénouement to it of any kind. This sort of mixture of love and friendship, or platonic love, was quite the fashion in the society of the *précieuses*. M. de Scudéry, herself giving the definition of this sentiment, says that "love and friendship mix like two rivers, the more famous of which takes away the name of the other." I must confess to a certain partiality for this sentiment, and I doubt if it is much to the credit of our present society to hear it often ridiculed and even denied. A passionate friendship between a man and a woman was in those days recognized and respected, and had nothing to fear from calumny. Mademoiselle received her friends every Saturday, and her friends were expected to come without being invited. It is only under such conditions,

which to a certain extent still exist in Paris, that a real society can be formed; not in costly routs and gorgeous balls, which are merely theatrical. The rooms of Mademoiselle de Scudéry were in the rue du Temple and very simple; there was a small garden attached to the house; all her friends knew her birds and her favorite cat.

The reputation of Scudéry was increasing. 'Artamène' and 'Clélie' had appeared. The Fronde was represented in the last novel, and the heroes which this time moved in Carthage and Rome were at once recognized by everybody. The famous *Carte du tendre* was drawn in the first volume. A wit of the time, speaking of this country of love delineated in all its details by Mlle. de Scudéry, said, "The virgin of the *Marais* has created a world and has left to others the trouble to people it." Mlle. de Scudéry had declared her intention never to marry. Her friend Pellisson was arrested at the same time as the famous Superintendent Fouquet and taken to the Bastille. At a time when it was not very safe to offend the Monarch, two women were found who never concealed their sympathies: Madame de Sévigné was faithful to Fouquet, Mlle. de Scudéry to Pellisson. The latter wrote a touching letter to Colbert in favor of her friend.

The comedies of Molière, the satires of Boileau, made a reaction against the literature of the *précieuses*. The Salon de Rambouillet had lost its principal luminaries, and the *Samedis* of Mlle. de Scudéry by degrees became less aristocratic, though she preserved some of her friends to the last. When George died, Mlle. de Scudéry remained alone, still loved and respected by the Condés, the Rambouillets, the Montausiers; but she became more solitary. Mazarin had left her a pension of 1,000 livres; Louis XIV. gave her one of two thousand; her novels did not sell so well as formerly, and her friends used to make her a present of some importance every year. Her last works are more interesting, perhaps, than the first for modern readers, especially the 'Conversations.' She lays it down as a rule that one of the necessities of conversation is the mixture of both sexes: "The most honest ladies in the world (*honest* in the language of the XVIIth century means cultured), when they are many together, say absolutely nothing which is worth anything, and are more *ennuyées* than if they were alone," an observation which has often been made to me by ladies in England who had waited after dinner for the return of the gentlemen. These small treatises contain also interesting chapters on letter-writing, on story-telling, etc., and nobody could be a better professor of these small arts of civilized life.

To a very old age Mlle. de Scudéry preserved the vigor of her mind. She was pious, though she never was a *dévote*. On the second of June (1703), in the morning, she got up and dressed as usual, though she had a cold and fever. As she stood in her room she felt very weak, and exclaimed: "I must die." She asked for a crucifix and kissed it. It was placed before her and she kept her eyes on it. Her confessor was not found, and a Capuchin came instead of him. She bade him "Give me, give me my Jesus," pressed the crucifix to her bosom, and died, aged ninety-four years.

Notes.

MACMILLAN & CO. will shortly publish 'Betsy Lee: a Forecastle Yarn,' a dialect poem descriptive of Manx sailor and farm life.——D. Lothrop & Co., Boston, announce 'African Adventure and Adventurers,' edited by Rev. Geo. T. Day, D.D.

—Last fall we received from the U. S. Coast Survey Office some copies of their large-scale map of Newport and the beaches, exclusive of the Point, the map of which was then incomplete. Desiring to mention both together, we have delayed too long calling attention to the former as an experiment deserving of all encouragement and of the widest extension. What we have before us is an exact photolithographic transfer from the "plane table sheets" (No. 21) of the Survey, as made in the field, with only the distinctive marks for crops, etc., omitted, and without colors. In a space of about 21 x 28 inches we have set down, on a scale of six inches to a mile, the natural and municipal topography of Newport from Beacon Hill to Ochre Point (N. to S.), and from the end of Long Wharf to Flint Point (W. to E.). Not only is the coast line delineated with the greatest accuracy, and the inequalities of the island marked by lines of equal altitude for every twenty feet—sometimes for every ten—but every street and road, every estate, and every house is located with the same care, the whole making the most perfect record of the town for 1872 that science can produce. We spoke of this map as an experiment. It is such only as being the first effort of the Office to popularize its work. There are in the archives of the Survey many hundreds of maps on this scale, also made in the field, scrupulously exact and beautifully drawn. They represent an immense amount of labor and a large sum of money, and they have an everyday value which makes them eminently adapted for publication and local if not general distribution. Should the yearly topographical work of the Coast Survey be published in this style, it would amount to about 150 such sheets as this of Newport, and they could be issued within six months of the execution of the surveys. Their reproduction might strongly be urged on the ground that it would insure the preservation of maps of which but a single copy now exists. The Newport sheet is sold from the Office at Washington for fifty cents; and we hope that the native residents and the pleasure-seeking and summer sojourners of the place will create such a demand for it as may be found difficult to supply. We may add that the franking privilege being abolished, the Government could not do better than provide for the sale, nearly at cost, of its valuable publications in all departments. Doubtless some firm in Washington could be got to attend to the details of these transactions, as advertisers and forwarders to order.

—If the Crédit Mobilier investigation, and the Caldwell investigation, and the exposure of Pomeroy, and the New York Senate's dropping the investigation of Tweed as soon as he had resigned, have shown the baser uses to which money is put in this country, making all of us despair a little of the Republic, there is a world of encouragement in looking at the other side of the shield. The long list of those who merely in the past twenty-five years have manifested what we may almost call the American sense of the responsibility of riches—the Tappans, Astors, Peabodys, Coopers, Thayers, Sheffields, Vassars, Packers, Cornells, Stevensons, Simmonses, and Lenoxes (to select a few of the more prominent)—has since the opening of the year been signally increased. The generous givers just named are perhaps even outranked in munificence by Mr. Johns Hopkins, of Baltimore, whose public endowments, present and prospective, will amount to between four and five million dollars. A university with scholarships for the poor he has already taken steps to organize by the appointment of trustees, by the gift of his Clifton estate of four hundred acres, and by setting apart in his will for this object his entire interest in the Baltimore and Ohio Railroad. Still more recently—only last month in fact—he conveyed to other trustees two million dollars, with which to erect and maintain a hospital in the city of Baltimore for the indigent sick of the city and its environs "without regard to sex, age, or color"; a training-school for nurses in connection with it—these two institutions to form a part of the medical school of the future university; and in the country an orphans' home with accommodation for three or four hundred colored children, and due provision for their maintenance and education. These deeds speak for themselves, but it should be added that Mr. Hopkins's instructions are, like his intentions, of the most liberal character, and that he and every one of his trustees are Southern men by birth and life-long residence. Mr. John Anderson, of this city—to turn to our second illustration—has just given $50,000 and a small island, with buildings and other improvements, situated at the entrance to Buzzard's Bay, to Professor Agassiz for a normal school of natural history, to be held during the summer vacation as a branch of the Cambridge Museum. The endowment is so complete that the school will be opened in July with about fifty pupils of both sexes, who must be either professors, teachers, or persons fitting themselves to be teachers, and to whom no charge will be made for tuition. The corps of instructors in this novel experiment will be the *élite* of American scientists. Commodore Vanderbilt, too, apparently not unwilling to be Drew's rival in dispensing as in making money, has been giving liberally—more liberally perhaps than wisely—to sectarian seminaries in Tennessee and on Staten Island, parting it is said with a million of dollars. The University of California, under President Gilman's new régime, is also stimulating the generosity of the Pacific coast and receiving significant donations of land and money for professorships, books, collections, etc. And finally, as taking effect during the present year, we may allude to the late Edwin Forrest's foundation of a home for decayed actors in Philadelphia, in a park of sixty acres.

—Few people will recollect that in the death of ex-Senator James Dixon, of Connecticut, we lose an American author, but "he was a poetical writer of some repute" in his youthful days, says the Hartford *Courant*, "and is favorably mentioned in Griswold's 'Poets of Connecticut.'" It is as a politician, however, that he is generally known, and of his political career the passage which made him widely known to people outside Connecticut, and made a majority of those who knew of him disapprove of him, was his going over in 1865 from the Radical-Republican wing of the party to the small and unfortunate company who followed the fortunes of President Andrew Johnson. Mr. Cowan of Pennsylvania, Postmaster-General Randall of Wisconsin, General Dix, Mr. Raymond, Mr. Hugh McCulloch, Mr. Doolittle, and other Republicans were with Mr. Dixon in this new departure, and none of them, so far as we recollect, except General Dix, who,

indeed, was hardly to be called a Republican, had any political success afterwards. They mostly were politicians disposed to be a little timorous, and from this and other causes inclined naturally to conservative views. And whatever is the truth as regards the others of them, we do Mr. Dixon at least no injustice when we say that he was a politician of the sort that is expert in every art of political manipulation, and that is extremely shrewd and adroit in caucus, whether or not it is statesmanlike in the closet and on the Congressional floor. Mr. Dixon was by profession a public man. Born in 1814, he graduated at Williams College in 1834, immediately afterwards began studying law with his father, and was admitted to the bar at about the same time that he was sent to the Connecticut Legislature by his native town of Enfield, although Enfield was Democratic and he a Whig, and although he was but twenty-three years old. Practice at the bar he did not long continue, and the rest of his life was mainly spent in politics, first as a Whig, then successively as a Know-Nothing, a Republican of a conservative type, and a "Johnson man." In this latter capacity he attended the famous "arm-in-arm" convention; but he had at last miscalculated the temper of the people, and in the election following (1869) he was defeated for Congress in spite of receiving Democratic support. His death was the result of heart disease, aggravated by depression of spirits caused by the loss of his wife. Personally, Mr. Dixon is said to have been much liked for his good nature and his zeal in serving his friends.

—A word of honor is due to the memory of Mr. Charles Knight, a veteran Englishman of letters, who was born eighty-two years ago, and who died early last month. "Sixty years since" he was a bookseller in company with his father at Windsor, and at the same time, and until 1827, he was the printer of the *Windsor and Eton Express* and also of the *Etonian*, better known to fame. In 1820, Mr. Knight and a friend projected *The Plain English man*, and thus twelve years before the *Edinburgh Journal* of the Chambers Brothers was published, he made the attempt to "supply intellectual food of the best quality, in such a form and at such a price as to suit the convenience of every man in the British dominions." The success of the attempt was not equal to the goodness of its intention, and *The Plain Englishman* was dropped at the end of two years. Then came bookselling and publishing of a costlier kind, and in 1822, Mr. Knight, aided by the good-will of some of his old *Etonian* friends, set on foot *Knight's Quarterly Magazine*, in which appeared much good writing by Macaulay, Hare, Praed, Townshend, and other brilliant young men of that day. Ten years later came the well-known *Penny Magazine*, and sixteen years later the *Penny Cyclopædia*. It is said that Mr. Knight paid for original articles contributed to this Cyclopædia not less than £40,000. An English Cyclopædia in twenty-two volumes based on this last-mentioned work, a popular history of England designed to show the domestic life of the people rather than the annals of their kings and ministers, a life of Shakespeare, a three-volume autobiography, are a few of the books edited or composed by this indefatigable worker, who was in the field so late as 1866 with 'Half Hours with the Best Letter-Writers.' His last public appearance in London is said to have been at the dinner which was given to Dickens on the occasion of his leaving England for his second visit to this country.

—M. Amédée Thierry, the second French historian who has reflected honor on that surname, would have been seventy-six years old had he lived till the second of next August. He was the younger brother of the more famous Augustin Thierry—*l'Homère de l'histoire*, as he was styled by Chateaubriand, whose 'Martyres' first fired young Thierry with the ambition to write picturesque history, and who worked at it with such ardor as to earn in more ways than one Chateaubriand's encomium, for he became blind at the age of thirty-two, just after the publication of his history of 'The Norman Conquest of England.' Amédée, like Augustin, was destined for the profession of school-teaching, but he early destined himself for something else, and before he had attained maturity was already devoted to literary and historical pursuits. By the time he was thirty-one years old he had published various review articles of some importance, a 'Résumé de l'Histoire de Guyenne,' and the work on which his reputation still most securely rests —'L'Histoire des Gaulois.' This book secured him a professorship at Besançon, but he was soon suspended, his liberalism being too popular among the students and too much for the ministers of Charles X. After the revolution of 1830, Thierry was steadily in politics, and at the same time paid due attention to literature, and his latest publication was 'Saint Jerome, the Christian Society and Rome, and the Roman Emigration to the Holy Land,' which appeared as late as 1867. Besides the works above-mentioned M. Thierry published (1840–42) a continuation of his history of the Gauls and commentary on it entitled: 'L'Histoire de la Gaule sous l'Administration Romaine'; 'Récits et Nouveaux Récits de l'Histoire Romaine (1860–64)'; 'Tableaux de l'Empire Romain (1862)'; and 'L'Histoire d'Attila et de ses Successeurs' (1864; new edition). He was one of Louis Philippe's prefects, he was made a member of the Legion of Honor in 1846, was afterwards a commander, and was a senator of the Second Empire.

—The death of "La Guiccioli," which took place at Rome a week ago to-day, is the death of a famous woman, who, well as she preserved in her old age her enchanting beauty and her youthful spirits, was already out of the world. The mention of her will carry the mind back to the early years of this century, when she and her English lover were shocking the British public of the Prince Regent's time beyond its power of expression, and she was the successor in odium of Nelson's Lady Hamilton. There is little need of dwelling at any length on her well-known career. Born in 1801, a daughter of Count Gamba, of the Roman nobility, she was taken from her convent school at the age of eighteen to be married to a man of three times her years, and who had been twice a widower, the Count Guiccioli. In a very few months after (April, 1819), she first met Byron, and the connection between the two immediately began, and lasted, with brief intermissions of absence, till 1823, when he took his departure for Greece. As to the moral aspect of this alliance it is enough to point out that Ravenna and Venice, in 1819, were different in some respects from the Old or the New England of those days, or of these; and that the "custom of the country" should come in for a share of the reprehension which the Countess Guiccioli certainly never, in her lifetime, felt bearing very hard on her conscience. As this one more charmer passes away—

"Dust hath closed Helen's eye"

is pretty much the only lesson which will be drawn from her career with any unanimity in the various lands where she had been famous and infamous. In 1851, at the age of fifty, and the apparent age of a woman much younger, the Countess, still proud of her *liaison* with Byron, married, as her second husband, the Marquis de Boissy, a rabid hater of all things directly or indirectly connected with the English, except his *marquise*. This union lasted till 1866. The one child, "Allegra," which the Countess bore to Byron, died in infancy, and the principal memorial of their attachment is a very poor book published in 1869, and telling the public, in regard to Byron's affairs, nothing not known before. This was the book that called out all the Byron controversy of three years ago.

BAGEHOT'S PHYSICS AND POLITICS.*

MR. BAGEHOT is best described by the term in vogue during the last century. He is an "ingenious" author. Many writers on society or politics far surpass him in extent of information. Some few are his superior in downright logical force. He has not the power possessed, for example, by Mr. Greg, of clinching an argument and driving it home by a kind of brute strength. There are again one or two essayists who equal him in literary skill. But we know of no modern English theorist who comes near him in ingenuity, or the power of suggesting new thoughts on old subjects. If he is right in saying that the main characteristic of the best English minds is the quality of "animated moderation," then Mr. Bagehot belongs to the highest class of English writers. What he says of Shakespeare and Scott, that they "have this remarkable quality in common, this union of life with measure, of spirit with reasonableness," is singularly true of himself. Many of his conclusions are questionable. It is easy to pick holes in a good number of his arguments. But it is impossible to deny that he is a thinker whose thoughts are both reasonable and filled with a certain spirit, animation, or freshness often wanting to the speculations of men who make far greater pretensions to logical acuteness. The fact that he really presents his readers with thoughts, and often with very valuable thoughts, marks him off from the tribe of desultory essayists who, with Mr. Helps at their head, put forth a minimum of thought involved in a maximum of words, and reduce the greatest subjects of speculation to the level of small-talk. The fact on the other hand that his thoughts are not only valuable but fresh, distinguishes him from that very respectable class of writers of whom Mr. Greg may be taken as a favorable specimen. They have and deserve great weight with the public; but their power lies in systematically elaborating ideas which are the common property of educated men. They argue with great force from well-established premises. They impress on the public conclusions which the public are very likely to overlook. But they do not in general strike out new ideas, or present well-worn themes in a new point of view. This is exactly what Mr. Bagehot's freshness of mind (which is closely allied to his intense hatred of pomposity) enables him to achieve. He takes in hand, for example, the English Con-

* 'Physics and Politics; or, Thoughts on the Application of the Principles of Natural Selection and Inheritance to Political Society. By Walter Bagehot.' London: Henry S. King & Co.; New York: D. Appleton & Co.

stitution. The topic is one of which we might well suppose it was now impossible to say anything which was at once true and new. Mr. Bagehot, though well informed on constitutional subjects, does not possess a single piece of information which is not accessible to every educated Englishman who has read Hallam and knows the history of his country. Yet Mr. Bagehot no sooner applies himself to his subject than he throws upon it a mass of new light. He effects this result by examining English institutions as they actually exist. He thus at once sets aside a whole mass of fictions and formulas, lays his finger on the essential point of modern constitutional government, and makes apparent to the whole world that its essence is government by a committee of parliament really elected, though elected in a roundabout way, and capable of appealing from the decision of Parliament to the judgment of the nation. With the merits or demerits of his constitutional theories we are not at present concerned. His work on the constitution is marred by an excessive ingenuity, which degenerates into a kind of intellectual dodginess. We allude to it here simply as exemplifying his aptitude for presenting stale subjects in a fresh aspect. It is of consequence that this quality should be fully appreciated, for there exists a danger that Mr. Bagehot's literary skill, versatility, and veracity may conceal from the mass of readers his great intellectual merits as a political or historical theorist. This peril is specially great with regard to his last work. It would seem to be in a sense a fragment. It is certainly disconnected in form, and the most appreciative critics must confess that it is marred occasionally by a disconnection of thought. The ideas are not linked closely enough together. Each page teems with suggestions, yet it is difficult at times to trace the exact course of the author's speculations, and it is possible that some readers, charmed with the flow of bright and sparkling sentences, which contain now an exquisite criticism on Carlyle's style, now an amusing anecdote of Mr. Bagehot's boyhood, and now a vigorous picture of Lord Palmerston as a man who "always went with a great swing, but never tumbled over," may fancy that the stream of Mr. Bagehot's thoughts meanders on, but scarcely flows, in a definite direction. Nevertheless, any reader who fancies that our author is one of those loose thinkers who only care to make a series of brilliant remarks will do him grievous injustice, and miss the real import of the essay of 'Physics and Politics.' It is an attempt, and in some respects a successful as well as remarkable, attempt to answer a problem which must have perplexed every one who has turned his mind to the history of mankind. Why is it that while we see all about us signs of a progress which seems to be unceasing, and which most Europeans hold to be illimitable, we yet perceive that whole races and nations make no progress whatever? The Arabia of to-day seems in essential characteristics to be very much the Arabia of Abraham and Jacob. In China you see marks of former progress. You have an elaborate and most artificial civilization. But the growth of the nation appears arrested. What is it which, speaking roughly, makes the nations of Europe the scene of constantly progressive change, whilst the East stands stationary from century to century? No writer so reasonable as Mr. Bagehot would ever dream of answering adequately this most perplexing of enquiries in a short essay of two hundred and odd pages. What he does attempt is to suggest considerations which at any rate may prepare the way for the solution of the problem. His aim is to point out the road to be taken by enquirers, rather than himself to bring the enquiry to a close. His suggestions may in many respects be erroneous. In some points they are open to grave question. But they are the suggestions of a man of great fertility of mind, who is tied down by no theory, and has a singular capacity for looking facts in the face, and looking at them, moreover, through his own eyes, and not through other people's spectacles. It is of consequence that the ideas of such a man should not be lost. The best service we can do our readers is to summarize Mr. Bagehot's theory, and then point briefly to what appears to be its strength and its weakness.

Mr. Bagehot's first step, and it is a very characteristic and important one, is to place the problem before us in a new point of view. Most Englishmen enquire why it is that certain races or nations are stationary. The true enquiry is, in Mr. Bagehot's opinion, Under what influences have any nations made progress? Constant progress is, in other words, the exception, and not the rule. "The ancients," as he points out, "had no conception of progress. They did not so much as reject the idea; they did not even entertain the idea. Oriental nations are just the same now; since history began they have always been what they are. Savages, again, do not improve. They hardly seem to have the basis on which to build, much less the material to put up anything worth having. Only a few nations, and those of European origin, advance, and yet these think—seem irresistibly compelled to think—such advance to be inevitable, natural, eternal. Why, then, is this great contrast?"

Put the enquiry in this form, and you have already advanced some way towards answering it. The thought immediately suggests itself that even the most stationary of modern nations are not marked by any abnormal incapacity, but represent races who have advanced up to a certain point, and have been able to advance no further. All the existing classes of mankind, even the savages of Terra del Fuego, have, as Mr. Bagehot believes, got some way. The people who could not civilize at all have died out in the conflict for existence. That civilization originated in this conflict every one, we suspect, who is not tied down by some religious theory will now admit. Those nations, as Mr. Bagehot puts it, which in any particular state of the world are strongest, have tended to prevail over the others, and in certain marked peculiarities the strongest tend to be the best.

The problem, therefore, of progress is to determine what are the conditions which have made one nation or body of men tend to be stronger than another. Mr. Bagehot's essay in reality insists on two main conditions as determining this tendency.

The first is the possibility of obtaining some fixed rule or law of life. Any body of men, call it race, nation, or tribe, which obeys a law or rule, must have had, in our author's view—and in this point we conceive him to be indubitably in the right—an almost infinite advantage over any set of men not bound together by any rule or custom. The first and primary requisite, therefore, for progress was that men should obey a law. "Law, rigid, definite, concise law, is the primary want of early mankind; that which they need above everything else; that which is requisite before they can gain anything else. But it is their greatest difficulty, as well as their first requisite—the thing most out of their reach as well as the most beneficial to them if they can reach it." To the importance of having a law of any kind in an early stage of society, combined with the fact that in classical times this importance was still keenly felt, Mr. Bagehot, with great ingenuity, attributes the stern political conservatism of all ancient philosophers. Plato and Aristotle "lived when men had not had time to forget the difficulties of government." No nation, therefore, on this theory ever progressed at all which was not able to submit to the yoke of some law or custom, and those nations which could do this made the first and most important step on the path of progress.

The next necessity for progress is the capacity for at last breaking through the bonds of the very rules or law in virtue of which progress had been originally made. Almost any custom is certain to be in some points defective. It must, from the nature of things, be grounded on a partial and imperfect view of life. Any nation which, having gained consistency by obedience to law, could yet vary its rules so as to meet new circumstances, was almost certain to have an advantage over a body of men acting solely by some fixed custom. To achieve this change was the second great problem of progress. Failure was possible in two directions. A nation might change too readily. In attempting improvement, it might fall into anarchy. A nation again might refuse to change at all. In such a case, progress was at an end. In one way or another, the mass of mankind have stumbled at this second step.

"No one will ever comprehend the arrested civilizations unless he sees the strict dilemma of ancient society. Either men had no law at all and lived in confused tribes, hardly hanging together, or they had to obtain a fixed law by processes of incredible difficulty. Those who surmounted that difficulty soon destroyed all those that lay in their way who did not, and then they were caught in their own yoke. The customary discipline which could only be imposed by terrible sanctions continued with these sanctions, and killed out of the whole society the propensities to variation which are the principle of progress."

What then is the quality which enables men under favorable circumstances to form customs and to vary them? Mr. Bagehot's answer is that this quality is nothing else than the inborn tendency to imitation. The stress laid on mimicry is one of the most original though not perhaps one of the most satisfactory portions of his theory. He shows extraordinary ingenuity in tracing out in literature, in art, and in politics the effect of mimicry. He maintains that in an early state of society men, who are much like children, are, like children, certain to imitate almost any model set before them. Hence, if once any individual, whether a priest or a lawgiver, impresses a certain view of life on a group of men, they are all but certain to mould themselves with one accord on the one type put forward for their imitation. Hence the growth of fixed customs, but hence, too, among fortunate races, the ultimate change of custom. A new type of character arises, from some cause which may be termed accidental, into prominence. If the type is utterly foreign to the society, its imitators fail and die out, but if it commands a certain amount of sympathy the force of imitation has full play, and gradually the whole society is moulded to a new form of character. This course of things is, in Mr. Bagehot's view, traceable in all departments of life. You see it if you look at a class of schoolboys, you may observe its influence in changes of literary taste, you may find it working in all great historical revolutions. In other words, the spirit of an age

means really the spirit of one or two men who influence the age. If society is moulded, as it often is, in so rigid a shape that not even a man here or there can develop a new type of character, then society is stationary. But if even one or two individuals can give free play to their genius, then you have movement and progress.

The three doctrines of the necessity in many early civilizations for a rigid law of some kind or other, the necessity during later stages of breaking through this law, and the immense influence exerted by mimicry, form the backbone of Mr. Bagehot's views. Stated nakedly and without the illustrations and applications by which he impresses them on his readers, these doctrines may sound like rather barren and unimportant dogmas. He proves nothing, it has been said, except that progress depends upon men being at once obedient to law and yet not too obedient to law. But such criticisms are mistaken. He makes suggestions which do not indeed solve the problem before him, but certainly take us some steps towards its solution. He, for example, makes perfectly clear that the very tendencies which aid progress at one stage become a hindrance to it at another, and thus removes at least half the difficulty of understanding why some nations have never progressed beyond a particular stage of cultivation. The force which impelled them to become civilized—for example, the influence of religion—was too strong for its purpose. It drove them so strongly in one direction that it made it impossible for them to turn in another. This is probably not the whole cause of arrested growth, but it is certainly one of its causes. Take, for example, the Mohammedan nations, what progress they have made they almost undoubtedly owe to their religion, but the existence of the religion seems to make further progress impossible. You cannot reform a law which is supposed to be enacted under the sanction of the Deity himself. It is again an immense gain fully to realize the mode in which imitation works. When you hear that the spirit or genius of an age changes, you are apt to have a vague impression that millions of people suddenly undergo some mysterious alteration. Study Mr. Bagehot, and you soon see that this alteration is not in itself a mystery. A very limited number of persons set the pattern of each age. The millions about them imitate the model. If the leading men in Europe were reconverted to heathenism, there is every reason to suppose that the mass of Europeans would take easily enough to the building of temples and the offering of sacrifices to Jupiter. The difficulty is, of course, to show what are the causes which make the leading minds of one age heathen and the leading minds of another monotheists.

Mr. Bagehot's theories have the great merit of throwing real light on their subject as far as they go. Their main demerit is that they do not go very far. Mr. Bagehot, for example, shows with great clearness that a law of some kind or other is an essential condition of early progress. He does not show what are the causes which enable one race to form customs whilst another race fails and goes to ruin for want of any principle of cohesion. He shows, again, the immense power of imitation, but he hardly suggests what are the conditions which make men, after admiring one type of character for centuries, turn as it were suddenly to the worship of another. Why, for example, did Constantine feel an admiration for a religion which Cæsar would have looked upon with detestation? We do not suggest for a moment that this kind of enquiry is unanswerable. In the instance we have given many obvious replies suggest themselves. What we do maintain is that Mr. Bagehot does not even attempt to account for the changes which come over the feelings of different eras. If it were merely that he does not answer a question which is not the problem before him, he would not be open to criticism. He is open to criticism because he does not seem to perceive distinctly that his theories do not account for changes, when they only assume that change will sooner or later take place. His speculations are again marred by a fault which lies deep in the character of his mind. His ingenuity is excessive. You cannot help feeling as you read his speculations that his wonderful power of drawing suggestions from the most ordinary events of life tempts him to believe that if he can explain a little everyday puzzle, he has certainly found the solution for some great question. He gives, for example, a most amusing account of the belief he entertained as a child in the lucky properties of a certain "fish" which he and his companions used in the game of loo, and concludes with the reflection that "many elaborate explanations of the totem, the 'clan' deity, the beast or bird who in some supernatural way attends to the clan and watches over it, do not seem to me to be nearly as alive to the reality as it works and lives among the lower races as the 'pretty fish' of my early boyhood." In other words, Mr. Bagehot has built up a whole theory as to superstition on the rather slender basis of his boyish reminiscences. No sensible person will object to such recollections on the score of the dignity of philosophy. But sensible critics may suspect that Mr. Bagehot has attached very undue weight to a somewhat amusing trait of his childhood. Examine the matter carefully, and you will come to the conclusion both that the analysis of his childish feelings is inaccurate and that the inference based on it is infinitely wider than it will bear. Mr. Bagehot is the dupe of his own excessive ingenuity.

THE MAGAZINES FOR APRIL.

WHAT sort of "medical expert" evidence was given in the late Wharton trials in Baltimore, and the earlier trial of Dr. Schoeppe, is related in the April *Lippincott* by Dr. H. C. Wood, jr., who tells a story that is certainly amazing; indeed, when we recollect that one woman at least has been hanged on the testimony of the chemist who figured in these trials, the story may be called not a little horrifying. Dr. Wood represents Professor Aiken, the chemist in question, as having reported that "he found prussic acid" in the stomach of Miss Steinecke, the woman whom Dr. Schoeppe was charged with murdering; whereupon the jury found the accused guilty, and he was sentenced to death. He came so near suffering death, too, that he was measured for his coffin, and had the dismal satisfaction of hearing of his respite, by special act of the Legislature, at about the same time that he heard the death-struggles of a fellow-prisoner, on the same platform with whom the doctor was to have been hanged. Yet a sifting of Aiken's evidence showed that his "finding" of prussic acid was the discovery of traces of that poison after the distillation of the stomach and contents with sulphuric acid. But inasmuch as saliva contains "ferrocyanide of potash, out of which sulphuric acid generates prussic acid, the latter substance will always be obtained by the process adopted by Professor Aiken from any stomach which has in it the least particle of saliva"—the manufacture being, let us trust, seldom followed by the consequences which came so near following Professor Aiken's. Yet it is probable that such results occur less seldom than could be wished. A local physician, testifying in this same case, swore that in his opinion the deceased came to her death from the effects of some compound poison, because "her eyes looked like the eyes of a hawk killed by himself some years before" with a dose of several poisons mingled in one. Another local physician, when it was urged that Miss Steinecke might have died of a certain disease of the kidneys, the symptoms of which are like those attending her death, swore that he had made a post-mortem examination of the body; that he had not looked at the kidneys, but that the liver was healthy, and, such being the case, the kidneys could not have been diseased—a most extraordinary inference. Again, the jury had it in evidence that Miss Steinecke lingered for many hours after her seizure and after the alleged dosing with poison; and they had the testimony of a competent toxicologist that prussic acid, if it does its work at all, does it in a few moments. But in spite of this the jury without difficulty brought in a verdict of guilty, the bench accepted it, and the prisoner was condemned on evidence "which from the same bench was subsequently stigmatized as being insufficient to warrant his commitment for trial." It will strike most people that it was not "expert evidence" that broke down in this case, but that there was very grave if not very disgraceful incompetency in the legal and judicial management. In fact, had it not been for the immediate and indignant protest of chemical experts all over the country, Dr. Schoeppe must have died an ignominious death—a victim to the lawyers, judges, and jurymen who put forward and who received the evidence of two or three country doctors, obviously ignorant of one branch of their extremely complicated and difficult profession.

All of *Lippincott's Magazine* is readable this month; for if nothing is extravagantly good, almost everything has a flavor of its own, and a flavor unlike that which the other magazines are apt to have in common. It is as the taste of the waters of the Delaware or Rapidan and the taste of the waters of the Merrimack. In "Berrytown" Mrs. Harding Davis hints her rather amusing hatred and contempt for such reforms as incidentally produce long hair but primarily have for their object the setting of all things to rights at once. Evidently she is not fond of the east wind; but her story is striking, and promises to be of her usual excellence. "Wilmington and its Industries," an illustrated paper, most readers will find to be not only instructive but also pleasing by reason of the peaceful, sleepy charm of the old-fashioned days which it brings back to remembrance. The writer should perhaps fear a libel suit, however, for he undertakes to speak of Mr. Charles Reade's 'Wandering Heir,' whose hero served as an apprentice near the ancient Wilmington, and he has the temerity to speak thus: "Reade, so long as he keeps up his friendship with Ferris, is safe, sane, and true. It would have been well if he had kept it up a little longer, for the moment he lets go Ferris's coat-cuff he falls into mistakes, calling the Delaware hereabouts a bay, and speaking of a prickly-pear hedge on a farm only sixty miles from Philadelphia." We may add that Mr. Reade is more in error in this part of his book than our magazine writer points out. For ex-

ample, speaking of the servitude of the poor servants who were shipped to the plantations, he remarks that "the Puritans," although no men talked more of liberty, and although for themselves they obtained it and defended it, yet in the case of the apprentices, etc., etc., meaning to say that at the time of Lord Altham's wanderings, the Delawareans were Yankees and Puritans—a curious blunder which most English novelists might well enough commit, but which is a little odd in the work of a professed lover of the American, and a novelist, too, who demands our admiration for his painstaking accuracy. A Yankee novelist who should introduce Lord George Gordon as a Quaker would do much the same thing that Mr. Reade has done in this instance.

People who are heartsick of hearing about the carpet-bagger and his rascalities, and have begun despairing about the condition of the South, might be recommended to read a lively piece by Mr. R. B. Elder, entitled "A Night in Bedford, Virginia." Bedford is the county just west of Lynchburg, a beautiful and fertile region, and there resides an ex-rebel general whom a young friend, nearly but not quite as well "reconstructed" as himself, visits at his home, where the two talk about the prospects of Virginia landowners, and about a New Hampshire man who has just bought a piece of the general's estate.

What with the articles above-mentioned and those that follow, it will be seen that the April *Lippincott's* is worth reading: "Thackeray's Gray Friars," written by an old gown-boy; "The Glaciers of Paradise," a poem by Mr. Boyesen, whose new language appears not to constrain and hamper him at all; two chapters, satisfactorily long, of Mr. William Black's "Princess of Thule"; "The Sweet Waters," a sketch, by Mr. Edwin De Leon, of the Bois de Boulogne or fashionable pleasure-ground of Constantinople; a second paper on the Kabyles; a good-natured, sprightly little story, "Mademoiselle Stylites," by Miss Margaret Vandegrift: some gossip about several English noble houses, and some good book reviews. To one of these latter we would refer all persons who wish to read up the history of San Domingo, as it supplements, at some length, Mr. Hazard's list of works on that subject. We should have mentioned that Mr. C. P. Cranch makes a rhymed version of a Chinese story which, after a fashion worthy of Æsop, warns against sharp practice and false pretences.

The opening article in *Scribner's*, "An Hour among the Greenbacks," gives a hasty account of the work done in the Treasury at Washington in the way of counting money, detecting counterfeit notes, and cancelling notes returned. Some remarkable things are told. For example: of one young woman who has been in the Division of Issues since its organization in 1862, it is said that she has on many occasions counted fifty thousand notes in five and a half hours. "This is at the rate of 9,090 notes every hour, 150 every minute, and two and a half every second." Often, however, this same counter "picks up" notes at the rate of three and one-third in a second for twenty minutes together. Anybody who does not recognize in this a wonderful feat may, as the writer remarks, readily satisfy himself that it is by undertaking to tap his finger on the table for half an hour or so at the rate of twice or thrice a second. Some other curious information this article contains, as, for instance, in regard to the defaced and mutilated bills and fractional currency returned to the Treasury: one Frenchman sends in a package of minute fragments of greenbacks which have "met with the accident of a little dog." We may remark in passing that apparently the writer has not closely observed the habits of the domestic goat, which, she says, sometimes eats paper money, "the green notes having an inviting and familiar appearance," the fact being that wrapping-paper, wall-paper of any and every color, and newspapers of every grade, are alike welcome to him.

"Moscow and Southern Russia," another illustrated article, comes second in *Scribner's* table of contents, and is by Miss E. D. Proctor, who has travelled among the people, or rather the peoples, of whom she writes with spirit; Mr. Edwin De Leon describes the late Emperor Napoleon at Vichy; "Saxe Holm," a writer fitted for wide popularity, carries further forward the history of her heroine, Draxy Miller; Dr. Holland, in his eighth and ninth chapters, has something to say about the "revival" once so common in New England religious circles, and condemns it strongly; "An Ancient American Civilization" (illustrated) is concerning the Peruvians under the Incas, and is not the regulation article that it may at first sight seem—an eviscerated chapter or two of an accessible book; it is from the unpublished "Travels" of a French gentleman who has recently been exploring Peruvian sepulchres and collecting material to illustrate the history of that unfortunate race; "Needed Modifications of our Currency and Banking System," by Mr. Lyman Atwater, is the solid article of the number; "Hypatia," by Mr. Stedman, appears to be addressed to a female lecturer who favors the woman movement; "Martin Lea's Story," by "Norman Holm," is dismal in the highest and happiest degree; finally, there is much "Culture and Progress," "Nature and Science," "Home and Society," and "Topics of the Time," and Mr. A. C. Wheeler writes of Miss Kellogg as all Americans should be glad to see that lady written about.

Magazine readers who wish to be amused, and who are not easy to amuse, will probably find "Marjorie Daw," in the *Atlantic*, by Mr. T. B. Aldrich, about as well suited to their needs as anything else in the April magazine literature. Anything at once prettier and more farcical, more pleasantly interesting to the end and with an end more unexpected, than this witty little trifle, it would be hard to find. Excellent, too, is another short paper in this magazine—Colonel Waring's sketch of his horse. "Ruby" must have been, as an Irish groom once remarked of another horse, "a most intricate lept one" for clearing ditches and Virginia rail fences; but in spite of his demand on credulity, he stands out in Mr. Waring's description as veritable horse-flesh and worthy of Hector or Assheton-Smith. "Some Impressions of London Life," by Mr. E. S. Nadal, is another clever article that is a little out of the *Atlantic's* usual way, but not the less welcome perhaps on that account; while in the *Atlantic's* accustomed way we have Mr. Parton's "Edmond Genet in the United States," and Mr. Howells's "Chance Acquaintance." "Chopin" is by a writer not hitherto known to us, whose admiration of Chopin we shall call ardent—excessive not being for us to say in such matters. The poetry of the number is of extremely little moment, though Mr. Boyesen is once more successful in his Norwegian legend.

Serpents have always had a sort of horrible fascination for the sons of Eve, and naturally there has been much romancing about their habits, especially the habits of the more venomous kinds. Most readers, then, will be surprised at some statements which they may read in the "Scientific Miscellany" of the *Galaxy*, where a Mr. Morley, chief surveyor of some railroads in Colorado and New Mexico, sets down some of the results of his observation of these reptiles, and corrects several popular delusions in regard to them while confirming some articles of the popular faith. The tales which one may hear among the Southern negroes about the rattlesnake's ability to launch itself through the air to a distance of twice or three times its length, Mr. Morley has never found verified in the course of his experience with many hundred snakes: "It throws itself forward about three-fourths of its length, supporting its weight entirely upon the remaining fourth. In order to strike, it must lie in a close coil, with its head and neck erect." Its venom is not, as has been universally asserted, injected into the wound through a hollow fang; the fangs are hollow for a part of their length, but the tip is never pierced: "the poison-sac, the position of which may be roughly indicated by comparing it to a gum-boil, is in such relation with the base of the fang that, when the animal strikes, pressure is exerted upon the sac, which causes a drop of venom to run down *outside* the tooth into the puncture." Thus it happens that rattlesnakes' bites are sometimes harmless when the creature attempts to strike through cloth, the poison being absorbed by the material. As for the rattle, it is of little value as a warning, for the striking is almost simultaneous with the sound, and is done with electric quickness—sometimes is done twice, contrary to the opinion that venomous snakes do not bite twice in immediate succession. But if the warning is of little value, the bite, on the other hand, is reported by Mr. Morley to be much less dangerous than he had supposed. Of thirty persons whom he has known to have been bitten, all recovered except one, and he lived twelve days after the accident. This one, by the bye, was the only one of the party who had surgical aid. The best cure for the bite, Mr. Morley says, confirming the popular belief, is to make the patient drink whiskey enough to make him drunk; and he further says that much more whiskey is required to produce this effect than if the person drinking had not been bitten. This specific, for such it may almost confidently be called, is also in use in the South, and sometimes really immense doses of spirits are tolerated. The peculiarly offensive odor of these snakes is vouched for by Mr. Morley, who says that if "one is irritated and made to bite the rake or hoe with which it is intended to kill him, the implement will retain the same unpleasant odor for months." One more error he corrects by saying that he has frequently killed the rattlesnake at an elevation of about 8,000 feet, although all the writers on the subject say that he is never found at a greater height above the sea-level than 6,000 feet. These mountain snakes are said to be more venomous than their brethren of the lowlands, but this may be a mere conjecture based on the highland snake's greater vividness of color. Nervous readers may be pleased to hear that the part of the United States where rattlesnakes are most numerous is the strip of land, sixty or seventy miles wide, between the Rio Grande and the Neuces, in Texas, which swarms with them: "One cannot go fifty yards without seeing a rattlesnake." Moccasons, centipedes, tarantulas, and scorpions are other inhabitants of this region.

There is plenty more of readable matter in the April *Galaxy*. Mr. De Forest's "Wetherel Affair" promises to be as good as any novel he has

written, which is saying not a little; Turgenef's "Antchar" has reached its third part; Mr. Justin McCarthy draws a portrait of Mr. Joseph Arch, the Englishman who has taught his fellow-hinds to co-operate and agitate—agitate for four dollars a week of wages, be it remembered; "A Snow Storm and a Baby" is a rapid and fairly well told story; Mr. Bayard Taylor contributes a dignified sonnet; Professor Van Amringe's essay on "Life Assurance" concludes with the third part; Mr. R. B. Kimball speaks a good word for Napoleon Third; and Mr. John Durand accomplishes the incredible by taking up "Hamlet" and saying something new and true—so far as our knowledge and our judgment go—in reference to that play. The character of Ophelia is the matter more especially under investigation, and Mr. Durand dissents from some of the common conclusions. He does not at all believe with Mr. Hudson that the unfortunate girl is perfection itself; nor will he, with Mrs. Jameson, declare that Ophelia loves "in the silent depths of her young heart far more than she is loved." Mr. Durand, on the contrary, thinks that she treated Hamlet with less than true loyalty, and, not to put too fine a point on it, angered him by joining with his enemies in a trick to deceive him, in prosecution of which scheme she told him a falsehood, well-meant, perhaps, surely not ill-meant, but deliberate, and told at the moment when he was trying her to see if she were true. As to the other parts of Mr. Durand's essay, with some we may agree and about others say nothing; but that part of it for the sake of which it was written appears to us a good example of Shakspearian criticism of a kind needed. The multitude of critics and commentators has bred a lazy or a slavish set of readers, and an independent reader who does not go with the many but thinks for himself is not too common, nor indeed can he be.

Mr. Joseph Arch comes up again in *Harper's*, which has a portrait of him, and a sketch of his career, written apparently by Mr. M. D. Conway. Mr. Arch is clearly a man of mark and note, and if the accounts we get of him are unprejudiced, he most probably has a very useful future before him. The following is a glimpse of the misery which he and his coadjutors are now endeavoring—and here is a lesson for a Communist—to get into a Parliamentary Blue-book, after investigation made by a royal commission:

"Mr. Mitchell, the other laboring man who spoke, told a doleful story of how often he had suffered the pangs of hunger when, at eighteen years of age, he had followed the plough, working from six in the morning until ten at night without having twopenny-worth of food in him, and a little sour cider, which was called 'perquisites.' It was the third runnings. The wages were seven shillings a week. 'The living was tea-kettle broth for breakfast. Two or three little pieces of bread were put in the breakfast pot, which held three quarts, and then the bread was soaked with hot water. For dinner they got a few potatoes and a square inch of bacon fried in the pan for a family of seven, the fat going on the potatoes, and the meat being the father's dinner. For tea they soaked burned bread, and put a little treacle on it, that being carried to the husband in the field by the woman. For supper they got little pieces of bread and skim-milk cheese. As for dwellings, I have known thirteen huddling together in one room on what they called a "shakedown," like hounds in a kennel. Last week I spoke to an old man at Yeovil, whose master told him he could not give him more than five shillings a week, and who said he was then literally starving. I will do my best to elevate my countrymen, and run the risk of the horse-pond.'"

The allusion in the last line is to what is now known as "the bishop's baptism." That right reverend father in God, the Bishop of Gloucester, substantially advised the farmers of his diocese to duck in the horse-pond any "agitator" who might come into their neighborhood. That, if the very worst phases of English peasant life were brought forward and insisted upon, Mr. Mitchell's picture might have been painted in still darker colors, is as well-known as it is hard to tell in plain speech. But to work at ploughing for sixteen hours a day "without twopenny-worth of food in one," at seven shillings a week, makes a good enough grievance for the present.

The "Easy Chair" discourses upon Bulwer, the younger Dumas, and his reply to a German who wished to buy a play from him; and upon the eagerness of denunciation which has followed Mr. Colfax, who, the "Easy Chair" says, will probably have explained the charges against him before the reader gets the "Easy Chair's" words—as if there was much need of Mr. Colfax's explaining anything, after admitting his quarterly receipts from the beneficent Mr. Nesbitt.

A Hand-book of Social Economy. By Edmond About. (New York: D. Appleton & Co.).—The general scope and aim of this clever little book may be easily stated in a few words, though for any idea of its brightness, clearness, and interest we must refer the reader to M. About himself. The purpose of the author is to diffuse among the working-classes correct notions on the subject of economics; on the relations between capital and labor; on production; on consumption; and other matters which are usually treated under the head of political economy.

The general conception of the economic cosmos existing in the mind of the workingman is undoubtedly the great obstacle in the way of his progress. He has been taught from his cradle up that mankind is divided into rich and poor; that the interests of these two classes are antagonistic; that the main object of the rich capitalist is to get as much work done for him by the poor laborer as possible at the least expense; that no matter how hard he may work, he will probably remain all his life in the same condition in which he begins it, if, indeed, he is lucky enough to remain where he is, and does not sink to a lower level; and he is taught at the same time certain general ideas as to justice and equality, which seem to him strangely in conflict with the actual condition of the world. Besides this he sees that riches do not by any means fall to the lot of those who work the hardest for them, but are quite as apt to come by lucky speculation, by mere chance, or even by fraud. It is hardly to be wondered at that, in an age of Fisks and Goulds, Crédits Mobiliers, and brummagem empires, the ambitious workingman should be led to thinking that, after all, pillage is the most profitable kind of labor; and, on the whole, if fortunes are to be acquired by any one unjustly, it might as well be by himself as by his capitalist employer.

It is this conception which M. About desires to eradicate from the workingman's mind. The *Commune* has alarmed M. About, as it has most other people, and in the volume before us it is evident that the dangers of such socialistic revolutions are constantly before his eyes. With his usual skill, in order to remove the false impression in the minds of his hearers, he puts before them his picture of the social economy of the world in such persuasive and truthful colors, that no unprejudiced person can fail to be convinced. The world, he says, is no such fighting-ground as you have been taught to believe it. The world is a great workshop in which nature furnishes materials which man by his labor endows with utility. In this workshop it is only the idle and thievish who are out of place—the "parasites," as he calls them, who appropriate and waste the products of the others' labors—thieves, beggars, gamblers, communists. In this workshop each has his place, from the masters, who direct and employ, to the receivers of wages, who handle the machines, stoke the fires, and distribute the goods.

No one can fail to be convinced of the truth of this picture, any more than he can of the other. Both are true. It is true that each man receives from the general fund of accumulated wealth in proportion to the labor he gives, and it is also true that some unscrupulous and clever men always get more than their fair share. In one case it is an Emperor, who gets hold of the revenues of a government by what he calls a *coup d'état;* in the next it is an employer of labor who gets fabulous wealth by what he calls a land-grant; again it is a physician who grows rich by the sale of what he calls a panacea, or a demagogue (a labor-reformer perhaps) who gets money by the sale of what he induces people to believe is eloquence. This has been going on since the world began, and will go on until it comes to an end. All we can do is to confine it within narrow limits, which we certainly do not succeed in doing now. The rest must be done by the gradual elevation of the working-classes themselves in intelligence and self-restraint. They have already taken one great stride from the condition of slavery into that of wage-receiving freedom. From this stipendiary state into that of industrial co-operation they are undoubtedly destined to pass, but only through a gradual change in the mental and moral condition of the world.

Meantime, such books as this of M. About are peculiarly serviceable, as they put before the workingman a true picture of the relations of things as they look from the point of view of enlightened self-interest, as well as from that of unselfish sympathy with the struggles and sufferings of mankind. Teachers will find it an excellent vade-mecum.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*	
Abbe (F. R.), The Temple Rebuilt	(Noyes, Holmes & Co.)	
About (E.), Rouge et Noir	(Claxton, Remsen & Haffelfinger)	
Brooke (H.), The Fool of Quality	(Macmillan & Co.)	1 75
Burr (Rev. E. F.), Pater Mundi; or, Doctrine of Evolution, second series	(Noyes, Holmes & Co.)

NOW READY.

The March Number of the

FORTNIGHTLY REVIEW.

EDITED BY JOHN MORLEY.

$6 a year, or 50 cts. a number.

CONTENTS OF THE MARCH NUMBER.

Are we Christians? By Leslie Stephen.—Servia and Its New Prince. By Humphrey Sandwith.—The Organization of a Legal Department of Government. By James Bryce.—On the Historical Element in Shakespeare's Falstaff. By James Gairdner.—On the Causes which Operate to Create Scientific Men. By Francis Galton.—The Game Laws and the Committee of 1872. By A. H. Beesly.—Rameau's Nephew. From the French of Diderot.—Critical Notices: 'L'Avere et l'Imposta.' By J. S. Mill.—'Biographical and Critical Essays,' 'Notes of Thought,' 'Jest and Earnest,' 'Memoir of a Brother,' 'Our New Masters,' 'Mountaineering in the Sierra Nevada,' 'Caliban.' By Edith Simcot.

CONTENTS OF THE FEBRUARY NUMBER.

Causes of War in the Existing European Situation. By Emile de Laveleye.—A Conversation with Marcus Aurelius. By W. W. Story.—Louis Napoleon: 1851 and 1873. By Albert Venn Dicey.—Class Legislation. By Henry Crompton.—The New Cure for Incurables. By Lionel A. Tollemache.—Forty Years of the House of Lords. By F. Bowen-Graves (conclusion).—The Eustace Diamonds. By Anthony Trollope (conclusion).—Critical Notices: Murray's 'Manual of Mythology,' 'A Concise History of Painting,' 'Memoir of Nathaniel Hawthorne,' 'The Red Flag,' and other Poems. By Sidney Colvin.

CONTENTS OF THE JANUARY NUMBER.

The Revival of Authority. By Frederick Harrison.—Grote's Aristotle. By John Stuart Mill.—Mr. Stephen's Introduction to the Indian Evidence Act. By Sir Henry S. Maine.—Memorial Verses on Theophile Gautier. By A. C. Swinburne.—Ibsen, the Norwegian Satirist. By E. W. Gosse.—Forty Years of the House of Lords. By F. Bowen-Graves.—The Eustace Diamonds. Chaps. LXXIII. to LXXVI. By Anthony Trollope.—The Five Gas-Stokers. By the Editor.—Critical Notices: 'Middlemarch' and 'Love is Enough.' By Sidney Colvin.

☞ A New Story, by Anthony Trollope, will be commenced in the April number.

Owing to the misunderstanding incident to the beginning of such an enterprise, the January and February numbers have not appeared as promptly as there is every reason to hope subsequent ones will.

HOLT & WILLIAMS,

25 Bond Street, New York.

ECLECTIC MAGAZINE

OF

FOREIGN LITERATURE, SCIENCE, AND ART.

CONTENTS OF THE APRIL NUMBER.

Embellishment—Prof. Richard Owen.

1. Unpublished Letters of the Princess Charlotte—*Quarterly Review.*
2. Æneas Sylvius Piccolomini, Pope Pius II.—*Macmillan's Magazine.*

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

A $2,000 GARDEN.

PLAY AND PROFIT IN MY GARDEN.

By REV. E. P. ROE,

Author of 'Barriers Burned Away,' giving a record of the author's experience in gardening for recreation and profit, and showing how, in one season, he received $2,000 from the sale of fruit and vegetables raised on two and a quarter acres, beside an abundant home supply.

Will be published in April in one vol. 12mo, price $1 50, by

DODD & MEAD, Publishers,

NEW YORK.

An elegant and indispensable work for gentlemen residing in the country, or about to remove thither, and especially for such as contemplate building.

COTTAGE RESIDENCES; or, A Series of Designs for Rural Cottages and Cottage Villas and their Gardens and Grounds, adapted to North America. By A. J. Downing. Containing a revised list of Trees, Shrubs, Plants, and the most recent and best selected Fruits. With some accounts of the newest styles by Henry Winthrop Sargent and Charles Downing. With many new designs in Rural Architecture, by George E. Harney, Architect. Illustrated by upward of One Hundred and Fifty fine Wood Engravings, including Elevations and Plans for Cottages and Villas, Lodges, Stables, etc., in wood, brick, and stone, with estimates of costs, etc. Also, many designs for Gardens and Grounds. 1 vol. 4to, extra cloth, gilt, $6.

Published this day by

JOHN WILEY & SON, 15 Astor Place, New York.

MURRAY'S HAND-BOOK FOR Travellers. Just received, a further supply of the LATEST EDITIONS at wholesale and retail by JOHN WILEY & SON, 15 Astor Place, New York.

BOOKS BY MAIL.

The Publisher of the *Nation* will hereafter forward by mail any book for which an order may be sent him, on the following conditions, which must be strictly observed:

1. That the money be forwarded in advance whenever the price is known.

2. That enquiries as to price or other particulars be accompanied by a stamped and addressed envelope for the reply. (These enquiries should be as *specific* as the knowledge of the writer will permit. It is presumed that in most cases the name of the work, of the author, or of the publisher can be given.)

3. That both money and books shall pass through the mails at the risk of the purchaser.

THE NATION,

5 Beekman Street,

P. O. Box 6732. New York City.

TO PROFESSIONAL MEN.

Individuals whose duties are intellectual observe especially the waste of the nervous system, particularly the brain, and the necessity of restoring it by appropriate food. The more general use of Phosphatic Food, therefore, cannot be too strongly recommended.

RUMFORD YEAST POWDER,

Prepared under the direction of

PROF. E. N. HORSFORD,

restores the Phosphates lost in the preparation of fine flour, and his Acid Phosphate (Medicinal), imparts new vigor and strength to the system.

THE EVENING POST.

Volume 72. Established 1801.

Daily, $12; Semi-Weekly, $3: Weekly, $1 50.

The New York *Evening Post*, edited by WILLIAM CULLEN BRYANT and PARKE GODWIN, assisted by the strongest talent that can be engaged, has for more than half a century maintained the same principles of Freedom and Progress through all changes of parties and policies.

The *Evening Post* is equal to any other as a newspaper, and is complete in its Political, its Literary, its Scientific, its Agricultural, and its Commercial Departments.

Specimen Numbers, containing liberal clubbing terms, sent free. Address

WM. C. BRYANT & CO., New York.

HOMŒOPATHIC VETERINARY Practice, designated for Horses, all Kinds of Domestic Animals, and Fowls. 1 vol. large 8vo, illustrated, half-morocco, price $5. This is the latest, most complete, and reliable work in print. Send for Descriptive Circular. Will be sent, postage free, on receipt of price. Address Publishers, BOERICKE & TAFEL, 145 Grand Street, New York.

THE WEEK IN TRADE AND FINANCE.

March 31, 1873.

At a special meeting of the directors of the Bank of England, on Tuesday, the discount rate was raised from 3½ to 4 per cent. At the regular Thursday meeting of the directors, contrary to general expectation, no further advance was made. During the week ending March 27, the Bank lost £945,000 in bullion, which is accounted for by the French indemnity payments to Germany. It was in consequence of this expected drain of specie from the Bank that induced the directors to advance the rate of discount, although it may be partly explained by the feeling on the other side that the practice of loaning sixty days' sterling bills to speculators in this market, upon stock collaterals, should be checked. The amount of sterling loans made in this city has been variously estimated from $20,000,000 to $50,000,000, and some apprehension has been expressed here about the loans being renewed when they fall due. Our information is that the loans were mostly made with the privilege of one, and, in some instances, two renewals.

We have but to repeat that money has remained stringent in this market with $\frac{1}{64}$ to $\frac{3}{32}$ and interest, as the range of rates. We see no sign of any "let up" until the middle of April at least, and we doubt if, during the summer, money will be such a drug as it has usually been. Time money is in demand for six months at 11 and 12 per cent. upon stock collaterals of a desirable nature. Just at this time a large amount of currency is needed in the interior, especially in Pennsylvania, for the purpose of making settlements on the 1st of April; after that date the money will begin to return to the money centres, and by the 10th or 15th is usually all back again.

The stringency in the call money market keeps commercial paper dull of sale. The best names are quoted at 10 to 12 per cent., while paper of an inferior grade, but still quite good, has been sold as high as 18 per cent. and under.

The bank statement is unfavorable, showing a falling off of $867,600 in the reserve, against a reduction of but $1,092,700 in the liabilities. The banks now stand $377,200 below the required 25 per cent. reserve, but the deficiency is confined to the State banks, as the statement published below shows. The following is a comparison of the averages of the past two weeks:

	March 22.	March 29.	Differences.
Loans	$275,198,800	$274,348,760	Dec. $850,100
Specie	17,472,300	16,179,100	Dec. 1,293,200
Circulation	27,613,690	27,635,700	Inc. 22,100
Deposits	194,623,500	193,508,700	Dec. 1,114,800
Legal tenders	38,304,200	38,729,800	Inc. 425,600

The following shows the relation between the total reserve and the total liabilities:

	March 22.	March 29.	Differences.
Specie	$17,472,300	$16,179,100	Dec. $1,293,200
Legal tenders	38,304,200	38,729,800	Inc. 425,600
Total reserve	$55,776,500	$54,908,900	Dec. $867,600
Circulation	27,613,600	27,635,700	Inc. 22,100
Deposits	194,623,500	193,508,700	Dec. 1,114,800
Total liabilities	$222,237,100	$221,144,400	Dec. $1,092,700
25 per cent. reserve	55,559,275	55,286,100	
Deficiency in legal reserve	217,225		
Excess over legal reserve		377,200	Dec. 594,425

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$236,910,000	$37,438,700	$274,348,700
Specie	14,645,900	1,533,200	16,179,100
Legal Tenders	34,726,900	4,002,900	38,729,800
Net Deposits	167,272,700	26,236,000	193,508,700
Circulation	27,592,700	43,000	27,635,700

Business at the Stock Exchange has been very moderate in amount, and, beyond a few speculative fancies, quotations have undergone but little change. Milwaukee and St. Paul has remained strong, and been unusually active. The price advanced to 60⅞ on Friday, with a reaction of one per cent. at the close on Saturday. As we recently stated, the cause of the activity is due to some sort of a proposed agreement to "pool" the earnings of the road with those of the Chicago and Northwestern, so that in future the two roads will work harmoniously instead of carrying on a ruinous competition for business. The stockholders of the Milwaukee and St. Paul will be grateful for an arrangement which will improve their property in any way and ultimately put money in their pockets in the shape of dividends; and to the stockholders of the Chicago and Northwestern an arrangement of this kind will be beneficial, and probably enable them to dispose of their stock. The stockholders of the latter consist of Mr. Jay Gould and his friends in the recent "corner," all of whom retain the stock for the very good reason that no one will buy it from them.

Harlem is very strong, with the report still current of a consolidation with the Central and Hudson, and a prospect of a division of stock to represent the surplus property of the former amongst its stockholders. This consolidation will take place sooner or later, as the two roads run parallel to each other, and are under the same management, and it is very desirable that they should so remain. The *Daily Bulletin*, usually well informed, says:

"Late in the day a meeting was called of the directors of the N. Y. Central and Hudson and the N. Y. and Harlem Railroad Companies for next Tuesday morning, the business before the meeting to be the perfection of the lease of the Harlem to the Central and Hudson. The terms of the lease as it now stands are as follows: Only the Harlem Railroad proper, on which steam is used, is to be leased, and on this the Central and Hudson guaranty 8 per cent. annual dividends to the Harlem stockholders. The city railroads of the Harlem, which are to be reserved to the Harlem, already earn 3 per cent. on the entire Harlem capital. The city real estate of the Harlem is to be sold as soon as practicable, and the proceeds, estimated as equivalent to 30 to 40 per cent. of the Harlem stock, to be given also to the Harlem stockholders. These are the terms as given to us by those who should know and who have no interest to deceive."

Western Union has been weak on a moderate amount of business. At the commencement of the week Pacific Mail and Panama were strong, but at the close prices on both stocks fell off, especially on Panama, which, for some reason, has been pressed for sale; the price on Tuesday reached 116⅜, from which price there was a gradual decline until Saturday, when the lowest point reached was 110⅛. From recent accounts, the grand railroad-steamship-sewing-machine combination has become considerably mixed up, the property of one company having been mortgaged to another, and from present appearances we should judge that no man seeth the end thereof. The property of the Howe Sewing-Machine Company is reported to have been mortgaged for $1,140,000 to the Pacific Mail Steamship Company by Mr. Stockwell, who is the largest stockholder in the former and president of the latter.

The earnings of the Union Pacific R. R. Co. for the month of February and since the beginning of the year have been as follows:

	Feb., 1873.	Feb., 1872.
Earnings	$491,783 55	$531,115 09
Expenses	289,266 22	392,354 05
Net earnings	$202,517 33	$141,761 04

	Jan. 1 to Feb 28, 1873.	Jan. 1 to Feb. 29, 1872.
Earnings	$1,015,758 41	$808,051 17
Expenses	640,833 42	772,095 81
Net earnings	$374,924 99	$35,955 36
Increase gross earnings year 1873 compared with 1872		$207,707 24
Increase net " " " "		$338,969 63

The following shows the highest and lowest sales of the leading Stocks at the Stock Exchange for the week ending March 29, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	101¼ 102¾	101⅜ 102⅞	102 102⅝	102 102⅝	102 102⅛	101⅜ 102¼	87,000

The Treasury gives notice to-day that during the month of April it will purchase $500,000 5-20s on the 9th and 23d of the month, and sell $1,500,000 gold on each Thursday.

The Government bond market has been very strong throughout the week. A great scarcity of bonds has existed, and the demand for them for shipment to Europe has been steady. Prices at the close on Saturday show a handsome advance as compared with those at the beginning of the week. The firmness of gold strengthens Government bonds so long as the price in Europe holds its own.

The feature of the different markets has been gold. The price on Monday was 115½, from which a gradual advance continued until the close (Saturday) when the price was 117. The imports for the week were very large, amounting to $13,884,598. The possibility that the Treasury will flood the market with new legal tenders keeps up a feeling that gold is good property to hold, and forms a basis upon which the "clique" can advance the price. The large imports are taking a large amount of gold from the banks, as it is needed to pay duties at the custom-house. Altogether the outlook in the gold-room is favorable for the "bulls," and from the fact that 1 per cent. bonus is bid for the privilege of calling it at 120 at any time within four months, it is probable that the price will advance to that figure before the summer is over.

The Nation.

NEW YORK, THURSDAY, APRIL 10, 1873.

The Week.

THE facts, so far as they have been developed, with regard to the loss of the *Atlantic* on Meagher's Rock, are these: The vessel left England insufficiently coaled and insufficiently provisioned. On the 31st of last month, when she was 460 miles from New York, there were, according to Captain Williams's statement, only 127 tons of coal and barely two days' provisions left, and the captain, considering that the "risk was too great," determined to run into Halifax. The position of the *Atlantic* was got by "observation and chronometer," and at twelve o'clock midnight was reckoned to be 48 miles off Sambro Light, at the entrance of the harbor, the light bearing almost due north. The speed was then about 12 knots per hour. Captain Williams had never brought a ship into Halifax, and knew nothing about the coast except what is known to every one, that it is perhaps the most dangerous in the world; the third officer had been in the harbor twice; none of the other officers had ever been there. It will be seen that, going 12 knots an hour, the vessel was rapidly nearing the coast; she was already "within soundings." Under these circumstances, the captain, at 12.40, went to bed (no soundings having been made), with orders that he should be called at three o'clock, relying on the clearness of the night, and the certainty of Sambro Light being seen, and intending on getting near the coast to lay to. As a matter of fact, he was utterly mistaken either as to position or else direction, for he was carried miles to the westward of Sambro Light, and driven right on to the coast. At three o'clock the vessel struck. Captain Williams admits that had he taken soundings the loss would not have occurred. Some of the newspapers find fault with the construction of the vessel, and maintain that she was too long for her width, and that if she had been properly constructed she would have "held her own" when she got on Meagher's Rock. Captain Williams, however, whose interest it certainly is to find fault with her construction if it is any one's, says nothing of the kind; and it should be remembered that the *Atlantic* was built for a sea-going vessel, and not for a rock boat.

That Captain Williams was perfectly sober at the time of the wreck, and that he did all in his power to save life, seems to be established, but there are some facts connected with his previous career which have been thus far covered up, but which ought to be stated, as they have a very direct bearing on the culpability of his employers—the White Star Line. Captain Williams was formerly on the Williams and Guion line, and while in the employ of that company so thoroughly disgraced himself by drunkenness that, on the representations of one of the passengers who crossed the ocean in a vessel of which he was in command (he having been helplessly drunk all the way over), he was removed or allowed to resign. This is the real truth of the story that his dismissal was "owing to a difficulty with some of the passengers." The Williams and Guion officials then gave him a letter of recommendation, on the strength of which he got a command from the White Star Line. This makes the shameful story complete. One company dismisses a man for beastly drunkenness; a second company places a thousand lives in his keeping on the strength of a recommendation from the first company. To save a little money, the vessel is insufficiently coaled; and to supply her, she is taken directly on to an unknown and frightfully dangerous coast, the man in charge going to bed while she is running on. It would be worth while knowing what excuse the White Star Line can give for employing an officer dismissed for any reason whatever by another company.

The recent Rhode Island election is hardly worth speaking of. It was a complicated matter, with many interests and issues involved, but all of them local. The Republican candidate for Lieutenant-Governor was beaten, there being a temperance candidate in the field, and no choice by the people. It was thought the presence of a temperance candidate in Connecticut might also have had some effect even upon the choice for the governorship, and it had some, but, as it seems, not very much—prohibition still being a highly fancy stock in State politics, and used mostly in illegitimate operations. More important seems to have been the dissensions among important politicians, which cut down the Republican vote for Mr. Haven in New Haven City by just about the majority which it is now asserted—without corrected returns, however—that Mr. Ingersoll, the Democratic candidate, has obtained. It is said that the Democrats have also carried the House, while the Republicans control the Senate. The chief contest was in the Congressional districts, which stand as before—Mr. Hawley's majority running well up to 1,300 apparently, against 633 last year, when he was elected over Mr. W. W. Eaton, a tried wheel-horse of the straitest Connecticut Democracy. The increase of his majority will be generally looked upon as caused by his anti-back-pay and anti-corruption attitude in the last House, where, although a new member, he was an old enough politician, and near enough to the inner priesthood, to be allowed to make a great deal of noise. On the whole, then, the election is of no particular significance, except as showing that "the people" are not yet up in arms, and that "every man round us may rob as he please," as the song (prematurely) said on the occasion of Mr. Blueskin's cutting the throat of Mr. Jonathan Wild.

When by limitation of time New Jersey became free from the power ignorantly granted to the railroads in the days when little o the future of the new invention could be foreseen, it was hoped that she might become wholly free. The New Jersey Transportation Company and the Camden and Amboy were, however, too much for the efforts of the State, and since the beginning of 1867, when the alliance between these two powers became firm, the two companies have been as strong at Trenton as ever; and to think of the amount of money paid out for their strength is no consolation when we reflect on the persons to whom it was paid, and the lessons it has taught. The last Legislature, however, has secured the gratitude of the country by passing a general railroad law, very good in principle—whatever its working may be in the face of its bitter and able enemies—a law whose passage is a proof of the inherent honesty of the Jerseyman. Their surface history, hampered as they have been by their contract with the companies, and afterwards exposed as they have been to some of the wealthiest corruptors in the world, may seem to indicate something very different from inherent honesty. And an obstinacy, almost of conservatism, has caused the Jersey community in general to fall into the bad graces of some of us; but whoever knows the people of the State, knows that the most conspicuous part of their past history badly represents them, and that the ordinary Jerseyman is as honest a man as can be found anywhere. With rare exceptions, we surmise, other American communities that have sneered for so many years at Jersey may probably look at home.

The Illinois farmers met yesterday week in a convention that must have formed an animated contrast to the regular cut-and-dried American convention, as known to the last thirty or forty years of our politics. Nearly three hundred farmers were present from almost three-quarters of the counties of the State, and these delegates are said to represent about one hundred thousand Illinois electors, and to have been mostly Republicans in politics. A vote to invite Gov. Beveridge to address the convention failed to pass when first offered, but on a reconsideration was got through, in spite of "much opposition" and many voices in the negative, and the governor made a

speech, in which he began by saying that he "recognized the fact that the producing interest in all lands, especially in this Prairie State, the richest country on God's green earth, was the grandest and noblest interest asking for our protection, our fostering, and our care (applause)." The Governor admitted, also, that the railroad companies had been extortionate, and thought it must be admitted that other interests as well as those of the farming classes had suffered. But just how this was to be remedied it might not be so easy to say; all the evil could not be remedied that afternoon, nor that year probably, and perhaps not for five years or twenty-five. He had appointed a good railroad commission, all of the commissioners being farmers who meant work, and intended that the railroads should be the creations of the people's representatives and obey the popular will. An amendment of the Constitution of the United States might be necessary, but it would be easy to get if the farmers showed persistency, and it would at once and for ever abrogate the famous "Dartmouth College decision"—secured by Daniel Webster, Jeremiah Mason, and Jeremiah Smith, pleading before Chief-Justice Marshall against William Wirt, William Pinckney, and John Holmes, in behalf of the college corporation and against the New Hampshire Legislature, which had set aside the college charter. The farmers were at first angry enough to forget all the legal bearings of the work they have gone at with so much zest; but before they got together in convention, they seem to have settled into a fair degree of coolness, and to mean business very distinctly. Their "granges," so called, or anti-monopoly clubs, are now to be found in Illinois, Iowa—where the movement began, and where they are said to have fifty thousand men enrolled—Kansas, Indiana, Michigan, and Wisconsin.

After Governor Beveridge's speech, General John M. Palmer made a speech a good deal less conservative than the official's, and which had for its most important point the suggestion that railroad stocks should be taken by law out of the category of personal property, and thus "withdrawn from speculation." After these preliminaries, and while the Committee on Resolutions were making ready to report, a resolution was offered and adopted which "emphatically placed the seal of our condemnation" upon the increase of the congressional salaries and the securing for each of the senators and representatives "a bonus of $5,000 for services already rendered." The President was also censured by the convention, and we observe that a resolution the same in substance was at the time pending in the Illinois House and Senate. The real business of the convention then began to come on in the reading of the resolutions, which were no less than eighteen in number, and very thoroughgoing; after which adjournment till evening was voted. The evening session was at first confused and noisy, the firebrand being the free-trade resolution calling for the "repeal of the protective duties on iron, steel, lumber, and other materials which enter into the construction of railroad cars, steamships, agricultural implements," etc. It is stated by one correspondent—who represented an entirely free-trade journal—that "a Radical ring," consisting of "Mr. A. B. Meagher, of the National Protective Association, Mr. J. C. Scanlan, of the Irish Industrial League, Mr. John Harper, United States Collector, and Judge Bradwell, the Republican leader in the House," was formed to prevent the farmers from saying anything upon the tariff question, and confine them to attacking the railroads. The resolution passed, however, in spite of interruptions and disturbances of a most unseemly character, due to the late arrival of the elected officers of the convention.

The substance of the principal resolutions is as follows: The railroad companies of the world, wherever governments have not controlled them, have proved themselves as extortionate and opposed to free institutions as the robber-barons of the Middle Ages; their despotism shall be subverted and destroyed; the State, in the convention's belief, did not and could not so far part with its sovereignty as ever to create a corporation that could not thenceforth be controlled by its creator; the railroad corporations (representing in Illinois $250,000,000 of money in the hands of a few men, and representing in the whole country $4,000,000,000) are to be viewed with alarm; the General Assembly must pass laws "fixing reasonable rates for freight and passengers"; the present statute providing for the "classification" of railroads, so as to adjust the tariff of charges according to gross amount of earnings, is a "delusion and a snare," for the roads classify themselves as they please; a bill should be passed which, "recognizing the principle that railroads are public highways," shall compel the companies to make "actual connections" between roads that meet and cross each other; the Legislature should pass a law making it a misdemeanor for a legislator to travel on a free pass from a company; whereas the Constitution of 1848 forbade special charters (except for municipal purposes), it is extremely doubtful whether all Illinois railroad charters granted since 1848 are not invalid; and whereas the Constitution of 1870 forbade the watering of stock, and whereas nearly every railroad in the State has since then issued watered stock, it is the duty of the Railroad Commissioners to institute proceedings against the companies. Of these resolutions all passed without material alteration, as well as the tariff resolution of which we have spoken, and the convention laid on the table a resolution declaring it the duty of the National Government to improve the Illinois River, an affluent of the Mississippi, which waters Central and Western Illinois for a distance of about 500 miles, and is navigable with good luck and sufficiently small craft for about half its length. The farmers were, however, bent on having railroads, and no proposition looking to old-fashioned internal improvements had any chance with them.

"Under instructions of the Secretary of the Treasury, Mr. E. O. Graves, of the Civil-Service Board, went South in the middle of last week, accompanied by Mr. S. I. J. Kimball, of the Revenue Marine Bureau, to visit the principal Southern Custom-houses and subtreasuries, and to put in operation the civil-service rules, which will be substantially the same as those at the New York Custom-house. Mr. Kimball goes also in connection with the Life-Saving Service, but Mr. Graves goes with special reference to putting the public service on a civil-service footing. The examination of the 565 applicants for the 40 vacancies in the Treasury was concluded yesterday, and it will be two or three weeks before the result can be written up and tabulated. The candidates for each day who came up to an average of 80 are not more than ten per cent. of each day's list." This we give as semi-official, and the latest news that we have anywhere seen concerning this greatest modern source of interminable and flatly contradicting assertions. From the same authority we quote these further facts, which we leave our readers who know Mr. Collector Arthur and his friends to reconcile as may best be done. "Mr. Curtis alone"—it is about Mr. Curtis's resignation that the correspondent is writing—"warmly espoused the promotion of Mr. Benedict because it would be a conspicuous thrust at the politicians." Except by Mr. Curtis, the promotion was not urged, strange to say; "but the President responded to Mr. Curtis's appeal, and appointed Mr. Benedict." Upon this, "the Senate laid the resolution on the table, and to save it from rejection it was withdrawn." In other words, the Senate would have its way, for whatever reason.

Mr. Albert S. Stickney, who gave signal proof of his ability as an investigator in the Barnard impeachment case, was wisely selected some time ago by the Erie Investigating Committee to conduct their examination for them, and the result has been "astonishing developments." The committee has now had before it an array of swindlers, thieves, "corruptionists," lobbyists, bribers, operators, and other habitual criminals such as probably were never before in the history of the world subpœnaed in any one matter. The testimony lately taken has referred chiefly to the sums of money paid out of the Erie Treasury at one time and another to the various members of this crew. To James Fisk, for instance, one item of $3,000 appears to have been paid for "carriage hire and services";

Tweed received $50,000 for the coal which he distributed in charity to the poor of his district. James Fisk's total "expenses" from March to December, 1868, were $171,400 43. Jay Gould's "legal and incidental expenses" for 1868 were $422,000. Peter B. Sweeny received for "legal expenses" in 1868, $150,000. William M. Tweed, for legal services, received $135,000 altogether; and H. D. Barbour and A. Van Vechten got some of the plunder. These two worthies are professional bribers, and they have testified with much solemnity that they have no recollection as to the nature of the services for which they received the money. Mr. Watson, the new president of the Company, testifies that, after he came into office, he was approached by a number of influential gentlemen, who signified to him, by "nods and shrugs," that, unless he was prepared to "divide," he might as well give up all hope of carrying on the Erie Railroad. He says that they did not make any request for money, and that he cannot, not being himself a master of pantomime, give the committee any idea of the manner in which they expressed themselves; but they made it very clear to his own mind, and he told them in reply that if he expended any money on them at all, it would be in having them incarcerated in the Penitentiary, and on hearing this their interest in Erie reform suddenly ceased. The most atrocious case in the whole list, however, is that of General Sickles, who, having been sent to Spain to represent the United States, requests and obtains a leave of absence, that he may come home and assist a gang of speculators in obtaining possession of a road by bribing a number of the directors. He comes over, gets an order from Washington which is so outrageous that no one is bold enough to use it, swindles everybody, including his employers in the reform movement, and returns to Spain in triumph to represent his country once more.

The Government, it is announced, has selected the Brazilian, Sardinian, and Swiss arbitrators as the recipients of two magnificent silver wine-coolers and a punch-bowl apiece, wrought by Messrs. Tiffany & Co., and given to Count Itajuba, Count Sclopis, and Mr. Staempfli, in recognition of their labors. Mr. Adams gets none, and neither does Chief-Justice Cockburn. As for these gentlemen, the Government appears to have regarded Mr. Adams, and to suppose the British Government to have regarded the Chief-Justice, not as judicial officers sitting to arbitrate, but as a pair of counsellors who were to pull against each other like two advocates, and each extort what he could from his three impartial associates. This, we suppose, is not the view of his duties that was taken by Mr. Adams; but it affords a reasonable explanation of our Government's latest action in the premises. And if the winner in a legal contest behaves with propriety when he makes presents to the judges who have given him a decree, it is perhaps as good a way of disposing of the matter as any. We cannot think, however, but that the thing would be as well undone, considering the dignity of the tribunal, the pleaders, and the cause.

In the House of Commons, on Monday evening, Mr. Lowe presented his budget. The statement shows a reduction of the national debt for the past year of £6,861,000 ($34,305,000); the actual revenue having been in excess of the estimated revenues by £5,762,775 ($28,813,875). The total debt is £785,800,000 ($3,929,000,000). The Government proposes, in view of this exhibit, which was received by the House with marked expressions of approval, to pay half the *Alabama* claims award out of the revenues of the present year, without increasing taxation; to take off 50 per cent. from the duty on sugar, and a penny in the pound from the income tax. This would make the estimated expenditures, for the year ending March 31, 1874, £73,471,000 ($367,355,000), and the revenue £73,762,000 ($368,810,000).

Count Bismarck made a remarkable speech in the Prussian House of Lords on the 10th of March, in favor of changing Articles 15 and 18 of the Constitution, which regulate the relations of the state and the Catholic Church. Like Professor Virchow, he insisted on the historical continuity between the present struggle in Germany and the old conflict of Guelphs and Ghibellines, and, in fact, that conflict of power far more ancient than the coming of Christ, and as old as the human species itself—namely, between royalty and the priesthood. It was, he said, a falsification of the issue to call that a clerical question which grew out of an attempt to subject the secular to the religious authority—an eminently political purpose. The present Papal pretensions have been those of priestcraft since the world began, there having always been priests (titled or untitled) "who declared that they knew the will of God more exactly than their neighbor, and, on the strength of this affirmation, claimed the right to command him." The wars of the Papacy against kings and emperors have had all the characteristics of other political contention: there have been treaties of peace, seasons of pause, and armistices. Some popes have been bellicose and conquering, others peaceful; cardinal prime-ministers of Catholic powers have pursued a violent anti-papal policy, bishops have sided with the emperors of Austria against the interests of the Pope. The question, therefore, is not of the persecution of the church but the defence of the state—the limitation of the powers of the priests and of the king respectively, and in such a way that the state can subsist within the limits laid down.

Since 1848 there has been an armistice between Prussia and the Papacy, as the articles of the constitution under discussion testify. These were framed at a time when the restoration of civil order seemed to depend upon the Catholic rather than upon the Evangelical population, and they would probably have remained undisturbed even now but for the behavior of the Clerical party in the Prussian Landtag. At a time during the Franco-German war when the attitude of the Italians made the Prussian Government by no means disposed to lean to their side in the controversy with Pius IX., the king and his ministers at Versailles were surprised by the formation of a party of the Centre, consisting of the Catholic members of parliament, whose aim was to act in concert for the insertion in the Constitution of the Empire of the very articles of the Prussian Constitution touching the relations of church and state. To this, Bismarck says, he attached little importance, till, on his return from the seat of war, he observed what a powerful organization this party had attained, and how, on the one hand fostering anti-German tendencies in the Polish provinces, and on the other ordering at pleasure the election of obscure and subservient deputies, it strove to supplant the Empire as it now exists with two political organisms working side by side—"one having its staff-officers in the party of the Centre, the other in the directing secular principle embodied in the government and person of the Emperor." This dualism was not to be tolerated, and the Government had been compelled to denounce the armistice of 1848, and establish a new *modus vivendi* between the secular and clerical authorities.

We have thought this abstract worth making not only as a part of the news of the day, but because the situation in Germany as described by Count Bismarck presents such a striking analogy with that in which our own country found itself before the rebellion. We had here exactly that dualism which he justly deprecates, resulting from the armistice between slavery and freedom admitted into the constitution of 1788—an aggressive pro-slavery party of the Centre violently resisting the logical development of our republican principles, dictating who should be candidates for Congress, and elevating the obscurest doughface to the presidency. All the while we listened to complaints of wanton assaults on the divine institution, of intermeddling and "persecution," from the party of mobs and lynch law, until, being no longer able to maintain its staff-officers in Congress, it transferred them to the field of battle, and, still entreating to be "let alone," began at Fort Sumter the attack which ended in the abolition of slavery and of political dualism on this continent.

THE SURRENDER OF CIVIL-SERVICE REFORM.

IT is one of the inexplicable phenomena in the life of General Grant, that while, in adverse circumstances, he has repeatedly shown a firmness of character, and especially a tenacity of purpose verging on obstinacy, on the other hand, in very easy circumstances, when almost all obstacles have been overcome, and all opposition has well-nigh ceased, he has shown a weakness, an indecision, a fatal facility for yielding, that we ought to expect only in a very much inferior man. If the master of a vessel, through a prolonged tempest, and indeed through many storms and tempests, should be found heroically resisting the threats and persuasions of his crew, and then, after triumphantly bringing his vessel safely into smooth water, should supinely allow the crew to run away with the ship, his conduct would not be more anomalous than some of the acts of General Grant's life appear. It is unfortunate for him that he deliberately avowed his belief in certain principles looking toward the better government of his country; that they were unpalatable to his political friends and associates, prejudicial, as was supposed, to his immediate political interests, and required an unusual degree of nerve to be carried into operation. It is unfortunate, because these are peculiar conditions of difficulty which General Grant's previous life seemed to assure us he would have been able, of all men, to surmount. That a successful soldier, devoid of all political experience, should not believe in the reform of the civil service, would not have been surprising; that he should have some impracticable hobby of his own which on being tried failed, and was then abandoned, would not have greatly disappointed the people who elected him; but that he should adopt a policy in consonance with the intelligence of the age, and in advance of his political supporters, and should successfully carry it so far into practical operation that his newspaper organs acknowledged it as one of the accomplished reforms of his Administration, and should then yield to the very opposition over which he had triumphed, surprising those who rejected him and disappointing those who had relied upon him, is certainly one of the strange things that nobody but General Grant would do.

Reviewing his surroundings at the particular time when he thus acted, his conduct seems more inexplicable than before. The President had been compelled to meet the opposition of his own friends, and even to endure the sneers and insults of his own political leaders. Mr. Conkling had contemptuously belittled the reform as altogether too ethereal for practical life. Mr. Morton had conjured up a caste of aristocratic office-holders lording it over the free and humble citizens of the Republic. Mr. Carpenter had flung a resolution of enquiry against it, and sneered at the President's commissioners as "a board of schoolmasters," sitting at the other end of the avenue to determine who should and who should not hold office under the Government of the United States. Against such opposition as this the President had persevered; and he had carried his derided measure of reform into practical operation without the cordial support of a single politician or a single organ of his party. He had also gone through the ordeal of a renomination, and was conceded to have carried his party through the second election, giving it more than he received, and owing it less than it owed to him; and he had reached that independence which so few men have ever obtained—the independence of being no longer eligible for the Presidency. Besides this, the arrogant power in Congress whose interference with the Executive has been the chief cause for civil-service reform, had received a check, occasioned by its own corrupt practices; and no Congress for the last fifty years had expired so much despised by the people or so little to be feared by the President. And then, at that moment, when all opposition seemed to be overcome, and the chief enemies of reform overthrown, General Grant yielded to a pressure which had almost ceased to exist.

At this time of writing, the latest intelligence from Washington authoritatively asserts that, although the civil-service commission is dissolved, the principles which it was intended to establish will be adhered to, so far as the minor offices are concerned, and indeed that an officer of the Treasury has been sent to put the system into operation in the Southern Custom-houses. But we read in the Administration papers at Washington that the President, having been so audacious as to exercise his own discretion in the matter of an appointment of a postmaster, felt constrained to offer the defrauded member of Congress the following very expressive apology, which, it is needless to add, the Washington organ publishes as something highly creditable to the President's head and heart:

"*To the Hon. James A. Garfield:*

"EXECUTIVE MANSION, WASHINGTON, D.C., March 18, 1873.

"DEAR GENERAL: In your absence I appointed a lady for postmaster at Ashtabula, Ohio, in your district. It is of a class of appointments I am glad to make, where it can be done—that is, it is giving a soldier's widow an opportunity of supporting herself and orphan children. I hope it will be satisfactory to you and to the citizens of Ashtabula.

"I am, General, very truly yours, U. S. GRANT."

We are, therefore, constrained to think that if it was necessary for the President of the United States to explain to a member of Congress, on the 18th of March, why he made an appointment of this character, no very hopeful anticipations of his independent action can be indulged in early in April.

The motive which has actuated General Grant is one not easy to understand. If, after two or three years of patient and faithful trial, the President had become satisfied that his system was incapable of accomplishing the desired results, or that it had been carried too far, and applied to officers who might be better selected in another manner, we should be bound to exonerate the President from any improper motive. If, without any such trial, General Grant had adopted the views of Messrs. Morton and Carpenter, and boldly asserted that the system was a mistake, "incompatible with free institutions," and incapable of producing practical results, a very damaging blow would have been struck at the subject of civil-service reform. But up to the latest hour the country had received continued assurances of the success of the new system, with promises of its extended application. The President had not only availed himself of Mr. Curtis's services, but he had allowed Mr. Curtis to speak repeatedly for him, and had accepted the support of that gentleman's powerful influence. It is needless to say that it was an influence that could not have been bought, and that it was powerful because the country knew that Mr. Curtis would never have given it except in the honest belief that the President and himself were fully agreed in the matter which he so earnestly advocated.

We have hitherto spoken of civil-service reform as a fact accomplished, so far as its acceptance in the popular mind was concerned, though by no means a system completed, perfected, or in successful operation. It is now apparent that it is a reform which will require renewed effort on the part of those who believe in it, before it can be considered accomplished. Whether it be continued in the weak and modified manner promised by the Washington despatches, or whether appointments be wholly abandoned to members of Congress and politicians as before, it is equally evident that civil-service reform is no longer having a fair trial. A false trial, as every intelligent man knows, is incomparably more dangerous than none at all. Many a useful measure has been thrown back for a generation by the artful expedient of pretending to try it, and then condemning it for its want of success. Whatever the President's motives may have been, we do not attribute to him any such deceitful purpose. But, however honest his motives were in the past, or will be in the future, civil-service reform is by his management placed in the false position of appearing to be tried when it has in fact been suspended.

Let us here point out a fallacy which has generally been accepted throughout the country. The system which the President has introduced has been termed, and is believed to be, civil-service reform. It is simply competitive examination. Competitive examination is not civil-service reform, but merely a means toward that end. It is possible to have the latter without resorting to the former. Indeed, many civil-service reformers are opposed to competitive examination, and hold that in England it is about to be carried too far, and that it will operate imperfectly in the civil service, and affect injuriously the ge-

neral cause of popular education. Let it be, then, understood that although this experiment of the President's should fail, nothing is proved by the failure; and that if the experiment should be fairly tried and should fail, all that would be proved is that we have resorted to defective means for reaching a most desirable end.

In England, the singular spectacle may now be seen of the opponents of the Administration opposing competitive examinations, and insisting that fitter appointments can be made by their political adversaries than by independent non-political boards. In America, our civil service is in no such plight. It is political, and nothing but political in the worst sense of the term—without system, without merit, and, we may add, in our great cities without decency. However defective competitive examination may be as a system, we accept it for the present as the only system that can raise our degraded service out of the political mire. If the congressional politician had only kept his hands off of it, it would before this have done much to reform itself. Mr. Trumbull was not far from right when he proposed to make it a misdemeanor for a member of Congress to intermeddle with the executive appointments. But such a statute would be disregarded by members of Congress just as statutes against corruption have been disregarded, and Congress is emphatically the branch of the government that the people cannot trust. So long as secretaries surrender their entire appointing power to members of Congress, and presidents write them apologetic letters, and our legislators use the executive offices of the country as their political property, it is necessary, if we would have reform, to select a system of appointment which will leave as little as possible to what is called "discretion." Public competitive examinations, in which the best man shall win irrespective of his politics, or color, or influence, seem to constitute a system that on the one hand will eradicate the party element from the appointments, and on the other will give us men who certainly cannot be very bad. In England, the system is objected to on the ground that it is not certain to select the best candidates; in America, we have not yet reached that ground of objection, and must resort to whatever system will be most likely to strain out the worthless material with which party managers would otherwise flood the service. Such a system General Grant led us to hope would be effectively established, and such a system he seems to have now abandoned.

THE "FARMERS' CLUBS" AND THE RAILROADS.

AMONG the numerous figures of speech for which the recent Presidential campaign was noticeable, that of the "prairie fire" was not the least common. This conflagration was continually promised and continually looked for, but it would not come. The prairies in fact, until after the election was over, were in a decidedly uninflammable condition. No sooner, however, was the great result decided, than, at a moment when such a phenomenon was least anticipated, they suddenly flashed up into a blaze which seems likely to make the State of Illinois, at least, uncomfortably warm in a political sense for some time to come. They had been ignited by a spark from a locomotive.

Seriously, the recent convention of the Farmers' Clubs at Springfield is perhaps the most noticeable political gathering which we are likely to see for some time to come. Very few people in the East have paid much attention to it, or to the circumstances which led up to it, and yet they possess a deep political and financial significance. They constitute in fact an earnest, though almost inarticulate, protest against the whole present organization of the railroad system of the country—a protest the more dangerous because both unintelligent and angry. The history of the Illinois movement is somewhat as follows: Under our system of railroad ownership, an excessive competition exists for the business of all competing points, while the local business of the various competing lines is an absolute monopoly. This has naturally resulted in compelling the corporations to do through business at rates often ruinously unremunerative, which again has compelled these companies to recoup themselves for their losses and secure their profits by excessive charges on the local traffic, of which they hold undisturbed possession. A case of merchandise, for instance, would be carried on through-rates a thousand miles, from New York to Chicago, for $5; but the Illinois road which took it a hundred miles out of Chicago to its point of destination, would make a further charge on it of perhaps $5 50; and this, too, though that same road would probably have completed the carriage from New York to St. Louis, another competing point, for a mere trifle more than the rate to Chicago. The local business, in fact, had to pay all.

As long as the times were good and prices high, as long as the farmers found ready markets and cash sales, this evident abuse, though noticed, excited little clamor. During the last few years, however, enormous areas of new country have been brought under cultivation, harvests have proved abundant, and prices have fallen, until now at last freights to market consume the entire margin of profit. It has ceased to be profitable to raise food. As this unpleasant fact has gradually forced itself upon the notice of the farmers, they have more and more turned their attention upon the question of railroad charges, and two years ago the present agitation began to take shape. Of course, the first resort was to legislation. A law would easily regulate the whole difficulty. Was it not notorious that a usury law always established the rates of interest? Why, then, should not a similar one settle the question of freights? Unfortunately, in granting charters to their railroads, the Legislatures of the Western States had never reserved the power either to amend or repeal those charters, or to regulate the fares and freights which the corporations might charge under them. These charters, therefore, under the famous decision in the Dartmouth College case, amounted to contracts between the States and the corporations, and, as such, came within the scope of the constitutional inhibition of laws impairing the obligation of contracts. In no way daunted by this obstacle, the first Legislature which met under the new constitution of Illinois proceeded to enact a most intricate law, establishing maximum rates of fares and freights for all the railroads in the State, and at the same time erected a board of railroad commissioners to look after its enforcement. Then came the first trouble. The corporations of course contested the validity of the law. If the Legislature could establish one rate at which they should do the work of transportation, it could establish another. They were fighting for their lives and property; it was again taxation without representation. With much trouble and popular perturbation, a case was brought before the Supreme Court of the State, which at last held the existing law establishing fixed maxima to be constitutionally invalid, but at the same time intimated that the corporations, as common carriers, were bound to transport at "reasonable" rates, if only in each particular case what was reasonable could be ascertained. Then the Legislature, impelled by the Farmers' Clubs, took the question up again upon this basis, and proceeded to fix by a rule a test of the "reasonable." New statutes were prepared, establishing rates which were to be held to be reasonable, unless otherwise decided by a jury of twelve men. The power of the State was invoked to prosecute all cases of violation of the law, and a new board of commissioners was selected, which was supposed not to be more enlightened than the old one in the discussion of railroad questions, but more, as it is termed, "in sympathy with the people." Here the case now rests. The wheel has fairly gone round its entire circumference, and the people of Illinois have got back in the nineteenth century to the position of England in the sixteenth. An arbitrary power is claimed in the supreme legislative body to decide on the reasonable rates of the cost of private services. Just as three hundred years ago the price of bread and of labor was regulated by act of Parliament, so now the cost of transportation is to be fixed by a jury of twelve men. Almost necessarily, the verdict of the twelve men can be known in advance. They may be counted upon to declare any rate reasonable which the Legislature fixes, and the corporations may make up their minds to a succession of highly unsatisfactory verdicts. We say that these verdicts may be counted upon in advance. At first glance, it may seem as though this inference was unjust, and yet, let any man who thinks at all conceive for himself, if he can, the result of a system of

legislation which made the use of boots or cotton cloth or bread depend upon the verdict of a jury of twelve men sitting at the doors of each bakery or factory. It requires no great knowledge of human nature to anticipate in such a case the speedy cooling of ovens and cessation of wheels.

Thus far, therefore, the result of the Illinois railroad war must be regarded as rather portentous than satisfactory. Legislatures are once more to try their hands at the great work of fixing prices, and juries are to decide whether the prices thus fixed are what they ought to be. Such attempts are by no means new—hitherto they have not proved beneficial. The farmers of Illinois, however, may revolutionize the ripe experience of all times and of all countries, but if they do it will be through the use of a singularly mediæval machinery. While we in New York are struggling to bring about the repeal of our ridiculous usury laws, in Illinois they have not only just re-enacted them, but they are exerting themselves to extend their operations over railroads, elevators, and cattle-yards—over, in a word, the whole machinery of their business. While we are discussing the shortcomings of the jury system, they are elevating that somewhat obsolete tribunal into a species of grand, general financial regulator. The panel is, in future, to pass upon disputed points of political economy—a method of arriving at correct results which never probably suggested itself to the late Dr. Adam Smith. Still, unique as the machinery is, it will not improbably grind out the result immediately desired by its ingenious inventors. But what then?—will their condition be thereby improved? This we gravely doubt.

What, after all, is the occasion of this plethora of the produce of the West, which has gone on reducing prices until profits are now wholly eaten up in freights? Manifestly it is due to the fact that railroad development has extended the area of attainable food-producing lands over so wide a region that more food is produced than can be disposed of to a profit under the present cost of production. Let us suppose that the hope of the farmers was realized, and that their great staples could be brought to the market at half of the present cost, what would be the result to them? Would they profit by the reduction? It is difficult to see how they could. The immediate result would be a vast extension of even the present area of profitable food production, and the introduction of a new host of competitors. Every reduction of rates would thus enure wholly to the consumer—not at all to the producer. Return freights might be lower, which would somewhat, though to a very small degree, reduce the price of manufactured articles in the West, but the farmer would have no more money in proportion to buy them with. The difficulty is in over-production at the present cost of production, not in high rates of carriage. To increase his profit, the farmer must reduce the cost of growing his crops, and at the same time limit the area which competes with him, otherwise every dollar yielded to him or extorted by him in rates will accrue not to his benefit but to the benefit of the consumer, and of other farmers further West now excluded from the market.

So far as the present phase of this question is concerned, therefore, the remedy would seem to be beyond the reach of the railroad corporations. Every possible concession which the most enthusiastic farmer demands on their part would but remove the seat of the struggle. But it still brings forward into clear, strong light what must inevitably prove one of the momentous questions of the future. In its essence, that which the farmers demand is just. They ask for an access to their markets which shall combine the three elements of certainty, economy, and impartiality. All these are reasonable demands, and yet these are just what the existing system of transportation can never afford. It is not the fault of the railroad corporations. It is nothing less than the breakdown of competition as applied to our railroad system. The cost of transportation cannot be certain where it is necessarily subject to periodical wars of rates, resulting in brief truces of extortions; it cannot be economical while performed by many agents dividing the traffic, which can only flow cheaply when concentrated in single broad, deep channels; it cannot be impartial while the results of ruinous competition at one point must necessarily be made good by double profits at another. In other words, we are gradually realizing that this enormous interest has been built up on a false economical principle—that competition will regulate where it has free, full play, but where it has not such full, clear play, it must confound.

A vague glimmering of this difficulty is beginning to dawn on our people. The remedy for it lies far beyond the verdict of any twelve men in a jury-box; however intelligent these may be, they can hardly supplement defective laws of trade. The contest now going on in Illinois is one of the early skirmishes of the impending war, which, unless we greatly err, is destined to produce industrial, social, and, above all, political changes in this country of the most startling description. The locomotive is coming in contact with the framework of our institutions. In this country of simple government, the most powerful centralizing force which civilization has yet produced has, within the next score years, yet to assume its relations to that political machinery which is to control and regulate it.

ENGLAND.

LONDON, March 22, 1873.

WHEN last I wrote to you, we were still looking forward to the great fight over the Irish University Bill. I was at that time disposed to think that the second reading would pass, but that the bill would be hopelessly mangled in committee. The result, however, was, as you already know, more speedily and decisively unfavorable. Mr. Gladstone's administration has received a severe blow, and, though it has now come back again in its old shape, its prestige is seriously diminished. The bill now deceased may be dismissed with a very brief epitaph. Nobody was in favor of it with the exception of the Ministry and their thick-and-thin admirers, and nobody will weep over its remains. The only real question was whether the party ties of the majority were strong enough to stand the strain of so unpopular a measure, and that question has been decided in the negative. Mr. Gladstone's normal majority is between 80 and 90; some 35 Irish Roman Catholics deserted on this occasion to the enemy; and the supplement necessary to convert the majority into a minority was derived from the ranks of the discontented Radicals. Mr. Fawcett and about seven others went into the lobby with their natural enemies, the Conservatives, and with the natural enemies of both, the Ultramontanes; and thus a heterogeneous body was brought together, just sufficient to give a quietus to the Irish Bill. And then appeared the admirable nature of the British Constitution, which gave us once more the edifying spectacle of a ministerial crisis. Everybody knows that our Constitution is the pride and envy of the world, and secures liberty without license, flexibility without weakness, and, as somebody says, a good many things without a good many other things. However, the venerable machinery is at times a little cumbrous, and can only be made to work by a vast expenditure of solemn and, to the irreverent, rather tiresome speechmaking. Our Government, as Mr. Bagehot explains with sympathetic admiration, is in reality government by a committee of the House of Commons; but the beauty of the system is that we carefully conceal the fact from ourselves and from everybody else. The veil of royalty descends over the great magicians who arrange the working of the machinery, and shrouds them in sacred obscurity whilst they are going through their mysterious observances. The effect of this upon the language of the chief actors is not a little bewildering. Mr. Gladstone is in his way a master of English, though at the best of times he is apt to be verbose and intricate. But when he comes forward to reveal to the outside world the principles which have guided his steps in the innermost sanctuary, his language becomes so stately as to be barely intelligible. Here, for example, is a sentence literally copied from a document which he laid before the Queen, with the view of accurately defining his position for Her Majesty's satisfaction:

"In humbly submitting this representation to your Majesty, Mr. Gladstone's wish is to point out the difficulties in which he would find himself placed were he to ask your Majesty for authority to enquire from his late colleagues whether they or any of them were prepared, if your Majesty should call on them, to resume their offices, for they would certainly, he is persuaded, call on him for their own honor, and in order to the usefulness of their further service, if it should be rendered, to prove to them that according to usage every means had been exhausted on the part of the opposition for providing for the government of the country, or, at least, that nothing more was to be expected from that quarter."

All which means, in brief, we won't come back to office unless it is quite clear that the opposition can't take our places. The position, in fact, is simple enough. The present Government has a very large majority on all questions but one. By a special infelicity, they happened to knock their

heads against that particular wall. They have found the wall harder than they expected, and in that direction are brought to a dead stop. The natural conclusion is that they ought to go on with the work which they can do, and waste no more time over the work which they can't do. Let us by all means drop this dead bill and pass the Judicature Bill, settle the budget and the taxes, decide upon our foreign policy, and carry on the business of the country, which is of pressing importance. That, in fact, is the conclusion which we have reached, but we have had to reach it through all manner of devious and intricate paths. Government had to show that they were in earnest; they were bound to resign when the bill failed, and give every chance to other men to take their places. Consequently, the abandonment of the bill involved throwing the whole machinery out of gear for a fortnight or so, and all the proper constitutional parade of interviews between Her Majesty and Her Majesty's humble servants, and the production of elaborate manifestoes, such as that from which I have quoted. Well—there is little enough harm done as matters stand; we have got back again to our old position, and the Government will go on, with some injury to its reputation, but it is to be hoped with a greater eagerness to retrieve its reputation by hard work in other departments of legislation. The great anxiety of the House of Commons was to know whether a dissolution was to be expected this autumn. The general impression seems to be that it will take place, inasmuch as members are growing unruly, as the Government has shown its weakness, and as the natural end of the Parliament approaches.

For this reason, the byplay which took place between Mr. Gladstone and Mr. Disraeli was watched with special interest. Mr. Gladstone, it was generally thought, was sincerely anxious to retire. He has done a great deal of very hard work during the last four years, and is a man who never shirks his work, or, indeed, takes it as easily as a man of calmer temperament would consider wise. It is supposed that he would not be unwilling to retire into the comparative quiet of opposition, when he might employ his leisure in writing a great theological work for the confutation of Strauss. As he is the greatest of living financiers, and not precisely the greatest of living theologians, he naturally imagines that theological speculation is his proper calling. However, this is a mere guess; and his readiness to retire admits of a different interpretation. Mr. Disraeli evidently thinks, and there is some plausibility in the theory, that this wish for retreat is merely another form of a desire for power. Pope, indeed, observes of his friends:

> "If merely to come in, sir, they go out,
> The way they take is strangely roundabout."

In fact, however, roundabout ways are occasionally the shortest. In the present case Mr. Gladstone—if Mr. Disraeli be a fair interpreter of his motives—was playing a very simple game. By inducing Mr. Disraeli once more to take office whilst in minority, he would be making his opponents ridiculous. Mr. Disraeli, indeed, has been caught in that trap twice before, and is too clever a politician to fall into it again. In a very clever speech, full of his usual keen wit, Mr. Disraeli painted the miseries of a ministry which only holds office on sufferance. The majority, whilst making great professions of fair-play, can easily subject him to constant humiliation; and, after a few months' uncomfortable balancing in the seat of power, the luckless minister has to appeal to the country under the burden of misfortunes for which he is not really responsible. The portrait was painted with infinite spirit, for it was painted from the life. In short, if Mr. Gladstone is sincerely anxious to retire, Mr. Disraeli is as sincerely anxious not to come in. He will not have his hand forced by his antagonists. He is playing a waiting game, and hopes—not, it must be admitted, without some justification—that a few more blunders and failures of the existing administration will turn the stream still more decidedly in favor of the Conservative reaction. With great cleverness, he made a speech calculated to serve as a manifesto in view of a coming dissolution. He could not, indeed, hold out any very distinct line of policy, for he argued rather extravagantly that it was unfair to expect that an opposition leader should be provided with a definite policy, inasmuch as he was not in possession of the necessary information. But he touched with infinite dexterity on the various weak points of the existing Government. He took care to repudiate any connection with the Catholics, who had accidentally voted with him in the last division. He referred to the great expenditure in which we are still plunged, although the profligate expenditure of the Tories had been the main cry at the hustings on the last occasion. He noticed the various humiliations incurred by our foreign policy, and hinted that he possessed the true secret of solving the Asian question and satisfactorily settling neutral rights. He declared that, as awkward questions had been effectually cleared out of the way, a great career offered itself to the Conservative party of the future; and although this part of his speculations was concealed under a judicious haze of generalities, he succeeded in conveying the impression that he would be an admirable party leader when the right time came, and that meanwhile any discontent felt by his followers at his reluctance to take office was thoroughly unreasonable.

For the rest of the session we have no definite reason to expect any very exciting topics. The great subject of debate ought to be Lord Selborne's Judicature Bill, on which opinions are very much divided—some lawyers arguing that the reforms proposed are really delusive and nominal, whilst others regard them as a long step towards better things. At any rate, it brings up a subject of very great importance, and one is glad to see a substantial effort at law reform occupying the attention of Parliament, which is too apt to prefer more flashy and popular subjects.

Notes.

A NEW work, 'Play and Profit in My Garden,' by Rev. E. P. Roe, author of 'Barriers Burned Away,' will be published this month by Dodd & Mead, who announce also 'Questions of the Day,' by Rev. John Hall, D.D., with a new edition of his 'Paper for Home Reading.'——The Executive Committee for the collection of the Woolsey Fund of Yale College report an aggregate of $154,394 53 as having been subscribed, and of $69,580 79 as being in the treasurer's hands on March 15. It is desired to pay over the first instalment of $100,000 on Commencement Day (June 26), and contributions should be sent either to Mr. Henry C. Kingsley, Treasurer of Yale College, or Mr. Alexander H. Stevens, Treasurer of the Committee, Gallatin National Bank, N. Y.——Carl Habel, Berlin, has in press 'Prolegomena' to a new edition of the 'Imitatio Christi' of Thomas à Kempis, which is to be not only an introduction to his complete works, but an attempt to establish finally his authorship of the 'Imitatio.' For this purpose his original autograph will be made use of as never before, with due reference to its peculiarities (especially its punctuation, neglect of which has obscured the rhyme and rhythm of the composition), to its division into chapters, etc. Numerous facsimiles of important manuscripts, including that of the 'Imitatio' itself, will be given. Pastor Hirsche of Hamburg is the editor.——Joseph Albert, the well-known Court-photographer of Munich, and inventor of the permanent-printing process which bears his name, invites subscriptions to a large quarto 'Album of the Passion Play at Ober-Ammergau.' This is an account of the play, with the text and songs of the chorus, by John P. Jackson, illustrated by a series of twenty etchings from the drawings of 'The Homes of Ammergau' by Eliza Greatorex, and sixty large photographs of the scenes and tableaux taken by Albert himself. Mr. Jackson has already edited a similar work on a much smaller scale, but without illustrations. The 'Album' will contain, besides those mentioned, a view of the village of Ober-Ammergau, and portraits of the delineators of Christ in 1850, 1860, 1870, and 1871—in all, more than eighty pages of art leaves and two hundred pages of text. Two hundred copies only will be published, and the price is fixed at £10 10s.——'The Life of Friedrich Schiller' is the latest volume of the admirable ninety-cent edition of Carlyle's complete works. (New York: Scribner, Welford & Armstrong.)——J. B. Lippincott & Co. have issued the 'Pickwick Papers' as the first of a new library edition of Dickens, printed in large type on the best paper, and illustrated with steel engravings by H. K. Browne, Cruikshank, and others. They announce as in press the following works; 'Work, Play, and Profit,' by Anna M. Hyde, being gardening for young folks; 'Thinkers and Thinking,' by John Darby; 'Thoughts on Life and Character,' by S. P. Herron; 'The "Spiritual" Delusion,' by Dyer D. Lum; 'The Great Trial,' by A. C. Harness—an arraignment of the Genius of Civilization; 'Gone Before,' by Henry Southgate; a novel, 'Under the Surface,' by Emma M. Connelly; poems, 'Leisure Moments,' by H. Helen Nunes; and 'Queen Loo, The Prehistoric Woman, and Other Poems,' by G. Narramore.——The spring announcements of Holt & Williams include 'Essays,' selected from the papers of the late Professor James Hadley; 'Liberty, Equality, and Fraternity,' by Fitzjames Stephen; Strauss's 'Old Belief and the New'; Tylor's 'Primitive Culture' and 'Early History of Mankind'; 'History of German Literature,' by Gostick and Harrison; the second volume of Freeman's 'Historical Course,' being the volume on England; and a large addition to their 'Leisure-Hours Series'—novels by Turgenef, Cherbuliez, Droz, Freytag, etc., and 'Scintillations from Heinrich Heine,' translated by Simon Stern.

—*Hygiene* is the name of a fortnightly journal of sanitary science published in this city through Messrs. G. P. Putnam's Sons, which we can confidently praise for the intelligent manner in which it is edited, as well as for the excellent taste displayed in its typography. In form it is an 8vo of 32 pages, convenient for binding, though the plan and scope of this periodical

make of every issue a valuable tract for public distribution. It is very far, however, from having the scrappiness and disjointedness of a tract. It has regular departments, not, as in the case of the so-called health journals of another stamp, for general, unsystematic, and more or less charlatanical talk on hygiene, but for the practical discussion of current topics from a scientific point of view, giving to the meaning of "hygiene" such an extension as makes it equally proper to discuss the physical aspects of hanging and to point out defects in the construction of the Warren Cooker. There is an evident purpose to avoid anything like padding. We should mention as being particularly interesting and valuable the summary called Health-Notes, the Analyses and Comments, and the Book-Notices. A little later in the field is the monthly journal, the *Sanitarian*, edited by Dr. A. N. Bell, and published by A. S. Barnes & Co., New York City. It has a less popular character than *Hygiene*, giving in full what the latter gives in abstracts, and so rather addressing itself to the profession, who ought to find their account in it. The April number (No. 1) has an article on the New York Quarantine Establishment, by the editor, with illustrations and a quarantine chart of the harbor.

—A noteworthy series of papers, by Mr. Howard Staunton, has lately appeared (and, it is to be hoped, is not yet finished) in the *Athenæum* on "Unsuspected Corruptions in the Text of Shakespeare." All such contributions to Shakespearian literature are to be warmly welcomed. They are not the haphazard guesses of a novice, but the results of years of such training as the editing of Shakespeare can alone give, and are supported by parallel passages from Shakespeare's own works and from contemporary Elizabethan literature. Although we may not always be convinced that the passage in question is corrupt, or that, if corrupt, Mr. Staunton's conjectural emendation is the happiest to be found, yet the mere fact that so keen a critic has expended on it some of his best thought is sufficient to make us pause and reflect—and is that time ever to be counted lost which has been devoted to a passage in Shakespeare? It is minute verbal criticism which is the very life of Shakespearian study. Without it there can be no genuine æsthetic criticism. Dr. Arnold felt this clearly when he said: "My delight in going over Homer and Virgil with the boys makes me think what a treat it must be to teach Shakespeare to a good class of young Greeks in regenerate Athens; to dwell upon him line by line, and word by word, in the way that nothing but a translation-lesson ever will enable one to do; and so get all his pictures and thoughts leisurely into one's mind, till I verily think one would, after a time, almost give out light in the dark after having been steeped, as it were, in such an atmosphere of brilliance; and how could this ever be done without having the process of construing, as the grosser medium through which alone all the beauty can be transmitted, because else we travel too fast, and more than half escapes us?" Every student of Shakespeare will echo these true words, and respectfully entertain conjectural emendations when proffered by such scholars as Mr. Staunton.

—That very large portion of the unscientific public which is interested in questions relating to the "future of the earth," will do well to look at No. 7 of "Half-hour Recreations in Popular Science," published by Estes & Lauriat, Boston. The number in question is a paper by Prof. A. Winchell, of the University of Michigan, on the "Geology of the Stars," in which he gives a summary of the present condition of scientific knowledge with regard to the history of matter, from its nebulous to its stellar, and, finally, its planetary condition. On the probable future of the earth, the first two phases throw no light, but the last does. There is in the moon, as every one knows, no present evidence of the existence of an atmosphere or of water; but their "former existence is a fair and direct deduction from the doctrine of the common origin of the earth and moon." But if they once existed, how shall we explain their disappearance? They have been absorbed by the rocks. In an age long gone by, the moon was in the same physical condition as the earth. The water on its surface, or that which descended in periodic storms, as it percolated the porous rocks and thin crust of the moon, soon reached a temperature which dissipated it in vapor, and returned it to the surface, to be recondensed. But the moon, having only one-forty-ninth the bulk of the earth, cooled forty-nine times as rapidly as the earth, and at length a temperature was reached at which the rocks on the surface took it in faster than it could be evaporated again. "The moon is a fossil world, an ancient cinder suspended in the heavens, once the seat of all the varied and intense activities which now characterize the surface of our earth, but in the present period a realm of silence and stagnation."

—Such will be the fate of the earth. Already our planet has passed through the "ring condition" now presented by Saturn, and the stage now seen in Jupiter, in which "a water mist begins to condense in the peripheral regions," and gathers with a vaporous envelope; this precipitates an aqueous rain, which ultimately finds a resting-place upon the incrusted nucleus. Later, life makes its appearance. Then comes the terrestrial stage, in which we now are, and in which the "organic phase culminates." Then comes the stage in which Mars now seems to be, with diminished vapors and infrequent rains, encroaching cold, and "decline of the organic phase." Last of all will be the stage in which the moon now is, beginning with the disappearance of aqueous vapors, ending with the total absorption of ocean and air, the extinction of organization, and final refrigeration:

"The progressive cooling of the earth will allow the waters to circulate deeper and deeper. When the thickness of the terrestrial shell, which must be saturated with water, has doubled, the increased demand must lower the waters of the ocean, and long before refrigeration has reached the centre the thirsty rocks will have swallowed the sea and all our surface waters. The drained, and shrunken, and shivered zone lying nearer the surface will suck in the atmosphere, and this will disappear in the pores and the caverns of the worn-out world."

—The cumulative plan of voting has received a check in Pennsylvania, where there was reason to hope much from a trial of it, as we intimated in our recent notice of Senator Buckalew's work on the subject. It now appears that the act passed through his influence, providing that councilmen, etc., in boroughs throughout the State should be elected by the cumulative vote, proved so unpopular that during the winter several boroughs procured the passage of acts exempting them individually from the application of it. These the Governor vetoed, on the ground that it was better that a general law should be abrogated all at once rather than by piecemeal; upon which the Legislature, with yet other special acts looming up before it, passed an act repealing the Buckalew statute, and last week the Governor gave it his signature. We must freely admit that this result is more disappointing than discouraging. Pennsylvania is but stony ground for political reform, even of a sort not more advanced than cumulative voting. It is now in order for Mr. Buckalew and his friends to reopen the discussion of minority representation, and to continue it until comprehension of the principle leads naturally and without coercion to the adoption of practical measures as fast and as far as enlightenment spreads.

—That interesting question regularly discussed in American society after dinner, "How ought Englishmen to be put to death?" will be the subject of more lively debate than ever when our public become aware of certain statements which are made by the well-known Dr. Letheby; and we suggest that the discussion be brought to a close at an early day, debate having already too long postponed action. Dr. Letheby, Toxicologist, Medical Officer of Health for the City of London, M.B., Ph.D., Fellow of the Linnean and the Chemical Society, Lecturer on Chemistry to the Corporation of London, etc., etc., etc., when, in his excellent book on 'Food,' he has occasion to speak of the people of the United States and their *cuisine*, puts forth many nefarious sentiments, of which this that follows is a sample: "The sallow, weazen look of the natives of the Northern States of America is thought to be due to the indigestible preparations of Indian corn, called *mush*, *hominy*, or *Johnny*, which constitute the chief portion of their daily meals." Again he says: "In certain districts of North America, especially on the Allegheny Mountains, the flesh of all the cattle is poisonous, and so, also, is the milk they yield, and the cheese which is made from it." And yet again—after being compelled to admit that "hares" [a British animal—ED. NATION] which have fed on the *rhododendron chrysanthemum* "are frequently unwholesome"—he makes haste to add that "the same is the case with pheasants in Pennsylvania and Philadelphia" (*sic*). Philadelphia pheasants, it seems, "feed during the winter and spring on the buds of the wild laurel" which abounds; and Dr. Letheby has also known "many instances of serious mischief from prairie birds, which are largely imported into this country from America, and attributes it to the food made use of by the bird." Over here, Tenterden Steeple is supposed to be the cause of these seizures, which are never severe, the usual remedy being a few less prairie "birds" at a time. As for the "mush or Johnny," it is at least better than the cow-heel and three half-quarterns of gin which constitute [fact—ED. NATION] Dr. Letheby's notion of "a square meal," as the English call it. We may return to this subject again; meantime, if distinguished English gentlemen, when writing about the thirty or forty weazen millions of their kith and kin on this side of the water, would take half the pains to be correct before they talk that we over here always take whenever we have to speak about distinguished Englishmen, it would be "more better," to use the language of Andrew Marvell, private secretary of Milton, whose immortal works both countries possess in common.

—The *Athenæum* speaks of an English lady, Miss Anna Blackwell, who has recently had printed, for private circulation, a pamphlet entitled 'Spiritualism and Spiritism,' which must be rather curious. Miss

Blackwell claims, it is said, the credit of being the person who first introduced Spiritualism into France (so long ago as 1850), and now of laying before the English public "the far more intellectual and refined doctrine of Spiritism." Spiritism appears to have for its distinctive features the doctrine of the reincarnation of souls, and thus to differ little, if at all, from the ordinary belief in metempsychosis—though we speak under correction from any heathen reader skilled in this latter doctrine. A principal difference between the two is perhaps that, according to Miss Blackwell, some of the more highly endowed subjects of the Spiritistic reincarnation have not merely Plato's "dim reminiscences" of the soul's former habitation in this world, but a perfect knowledge of their former estate. Thus, the late M. Allan Kardec could recollect the time when he was here as John Huss, the Bohemian Reformer, who was burnt at the stake in 1415. As 1415 is only four hundred and fifty-eight years ago, and as M. Kardec died some time since, it will be seen that his life in his last human form—if that of Huss was his last—must have been acceptable to the powers controlling the transmigration, four hundred and odd years being a rather short interval between human incarnations. In Miss Blackwell's own case, if we may trust the *Athenæum's* brief synopsis in a matter of this degree of delicacy, the interval since she was last in human form is rather more than five thousand four hundred years; and for reason good. She says that she has authentic evidence, revealed to her by two spirits, that in the year 3543 B.C. she was a princess of Abyssinia. The first spirit who communicated this intelligence to her was her father of that date, and the second spirit-witness confirmed the father's testimony in the following dialogue:

Miss Blackwell—"Are you a friend?"
Spirit—"Enemy."
Miss B.—"Of this life?"
Spirit—"No. Long ago."
Miss B.—"In what quarter of the globe?"
Spirit—"Africa."
Miss B.—"In what country?"
Spirit—"Abyssinia."
Miss B.—"Before or after Christ?"

The spirit names the date as above given, says that she was one of the attendants of her questioner in the state of existence which they shared in common so long ago, and that the questioner was a king's daughter. The conversation concludes as follows:

Miss B.—"Was I good?"
Spirit—"Wicked and ugly."

The fact that the attendant is still in the spirit-world, and has not been allowed to return to the comfortable life of humanity, may be taken, we trust, as militating against her testimony, and probably we cannot be too cautious in accepting her word as to the character and personal appearance of her former mistress. But it may be that the "ugly" is used in the sense which that word bears in some American quarters, and means "cross," and has no reference to physical graces or deficiencies of any kind.

—The year 1872 has, on the whole, been well represented in historical literature, and has produced several works of permanent value. The fourth volume of Mr. Freeman's great work was late enough in 1871 to count here, and at any rate was not noticed in our last annual survey (see No. 348). This indefatigable worker has not failed to produce two or three slighter books in the interval between his fourth and fifth volumes—the 'Essay on the English Constitution,' the 'Rede Lecture,' and the 'Outlines of History,' all of which have been noticed by us. Mr. Froude, too, nearly as active in his field, has produced his 'History of Ireland,' certainly in the midst of a storm such as seldom greets a new history. On the other hand, we cannot say much for American writers, nor for English writers of the second class: there is little deserving mention under either head, except Mr. Frothingham's 'Rise of the Republic' and the two books of the Messrs. Drake—the 'Biographic Dictionary' and 'Old Landmarks of Boston.' Two important reprints—Greene's 'Historical View of the American Revolution' and Ticknor's 'History of Spanish Literature'—also belong here. In ancient history, Mommsen, no less voluminous a writer than Mr. Freeman, and who never does anything without making a mark, has issued the first volume of his 'Roman Constitutional Law' (*Staatsrecht*), unquestionably the most important work in this field since 'Niebuhr'; it forms an epoch in this branch of enquiry, as the history of the same writer does in Roman history. Dr. Ihne has issued the third volume of his Roman history, a work which is not without value, even by the side of Mommsen's greater work. His point of view is antagonistic to the Romans, and very favorable to Carthage; this third volume comes down to the fall of Numantia. Mommsen does not yet give us the Roman Empire, so long desired from his hands; but one of his pupils, Schiller, has published a history of the reign of Nero, which has received great commendation. We will also mention Planta's 'Ancient Rhætia' and Professor Nitzsch's 'Roman Annalists,' the volume published extending down to Valerius Antias. In this category belong also Burn's admirable 'Rome and the Campagna' and the first instalment of Smith's splendid 'Ancient Atlas'; while the Cesnola collection of remains from Cyprus certainly deserves mention in a survey of the year.

—The Historical Commission of Munich has published fewer important works this year than usual; one or two of the most important—as the first volume of the great 'German Biography' and the 'Chronicle of the City of Nuremberg'—are just ready for publication. Three volumes have been issued of the history of sciences in Germany—of Technology, by Karmarsch; of Zoölogy, by Carus; and of Philosophy, by Zeller. Other important works of this series (now numbering thirteen volumes) are the histories of Constitutional Law by Bluntschli and of Philology by Benfey; it is worth mentioning, as illustrating the calm, scientific spirit in which history is studied in Germany, that the histories of Protestant and Catholic theology stand side by side in the list. Of the great English series of mediæval documents published under the direction of the Master of the Rolls, we have the completion (Vol. IV.) of Roger of Hoveden, by Professor Stubbs, and the first volume of Matthew Paris, by Mr. Luard. This is also the place to mention Professor Stubbs's great collection, 'Councils and Ecclesiastical Documents,' Vol. III. containing the Anglo-Saxon Church to Alfred. Vol. I. comprises the early British Church; and Vol. II., edited by Mr. Haddan—not yet published, on account of his illness—will be devoted to the Scotch and Irish Churches. The English Historical Commission continues to unearth numerous valuable documents, chiefly belonging to the sixteenth and seventeenth centuries; but they are historical materials rather than history. Other histories of importance are Monod's 'Grégoire de Tours,' Hausrath's 'Neutestamentliche Geschichte'—both of which we have mentioned before—and a collection by Amédée Thierry of his papers in the *Revue des Deux Mondes* upon the history of the fifth century—somewhat similar to his brother's 'Récits des Temps Mérovingiens.' Baron von Helfert's 'History of Austria since 1848'—written in support of the reaction of 1849—should also be mentioned. Evans's 'Stone Age of Great Britain' belongs in a sense to history. The period of the Hussite Wars, the study of which received a new impulse from Palacky's great work, has of late attracted a great deal of attention from German students. Dr. Wilhelm Berger's 'Johannes Hus and König Sigmund' gives a full and graphic sketch of the Hussite movement down to the death of Huss, from an almost exclusively political point of view—a very careful and thorough study. He takes the same ground as Hefele (see *Nation*, No. 312), that Sigismund was guilty of no breach of faith towards Huss; his safe-conduct having no validity against judicial process, to which Huss voluntarily submitted himself. Those who desire a sketch of the career of the religious reformer will find Köhler's 'Johann Huss' a good popular work. The author has since published a similar work upon Luther. Professor Grünhagen, of Breslau, has published a detailed history of the Hussite Wars in Silesia, to illustrate the view that these wars were rather national—Slaves against Germans—than religious. Two volumes of the 'Scriptores Rerum Silesiacarum' (VI. and VII.) have also appeared, under Grünhagen's editorship, covering the period of the Hussite period and the Podiebrad period respectively. To these wars is traced the origin of the antagonism between Silesia and Bohemia.

ZOÖLOGICAL MYTHOLOGY.*

THE literature of comparative mythology, which, for so young a science, is already abundant and well matured, has been enriched by two recent publications, very different in scope and character, but perhaps for that very reason none the less adapted to be considered together. Professor De Gubernatis of Florence has published in English an elaborate, and for all practical purposes exhaustive, treatise upon one portion of the great field embraced by the science; and Mr. Fiske, of Cambridge, has presented in a few graphic chapters a summary of some of the most important of the results already reached, joined to a discussion of what we may term the philosophy of mythology and its relation to the other branches of primitive culture. We need only premise that both writers have done very satisfactorily what they set out to do. Mr. Fiske's papers are not merely a popular presentation of results reached by the study of others; in a science like this, which is essentially comparative, nothing is more serviceable than that students who are not specialists in it should from time to time examine the state of the science, and help in establishing its philosophy. These papers discuss one by one some of the leading classes of myths, grouped about the idea

* 'Zoölogical Mythology; or, The Legends of Animals. By Angelo De Gubernatis, Professor of Sanskrit and Comparative Literature in the Instituto di Studii Superiori e di Perfezionamento at Florence, etc.' In two volumes. New York: Macmillan & Co. 1872. 8vo.

'Myths and Myth-Makers: Old Tales and Superstitions interpreted by Comparative Mythology. By John Fiske, M.A., LL.B., Assistant Librarian, and late Lecturer on Philosophy at Harvard University.' Boston: James R. Osgood & Co. 1873. 12mo, pp. 251.

from which they seem respectively to have been developed; the three last are of a more general character, and the last, 'The Primeval Ghost-World,' analyzes the process of myth-making with great clearness of insight. The book, by its calm and broad spirit, is well suited to those who find themselves unprepared to follow Professor Max Müller and Mr. Cox to the full length of their hypotheses.

Professor De Gubernatis's work is, on the other hand, intended for the use of special students, and would as a whole be dry reading for anybody else. His theme is, the animals in mythology so far as they had their origin in the observation of celestial phenomena. It is true there are not infrequent expressions which would seem to imply that the author regarded this as the sole origin of all zoölogical mythology, as in the Preface, p. xv.: "There is but one general domain in which all the animals of mythology are produced, and made to enact their respective parts. This domain is always the heavens." But he admits (vol. ii., p. 422) the danger theorists are in "of confining their observations to one special favorite mythical point or moment, and referring almost every myth to it"; and says explicitly, p. 424: "It would be an exaggeration to ascribe to all the myths one unvaried manner of formation." At any rate, the most hasty consideration will suggest zoölogical myths of which this work takes no account; such, for example, as the *totems*, treated by Mr. McLennan. And it would be preposterous on the face of things to maintain that in all cases where a myth relates to animals whose home is the earth or the water, it must be ascribed to some resemblance to sun, moon, star, or clouds.

Still, one is astonished at the clearness with which this connection between the animals of mythology and celestial phenomena is proved in a vast number of cases where it is at first sight very obscure. The chief value of the book is that it goes back to the very earliest myths, those of the Vedas, gives these in detail, and then traces in each case the shape which the myth assumed, in later Hindu tradition, and among the Iranians, Turanians, (by intercourse), Slavonians, Scandinavians, etc. The materials are drawn least from the classic, the Scandinavian, and other mythologies which are generally familiar; most copiously from Asia and Russia. One is, as we have said, astonished at the variety of the symbolism found in the Vedas, and the multitude of different animals which are identified with these phenomena of morning and evening. For example, the antelope, not an animal that we should think especially likely to suggest such images: "The Rig-Veda represents to us the Marutas, or winds that lighten and thunder in the clouds, as drawn by antelopes. The Marutas are born 'shining of themselves, with antelopes, with lances, amid thunder-peals and flashes of lightning.' 'They have yoked, with a red yoke, the antelopes. The young battalion of the Marutas goes of itself, and has an antelope for its horse.' The horses of the Marutas, which we already know to be antelopes, are called winged, and are said to have golden forefeet. The antelopes of the Marutas are splendid. Nor are the Marutas only carried by antelopes; they also wear upon their shoulders antelopes' skins" (ii., p. 83). The wealth of symbolism in the Vedic myths, and its development into all the later phases, is shown most completely in the chapter on "The Cow and the Bull," which occupies more than half of the first volume, and which demonstrates many remarkable transformations of myths; although we cannot think that this single aspect exhausts the extensive and varied mythology of these animals.

In the chapter on "The Horse" we have a graphic and picturesque account of the growth of mythical pictures from the phenomena of dawn and twilight. "This continuous succession of shadows, penumbræ, chiaroscuri, and shades of light, from the black darkness to the silver moon, from the silver moon to the gray twilight of morning, which gradually melts into and confounds itself with the dawn, from the dawn to the aurora, from the aurora to the sun; the same variations recurring, but inversely, in the evening, from the dying sun to the reddish and blood-colored sky or evening aurora, from the evening aurora to the gray twilight, from the gray twilight to the silver moon, from the silver moon to the gloomy night—this continual change of colors, which meet, unite with, and pass into each other, originated the idea of celestial companions, friends, or relations, who are now in unison and now separate, who now approach to love each other, to move together, and affectionately follow each other, now rush upon each other to fight, despoil, betray, and destroy each other turn by turn, who now attract and are now attracted, are now seduced and now seducers, now cheated and now deceivers, now victims, now sacrificers" (i., p. 320). Further on, in speaking of mythical characters: "In their nocturnal journey the moon plays the part now of the good old man or the good fairy; now of the good cow or the bull; now of the gray horse, the steed of night, who in three stations bears them to their goal; now of the bird who, nourished upon their flesh, carries them to their destination; and now we have, on the contrary, the monster itself or the step-mother who threatens, tortures, and persecutes them" (p. 325). This is clear and instructive; only, while recognizing that the makers of myths saw all these things, we surely need not conclude that they saw nothing else.

Even Mr. Fiske, whose point of view is a philosophical one, is not free from this tendency of the pure philologists—exemplified in Mr. Cox and Professor De Gubernatis—to see in myths nothing but phenomena of nature translated into language; in the words of Max Müller, that "mythology is only a dialect, an ancient form of language." Mr. Fiske says, p. 22, that "it is characteristic of a myth that it is spread in one form or another over a large part of the earth, the leading incident remaining constant, while the names and often the motives vary with each locality." This language would seem to imply that nothing is a myth unless it possesses this universality; that a myth may be suggested by the daily course of the sun and moon, by the winds, the stars, and the clouds, but not by anything that is exclusively local or individual. To be sure, it is largely a matter of definition and limitation. If Hercules was the sun, and thus was identical with Perseus, Achilleus, Sigurd, and other solar heroes, still the elements of his several labors, the lion of Nemea, the hydra of Lerna, the birds of Stymphalos, must have been associated with some special local phenomena. And if a genuine myth may thus be associated with a special locality, why may not a myth be formed which is exclusively local—not connected with sun, moon, or stars, but with exclusively local phenomena, and, it may be, with temporary and exclusiveiy local occurrences—a meteor, for example, or a mirage?

Max Müller and his followers have done an inestimable service to the study of mythology, and have placed it at last upon a sure foundation. The various systems of symbolism and allegory which were proposed in former times were all inadequate because founded upon inadequate data. Mythology could not be anything but empirical until there were materials for its comparative study; now, at last, with investigations such as this of Professor De Gubernatis, we may feel that we are actually getting at the bottom of the subject, that we have an hypothesis which explains the phenomena, and which will never be set aside.

At the same time, while admitting all this, we cannot but think that the present method is inadequate likewise—not in the same way and degree as earlier theories, for this is fundamental and scientific, while those were partial and empirical—still incomplete. What has become of that interpretation of local myths which appeared so fruitful and suggestive when brought forward by Karl Ottfried Müller? It is wholly ignored and indeed denied by the new school. What has become of the historical mythology so eloquently developed by Müller's pupil, Ernst Curtius, both as representing events in early Greek history, and especially as embodying the influence of foreign thought upon the religious ideas of the Greeks? The one is absolutely denied, the other neglected. Now, if we are ever to have a really rich and edifying science of mythology, it must, to be sure, be based upon these comparative studies; but it must be recognized that the Greeks, too, as well as the primitive Aryans, possessed a constructive imagination, and that what they added is of value as well as what they inherited. A third element, too, must be recognized—that of the direct influence of more cultivated nations. For example, Hercules is not only the primitive sun-god; he is also the Phœnician Melkarth; and, for the matter of that, so far as the Greeks were concerned, he was no sun-god at all, but the heroic champion and reformer.

The execution of 'Zoölogical Mythololgy' is modest and every way satisfactory; the use of the English language is remarkable for one who "for the first time in his career as a student ventures to address himself to a foreign public and clothe his ideas in a foreign tongue." We have noticed only one incorrect expression—"skilful to rob" (i., p. 328, note). There are scattered through the rather dry treatise many brief sentences which go to the root of the matter. "It is these inconsistencies which have caused mythology to be condemned by the crowd of old but prolific pedants as a vain science; whereas, on the contrary, it is precisely these inconsistencies which raise it in our esteem to the rank of a valid science" (i., p. 89). "This is unnatural in zoölogy, but it is very natural in mythology" (p. 370). "Because the primitive man was not so much inclined to make abstractions as comparisons (to represent strength, for instance, he had recourse to the image of the bull, the lion, or the tiger; . . .), in the primitive speech of mankind no conjunctions existed by means of which to write the two terms of a comparison: hence a strong king became the lion, a faithful friend the dog, an agile girl the gazelle, and so on" (ii., p. 427). "Primitive man does not ascribe to the god any other form than those which he sees round him and which he knows; the god cannot have wings of his own, divine wings; he must become a bird in order to be winged" (p. 428). This remark may be supplemented by Mr. Fiske's, p. 79: "To the ancient there was nothing necessarily diabolical in the transformation of a man into a beast."

We will add a few words from the preface, upon the varied development

received by the same myth in different communities: "It is sufficient here to cite the complete epos which formed itself in Europe concerning the fox, to which the Indian traditions, which prefer to dilate upon the cunning of the serpent, assign quite a secondary place. It is true that here zoölogical geography comes in to explain the apparent interruption in the series of comparison, showing how it was impossible that in the Hindu legends the fox, an animal far less familiar to those regions, should become the highest type of feminine malice; while for the same reason the elephant, the giant ape, the gigantic turtle, which occupy such an important position in the Brahmanic mythology, could scarcely find a place in the mythical legends of Europe" (p. xiv). It is also a suggestive remark, of the truth of which those more familiar with the habits of animals can judge, that "the cunning of the fox has been exaggerated by popular superstition as much as the stupidity of the ass, for a mythical reason and from tradition, far more than by the observation of exceptional habits in these animals"; the fox, from its color, being "the reddish mediatrix between the luminous day and the gloomy night"—"the hour of twilight is the time of uncertainties and of deceits" (ii., p. 122).

While saying that the detailed comparison of myths, their genesis and development, is, as might be expected, rather monotonous and dry, we must not forget to mention the numerous stories introduced, especially the unpublished Italian legends, which our author has picked up himself, and those from the Russian of Afanasief. We will close with one of the most entertaining of the latter, relating to the little jorsh (perch), who appears to play the part of Br' Rabbit in the negro stories:

"The bream accuses the little jorsh, the wicked warrior who has wounded all the other fishes with its rough bristles, and compelled them to forsake the Lake of Rastoff. The jorsh defends itself by saying that it is strong in virtue of its inherent vigor; that it is not a brigand but a good subject, who is known everywhere, highly prized, and cooked by great lords, who eat it with satisfaction. The bream appeals to the testimony of other fishes, who give witness against the little perch, who thereupon complains that the other fishes in their overweening importance wish, by means of the tribunals, to ruin him and his companions, taking advantage of their smallness. The judges call the perch, the eel-pout, and the herring to give witness. The perch sends the eel-pout, and the eel-pout excuses itself for not appearing, pleading that its belly is fat and it cannot move; that its eyes are small and its vision imperfect; that its lips are thick, and it does not know how to speak before persons of distinction. The herring gives witness in favor of the bream and against the little perch. Among the witnesses against the jorsh the sturgeon also appears; it maligns the jorsh, alleging that when he attempts to eat it he must spit out more than he can swallow, and complains that when it was one day going by the Volga to Lake Rastoff, the little perch called him his brother and deceived him, saying, in order to induce him to retire from the lake, that he had once also been a fish of such size that his tail resembled the sail of a ship, and that he had become so small after having entered Lake Rastoff. The sturgeon goes on to say that he was afraid, but remained in the river, where his sons and companions died of hunger, and he himself was reduced to the last extremities. He adduces, moreover, another grave accusation against the jorsh, who had made him go in front in order that he might fall into the fishermen's hands, cunningly hinting that the elder brothers should go before the younger ones. The sturgeon confesses that he gave way to this graceful flattery, and entered into a weir made to catch fish, which he found to be similar to the gates of great lords' houses—large when one goes in and small when one goes out; he fell into the net, in which the jorsh saw him, and cried out, deriding him, 'suffer for the love of Christ.' The deposition of the sturgeon makes a great impression upon the mind of the judges, who give orders to inflict the knout upon the little jorsh, to impale it in the great heat, as a punishment for its cheating; the sentence is sealed by the crayfish with one of its claws. But the jorsh, who has heard the sentence, declares it to be unjust, spits in the eyes of the judges, jumps into the briar-brake, and disappears from the sight of the fishes, who remain lost in shame and mortification" (vol. ii., p. 346).

GERMAN NOTIONS OF OUR FEDERAL CONSTITUTION.*

ABOUT three years ago, in a review of Mr. Blankenburg's book on 'Die inneren Kämpfe der nordamerikanischen Union bis zur Präsidentenwahl von 1868,' we complained that German scholars, in striking contrast with their usual painstaking thoroughness, are wont to consider the United States as a kind of literary *terra nullius*, of which everybody may take possession. In this solitary case, a real knowledge of the subject treated is with them an object of hardly secondary consideration. So far as they condescend at all to collect material for their work, they read "with a wet finger," sighing for some ingenious Yankee to invent a machine for turning over the leaves of the books with tenfold speed. This is strong language, but it is high time to put a stop to this disgusting book fabrication, by making these easy-minded type and paper wasters understand that they will henceforth be watched and mercilessly exposed.

On page 39 of the second volume of Mr. Rüttimann's 'Nordamerikanisches Bundesstaatsrecht," we find the above-mentioned work of Mr. Blankenburg quoted as authority, and for no less a question than the reconstruction of the rebel States. This single fact sufficiently proves how competent a man Mr. Rüttimann is to write a work of two volumes on the constitutional law of the United States. We do not mean to put him in the same category with Mr. Blankenburg, which would, indeed, be doing him gross injustice. On the other hand, we cannot measure the two men by the same standard. Mr. Rüttimann is not, like Mr. Blankenburg, a general publicist of rather indifferent standing, but professor at a university, whose principal task it is to train future scholars, and whose book pretends to be a strictly scholarly work. By this pretence, he challenges a careful and thorough examination of the work, and hardly a single page can stand such a test.

One need not be very deeply versed in the constitutional law of the United States to know that it is absolutely impossible to write a good work on it without having acquired a thorough knowledge of the history of the United States. In this Mr. Rüttiman is almost entirely lacking. Want of space forbids us to prove this assertion, and to point out all the important omissions and inaccuracies consequent upon the author's inefficiency in this first requisite. We must content ourselves with mentioning that by far his principal historical authority is Neumann's 'Geschichte der Vereinigten Staaten,' one of those "wet-finger works" whose only real merit is that it strenuously upheld the cause of the Union and of the free-labor North against secession and slavery—a work so superficial that, for instance, even the main motions in the debate on the Missouri question are radically misstated. Our general judgment upon Mr. Rüttimann's work can be amply justified by stating a simple fact, and illustrating by a few examples the unavoidable consequences of it.

The original sources from which the constitutional law of the United States has to be gathered, *i.e.*, the decisions of the courts, chiefly of the Supreme Court of the United States, Mr. Rüttimann has never had in his hands. It even seems in the highest degree probable that the United States statutes at large are not among the works used by him; his knowledge of the constitutional law is entirely derived from second and third-hand sources. The manner of quoting leaves the general reader in doubt whether or not the author pretends to have consulted the original sources; an expert sees at a glance that he has not. On page 21, for instance, we read: "12 Howard 443 . . . " the quotation follows, and at the end, in brackets: (Gardner 226). According to the German manner of quoting, it should be: Howard, or Howard's Rep., xii. 443. Now, turning to 12 Howard 443, we find that there the report of the case of *The Propeller Genesee Chief* v. *H. Fitzhugh* begins. The quoting of the page where a report begins, so common in American law books, is quite unknown in Germany if a particular sentence is referred to. Finally, the sentence quoted by Mr. Rüttimann is not to be found at all in the report.

One other example of the same kind, but still more striking. On page 15, the decision of the Supreme Court in *Brown* v. *Maryland* is mentioned, and then added: "*In a later decision*, this too unconditional and general sentence has been narrowed down and rendered more exact *by the Supreme Court* in the following manner:" then follows a long quotation, which, as the author correctly states, is to be found 5 Howard 574, 575. If he had read the report himself, he would, however, have found the following sentence preceding the quotation: "This question came directly before the court, for the first time, in the case of *Brown* v. *The State of Maryland*, 12 Wheat. 419. And the court *there* held . . . ;" and immediately after the quotation: "This I understand to be substantially the decision in the case of *Brown* v. *The State of Maryland*." Furthermore, this résumé of the decision in *Brown* v. *Maryland* which is given as a later and more or less differing opinion of the court, is, in fact, not even a résumé made by the court, for no opinion of the court was delivered. "Each justice gave his own reasons for affirming the decisions of the State courts," and the résumé is to be found in the "reasons" of Chief-Justice Taney.

On pp. 57, 58, the unfortunate Gardner is again made responsible for the assertion that "*the Supreme Court* of the United States has *decided* that, if the forms and conditions of the revision (of a State constitution) are not regulated by the constitution of a State, the legislative authority of the same has alone the right to determine when and how a change of the constitution can be effected." Here allusion is made to the case of *Luther* v. *Borden*; there, however (7 Howard 40), we read: "The point, then, raised here has been already decided by the courts of Rhode Island. The question relates, altogether, to the constitution and laws of that State; and the well-settled rule in this court is, that the courts of the United States *adopt and follow the decisions of the State courts* in questions which concern merely the constitution and laws of the State."

So the author gropes on in a dim twilight, absolutely dependent upon

* 'Das nordamerikanische Bundesstaatsrecht verglichen mit den politischen Einrichtungen der Schweiz. Von Professor Rüttimann.' Zweiter Theil. Erste Abtheilung. Zürich. 1872. pp. 290.

the spectacles of Duer, Pomeroy, Gardner, Walker, etc., all doing pretty well on their rightful owners' noses, but none of them exactly the thing needed for Mr. Rüttimann, who should have learned to use his own eyes before he undertook to lead others. Yet we are comparatively well off where he holds fast to the coat-tails of the above-named gentlemen, though he is often not quite clear whence they come, nor whither they are going. Whenever he has to trust his own legs, a really painful stumbling begins. On page 31 he says: "To the States which had seceded from the Union and waged war upon it, Congress granted a restoration to their former status only on condition that *none* of their citizens (*Angehörige*) should enjoy the active right of a citizen (*Aktivbürgerrecht*) who could not take an oath that he had never broken the allegiance due to the Union." It seems hardly asking too much that a man who writes a voluminous work on constitutional law should have read the Fourteenth Amendment to the Constitution and the Reconstruction Acts of March 3 and 23, and July 19, 1867; but to have read them and write such a sentence is simply impossible. Perhaps Mr. Rüttimann's excuse is that he only knows of a Reconstruction Act of February 20, 1867 (p. 38). To this it could be answered that Mr. Rüttimann reads altogether too little, for it even seems doubtful whether he has read the entire Constitution of the United States. He says on page 44: "For this purpose [to fill a 'gap in the existing penal law'] the conceptions (*die Begriffe*) of a high crime and a high misdemeanor have been *created* (*gebildet*) by the laws of July 31 and August 6, 1861." In the opening argument in the impeachment trial of Andrew Johnson, Mr. Butler (i., p. 88) said: "It is but common learning that in the English precedents the words 'high crimes and misdemeanors' are universally used." We don't know whether Mr. Rüttimann will agree with Mr. Butler on this point, but he certainly might agree with us in asserting that it *should* be rather "common learning" for a writer on the constitutional law of the United States that Article III. Sec. 4 of the Constitution reads: "The President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for, and conviction of, treason, bribery, or other *high crimes and misdemeanors.*"

We have purposely confined ourselves to the first sixty pages of the book. We could easily point out *in these* a dozen other blunders, some quite as great, and all of them bad enough. If a professor is not ashamed to put his name to such a fabrication, what is to be expected of the general crowd of "article writers"!

SOME NEW FRENCH BOOKS.*

THE publication of an important historical (posthumous) work from the pen of M. Villemain is the literary event of the day in Paris. From the press of Didier & Co. has just appeared a 'History of Pope Gregory VII.' on which M. Villemain bestowed the labor of nearly forty years. In 1827, the work was announced to be published by subscription, and the list was immediately filled up. At this period M. Villemain had been forced out of the Council of State by the Villèle Ministry, and the resumption of his course of lectures at the Sorbonne engaging his attention, his 'History of Gregory VII.' was not completed until 1834, when he had the manuscript recopied with the intention of immediate publication. The work, however, now appeared to him incomplete without some account of the rise and origin of the Pontifical power and policy which Gregory VII. carried to its apogee. M. Villemain therefore resumed his labor upon his book, and continued, down to the year 1845, writing a preliminary history or Introduction and retouching the chapters already completed. Although at this time two copies of the work were written out for the press, M. Villemain still retained it, making additions and corrections from time to time almost down to the period of his death (May 8, 1870). Of the four hundred and fifty pages of the first volume, more than one-half are devoted to the Introduction. Down to the beginning of the present century, the character of Hildebraud, as Gregory VII. is frequently called, was very far different from that given him by subsequent historians. In France Guizot, and in England Dr. Arnold, have vindicated his memory, while the great work of Voigt, the Protestant Professor at Halle, is at once the highest historical authority and the strongest eulogium concerning him. From a comparison of dates, M. Villemain would appear to have commenced his work before the history of Professor Voigt was announced.

Some forty years ago, Michel Chevalier's work on the United States was the revelation of a new country to the people of France, who had almost forgotten that the greater part of our territory once belonged to them, and that, at a period when men of English race had planted a struggling colony on a strip of barren sea-coast, France explored the immense Valley of the Mississippi, held the line of the great lakes and the St. Lawrence, built a fortress at Quebec, cities at Montreal and New Orleans, and dotted Ohio, Illinois, and Michigan with military posts and agricultural colonies. The desire in France to know more of the United States very naturally increased after the failure of the Southern rebellion, in support of which the French invasion of Mexico was mainly planned, and which terminated in a peremptory order of the United States Government to Louis Napoleon to take his troops out of the country. French scholars and public men had already begun to pay some attention to our literary and our political system. Guizot wrote the life of Washington. Laboulaye, Montalembert, and Gasparin vindicated the action of the Government in suppressing the rebellion, translations were published of Marshall's Washington, of the Constitution, Bancroft's History, Story's Commentaries, etc., etc.; and we now have an original French work on the history, rise, and progress of the United States. Of its six hundred pages, more than three hundred and fifty are devoted to the Colonial period and the War of the Revolution, with what seems to us a disproportionate attention to the history and affairs of Canada. Although little more than a compilation, the work will doubtless be of service in giving to strangers some general idea of the history and progress of our country. M. Fontpertuis does not appear to have any personal acquaintance with the United States, and in many minor matters his book is full of inaccuracies. Thus we have Washington writing to his dear wife "Petsy"; we are told of the Newbury Address, in which it is difficult to recognize the Newburg Letter; and we learn that the steamboat which Robert Fulton built here in New York, and which he navigated to Albany, was propelled by machinery constructed by MM. Bolton & Watt in England.

In 1869, a French pianist, proprietor of the Polish name Kowalski, made a concert tour through the United States. We have his word for it. Personal knowledge of the fact, even from hearsay, have we none. Returned home, he experiences the necessity, *il sent le besoin*, of writing out and publishing his impressions of travel. Many of the impressions are amusing, and much of the information he imparts to his countrymen is startling. Thus:

"In every other country young men make love to young women, but in presence of the parents, who closely watch their interviews. In America there is no surveillance, the young girl makes free use of her liberty, and accepts the attentions of the young man, who from this moment is her *lover*. This is called *flirter*, from *flurty*, an English word signifying to make love," etc.

Then his readers are enlightened as to the Richardson-McFarland affair. "The trial opened, and Mr. Horace Greeley, a distinguished lawyer and the editor of the *Tribune*, appeared as counsel for Mrs. Richardson." We will not shock our readers by a reproduction of the surprising psychological argument of the lawyer in question. One "Tweed," we learn, "was comptroller of the finances of the State of New York, and for many years concealed in his books a deficit of a hundred millions of dollars." At Albany our author falls a victim to an unlettered hotel-keeper, who persuades him that it is the oldest city in the United States. This, however, is not difficult to believe after the statement that vessels of fifteen hundred tons burthen ascend the Hudson River a distance of one hundred and fifty leagues. Forewarned, forearmed; so that if we wake up some fine morning and find ourselves bound hand and foot by our German fellow-citizens, Mr. Kowalski will be justified in saying, "I told you so." He warns us (p. 103) that in America "the naturalized German in no way accepts the usages of his new country. He remains what he is. They have their own places of assemblage; and first of all, the breweries, where tranquilly smoking their pipes they enunciate principles of a profound Macchiavellism. They conceal their ambition under an outside of good-fellowship (*une enveloppe débonnaire*), and, looking upon the United States as a country without owners, they hope finally to grasp the rich booty." We trust that Mr. Eugene Lawrence, who is especially charged by the Messrs. Harper with the care of our liberties, will look into this matter, and expose the nefarious plot. Finally, we take Mr. Kowalski's inspiriting galop, *Ventre-à-terre*, to be a better composition than his work, although many musical ladies were puzzled as to how its title should be translated, and naturally shrank from asking for information.

The position occupied by the Comte de Chambord lends an interest to his own individuality. It was with the hope of increasing our knowledge of the man himself that we took up 'Henri de France.' He has been so generally represented as in every way mediocre that we felt more than willing to study the other side of the question in a work written avowedly in his in-

* 'Histoire de Grégoire VII., précedée d'un Discours sur l'Histoire de la Papauté jusqu'au XIe Siècle. Par M. Villemain.' 2 vols. 8vo. Paris: Librairie Académique Didier et Cie. New York: F. W. Christern.

'Les Etats-Unis de l'Amérique Septentrionale. Leurs Origines, leur Emancipation et leurs Progrès. Par Adalbert Front de Fontpertuis.' 1 vol. 8vo, 600 pp. Librairie de Guillaumin et Cie., Paris. New York: F. W. Christern.

'A Travers l'Amérique. Impressions d'un Musicien. Henri Kowalski.' Paris: E. Lachaud. 1872. New York: F. W. Christern.

'Henri de France; ou, Histoire des Bourbons de la Branche Ainée, pendant quarante ans d'exil, 1830-1870. Par M. Alfred Nettement.' Nouvelle Edition. Paris, 1872. New York: F. W. Christern.

terest, though to be sure M. Nettement professes to be an impartial historian, with no desire but to present the exact truth to the body of French voters for whom his narrative is evidently intended. We rose from the tedious perusal of the two small volumes with the impression that the author is a political monomaniac, a man with a fixed idea, for which he is scarcely responsible. There is no reason to doubt his facts. His dates and details are unquestionably derived from good authority, perhaps from personal acquaintance with the *entourage* of the exiled prince. He gives a minute account of his education, which would have been completely under the control of two Jesuits, had not their order been so detested in France, even by the Legitimists, that it was absolutely necessary to select other tutors for him. We are assured by M. Nettement, with rather a suspicious amount of repetition, that his education was most successful, and that one of its principal results was the intense love for France preserved by the Comte de Chambord through his forty years of exile. According to our author, the Prince, who hopes to become Henry the Fifth of France, is a being almost superior to common humanity, endowed not only with all the virtues that grace an exiled prince, but pre-eminently with all those which should adorn a king of France. We are given to understand that his political ideas, though they are not specified, are the only ones which can harmonize all national liberties with the rights of the king himself, and place the government of France upon a sure, permanent, and Christian basis. His religious views are not more easily ascertained, but we presume that he does not approve of the Revocation of the Edict of Nantes. He trusts, however, that the virtues of St. Louis will cover a multitude of the sins of his descendants. After the fall of the younger branch of the Bourbons, he was ready to forgive them with royal magnanimity for having occupied a throne from which the French people had driven his grandfather, but only on the condition that they should prostrate themselves before his own divine right of reigning over them. He has the innate Bourbon belief that his race is as necessary to the French as the French are to his race, and he acts accordingly.

M. Nettement's book reaches to the year of its publication. The author shudders at the present state of his country. He sees no hope but in the blissful reign of Henry the Fifth. In the meantime, the Comte de Chambord himself, who will not even recognize the tricolored flag, is apparently waiting in philosophic calm until the French surrender at discretion, and call him unconditionally to the throne. He will then of his free grace grant them what political liberty they must have. In spite of M. Nettement's book, we do not feel much increase of respect for the last descendant of Louis XIV., nor any great belief that his reign would be less precarious than that of his relatives.

'*The Ocean, Atmosphere and Life*: being the second series of a descriptive history of the life of the globe. By Elisée Reclus, author of 'The Earth,' etc. Illustrated with two hundred and fifty maps or figures, and twenty-seven maps printed in colors. (New York: Harper & Brothers. 1873. 8vo, pp. 534.)—Among the good popular scientific books which could be selected for translation into English, 'La Terre,' by Elisée Reclus, is one of the best. Until recently the author was probably known to but few American readers, the principal popular works on natural history of which translations have been republished in this country being the sensational and somewhat superficial works of Figuier. The author of 'La Terre' has, unlike most of his countrymen, a perfect command of English and German, he has travelled extensively, and while familiar with the original scientific works relating to Physical Geography which have appeared outside of France, he has freely consulted the great Book of Nature, and has translated the labors of his peers into familiar language in a most attractive and instructive manner. 'La Terre' is an admirable popular sketch of Physical Geography, and, like all the illustrated works of Hachette et Cie., it is beautifully executed; its typography is excellent, the woodcuts are well done—clear, precise, and to the point, while the larger maps (freely scattered through the volumes), intended to illustrate some of the more general phenomena of the earth's surface, are sufficiently well executed to do credit to many a more scientific volume.

The book issued by the Messrs. Harper under the name of 'The Ocean' is a mere reprint of an English translation of the second volume of 'La Terre,' published in 1869. The translation has evidently been made by some one totally ignorant of the rudiments of Physical Geography; the French technical terms are not reproduced by their corresponding English ones; we have a medley of English and French, showing at a glance the ignorance of the translator and the very unsuccessful use made of a French-English Dictionary. What can be said to excuse such translations as the following: "Fixation of the sands by seeds"—*fixation des sables par les semis*; "barometric measures"—*mesures barométriques*. Does the translator intend to give us a chapter on pecks and quarts reduced to French measures? "Calm during a hurricane"—*calme sous le vent!* When we have such excellent terms as bores for *mascarets*, why call them tidal eddies? Why speak of the "reclamation of the earth by cultivation"? The following phrases selected at random illustrate inaccuracies to be found on every page of the reprint: "Speed of the cyclone"—*vitesse de translation du cyclone; sur le pourtour*—"path"; *demicercle maniable*—"semicircle manageable"; *Banquise*—"Antarctic land." It becomes impossible to distinguish between ignorance of the subject-matter and insufficient acquaintance with French. There is no uniformity in the standard of measures; the metric system, used of course in the original, is sometimes changed into feet, sometimes into fathoms, or sometimes retained without a word of explanation. The scale of the woodcuts, always carefully given in the French edition, is omitted. The list of the woodcuts and plates given at the commencement of the book is, in the majority of cases, rendered inaccurate and meaningless by the bungling manner in which their explanation has been curtailed. The alterations needed in the electrotypes of the cuts and in the plates of the larger illustrations, to make them available for English readers, are not well done. As little as possible seems to have been altered, and, as might be expected from such a course, the cuts and plates present an agglomeration of French and English which is disgraceful in a popular scientific book, the value of which must depend upon its strict accuracy. The thin varnish of English laid on some of the maps is altogether too transparent; we find throughout the illustrations such excellent English idioms as "Ocean Pacific, Ocean Atlantic, Sea Baltic, Sea North, América du North, Gulf of Gascogne." When more important changes were required, the purpose of the original figure has generally been lost; thus, the figure intended to show the Mediterranean flora, and especially the large map illustrating the distribution of rain, are admirable examples of useless illustrations, and many others will prove serious puzzles to the enquiring mind. We are told that the large maps were printed in England and two of them incorrectly numbered. Nothing would have been easier, we should suppose, for an establishment having the facilities which the Messrs. Harper possess, than to rectify these blunders and to have placed the maps as they are to be found in the original. This was not done, although we are informed that the error had been rectified. It certainly is fortunate for the credit of this country that the maps were printed in England; they have lost immensely by the many transfers and changes they have undergone, and cannot be compared with the French impressions. There are mistakes regarding this country which we may pardon in a foreigner, but there is no excuse for repeating such blunders when issued in a translation on this side of the Atlantic. To foist upon the intelligent American a map of Florida (Fig. 22), full of such nonsense as "Bank of Caye de Sel" ("Salt Key"), is presuming too largely on his ignorance. Nothing better could be expected of a translator who knew so little of American scientific men as not to correct Reclus in alluding to the late Professor A. D. Bache of the Coast Survey as "Franklin Bache," because he was a descendant of Franklin. The original was published in 1869, before the great explorations of the deep-sea bottom undertaken by the Swedes, Americans, and English; but might we not reasonably expect in 1873 to have this most important chapter brought down to the present time, and to find something more satisfactory than the closing lines on that subject added by the translator?

If American publishers wish to obtain the assistance of scientific men in introducing popular scientific works to the public, let them meet the growing demand by furnishing a good article; let them entrust the choice, the editing or translating, to persons who are conversant with the subjects, and not bring science into disrepute by making of an excellent book a miserable caricature, totally unfitted for its purpose.

Memoirs of a Maryland Volunteer. War with Mexico in the Years 1846-7-8. By John R. Kenly. (Philadelphia: J. B. Lippincott & Co. 1873.)—At the outbreak of our war with Mexico, fifty thousand volunteers were called for by President Polk. In response to this call our author raised at Baltimore a company of infantry, in command of which he landed at Brazos St. Iago early in July, 1846. The book has but slight military value. An infantry captain, fresh from civil life, forced to wrestle with the harassing complications of drill and guard mounting, and whose mind is torn with distracting doubts as to the proper form of muster-rolls, can hardly be expected to be capable of imparting much valuable strategic information. One well-established fact, though, in the history of volunteer armies he appears to have reached at an early period of his experience. It is that "without pay, a soldier is one of the most disagreeable beings on earth, and without pay soldiers are not easily commanded." At the storming of Monterey, his command was repulsed with severe loss. In connection with this fact, he relates a characteristic incident concerning General Twiggs,

which is in entire harmony with all the army traditions concerning him. Twiggs should have been in the attack of the 21st of September as commander of the first division, but was absent, Col. Garland, next in rank, commanding in his place. Major Kenly relates:

"I saw General Twiggs when he came upon the field, riding from the direction of the camp, but well out of the range of the guns of the citadel. This was, I think, about noon; it might have been a little earlier, but it was after the repulse of our first assault. I was so struck with his coming almost alone, and in such very unmilitary garb, that he noticed me, and, approaching, said, 'I expected a battle to-day, but didn't think it would come off so soon, and took a dose of medicine last night, as I always do before a battle, so as to loosen my bowels; for a bullet striking the belly when the bowels were loose might pass through the intestines without cutting them.' I was very much interested at hearing all this from so old a soldier, but still it didn't satisfy me; and I wasn't astonished when I heard subsequently that General Taylor had quietly ignored his being present, and suffered the command of his division to remain with Garland."

In the matter of fighting, our author does not appear to have been fortunate, for although serving on both the lines of operations—Rio Grande and City of Mexico—he does not appear to have 'assisted,' as the French have it, at any of the important battles, after Monterey, which decided the issue of the campaign. Buena Vista was fought after his command was marched to Tampico. He left Vera Cruz for the interior, with the rank of major, but was stationed with his command at the National Bridge and Jalapa during the active operations of General Scott's army before the city of Mexico. Although the work gives us descriptions of the battles of Cerro Gordo, Contreras, Churubusco, Molino del Rey, and Chapultepec, they are not from the author's personal observation. With the aid of copies of official documents and general orders, a connected relation of the events of the campaign is presented, which, aided by the writer's sketches of what he saw, makes a work of fair interest for the general reader.

Healthy Houses. A Handbook of Drainage, Ventilation, Warming, and kindred subjects. By William Eassie, C.E. (New York: D. Appleton & Co.)—Mr. Eassie, though an Englishman, and writing for his countrymen more particularly, has kept an eye to American improvements in building and domestic conveniencies, and seldom closes a survey of any one of his topics without some allusion to what has been accomplished in the United States. We mention this, not because it adds so very much to the value of his book, but because it may reconcile the American purchaser to him, it being not unnatural to suppose that even if English hygiene is the same as American hygiene, the practical contrivances which the author describes with so great fulness are rather adapted to the conditions of English than of American living, besides being difficult to procure over here. This is of course true to a certain extent; for example, the chapter on chimneys has a much greater importance for our British cousins than it has for us with our bright skies and prevailing dry west wind. Possibly we may also think we have little to learn from them in the matter of stoves. But in the case of drainage, ventilation, water-supply, fireproofing—in any case, indeed—the description of a great number of different inventions to effect the same object necessarily involves the principles on which the discussion must turn in this country as well as abroad. With this explanation, and with the further remark that Mr. Eassie exhibits a wide practical experience of all the branches of his subject, and employs copious diagrams to illustrate it at every step, we can recommend his manual to heads of families, to architects and builders particularly, and, last of all, to the inventors.

Before yielding the floor, however, we will call attention to a work of similar purport, but written in French, 'La Maison,' by Prof. J. B. Fonssagrives, a prolific and elegant writer on hygiene, two of whose works (the 'Mother's Register' and 'The Mother's Work with Sick Children') are already accessible in an English dress. There is a general similarity in the topics treated by this author and by Mr. Eassie, but a great difference in the mode of treatment, Prof. Fonssagrives indulging in historical retrospects which, combining ripe scholarship with the natural graces of the French style, make 'La Maison' pleasant reading as well as profitable. The chapter on light—"Le Soleil et la Lampe"—has no parallel in the English work just noticed, and it marks the distinguishing point of view of the physician as opposed to the civil engineer and contractor. Beginning with the motto, "Where the sun does not enter, the doctor will," Prof. Fonssagrives insists upon the importance of choosing carefully the site for a house with reference to the points of the compass, and deciding how many windows there shall be, how large, and how disposed. He tells how to determine whether the *carré d'éclairage* (total lighting surface of a room or of a house) is sufficient for health, suggesting the use of sensitized photographic paper for this purpose. Next he passes to the quality of the glass fit for use in ordinary and in exceptional conditions, considering also its effect upon the sight; then to the use and abuse of shades and curtains, the choice of wall-papers, and so on to the subject of artificial light, of which the French would seem to have neither an abundance nor the best of the cheaper kinds.

Whether this book would bear reproduction as it stands we can hardly say. We can recommend it to architects and builders, and to persons acquainted with French, and not averse to mingling the *utile* and the *dulce* in their reading. The following extract, on the moral aspect of the open fire-place, is a good instance of our author's manner:

"Moreover, this is one of those questions which do not wholly belong in the physical category, since they involve a sentiment. The open fire-place has become, not without reason, the symbol of domestic intimacy, the centre of family gossip, the witness of all the joys and sorrows of private life. For my part, I could never, when passing before a house either in ruins or while building (and Paris has given us in the last twenty years ample occasion for meditations of this sort), behold without emotion the long black riband traced of yore upon a wall by the smoke of a fire-place. Sometimes one sees only a bit of casing, and near it a few dangling strips of carpet. It is nothing, and yet everything. Argos was once there. There have people been born and loved one another, and witnessed the birth and death of some one of their circle, and suffered, and played with children, and chatted, and read. All this makes the fire-place sacred. It must not be disturbed. . . . Though one be warm already, he still seeks the fire-place. We say domestic hearth (*foyer domestique*) to express the house (*maison*), the *home*, the 'chez-soi,' the lesser and dear fatherland; we shall never say the 'domestic heater' (*calorifère domestique*) to express the same thing. It is invincible as a tradition and as a sentiment."

Hinsides Atlanterhavet. I. (New York: F. W. Christern.)—Mr. Robert Watt, editor of the *Day's News*, a lively daily paper published in Copenhagen, is the author of this book of American travels, written in the Danish language, whose title signifies "Beyond the Atlantic." Mr. Watt is a spirited and fluent writer. He takes the reader with him across the ocean and lands him in Quebec; thence by Montreal to Niagara Falls, describing life on board the steamship, and sketching the interesting scenery of the St. Lawrence, with episodes from the early French wars, and some account of the manners and habits of the French inhabitants. Next follows a graphic description of Chicago, and especially of the great public works of that vigorous young city—the stock yards, the lake tunnel, the parks, and the successful turning of the current of the Chicago River backwards into the Illinois River. Mr. Watt was for a whole week an eye-witness of the great fire, whose scenes of horror, suffering, and death he paints in lively colors, not forgetting to applaud the astounding energies which it aroused. He next visited the Scandinavian settlements in Wisconsin and Minnesota, and gives useful and accurate information of the present condition and future prospects of the immigrants, with sketches of the trials and dangers incurred by many of them in the war with the Dakotas in 1862, when whole families of these hardy pioneers were butchered by the savages.

Although it is evident the author has been painstaking in the collection of his facts, yet this part of his book is open to the criticism that its description of early settlements in the West is much too rose-colored. He passes over the years of necessary trials and privation, and the climatic diseases which the new-comers rarely escape; nor does he allude to the severe winters in which, especially in Minnesota, as was sadly exemplified during the bitter season just past, many of the immigrants succumb. In speaking of fortunes acquired by individuals his figures are always in the millions, and he hardly alludes to the best citizens of the Republic—the tens of thousands who, by dint of industry and temperate living, rise from humble origins into easy circumstances and moderate wealth. It would also have been quite in place had Mr. Watt devoted a chapter to the honor in which work and workmen are held in America, in contrast with the false notions of respectability which prevail in monarchical countries. In his closing chapter, however, on the men and women of America, the author reveals his appreciation of the best traits in the American character, showing that he has not in this respect permitted himself to be affected by stale European prejudices. We hope that in his second volume, which we shall be glad to read when published, he may be more careful to avoid the appearance of writing in the interest of certain steamship and railway companies, rather than in that of his countrymen alone. Even the appearance of evil is to be avoided.

BOOKS OF THE WEEK.

THE NEW BOOKS OF THE SEASON

PUBLISHED BY

HARPER & BROTHERS.

1. THE TREATY OF WASHINGTON: Its Negotiation, Execution, and the Discussions Relating thereto. By Caleb Cushing. Crown 8vo, cloth, $2.

2. LITTLE KATE KIRBY. A Novel. By F. W. Robinson, author of 'Christie's Faith,' 'Mattie: a Stray,' 'No Man's Friend,' 'True to Herself,' etc. Illustrated. 8vo, paper, 75 cts.

3. THE FISHING TOURIST: Angler's Guide and Reference Book. By Charles Hallock, Secretary of the "Blooming-Grove Park Association." Illustrations. Crown 8vo, cloth, $2.

4. BY THE LATE LORD LYTTON:
THE COMING RACE. 12mo, paper, 50 cts.
GODOLPHIN. New edition. 8vo, paper, 50 cts.
LEILA; or, The Siege of Grenada. New edition. 8vo, paper, 50 cents.
KENELM CHILLINGLY; His Adventures and Opinions. *In press.*

5. TURNING-POINTS IN LIFE. By the Rev. Frederick Arnold, B.A., of Christ Church, Oxford. 12mo, cloth, $1 75.

6. TO THE BITTER END. A Novel. By Miss M. E. Braddon, author of 'Aurora Floyd,' 'Dead-Sea Fruit,' 'Birds of Prey,' 'John Marchmont's Legacy,' etc. Illustrated. 8vo, paper, 75 cts.

7. SANTO DOMINGO, Past and Present: with a Glance at Hayti. By Samuel Hazard. Maps and Illustrations. Crown 8vo, cloth, $3 50.

8. STUDENT'S HALLAM'S CONSTITUtional History of England. The Constitutional History of England, from the Accession of Henry VII. to the Death of George II. By Henry Hallam. LL.D., F.R.A.S. Incorporating the Author's Latest Additions and Corrections, and adapted to the Use of Students. By Wm. Smith, D.C.L., LL.D. 12mo, 747 pp., cloth, $2.

9. RECLUS'S OCEAN. The Ocean, Atmosphere, and Life. Being the Second Series of a Descriptive History of the Life of the Globe. By Elisée Reclus. Illustrated with 250 Maps or Figures, and 27 Maps printed in colors. 8vo, cloth, $6.
Uniform in style with 'The Earth,' by Elisée Reclus. 8vo, cloth, $5.

10. GEORGE ELIOT'S MIDDLEMARCH. Middlemarch: A Study of Provincial Life. By George Eliot, author of 'Adam Bede,' 'The Mill on the Floss,' 'Romola,' etc. 2 vols. 12mo, cloth, $3 50. Popular edition, 8vo, paper, $1 50.

11. HUDSON'S HISTORY OF JOURNALism. Journalism in the United States, from 1690 to 1872. By Frederic Hudson. Crown 8vo, cloth, $5.

12. ROBIN GRAY. A Novel. By Charles Gibbon, author of 'For the King,' and 'For Lack of Gold.' 8vo, paper, 50 cts.

13. THE REVISION OF THE ENGLISH Version of the New Testament. With an Introduction by the Rev. P. Schaff, D.D. 618 pp. crown 8vo, cloth, $3.

This work embraces in one volume:

ON A FRESH REVISION OF THE ENGlish New Testament. By J. B. Lightfoot, D.D., Canon of St. Paul's, and Hulsean Professor of Divinity, Cambridge. Second edition, revised.

ON THE AUTHORIZED VERSION OF THE New Testament in connection with some Recent Proposals for its Revision. By Richard Chenevix Trench, D.D., Archbishop of Dublin.

CONSIDERATIONS ON THE REVISION OF the English Version of the New Testament. By C. J. Ellicott, D.D., Bishop of Gloucester and Bristol.

14. NORDHOFF'S CALIFORNIA. California: for Health, Pleasure, and Residence. A Book for Travellers and Settlers. By Charles Nordhoff. Illustrated. 8vo, paper, $2; cloth, $2 50.

☞ HARPER & BROTHERS will send either of the above works by mail, postage prepaid, to any part of the United States, on receipt of the price.

☞ HARPER'S CATALOGUE mailed free on receipt of Six Cents in postage-stamps.

A $2,000 GARDEN.
PLAY AND PROFIT IN MY GARDEN.
By Rev. E. P. Roe,

Author of 'Barriers Burned Away,' giving a record of the author's experience in gardening for recreation and profit, and showing how, in one season, he received $2,000 from the sale of fruit and vegetables raised on two and a quarter acres, beside an abundant home supply.

Will be published in April in one vol. 12mo, price $1 50, by

DODD & MEAD, Publishers,
NEW YORK.

A MAGNIFICENT AND UNRIVALLED WORK.

A NEW VARIORUM EDITION OF

SHAKESPEARE.

EDITED BY

HORACE HOWARD FURNESS, A.M.

JUST ISSUED.

MACBETH. Being Volume II. of the Series. 8vo, superfine toned paper, fine cloth, uncut edges, gilt top, $3.

RECENTLY ISSUED:

ROMEO AND JULIET. Being Vol. I. of the Series. Uniform in style and price.

"The publishers have the satisfaction of knowing that they have given to the world the best edition on William Shakespeare."—Philadelphia *Press.*

"Mr. Furness will, by the work which he has undertaken, make the whole English-speaking race his debtor."—*Liberal Christian.*

"The admirable scholarship," says the New York *Tribune*, referring to the first volume, "with the sane and delicate critical sense which marks this specimen volume of a new variorum edition of Shakespeare, would make the affectionate study of its pages by a young scholar, as far as English literature is concerned, almost equivalent to a liberal education. Rarely has a piece of literary labor been issued from the American or English press which indicates so profound a knowledge of the subject, so wise and thoughtful an appreciation of the necessities of the occasion, and such refinement and justness of taste in the selection, from diverse and remote quarters, of the matter most pertinent to the critical and antiquarian points under discussion."

"*Resolved*, That, in the opinion of this Society, no single volume yet published in America is at all equal to this in value as a contribution to Shakespearian literature."—Extract from the minutes of the Shakespeare Society of Philadelphia, with respect to 'Romeo and Juliet.'

*** For sale by Booksellers generally, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

JUST PUBLISHED.

8vo, cloth, pp. 648, price $7 50.

THE WEEK IN TRADE AND FINANCE.

April 7, 1873.

THE week in Wall Street has witnessed the severest "pinch" in money that has yet occurred since the present stringency commenced. On Monday ¾ of 1 per cent. a day was freely paid, and we have heard that loans were made as high as 1 per cent. over-night.

The range of rates has been from $\frac{1}{16}$ and interest to 1 per cent. per diem. Notwithstanding the many calls made upon the Secretary of the Treasury to draw upon his "44 millions legal tender reserve," he has so far wisely abstained from availing himself of this doubtful method of making things lovely for Wall Street, and has kept on in the even tenor of his way; possibly Mr. Richardson has learned something from his predecessor, and has made up his mind to keep out of Wall-Street affairs. Although hard upon speculators, they can afford to stand the present high rates, but the merchants are seriously inconvenienced by them, interfering as they do with the sale of commercial paper, which, during the past week, has been almost unsalable.

The bank statement indicates that legal tenders have been locked up by the clique engaged in the manipulation of the stock market; and although there have been daily reports of the arrival of currency in this city from the interior, the clique has been strong enough to absorb and lock it up with about four millions additional. The extortionate demands of the money-lenders have caused a bitter feeling among merchants and others, who are generally borrowers, and some of the daily papers have been loud in their demands upon the District Attorney for the enforcement of the usury laws, and for the trial and indictment of the offenders. Should this be done, and one-half or even one-fourth of the parties tried who have loaned money at usurious rates of interest, the courts would have nothing else to do but to try these cases for the next twelve months; and should the parties be convicted and punished to the full extent of the law, as the papers in question demand, there would be but few moneyed men left in Wall Street to transact business. The repeal of the usury laws has so far been defeated at Albany, and we hope that those in favor of their continuance are satisfied that matters would be worse if they were repealed.

The bank statement for the week is very unfavorable, showing a loss of $4,304,000 in the total reserve, and a decrease in the total liabilities of only $5,741,600.

The banks are below their legal reserve $3,245,800, the lowest point yet reached.

The following is a comparison of the averages for the past two weeks:

	March 29.	April 5.	Differences.
Loans	$274,348,700	$273,534,000	Dec. $814,700
Specie	16,179,100	15,664,400	Dec. 514,700
Circulation	27,635,700	27,715,800	Inc. 80,100
Deposits	193,508,700	187,687,000	Dec. 5,821,700
Legal tenders	38,729,800	34,940,500	Dec. 3,789,300

The following shows the relation between the total reserve and the total liabilities:

	March 29.	April 5.	Differences.
Specie	$16,179,100	$15,664,400	Dec. $514,700
Legal tenders	38,729,800	34,940,500	Dec. 3,789,300
Total reserve	$54,908,900	$50,604,900	Dec. $4,304,000
Circulation	27,635,700	27,715,800	Inc. 80,100
Deposits	193,508,700	187,687,000	Dec. 5,821,700
Total liabilities	$221,144,400	$215,402,800	Dec. $5,741,600
25 per cent. reserve	55,286,100	53,850,700	
Deficiency in legal reserve	377,200	3,245,800	Inc. 2,868,600

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$236,004,500	$37,529,500	$273,534,000
Specie	14,165,400	1,499,000	15,664,400
Legal Tenders	30,915,900	4,024,600	34,940,500
Net Deposits	161,488,800	26,198,200	187,687,000
Circulation	27,672,800	43,000	27,715,800

Considering the condition of the money market, stocks have kept up remarkably well, but it has generally been the case that, when money has been made artificially tight, prices have been supported by the large holders, who prefer paying the going rates for money to selling their stocks. In the present disturbance the "bulls" have been encouraged to hold on by the constant hope that the Secretary of the Treasury might come to their relief by drawing upon his so-called "legal-tender reserve." This hope, so far, however, has proved delusive, and they were left to paddle their own canoe as best they might. The greatest effect produced upon the prices of stocks by the stringency in the money market was on Monday, the first day of the squeeze; and by a reference to the daily range of prices published below, it will be seen that the market declined but little, if any, below the lowest quotation of that day on the very active speculative stocks, against which the demonstration was directed, while the price of investment stocks seems to have been quite as much affected as those of the "fancies." There has not been anything like a panic in the market, and the decline that has taken place has been made by a gradual falling off in prices.

At the meeting of the directors of the Central and Hudson and the Harlem Railroads on Tuesday, an agreement was made whereby the latter is leased to the former on the following terms: The Central leases the Grand Central Depot and all the track and real estate of the Harlem from Forty-second Street in this city to Chatham Four Corners, for the term of 401 years. The Central agrees to pay 8 per cent. annual dividends upon the Harlem stock and interest on its bonds. The Harlem retains possession of the Fourth Avenue line of horse-cars, and all its real estate below Forty-second Street.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange, for the week ending April 5, 1873:

	Monday.		Tuesday.		Wed'day.		Thursday		Friday.		Saturday.		Sales Sh's

During the height of the monetary pressure, the price of Government bonds yielded, and on Wednesday quite a break occurred in the market, caused by sales of bonds made, it is said, for the purpose of raising money. The decline on Wednesday was equal to 1⅛ per cent. on the 5-20's of 1867—the leading bonds dealt in at the Stock Exchange. This decline lasted but for a short time, being followed by a reaction the next day, and, after going through a wide range of fluctuations, the market finally closed on Saturday at higher prices than the closing ones of last week, the improved condition of the market being due to the higher price of gold.

The following shows the course of the market, the closing quotations being given for Saturday, April 5:

	Saturday, March 28.		Wednesday, April 2.		Saturday, April 5.	
6s 1881 Coupons	120⅛	—	118⅞	119¼	120⅜	120⅝
6s 1864 5 20 "	117⅛	—	115¾	116⅛	117⅛	117⅛
1865 " "	118⅛	—	117	—	119	119⅛
1867 " "	118⅛	118⅜	116½	117⅝	118¾	118¾
1868 " "	117⅞	—	115	116½	117¾	118
5s 10-40 Coupons	112¼	—	111¼	—	112¾	113

The Treasury purchased no bonds during the week.

The market for State and railroad bonds has been dull and neglected, as might naturally have been expected; beyond some few sales of Tennessees at 80 and 80¾, and Virginia consolidated 6's at 52, scarcely anything was done in the former. In railroad bonds, prices have been well maintained in spite of the "flurry" in money, the principal effect being more to prevent transactions than to depress prices.

The Treasury received on Thursday bids for gold amounting to $5,540,000, at 117 to 117.56. $1,500,000, the amount advertised to be sold, was awarded at 117.28½ to 117.56 to ten firms. If Mr. Richardson's idea was that his programme for April would put down the price of gold, we think that he must be greatly disappointed by its effect upon the market. The first movement of the "bulls" on Monday was to run the price up to 118⅜ from 116¾, the price in the morning. Considerable realizing sales were made at the advanced price, on which the market fell off to 116⅞, only to start up again later in the week, until at the close on Saturday the quotation was 119½. The general opinion prevails in Wall Street that the movement is not by any means over, and that, before summer is passed, the price will have seen 125, if not 130. It is, however, perfectly natural that people loaded up with an article they would like to sell at a higher figure should set afloat the most extravagant predictions as to the future price.

The imports for the week were $7,576,073, against $13,886,000 for the week previous. The specie shipments for the week amount to $1,246,187, consisting principally of silver bars. The total amount shipped since January 1, 1873, is $14,593,505, against $6,101,098 for the same period in 1872, $14,978,470 in 1871, $6,679,819 in 1870, $9,678,966 in 1869, and $17,117,326 in 1868.

The Nation.

NEW YORK, THURSDAY, APRIL 17, 1873.

The Week.

IT was with profound regret that the country read on Sunday morning of the treacherous murder of General E. R. S. Canby, who was killed by the Modoc "Captain Jack" while engaged in a last conference with the Indians, whom he had little hope of conciliating, so insolent had their recent successes and their strong position made them, but whom he was desirous of sparing if he could. "He had already completed the necessary military preparations to enforce obedience to the conclusions of the Peace Commissioners," says General Order No. 3, which announces his death, "after which he seems to have accompanied them to a last conference with the savage chiefs, and there met his death by treachery outside his military lines, but within view of the signal station." The Commissioners appear to have told the Indians present at the interview that certain demands of theirs—made probably with no expectation of compliance, as the killing was already resolved upon—could not be complied with, and that the ultimatum of the Commissioners must be accepted, whereupon Captain Jack called out "all ready," and the white men were at once fired upon, Jack killing General Canby with a pistol bullet, which entered under the eye. "Thus," to quote General Sherman's order again, "perished one of the kindest and best gentlemen of this or any other country, whose civil equalled his military virtues." He was indeed one of the American citizens whose careers have been a source of pride and consolation to the country.

General Canby was a Kentuckian by birth who went to West Point from Indiana, his place of residence in 1835, graduating in 1839. Thirty-four years he had been in the service. He began his fighting in the Seminole war, and afterwards was greatly distinguished for bravery in Mexico. The outbreak of the rebellion found him in New Mexico, where the defection of his superiors left him in chief command of the loyal forces. With these he defeated his old subordinate Sibley, who was made a Confederate General, and led a force of Texans against his old commander, and he entirely cleared his sub-department, that of New Mexico, of rebels. After this, General Canby was with Secretary Stanton at the War Department; in command in this city at the time of the draft riots of September, 1863; back again at the War Department, sincerely respected and trusted; in command of the Military Division of the West Mississippi between May, 1864, and June, 1865, during which time he captured Mobile, and received the sword of General Richard Taylor, and afterwards that of General Kirby Smith, thus ending the war. Then he commanded wisely and skilfully, during reconstruction times, in the Department of the Gulf and that of Louisiana and Texas, showing himself, amid all his arduous and delicate duties, to be, as we gladly remember saying, "one of the glories of West Point"—a cultivated, law-abiding, cool-headed soldier and governor. He was sent to Oregon for needed rest and quiet, and the General of the Army and the Interior Department were only too glad that a man of his skill, experience, and courage should have happened to be on the ground when the Modoc troubles came up. His scalp is now at Captain Jack's belt, we suppose; and we hope there will be some reflection on this fact, among others, namely, that several hundreds of our estimable fellow-citizens—pious editors and members of the Indian Ring, rum and blanket and bacon sellers, Indian agents, and so on—are to-day rich men by reason of the sale of Colts, and Smith & Wessons and fixed ammunition to these Captain Jacks and Boston Charlies. Canby is dead, but some of the rest of us are above want.

It would be very absurd to allow the tragedy, however, to bring what is known as the peace policy of the Administration towards the Indians into contempt, as many people in the first moment of excitement seem disposed to do. That policy has not been tried long enough to test it thoroughly. The effects of a century of rascality and cruelty cannot be wiped out by any policy, however wise, in four years nor in eight. Moreover, it cannot possibly be sound policy for a civilized community either to treat any body of men, however degraded, as wild animals, or to give them up as fair game to a gang of thieving, lying, cozening politicians calling themselves "agents" and "contractors." In so far as General Grant is trying to get the Indians to adopt a civilized life, and to protect them from knavery, we do not well see how he is to be condemned. But one thing that is wrong in the policy of the Government, and what has led to the recent tragedy, is the practice of considering roving tribes of Indians as sovereign powers, and negotiating with them as such with all the forms of diplomacy. This reached the last extremity of absurdity when General Canby sat down on behalf of the United States in conference with Captain Jack, Nasty Jim, Bogus Charley, Hooker Jim, and other worthies of the same kind, representing not even a tribe, but forty or fifty thieving cut-throats who were lurking behind the adjacent rocks, and had for two months been bidding defiance to the Government and the laws. We ought not to have needed this shocking affair to demonstrate the unwisdom as well as ludicrousness of proceedings of this sort. The "peace policy" needs, as a necessary accompaniment of it, the repeal of all legislation exempting any persons living on the United States soil from the operation of the laws of the land, the relegation of the Indians, like other people, to the jurisdiction of the courts and the pursuit of the sheriff; the treatment of all roving tribes as, what they are, bands of murderers and marauders, and the rigid and persistent presentation to them, without ifs or buts, of the alternative of agriculture or death, and the employment of such force as may make this alternative a dread reality. The pursuit of these people with such little detachments as we now employ is cruel to them and discreditable to us.

Mr. Curtis's letter of resignation has been published during the week, and gives as the reason the fact that the circumstances under which several important appointments have recently been made, seemed to him to show an abandonment both of the letter and spirit of civil-service regulations. This drew a sort of (apparently) semi-official reply from the Washington *Chronicle*, according to which the cause of the difficulty was a difference of opinion, originating some time ago, between the President and Mr. Curtis—the President holding that the rules ought to be so modified as to permit the transfer of officers from one branch of the service to another, which, in Mr. Curtis's view, would be hostile to the leading principles of reform, these requiring an officer's retention in the discharge of the duties to which he is trained, and the reasonable assurance to him that his chance of promotion within his own field shall not be diminished by the intrusion of outsiders. The President's view was, however, carried out in the Benedict case, in defiance of the rules; whereupon Mr. Curtis resigned.

The bad features in the Benedict case were, that the Deputy-Surveyor, after being nominated for the Surveyorship, was withdrawn from the Senate, without reason assigned; that the members of the Ring here boasted or announced that the withdrawal was made in obedience to their wishes; that the committee appointed to select another appointee from among the Custom-house officers, never acted, or else that, without waiting for their report, the President appointed Mr. Sharpe, the Marshal of this District, to fill the vacancy, apparently under advice from the Ring managers. The answer made, or which would be made, to all this is, we be-

lieve, that Benedict's name was withdrawn because it was found that Mr. Conkling would not consent to his nomination, which would, of course, carry an adverse vote in the Senate; and that the Committee did not act because Mr. Curtis was sick, and nobody else cared much about the matter; and that in the absence of any report from them the President, who did not care much about the matter either, without thinking very much of the rules, appointed Mr. Sharpe, in accordance with Tom Murphy's suggestion; in short, that the miscarriage was the result partly of misfortune and partly of carelessness, and showed no intentional disregard of the regulations on the President's part, and that he is as zealous in the reform as ever; but that his zeal is tempered by the insouciance of the "average man," of whom he is a fair representative. Mr. Curtis has denied the difference of opinion with the President about the modification of the rules in an "interview" with a *Herald* reporter.

Messrs. Phelps, Dodge & Co. have finally settled their differences with the Government, and have published a statement of the affair, which the public will read with sincere satisfaction, as it is a complete vindication. With it comes a letter from Judge Noah Davis, who was United States District Attorney when this trouble began, and whose testimony nobody will question. He says that the members of the firm from the first invited "the closest scrutiny," met the charge in "a spirit of most perfect fairness and frankness," at once put their books and papers into the hands of the Treasury Agent, and gave every assistance in the subsequent investigation. He says that he found there had been, during five years, a considerable number of infractions of the revenue laws "by the house," but evidently without any intent to defraud; that these infractions left a million dollars' worth of property exposed to forfeiture, though the value of the articles on which the under-valuation occurred was only $260,000, and that the firm, at his suggestion, agreed to pay in this sum in settlement, and this has been finally accepted. He adds that "in a business of many millions of dollars during the period of five years in which these irregularities had occurred, and during which they (the firm) had paid to the Government several millions of dollars in duties, the whole amount lost by the alleged fraud fell short of the sum of three thousand dollars"; and, to crown all, Judge Davis declares that he has since ascertained that the application of the rule under which the Messrs. Dodge made this under-valuation, has in other cases produced an over-valuation, "under which the Government received duties beyond what would have been payable under the correct rule of valuation, to an amount very considerably in excess of the duties lost." We propose to say something more about this remarkable case next week, because it furnishes a valuable illustration of the relation of the Government to the trade and industry of the country.

We have received from Messrs. Williams & Guion a very energetic oral remonstrance for what they allege to be the injustice done them by our paragraph of last week, in which we said that Captain Williams, of the steamer *Atlantic*, had been guilty of drunkenness on duty while in their employ, that "he was removed or allowed to resign," but "the Williams and Guion officials then gave him a letter of recommendation, on the strength of which he got a command from the White Star Line." What Messrs. Williams & Guion particularly complain of is the charge that they gave Williams a letter of recommendation, which they flatly deny; but they do not deny that he did get drunk on duty, and that in consequence of this he resigned, and would have been dismissed if he had not done so. The assertion that "the Williams & Guion officials" gave him a letter of recommendation we made on the strength of the *Tribune's* report of an interview with Mr. Sparks, the manager of the White Star Line. Our error, it seems, lay in the use of the phrase "Williams & Guion officials." Messrs. Williams & Guion form a firm on this side of the water, while the line is managed and the captains employed on the other side by the firm of "Guion & Co." Messrs. Williams & Guion, therefore, did not give Captain Williams a recommendation; but we now learn directly from Mr. Sparks that Mr. Stephen Guion, of the firm of Guion & Co., in Liverpool, "particularly requested" Mr. Ismay, in Liverpool, of the White Star Line, to take Captain Williams into their service, although he (Mr. Sparks) is not sure whether this request was made in the form of a letter or not.

The result of Mr. Richardson's claim that he had presumptive power to expand the currency—that is, to adulterate the coinage to the extent of nearly 7 per cent.—was that when he took office, after Mr. Boutwell's resignation, the expansionists in Wall Street at once got up a tremendous "squeeze," for the purpose of making him "come to the relief of the country," or help to "ease the April settlements," by issuing his "reserve greenbacks," and for some days at the beginning of the month money was lent at the rate of about 300 per cent. per annum. Mr. Richardson, however, we are glad to say, came not, having either learnt wisdom since last fall, or not having the courage to carry out his views, and the pressure was falling off, when an attempt was made to enforce the usury laws by summoning large numbers of bankers and brokers before the Grand Jury to give evidence as to violations of them. As everybody in New York has during the last half-year violated them without the slightest scruple, whenever he had any occasion to do so, this is of course a kind of burlesque performance, and it makes the maintenance of the law by a community of adult business men a curious and somewhat puzzling problem. It is believed at this writing, however, that the enquiry by the Grand Jury will amount to a *reductio ad absurdum*, and lead to a repeal of the law at Albany, if not as regards the whole State, at least as regards this city.

It is said that the complete history of the wine-cooler presentation by our Government to the arbitrators, Staempfli, Itajuba, and Sclopis, is this: These gentlemen declined to receive any money from England and the United States, while Mr. Adams and Sir. A. Cockburn were paid a regular equivalent for their services. Under these circumstances, it seemed best to both Governments to make presents, in ackowledgment of the obligation they were under. The three foreign ambassadors will receive the usual diplomatic snuff-boxes from England as well as the plate from the United States. All things considered, it seems a pity that the thing should not have been made public at the outset, and much misunderstanding thus prevented. It would have been better, too, if no presents at all had been given, and regular salaries had been taken; these are days in which the air is full of suspicion, and the practice of "gift-taking" in these latitudes has been pushed to such an extreme limit that there is a large number of respectable people who have come to regard a present or any sort of a gift—particularly of a wine-cooler—as "on its face corrupt."

Mr. Robert Roosevelt, a member of Congress from one of our city districts, set an example, the other day, which constituents in other districts might be very glad to have their members follow. He made an address in which he taught his hearers some of the technical and routine difficulties which beset the new member; and he made plainer than it has been to most people how entire a tyranny the majority of the House can exercise; how ignorantly they vote; how powerful the Speaker is in virtue of his appointment of Standing Committees and Committees of Conference, and how despotic and arrogant he can be if he so pleases. Mr. Roosevelt said, in so many words, that, wishing to speak on the report of the Poland Committee, he went to Mr. Blaine and asked to be recognized when he rose. Mr. Blaine said that he wished both sides to be heard, but

feared that ten minutes was all the time that Mr. Roosevelt could be allowed. He then, however, asked the latter what action he intended urging, and on Mr. Roosevelt's replying that he intended to urge the expulsion of some members whom the report recommended for that fate, Mr. Blaine said, "I fear I shall not be able to give you an opportunity;" and Mr. Roosevelt, often as he afterwards tried, could not catch the Speaker's eye, and described himself to his audience as a victim of "outrageous abuse of authority." Rules and orderly methods there must be in all such assemblages, and much must be left to the judgment of the presiding officer, and, although Mr. Roosevelt is a responsible person, and makes a grave charge against the adroit politician who has offended him, perhaps the only moral we need to draw is the indirect one that constituencies may easily set on foot too rapid "rotation" in the representation of their districts, and that it is a clear advantage to a Congressman not only to love his native country but to know the ropes, as the phrase goes. Mr. Roosevelt also enlightened his audience as to the "previous question" device, a brutal way of shutting off discussion, only to be resisted by the barbarous practice of filibustering, calling the yeas and nays on the question of adjourning. By this rejoinder to the previous question, twenty-four men can indefinitely prevent the majority from doing anything. The gigantic power of the Speaker in appointing the committees, who each really make and pass the bills which annually go through a House seven-tenths of whose members do not know what they are voting on; the Speaker's power thus to oblige monopoly companies of all sorts; the means which have been devised abroad for taking the yeas and nays mechanically in a few seconds, thus saving much valuable time; the Congressional habit of crowding business into the last ten days of a session—these are a few of the matters on which it would be well if electors and candidates had a fuller and freer understanding.

The prediction that Mormonism would not long survive the entry of the railroad into Utah and the invasion of the Gentile miner, and the advent of fashionable female apparel on the backs of the Gentile women, appears to be in process of fulfilment. At the Spring Conference of the Latter-Day Saints, Brigham Young resigned his position as trustee of the church, a position which made him paramount over its finances. He had previously resigned all his other offices; his successors have, we believe, been chosen; and he is reported to have divided his property among his wives and children. He has become old, he said, and the work should be laid on the shoulders of younger men. The fact is, however, that for two or three years now the Mormons have been restive under his leadership; 1873 is not 1847, and the diffusion of intelligence in our frontier countries within the last thirty years has been so enormous that we suppose another Joe Smith, or Sidney Rigdon, or Nauvoo, or Salt Lake City, with its band of Danites, and all the dense and dirty stupidity of Mormonism, could nohow again be possible. It is said that Young meditates a new settlement with some of his followers in Arizona or some other region further from civilization than Utah now is. Not the less, however, would it seem that the long-standing Utah disgrace is now at last soon to disappear from our contemporary history, and the prophet, priest, saint, and administrator is to give up the contest and take himself out of sight.

The late Mr. Greeley made it a capital offence in Mr. Motley, when this gentleman represented the United States at the Court of St. James, that he had dukes at his dinner-table. But most Americans know enough of diplomacy to understand that the dinner-table is one of its favorite resources, and that a success may be assured by the mere fact of getting a duke for an after-dinner talk. A notable instance of this dinner diplomacy was the new convention between Germany and France, lately signed at Berlin. Lord Odo Russell, the English Ambassador, gave a dinner, at which the Emperor William and Viscomte de Gontaut Biron, the French Ambassador, were guests. The Emperor took occasion to be particularly gracious to Count Biron, and the latter, watching his opportunity, expressed the hope that his majesty would favor with his presence the reception-concert to be given at the French Embassy, and added that he would gladly have made this a ball in honor of the Emperor, but the continued occupation of France was a barrier to such a festivity. With great cordiality the Emperor expressed his desire to evacuate France before the time stipulated by the last convention, and his readiness to listen to any proposals to that effect from the French Government. Count Biron at once telegraphed this table-talk to Paris, and shortly received the new terms of President Thiers. A few days later, March 12, the throne-speech to the Reichstag expressed the hope that the time was not distant when the financial condition of the French Government, so rapidly developing, would warrant the entire evacuation of French territory earlier than was at first anticipated. On the 15th of March the new convention to this effect was signed by the two governments, and on the evening of the same day the Emperor and Empress appeared at Count Biron's reception, where the former attracted the attention of the company by his marked courtesies to the Ambassador and his family. Thus the by-play of social diplomacy came in to smooth the lingering asperities of war.

The burden of the Emperor's speech at Berlin, on the opening of the Reichstag, was the care of the fortresses, the development of the navy, the increase of pay to the army, and the nurture in every way of the defensive power of the nation, so that Germany, like the strong man armed, may keep her palace and her goods in peace. The army of the German Empire, upon the peace basis for 1873-4, is fixed at 401,659 men, at a total cost of 90,373,275 thalers. Officers, 17,033; under-officers, 48,073; surgeons, 1,679; paymasters, 681; horses, 96,152. A third company is to be added to each artillery train. In addition to these ninety millions for the army, the Government calls for sixty-eight millions for the fortresses, of which nine millions are for Cologne, eight millions for Königsberg, ten millions for Wilhelmshaven, seven millions for Posen, five millions for Thorn, four millions for the lower Elbe, five millions for the lower Weser, and the remainder for points less exposed to attacks from without. The speedy capture of many of the smaller forts in France demonstrated that the strengthening of fortifications had not kept pace with the improvements in artillery, and it is proposed to transform the principal fortresses of Germany in accordance with the exigencies of modern warfare.

The Russian expedition against Khiva is supposed to have, by this time, started, but nothing very certain is known about its route and composition. That it will not much, if at all, exceed five thousand men, with forty pieces of artillery in all, is generally conceded, but this will be an abundantly strong force, once it reaches the Khivan oasis—the defences of the place being contemptible. Vámbéry, writing in the *Revue des Deux Mondes*, estimates the force the Khan can put in the field at 25,000 men, but this would be wholly irregular cavalry, which might harass the columns in the line of march in the desert, but could do nothing to save the capital. As regards the routes to be pursued Vámbéry says: there are four, varying in length from five hundred to a thousand miles, and the story from St. Petersburg is, that the force is to advance in four divisions—one along each of these routes, and to continue on reaching the oasis. He treats this, however, as ridiculous, and evidently thinks five times as many men necessary. Sir Henry Rawlinson, on the other hand, lecturing before the Royal Geographical Society, declares himself satisfied that the expedition will advance along one route only, the easiest one along the shores of the Aral to the Oxus, and in successive divisions. Meantime, it is reported from St. Petersburg that trouble has broken out in the household of the Khan, who has been executing and imprisoning right and left the officials most hostile to Russia, has released the Russian prisoners, and sent them to meet the column advancing from Orenburg.

"FEDERALISM" IN SPAIN.

WHEN the last Spanish Revolution took place, very few persons, certainly, imagined that federalism would prove the worst enemy of the new régime, and fewer still had formed an adequate idea of what federalism means in the newest political vocabulary of European radicals. In the mouths of Republicans like Castelar and Figueras, it is a very harmless word, describing simply that division of political power of which the governments of Switzerland and the United States furnish the most striking modern examples; and, taken in this sense, there is not much in the term for enlightened and patriotic men to quarrel over. Whether all the powers of government shall be concentrated in one organization, or divided in certain proportions among several, is after all in a great degree a question of detail, if the fundamental principles of the government are well settled and generally agreed upon. But the Spanish Republicans, properly so called, are not only, as Señor Figueras somewhat sadly admitted in his speech the other day, a small minority of the nation, who have been indebted for their present supremacy to a happy combination of accidents rather than to the deliberate action of public opinion, but they are not by any means agreed among themselves as to the basis of social order. In other words, the "Federalists," who to all appearance constitute "the bone and sinew" of the Republican party, not only do not want a unitarian republic, administered by scholars and gentlemen at Madrid, with the aid of a large standing army and on the soundest principles of political economy, but they do not believe at all in the ideal of social order cherished by the Republican leaders. They differ from the latter not only in thinking that Castile and Aragon and Catalonia and the rest ought to have governments of their own, but in thinking that the aim of government should be to reorganize society on a more equitable basis. In fact, they are much further in advance of Castelar than he was of King Amadeus. He wanted to protect property in one way—Amadeus in another; whereas the Federalists believe the protection of property as at present a crime against humanity. In fact, Señor Castelar and his friends have travelled thus far, as we ventured to predict at the outset that they would, on the sorrowful road on which M. Lamartine preceded them in 1848, and with somewhat the same result. They have got rid of the monarchy with great ease, but in doing so they have raised devils which they can neither lay nor satisfy, and they have, in carrying out the revolution, made one great mistake into which "the friends of order," or "moderate republicans," in France never fell, in disorganizing the army. One of the most striking features of all the French revolutions since the first has been the abstinence of the army from all share in bringing them about; and, as a general rule, the army, when handled vigorously and energetically, has never shown any reluctance in resisting them. In fact, the French troops have, on the whole, preserved the fundamental principle of military morality—obedience to the powers that be—with extraordinary tenacity; and this virtue, without which an army becomes a pure and unmitigated curse, has really made the French soldier, on more than one occasion, the saviour of French society. He has not "meddled in politics" except at the command of the civil ruler or "chief of the state." In each successive revolution, too, all parties have taken pains to preserve the army and its discipline intact amid the prevailing disorder.

In Spain, on the other hand, the army has long ago "gone into politics." Most Spanish generals of distinction have, for more than half a century, been more politicians than soldiers, and no political revolution has occurred or been attempted during that period in which portions of the regular troops have not been found on both sides, and many abortive "pronunciamientos" have been the work of a restless officer with one or two regiments at his back. The consequence is that Spanish politicians of the best type, men like the present Republican leaders, profoundly distrust the army; and the leaders of the Republican party evidently did not feel sure of their republic a single day after the departure of the king until they had in some way crippled the military force. This they did very effectually by abolishing the conscription and preparing to arm "the people" or the national guard with breech-loaders. The abolition of the conscription, of course, ought not to have affected the discipline of the men now in the service, but, with the usual perversity of events, it did. In fact, it seems to have spread insubordination through the whole force. Men who had been forced into the ranks naturally asked why, if the principle of the conscription was bad, it should be allowed to operate in their case any longer, and, if volunteering was the proper mode of recruiting the force, why they should be shut out from its benefits. The officers, on the other hand, however indifferent they might feel about the mode in which their soldiers were procured, saw in the suddenness of this reform not only a proof of Government distrust of them, but a striking warning of the uncertainty of their future. That under these circumstances the desertion and mutiny of whole battalions and regiments, and the spread of Carlism among the officers, should form the leading incidents of Spanish telegrams, is not to be wondered at.

The disorganization of the army has thus brought the Government face to face with one of the most unpleasant facts of the situation—a fact which can, it would appear, only be dealt with by military force. Not only are they compelled to give the northern provinces up to Carlist raids and excesses, but they are compelled to witness the experiment of "federalism" put into practical operation in many districts in spite of them, and amidst the wildest disorder—disorder which in some places seems to threaten social dissolution. This "federalism" has now become a distinct plank in the Socialist platform, although it was never prominently heard of until the reign of the Commune in Paris. What it proposes is neither more nor less than the splitting up of the nation into a multitude of small communities—cities, towns, and villages—almost or totally exempt from the interference of any central authority, and this not with the view of better administering local affairs, in one sense of the term, but with the view of giving the local majority more complete control of the local property. The new Federalists would, in short, have no political unit so large that a trades-union, or committee of workingmen, could not readily manage it by fixing wages, dividing profits, keeping down riches, or generally regulating the lives of the inhabitants; and their political ideal is now a collection of these units, mutually independent, and perfectly secure against interference from the outside on the part of armies or great social agglomerations of any kind. They tried hard after this ideal in Paris, and in some of the cities of Southern France, in 1871, and actually declaimed with so much unction against "centralization" as to persuade some of our great publicists over here, such as Mr. Ben. Butler and Mr. Wendell Phillips, that what they were aiming at was "municipal independence" as Samuel Adams and Dr. Franklin understood it. What they were really aiming at was a chance of dealing with rich men on principles of pure "equity," without interference from constitutions interpreted by the courts or police sent down by the general Government.

The Federalists are, in fact, now opening the eyes of many estimable gentlemen in Spain, as the Communists opened the eyes of a good many estimable gentlemen in France. Castelar and Figueras are finding out that they are by no means in the front rank of "advanced thinkers," and the beautiful picture they draw of Spain, as they would wish to see her, is in the eyes of other Republicans only a dreary waste, which has to be traversed before the promised land can be reached. These gentlemen, in fact, like a great many other progressive politicians, seem to have been ignorant, when they took charge of their country, of the enormous change in the political ideals and aspirations of the working-classes which the last thirty years have wrought. They have gone on dreaming about a "republic," meaning thereby universal suffrage without a king, just as the previous generation went on dreaming about constitutional monarchy, and flattering themselves, and trying to flatter others, that a panacea for the ills of modern society was to be found in a change of the form of government; and hence the pæans, embraces, and "hailings" which marked the flight of poor Amadeus

—the fact being that the portion of Spanish society, like the portion of every European society, which detests kings, detests just as much the kind of government which middle-class Republicans, whether in Europe or America, would set up in their stead. It is this dislike of existing social arrangements, the profound belief of a large body of the poor that poverty can be cured by the strong hand, which constitutes the most important and most dangerous element in the problem of modern politics, and it constitutes the one great fact with which political reformers have to deal. To any one who seriously considers the nature and bearings of this fact, the rejoicings of some of our brethren over the expulsion of a king, and the setting up of a president, while the social, moral, and mental condition of the population remains unchanged, have something very melancholy about them.

A THIRD STAGE OF CONSTITUTION-MAKING.

THE new constitution adopted by Illinois, the deliberations of the convention in Pennsylvania, and now the amendments proposed by Governor Hoffman's Constitutional Commission to the constitution of New York, all point in the same direction. They indicate very clearly that the country has begun to enter on its third stage in constitution-making—a stage to be marked by very novel features. In the Constitution of the United States we have the fossil type of the first period. In it we easily distinguish the highly "differentiated" organs called legislative, judicial, and executive, "each independent within its own sphere," and all deriving their powers from the consent of a small body of native-born and well-to-do electors. The terms of office are long, and the tenure of office secure; the final arbiter of all domestic disputes is the judiciary. The type is evidently foreign; it is English, with such adaptations as different circumstances of political climate and soil—or, as a naturalist might say, "the environment"—have made necessary. We find the same type in most of the old thirteen colonies. In the New York constitution of 1846 we have a second fossil type. In this the basis of suffrage has become almost universal, the judiciary has become elective, terms of office are short, and though many resemblances to the old type still exist, it is evident the fundamental principle of the new one is radically different. The judiciary, the legislature, and the executive have ceased to be highly "differentiated," and have in consequence lost their vigor. This has been reabsorbed as it were by "the people," who are unwilling any longer to part with it, except for very brief intervals. They have, to be sure, retained the representative machinery, but their representatives are rather to be regarded as delegates than as anything else. It is the type of pure democracy. This type, too, is an importation, but this time it comes from France, not England.

The third period has now begun, and the type, so far as it can yet be seen, is very different from either of the two preceding it. For the third time within a century, the People come together to deliberate upon their basis of government, and perhaps the most noticeable thing about their deliberations and their votes is a general agreement that, during the past thirty years, they have themselves been abusing the power which thirty years before they gave to themselves. In no historical constitutional movement has this before been the case. In England, in France, in Italy, in Germany, the progress of society from one condition to another has almost always (we must indeed except such modern administrative reforms as those of Stein and Scharnhorst in Germany) been accomplished by a struggle between classes whose interests conflicted—between king and nobles, nobles and commons, church and state. But we have abolished classes, and the only dangerous power with which we find ourselves face to face is the power we have given ourselves. The third period of constitution-making in this country has already for its distinguishing trait the effort of the people to take away from themselves or from their representatives some of this power. The new Illinois constitution is chiefly remarkable for the fact that it puts an end to special legislation; or, in other words, the people find that they cannot elect men who have sufficient honesty to be entrusted with the discretion which special legislation requires. The legislature is in a peculiar manner the agent of the popular will, and, thirty years ago, a suggestion that the legislature could not be trusted would have been considered as an insult to the people themselves. The executive might not be trustworthy, and the judiciary might prove unreliable, but the legislature, being directly responsible to the people, was in fact the people themselves in a compact form. This is all changed. To put an end to special legislation is one of the main objects of the Pennsylvania reformers, and in the amendments proposed to the constitution of New York we find that the legislature is prohibited from passing private or special acts in some eighteen different classes of cases.

The same distrust of the legislature—the popular body *par excellence*—is curiously shown in the "Proposed Amendments" by the provision that "no bill shall become a law after the final adjournment of the legislature unless approved by the governor within thirty days after such adjournment," and by a multitude of provisions with regard to the order of legislative proceedings—the "readings," the "yeas and nays," titles, amendments, and so on, which have in reality the very good reason for their adoption not only that, as the Commission says, it is impossible for senators and members of the assembly to understand, in the tremendous press of modern business, in a becoming manner "what they are doing," but that, even when they do understand it, they cannot be trusted to do what they ought. This sufficiently appears in the report of the closing scenes of any legislature. The last legislative adjournment took place at Harrisburg. The following paragraph gives a fair idea of the evils with which constitutional conventions and commissions have to deal:

> "Disgraceful as are always the closing days of a session at Harrisburg, this year's performance caps the climax. With a reckless, riotous rush, bill after bill, resolution after resolution, was brought forward and put through, nobody knowing exactly what was done or left undone; and endless, of course, will be the sins of omission and commission discoverable when we come to review the scenes of the struggle. The bills poured in by swarms, by shoals, on the day before adjournment; and they might as well have been passed in a lump for all the deliberate attention they got. The press report of the proceedings, stating the case in the mildest form, says that things were done 'with such remarkable celerity that bills of three, four, or five printed pages in length were passed by their titles in about three minutes. In many cases the rapidity was so great as to prevent the reporters from obtaining the titles satisfactorily, and it was, of course, out of the question to attempt to analyze the bills.'"

We are also told by another well-informed authority that whereas this especial legislature had a good many important duties to perform, *e. g.*:

> "To establish the boundaries of the congressional districts, the apportionment bill adopted at the last session having failed to receive the Executive approval; to provide for the election of a state treasurer, under the provisions of the recently adopted constitutional amendment; to adopt a plan for the reorganization of the militia; to enact a general law defining the liability of property to taxation, as well as laws to regulate the sale of inflammable oils, and for other similar purposes; to amend the oppressive libel law; and to give the citizens of Philadelphia a chance for fair elections and honest juries"—

it did as a matter of fact pass an apportionment bill which is an "outrageous gerrymander"; by "blundering" and "bungling," it left the State without any treasurer at all for the coming year; it passed a militia bill which "does not seem to give satisfaction to anybody"; the exemption law "might have been put into better shape"; "the oil inspection bill" and two or three "other inspection bills, and other schemes, some of which succeeded and some failed, were contemptible frauds"; and the remaining duties were left unperformed.

The general distrust of the popular machinery is still further indicated by propositions like these made by the New York Commission—Art. VIII., Secs. 10, 11:

> "Neither the credit nor the money of the State shall be given or loaned to or in aid of any association, corporation, or private undertaking. This section shall not, however, prevent the legislature from making such provision for the education and support of the blind, the deaf and dumb, and juvenile delinquents, as to it may seem proper. Nor shall it apply to any fund or property now held or which may hereafter be held by the State for educational purposes.
>
> "No county, city, town, or village shall, hereafter, give any money or

property, or loan its money or credit, to or in aid of any individual, association, or corporation, or become, directly or indirectly, the owner of stock in or bonds of any association or corporation, nor shall any such county, city, town, or village be allowed to incur any indebtedness, except for county, city, town, or village purposes. This section shall not prevent such county, city, town, or village from making such provision for the aid or support of its poor as may be authorized by law"—

and still more openly in Art. XV., Sec. 3, in which the very valuable amendment is proposed that in every incorporated city there shall be a board of audit, elected by all the taxpayers who have property assessed at $250, and that the assent of this board shall be necessary to the passage of every resolution involving the expenditure of money—the first recognition that we have seen of the real character of a modern city. The legislative power of the common council in cities—a power which we have heard described by a politician of the old school as that of a chamber which "never in the experience of the race—no, never in that of the Gothic or the Slavic, or any of the white-haired races, has been dispensed with"—that, too, is to be done away with.

The judiciary and the executive, on the other hand, are not popular bodies, and we may see the same general tendency to restrict popular power, and place it in other than "popular" hands, in the adoption of the "judiciary article" in this State in 1869, which lengthened judicial terms, increased judicial power, and required the legislature to "provide for submitting" to the people, "at the general election in the year eighteen hundred and seventy-three," the question whether in future part or all of the judicial offices shall not be filled by appointment instead of election. In the same way, the new Commission proposes that "judicial officers of courts not of record, in the several cities of the State, having a population of not less than three hundred thousand, shall be appointed by the Governor, with the consent of the Senate, for a term of four years."

In the same way, too, the Commission proposes that the Governor shall hold office for three years instead of two; that at extraordinary sessions of the legislature no subjects shall be acted on except such as he recommends; that in money-bills he may veto particular items, while approving the rest. The Commissioners say with commendable frankness that

"In regard to extending the term of office of the Governor and Lieutenant-Governor to three years, the change would be in accordance with general public sentiment, and would advance the interests of the State, by obviating too frequent changes in policy and offices, and, in some degree, increasing the respectability and dignity of the offices."

Ten thousand dollars is proposed as the Governor's salary, and four thousand as that of the Lieutenant-Governor. In cities, mayors are to have the power of appointment, subject to confirmation by the aldermen, and heads of departments are vested with power to appoint and remove the subordinate officers.

Critics who stickle for distinctions may say that there is here to be seen no tendency to restrict the power of the "people," but only to impose restrictions on the legislature and to increase the power of the executive and judiciary. But when the people solemnly proclaim, as they have by constitutional votes in Illinois, that they cannot select legislators good enough to be allowed a general discretion as to the subjects on which they legislate, and that they cannot select good judges by means of frequent elections, they do in so far confess their own incompetence, and relinquish power, just as individuals do in private life, because they have too much to use well.

When we consider what, from a historical point of view, the executive (with his appointees, the judiciary) is, and what, in actual fact, "The People" is, we shall see that the new movement now going on to restrict and curtail the popular powers granted thirty years ago, is merely a repetition of a very old and familiar movement which has been taking place in all countries for many centuries. The "executive" is the historical sovereign. "The People" is the actual sovereign. The executive in English history is the crown, and the growth of liberty in the Anglo-Saxon world was the result of a long struggle between the old sovereign and his subjects. At last the struggle ended, and the subjects became themselves sovereign. But when they became so, their minds were so imbued with the lessons they had learnt during the long conflict that their principal aim in forming a new government in this country was to guard against encroachments from that branch of the government which theoretically represented their old enemy, wholly overlooking the fact that the real sovereign they had to dread and guard against was themselves. They therefore made a determined onslaught upon the new executive and the new judiciary, thinking liberty perfectly secure if the people were only sure that there should be no one above to trample on and abuse them. But, in reality, it was the People who had become sovereign, and the People who were to be dreaded in the new order. Therefore it is that we find that our predecessors of the Jeffersonian school of Democracy, in weakening the executive and the judiciary and strengthening the legislature, were in reality strengthening the sovereign, and making the same kind of mistake that would be made in England to-day if reformers were to suppose that, because the Queen selects a committee of the House of Commons as a ministry, she therefore is the source of the power by which that committee governs. It has always been a fundamental maxim of politics that any sovereign who has absolute power will before long abuse it—whether he be a king, an emperor, a house of peers, or a dictator. It remained for America to strengthen and confirm the truth of the maxim by demonstrating that it is equally true where the sovereign is a sovereign people. In other countries abuses of power by the sovereign have been met by revolutions, by popular risings, by the transfer of power from one centre to another. With us these remedies are no longer possible, for we are ourselves both sovereign and subjects. The only means of relief left us are those left to individual men who abuse their freedom by extravagance—that of imposing, of our own free-will, restraints upon ourselves. This is the real meaning of the elevation of "the respectability and dignity" of the executive and judiciary, as well as the curtailment of legislative power, which mark the opening of the third period of constitution-making in the United States.

SOME FRENCH SALONS.

PARIS, March 28.

THE study of French society has at all times seemed very interesting to foreigners. We like to read in Walpole's correspondence a lively account of French society at the time of Madame Dudeffant; it is a great pity that no writer as yet has given us a faithful and detailed account of the Directory period. I presume that the society which was adorned by Madame Récamier and by Madame Tallien was not very unlike Parisian society at the present moment. Then, as now, after very tragical events, all the social elements were for a moment mixed and almost blended together. The elasticity of the French mind is such that, after two years of depression, the instinct of sociability has become once more triumphant, and, in a certain sense, Paris has never perhaps been so gay as it is now; at any rate, I have never seen it under such extraordinary colors, so well worthy of close observation. The present state of society is, so to speak, the social representation of the political state of things; it may be called the "truce of Bordeaux" of the *monde*. For the first time, all parties have a legal right to aspire to the direction of the country; the Republicans enjoy the Republic *de facto*, the Monarchists enjoy the Monarchy *in ovo;* M. Grévy, the Speaker of the National Assembly, who represents perhaps even better than M. Thiers this curious political combination of forces, cannot give a dinner without balancing the Right and the Left in the list of his guests. After the Commune, passions ran so high that it was next to impossible to bring together the men of opposite parties; but now a *modus vivendi* has been found, and Republicans and Monarchists are seen in many places together.

Among the most brilliant receptions of the winter have been, for instance, those of the Minister of Foreign Affairs, M. de Rémusat, and nobody was better placed to form a connecting link between the various elements of society. Madame de Rémusat by her connections is united to the oldest families of France, but the blood of Lafayette is in her veins—she is a Liberal as well as her husband; and though they have both belonged till the present time to the Orleanist party, they are quite at home in the Republic of M. Thiers. Besides the diplomatic body, which naturally is always a great centre of attraction, there may be seen in Madame de Rémusat's rooms the

representatives of all the old parties, as well as Republicans even of the deepest dye. Count Arnim, with his high forehead and his inquisitive eye, will be near some deputy of Gambetta's party; an Arago will be announced immediately after a Clermont-Tonnerre; people look at each other with some curiosity. The scene is very much like a *première* (a first representation) at some theatre, where the ladies of society turn their glasses on the ladies of the half-world, and where the young dandies stare at such men as Dumas the younger, About, or the most famous critics and dramatic authors. It may also be compared to the short truce of two armies, when the officers are allowed to mix and exchange newspapers and cigars. A deep feeling of hostility is felt running under the soft manifestations of worldly politeness. I saw a lady the other day shudder when she heard the servant announcing M. Challemel-Lacour, the deputy who wrote at Lyons the famous note, "Shoot all these men," on the margin of a report. But M. Challemel-Lacour has been a professor in the university, he is a scholar, and is quite capable of playing his part in a salon.

At M. de Rémusat's receptions, as well as at all the official receptions, only one element is missing: the Bonapartists are not invited by the Ministers of M. Thiers. But the Empire had lasted so long that they had become quite an important element in French society. The diplomats, who for years have been in relation with them, cannot drop them completely; but it is only in their houses that they are to be met. Princess Orloff, who lives in the heart of the Faubourg St. Germain, receives more than any other member of the diplomatic body; and I saw a few days ago, at one of her routs, the too famous Duc de Gramont, for the first time since the war. All eyes were directed on him—on the tall and majestic form of the man who had played with the destinies of France with a levity worthy of the younger days of his famous ancestor. Not far from him was Marshal Canrobert, so long an intimate friend of the Emperor, still respected for the great courage he displayed at the battles before Metz. You can hardly take a step in one of these reunions without meeting some suggestive name or person. Here is the Comte de Paris talking to some deputy on the book he has just published on the condition of the workingmen in America; not far from him glides the Duchesse de Mouchy, who is a Murat, and who regrets in her heart the glories of the Imperial court. That young officer yonder, Count Beugnot, was with General Lecomte in the Rue des Rosiers on the 10th of March, when the old general was shot; he himself barely escaped, and came back to Versailles with his uniform in rags. This old general with the white beard is the silent Governor of Paris, Ladmirault, who is answerable for the maintenance of order in the communistic capital. These gentlemen, covered with crosses and ribands of all colors, are quite unknown; and they are seen bowing to their Ministers, who have not even the little riband of the Legion of Honor. The other night, at the new Prefecture of Police, I glanced a moment though the window, and saw the ruins of all the palaces and houses which have been burnt round the Sainte Chapelle, and wondered how the noble spire had been saved. Was it possible! all these flowers, and this music, and this quiet urbanity—was it only the dream of an hour? In this palace of the police, I could not help remembering a day when I was riding on the plateau of Chatillon, and met a poor woman who was crying hysterically. She was the wife of a policeman, had run away from Paris, and was finding her way to Versailles, ignorant of the fate of her husband. How distant all these memories seem already, and, if it were not for the awful skeletons of our palaces, how unreal all this seems now! We have all heard of the *bals des victimes* after the Terror; we also have our balls, where the victims of yesterday meet the victims of to-morrow.

One of the finest and most hospitable houses in Paris is the hôtel of the Countess Duchâtel, the widow of one of the last Ministers of Louis Philippe. The magnificent collection of pictures would be enough to attract anybody; and besides, this salon has the privilege of uniting the Orleanist and the Legitimist society. It is in such places that you can better understand the difficulties of the Orleanist party, which, by its principles, is almost drawn to the Republican side, while socially it has always been drawn towards the Legitimists. And the Legitimists, unfortunately, have the most untractable leader in the person of the Comte de Chambord. For many months the hope of a complete fusion between the two branches of the royal family was naturally the occasion of the most cordial fusion of two societies which before had little in common. The young duchesses and marchionesses of the noble faubourg were only too glad to abandon the solitary and gloomy salons where their mothers had cherished for years the fires of hatred against modern France, modern ideas, and 1830; the handsome Duchesse de Larochefoucault-Bisaccia opened her house, which was once guarded like the paradise of Legitimacy, to the colleagues of her husband in the Chamber. The Legitimists are, socially speaking, such an important element in French society that this fusion was quite an event in itself. The Liberals, to their great delight, found that there were many men in the Legitimist camp who were very open to progressive ideas; the Legitimists, in their turn, found that the Liberals were not all of the school of the Commune; but this happy union did not last long, and the letters of the Comte de Chambord have again disunited the ranks of the monarchical army. The connections which have been formed will, however, not be broken immediately.

Among the private houses which a foreigner ought to take especial care to visit, if he can, is that of M. Guizot. The old veteran lives in a very modest apartment, but every Thursday evening you can meet there all the distinguished in every rank of literature, of politics, and of fashion. The rooms are so small that all the visitors can hardly remain a long time, so that there is a constant succession of visitors. M. Guizot receives everybody with a grace you would hardly expect from such a stern statesman. He is still handsome, very erect, and he has an affable word for all. It is quite the custom there, as it is at M. Thiers's, to form a nucleus round him, and to hear him talk upon some topic of the day. What M. Guizot does every week M. Thiers does every night; he is ever ready to talk on every subject. There is hardly any conversation at his house, it is a long monologue; his visitors, as in the dialogues of Plato, are only expected to furnish him a subject. The powers of M. Thiers as a *causeur* are certainly very remarkable, and at the time when I used to see him at the Place Saint Georges, I liked particularly to hear him talk on art. It is perhaps a failing of mine, but I have always preferred reading the American Constitution, or even the telegrams in the newspapers, to hearing empty discussions upon the question of the Upper Chamber or the prerogative of the Executive power. Politics, of course, play at present a great part in the conversation of our salons, and a visit to the Assembly is quite an attraction for the ladies of fashion. But even politics in conversation ought to be lightly touched, on the old principle: "Glissez, n'appuyez pas." On the whole, I do not find that our essay of a pseudo-republic has made French society more vulgar or coarse; it has added some valuable elements to its composition, and added something more *piquant* to its contrasts. There is a foundation of urbanity in the French character which, I hope, will not be altered by any revolution.

SIGNOR SELLA AND HIS CABINET.

FLORENCE, March 15.

THE present Italian Cabinet may be styled a government which, politically speaking, represents the advanced Liberal party, socially the middle classes, and provincially, if I may say so, reaction against exclusive Tuscanism. Nominally, it is presided over by an honest mediocrity, an ex-doctor of Casale, a small provincial town, S. Lanza, a veteran of the old *bourgeois* Opposition of Piedmont. But the real soul of it is the Minister of Finance, S. Sella, by profession a geologist, a man of modest origin, but who has acquired wealth by industry and rigid economy. Three others of the Ministers, S. Castagnola for commerce, Admiral Ribotty for the navy, General Ricotti for war, are also Piedmontese, and thus give a decided preponderance in the Cabinet to that province, as well as to the *bourgeois* class they all belong to. S. de Falco and S. de Vincenzi are Neapolitans, and also belong to the Centre of the House and the cultivated middle classes of society. The former *consorteria*, with its decidedly French and semi-clerical tendencies, finds its representative in one man only, S. Visconti-Venosta, an elegant young Lombard, clever, insinuating, high-bred, timid, and serving on the whole as a species of moral clog to the rest of the Cabinet. It is easy to imagine how haughtily the political men who had held office from 1861 to 1869 must look down upon the self-taught parvenus of the present Administration, in the proud self-consciousness of superior scholarship, noble origin, and more elegant appearance. Nor is it difficult to understand their disappointment when they see those very Ministers whom they allowed to take office by sheer tolerance, in the secure conviction that they would not be able to hold it for a fortnight, and must ultimately have to give back the helm into their own experienced steering hands—when, I say, they see these very men keep their seats successfully longer than any of their own party ever could manage to do. And yet they feel they cannot do away with them, for the coalition against the *consorteria* and its wide-spread unpopularity is in full force. Nor is the Left, under the leadership of that clever old war-horse, Ratazzi, who has gone over to them with *armes et bagages* since the unfortunate Mentana episode, of which he alone was the cause, any better able to overthrow the present Cabinet.

So we have the situation as follows: When the Ministers propose a radical measure, it is but natural that the Radicals should think themselves alone justified in taking such a measure, and when they suggest a moderate law, the Moderates are persuaded that it would have been much better for them to have proposed it themselves—both parties of course considering the Ministers as thieves who have stolen from them their own ideas, of which they imagine they have a sort of monopoly. Meanwhile, each side is afraid that, if the present Ministry falls, it will be their antagonists who will replace it,

in consideration of which they finally let it subsist. Now, as there is one man of great energy in the Cabinet—and as energy is the only thing wanting to the Italians to make them superior statesmen—the policy followed by the Government has till now been most successful. Everybody is tacitly persuaded that it was S. Sella's energetic *veto* which prevented Italy from hurrying to the rescue of France and to her own ruin in 1870; that it was he who forced the King and his own colleagues to enter Rome; who urged the Minister of Justice to present the law on the Roman Convents, as he formerly presented that on the guarantees for the Pope's spiritual independence and secular powerlessness; who supported the Minister of War in his demand for a serious augmentation and consolidation of the army; finally, that it was he who, first among all the twelve Italian finance Ministers, insisted upon the taxes being really paid. Now, it is certainly not surprising that there should be no love lost upon S. Sella in Italy; for when a man has the priests and taxpayers against him in this country, he may say that he has all the world against him. As, besides, he continues to estrange the refined aristocrats of the Moderate party by his coarse and sardonic ways, he has finally succeeded in gaining for himself a greater amount of unpopularity than any man in the country, while he remains as indispensable as he is disliked, precisely because every one here is conscious of lacking the energy and *morale* which S. Sella possesses, and because the results of a financial policy which has succeeded in restoring order into the most dilapidated financial situation a state ever had, naturally impress themselves deeply upon all unprejudiced minds. It is S. Sella, and S. Sella alone, who maintains the rest of his colleagues in office. If he were to withdraw, not one of them could remain in virtue of his own power. This is what everybody instinctively feels, and thus it happens that a government which is extremely distasteful to the King, cordially detested by Right and Left of Parliament, unpopular among the masses, derided by all the newspapers and by "public opinion," may, after all, turn out to be the firmest and most durable one which this new kingdom has yet had.

Correspondence.

THE STUDY OF GREEK.

To the Editor of the Nation:

Sir: "Shall Greek be abolished?" was the subject of a composition (described by the reporters as "exhaustive") which was read last week at the meeting of the High School Teachers in Boston. The speech of the Principal of the University of Louvain to the "Philosophical Vagabond" has been quoted in your columns already; but it is so much better than anything said since that it will bear repetition:

"You see me, young man; I never learned Greek, and I don't find that I have ever missed it. I have had a doctor's cap and gown without Greek; I have ten thousand florins a year without Greek; I eat heartily without Greek; and, in short, as I don't know Greek, I do not believe there is any good in it."

Possibly that "splendid sample of our na-tive raw material," Mr. Hannibal Chollop, went a little too far in his depreciation of "the ancient Athenians":

"As it was, he contented himself with showing Mark one of his revolving pistols, and asking him what he thought of that weapon.

"'It ain't long since I shot a man down with that, sir, in the State of Illinoy,' observed Chollop.

"'I shot him down, sir,' pursued Chollop, 'for asserting in the *Spartan Portico*, a tri-weekly journal, that the ancient Athenians went a-head of the present Locofoco Ticket.'"

But after all, was not Mr. Chollop partially right in his views, even though there was too much rude sincerity in his expression of them? Homer sang that matchless parting of Hector and Andromache; but Homer never wore a pair of rubber-boots. Phidias set up the Olympian Zeus, to have seen which was counted by "the ancient Athenians" as the real *nepenthes;* yet no sewing-machine clicked in his wife's boudoir. The cell in which the clearest-headed and sweetest-tempered of men drank the hemlock was glorified only by the "light within his own clear breast," and not by the genial kerosene. If, then, Mr. Chollop was right and the editor of the *Spartan Portico* wrong, if we are so much "ahead of the ancient Athenians," it is time to cut the umbilical cord which binds us to the past:

> "Leave to the Greek his marble nymphs
> And scrolls of wordy lore."

We shall not have scholars and thinkers to connect us with antiquity and the great brotherhood of nations, but we shall have men that know "facts, hard facts, sir." Mr. Gradgrind lived too soon. It is time to canonize him as the great Apostle of the Education of the Future.

N. N.

Notes.

THE promised pamphlet, 'Proceedings at the Farewell Banquet to Professor Tyndall,' has been published in a neat form by D. Appleton & Co. It gives in full the interesting letter from Professor Henry, as well as those from other invited guests unable to be present. The same house has also issued, in one volume of about two hundred pages 12mo, Professor Tyndall's 'Lectures on Light,' as delivered in this country, with illustrations.——A second edition of Taine's 'Philosophy of Art,' translated by Mr. John Durand, and thoroughly revised by him, has been published by Holt & Williams (12mo, pp. 190).——Sir Charles Bell's classic work, 'Expression: its Anatomy and Philosophy,' with the original notes and author's designs, comes to us with the imprint of Samuel R. Wells, of this city, who has added a few notes of his own and a number of woodcuts from his phrenological storehouse. Most of these last never had any great value as accurate representations of types of mankind, and are less endurable now that photography has given us the means of perfect reproduction from nature. They are, for example, inexpressibly coarse compared with the wood-engravings of primitive races in the *Tour du Monde, passim.*——Parts 11 and 12 of Stieler's Hand-Atlas, containing maps of northeastern Germany, northeastern Russia, Scandinavia, Asia Minor, and sheet 5 of the United States, together with a map of the Southern heavens, have been received from B. Westermann & Co. and L. W. Schmidt. Thirty parts will complete the series. ——A new paper, called the *Chess Record*, has appeared in Philadelphia. ——'A Brief Account of the Paper Money and Finances of the War of the American Revolution,' by J. W. Schuckers, is announced by John Campbell & Son, Philadelphia.

—Two or three correspondents have called our attention to an error of ours which we dare say has been noticed by a great many other readers also. We spoke of the little girl Allegra, daughter of Byron, as having been borne him by the Countess Guiccioli. She is, however, well known to have been the offspring of Byron and a Miss Clermont, whom Byron met with the Shelleys in Switzerland in 1816. As she died at the age of five years and three months (vide his epitaphial verses for her), she may be said to have died "in infancy." There was no excuse, however, for the other assertion, which was made in heedlessness.

—The Chicago Law Institute has, like the Bar Association of this city, taken in hand the reform of law reporting. The "Illinois Reports" having been for some time among the worst in the world, the interest of the profession in Chicago has been at length aroused. The present incumbent of the office of State Reporter is a shrewd fellow, who, during six years of official life, by means of selling reports to the people at $5 a volume, and to "the People" (*i.e.*, the State in its official capacity) at $6 a volume, which would in reality have been dear at $3, and which would have been better unpublished altogether; by multiplying the number of volumes, too, through many devices known to professional book-makers, such as large margins, "leads," "spacings," prolix "head-notes," changing the size of the page, etc., etc., has contrived to amass a little fortune of $91,087 50, making his salary per annum $5,000 more than that of the Chief-Justice of the United States.

—Dr. Josiah Clark Nott, well-known as the principal author of the famous 'Types of Mankind,' by Nott and Gliddon, died on the morning of his birthday, March 31. He had nearly completed the Scriptural span of life, having been born in 1804. His father was a native of Eastern Connecticut, where the family name has been well known, but in early life he removed first to Georgia, where, *more patrio*, he acted as a teacher, and afterwards to Camden, South Carolina, where he practised law with success, and, after going to Congress, ended his days as a judge of the State Court of Appeals. Josiah Clark Nott, then, like many men who became strenuous defenders of the Southern social system, and whose "cursed-be-Canaan" ethnology was in its way very serviceable to the cause he favored, was a man of Northern extraction. At the age of twenty he graduated at Columbia, South Carolina, and for the next three years, following a fashion common among the sons of planters, he resided at Philadelphia, and attended lectures at the Medical College, where many of his young compatriots were picking up medicine enough to physic or bleed a sick field-hand on the paternal plantation. But Nott's mind was of an order superior to that of the common run of Southern medical students. One of his undergraduate performances was a translation of 'Broussais on Inflammation,' and his proficiency was such that in 1827 he was appointed "Demonstrator of Anatomy in connection with the Philadelphia Almshouse," and there remained till 1829, when he went home to Columbia, married (1832), and practised his profession till 1835. In the latter year he went to Europe and worked busily till 1837, when he returned and took himself to

Mobile, Alabama, where his father-in-law had established himself, where he resided with brief interruptions till his death, and where he founded the medical college and museum, and wrote the various ethnological works which gave him a widespread but somewhat evanescent reputation. Of these, the best known is his 'Types of Mankind,' the reputation of which as a scientific production would have been less but for the Dred Scott decision and the other phases of the long agitation.

—Mr. Jeremiah S. Black thinks that we might do away with a great deal of corruption if we would "make all fraudulent acts" of legislatures void, leaving the question of fraud to the courts. We find this proposition in a speech of Mr. Black's made before the Pennsylvania Constitutional Convention on the 10th of last month. At present, it is well-settled law that legislative acts are sacred and inviolable, no matter how obtained. Mr. Black does not discriminate between general acts and acts which are in reality nothing more than grants or subsidies to private individuals, like land-grants and steamship subsidies. There is, however, a clear distinction between the two cases. General laws cannot be enquired into in the courts, if for no other reason, because of the time which would be necessarily occupied by such investigations. It would be in the power of any malicious and selfish individual to postpone the execution of a law of the most urgent necessity perhaps for years, if the question of fraud could be gone into—an investigation into a matter of this sort necessarily involving a great deal of time in taking evidence. Besides this, in ninety-nine cases out of a hundred, no court could be able to say in the last resort whether the act might not have been passed on general grounds of expediency, even if the fraud or misrepresentation had been known to the legislature. But in the case of legislative grants of money or money's worth, why should not the matter be treated as if it were between individuals? It seems only fair to assume in such cases as these that the legislature would not have made the grant if it had known that fraud was being practised. Whatever may be thought of Mr. Black's suggestion, one curious historical statement it makes is worth noticing. It is in regard to the case of *Fletcher* v. *Peck*, in which the doctrine of the inviolability of legislative grants was established by the Supreme Court of the United States. He says that—

"The case itself was a fraud; it was made up at Boston by two men who lived in Tennessee, both of them having the same interest in the same fraudulent grant, and the counsel who pretended to argue it was employed and paid to give the cause away. This is not publicly known, but I assert it on the authority of Judge Catron, who knew the parties well, and was often told by both of them that the case was a sham, and the judgment collusive. The principle apparently decided by it is not found in the common law, and is directly in conflict with common sense and plain justice. It violates all the analogies of our jurisprudence. Not only private grants but judicial decrees and executive concessions are pronounced mere nullities when brought into contact with any kind of corruption."

—A correspondent writes us as follows: "All the newspapers of the country are now very busy denouncing the 'back-pay swindle,' but it does not seem to have occurred to any of them to suggest any effectual measure to prevent its repetition. It is not, perhaps, very generally remembered that such a measure was once frustrated by the wisdom of our ancestors, of which we now see the results. At the time when the first ten amendments to the Constitution of the United States were ratified, there was passed by Congress and submitted to the States another amendment, in these terms: 'No law varying the compensation of senators and representatives shall take effect until an election of representatives shall have intervened.' Mr. Madison, in proposing this amendment with others in Congress, used language which is worthy of notice, though late events have shown that he might well have insisted more strongly on the necessity of such a provision: 'There are several minor cases . . . in which I also wish to see some alteration take place. That article which leaves it in the power of the legislature to ascertain its own emolument is one to which I allude. I do not believe this is a power which, in the ordinary course of government, is likely to be abused. Perhaps of all the powers granted it is least likely to abuse; but there is a seeming impropriety in leaving any set of men without control to put their hand into the public coffers to take out money to put in their pockets; there is a seeming indecorum in such power which leads me to propose a change. We have a guide to this alteration in several of the amendments which the different conventions have proposed. I have gone therefore so far as to fix it that no law varying the compensation shall operate until there is a change in the legislature; in which case it cannot be for the particular benefit of those who are concerned in determining the value of the service' (1 Annals of Congress, 440). This proposed article of amendment was adopted only by the States of Delaware, Maryland, Virginia, North Carolina, and South Carolina, and therefore never became a part of the Constitution. Perhaps it might be more successful at the present day. The opposition to it would certainly come in the earlier rather than, as before, in the later stages of its passage." We will add that there is nothing in the Constitution to prevent these ratifications from being carried forward as still valid, and counted in favor of Madison's amendment, should any other States now feel like reviving it.

—All of our readers have heard of the English play entitled "The Happy Land," which was the other day suspended by the Lord Chamberlain, who dictated certain changes in it. A correspondent informs us that the real author of this interference was not so much the Lord Chamberlain, who has been so vigorously condemned for going to the relief of Messrs. Gladstone, Lowe, and Ayrton, as it was the Prince of Wales. He is said to have been much scandalized at some allusions to a lack of hospitality supposed to have been displayed in the reception of certain recent state visitors, as for instance the Khedive: "Where do you receive your foreign guests?" was the question, and the reply was, "At Buckingham Palace——Hotel." This to the Prince seemed shocking, and alterations were ordered by the Lord Chamberlain, who, however, kept the Prince's name out of the business, and made a stalking-horse of his own official objections to Mr. Ayrton's lavender or lilac pantaloons and to the cancan, with song, danced by the three ministers above-mentioned. We are informed from the same source that the Prince of Wales has also recently been taken for a subject by a metrical satirist, who has been writing for *Beeton's Annual* some parodies of the Laureate's later "Idyls." The parodies are reported to be duller than the originals, but it pleases the disaffected and the gossip-mongers to see the "tournament of the dead innocence" turned into one of the pigeon-matches in which the Prince delights. Stupid as the performance was, however, the Prince is understood to have bought up the copyright for a considerable sum, and copies at first worth one shilling are now sold for ten. Worse than all this, however, is the fact that the Prince and his brother, the Duke of Edinburgh, cast a vote apiece the other night, in the Lords, for the bill authorizing marriage with a deceased wife's sister, and that they have frequently gone to the theatre during Lent just passed. These two things are said to have made very angry the High Church party—which, however, has always been honorably known for its loyalty, and may no doubt still be depended upon.

—The Messrs. Rivington (London) send us their 'Annual Register' for 1872, uniform with the issues of the two preceding years already noticed in the *Nation*. The Washington Treaty and Geneva Arbitration, and the reconstructive legislation of France and Germany, are the chief features of the political record. This is followed by summaries of literature, art, and science; by a chronicle of remarkable occurrences during the year; meteorological observations; obituary; remarkable trials (including the Tichborne case); and a very valuable appendix, containing full texts of the treaty of commerce with France, the San Juan award, the Geneva award, besides Government statistics, etc., etc. The 'Register' is edited in a much more readable manner than is common with similar works of reference. The chapter on the United States is a sufficiently unpalatable reminder of the recent supremacy of Fisk, Gould, Barnard, and the Ring. It is hardly correct to say of our Presidential candidates that they were "*each* touring about to make profession of their faith before the people," although it is immediately added that "Grant harangued but little." He hardly opened his mouth. And in saying (on p. 302) that the London *Times* "had the credit of bursting the diamond bubble," the compiler omits all mention of Messrs. King and Gardner, but for whose sagacity the *Times's* habitual "bearing" of American enterprises would have had small effect in preventing one of the greatest and most deplorable swindles of the century.

—The name of a French author of distinction, M. St. Marc-Girardin, is to be added to the rapidly growing necrology of the year 1873. He died of apoplexy on the 12th instant, having advanced just two months into the seventy-third year of his age, for he was born on the 12th of February, 1801. We think we are not mistaken in saying that, like his great contemporary, Sainte-Beuve, whom he succeeded in 1869 as editor of the *Journal des Savans*, M. Girardin was of partly English blood. His long life had been spent in educational, journalistic, political, and literary labors, and was fruitful of good works. His first noticeable success was at the age of twenty-one, when, after graduating honorably at the colleges Napoléon and Henri IV., young Girardin obtained an honorable mention by the French Academy for the eloquence of his eulogy of Le Sage. In 1827, he secured a professorship (Collége Louis le Grand), and in the same year began writing for the *Débats*. Thenceforth honors, literary and semi-political, poured in upon him steadily. He was elected a deputy; he was appointed a professor of poetry in the College of the Sorbonne; he was sent on a mission of investigation into the educational institutions of other European countries; he was made Master of Requests to the Council of State; he was elected (1844) a member of

the Academy, of which he became one of the brightest ornaments, succeeding the not very brilliant M. Vincent Campenon; and he was the author of many highly valued books. Of these, the following are the best known: 'Tableau de la Littérature au 16me Siècle, suivi d'Etude sur la Littérature du Moyen Age et de la Renaissance'; 'Notices politiques et littéraires sur l'Allemagne'; 'Essais de Littérature et de Morale'; 'Cours de Littérature Dramatique.'

—Germany poured into France, during the late war, no fewer than 913,967 men, of whom 127,897—or more than one in seven—were killed, wounded, or missing at the close; among these were 5,254 officers and surgeons. The dead of the campaign amounted to 40,881; 17,572 died on the field of battle, 10,718 of their wounds; only 12,253 officers and soldiers perished of disease—a ratio terribly significant of the short and desperate character of the war. There were 78 engagements of the graver sort, 870 of the slighter, besides 33 sorties and 486 other rencontres. Wörth, Vionville, Gravelotte, and Sedan were the bloodiest.

—The long disputed question of the origin of the English trial by jury has perhaps been at last determined by the researches of a German scholar, Dr. Heinrich Brunner of Vienna. A full statement of his results is given by Prof. Sohm in the last number of the *Historische Zeitschrift*. Surprising as it may seem, he declares that this peculiarly English institution, identified more than almost any other with traditionary English liberties, and commonly referred, like all the rest, to the great Alfred, is not of Anglo-Saxon origin, is not even of Germanic origin, but was derived from Normandy, from the extraordinary royal jurisdiction of the Frankish kings. The original popular judicature of the Germanic nations, exercised in the "trial" of the hundred, consisted simply in judging the law; the facts being determined by the parties between themselves—by compurgation, ordeal, trial by combat, etc. By the side of this process, which was clearly inadequate to the more complicated relations of more civilized times, there was established in Merovingian times a royal process, administered by the Pfalzgraf and other royal officers, the *inquisitio per testes*, which was a genuine process of determining the fact, not of declaring the law, like the popular process. In compurgation the witnesses swore to the truth of the particular fact which they were there to testify to, and that was all. In the new process they took a general oath to tell the truth, which was then ascertained by the judge by questioning. In Normandy this process received a further development. It was made compulsory in certain cases (of landed estate), by writ *ex brevi*: the number of witnesses was fixed at twelve, and they became an organized body, *jurata*, a majority of which decided (a larger majority was required in certain cases). Still the jury was composed of witnesses, not of judges. In this shape it was introduced into England by Henry II., and gradually the jury, consisting of neighbors acquainted with the facts, was allowed to receive testimony from outside, thus being at once witnesses and judges. In this intermediate state it continued until 1650, when a statute was passed definitely separating the witnesses from the jury, whose functions now became the giving a verdict from testimony laid before them. The criminal jury was of rather later origin, but followed in general the same course.

—That infamous and incendiary work, 'Death-blow to Corrupt Doctrine,' which created so much alarm among the foreign residents in China some three years ago, has, it appears, not been altogether suppressed. Under a changed title, 'The Golden Mirror for Exhibiting the Demons,' it has been lately reprinted at Wuchang, province of Hupeh, in a condensed form, but with all the old venom and obscenity retained. This new edition has enabled an acute correspondent of the Shanghai *Budget* (issue of Jan. 30) to make a conjecture as to the authorship of the 'Death-blow' which seems to have hit the mark. "A man of Jan-chow, above all others distressed in heart," is what the anonymous libeller styles himself, according to the missionary version in English. This would point to the province of Kiang-si, but the correspondent thinks the translators have made a mistake, as his Chinese copy (dated 1861) has the words Ku-t'an-chow, the old name of a department in Hunan, to which, therefore, the origin of the book may safely be traced. Now, "Chinese scholars all possess a seal or seals with different mottoes engraved on them, and one or other of these mottoes is always attached to their compositions"; and precisely this *nom de plume* of "the man distressed above all others" the correspondent happens to find appended to a poem in a kind of Chinese anthology, printed many years ago for private circulation, in Hankow. The editor of the collection had affixed to each contribution a note giving a slight sketch of the writer, and the names under which he was accustomed to write; and "the man distressed" he declares to be P'eng Yu-lin, a Vice-President of the Board of War, and a native of the Heng-yang district, in the province of Hunan. The identification appears to be complete, and it only remains to add that this official stands in high favor at Peking, and deservedly, on account of his naval exploits during the Taiping rebellion, in which he was severely wounded, and, more lately, for his reform of the navy, and for other loyal services rendered in spite of his preference for private life. The discovery is not a pleasing one.

MR. BUCKLE.*

IN 1857, the 'History of Civilization' was the book of the day. It was admired, criticised, discussed, or assailed in every class-room and drawing-room here and in England. Ladies and gentlemen who had never mastered the annals of a single country discoursed of "historical laws," of "deductive" and "inductive" reasoning, and of the "stationary" character of morals, with all the enthusiasm and animation of ignorance. Fanatical admirers fancied that Mr. Buckle had opened a new era in historical speculation, and timid opponents thought he had shaken the basis of morals and religion, because he had shown that an unvarying number of undirected letters were slipped year by year into the post-box. Followers and foes alike believed that Mr. Buckle had produced a great work, and scarcely a reader here and there suspected that Mr. Buckle had achieved nothing more than to produce a fragment of the biggest of big books. The 'History of Civilization' has been compared by some critics with the 'Origin of Species,' and there exists a superficial analogy between the history of the two books. Each of them was in its turn the book of the year. Each excited an immense amount of controversy. Each introduced to popular attention enquiries and speculations which had up to that time interested students rather than the ordinary public. Each work was recommended by its style. For though few persons will agree with the anonymous admirer cited by Miss Taylor, who considers Mr. Buckle to have attained the perfection of a philosophical style, yet no one can deny him a faculty for lucid exposition, which falls far below the beauty of Mr. Darwin's terse and logical diction, but nevertheless attracts the attention of ordinary readers. But the points of contrast between the nature and the fate of the two books are far more marked than the points of similarity. No one but a man of science can give an opinion worth the paper on which it is written, of the ultimate value of the 'Origin of Species,' but a mere literary critic can perceive certain features in which Mr. Darwin's work differs from Mr. Buckle's. The 'Origin of Species' is confessedly the work of a master in the topics of which he treats. It is a beautiful specimen of argument, which is close and logical, yet so expressed as to be intelligible to men of no scientific culture. The theories which the book contains may ultimately be disproved, but they have indubitably produced an immense effect on the world. An intelligent reader cannot take up any recent work on morals, sociology, or politics without seeing the influence of Mr. Darwin's speculations and often of Mr. Darwin's phrases. In other words, the 'Origin of Species' is still, so to speak, a live book, and exerts at least the influence which it exercised when first published. Mr. Buckle, on the other hand, never possessed any claim, other than that derived from his book, to eminence as an historian. His style is flowing, but lax and utterly wanting in precision. He has not produced a single follower. His book, though readable, is already dead. The public have forgotten Mr. Buckle and Mr. Buckle's speculations. That the public estimate of his work has changed is certain. Is the change just? The appearance of his Life affords at once a good opportunity and also the means for answering this enquiry.

Mr. Buckle is in some respects now underrated as he was overrated sixteen years ago, but the verdict of 1873 is far more just than the verdict of 1857. The biographical notice itself, taken in connection with the miscellaneous works, proves to demonstration that Mr. Buckle can never claim a high rank as an historian, and justifies on the whole the rapid decline of his reputation. His first and fatal defect is, to use plain terms, his ignorance of history. The following passage from his diary is, in this respect, extremely remarkable:

"The sketch of the history of France during the Middle Ages has occupied me just ten days; but then, on one of these days I did not read at all, . . . so that I think on an average I may say eight days would suffice in future for each history. It is my intention to go first in this hasty and superficial way through European history of the Middle Ages, and then, reading the more elaborate works, make myself as much master of the subject as is possible considering the meagre information we at present possess."

His biographer adds that among the works read during the ten days were Gibbon and Hallam, and that Mr. Buckle apparently expected to find "more elaborate" works than these. Miss Taylor also adds the following comment, of which it is hard to say whether it be meant for eulogy or apology:

* 'Miscellaneous and Posthumous Works of Henry Thomas Buckle. Edited, with a Biographical Notice, by Helen Taylor.' In 3 vols. London: Longmans, Green & Co.; New York: Scribner, Welford & Armstrong.

"It seems likely that in fact he soon discovered that the bent of his own mind was deductive. There is little trace of his ever having exercised his mind much on facts at first-hand. People, things and events, society, nature, art, science, and even politics, seem to have had their main interest for him after they had been chronicled and even grouped for him by other minds. He evidently preferred to use his own original powers of thought on the materials which had been amassed by other thinkers."

Now, translate this from the language of biographical admiration into the tongue of plain criticism, and it may be rendered pretty much as follows:

Mr. Buckle preferred theory to investigation; he never enquired into the evidence on which facts rested, but took them at second or third hand from other people, and then spun fine theories about them. As an original authority he has no weight whatever. His powers were employed in drawing inferences from data which he had never verified, but found chronicled and grouped for him by other minds.

That this is the true interpretation to be put on the passage from Mr. Buckle's own diary and from Miss Taylor's comment is apparent from every page of his voluminous commonplace-book. It reads for all the world like a series of extracts from *Notes and Queries*. The moment you read it, you understand how Mr. Buckle got together the mass of authorities with which he encumbers rather than elucidates the pages of his history. To him, it would seem, a reference was a reference, and one writer as good an authority as another. We know of no other author of eminence who would refer for a fact to Miss Strickland or the *Penny Cyclopædia*. Mr. Buckle must apparently have thought that a statement for which any one would vouch in a printed book might be treated as a fact. He was, in fact, wanting in the primary qualities of an historian—the capacity for weighing authority against authority, and the firm belief that no one can write safely who has not recourse to original authorities. Even his most ardent friends feel that some defence is necessary. We are told that "he never could have borne the fatigue of studying manuscript"—this was to be regretted; but no sane critic really expects that an historian should study the manuscript of every author to whom he refers. What is really and justly expected is that an historian should carefully weigh authorities, should have recourse to the best works on his subject, and should estimate with the utmost care the evidence for the facts on which he grounds his theories. "If," it may be retorted, "every person who writes a history must go through the labor of examining a mass of evidence, how can any one work out wide generalizations worthy to be called historical laws?" The reply is simple, though perhaps disheartening to theorists. The state of our historical knowledge, or rather of our want of knowledge, makes the attainment of such wide generalizations all but impossible. History is, after all, little else than a sort of law court; no one can come to any tolerable verdict on its problems who will not spend an infinity of time and labor in the investigation of evidence. A person who grudges this labor, or does not understand its importance, ought not to attempt to become a historian. The men of genius who have really promoted historical science have either brought new facts to light or shown how new results may be attained by the comparison or combination of facts the truth of which is past a doubt. Original powers and a mass of commonplace-books will never enable even the most ready of theorists to become a great historian without the toil of investigation.

But even suppose it be granted that Mr. Buckle could hope to achieve anything by the manufacture of theories based on a mass of ill-digested facts, it can hardly be said that his theories were in themselves of great worth. As a theorist, he labored under a defect which we should be inclined to describe as essential "commonness" of mind. He constantly bases his views upon merely popular distinctions which a little reflection or education ought to have shown him to be untenable. His whole theory is based on the distinction between the progressive character of intellectual discoveries and the stationary character of the moral feelings. It never seems to have occurred to him that the distinction between the moral and intellectual parts of the soul is itself more convenient than accurate, and that, in fact, the soul itself does not consist of parts. He never even seems to have realized the primary difficulties to which his paradox, that progress depends wholly on intellectual changes, is exposed. He certainly seems to have taken no steps to meet them. Take, again, as an example of the same mental characteristic, his lax use of expressions, such as "superstition." He writes a volume to show that the Spaniards and the Scotch are both slaves to superstition. Whether there is or is not any truth in the doctrine he meant to put forward, will be decided by judges in different ways. What is, however, clear is that what is called superstition in Scotland is both in its character and its effects a very different thing from the superstition of Spain. A subtle or discriminating writer would have felt that it was necessary to analyze with great care the religious sentiments of Scotland and Spain; Mr. Buckle lumps them together under the vague term superstition. What, again, can be more absolutely inane than such generalizations as that women are deductive and men inductive, or that all Scotch writers, who must, in Mr. Buckle's view, have shared a feminine characteristic, prefer deduction to induction? Such generalizations can hardly attain the dignity of errors. They are, for all purposes of historical investigation, utterly futile. They have nothing approaching the importance of Comte's theory of the three stages of historical progress. Comte's generalizations are, in our judgment, open to the gravest of doubt, but they are, at any rate, not unmeaning, and would, if true, throw real light on history. Nor, again, can any of the so-called laws propounded by Buckle be even compared with many of the speculations of De Tocqueville, whose views as to democratic progress come nearer to historical laws than any generalizations which have been made about the course of human destiny.

What we have termed a commonness of Mr. Buckle's mind comes curiously out when he criticises men of genius. Many hard things have been said, both justly and unjustly, of Bacon. He has often been called something very like a knave, but we doubt whether any one before or after Mr. Buckle ever dreamed of considering him a fool. Mr. Buckle, however, says out roundly: "The truth is that, while the speculations of Bacon were full of wisdom, his acts were full of folly," and develops this wonderful paradox throughout a page, which merely constitutes a portion of an argument to show that men of genius have always been incapable in the ordinary affairs of life. The same turn of mind led Mr. Buckle to adopt all the sentiments of the time in which he lived. In 1851, he apparently shared the then prevalent anticipation of a sort of industrial millennium. "None shared the illusions of that period more fondly than Mr. Buckle. He thought he had reached philosophically, and could prove as necessary corollaries of a certain condition of knowledge and civilization, the conclusion which numbers held without knowing why; and it was this train of thought which made the opening of 'The People's Palace' interesting to him." Mr. Buckle, in short, was neither a great historian nor a great historical theorist. His 'History of Civilization' consists, for the most part, of crude generalizations supported by a mass of ill-authenticated facts.

Must we, then, conclude that the admiration excited by the 'History of Civilization' at its first appearance was altogether without ground, or that Mr. Buckle had no claims to the fame which he certainly obtained? There is no necessity for answering this question in the affirmative. Mr. Buckle's work was admired, not because of its great depth or great originality, but because it expressed in a clear and decisive form ideas, some of them true, some of them false, which had gradually been coming into vogue, and greatly needed clear expression. The works of many thinkers and the whole course of speculation had led the world to feel that the time had come for attempting to make history something more than a chaotic mass of anecdotes. Rightly or wrongly, it was universally felt that human actions must be at last made the subject of general rules, principles, or laws. To this conviction Mr. Buckle gave the boldest and most decisive expression. He did not discover a single historical law; he made scarcely a suggestion about the progress of civilization which was not to be found in the works of some more original thinker; but he proclaimed, in a voice which all men were forced to hear, that human actions were the subject of laws, and could therefore be made the object of science. Years will probably elapse before reflecting men will be able to decide what amount of truth the dogma so loudly proclaimed by Mr. Buckle contains. But no one can doubt that his doctrine represented in an exaggerated form an opinion which had many adherents. Mr. Buckle became a prophet, not because he was an original thinker, but because he uttered other men's thoughts with singular vigor. Both his defects and his merits combined to fit him for the post of spokesman for opinions which needed utterance. His utter want of subtlety, the very commonness of his mind, made it easy for him to get up wholesale, and without much discrimination, the doctrines of the teachers, such as Mill and Comte, from whom he derived his inspiration. His solitary life seems to have incapacitated him from entering into views opposed to his own; but this very incapacity enabled him to put forth his own views, or rather the views of his school, with a decision which can hardly ever be attained by men who have the misfortune to see two sides of a question. Moreover, though he seems to himself, and probably to his admiring friends, a person whose individuality and originality led him into constant conflict with common opinion, his whole tone of mind was in keeping with the ordinary sentiments of the day, and enabled him in fact to obtain a hearing when a man whose sympathies had really been opposed to the feelings of the age would have failed to get an audience. Let it, however, in justice to Mr. Buckle, be added that his success arose in part at least from some great merits, which were rather moral than intellectual. His enthusiasm for his work was of itself a quality as rare as it is great. It was combined with a fearless honesty, which led him to speak out opinions

which others would have muttered below their breaths. These two qualities taken together gave him even intellectually a certain kind of boldness, in which the writers of our day are singularly deficient. He was, so to speak, a man who could always utter what he had to say in a good, ringing, manly tone. He was certainly not a great man, yet he had about him a species of intellectual bigness. His work was like himself. His 'History of Civilization' is, to use a child's expression, a great big book. It was in every way too big for use, and reminds us of Robinson Crusoe's huge boat, which was too clumsy to be removed from its place, which never was of any use to its maker or any one else, but remained high and dry upon the land, a monument of a waste of labor and of dauntless energy.

RAY ON INSANITY.*

DR. RAY is well known as by far the ablest advocate, if not the inventor, of the new doctrines of criminal responsibility as affected by insanity and insane delusion, which have obtained so widely of late years, and his views are worthy of attention, not only by reason of their undoubted honesty, and the ability with which they are supported, but because the author, to his own confusion, as we think, assumes the functions not only of a physician but of a lawyer and judge, and sharply, not to say ferociously, criticises the legal theories generally applied to cases in which insanity is alleged as an excuse for crime. His last book, in which the author carries his peculiar views to even a broader application than in his 'Medical Jurisprudence of Insanity,' is principally made up of papers printed at different times in the *American Journal of Insanity*, the *American Law Review*, and other journals, and it is for this reason, perhaps, that we notice in it certain contradictions and inconsistencies of statement which might not have found place in a more homogeneous work.

The papers in which Dr. Ray's peculiar opinions find strongest expression are those on "The Causes of Insanity," "Objections to Moral Insanity Considered," and "The Trial of Rogers." The first of these contains many shrewd and valuable criticisms of popular fallacies regarding the causes and beginnings of insane disease. The writer believes that the causes assigned for the existence of insanity, are often but the occasions of the development of insane tendencies which had previously remained concealed and unsuspected. He forcibly says: "Taking up the first hospital report within reach, and turning to the table of causes, I find in it *hard work, fear of poverty*, and *jealousy*, to mention no others. We shall scarcely find any warrant, I think, for believing that the incidents here named can, in the nature of things, exert a morbific influence on the brain. A poor man can have no apprehension of poverty, while, in the rich, it must be a morbid feeling of course—part and parcel of the disease of which it is alleged to be the cause. Jealousy, in process of time, gradually increasing, may become a form of mental disease; but to call it the cause of insanity is very like saying it is the cause of itself. Hard work may produce that exhaustion of the vital energies which favors the development of insanity, but directly it cannot injure the brain."

Dr. Ray, as the above passage with its context shows, takes an exclusively medical view of his subject; he regards insanity simply as a disease, generally having its roots in the patient's constitution; and clearly holds that mere eccentricity, morbid imaginations, and insanity as popularly understood, are but degrees of the same thing. Forgetting that the law can take cognizance of insanity only as manifested in overt acts, he insists that the courts shall adopt his definition of it, and shall, in all cases, accept its existence when proved as an excuse for crime, or, at least, throw the burden of proof upon those who contend that it is not such an excuse. That the adoption of such principles of criminal procedure would result in frequent subversions of justice, it needs no argument to prove.

But it is in the paper on "Objections to Moral Insanity Considered" that Dr. Ray announces his most startling theories. He begins by grossly mistaking, as it seems to us, the position of his opponents. No one, whether physician or lawyer, cares to dispute that moral insanity may exist—impossible as it is to distinguish it in practice from moral depravity—and we suppose that every one understands by it such an aberration of the moral perception, however arising, as renders its subject unable to perceive in his own acts, or those of others, any essential quality of right and wrong. The law says that such insanity shall not discharge its subject from the consequences of illegal acts committed under its influence, so long as reason, will, and legal knowledge remain—that is, so long as the patient is *morally* insane merely—the reason of the rule being, that the law does not care what the criminal's own private views of right and wrong are, but has for its function the prevention of acts which the community has, for good reason, agreed to consider wrong. The Sentimentalist, believing that every man should be a law unto himself, revolts at this view, and concludes that no one should be punished for acts which his own conscience, no matter how perverted, approves. Dr. Ray seeing the difficulty into which he is led, and ashamed to advocate the bald sentimental view of the matter, fortifies his position by the naked assertion, that moral insanity *must, of necessity*, control the will and reason, and so render its subject irresponsible. He says: "The force of these morbid impulses cannot be resisted, because it is greater than that which the intellect was designed, in the normal constitution of things, to control." That is, we are not to expect any one to control his impulses to wrong, if it seem to him right, because this would be expecting too much of human nature. If this assertion be true, and it is wholly unsupported by proof, or in our opinion by reason, all controversy is at an end. If the disease controls the will, it is intellectual insanity, not simply moral insanity, and, of course, renders its subject irresponsible.

Thus assuming that moral insanity is a perfect excuse for crime, Dr. Ray goes on to consider what evidence will prove its existence, and advances opinions more startling if not more novel than any we have met elsewhere. His theories lead directly to the result that all criminal acts are *prima facie* insane. In other words, the very crime of which the defendant is accused, is the best proof of the insanity alleged to excuse it. He says: "The single criminal act may sometimes be very unsatisfactory proof of insanity; *but we apprehend that such cases are very infrequent.* . . . When a woman previously distinguished for every virtue takes the life of her darling child, am I obliged to stifle my instinctive convictions of her insanity merely because no other symptom of mental disease has been witnessed? . . . In a large proportion of cases, the crowning proof of insanity is drawn chiefly from the character of some single act, the previous and subsequent manifestations of disease being too obscure and equivocal to possess much significance. Now, it is going but one step further, and that not a very long one, *to regard such act as the sole proof.*"

After such expressions of opinion as we have quoted, we are not surpressed to find that Dr. Ray's views regarding insane delusion, so far as they can be determined from their somewhat vague expression, are equally remarkable. The rule laid down in the McNaghten case—the leading English authority on the subject—is that the existence of delusion shall relieve its subject from the consequences of acts committed under its influence, when and when only, if the delusion had been a reality, the act would have been excusable. In the famous Rogers case, Chief-Justice Shaw, of Massachusetts, adopted the same rule, adding to it the qualification that delusion may in some cases be an indication of *general mental unsoundness*, and, in such cases, may excuse criminal acts committed under its influence, even although the facts of the delusion, if real, would not have excused them. This rule has ever since been accepted by judges and lawyers as clear, definite, and precise, and as perhaps the best exposition of the law on the subject yet given, and worthy the reputation of its eminent author. Yet Dr. Ray somewhat flippantly says:

> "He [the Chief-Justice] hesitates and vacillates, returns again and again to qualify what he has said, or to add some condition for the purpose of enlarging or restricting the range of its application. As might be supposed, his ideas lack precision and lucid arrangement, and the reader is not always sure of his exact meaning."

It is evident from Doctor Ray's expressions on the subject, though his views are not precisely formulated, that he will be satisfied with nothing else than a rule which shall declare that delusion in all cases, on whatever subject, shall be taken as an indication of such insanity as renders its subject irresponsible. He would establish a new maxim in law—*insanus in uno, insanus in omnibus*—and make it embody a presumption which shall be conclusive in all cases.

We had marked for criticism many other passages in this new book, but space will not allow extended comment upon them. Yet one or two of the author's suggestions in regard to criminal practice, can hardly pass unnoticed. Dr. Ray seems to be of the opinion that the lawyers in the community are in league to break down and insult medical experts upon the witness-stand, and proposes as a simple remedy, that "the testimony of experts should be given in writing, and read to the jury without any oral examination. It would thus be deliberately prepared, its explanations well considered, and its full force and bearings clearly discerned. It would go to the jury on its own merits, no advantage being gained by the superior adroitness of counsel in embarrassing the witness and pushing his statements to a false and ridiculous conclusion." The obvious answer to this proposition is, that testimony which cannot stand the crucial test of cross-examination is generally worthless, and that such a practice would be in direct contravention of the rule of law, which requires that the accused, in criminal cases, shall be confronted with the witnesses against him.

Dr. Ray also proposes for general adoption, a rule which obtains in

*. 'Contributions to Mental Pathology. By J. Ray, M.D., author of "Medical Jurisprudence of Insanity," and "Mental Hygiene."' Boston: Little, Brown & Co. 1873.

the State of Maine, that, whenever insanity is alleged as a defence by the accused, "the prisoner shall be sent to the State Hospital for the Insane, that he may be observed by the superintendent, who shall report to the court respecting his mental condition." The working of this rule in Maine, as stated by the author, seems a sufficient reason for rejecting it. It appears that of thirty persons so placed under surveillance in the last twenty-one years, twenty-four were pronounced insane, and that all of these escaped punishment. To believe that, during a long series of years, five-sixths of all the persons alleging insanity as an excuse for crime are really irresponsible, seems preposterous.

It is pleasant to be able to close this notice, by thanking the writer for the full and interesting paper upon the insanity of King George the Third, which appears to be written very carefully, and collects much interesting matter from scattered authorities, which cannot be separately consulted without the expenditure of much labor, time, and patience. It is an article in which the peculiar theories of the author find no room for expression, and is of interest alike to the physician, the lawyer, and the historical student.

Key to North American Birds, containing a concise account of every species of living and fossil bird at present known from the continent north of the Mexican and United States boundary. Illustrated by 6 steel-plates and upwards of 250 woodcuts. By Elliott Coues, Assistant-Surgeon United States Army. (Salem: Naturalists' Agency. 1872. Large 8vo, pp. 361.) —This book will be welcomed by both the amateur and the professional ornithologist as a valuable contribution to the list of books treating of North American birds. While Dr. Coues has modestly called his work a "Key," it is in reality much more than the title indicates. A brief description of each species is given, but sufficiently full to enable the student to identify a specimen, while in many cases the descriptions are quite complete. The book will doubtless serve as a manual to many who find their recreation in observing and studying the habits of birds, and have not the means to purchase more costly works. For this class it is admirably adapted. The first 57 pages are devoted to an Introduction, which contains a large amount of valuable information, indispensable to the beginner, upon the anatomy and classification of birds. It gives plainly and concisely the instruction needed. The following, taken from the definition of a bird, page 1, will answer for a sample: "A bird is an air-breathing, egg-laying, warm-blooded, feathered vertebrate, with two limbs (legs) for walking, two limbs (wings) for flying or swimming, fixed lungs in a cavity communicating with other air cavities, and one outlet of genito-urinary and digestive organs," etc. Following the Introduction is an Artificial Key, which enables the student to find the genus to which his specimen belongs. The Systematic Synopsis occupies nearly 300 of the 361 pages of the book. The feature of most benefit to professional ornithologists is the numerous references to other authors which Dr. Coues appends to the description of each genus. These references are not only to standard works, but refer as well to articles in the proceedings of scientific bodies and in scientific periodicals, bringing the bibliography of the subject down to the latest date. A few pages are devoted to a Synopsis of the Extinct Birds of North America, for which the author acknowledges his indebtedness to Prof. Marsh. Those who possess Dr. Coues's work, and have not the necessary means of reference, will regret that the author did not insert in tabular form the classification he has adopted, at least down to Orders. Such a table would have been a great convenience to many. Some wrong references to figures are found upon pages 50 and 51, although such errors are very few. The Synopsis, we should have remarked, professes to be hardly anything more than a dry anatomical description of the several birds, and of course does not give the graphic description of habits and songs which one finds in Audubon or Nuttall. Still the most characteristic points in these respects will always be found stated briefly and forcibly; and once in a while even a bit of pleasing sentiment occurs, as the agreeable description of the greenlets, p. 119. The typographical execution of the work is every way worthy of it, and the cuts are very clear and instructive.

Fine Arts.

THE RECORDS OF PRIMITIVE CIVILIZATION.

IN a most interesting note on the Cesnola collection, sent to the *Academy* by Mr. Newton of the British Museum, we have not only the authority of one of the first living authorities in matters pertaining to classic art, for the distinct recognition of a relation in antique work here clearly shown, and of the most marked importance in an archæological art-genesis, but a strong confirmation of a theory for which I have for several years contended, and of which the famous jeweller and archæologist of Rome, Castellani, has made a direct statement—namely, of a primitive and independent Etrurian source of civilization. Mr. Newton says:

"In all the sculptures from Cyprus which can be fairly referred to the Archaic period, and which are not close imitations of the Egyptian, the type of features is very peculiar. The forehead recedes; the cheek-bones are high; the cheeks sunken; the nose, chin, and lips unnaturally pointed; the facial angle much sharper than in early art. It is singular that we must look to Etruria rather than to the Greek world for types analogous to the Cyprian. The two curious reclining figures in painted terra-cotta from Cervetri, in the Campana Collection of the Louvre, have the same receding foreheads and angular features, as may be seen by comparing the engraving of the figures in the 'Monum. of the Roman Inst.' vi. pl. 59 (see Brunn, 'Annali,' xxxiii. pp. 398, 399), with the figure and head from the Cesnola Collection (*Revue archéol.* N. S. xxii. pl. 23)."

And again:

"From the history of Cyprian sculpture, as developed in extant monuments, we may infer that art in this island passed through the same phases as in Etruria. First came an Archaic style, with a certain affinity to the Archaic Greek style, but differing from it very decidedly in the type and in many details of costume and ornament. Then succeeded a Hieratic style, through which archaic types were mechanically reproduced, and, after that, the disturbing influence of mature Greek art. It is probable that it was part of the Hellenizing policy of Evagoras to invite Greek artists to Cyprus, just as the Carian princes, ruling over a mixobarbaric population, drew Athenian art to Halicarnassus. But it should be noted that neither in Cyprus nor in Etruria does this Greek art, introduced at a late period from without, appear to have flourished except as an exotic. It gave rise to no school of Greek artists in Cyprus."

This question of the relation of Etruscan art with that of the rest of the East is one of the most dark and interesting which our study of the field offers. Castellani ('L'incivilmento primitivo') takes the distinctly intelligible ground that the Etrurian and Pelasgic races are the same, and, in the brochure alluded to, collects many curious antique traditions which favor the theory. Indeed, a general impression seems to have obtained amongst archæologists that there was a connection between the Etruscans and the Pelasgi which cannot be traced out positively, but may be by negative indications. Mux Müller inclines to doubt if the Pelasgi were a distinct race, and refers the name to *πελαιός*, an archaic form of *παλαιός, old*, as meaning the ancient people. But in objection to this we have the distinct assertion, by one of the Greek historians, that there was, on the coast of Italy, still a tribe who spoke the Pelasgic language—at once intimating that there was a race and a language, and that that language was nearly extinct. Moreover, we have the unmistakable evidence of the records of Karnak that the Cretan Pelasgi and the Tyrrhenian Pelasgi had on more than one occasion invaded Egypt, and in one case an alliance is indicated between these two branches of the great nation and the Dorians, whom slighter but not worthless evidence makes to have been related to the Pelasgi. The Tyrrhenian Pelasgi unquestionably point to the Etruscan; and as to the Cretan Pelasgi, we are told by the Egyptian record that they settled in the Delta of the Nile, and moved into Palestine as the Philistines (Pilisti or Pilisgi of the Karnak record), and abundant tradition informs us that the Pelasgi swarmed over the whole Archipelago of the Ægean, and were the earliest noted population of many of the islands even as far as Samothrace, while we find their work in the walls of nearly every ancient city site on the shores of the Ægean, the recent excavations at Troy showing its walls to be Pelasgic.

For confirmation or disproval of the traditions we have two scientific methods of examination—that by language and that by the works which have come down to us. The actuality of a Pelasgic language seems to be scarcely a matter of reasonable doubt in face of the declaration of the historian above alluded to, and the distinct recognition of the different branches of the "divine Pelasgi" by Homer and the early Greek traditions, as actual participants in the Trojan war—on both sides, since the Pelasgic

tribes settled on the coast of Asia had naturally become allied to Priam. If, then, there was an affinity between the Phœnicians and the Pelasgi, is it not more probable that the latter were the emigrant founders of the Phœnician tribe than the reverse? May we not, then, set aside for the moment all the commonly accepted theories that the Pelasgi or Etruscans were Phœnician colonists? I shall be able, I think, to show good reason why we must do so, and that all the so-called Græco-Phœnician sites or settlements are really more likely to have been Pelasgic than Phœnician, if the two are not identical.

The argument from language is almost nothing, and the little that we can deduce is negative. We have seen that the Pelasgic language was nearly extinct in historical times, so far as the coasts accessible to Greece are concerned, but that it differed materially from Greek we may judge. The Pelasgi were evidently "the ancient people," as Müller's derivation makes them to have been called—not allied by race to the Hellenes; and, if really an earlier offshoot from the primeval stock, the language was most certainly deficient in analogy to the Hellenic. Remark here how singularly suggestive is the fact that the Etruscan language has no analogy with any other known, nor can the inscriptions, though collated with everything hitherto discovered in ancient or modern language, be deciphered. Does not this prove a separation so ancient (if not a distinct derivation) from the other branches of the human race as to antedate all recognizable affinity, and entitle all the newcomers of the Aryan stock to call them "the old people"? This single fact presents a strong argument for the identity of the two races, based on philological affinities or the reverse, and a slight confirmation by indirection may be found in the fact that the Etruscan letters are Greek, but not the most ancient form of known Greek letters, and, therefore, are presumably borrowed from Greece in the later interchange of ideas consequent on an emigration from Greece to Etruria—the Etruscans probably having no alphabet or written language when they made the acquaintance of the Hellenes. This fact at once indicates that the language was imperfectly developed, since it had not taken a literal form, and accounts for its having been dropped as a language in favor of the Greek wherever the Pelasgi came in contact with Greeks, and losing all individual existence. It also proves by implication that there could have been no connection with Egypt or Assyria in the remote periods, as letters would scarcely have failed to have found their way with the earliest intercourse, and that, therefore, the Etruscans did not come from the East; and adds another weight to the conjecture that they were Pelasgi—no other than the Etrurian Pelasgi of the records of Thothmes III.

But, in default of clearer testimony from language, we turn to that of monuments, and on this Castellani is high authority. His hypothesis is that Greece was civilized from Etruria, and, in the course of my own investigation, I was fortunate to hit on a curious confirmation of this theory, not to my knowledge recorded.

There is from Etruria, down through the great series of plains as you go toward Naples and thence to Brindisi, a line of Pelasgic remains, every hill-site along the flanks of the Volscian and Sabine hills showing in the substructures that peculiar polygonal masonry of which the walls of Segni are a most marked example and in excellent preservation. Traces appear in the Ionian Isles, along the coast of the Morea, and all through Crete and the Archipelago, with a culminating importance and perfection in the Argolide, where Tiryns, the reputed birthplace of Hercules, represents the first style, Mycenæ the second, and Argos the third. At Mycenæ is the celebrated relief of the Lions over the city gate, a piece of sculpture which shows distinctly the characteristics of an art archaic but tolerably advanced, and far superior in spirit and design to anything which Egypt or Assyria had produced long after this had been executed.* It is made in an exceedingly hard limestone, which is popularly mistaken for flint, and is as difficult to work as porphyry, and which in that climate has preserved its worked surface uninjured. I climbed up on the relief to examine it closely, and found from the undercuttings that the manner of execution had been the same as the early Etruscan intaglii—by a series of drill-holes, having the intervening stone apparently removed by attrition, and with no vestige of the use of an edged or pointed tool. With this light I commenced an examination of all the so-called Pelasgic remains on the Argolide, and found that without an exception they appeared to have been done by attrition or percussion—the latter for facing the masses, and the former when a smooth surface or any ornament was wanted. The so-called Treasury of Atreus (which, by the way be it said, is precisely similar in construction to the Mamertine Prison in Rome, an Etruscan work of mythical date) is made from masses of a conglomerate split out by some unknown means, and rudely faced by rubbing together; nor here, even in the interior of the building, can the mark of cutting tools be found.

On the top of the ruins of the citadel of Argos, which shows the latest form of polygonal building—the polygonal stones laid three or four deep in courses with parallel sides—I found a stone which had, by some modern force, possibly exerted during its siege in the war of Greek independence, been overturned so that its ancient under-side was exposed, and this showed the whitish marks of facing by blows by a blunt instrument. It was evident in all the examinations I could make that the Pelasgic builders did not know the use of cutting tools for stone, yet the earliest known Egyptian work shows a perfect knowledge of stone-cutting.* If, then, civilization came from Egypt to Greece, how is it that the civilizers left the tools of their trades behind them, and that a work so far advanced in its knowledge of art as the Lions of Mycenæ should have been done without cutting tools? And why, moreover, should these works, one and all, show so much resemblance to those of Etruria, and so little to those of Egypt or Assyria?

We can now see the importance of these indications, pointed out by Mr. Newton, of an Etruscan art in Cyprus, taken in connection with the numerous city walls as well as the tradition of the Pelasgi. Newton's recognition of Etruscan work where we know the Pelasgi to have been, but have no intimation that the Etruscans ever were, is an unmistakable confirmation of the theory of the identity of the people called by these two names.

If further evidence of this kind, as to the identity of the Pelasgi with the people who brought the primitive arts to Greece, is worth noting, it may be found in the close resemblance of the tombs in the island of Ægina, off the coast of Morea, to those of Etruria, which is one of the most curious and, on any other theory, unaccountable coincidences in the history of civilization. Müller opposed to my deductions the fact that the primitive building of every people which is obliged to work with a stone of the character of the limestone of which the Pelasgi made their walls, is more or less of the same polygonal type, but this is a natural and accountable coincidence. What is not accounted for is the fact that all other rude forms of polygonal work are of undressed stone, while the Pelasgic is dressed to a nicety, and fitted perfectly; but when it is a stone that permits quadrate forms, as in parts of the ruins of Mycenæ, the stones are parallelopipedons, and there is often carving, of which the Lions are the best example, and all done without the use of edge-tools. This proves a high degree of culture and civic organization, attained to in the most complete independence of the East, and makes it probable that, so far from the Etruscans and early Hellenes having borrowed the arts from the East, it was really the Pelasgi, their ancestors, who carried certain of the arts to the East; and that the Etruscan types of ornament and art-work found in Assyria were as likely to have been originally introduced by the Pelasgi as to have been carried by Phœnician vessels to Etruria—more likely, in my opinion, as the Pelasgic naval knowledge antedated that of the whole East, and probably by ages.

Castellani quotes a tradition saying that the Pelasgi—restless and wandering over the whole East without finding a secure home, building cities for uncultured and more energetic races, and then, as in Athens, being driven out of them barbarously—came to the Delphian Oracle to ask what they must do to escape their misery, and the oracle replied: "Return to your native land, Italy, and you will find rest."

In considering this migration of the Pelasgi, we must remember that it was not like a raid of the Goths and Vandals, who swept over empires in a few years, but a process of swarming from one hive to another, building, populating as they went; and when we consider the time it must have cost to build the walls of a single city like some of those on their track, we may conjecture the ages it must have taken to go from Italy to the shores of Asia.

In a future communication, I will try to connect and systematize the traditions and authorities by which I believe that this theory can be maintained.

W. J. Stillman.

* The earliest Egyptian sculpture is dated as of the 22d cent. B.C., that of Assyria in the 10th, while the building of Mycenæ is put by tradition at 1300 B.C., and that of Tiryns at 1379, an exactitude of date as fabulous as the manner of building, and, like all dates of Greek mythic origin, only of slight comparative value. Thus, Tiryns was no doubt built before Mycenæ, but by the same art, and on the same system of fortification; if instead of 79 years we put several centuries, we shall come nearer the progress made between the two cities, but if we add 500 years we shall not bring it back to the date of the cave tombs of Egypt, and we carry it further from the early work of Assyria; so that, reasoning from dates, we might conjecture that Assyrian art came from Pelasgi, who had, in Egypt, acquired the art of cutting stone, and who worked for the Assyrians as they had for Hellenes.

* There is an instance of polygonal masonry at Athens in the terrace-wall of the Pnyx, the antiquity of which has been disputed, as, notwithstanding its polygonal form, it is historically noted as the work of the Thirty in changing the place of the popular assemblies, so that the people might not have the sea before them at their meetings (Plutarch, Them. 19). Had the archæologists, in weighing the question, ever recognized this trait of Pelasgic work, they would have seen at once that the Pnyx wall is unmistakably modern, as the mark of the cutting-tool is seen in all the facing, which is of the fashion known as "rusticated"; and the work was never finished, as we see that the cutting of the stones from the rock each side of the Bema was interrupted, a part of the rock nearly detached still remaining. I think, therefore, that we may decide with Wordsworth that the present Bema is that of the Thirty, and the ancient Pnyx that on the crest of the hill.

THE FORTNIGHTLY REVIEW.

EDITED BY JOHN MORLEY.

$6 A YEAR, OR 50 CTS. A NUMBER.

CONTENTS OF THE MARCH NUMBER.

Are we Christians? By Leslie Stephen.—Servia and Its New Prince. By Humphrey Sandwith.—The Organization of a Legal Department of Government. By James Bryce.—On the Historical Element in Shakespeare's Falstaff. By James Gairdner.—On the Causes which Operate to Create Scientific Men. By Francis Galton.—The Game Laws and the Committee of 1872. By A. H. Beesly.—Rameau's Nephew. From the French of Diderot.—Critical Notices: 'L'Avere et l'Imposta.' By J. S. Mill.—'Biographical and Critical Essays,' 'Notes of Thought,' 'Jest and Earnest,' 'Memoir of a Brother,' 'Our New Masters,' 'Mountaineering in the Sierra Nevada,' 'Caliban.' By Edith Simcot.

Owing to the misunderstanding incident to the beginning of such an enterprise, the numbers have not appeared as promptly as there is every reason to hope subsequent ones will.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

A $2,000 GARDEN.

PLAY AND PROFIT IN MY GARDEN.

By Rev. E. P. Roe,

Author of 'Barriers Burned Away,' giving a record of the author's experience in gardening for recreation and profit, and showing how, in one season, he received $2,000 from the sale of fruit and vegetables raised on two and a quarter acres, beside an abundant home supply.

Will be published in April in one vol. 12mo, price $1 50, by

PHYSICAL LOSS AND SUPPLY.

Every physical or mental exertion is connected with a loss of substance of the body. Motion destroys a portion of the integrity of a muscle, sight a something from the retina of the eye, and "thoughts which breathe and words which burn" literally render effete a certain portion of the phosphorus of the brain. It is scientifically true that mental exertion induces an augmented waste of the phosphates. To supply that waste, and to restore the energy of your brain, there is no better remedy than Prof. Horsford's Acid Phosphate.

TO MY FRIENDS AND THE ART PUBLIC GENERALLY

Being under the necessity of making alterations to my Art Rooms at 88 Fifth Avenue, and having a Collection of Paintings entirely too numerous to properly show at any time in such small quarters, I have temporarily secured the use of the fine Gallery,

625 BROADWAY, NEAR BLEECKER STREET
(The well-known old Dusseldorf Gallery),

and avail myself of the opportunity to make a Public Exhibition of the largest, choicest, and most valuable Collection ever gathered by me.

The most of them were painted to my order, and many of them have never been exposed, being fresh from the easels of the artists.

They will be offered at PRIVATE SALE ONLY, and will be on view for a very short period.

To these will be added several very important works painted expressly for me by the most distinguished artists, received at various times but never publicly shown, and now kindly loaned by their respective owners.

THE EXHIBITION

WILL OPEN ON

THURSDAY MORNING, APRIL 17, 1873,

And continue each day from 9 A.M. until 9 P.M.

ADMISSION FREE.

Your early attention, good-will, and patronage is very respectfully solicited by yours most truly,

SAMUEL P. AVERY.

THE PERKINS SALE of Rare and Beautiful Manuscripts will take place near London, England, late in May.

BERNARD QUARITCH,
15 Piccadilly, London,

Has printed a List of all the principal articles, made after the late Mr. Henry Perkins's own notes, and has sent this List to all the leading Institutions and Book-collectors.

Commissions for this sale should be sent to Bernard Quaritch without delay.

NOTES ON ENGLAND.

BY H. TAINE.

"The Notes contained in this volume comprise the frequent observations of ten years. They were all revised after his last visit in 1871."

Price $2 50, post free.

THE WEEK IN TRADE AND FINANCE.

April 14, 1873.

THE money market opened on Monday comparatively quiet to what it had been the week previous, and everything denoted a tendency to greater ease; but towards the close there were rumors that the Grand Jury was about to summon before it a large number of brokers to give evidence in regard to the lending of money at usurious rates of interest in Wall Street. On Thursday these rumors became facts, some fifty brokers having received notices to appear before that body on Monday. The effect of this on the money market was to cause timidity among lenders, and on Saturday many held off from lending their money at any rate; while those who were not afraid to lend obtained as high rates as they chose to ask—borrowers being, at the same time, grateful for the accommodations. 7 per cent. per annum and ¾ per cent. "commission" was freely bid for the use of money till Monday, and loans were reported as high as 7 per cent. per annum and 1 per cent. commission. It is our opinion that, had not the preliminary steps been taken for the enforcement of the penalties of the usury law, the money market would have closed last week at very near the legal rate; but if the effect of its enforcement is to cause lenders to become hoarders of money, we trust that the Legislature will take notice of the fact, and promptly repeal the law. Once allow the lending of money at any rate of interest agreed upon, and the result will be that, when money is needed and rates are high in this city, it will be sent here, and competition will be created among lenders. But, on the other hand, if the usury law is to be continued and strictly enforced, it is very probable that foreign capital will be taken away from here and placed elsewhere.

Business in commercial paper has been slow, and will probably remain so until the present uncertain state of the call money market ceases. Rates on prime business names are 10 to 12 per cent., but at the close of the week rates on all grades appeared to be nominal.

From London the reports are favorable; money in the open market being easy at the advanced rates, and the Bank of England rate of discount remaining at 4 per cent.—not having been raised at the Directors' meeting on Thursday. The Bank of England lost £548,000 in bullion, and the Bank of France 250,000 francs, last week.

The bank statement for the week is favorable, the banks having made a gain of $1,220,500 in their reserves, and being now $2,025,300 below the legal amount required, against $3,245,800 the week previous. What has become of the currency brought to this city by the different express companies is a question that has puzzled the Street; the banks show a loss of $787,000 in deposits, and yet the amount of currency received from the interior during the week is estimated at between $5,000,000 and $10,000,000.

The following are the statements of averages for the past two weeks:

	April 5.	April 12.	Differences.
Loans	$273,534,000	$271,516,900	Dec. $2,017,100
Specie	15,664,400	16,134,300	Inc. 469,900
Circulation	27,715,800	27,714,400	Dec. 1,400
Deposits	187,687,000	186,899,200	Dec. 787,800
Legal tenders	34,940,500	35,493,800	Inc. 553,300

The following shows the relation between the total reserve and the total liabilities:

	April 5.	April 12.	Differences.
Specie	$15,664,400	$16,134,300	Inc. $469,900
Legal tenders	34,940,500	35,493,800	Inc. 553,300
Total reserve	$50,604,900	$51,628,100	Inc. $1,023,200
Circulation	27,715,800	27,714,400	Dec. 1,400
Deposits	187,687,000	186,899,200	Dec. 787,800
Total liabilities	$215,402,800	$214,613,600	Dec. $789,200
25 per cent. reserve	53,850,700	53,653,400	
Deficiency in legal reserve	3,245,800	2,025,300	Dec. 1,220,500

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$234,051,800	$37,465,100	$271,516,900
Specie	14,447,700	1,686,600	16,134,300
Legal tenders	31,551,400	3,942,400	35,493,800
Deposits	160,056,700	26,242,500	186,899,200
Circulation	27,671,400	43,000	27,714,400

With the exception of the maintenance of prices in the face of a very stringent money market, such as we have for weeks described, the stock market has presented no very noticeable feature. It is evident, from the way in which large blocks of stocks have been kept off the market, that they are in the hands of strong holders. The large holders have been the best aware that an attempt to sell stocks during the monetary stringency would have brought about a panic; they have, accordingly, made the best of it, and will have their stocks for sale when easy money and probably higher prices tempt the confiding public. The majority of the speculative stocks dealt in at the Stock Exchange are now selling up to and beyond their intrinsic value; and, should the market be advanced after the money "pinch" is over, we are inclined to the belief that the present holders will gladly sell out, and allow others to make what they can out of them.

Harlem, for some unaccountable reason, became weak soon after the terms of the lease of the road to the Central and Hudson were known, and the price declined to 120½ on Tuesday. This decline was followed by a reaction, and the stock touched 127 on Thursday, finally closing at 124 on Saturday.

The New Jersey Central directors decided to pass the quarterly 2½ per cent. dividend, usually payable April 1, for the very good reason that no dividend had been earned. The price of the stock, of course, immediately fell off, sales being made at 96 on Wednesday, which was the lowest point reached, against 101½, the price at the beginning of the week.

The following statement of earnings has been made by the Company, as well as explanation why the dividend was passed:

"A comparison of the receipts, expenses, and net earnings of the three months ending March 31 with the corresponding quarter of the previous year, gives the following results:

	1873.	1872.	Increase.
Receipts	$1,802,870 41	$1,483,442 87	$319,427 54
Expenses	1,070 988 79	981,254 65	89,734 14
Net earnings	$731,881 62	$502,188 22	$229,693 40

"The above shows the net result of the business for the present year to the 1st inst., to be $229,693 40 better than the previous year. Notwithstanding this, as the state of the money market has prevented the sale of bonds as rapidly as required, and the net earnings have been necessarily used for other purposes, the Board have deemed it judicious to defer the question of dividends till July."

St. Louis and Iron Mountain Railroad stock showed some signs of life towards the close of the week, and the price advanced to 88, after having been at 85 on Tuesday. The earnings of the road are reported to be largely in excess of those for a corresponding period of last year, amounting to a gain of about 45 per cent. for the month of March. With an improved money market, this stock will undoubtedly advance, as, on its merits and future prospects, the present price is really low.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending April 12, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	101¼ 102	101⅜ 101⅝	101¼ 102	101¾ 102⅜	Holiday.	100⅜ 102	157,800

Pacific Mail	56⅜ 57⅜	55 56½	55⅜ 57	56 57⅛		56 57	144,400

The Treasury purchased $500,000 5-20's on Wednesday, at 114.49 to 114.97; the price of gold at the time was 118. The total offers amounted to $2,428,950 at 114.49 to 115.99—all under par in gold.

The Government bond market was strong at the close of the week in sympathy with the firmness of the price of gold. Late in the day Saturday, there was a fractional falling off in prices, on account of the trouble in the money market.

It is reported that telegraphic advices from one of the directors state that £2,000,000 6 per cent. gold loan of the New York Central and Hudson River Railroad Company have been taken in London at a price equivalent to 105 in our currency. The report, so far as we have been able to ascertain, lacks confirmation.

The gold market has been rather quiet, with the fluctuations confined between 118 and 119⅛. The price fell off early in the week to 118, and very little recovery was made until Saturday, when the "bull clique" took advantage of the demoralized condition of the money market, and ran the price up to 119⅛, from which it declined to 118⅝, closing at that at 3 P.M.

The total imports for the week were $6,271,258. The specie shipments were $912,314, making a total of $15,505,820 since January 1, 1873, against $6,572,122 for the same period in 1872, $16,668,882 in 1871, $7,104,958 in 1870, $9,747,541 in 1869, $18,744,575 in 1868.

The Nation.

NEW YORK, THURSDAY, APRIL 24, 1873.

The Week.

THE *Herald* correspondent telegraphs news from Vienna, which the State Department does not contradict, and indeed acknowledges to be in part true, that some of the American Commissioners have purchased their places for small sums. We are told there is to be a "rigid enquiry," but we suppose this will be small consolation to the decent people of the country, on which this horrible succession of American swindles, jobs, frauds, and rascalities is bringing shame and disgrace. The American Minister in London stands before foreign society tainted with complicity in putting a fraudulent mining scheme on the London market; General Fremont—"Fremont so true" of 1856, "The Pathfinder of the Rocky Mountains"—has been convicted and sentenced to five years' imprisonment by the French courts for complicity in a gigantic fraud, by which hundreds of poor French peasants were induced to buy worthless bonds of a bogus Texan railroad on the strength of a forged certificate. The present Vice-President of the Union and his predecessor have been convicted at least of public equivocation, and the majority of the members of the last Congress deliberately walked off with a large sum of public money to which they were not entitled, and even those who voted against the scheme are actually pocketing the plunder and defying the popular indignation. No wonder that the smaller fry are found buying their places, and generally cozening and cheating. When is this state of things to end? most people are asking; but as yet there is no articulate reply.

The President has, it is reported, appointed Mr. Dorman B. Eaton, of this city, to succeed Mr. Curtis, and Mr. Shellabarger, of Ohio, to succeed Mr. Medill, in the Civil-Service Commission. If this is true, a better selection than Mr. Eaton could hardly have been made; we wish as much could be said of Mr. Shellabarger, who has been a little too deep in "politics" to have much of the reforming spirit left in him. Mr. Curtis's place was first proffered to Mr. Frederick Law Olmsted, who, however, felt obliged to decline it, owing to the absorption of his time by his present duties. If the President has picked out Mr. Eaton, he undoubtedly furnishes strong proof of his sincerity; but, as we have often said before, nothing will be complete proof but the use of his power in such manner as to carry out the spirit of the rules in those matters to which they do not strictly apply as well as in those matters to which they do. There may be excuses for the failure to appoint Benedict, or for the failure to extend the operation of the rules thus far to any city but New York, or even for apologizing to members of Congress for appointing postmasters in their absence; but there is and can be no excuse for reappointing Casey at New Orleans, or for selecting the Rev. Dr. Newman and Mr. R. J. Hinton as "inspectors of consulates," neither of them knowing anything more about consulates than about chemistry. Just now, in fact, the popular faith in General Grant's good faith is languid; the selection of Mr. Eaton will do something to revive it; but then we must wait to see whether Mr. Eaton's name is used to cover continual "suspensions" or aberrations, or to give real strength to the machinery of reform.

Within the past week there has been savage fighting for the possession of the Lava Beds between the United States troops under General Gillem and the Modocs. A gang of Warm Spring Indians are now among those enlisted for the attack on Captain Jack, and they do their fighting after the Indian fashion. "Scar-faced Charley" was found wounded, in a cave, with a squaw. The squaw was at once turned over to the captors, and Scar-faced Charley's scalp taken. "Our side," the report from which we take these facts states, "has now five scalps in this fight." As we write, there is some doubt whether the Indians are still in the Lava Beds or whether they have escaped; but it seems clear that they have lost a good many men, and have been obliged to abandon their original position, if such desultory fighting as this can ever be said to have had one. Meantime, two of the worst bands of the Apaches have come in and surrendered to General Crook in Arizona.

There has been another horrible massacre, in Louisiana, at a place called Colfax, in Grant Parish, even worse than the New Orleans massacre of 1866, and a not unnatural consequence of the position in which Congress left the dispute between the two factions over the government of the State. The committee of the Senate made it pretty clear in their report that the Kelloggites who were in possession of the government were usurpers; but, as the Administration at Washington had recognized them, and refused to repudiate them unless Congress passed a bill or resolution to that effect, it made no change in its policy. Consequently, the people of the State are left divided into two bodies, one of which has the authority of the Committee of the Senate for believing that its rights under the election have been disregarded, and the other the authority of the Federal Government for believing that its rule cannot be shaken. A state of things better fitted to produce explosions of violence, particularly in view of the feeling of hostility prevailing between blacks and whites all over the cotton States, could hardly be imagined. Accordingly, when two persons, one black and the other white, claim the office of Sheriff in Grant Parish, the black, far from appealing to the court, takes possession of the court-house with a band of armed followers of his own color, South American fashion, throws up a rude entrenchment round the building, and bids his white competitor come on, hoping, as he has since confessed, that he would be able to hold out till the row drew the Federal troops to his assistance. Whereupon the white, nothing loth, collects his followers also, and besieges his rival, and, as a last resource, fires the court-house, and his men shoot the garrison down as they try to escape from the flames, until 150 have been slaughtered, with the loss of one white man killed and one wounded. There is now a great outcry for the punishment of these "demons," but there was no outcry, or at least no adequate outcry, over the disgraceful connivance at Washington at the state of things which has converted Louisiana into a South American republic, and destroyed all confidence on the part of all classes, not only in the law, but in a popular vote which produces the law. How can any people put any confidence in anything but rifles who see men like Casey and Packard not only kept in office, but put back into office when their term has expired; and the majority in Congress refusing to do their duty in the settlement of the local difference, and going calmly home with their pockets full of stolen money, without one word of rebuke or disapproval from the President?

Mr. Adams's *éloge* of the late William H. Seward, delivered last Friday at Albany, has great merits as a funeral oration, and is a valuable addition to the history of the country. We cannot attempt, in the limits of a paragraph, to give a complete analysis of it, but, in brief, the picture given of Mr. Seward is that of a great statesman. Early foreseeing that slavery was to be the most important question in politics in his time, and having developed a philosophical theory of government in which the perpetuation of slavery found no place, he threw himself heart and soul into the anti-slavery camp, where he remained fighting for the cause till its triumph. In Mr. Lincoln's cabinet, his was the leading mind, and it was his firmness in withstanding the popular clamor at the time of the Trent affair that in reality saved the nation from dissolution—inasmuch as the retention of Mason and Slidell would undoubtedly have resulted in an unsuccessful war with the combined forces of England

and the Confederacy. He receives great praise, also, from Mr. Adams for his admirable organization of the diplomatic service during Lincoln's Administration, and his adhesion to Johnson is explained as having been caused by his desire to carry out the policy of reconstruction already begun under his first chief. His failure to do so was his misfortune, not his fault. In regard to the nomination of Lincoln, Mr. Adams thinks that Seward's behavior at the time was marked by unparalleled magnanimity. This portrait is very different both from the popular view and from the view taken by the anti-slavery Radicals. Mr. Adams's oration is all the better because of this difference, and because we know, what in the case of most oratorical efforts of the day we never do know, that the orator means exactly what he says. The "occasion" seems to have been a success. Among the audience were a number of distinguished people; those "chiefly interested" would appear from the list to have been Frederick Douglass and Millard Fillmore.

The Phelps-Dodge affair has taken a most singular turn. Judge Noah Davis, it will be remembered, alleged, in the most explicit manner, that he, who was District Attorney when the charges were made against the firm, was fully satisfied that the intent to defraud the Government never entered their heads, and that, therefore, although their infractions of the law made a million dollars' worth of property—or, in other words, all goods described in the invoices with regard to which the infractions occurred—liable to forfeiture, he suggested that the firm should pay, in settlement, only $260,000; or, in other words, only the value of the goods on which the full duty was not paid; and this although, according to his own showing, the Government had only lost $3,000; and on this basis a settlement has actually been made. But, as the *World* has pointed out, infractions of the revenue law must be made "knowingly," and with intent to defraud, in order to render an importer liable to any penalty at all. According to the statement of the law-officer of the Government, therefore, the Dodges had committed no legal any more than moral offence, and had incurred no liability, small or great, beyond their payment of $3,000. So that when he recommended them to pay $260,000, he recommended them to submit to a piece of pure extortion to the amount of $257,000, the greater part of which would be divided between the rascally clerk who informed against them, the District Attorney, the Collector, and the Treasury detective. This of course places the Treasury in a very awkward position, and accordingly Mr. Boutwell comes out with a flat denial that he ever agreed to any compromise as long as the firm made formal protestation of their innocence, and that it was only when they withdrew this that he agreed to the settlement. But the question still remains, why, if he believed the firm guilty, did he accept one-quarter of the amount to which, if the firm was really guilty, the Government was entitled? There appears little doubt that the firm was guilty of a great indiscretion in agreeing to compromise at all, and in not publishing their statement months ago; but it is to be said in their defence, as we think it is easy enough to show, that no firm, however rich or powerful, can fight the Government with heart or hope under the detective system with which the Treasury is now armed, and which enables a gang of knavish politicians to work the ruin of any house by mere accusation.

The New York Charter passed the Assembly as amended by the Senate, and though by no means so bad as it was feared it would be when the Custom-house publicists framed it, yet as it is hardly likely to stand more than a year or two, it is mainly interesting as a specimen of low political "work." It is, of course, nominally a "reform charter," but, as its promoters frankly avowed, the only "reform" they have, or ever had, in their minds is one which should give all the offices to the Republicans. They have not been able to carry out all their designs. The appointing power, instead of being given to the Board of Aldermen, leaving the Mayor only the right of confirmation, as they intended, is given to the Mayor, leaving the confirmation to the Aldermen. The Board of Assistant Aldermen, which they acknowledge to be useless, they order to be abolished, but, characteristically enough, not until 1875, having uses of their own for it in the interval. We have often called attention to the disgraceful intrigue by which they got Mayor Hall, on the eve of his going out of office, to appoint certain creatures of their own to several important offices for terms of five years. To prevent the frustration of this scheme, the new charter directed the retention of these and other persons in office; thus, as the *Evening Post* pointed out, making the legislature exercise the executive power of appointment, in an act purporting simply to supply a formal organization to a municipal corporation. Among the other remarkable persons retained in office is "Hank" Smith, the notorious police commissioner, on whom the *Times* used to publish five abusive articles per week in 1872, and whose crimes and rascalities it charged to the account of Mr. Greeley. This awful "scoundrel," however, is now in high favor with the Ring. They have actually retained him in office by special legislation. The charter also cuts down the salaries of the judges by nearly $7,000, a provision which seems plainly unconstitutional, and which we trust the Governor will maturely consider. The members of every Ring, and indeed all politicians, seem to have an instinctive hatred of an upright bench, somewhat like the loathing of rats for a terrier. From first to last, no member of the Ring, or any of their agents in the Legislature, made the slightest pretence that they were consulting the interests of the city or the wishes of its people. They openly avowed that they were serving "the party," and nothing else—a piece of candor which does them much credit. They also dealt very characteristically with a bill, prepared by Mr. D. B. Eaton, abolishing the election of the police justices, and giving the appointment of these officers to the judges of the Superior Court and the Mayor. As this would have taken the offices out of the category of "spoils," they adroitly reserved the appointment for the Mayor and Aldermen, which, if it does not secure it for "the party," at least gives the managers what they call "a chance."

Some enterprising paper ought to publish, in the form of a pamphlet, the "testimony," as it is called, given by Mr. Thomas G. Shearman before the Erie Investigating Committee. On Saturday, he came before the Committee, and once more revealed the character of Attorney-General Barlow, who seems, on the whole, to be one of the most inscrutable corruptionists now living. Mr. Shearman says that in 1872 he told J. H. Comer that he "believed" that a certain contract, made by Fisk with Belden & Hays, was made for the benefit of General Barlow; that he got this information from Fisk, Gould, and Belden, and several other persons whose names he declined to give, as they were his clients; that on one occasion Gould said he "had fixed him," or "would fix him"; that Simon Stevens told him (Shearman) that at one time General Barlow wrote a letter to General Sickles demanding a large sum of money—he thought $100,000. To be perfectly accurate, however, Mr. Shearman added that the statement was not made by Stevens, but by David Dudley Field, in the presence of Stevens, who assented to it by remaining completely silent. He further "understood" from Stevens that he (Stevens) had learned of money coming to General Barlow from the hands of Mr. Wheeler H. Peckham, and he said that Stevens also "intimated" that he knew what became of the $1,500 paid to Speaker Smith. Better than this even, Watson, the new president of the road, had told Shearman that "a friend of General Barlow" had begged on his behalf the very $10,000 he afterwards declined taking. "Witness is further willing to swear," as the formula goes, that he has publicly charged General Barlow with secret affiliations with no less a person than Judge Barnard. The next day explicit denials were made by Watson, Peckham, and Stevens—so that the whole damnable story may now be considered confirmed. The *Tribune* says, *apropos* of all this, "that there is a plain question of veracity at issue between Mr. Shearman and the Attorney-General." There is "a plain question at issue" between these gentlemen, but it is certainly not one of veracity. What remains to be ascertained is the precise degree of somebody's

mendacity. There has evidently been a great deal of what the *Tribune* calls "architectural lying" in the matter, but not by Barlow, or Watson, or Peckham, or Stevens.

The strikes predicted some weeks ago are now going on, though in a rather half-hearted way. They are marked by the usual features—a convention to demand the enforcement of the eight-hour law, followed by interviews between the leading agitators and the local politicians; several assaults on men who have taken the places of the strikers—one extremely brutal, resulting in death and two arrests for murder; and the turning out of the police to protect the new men. The places of the men on strike in the works of the New York Gas Company have been supplied by Italians, and as to the present condition of the company all sorts of conflicting rumors are afloat. One is, that the old men are signing petitions to be taken back; another, that the New York Company have made a connection with the Manhattan Company, and is really getting a large part of its supply from the latter. It is also said that the Italians work very well; while, on the other side, the story is that they cannot stand the work. Nothing has yet occurred at all to be compared in gravity with the building strikes of last year.

One of the most significant features of those strikes was the formation of an Employers' Committee, for the purpose of ascertaining the possibility of making combinations of capitalists to resist the demands of labor, like the combinations made by labor to resist the encroachments of capital. Of course, such combinations are just as possible in one case as in the other; the entire capital of a State or a country, or indeed of the world, employed in a particular industry, might form a union for the purpose of holding out against strikes, and could do it all the more easily, as it could afford to waste more time and money in the struggle. Something of this kind, it seems, is already organized in the boot and shoe trade for the purpose of resisting the Crispins—one of the most powerful trade-unions in the country. The organization is called the "Employers' Protective Association." In Cincinnati last Friday, a Crispin committee called on Mr. Kilsheimer, of the firm of Kilsheimer & Sondheimer, shoe manufacturers, and asked Mr. Kilsheimer whether he belonged to this association, and, on his telling them that he did not, he was requested to sign a paper stating the fact, and promising never to belong to such an association. This, he said, he was willing to do, provided they would sign a similar paper promising never to molest him in his business, and to belong to no organization interfering in the relations between employer and employed. This, however, was trifling with a grave subject, and his hands immediately struck. Meantime, co-operation makes small progress. Herbert Spencer, we observe, considers the co-operative experiment, judged by its results, a failure, though he is a firm believer in its ultimate success. He thinks that the laboring class do not at present show that spirit of fairness and sense of justice which is its necessary basis; and their treatment of their own fellows in their labor organizations shows clearly what a very poor article "workingman morality," like all class morality, is.

The Rev. John J. Keane, of St. Patrick's Church, Washington, writes to the *Catholic Review* that the *Nation's* statement that Patrick O'Brien's commutation was granted by the President "on the prayer of the Catholic clergy," is a "baseless falsehood," and asserts that "no Catholic clergyman had anything to do with the commutation." We shall only say that if Father Roccofort, of St. Aloysius' in the same city, will assert that he did not intercede for O'Brien, whether with the President, or with anybody having, or supposed to have, influence with the President, he will come nearer settling the matter than Father Keane has done. Father Keane refers us to Mr. Ben Butler for the real truth of the affair, but this must be a joke. The Massachusetts moralist, we believe, denies all connection with the commutation.

The resignation of the Presidency of the French Assembly by M. Grévy is likely to prove an important advantage to the Republicans in the Chamber, as there is perhaps not one of them who unites so much devotion to the cause to so much ability and weight of character, and he has, of course, for all practical purposes, been *hors de combat* as long as he was in the chair. Beyond this, the relative positions of the various parties or factions seem little changed. But a measure lately introduced, and which commands general support, proposing to make voting at elections compulsory, is perhaps the most valuable illustration of the peculiar condition of French politics which has been supplied for a long time. The total absence of interest in politics generally on the part of the great body of the French people, is perhaps the greatest difficulty in the way of carrying on a constitutional government, and it has produced one result during the last two years which curiously affects the state of parties. The one political duty which the average French elector feels bound to perform—or rather the one use he feels bound to make of his vote—is to support the Government for the time being, opposition to the Government being, in his eyes, and for obvious reasons, necessarily revolutionary in its character and aims. Therefore, when the prefect and the maire call him to the polls, he goes and votes the Government ticket, no matter on what subject, as the only way known to him of securing peace and tranquillity, or, as he calls it, "order." It follows from this that the Government can always, or almost always, command a majority; and when, therefore, it was proposed last year to submit the question of a republic or a monarchy, to "the people," the Right strongly resisted it, because M. Thiers had given in his adhesion to the Republic. On the other hand, when, as in some of the elections last fall, the Government abstains from all interference, the bulk of the electors think the affair is of no consequence, and do not vote, so that the result gives no indication of the state of public feeling. To remedy this, therefore, it is proposed to extract public opinion from the voters by the threat of fine and imprisonment. The Left support the measure on general principles, and the Right because it seems likely to ensure them good majorities. But the Right has been, on the whole, losing ground for some time back. It was the insubordination and obstreperousness of some of its leading members which led to M. Grévy's resignation, and they have committed the folly of quarrelling with the Government for expelling Prince Napoleon from France—a matter on which their own "record" is bad.

The incident which led to M. Grévy's resignation was in itself significant. The Government is greatly troubled to know what to do with the city of Lyons, which is and has been a focus of insurrectionary sentiment ever since the first Revolution. It has revolted against all governments in turn; during the German war, it virtually established its independence, proposed to put itself at the head of a new confederation, to be called the "Ligue du Midi," and amused itself by overturning the rulers of its own choice about once a week. Moreover, it is profoundly Communistic. The swarm of workingmen who compose the bulk of its population are opposed to both labor and capital, to riches and poverty, and in fact to nearly every social arrangement yet tried by man, and have never yet succeeded in making a clear statement of what they want. Keeping Lyons quiet is therefore one of the most puzzling tasks of every French administration. A committee of the Assembly containing a majority of members of the Right has, therefore, reported strongly in favor of a Government scheme for electing the Municipal Council by districts instead of on a general ticket, so as to divide or weaken the socialistic element, and one of the representatives of the city stigmatized their report as "bagage," or bosh, which the Marquis de Gramont, on behalf of the Right, denounced as an "impertinence," for which he was called to order by M. Grévy, whereupon the Right, instead of submitting, rose at M. Grévy with shouts and gesticulation, and he left the chair in disgust, and refused to come back.

THE SUPREME COURT RIGHTING ITSELF.

THE Supreme Court has recently delivered two opinions, giving an able and clear construction to the Thirteenth, Fourteenth, and, incidentally, to the Fifteenth Amendments to the Constitution of the United States—opinions which are important as showing that the Court is recovering from the war fever, and is getting ready to abandon sentimental canons of construction. In the principal case there is, indeed, this drawback—that it was rendered by a divided bench; but no impartial lawyer, we fancy, will hesitate to say that the strength of the Court, as well as of the argument, was on the side of the majority.* In order to understand the scope of the decisions, it is necessary to trace the suits in which they have been rendered to their origin.

On the 8th of March, 1869, the Legislature of Louisiana, for the ostensible purpose of localizing a business which, as then carried on, was dangerous to the health of the inhabitants of New Orleans during part of the year, passed an act incorporating the Crescent City Live Stock Landing and Slaughter-House Company, and giving this company a monopoly of the business for twenty-five years within a certain district. The act of incorporation directed the discontinuance of all other yards, slaughter-houses, and stock-landings, and the new company were granted the right to levy a limited toll on all cattle slaughtered at their shambles. The grant of this monopoly naturally caused great dissatisfaction among the butchers of New Orleans, and they at once cried "Ring," and went into the courts for relief. Whether the cry of "Ring" was founded in fact we have no means of knowing, as the question of corrupt motives could not be examined by the courts. The Supreme Court of Louisiana sustained the monopoly, and the butchers took their case into the courts of the United States, and asked for relief, first, on the general ground that the company was an odious monopoly, an imposition on the great body of the community of New Orleans, and particularly on the butchers of that city; second, that whether it was odious and an imposition or not, it was certainly a monopoly, and that no State legislature could grant a monopoly; third, that the act of incorporation violated the Constitution of the United States by creating an "involuntary servitude" forbidden by the Thirteenth Amendment; fourth, that it "abridged the privileges and immunities of citizens of the United States," "denied" to the plaintiffs "the equal protection of the laws," and "deprived them of their property without due process of law," contrary to the provisions of the Fourteenth Amendment. The United States Circuit Court (Judges Bradley and Woods) decided the monopoly to be unconstitutional under the Fourteenth Amendment, on the ground that, although it might be difficult to define the "privileges" which a State is forbidden to abridge, "we may safely say that there is no more sacred right of citizenship than the right to pursue unmolested a lawful employment in a lawful manner. It is nothing more nor less than the 'SACRED RIGHT OF LABOR'." (The capitals are Judge Bradley's.) The act incorporating this company, interfering with the butchers' and live-stock men's sacred right of labor, was unconstitutional and void. We called attention to this decision at the time it was rendered (see *Nation*, No. 283, Dec. 1, 1870), for it seemed to us then, and we are gratified at being able to infer from the decision of the Supreme Court that we were right, that it was very broad, and that its effect would be to strike a blow, "not only at a New Orleans slaughter-house company, but at the existence of almost every franchise in the United States."

The Supreme Court has now decided, first, that it is not by any means obvious that the monopoly is "odious," or an "imposition," because it may very well be beneficial to the health of the city; second, that the mere fact that it is a monopoly is not against it, because both the Parliament of Great Britain and the legislatures of this country have "from time immemorial" exercised the power of creating monopolies and granting exclusive privileges. Then, approaching the subject of the Amendments, the Court gives what we may hope and believe to be a final and authoritative interpretation of the new articles adopted since the close of the war, saying, at the outset, that they must be construed together, and in the light of the historical facts which led to their adoption. Their interpretation and construction is this. The Thirteenth Amendment means, in the first place, that not only slavery as popularly understood, but all kinds of involuntary servitude, such as peonage, servile apprenticeship, or serfdom, are prohibited. Under these circumstances, the Court intimates pretty broadly that the article in question can have, in the mind of a sensible person, no sort of bearing on the case at bar.

In the second place, the process of reconstruction undertaken under Johnson developed the fact that in some of the States, notwithstanding the formal recognition of the new régime of freedom, the condition of the slave-race would, unless further protected by the Federal Government, "be almost as bad as it was before":

> "Among the first acts of legislation adopted by several of these States in the legislative bodies which claimed to be in their normal relations with the Federal Government, were laws which imposed upon the colored race onerous disabilities and burdens, and curtailed their rights in the pursuit of life, liberty, and property to such an extent that their freedom was of little value, while they had lost the protection which they had received from their former owners from motives both of interest and humanity. They were in some States forbidden to appear in the towns in any other character than menial servants. They were required to reside on and cultivate the soil without the right to purchase or own it. They were excluded from many occupations of gain, and were not permitted to give testimony in the courts in any case where a white man was a party. It was said that their lives were at the mercy of bad men, either because the laws for their protection were insufficient, or were not enforced."

These circumstances led Congress to pass the Fourteenth Amendment, and to require its adoption by the States lately in insurrection:

> "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States. Nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

Finally, to make the enfranchisement of the negroes perfectly secure, the Fifteenth Amendment was passed, giving them the right of suffrage. Taking all the amendments in connection, we see that they had but one purpose—the absolute abolition of slavery, and the elevation of the negro to an equality with the white citizen, and of course they must be construed in the light of this historical fact.

Coming now to the discussion in detail of the Fourteenth Amendment, the Court says that the first clause relating to citizenship has only this effect—to make the negroes citizens of the United States; that it does not destroy, but, on the contrary, continues and keeps alive the distinction between citizens of States and citizens of the United States. "Not only may a man be a citizen of the United States without being a citizen of a State, but an important element is necessary to convert the former into the latter. He must reside within the State to make him a citizen of it." We may suggest, as an example of such a citizenship, the case of a foreigner who becomes naturalized in the United States, and then acquires a residence or domicile, without denaturalizing himself, in Havana or Mexico. He would not be a resident of any State, but he would still be a citizen of the United States. It is only the "privileges and immunities" of citizens of *the United States*, then, which States are prohibited by the Fourteenth Amendment from "abridging," and "if there is a difference between the privi leges and immunities belonging to a citizen of the United States as such, and those belonging to the citizen of a State as such, the latter must rest for their security and protection where they have heretofore rested."

The Court then proceeds to enquire what the words "privilege and immunities" are which the butchers allege to have been "abridged," and decides that they are nothing more nor less than those mentioned in the original Articles of Confederation, and in the second section of the fourth article of the Constitution,

* The dissenting minority was composed of the Chief-Justice and Justices Swayne and Field, as well as Justice Bradley, who delivered the opinion in the Circuit Court.

"the citizens of each State shall be entitled to all the privileges and immunities of citizens of the several States." Precisely what these privileges and immunities are in detail the Supreme Court declines to explain, apparently not for the same reason which once led Mr. Cushing, when Attorney-General, to say that "it is difficult to explain what this section means, if indeed it means anything" (Ops. of Attorney-Generals, vol. viii. p. 302), but they decide that the phrase means in a general way "civil rights," and it was these "civil rights" on which the argument of the butchers was founded. Their argument, therefore, amounted to this, that the civil rights of the citizens of the various States which were formerly protected by the State governments are, since the adoption of the Fourteenth Amendment, under the protection of the United States—a conclusion which would put an end to federal government, do away with State laws, courts, and constitutions, and throw pretty much the entire business of the country into the hands of Congress and the officials of the United States. Not only would these rights be "subject to the control of Congress," whenever in

"its discretion any of them are supposed to be abridged by State legislation, but that body may also pass laws in advance, limiting and restricting the exercise of legislative power by the States in their most ordinary and usual functions, as in its judgment or discretion it may think proper on all such subjects. And still further, such a construction, followed by the reversal of the judgments of the Supreme Court of Louisiana in these cases, would constitute this Court a perpetual censor upon all legislation of the States on the civil rights of its own citizens, with authority to nullify such as it did not approve as consistent with those rights as they existed at the time of the adoption of this Amendment."

This monstrous conclusion the Court refuses to adopt. It then goes on to give one or two instances of what are the "privileges and immunities" of citizens of the United States which are placed under the special care of the Federal Constitution by the Fourteenth Amendment, and mentions the right of citizens to demand the care and protection of the Federal Government when on the high seas or within foreign jurisdiction; the right to use the navigable waters of the United States; the right (conferred by this very Fourteenth Amendment) to acquire State citizenship by residence. But the Court thinks it useless to pursue this branch of the enquiry, since it is "of opinion that the rights claimed by these plaintiffs in error, even if they exist, are not privileges and immunities of citizens of the United States within the meaning of the clause of the Fourteenth Amendment under consideration." Of the other clauses of the Amendment, about "due process of law" and "the equal protection of the laws," the Court makes short work, saying, in conclusion, that there is no purpose apparent in the three amendments of changing the relations of the States and of the Federal Government:

"Under the pressure of all the excited feeling growing out of the war, our statesmen have still believed that the existence of the States, with their original powers for domestic and local government, including the regulation of civil rights—the rights of person and of property—was essential to the perfect working of our complex form of government."

The other case to which we have referred was that of Mrs. Myra Bradwell, a Chicago lawyer, wife of another Chicago lawyer, and editor of the Chicago *Legal News*; of course a firm believer in the cause of woman. This lady, in pondering the additions made to the Constitution of the United States by the Thirteenth, Fourteenth, and Fifteenth Amendments, came to a conclusion somewhat different from that reached by the New Orleans butchers, but interesting as showing the effect produced by legal study on the female mind. Mrs. Bradwell having applied to the Supreme Court of Illinois for a license as a practising lawyer, was refused her petition, on the ground that under the State Constitution only men could be lawyers. She immediately appealed her case to the Supreme Court at Washington, arguing that the decision of the Illinois judges established "involuntary servitude," abridged her "privileges and immunities," etc., etc. It is a rather ludicrous illustration of the character of the woman movement, that a prominent female agitator should have seized the opportunity to prove the fitness of her sex for professional life by taking for her first important case one which she must have known the court would decide against her, unless she either supposed that they were likely to be influenced by personal solicitation and clamor, or else that they were all gone crazy. The head-notes of the decision of the Court in these two cases might read in this way:

Held, that the Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution of the United States, abolishing negro slavery and the power of the States to make distinctions or discriminations between the civil rights of negroes and whites, do not restrict the right of States to regulate the slaughtering of cattle within their limits, nor abolish the jurisdiction of State governments over their citizens, and transfer it to the United States, nor entitle female citizens of the United States, as such, to practise law in State courts.

A PARTY WITHOUT NEWSPAPERS.

THE disaster which befell the Liberal movement last year, followed by the decisive defeat at the polls of the Liberal-Democratic combination, certainly does not betoken at this time a successful reorganization of parties. The naturally narrow and proscriptive nature of the Administration leaders in the Senate led them to improve the occasion by reading such men as Senators Trumbull and Schurz out of the party, in the manifest belief that no one would again dare to indulge in "desertion," and that party discipline could be enforced on all persons, whether leaders or rank and file. The outlook has not been a promising one for rational improvement in the affairs of government, and the Liberal disaster has seemed a pretty effectual dam in the current of reform. If a new move had to be made on the political chess-board immediately, it would undoubtedly be a failure; but in this country a great deal can happen politically in three years, and there are certain indications now that the current is again moving. Of this latter fact the Washington *Republican*, an organ of the Administration, has just narrated unconsciously some most conclusive evidence. It seems that Mr. Schofield, the member from Pennsylvania, has been "interviewed," and, among other things, has said that the daily press rules the country, and that no party can stand against it; that it cannot be resisted on a great issue except for a short time and at enormous expense; and that in the last campaign it was only "by prodigious efforts with speeches and public documents that we succeeded in carrying the election against a powerful press syndicate." "But," adds Mr. Schofield, "we can't afford to keep up the effort, and they can. The New York *Tribune*, Cincinnati *Commercial*, Louisville *Courier-Journal*, Chicago *Tribune*, and St. Louis *Republican*—only five papers—were able to put the whole Republican party to its trumps."

Commenting upon these utterances of Mr. Schofield, the Washington organ says:

"One of the greatest dangers, in our opinion, that threatens the Republican party at the present time is the loss of its newspapers. In whatever direction we turn, we find that the newspapers that formerly stood by and sustained the party have either assumed an attitude of hostility or are cold and indifferent toward it. The party could easily afford to lose some of the journals above-mentioned. The *Tribune* is, to be sure, a severe loss to the party, one which thus far has not been supplied, and is not likely to be. The *Times* had the chance to be all to the Republican party that the old *Tribune* was, but it missed the opportunity. The success that attended it in the late campaign was entirely fortuitous.

"The party can win against these journals in future campaigns as it won in the last one. But there is no use in denying that other journals of lesser influence and reputation are following their example and arraying themselves in hostility against the party. We are not advocates of strict party discipline, either so far as the public journals or party nominations are concerned. On the contrary, we believe in a very wide latitude of opinion and of action; but the newspaper symptoms at the present time indicate something more than the mere waywardness of individual caprice and captiousness. The fact is, the Republican party has not acted as it should have acted towards its newspapers during the last couple of years. Only last session of Congress, it passed a law abolishing the exchange system, for that will be the practical effect of it so far as the poorer papers are concerned. There never was a more fatal blunder committed by the Republican party. When the newspapers are compelled to pay postage upon their exchanges, they will naturally only take those of the widest circulation. The smaller papers will be entirely ignored, and the journals that are now in opposition to the Republican party will have a greater indirect influence than they have at present. It is plain to any one who even pays the slightest attention to the subject, that the Republican party is losing its newspapers day by day, and for the most obvious reasons in the world."

It is apparent that by the term "Republican party" the Administration editor means the party managers; and that his idea of

keeping newspapers is very much like other men's idea of keeping horses; viz., by buying them and then providing them with the necessary quantity of provender. It is well enough known, however, that the great papers of the country could not afford to sell themselves for all the pay and patronage that the party managers have at their disposal, and that when such papers change their course, and steadfastly and successfully pursue it, the new course indicates the changed convictions of their readers. Newspapers help people to form opinions, but they are also one of the surest indicators of what people think. Messrs. Morton and Conkling have declared that they can get on without "deserters"; can they also get on without newspapers? They have said pretty emphatically that they are opposed to reform. Where will they be politically when the readers of all these papers have determined that there shall be progress and improvement in the administration of our government?

The political view in America, in fact, discloses an extraordinary paradox, in this, that, with the most representative government in the world, no people in the world are at this time so grossly misrepresented by their rulers. We say the most representative government in the world, because the principle of representation permeates every part of the system. Constitutional conventions for founding the organic law; legislatures for enacting statutes; boards of supervisors for county affairs; common councils for city and village ordinances; the upper as well as the lower house of every legislative assembly, all are representative; so that there is nothing established in the way of an enactment in this country, from the framework of government to a police regulation against throwing dirty water in a gutter, which is not directly done by the representatives of the people. It is also the most representative government on earth in the quick facilities it gives for changes in representation. In only one legislative body do the members hold office so long as the members of the House of Commons, and in it there is a peculiar facility for change which the House of Commons does not possess. In the English body, the election being over, the House remains the same until another election comes to call together a new House; but in the Senate, one-third of the members go out of office every second year, and a fresh representation comes or is liable to come in. What with Congressional elections, State elections, town and city elections, the political society of this country seems to be in a constant state of fermentation, in which the representative particles are always coming to the surface. Nevertheless, with all these means at hand by which society, without fear or restraint, can make its wishes known in a single year, and change the character of its legislative assemblies in not more than two years, its honest wishes are most effectually thwarted by the persons theoretically chosen to give those wishes legal effect. And it is pretty much the same whether we look at the State or the Federal Government—at Albany, or Harrisburg, or Washington.

The members of the Republican party belong largely to the intelligent classes of society, are neither weak nor apathetic, constant readers of newspapers, and familiar with all the evils of the time. They have given stronger evidences of their independence of party leaders than any party that ever existed, cutting loose from Mr. Seward and Mr. Chase, from Mr. Sumner and Mr. Greeley, with a decided hand, at the moment when those gentlemen began to lead in a direction that was not approved. It would therefore seem to a stranger the easiest thing in the world for such men to go to the polls and vote against the managers of their party. But the question then arises, for whom shall they vote? and it is this which is the problem of the situation.

Hardly had the war ended when the Northern leaders of the Democratic party resorted to their old trick of getting the South into hot water. In this they succeeded so well that in a few months they destroyed all confidence at the North in the professed sincerity of the South, and ended in bringing down upon the unhappy Southerners fresh woes in the form of military and carpet-bag governments. During these years the loyal voters of the North felt that they could not assume the risk of confiding the grave issues of the war to Democratic management, and they have given a remarkable example to the world of a people who, knowing the value of money and the grievance of excessive taxation, and who are moreover too devoted to the pursuit of wealth, nevertheless resolutely consented to be cheated and robbed by their public servants rather than imperil the newly-acquired rights of the ignorant and poor and uninfluential freedmen. It was this settled conviction in the public mind which compelled the Democratic managers to forego last year even a platform of their own.

At present the conviction is rapidly gaining ground that the freedmen have learnt enough of the political ways of white men to be able to take care of themselves. But now a new cloud looms up in the Republican mind, in consequence of the peculiar materials and management and history of the opposite party. The Democratic party is made up largely of the two extremes of great cities—of a few gentlemen of fortune and of the ignorant and degraded populace—the "dangerous classes" of European society. These extremes coalesce; the rich set because of their instinctive love of things as they are, the ignorant because of their instinctive hatred for things as they should be. The Democratic party is also a party without a policy—a party of mere negation, which never has anything positive to offer, which was opposed to the war, opposed to the prosecution of the war, opposed to emancipation, opposed to the constitutional amendments, and which never rises higher than an obstinate opposition to everything that is done or attempted by its adversary. Its history is too intimately interwoven with secession and the rebellion, and its associations have been too close with the men who brought on the rebellion and are morally responsible for it. There is also an apparent timidity in the managers of the party, a want of principle or of moral courage, an instinctive fear, perhaps, that the ignorant ranks which they lead and seem thoroughly to control will really not be led too abruptly out of their old paths, nor constrained into supporting any new policy of affirmative usefulness. It is difficult to conceive of any other reason which can make them persistently adhere to a policy which has confessedly no end but that of inevitable defeat. They seem to know that their troops cannot be trifled with, and that if they would remain generals, they had better make no attempts to cross the prejudices of vice and ignorance. Hence it is that the Republican mind instinctively hesitates, and will long continue to hesitate, before it will consent to hand over the country to politicians as unscrupulous as its own, having behind them all the material in the land which is the least fitted for the responsibilities and sacrifices of self-government. Hence it is that the Republican politician instinctively feels that he can give his audacity pretty full swing without running any great risk of losing his place. Hence it is that Messrs. Morton, Logan, and Conkling dare to force the President into the abandonment of the one reform to which the party was pledged, while the entire respectable press of the party is slowly wheeling into the unfriendly ranks.

The question therefore is, how can the Republican citizens stop the maladministration of Republican leaders without throwing the government into more unscrupulous hands? Of course, no party can maintain itself with the whole intelligent press of the country for three years arrayed against it; and when once the press adopts a policy and meets with opposition, it is not apt to be overmoderate in its counsels. It is not easy to predict what shape the movement will assume, nor to foretell at what point it will be willing to halt; but if the editorial statement we have quoted from an Administration paper be true, then it is certain that a movement has begun, spontaneous, unforeseen, long before a Presidential election, and on the heels of a disastrous defeat, which is laying the broadest and strongest foundation for a future party, by drawing to itself the sympathy, if not the support, of the entire intelligence of the people.

BARON RICHTHOFEN'S TRAVELS IN CHINA.

I.

WITHIN the last fifteen years a good many Europeans have travelled in the remote parts of China, and among them there has been none better fitted by nature and education for the work of an explorer than Baron Fried-

rich von Richthofen, a Prussian geologist, half an American, however, by virtue of his long residence in the United States among the mountains of California, and his close friendship with our own eminent geologist and mining engineer, Professor Whitney of Harvard College. Baron Richthofen has a keenness of observation, a precision in generalizing from specialties, a soundness of judgment, which give for the general reader a value and interest to his accounts which a geological treatise would not alone possess. But the most useful basis for a traveller in countries where the character of the people as well as the chances for change and progress are mainly affected by the natural conditions of the land, is a thorough geological education, and in that department of science he is acknowledged to stand in the first rank.

Of the eighteen provinces of China, those that lie upon the seaboard have long been well known. In each there is a port open to foreign commerce, and the residents at those ports, commercial and missionary, traverse them through their length and breadth. Behind these is another tier of provinces less known, then still another, and finally a fourth tier, the most interesting of all, and forming the western side of China proper. These provinces border upon Mongolia, Thibet, and Burma, are very mountainous, abounding in picturesque scenery, and one of them, Szr-chwan (or Szechuen), is the largest in extent and one of the richest and most populous in the Empire. This western tier also, including those in the northwest, which lie rather nearer the seaboard, hold the greater part of the coal and minerals of China, adding greatly to their interest.

The members of the foreign mercantile communities in China have always taken an active part in collecting information and promoting researches in the country, and, in the summer of 1869, the Chamber of Commerce of Shanghai sent a delegation of its members on a journey into Szr-chwan to ascertain its capabilities and the possibility of reaching it with foreign steamers by the way of its great water-road, the Yangtze River. Foreign steamers at present run on that river to the great central mart of Hankow, 600 miles from its mouth. The delegation found that the navigation was easy for 400 miles further, but, to reach the heart of Szr-chwan, there were still 420 miles, and these lead through gorges and over rapids of the most dangerous character, and almost impassable except for short and shoal vessels, such as are used by the Chinese. The great difficulty of improving the communication, without which the extension of the residence privilege to Szr-chwan was of doubtful advantage, and the indisposition of the Chinese Government to increase the facilities for foreign intercourse, prevented any practical result from this effort, though the information obtained was of great value.

Soon after this enterprise, the Chamber, aided by subscriptions from individuals, raised the sum of about taels 6,000 sycee, the equivalent of about $10,000 in our money, for a general and superficial exploration of the coal-bearing and mining districts throughout the north and west of China, this time in the interests of general knowledge. The especial object in the subscription was to avail themselves of the services of Baron Richthofen, who had offered to give them without remuneration, if enough money was provided for travelling expenses. After some preliminary excursions, Baron Richthofen entered upon his principal journey, the report of which to the Shanghai Chamber of Commerce, made in May, 1872, we now propose to review.

He left Peking in October, 1871, intending to pass through the remote provinces of Shanse, Shense, Szr-chwan, and Yunnan, and perhaps finally descend to the sea through Cochin China or Burma, far to the south. This journey would run along a line from 1,200 to 2,000 miles from the coast line, through very interesting provinces, entirely free from the effects of contact with Europeans, and some of them the scene of the earliest incidents in Chinese history. Owing to the troubled state of the country, he did not get beyond Szr-chwan, returning to Shanghai down the Yangtze. The party consisted of the Baron, his foreign interpreter, and his Chinese servant. They travelled on Chinese horses, their baggage sometimes carried in carts and sometimes on pack mules.

Leaving Peking, he first examined the coal-beds near that city, passed into Mongolia, travelling northwest, spent two weeks there, and re-entered China proper in Shanse at a town called Ta-tung-fu. The table land (or steppes) of Mongolia is separated from China proper by a belt of rough mountain peaks, where the diversified country which drains to the sea suddenly ceases, the land rises between 5,000 and 6,000 feet, and the observer finds himself upon the boundless grassy plain of Central Asia, without rivers or outer drainage, without mountains for hundreds of miles, without cultivation, and inhabited by the same race that followed Genghis Khan and Attila. The Great Wall runs through the rugged border country, paying no regard to mountain peaks or valley depths. It is now in ruins, except at certain passes, and the Chinese settlers have penetrated far beyond it into Mongolia. The two races do not, however, intermarry, and the Chinese advance only by pushing the Mongols before them. As the latter are constantly outwitted and cheated by the cunning traders of the former, there is no love felt for the intruders, and the Baron justly says that "they may become terrible if their dormant force is wielded by some strong controlling power."

As contrasting the life of the two nations, the following extract is interesting:

"After having seen for days nothing but grass land, with here and there an isolated Mongol camp, and with numberless herds of cattle, sheep, camels, horses, and goats grazing around shallow basins, with an undrained pool in the centre, one arrives quite unexpectedly at the edge of the plateau, with an altitude of about 6,000 feet, and overlooks the large flat basin of Tung-nin-kwan. Although only 250 feet below the edge, it forms part of the other system, and is drained to the sea. The Chinese settlers have within a few years advanced to this valley from below, bringing with them their domestic habits, their industry, their implements of agriculture, and their commercial spirit. It teems with scattered villages, the houses of which, roughly built of loam, could, in November, scarcely be discerned between the high grain stacks which surround them. On the same extent of ground where a short time ago a few Mongols earned a scanty subsistence by feeding their herds on spontaneous vegetation, a Chinese population probably amounting to thousands not only finds the means of subsistence, but exports produce to the neighboring districts of China and to the Mongols themselves.

"The contrast between nomadic and agricultural life is seldom so strikingly exhibited, and however strongly a hasty visit to the 'Grass Land' may predispose the mind in favor of the frank and hospitable Mongol, that single sight is sufficient to illustrate the superiority of the hard-working Chinese, though the level be low at which the race has stopped on its former road to progress."

Entering the fertile and important province of Shanse, near the capital city of Ta-tung-fu, the Baron crossed it from north to south, leaving it at the fortress and town of Tung-kwan on the Yellow River. This province is noted for the production of iron and salt, and is also throughout a coal-bearing region. It is of great elevation, its general altitude being 5,000 to 6,000 feet above the sea. The great peculiarity, however, is its soil, which is the singular formation called *loess*. This is supposed to be a sub-aerial deposit, in contradistinction to alluvial bottom lands, which are the deposit of water. It is found where there is no outward drainage, and is, to quote the words of the Baron, "the collective residue of uncountable generations of herbaceous plants, assisted by the large amount of material which was spread over the plain by wind and water, and kept there by vegetation." It is defined as "a solid but friable earth of brownish-yellow color, and, when triturated with water, not unlike loam, but differing from it by its highly porous and tubular structure." "It is full of fossil *land* shells, and contains bones of quadrupeds, but no remains of either marine or fresh-water shells." The loess covers whole sections of country, high and low alike, sometimes much over a thousand feet in depth, smoothing down excrescences, and giving a soft and rolling character to the surfaces. It is the only cultivated ground in the north, after leaving the alluvial plains and valleys, and but for it great portions of those northern provinces would have been waste. It is of extraordinary fertility, needing only rain for continuous crops, so much so that, after cultivation for probably 5,000 years, it still yields full returns for the seed sown! The only manure is fresh loess, either by turning over or throwing on a few inches from ridges at the sides of the fields. Baron Richthofen thinks this property of regenerating itself is due to the great porosity of the loess, which enables it to absorb gases from the air in large proportion, and also to draw to the surface, in heavy rains, fresh supplies of the fertilizing constituents of the soil from great depths.

It is not stratified, except where it has been redeposited by water, and its tendency to vertical cleavage and its tenacity cause singular peculiarities in the countries where it exists. Wherever water runs, it cuts deep channels with steep sides, from forty to two hundred feet deep. Some of the river courses are sunk six hundred feet, with sides so steep that the river is inaccessible. These ravines traverse the whole land, ramifying into branches, and these into branchlets, until the country is fairly impassable, except on the worn paths. Up to its borders, merchandise and produce are carried in carts, but nearly throughout the formation the only methods of conveyance are men's shoulders or pack-animals, which, in North China, are generally mules or donkeys. Over one pass the Baron met, by computation, more than 2,000 pack-animals in one day, and over another fully 5,000 donkeys, all fully laden, conveying merchandise from the south to the north. The paths through the loess country, where not pursuing the course of a ravine, ascend by zigzags the intervening ground, and descend at the next ravine, and so on, constantly ascending and descending precipitous inclines. The inhabitants throughout the region live in caves cut in the walls of loess, the doorways perhaps edged with brick, and these walls are so lasting that the caves are often handed down to generation after generation. The walls of the caves are lined with cement made from a marly substance found in the loess

itself, and many of them are well lighted and comfortable, warm in winter and cool in summer. To quote again:

"High up on a rock of earth, steeper than any rock of stone, stands the temple of the village on a small fortress, which affords the villagers a safe retreat in times of danger. The only access to such a place is by a spiral staircase dug out within the mass of the bluff itself. In this yellow defile there are innumerable nooks and recesses, often enlivened by thousands of people, who dwell in caves dug out in the loess. Through every gully they climb up to their fields, each of which is a small terrace for itself, enclosed by vertical walls on two or three sides, and descending in another wall to the next field below. Looking down a slope of loess, nothing is visible but fine green fields, looking up, all is yellow and cliffy, because only the naked vertical walls of the terraces can be seen."

The loess extends to very high land (in some places, under the Baron's observation, reaching to 8,000 feet), but, wherever it is, it is cultivated. Owing to the ease with which it is ploughed, and the little need for manure, the country recovers its prosperity after desolation by war in a way unknown in alluvial countries. In Nganhwei, for instance, after the Taeping rebellion, the alluvial country for many hundred miles still lay in reeds and jungle ten years after the rebel hordes were swept away. But in Shense, in the loess country, where also there was a frightful slaughter, and only one-tenth of the people returned to their villages, two years sufficed to see the whole land again under cultivation. The description of loess is completed by the following extract from another portion of Baron Richthofen's account, where he is referring to the celebrated basin of the Wei:

"Everything is yellow. The hills, the roads, the fields, the water of rivers and brooks, are yellow; the houses (where there are any) are made of the yellow earth, the vegetation is covered with yellow dust, and whatever moves on the road shares the general yellow color. Even the atmosphere is seldom free from a yellow haze. It is here, if I am correctly informed, that the word 'hwang' (yellow) was first used as the symbol of the earth, and one of the most ancient of the Chinese emperors adopted the title 'Hwangti,' 'Lord of the Earth,' or, as we may more fitly translate it, 'Lord of the Loess.'"

The country covered by this valuable mantle is 250,000 square miles in extent, and is altogether in the north of China, as it is quite unknown elsewhere within its bounds. Shanse yields, for exportation, coal, iron, and salt, consuming its agricultural products within its own borders. It even imports wheat, together with cotton and opium. Its altitude prevents it from profiting to the full extent by the richness of its soil. It is, however, a wealthy province, owing to the enterprise and intelligence of its people, who spread all over China, as bankers and clerks, leaving their families at home, and ultimately bringing home the fruits of their industry and economy. The principal native banking-houses in Shanghai are Shanse. The people are pleasant in manners, and friendly to foreigners, and one travels through the province with safety and comfort.

Entering Shense, the next province towards the west and southwest, at Tung-kwan, where the Yellow River, after flowing south, takes a sharp turn to the east and runs in a parallel direction to the Yangtze, towards the sea-coast, the Baron travelled along the great high road to Si-ngan-fu, the capital of the province, and one of the largest cities of the north. Baron Richthofen says but little of the Yellow River, as, in the region where he crossed, it runs through such inaccessible ground that, in the Mohammedan rebellion, it proved an effectual barrier to its spread from Shense to Shanse. It is navigable for small boats, but has few landing-places, and is difficult to cross. Where he crossed, perhaps a thousand miles from the sea, "the current was swift, the water muddy, the river shallow, and the width estimated at 600 yards." As is well known, this river, when it reaches the alluvial country, has brought down such an immense deposit that it fills its bed, and so, when in flood, overtops its banks, and devastates the surrounding country. Moreover, in the endeavor to keep it in its channel, the Chinese go on heaping up the dikes until the bed of the river itself is above the surrounding country. At last comes the period when it forsakes this channel, no longer a channel, and chooses a new line across country, sometimes striking the sea far away from its original mouth. A few ages pass, and it is back again, causing infinite loss and misery in these movements. A traveller* through the alluvial region thus describes the scene when he struck the Yellow River at a parallel point, and where the dikes were yet doing good service. After speaking of subsidiary works some 10 or 12 miles from the north bank, showing the distance its ravages extended, he says:

"At last, in a village apparently bounded by an earthen wall as large as that of the Tartar city of Peking, was reached the first of the main outworks erected to resist the Whangho (Yellow River), and on reaching the top, the river and the gigantic earthworks rendered necessary by its outbreaks burst on the view. On a level with the spot on which I was standing stretched a series of embankments, each one about 70 feet high, and of breadth sufficient for four railway tracks to run abreast on them. One long bank, about two miles from the river-bank, ran parallel to the direction of the stream; half a mile distant ran a similar one. These two embankments were then connected by another series of same height and size, running at right angles and continuing down to the edge of the water. The country is thus divided into a series of squares offering, I should imagine, a very effectual resistance to any inundation."

The river here, probably 400 miles from its mouth, was half a mile broad, and so shallow that the ferry-boat was poled across, except over a small channel about 12 feet wide and 20 feet deep.

Shense had been completely devastated by the Mohammedan rebels some ten years before, but was now again in possession of the Imperialists, after being lost for eight years. The character of this rebellion was of the bloodiest description. To quote again from the Baron:

"Evidently the Mohammedans have had the firm purpose to exterminate the entire Pagan population and the destructible portion of their property. They made a wholesale slaughter of men, women, and children, and destroyed villages and cities. Where mountains were in the neighborhood, the inhabitants fled to them if they were able to do so. But the movements of the rebels, who were on horseback, were so rapid and unexpected, that the proportion of those who were able to take refuge was small. The destruction was greatest in the central portion of the Wei Basin, on account of the great distance of the hills. On the road from Tung-kwan to Si-ngan-fu, every city was destroyed. In the villages, not a house was left standing, those of the Christians excepted. The villages in the Wei Basin were large and numerous: not one of them has escaped destruction. The destruction of life counts by millions."

The cities with solid and high walls escaped, as the rebels had no artillery, and Si-ngan-fu was thus preserved. The Christians spoken of are Catholic Christians, of whom there are many in the western and northern provinces, from the times of the early Jesuit missionaries, and they were on good terms with the Mohammedans.

Baron Richthofen did not find the people in Shense so pleasant as they had been in Shanse, perhaps owing to the recent turbulent times, perhaps partly to the influence of the neighboring province of Honan, where the people have always been rude to strangers, and especially to foreigners. He, however, crossed without any noteworthy incident.

* Letter of E. C. Oxenham, of the British Legation at Peking.

ENGLAND.—MR. PLIMSOLL AND THE SHIPOWNERS.

London, April 4, 1873.

ALREADY, though we have not yet arrived at the Easter vacation, the overburdened mechanism of the House of Commons gives symptoms of the approach of the usual climax of a general dead-lock. In the best of times, it is apt to become clogged with the vast multiplicity of business which comes before it; it is well if a very small fragment of the raw material offered at the beginning of the session is turned out as a finished product at the end; and if the sensational measure of the year be passed, and a few more bits of legislation be turned out in a more or less mangled condition, we may consider that we have done very well. When the whole mechanism is thrown out of gear by such a catastrophe as that which has befallen the Government, the work done is of course diminished in proportion. Of the two principal undertakings promised for this session, the reconstruction of the Irish University and the reform of our judiciary, the first has, of course, gone to the limbo of legislative abortions: one little fragment indeed survives, and will, to all appearance, be carried through Parliament. Mr. Fawcett's proposal to meet the Catholic demands by throwing open Trinity College to members of all persuasions was, for the time, put aside by the attempt of Government to deal with the question, and has again come to life with the collapse of that attempt. Some sanguine people hoped that Government, without adopting Mr. Fawcett's plan, would give him sufficient facilities for getting it through Parliament. A private member has no chance of passing a bill of such magnitude unless he receives some assistance from ministers. They have only to be indifferent, without being openly hostile, in order that he may be swamped by the pressure of official business. It was hoped, however, that having failed themselves, they might allow a measure to be passed which would settle a very troublesome question sufficiently to get it out of the way for the next election. On the other hand, it was supposed that Mr. Gladstone was too much vexed at his own failure to allow one of his bitterest Radical opponents to get the credit of settling the difficulty. The result has been a kind of compromise. Mr. Fawcett's measure, reduced to the modest proportions of a simple abolition of tests, will be passed; and the provisions intended to provide a new governing body capable of representing all parties will be dropped. A grievance will be removed, inasmuch as Catholics and Dissenters will now be able to compete for a fair share of the endowments, and Trinity College will be in this respect in the same condition as the colleges at Oxford and Cambridge.

Of course, the wider question of a university capable of conferring degrees upon students in other colleges remains unsettled. There is, therefore, still an opportunity for any party which is not afraid of burning its fingers to rake up this agitation again and see what it can make of it. The precedent of this year's performance will not be very encouraging, and it seems highly probable that Ultramontane members will have a good text for their oratory for many years to come.

This question being for the present out of the way, and Mr. Gladstone having been forced by the incapacity of his opponents to resume his post, the other great measure of the session might have been expected to be pressed with the greater energy. If ministers could not win fame by remedying the last remaining Irish grievance, they had the stronger motives for distinguishing themselves in the paths of law reform. It seems, however, that Lord Selborne is rather wanting in the necessary vigor. After making an admirable speech in introducing his measure, he and the distinguished legal luminaries who enjoy the comparative repose of the House of Lords seem to be taking the matter rather too easily. The absence of one or other of those great pundits caused the second reading to be put off to a rather late period, and they have found so many difficulties of detail that they have decided to refer the subject to a select committee. Lord Selborne assented to this with rather more than the necessary courtesy, and the consequence is to render it doubtful whether anything can be done this session. The Easter recess is close at hand, during which no man can work. After that, a select committee continue the process of picking holes in a complicated measure as long as seems good to them; and when it at last emerges, and is sent down to the House of Commons, that period of the session will have been reached at which jaded and weary members are thinking rather of Scotch moors than of legislation, and a very little obstruction is sufficient to be fatal to an elaborate bill. There is not energy enough left in the general mass of the members to overpower the opposition of a few of those dogged persons who refuse to be silenced or pacified. If these prognostications be fulfilled, the session, it must be admitted, will come to a somewhat weak and impotent conclusion, and probably Mr. Disraeli will consider that he has acted wisely in refusing to take office. The growing unpopularity of his opponents is not likely to be counterbalanced by any brilliant success. There is indeed one awkward obstacle to a speedy success of the Conservative party, namely: the resolution of a considerable section of that party not to take office so long as Mr. Disraeli is the leader. A knowledge of that fact was dexterously ignored in the ingenious speech in which he gave reasons for not taking office on Mr. Gladstone's resignation; but the truth is sufficiently notorious, and is one more reason why we are not likely to have any strong government for some time to come.

Politics of the ordinary kind have ceased for the moment to be very interesting; the British public has worked itself into a great state of enthusiasm about another agitation. It is as difficult to explain these sudden gusts of popular emotion as to explain the variations of the weather. Just now, be the reason what it may be, the whole world is occupied in eagerly discussing Mr. Plimsoll. A year ago, few people knew his name, and nobody cared about the subject which has lifted him into temporary fame. In a general way, everybody was aware that a good many rotten old ships went down annually upon our eastern coasts; and perhaps we had a dim suspicion that the system of marine insurance prevented the owners from taking as much interest in the matter as they ought. It happened, however, that Mr. Plimsoll made a voyage from London to Hull during a great storm, and that Mrs. Plimsoll was very anxious for his safety. When he escaped, he resolved to show his gratitude by securing new regulations for the safety of people placed under similar conditions. He has gone into the subject with immense energy, and with a zeal which perhaps outruns discretion. He has published a book which is calculated to curdle the blood of persons who go down to the sea in ships. It is elaborately illustrated with photographic representations of the various dishonest tricks by which ships are roughly stitched together sufficiently to deceive the underwriters, and to go down at the first rough weather which they encounter. Moreover, he confirms his general statements by giving particular instances so fully delineated that he has already four actions for libel brought against him. Their personal nature may be easily imagined. There is a story, for example, of a certain shipowner, sufficiently well known, whose ill-luck in ships is so notorious that he can no longer insure them. The suggestion is, of course, that before he got his bad name he made money by sending ships to sea overinsured, with the calculation that it would pay him to lose them. Then there are stories of overladen ships going to sea so deep in the water that everybody on shore foretold their fate; of sailors, of course provided with wives and families, who begged to be discharged but were forced by the present law to abide by their contracts, and who are accordingly at this moment at the bottom of the German Ocean. The indignation excited by such incidents received an accidental impulse by the wreck of the *Northfleet*, and will doubtless be stimulated still further by the loss of the *Atlantic*; for the public mind is not superfluously endowed with logic; and although neither of those melancholy disasters is attributable to the causes indicated by Mr. Plimsoll, still their occurrence brings forcibly before the general imagination "what pain it is to drown." Mr. Plimsoll thus appears as the sailors' advocate against the selfishness and roguery of shipowners; and he has certainly made out a *prima-facie* case for some legislative interference. He has been addressing public meetings and creating extraordinary enthusiasm, which most likely will be increased by the result of the trials against him. If the actions for libel should fail, his case will be regarded as proved; and if they succeed, he will appear as a martyr in the cause of public reform.

Meanwhile, he demands immediate legislation, for the purpose of effectually remedying such evils in future. A commission is to examine the subject, but he maintains that the case is too urgent to wait for the result of its enquiries, and that something should be done to apply at least a provisional remedy. The proposal is in one sense characteristic of that change in public opinion which Mr. Mill and his school are always denouncing. It illustrates the common tendency to ask Government to put everything straight, instead of trusting our old friends the inexorable laws of supply and demand. An army of inspectors is to be appointed, so numerous as to prevent any ship from going to sea in a dangerous state. The definition of what constitutes a dangerous state is to be framed in a series of parliamentary regulations. It is to be rigidly declared what is the position of the load-line; what is the minimum of free-board; on what conditions cargo is to be allowed to be placed on deck, and so on. In short, a system of regulations is suggested calculated to make Mr. Herbert Spencer's hair stand on end. There is certainly not much chance that any such rules will be adopted; and it is not impossible that the demand may provoke a reaction. The most general grievance seems to be the difficulty of obtaining a sufficient security for sailors. It is certainly hard upon a man to be forced to go to sea in a sieve which he had taken for a trustworthy ship; and it would seem that sufficient facilities are not afforded by the present law for allowing him under such circumstances to call in the assistance of the authorities. However, Mr. Plimsoll's enthusiastic friends do not pay much attention to the doubts of our friends who believe in *laissez faire*, and, indeed, it is curious to remark how little weight doctrines of that school seem to carry with them at the present moment. We are beginning, for example, to discuss the propriety of a purchase of all railways by the state. Nothing could be more contrary to the good old Radical theory; and yet the proposal is being discussed very seriously by intelligent men, and there is certainly a very considerable weight of opinion in its favor. The operation would be so gigantic that of course there is no probability of such suggestions immediately leading to action. The purchase of the telegraphs has afforded a precedent which seems, though on a scale comparatively unimportant, to be in favor of the operation; and though it may be very doubtful whether it will ever be carried into effect, it seems to be highly probable that before long it will be one of the leading topics of the day.

Correspondence.

GREEK OR GERMAN.

To the Editor of the Nation:

Sir: Your correspondent of this week is quite sarcastic about the proposed substitution of German for Greek as a requisite for admission to college. But one or two of his flings refute themselves.

No one pretends that the fabulous Principal of the University of Louvain was not an incompetent cheat; but there are many persons who seriously think it unnecessary to prepare every young man for positions such as that of the contented doctor.

There are many boys of this age who can never be brought to digest our knowledge of Phidias; but out of these many a certain proportion can be brought to find some use for sewing-machines.

No one knows better than Prof. Goodwin that the Greek learned by at least a fourth of the students in Harvard College is every way worthless. Why not, then, allow those who are not and cannot be of a literary turn to leave Greek and take in its stead something which looks toward bread-and-butter? There are many plain people to whom bread-and-butter must always appear the highest end in life, and who should not be weakened for their struggles by innutritious diet.

It is true enough that culture is worth more than rubber-boots, and that to the man of culture Greek is indispensable. But this is wholly away from

the point of the discussion. No one proposes to put it out of the power of a boy capable of high culture to learn Greek. No one proposes to lower the standard of Greek learning in our colleges for those for whom Greek is desirable.

The practical method of making the proposed change, and that which, I venture to predict, President Eliot will be found to favor, would be to make German *or* Greek the requisite, and perhaps a small knowledge of the rudiments of each.

Your correspondent is probably aware that Aristotle was wise enough to limit his class in esoteric philosophy, and that a part of the wisdom of antiquity has come down to us in the legend of Procrustes.—Yours, etc.,

W.

CAMBRIDGE, MASS., April 18, 1873.

Notes.

T. H. MORRELL has in press "a volume commemorative of the American tribute to the genius of William Shakespeare," of which only fifty copies will be printed. It will give an account of the setting-up of Mr. J. Q. A. Ward's statue of Shakespeare in Central Park, and be illustrated with several pictures.——Judge Daly's Annual Address before the American Geographical Society, on February 17, has been printed in pamphlet form by the Society. It will be found an interesting and comprehensive survey of geographical progress during the year 1872. The daily press, in its report of it, made sad work of the proper names. A few errors of this sort have even here escaped the author's revision. Dr. Schweinfurth's name is not *Gustave* (p. 50), but Georg or George. He himself calls the African tribe the Monbuttu, not *Mombuttu*. *Annuaire Geographique* (p. 59), we presume, stands for M. Vivien de St.-Martin's *Année Géographique*.——Petermann's *Mittheilungen* for March 4 has for its usual two maps one of Southwestern Germany, with Alsace and Eastern Lorraine, before the outbreak of the French Revolution of 1789; and one of the eastern half of Australia, showing all the telegraphic network of the Continent, including, of course, the great overland line from Port Augusta to Port Darwin. The latter is in all save the coloring identical with Stieler's No. 73, as far as it goes.——The First Annual Report of the Committee on the Boston Museum of Fine Arts is before us. The Museum is still without a permanent home, as the Boston fire found it, to its detriment; but its collections are increasing, and are as far as practicable opened to the public. The Legislature is urged to grant a petition for the opening and maintenance of a State Normal Art Training-School.——We are informed by circular that an Oratorio Society has been founded in this city and placed under the direction of Dr. Leopold Damrosch. There will be an active and a passive membership, and preparatory classes for persons not experienced in choral singing. Dr. Damrosch may be consulted at his residence, No. 220 East Thirty-fifth Street.——We have received from Dodd & Mead Part II. of Maynard's 'Birds of Florida,' already noticed by us. The description of the habits of the birds catalogued continues to afford very agreeable reading. No plate accompanies the present part.——'The Last Poems of Alice and Phœbe Cary,' edited by Mary Clemmer Ames; 'Protection Against Fire,' by Joseph Bird; and 'Old New England Traits,' edited by George Lunt, are among the announcements of Hurd & Houghton.

—We have been asked whether there is any truth in a newspaper statement to the effect that the treaty now existing between this country and Germany as to the right of citizenship in either is to undergo modifications; and that, with the consent of the United States, a clause is to be inserted which would divest of his American citizenship any adopted citizen visiting his native country, and remaining there for a longer term than two years. We can only say that we have no information in the premises.

—Next after the Population volume of the Census, the volume of Vital Statistics which has lately appeared is likely to attract attention. It, too, is provided with colored charts, four of which serve to indicate to the eye the distribution of disease in the United States. Thus, the blue chart denotes the ratio of deaths by consumption, the darker tints assuming a wedge shape, roughly defined by lines drawn from Chattanooga on the one hand through Richmond, and on the other through St. Louis. Most in the shadow of this dreadful disease are the New England coast, all of New Hampshire, and Northern Vermont. Malarial diseases (yellow chart) haunt the Atlantic and Gulf coast from Delaware Bay to Texas, while New England and the larger Middle States, with the two Virginias, are comparatively free from them. California, which, in the central portion, is tolerably consumptive, is universally malarial, but in a light degree. Enteric, cerebro-spinal, and typhus fevers (colored pink) are pretty generally distributed, but find a stronghold in Southeastern Georgia particularly. No large region, again, wholly escapes intestinal diseases (colored green); but Western Iowa and the district in Mississippi east of the Pascagoula River are noticeably afflicted. Besides these maps, constructed in the office, we have a hypsometric sketch of the United States (map of comparative heights); a chart showing the mean temperature by isothermal lines; and one showing the mean precipitation of rain in like manner. This last is very striking, the prevailing tint, which is blue, being wholly absent from the vast region west of the one hundredth meridian. To the fever chart might properly be annexed Dr. Morrill Wyman's map of the districts exempt from the hay-fever.

—The volume consists of special and general tables of mortality in the United States; of statistics concerning the blind, deaf and dumb, insane, and idiotic; of tables of births; and, finally, of ages. The text which accompanies here and there this laborious array of figures is not exactly popular reading; but Gen. Walker's remarks are always clear and terse, and they make the defects of the census law manifest to the commonest understanding. A cursory examination of the statistics of ages has led us to the following results, it being premised that the males of the foreign-born population are largely in excess of the females; the males of the native white population much less so; while the male colored population is in a decided minority. Contrary to the theory, and we should suppose somewhat to the despair, of Mr. John Timbs, lately editor of *Notes and Queries*, whose forthcoming work, it is said, will maintain that there is no properly attested instance of a centenarian, we are assured that in this country 58 persons in 10,000 reach their hundredth year. How many of our total population could make this boast in 1870, we shall proceed to show. Among the native whites, 642 lived to be one hundred or more years old, viz., males 259, females 383. Foreign-born: total 322, males 135, females 187. Colored: total 2,537, males 885, females 1,652. In every case, the female centenarians outnumbered the male. Tennessee showed 66 (native white) of both sexes, and North Carolina 59; the latter State bearing the palm, however, with one centenarian to every 11,400 (native white) inhabitants. New York naturally leads off in foreign-born centenarians, showing 83 against Pennsylvania's 40, though their ratios are nearly the same (1:13,500, 1:13,600). Louisiana shows 263 colored centenarians; Alabama, 256; Mississippi and Georgia, 254 each; South Carolina, 210; Virginia, 202. Louisiana's ratio is also highest (1:1,400), against Mississippi's (1:1,750). That the former State should prove to be the negro's paradise of longevity appears to be due to accidental causes, if on this point the censuses of 1850 and 1860 are trustworthy. In both these years Virginia took the lead (326, 243 respectively), and Louisiana stood fourth on the list (155, 168 respectively), with Alabama fifth (134, 164 respectively). Perhaps the explanation is that the war and the migration since the war have depleted Virginia in favor of other Southern States, and notoriously the Southwestern—the migration to Louisiana and Texas having been enormous. The age of a slave being extremely difficult to fix, a negro centenarian is perhaps to be looked upon with suspicion. It is certainly singular that in spite of the pains taken to make the census of 1870 more accurate in all respects than its predecessors, and in spite of the war's fatality to the colored population, there should be reported 2,537 colored centenarians in 1870, against 1,940 in 1860, and 1,768 in 1850. This appears to throw some light on the question whether freedom or slavery is the better state for the negro, and whether his race is dying out in the United States.

—The following extract from the 'Truths and Fictions of the Middle Ages, by the late Sir Francis Palgrave,' has been furnished us by a correspondent, apropos of our recent notice of Dr. Heinrich Brunner's researches:

"Until the reign of the Tudors, the *jury*, instead of being the peers of the accused, by whom his guilt was to be tried, a court before whom the validity of the evidence given by the witnesses was to be investigated, were the *sworn* witnesses themselves, and their *true saying*, the *veredictum*, or verdict, was the summing-up of their own testimony. Hence it was the duty of the sheriff to learn their previous knowledge of the facts, and to summon those by whom, in the words of the process yet in use, 'the truth could be better known.' Thus, for example, if the authenticity of a deed was contested, the parties named as witnesses in the charge of attestation were not subpœnaed to give evidence that they had seen it duly sealed, but were themselves associated to the jury.

"So consistent was the ancient law that, if the crime was of such a secret nature that *the neighborhood*, the *visne*, or *vicinetum*, the name technically given to the jury, could not reasonably be supposed to have a knowledge of it—murder by the administration of poison may be instanced—then the accused party could not be tried by a jury at all. The jurors were brought before the judge by the sheriff, upon the same principle that the attorney now collects his witnesses in order to obtain a conviction. He got together those who, in his opinion, could best make *out* the case. It is to be feared that the sheriff—of the modern limb of the law we will say nothing—was not always overscrupulous as to the means by which that end was to be attained."

—If any American intending to visit the Vienna Exposition has friends at Ulm on the "blue Danube," we think we can counsel him to procure through them such accommodation as he will need at the Austrian capital. Considering the two to three hundred miles intervening between the two places, this may seem like very singular advice. There is, however, at Ulm a company which has undertaken the construction of a number of hotel-barges which will be floated down to Vienna and moored together near the Exposition building, with postal, telegraphic, and transportation facilities, and with good restaurants close at hand. On board one of these our American friend can instal himself—not on the *Rhine* or the *Helvetia*, for the Swiss have already bespoken these; nor on the *Union*, also engaged; nor now, perhaps, on the *Würtemberg*, *Ulmia*, *Borussia*, *Austria*, or any other of the first flotilla of ten; but on some one of those to be built subsequently, as the application for rooms seems to warrant they will be at once. He will find all the German modern conveniences in his state-room, including a mosquito-net, and he will be charged the moderate price of one dollar (two gulden) per diem. It will be strange if he does not profit by the novel idea, and, on his return to this country, set to work building floating palaces for the centennial celebration at Philadelphia, or for anchorage in the Lower Bay of New York as a convenient summer resort, with bathing and fishing thrown in.

—Since our last summary of important French publications, the following have been noted as deserving the same commendation, to judge by the reviews in which we have met with them at second-hand: Albert Sorel's 'Treaty of Paris, of Nov. 20, 1815,' has a squint towards the later treaty of 1871; and another bit of war literature, 'France in Prussia in 1807-8,' by Baron Ernouf, is also designed to suggest odious comparisons. This latter work is made up of contemporaneous documents—pamphlets, reports, newspapers, etc.—published in Prussia during the French occupation, for the most part clandestinely, so that they are now rare. The author hopes that it will appear from this disinterested evidence how generous the French were, and what respecters of persons and property, when they had a chance to play the "barbarian" invader. M. F. Jacqmin, superintendent of the Eastern Railway, publishes his lectures on 'The French Railroads in the War of 1870-71,' delivered last year at the Ecole des Ponts et Chaussées. They include a survey of military transportation by rail in Germany and Austro-Hungary, and in France and Germany during hostilities; a discussion of the defence of lines of railroads; and rather unfavorable criticism of the extemporized German railway construction. An unpartisan history of the Revolution of 1848, by Henri Gradis, in two volumes 8vo, is praised also for its exactness. Two fragments relating to the elder Revolution have been published together—the inedited correspondence of Mlle. Théophile de Fernig, one of Dumouriez's aides-de-camp, and younger of the two sisters referred to by Lamartine in book xxxvii. of the 'Girondins'; and the inedited journal of La Villeurnoy, on the 'Coup d'Etat du 15 fructidor an V.' This writer was secret agent of Louis XVIII., and among those deported to French Guiana. Here follows properly the 'Introduction to the History of Cayenne,' by the Messrs. de Saint-Quentin—Alfred furnishing a collection of tales and fables in the Creole dialect, with accompanying translation, notes, and commentaries; Edward, some Creole songs; and Augustus, a study of the Creole grammar.

—M. Alphonse Feillet's new edition of the works of Cardinal de Retz has, in two volumes, got as far as the year 1649 of the Memoirs. This elaborate and conscientious work exhibits the various readings of the original text, adds a commentary, and will end with a valuable lexicon of the Cardinal's French. A 'History of Dramatic Music in France,' from its origin to the present day, is by M. Gustave Chouquet, and should have something of interest for the admirers of Rousseau. The complete works of the troubadour Adam de la Halle, "poésies et musique," contains specimens of thirteenth-century French music in the old notation and also modernized. E. de Coussemaker is the editor. Besides the foregoing, we find announced an intended 'Collection des Chefs-d'œuvre historiques et littéraires du Moyen Age,' edited by Prof. Léon Gautier (Ecole de Chartres), and published by Didot; embracing 1. Latin historians (Gregory of Tours, Eginhard); 2. French chroniclers (Froissart, "morceaux choisis"); 3. Latin poesy; 4. Provençal poetry (Chanson de geste de Roland, Roman de Perceval; French Theatre of the Middle Ages; Imitation of Jesus Christ of St. Francis de Sales, etc., etc.) There will be translations and glossaries. In art we have Jacquemart's 'History of Pottery,' in all ages, with exquisite wood engravings and etchings by Jules Jacquemart, fils; and 'Bracasset, sa vie et son œuvre,' by Charles Marionneau, who has for a subject of admiration and eulogy an animal painter of the first class, but comparatively little known for the master that he was while he yet lived. Barbier's 'Dictionnaire des Ouvrages anonymes,' begun in 1806-1808, has reached a third edition, and is appearing in parts. Antonin Rousset's 'Dictionnaire général des forêts,' of which the first part treats of legislation and administration relating to the conservancy of forests, from 1672 to Jan. 1, 1872, may yet serve as a guide to our legislators when dealing with the same subject. Prof. Michel Bréal's 'Remarks on Public Instruction in France,' and Prof. Gustave Boissonade's 'Histoire de la Réserve héréditaire et de son influence morale et économique,' discuss questions of prime importance to their countrymen. M. Boissonade is a warm defender of the *partage égal* against critics like M. Jannet and M. Le Play, but he advocates an increase of the *portion (quotité) disponible* (that is, the amount of his estate which a testator may dispose of at his pleasure) to one half of the patrimony, whatever be the number of his children.

THE HARE FAMILY.*

THE fact that this book, comprising two thick volumes in one binding, has run through five editions within a single year, is proof enough that it has been interesting in no ordinary degree to the English public. Why it should be so is not apparent at a first glance. It is in form the memoir of Maria Leycester, the widow of Augustus Hare, who is best known in America as one of the two brothers who wrote the 'Guesses at Truth.' She was not in any way what might be called a remarkable woman, nor is her story, as told in her own letters and journals, by any means an extraordinary one, or one marked by any very striking incidents. Indeed, she seems to have walked from the cradle to the grave, through a long life, in "the green and quiet ways of unobtrusive goodness." She was born, and "well born," her biographer is evidently anxious to have us remember, in an old Cheshire manor-house, in which her family had found a happy home for centuries, and near to which her father was a parish vicar—one, as well as we can judge from scanty references to him in the book, of the quiet, conservative, God-fearing, but, above all things, gentlemanly parsons somewhat of the type of the elder Keble, who, in the days before railroads, passed their lives peacefully in remote parishes, struggling with the ordinary local problems of peasant poverty and vice, taking their pleasure in the society of the "county families," and wholly unvexed by theological strife. Her youthful life in the paternal rectory was, on the whole, happy, in spite of her mother's death; and her education, as might be expected, imbued her mind from her earliest years with the deep, but healthy, well-bred, and not over-fervid piety of the Anglican Church—the piety which raises decency and order to so high a place among the virtues, and twines itself so tenderly around the old pillars whether of the state or the household. Among her father's near neighbors was Sir John afterwards Lord Stanley of Alderley, with whose children she grew up in terms of intimacy, afterwards deepened by intermarriage. But the friends who exerted most influence on her in these early years were the Hebers. Reginald Heber, afterwards Bishop of Calcutta, and known in all American Sunday-schools, if in no other way, as the author of "From Greenland's Icy Mountains," was rector of Hodnet, a parish two miles away, and for three or four years Miss Leycester passed part of nearly every day—mostly the evening—at his house, Heber reading aloud to the ladies, sometimes poetry, but principally Scott's novels, which were then appearing, and which, while the authorship was unknown, were attributed by the provincial mind of Cheshire to Richard Heber, Reginald's elder brother, who was the only person on that horizon supposed to be capable of such a feat. Reginald also gave her German lessons, and wrote songs for her to sing—among others, the familiar "I see them on their winding way." This happy and peaceful life of hers—dinners, rides, walks—only broken by a trip to Scotland or the Continent, and occasionally a few weeks' visit to London, lasted until 1822, when the bishopric of Calcutta was offered to Heber, and he accepted—news which came as a thunderbolt to the quiet rectory at Stoke. The blow was made all the heavier by the fact that Miss Leycester had in the meantime become attached to Martin Stow, whom she met at the Hebers', and who was a college friend of her brother's, and who vainly sought her father's consent to their marriage, he being a "mere country curate." Poor Stow in his desperation accepted Bishop Heber's offer of his chaplaincy in India, hoping that the prospect that their daughter, if she married him, would still have the society of the Hebers, might soften the hearts of the obdurate parents, but it was in vain, and he bade her a last farewell, went to his post, and died there in two years, leaving a memory which has been enshrined beside Heber's in the affections of English Churchmen.

After this, Miss Leycester was wooed successfully by Augustus W. Hare, and with him, as rector of the small parish of Alton-Barnes, in Wiltshire, spent five years of delightful married life, during

* 'Memoirs of a Quiet Life. By Augustus J. C. Hare.' Two vols. Fifth edition. New York: George Routledge & Sons. 1873.

which she adored her husband, and listened to his sermons with rapture. He died of consumption in Italy in 1833, and she passed thirty-three years in mourning widowhood, partly at Hurstmonceaux Rectory with her brother-in-law Julius Hare, and partly in a quiet home of her own and in journeys on the Continent, seeing little society, and her whole mind absorbed in preparation for the reunion with her husband, for which she looked with a vividness of anticipation which the lapse of time apparently only deepened. There is plainly not enough in such a life to justify a big book. Her letters and journals reveal no remarkable powers either of thought, or observation, or expression. A very large proportion of the published extracts from them owe all their interest to the simple but feebly-drawn pictures they present of quiet English clerical life, and to the struggles of passionate affection to draw consolation under a terrible bereavement from an inexhaustible but apparently not very deep fountain of religious sentiment. These struggles are portrayed at such length, and with so little variety in circumstance, that one finds one's self constantly doubting the taste and expediency of their reproduction.

For the secret of the success of the book we must, therefore, look elsewhere than to the story of Mrs. Hare's own life, and it is to be found, we think, in the glimpses it gives us of the antecedents and surroundings of Julius and Augustus Hare, who again owe their celebrity much less to anything they themselves accomplished in the work of the world than to the fact that they belonged, both at college and in their after-life, to a circle of men who have made a considerable figure in the English literary and religious world during the last fifty years. They were both Anglican ministers, and were men of considerable scholarship of the English type. Julius in particular had dipped deeply into German literature, but the 'Guesses at Truth' display rather acuteness, and suggestiveness, and strength of conviction, than either learning or reflective power. Beyond this, and a volume or two of sermons, only remarkable in the case of Augustus for their sweetness, persuasiveness, and directness, and in that of Julius for a certain brilliant discursiveness, they contributed nothing, or almost nothing, to literature. Augustus died at forty-one, a laborious and devoted parish minister of only five years' standing; Julius, in maturer age and after much longer service, too, as a parish minister, but one who never found his place either in the pulpit or beside the sick-bed.

But they made their entrance into clerical life with a background more picturesque and aristocratic than most country parsons can boast. They were the descendants of Francis Hare, one of George the Second's bishops, a man of good old Essex family, who, though of somewhat sour and penurious temper, managed to climb up the ladder of preferment, and secure a greater number of fat offices, including sinecures, than any churchman of a period in which churchmen were shameless and greedy. He married twice, and both times obtained a large fortune, and through his marriage his son by his last wife inherited the famous old castle and estates of Hurstmonceaux on the Sussex coast, long the seat of the Dacres, then sold in 1708 to George Naylor, a successful lawyer. It was the noblest baronial hall—indeed, the largest inhabited house—in England in its day, and that in which the most lavish hospitality prevailed, and it is only a century since its fires went out, and it was abandoned to the bats and owls, and fell into the picturesque ruin over which tourists now fondly linger. The author of the volume before us, the son of Francis Hare, the last owner, tells with pardonable pride of the days when the vast suite of guest-chambers in the castle was constantly filled with visitors; of the great oven, in which the guide-books say a "coach and six could turn round"; of the two butts of ale, which stood constantly "on tap" at the outer gate, so that every thirsty wayfarer might draw and drink; of the twenty old crones who picked the grass out of the pavement of the great court-yard; and of the four lusty servitors whose sole duty was to mind the castle clocks. In 1806, however, the father of Julius and Augustus Hare, being much burdened with debt, and by no means of an accumulative turn, sold the estate and castle, but the church living of Hurstmonceaux remained in the family. Even this his heir, Francis, the brother of Julius and Augustus, sold also, so that the death of Julius, who held it, closed the connection of the Hares with Hurstmonceaux altogether. It thus only lasted about eighty years altogether, but this was long enough apparently to give the Hares a deep ancestral feeling for the place, and furnish the generation to which Julius and Augustus belonged with a splendid background at their entrance on life. They were two of four sons of Francis Hare-Naylor (the name Naylor was taken when the estate was inherited from Grace Naylor), who married a daughter of Bishop Shipley of St. Asaph's. The lady was the grand-niece of the famous Earl of Peterborough. Georgiana, famed in London society at the close of the last century as "the beautiful Duchess of Devonshire," was her cousin; her sister married Sir William Jones, the celebrated Oriental scholar. She herself was a woman of remarkable powers of mind and great sweetness of character, but whose life was clouded by being married to a shiftless husband. The children were partly educated, and some of them born, in Italy—the well-known Clotilda Tambroni—who has rejoiced the hearts of so many Woman's Rights champions as having been at one time Professor of Greek at Bologna—having, as well as Mezzofanti, afterwards the famous Cardinal, given them some of their instruction while living on terms of warm and intimate affection with the mother. But Mrs. Hare died early and very sadly, worn out in life's struggle, and the boys were tenderly cared for and their education provided by Lady Jones, their aunt. At school and college they were surrounded by friends and companions whose names are now household words in the English-speaking world. At the Charterhouse School, Julius had among his companions Thirlwall and Grote, the future historians of Greece, Sir William Jones, and Sir Henry Havelock, afterwards of Indian fame. At Cambridge, he met Sedgwick, who was his tutor, and Thirlwall, and Whewell, and among his pupils he had John Sterling, Frederick Maurice, and Richard Cavendish. He and Augustus took orders in due course, published the 'Guesses at Truth,' and in due course Augustus took one of the college livings at Alton-Barnes, while Julius settled at Hurstmonceaux. While here, he had John Sterling for eight months as his curate, and married Esther, a sister of Frederick Maurice. The brothers, too, were intimate with Walter Savage Landor, and Arnold, and Niebuhr, and Bunsen; and Augustus, during a portion of one of his visits to Italy, stayed for some time in the house of Lady Blessington, and sent her a cordial message from his death-bed. His days of happiness and usefulness were few. His active service in the church only lasted five years, the whole of which were passed in one little parish, in which he gave himself, with extraordinary and long-remembered fervor, up to the instruction and consolation of the poor laborers who composed the bulk of his flock. Julius, who settled down in the stately family living of Hurstmonceaux, had not the material of a pastor in him, and preached over the heads of his congregation. He was passionate and combative, as Augustus was patient and gentle, and passed the flower of his years in controversy. He had a fine library and fine pictures. The charms of his conversation made his rectory for many years a favorite resort of some of the choicest spirits of the intellectual society of the capital. With characteristic impetuosity, he was twice engaged, and both times to widows, for long periods, before he married Esther Maurice. His death in 1854 broke up the circle of which Hurstmonceaux was for so many years the centre. His library was presented by his widow to Trinity College, Cambridge, and his pictures to the Fitzwilliam Museum. Mrs. Augustus Hare lingered until 1870, but the portion of the book which relates to this period might well have been omitted. As a record of the family life of a cultivated clerical circle, containing some of the best elements of English life, and exhibiting many of its most striking peculiarities, it will well repay reading.

THE NORTH AMERICAN REVIEW FOR APRIL.

THE *North American Review* for April is probably as able and authoritative a number as ever issued from the press. Mr. John K. Paine, of Harvard College, the well-known composer and organist, discusses the music of Liszt, Berlioz, and Wagner, giving most of his attention to the last-named master; Mr. Chauncey Wright treats learnedly and at length of "The Evolution of Self-Consciousness"; Mr. Henry James, jr., eulogizes, with an appropriate array of adjectives, the late Théophile Gautier; General and Professor Walker, sometime Commissioner of Indian Affairs, contributes a very interesting paper entitled "The Indian Question," which ought to be on file in every newspaper office in the country; Mr. Karl Hillebrand closes his review of the life, character, and influence of Herder; and the sixth and last article is composed of five book-notices, the longest being a review of 'Middlemarch'—a book which, as we suppose, has called out more of careful critical writing than any modern work of fiction, and is destined to call out still greater quantity. It is wonderful to think of the world of oral and written discussion that has been directed to this story and its personages. The reason, perhaps, is the one hinted at by the *North American* critic, namely, that it satisfies no one, and, we would add, dissatisfies people as reflecting the stern discontent of a dissatisfied and dreary moralist—perhaps we should further add, of a female moralist. We speak with a full sense of the astonishing power of this great writer, whom, however, it is too early yet for her readers to see with clearness and precision.

That the *Review* is not declining in vivacity with lapse of decades, but rather may be said to be renewing its youth, the following reference to some well-known citizens is evidence: "From the Secretary of the Treasury down to James Fisk, jr. and David Dudley Field, there seems a growing tendency to disregard the law in the pursuit of ends which seem desirable, whether those ends be the moving of the crops or the plunder of a rich corporation." The book under review is Mr. Richard Frothingham's 'Rise of

the Republic of the United States,' and the reviewer makes some other just remarks as well as this one. For example, those really most un-American of Americans—the men who are for ever parading themselves before their uninstructed fellow-countrymen as patriots peculiarly American—may profitably read sentences like these which follow, and the books, also, to which they refer. We should then hear less oratory from the breed of politicians who are ready to go, as a Connecticut politician the other day said he was, "with the New Testament in one hand and the Stars and Stripes in the other, and welcome to our shores all of every race and every color and every continent," etc. etc. It ought not to be necessary to say, but it is necessary, and daily more so, that not by such labors as these was this Republic founded. The reviewer says: "If the people of the United States were more familiar with the history of their own country, and understood better the conditions under which republican government has succeeded with them so remarkably, we should hear less of that political school which sees in Napoleonism the only cure for the vices of our system; and, on the other hand, should be less eager to extend our national congratulations whenever among the various phases of anarchy in any quarter of the globe the republican is for a moment uppermost." Flag-waving is an inexpensive process of fitting him for self-government and the government of others, but good readers of Mr. Frothingham will think it a doubtful substitute for the century and a half of town-meetings and vestry-meetings which preceded the Revolution, and the thousand or two years of Anglo-Saxon and English liberties which preceded the Massachusetts and Connecticut town-meetings. The fact is, if we are proud enough we are not rightly proud of the state here founded, and our flag-wavers and sympathizers do really insult us and those who went before us when they pass Congressional resolutions sympathizing with republics which have no republicans, and peopled with races of men our inferiors in many important respects.

Mr. Paine is not an admirer of the music of the future. The texts of Wagner's operas, he observes, are open to grave criticism as dramatic subjects; his most determined admirers cannot maintain that he has a good literary style; and indeed, the rhetoric and versification of his texts deserve severe censure; in the portrayal of character he fails to display any great originality or power, and as a dramatic poet he cannot be classed as a master, "nor as a musician will he ever occupy an equal rank with Bach, Handel, or Beethoven." What, then, is the secret of his present popularity? Mr. Paine's answer to this question is that "Wagner is a consummate master of all the externals of the stage." The theatrical spectacle with its brilliant pomp is an invariable and indispensable adjunct to his operas; "one grand effect succeeds another in logical and natural sequence; yet nothing, apparently, is introduced for the sake of effect," and the rich variety of the scenes without superfluity powerfully affects the spectator; the composer even turns decorative artist and invents scene-pictures for his operas. Then, too, he has diplayed equal skill and originality in his treatment of the action of the play, and is true to the dramatic object in all points of display: "Although his later music is not framed on an ideal style and is difficult to sing and lacks real beauty in the absence of melody, yet it is declamatory in a powerful degree; it is true to the metrical accents of the verse, and expresses vividly the meaning of the words, and in this respect he stands out prominently as a progressive master, and will exercise decided influence on the dramatic music of the future." Furthermore, Wagner "has exhibited a wonderful technical command of the orchestra," and "many of the themes and melodies of his earlier operas are noble, characteristic, and pleasing, though, with some notable exceptions, compared with similar compositions of the greatest masters, they appear to disadvantage and seem somewhat coarse and formal"; his music, "composed in the free thematic form," when compared with similar works by Schumann, for example, or Mendelssohn, appears to lack refined beauty, and this lack is not compensated by any real grandeur of style.

Of the essay by Mr. Wright we are incompetent to speak, though in the several capacities of metaphysician, mystic, poet, and theologian, we darkly see, or suspect we do, that for such this innocent-looking philosophic treatise contains certain love-pats. Mr James's criticism of Gautier is very kind. "If there are sermons in stones," he remarks, "there are profitable reflections to be made even on Théophile Gautier; notably this one—that a man's supreme use in this world is to master his intellectual instrument and play it in perfection." Persons in imperfect sympathy with the general view here implied will feel like suggesting that the supreme use of some men in this world, considering what a world it is, is to throw away their intellectual instrument and never play anything on it. But Mr. James's essay makes it plainer than would be supposed by most who have listened to British-American sermons over Gautier's remains, that Gautier was hardly one of these players after all, though certainly no fit company for St. Cecilia. A wonderful world we shall have, though, when "art for art's sake" is the rule that guides our pickers and stealers and our young addlepates.

The 'Herder' essay will be found full of instruction, for its object is to rehabilitate the reputation of that once very famous and influential man. "Herder, the real originator," says Mr. Hillebrand, "of the German civilization of the nineteenth century . . . He it was who first gave utterance to the German idea." Mr. Hillebrand proceeds to make good this assertion by specific proofs, and begins by laying down as the new principle which Herder with revolutionizing effect applied to theology, history, and poetry this: "the superiority of nature over civilization and of intuition over reason"—organism above mechanism; the individual above the rule; synthesis rather than analysis; development rather than legislation; "in a word, the *fieri* above the *facere*." After this beginning, which is not without its vagueness, though intelligible enough, the essay follows Herder through the various fields of his immense activity, and concludes by enumerating the monuments of his influence. What but applying Herder's ideas of organic evolution was Niebuhr doing when he was revealing the growth of Rome, the birth of her legends, religious and national, the gradual formation of her constitution, the struggle between her patricians and plebeians, so like that which Niebuhr saw going on in "his own dear Ditmarsians." This is writing about Romans, not as if they always walked about in horse-hair helmets, but as Herder would have the historian write—"able to feel the beat of the nation's pulse whose vicissitudes he undertook to rehearse." And what but applying Herder's ideas was F. A. Wolff doing when he was pointing out the process of epic poetry; or Savigny when proving that the Roman civil law was not the work of one wise legislator but the wisdom of centuries; or Ottfried Müller, when, instead of the school-history Lycurgus evolving a constitution like the Abbé Sieyès, he shows us several legislators satisfied to compile and codify the laws and customs of their country; or the same Müller making it clear that the Greek mythology is not a collection of moral sentences and historic facts, but is the involuntary personification of surrounding nature afterwards developed by the imagination; or Max Müller and Adalbert Kuhn, when upon the basis of comparative linguistics they erect the new science of comparative mythology; or Wilhelm von Humboldt, when he established the laws of language; or Jacob Grimm and his brother; or A. W. Schlegel; or Frederick Schlegel; or D. F. Strauss; or Benjamin Constant, De Tocqueville, Renan, Taine, Carlyle, and Darwin? Each in his own particular branch applies and develops "Herder's two fundamental principles, *i. e.*, that of organic evolution and that of the entireness of the individual." Another of Herder's fundamental principles—namely, that unless men eat and drink once in a while they will die from lack of nutriment—these writers are all busily applying, too. The claim made for Mr. Hillebrand's hero is a pretty wide one, it will be seen, in some aspects of it, and to bear in mind the third fundamental principle just mentioned, or some similar one, may be as well when we come to consider how much of the credit of these men's labors is to be assigned to Herder for his share. But it is not to be denied that Mr. Hillebrand's essay traces in the works of the versatile and pliable and enthusiastic divine the distinct germs of very many of the true achievements of his successors. Nor perhaps is more really asked than that this be conceded, though some readers may feel as if they were asked to say that but for Herder there would have been no Darwin, no Grimm, no Humboldt. That is not Mr. Hillebrand's conception of the course of history any more than it was Herder's. We should like to devote more space to this excellent and suggestive paper, but cannot. There is a passage or two in reference to Goethe and Schiller, and the exclusively Greek, which devotees of those German demigods might find worth looking at. We shall take space, however, to say that this, like the other articles in the number, gives many evidences of careless proof-reading. What is it, we wonder, in the make-up of the proof-reading mind which—barring miracles—necessitates the spelling of "exceptionally" with a "b" in the place of the first "l"? This and many mistakes really worse, though involving nothing of the supernatural, disfigure the *Review* this month.

General Walker's article ought, as we have said, to be read and kept for reference. It is a perfect boon to have such a body of trustworthy information in regard to a topic on which so much is said, and said with so much heat, and on which so little is known. How many editors know how many Indians the United States have within their borders; how many are civilized; how many actually or partially hostile; how far the process of reclaiming them has gone; and how much above one million of dollars it costs to kill a hostile Indian by means of a United States regular soldier? Very few know anything about any of these things; of the whole number of editors in the United States, probably there are not six per cent. who have not within ten days written at least one article in favor of exterminating Modocs, or opposing or defending "the Quaker policy." This article tells exactly what this policy is, and what in the opinion of the writer, an

authority, should hereafter be the general policy of the Government towards the tribes; and relates also the history of the past relations between the two parties. The following is a sample of General Walker's way of looking at his subject, and also of his way of writing:

"Voluptuary and stoic; swept by gusts of fury too terrible to be witnessed, yet imperturbable beyond all men under the ordinary excitements and accidents of life; garrulous, yet impenetrable; curious, yet himself reserved; proud and mean alike beyond compare; superior to torture and the presence of certain death, yet, by the standards of all other peoples, a coward in battle; capable of magnanimous actions which, when uncovered of all romance, are worthy of the best days of Roman virtue, yet more cunning, false, and cruel than the Bengalee—this copper-colored sphinx, this riddle unread of men, equally fascinates and foils the enquirer. This, however, is the Indian of history. The Indian for whom the Government is called to provide subsistence and instruction presents no such psychological difficulties. Curious compound and strange self-contradiction as the red man is in his native character, in his traditional pursuits, and amid the surroundings of his own wild life, yet when broken down by the military power of the whites, thrown out of his familiar relations, his stupendous conceit, with its glamour of savage pomp and glory, rudely dispelled, his occupation gone, himself a beggar, the red man becomes the most commonplace person imaginable, of very simple nature, limited aspirations, and enormous appetites."

MIVART'S ELEMENTARY ANATOMY.*

THE author of the 'Lessons in Elementary Anatomy' has for some time been well known to investigators in science through several elaborate monographs on the comparative anatomy and classification of mammals, especially of the order primates, and he has lately become conspicuous by his work on 'The Genesis of Species." This latter work, which seems to have been so much misunderstood and quoted against evolution itself, we may remark parenthetically, simply attempts to account for the facts of *evolution* (which is admitted) by other hypotheses than Darwinism or *natural selection* (which alone is repudiated, and that only in part). In the present lessons on the elements of anatomy (which cannot truly be called elementary lessons), the author has advantageously applied the varied knowledge which he has gained by his researches in comparative anatomy, and, as he remarks, "this endeavor is the first of its special kind." In twelve "lessons" are given (1) a general view of the structure of the human body, and its relations to other animal bodies; (2) the skeleton in general, as well as the vertebral column and thoracic elements; (3) the cranium; (4, 5) the limbs; (6) generalities respecting the skeleton; (7) the exterior; (8) the muscles; (9) the nervous system; (10) the circulating system; (11) the alimentary system; and (12) the excretory organs—rather more than half of the work being devoted to the consideration of the skeleton. Under each of the chapters in which the skeleton and its components are described, first is given a general description of the characteristics developed in man, and then follows a brief comparison and contrast with those characters of the homologous parts in the other vertebrates. Several diagrams (*e.g.*, illustrating the formation of the skull, Figs. 92, 93, and an ideal skull, Fig. 197) are added to aid the conception of the morphology of different parts, and it is gratifying to add that, unlike certain others that are widely known, they are based only to a very slight extent on *a priori* transcendental prejudice; still it is well to bear in mind that perhaps more than one of them takes for granted postulates which all might not be prepared to admit.

As in the case of the osteology, in the single chapters in which the muscles, nervous, circulatory, and alimentary systems and the excretory organs are severally described, first the structure as exhibited in man is made known in general terms, and then the homologous parts in the lower forms. The only specially noteworthy feature in these chapters is the adoption (with the qualification, however, "if this interpretation be correct") of Prof. Huxley's latest views respecting the correspondence of the ossicles of the ear in man with the elements of the suspensorium in the inferior vertebrates. And this adoption with the qualification referred to is, in our opinion, a not injudicious measure, as the views in question seem to be in accordance with embryological facts and best to account for the modifications which exist in the vertebrate series. But "if this interpretation be correct," we have an apt exemplification of the misleading tendencies engendered by an exclusive attention to the study of the structure of man, and especially from a physiological standpoint. In man the auditory ossicles, as implied by their name, are confined to the completion of the organ of hearing, while in the lower vertebrates the homologous elements are entirely removed from that organ, and act simply as a suspensor of the lower jaw; and as in the "Lessons" the auditory ossicles in man are treated of in connection with the nervous system, in order to institute a comparison with the homologous parts, we have to refer back to the chapter on the osteology of the skull.

Without dwelling upon other points, we may add that in the concluding chapter an excellent summary is given of the differences exhibited by man (in common with all mammals) from the fishes, the batrachians, the reptiles, and the birds, and, in his own class (in common with all placental mammals) from the monotremes and the marsupials; from the members of his own order; and lastly, and especially, from the higher apes. The chief fault we have to find with this summary is that the casual student might be apt to form an erroneous idea respecting the value of the thirty-five characters exhibited as contrasts between man and the higher apes, not being cautioned in the book itself, unless by the general statement that man "even differs far less from the higher apes than do these latter from the inferior forms of the same order." Still one might not be aware that the differences in all the points enumerated between representatives of the apes and monkeys were greater than those between *only* the highest apes and man. Moreover, as germane to the same question, we object to the concluding observation that man is separated from the inferior animals "by an abyss so vast that no chasm separating the other kingdoms of nature from one another can be compared with it." The work being *purely anatomical*, it is not evident what claim such an assertion has to a place in it. The assertion may or may not be true, but it is the expression of a dogma which, far from being the legitimate deduction of the facts set forth, is, as is to all intents admitted, opposed by them; and it should, accordingly, in the interest of good logic, be avoided in a work from which physiology and psychology are excluded, and which has as one of its missions to teach how to weigh facts. But having said this much, we can cordially commend the work as a whole. There are minor points respecting homologies and other questions upon which we are not of accord with the author, but most of these are still *sub judice*, and therefore not to be dogmatically treated of one way or the other. We need only add that the work is well printed in nearly the same style as Huxley's 'Lessons in Elementary Physiology,' and Flower's 'Introduction to the Osteology of the Mammalia,' issued by the same house, and many of the numerous illustrations will be recognized as old friends by readers familiar with those works. The sketch of classification of the vertebrates given in the first chapter is adopted, with a few inconsiderable modifications, from Huxley's 'Anatomy of Vertebrated Animals.'

'The Medical and Surgical History of the War of the Rebellion (1861–65). Prepared under the direction of Surgeon-General Joseph K. Barnes, U.S.A. Part I.: Surgical Volume; Medical Volume, with Appendix. (Washington: Government Printing-Office. 1870.)—In magnitude, this important work exceeds anything of the kind ever attempted; and naturally, as the materials were vaster. Not only, however, does it surpass in the scale and fulness of its statistics, but in their completeness, advantage having been taken of applications for pensions to trace, for a considerable period after their discharge from the service, the history of patients who would else have passed out of the knowledge of the medical department. This is a unique feature, and obviously of the highest value. A somewhat detailed account of the General Hospital system is promised in a third volume, to match these elegantly printed quartos, whose contents we can only briefly indicate. The Surgical Volume opens with a chronological summary, day by day, of engagements and battles during the Rebellion. This occupies 107 pages, and gives in parallel columns the locality, description of Union troops engaged, loss on both sides, with remarks and references to authorities; after which an index of places. The remaining space is devoted to the discussion of wounds in various parts of the body, a very large number of cases being reported in detail, in many instances alphabetically arranged, and in not a few illustrated either by woodcuts or by finely executed colored plates. It will be seen that, while this volume has a special instructiveness for the medical profession, it is not without interest for the general student and for a very wide class of readers. The same may be said still more emphatically of the Medical Volume. Here we have a vast array of tables of death and disease in the regular and volunteer forces for each month of the war, compiled with special reference to season and region, and agreeing very nearly with the military departments of the period. These the physician and sanitarian may ponder, while the lay reader will skip them in favor of the Introduction and of the Appendix.

The Introduction, dealing with some of the grand results of the statistical enquiry, essays to fix the total number of deaths caused by the war in the Union ranks. This leads to an interesting comparison of authorities. The Adjutant-General's office can, with absolute confidence, affirm the death of at least 303,504 soldiers (33,380 colored); the Quartermaster-General points to 313,555 (presumed) Union graves in the national cemeteries and elsewhere; while the Surgeon-General, with the poorest facilities of all for ascertaining the whole truth, can allege only 282,955. Very likely 315,000 is not too high an estimate for the total loss. We have next the killed in battle; ac-

* 'Lessons in Elementary Anatomy. By St. George Mivart, F.R.S., etc.' London and New York: Macmillan & Co. 1873.

cording to the Adjutant-General, 44,238; according to the Surgeon-General, 35,408. Here again the former is naturally the better authority. The Adjutant-General falls behind, however, in the number of deaths from wounds, 33,993 (Surgeon-General, 49,205); and from disease, 149,043 (Surgeon-General, 186,216). There were 526 suicides, homicides, and executions; and 24,184 deaths from unknown causes. Disease thus carried off twice as many victims as violence; or, in other words, of every three deaths from known causes, but one was due to violence. This ratio, however, is a very favorable one in a sanitary-historical point of view. The black troops lost more than three times as heavily by disease as the whites; the white regulars somewhat less so than the white volunteers. The tables, it is estimated, cover about nine-tenths of the class of facts intended to be embraced in them. They assign causes in 189,397 of the 223,535 recorded cases of discharge from the service (Adjutant-General, 285,545). Diarrhœa and dysentery were the most fatal diseases, "camp fever" coming next, and pneumonia third. Their death-roll embraces 88,497 whites and 16,688 colored soldiers —56 per cent. of the whole number of deaths from disease.

The Appendix has an historical value of a peculiar but really high order. It consists of extracts, or even full reproductions, of medical reports from all parts of the seat of war, which, while mainly concerned with the professional aspects of camp and field experience, often give graphic accounts of the engagements witnessed, the movements of troops, and of other events in regard to which no testimony might be thought so unbiassed and truthful. No important campaign is here omitted, and, what materially assists the narratives, there is a liberal supply of good maps, either of particular battles or of the shifting theatre of the war. We will close our imperfect review of a work so creditable to American science and to the medical bureau of the War Department with a few extracts suggestive of the claims which this history has to a place in every library beside Draper's 'History of the Civil War' or Greeley's 'History of the American Conflict,' or the still better history of the great struggle as yet unwritten. Medical Director King reports, of the battle of the first Bull Run:

"On the morning of July 21, 1861, the General commanding, accompanied by his staff, passed at daylight through our columns, already moving in the direction of Bull Run, until he reached a point beyond Cub's Bridge. . . . Here we halted in the shade, as the day, even thus early, promised to be one of the hottest of the season. While observing the troops passing, we discussed the prospects of the day before us. I perceived that our troops marched at double-quick, and some at a full run, while many, overcome by the heat, threw away their blankets and haversacks. I expressed my opinion to the General that, owing to their rapid movement, the men would be exhausted before they arrived at the scene of action. In this view he acquiesced, and directed the men not to run; but as the officers behind, from an idea that great haste was necessary, constantly repeated the command to close up, the troops were kept at a run a great part of the way. . . . As one of the causes of the Bull Run failure, I desire to record my belief that the exhaustion of our forces by the long and forced march contributed as much as anything else to the disasters of the day."

"My impression at the commencement of the battle was that there would be a brisk skirmish, and then the rebels would most probably fall back and take up a new position. I thought it would be a small task, therefore, to make out a list of the killed and wounded, and with note-book in hand I began to count the number of each. It is a singular fact that I observed near one hundred dead before one wounded!"

Here is Director McParlin's description of the battle of the Wilderness:

"As has been well said, 'this was a battle which no man saw or could see,' fought in the midst of dense thickets of second growth underbrush and evergreens, rendering the use of artillery almost impossible, and compelling the opposing lines to approach very near in order to see each other. It was a series of fierce attacks and repulses on either side, and the hostile lines swayed back and forth over a strip of ground two hundred yards to a mile in width, in which the severely wounded of both sides were scattered. This strip of woods was on fire in many places, and some of the wounded who were unable to escape were thus either suffocated or burned to death. The number who thus perished is unknown, but it is supposed to have been about two hundred. . . . The proportion of officers wounded was very large, being one to every sixteen enlisted men. This was due to the fact that the conflict partook of the character of skirmishing on a large scale, and those who were the most conspicuously dressed were the first victims. For a similar reason, the Zouave brigade of the First Division, Fifth Corps, whose uniforms were braided with red and yellow scrolls, met with a very heavy loss. The relative proportion of killed was also large, being nearly one to every five wounded. Only two hundred and forty wounded from cannon shot and shell were observed. As a somewhat interesting fact bearing upon the character of the conflict, it may be mentioned that it is stated by the chief ordnance officer that but eleven rounds of ammunition per man were used by the army during the three days' fight."

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

PUBLISHED THIS DAY.

The great Novel of the season, "Ouida's" New Work.

PASCAREL.

BY "OUIDA,"

Author of 'Strathmore,' 'Idalia,' 'Under Two Flags,' 'Tricotrin,' 'Puck,' etc. 12mo, fine cloth, $2.

"'Ouida's' pen is a graphic one, and page after page of gorgeous word-painting flow from it in a smooth, melodious rhythm that often has the perfect measure of blank verse, and needs only to be broken into lines."—*Philadelphia Evening Bulletin.*

THE WEEK IN TRADE AND FINANCE.

April 21, 1873.

THE report of the Grand Jury of their investigations touching the violations of the usury law bids fair to bring to an end the agonizing condition of things in the money market. After the examination of a number of bankers and brokers, the substance of the Jury report on Thursday was that they had failed to trace the reason of the present stringency in the money market to a so-called lock-up of money or to any special cause; that the law is absurd and unpopular to such an extent that not a man can be found to aid the authorities in discovering its infractions; that the enormous rates which have so long been paid in this city are almost entirely due to the existence of such laws; that special charters have been granted to several corporations authorizing them to take commissions above legal interest on their loans of money, thus legalizing in special cases the very thing the usury laws were intended to prevent; and that the enormous rates paid by stock speculators have had the effect of drawing the capital of the city from its legitimate channels, thus preventing merchants from obtaining money at moderate rates such as ordinary business men can stand. The report closes with the following sensible recommendation which was sent to Albany by a special committee on Friday:

"For these reasons and many others which might be mentioned touching the best interests of this city and the State, this Grand Jury hereby recommend to the Legislature of the State the immediate repeal of the usury laws, or such a modification of them, so far as they relate to the city and county of New York, as will permit money to come here from other places and countries, and be employed legally, or equalizing the rate of interest with other great monetary centres."

The publication of the above report had the immediate effect of making money comparatively easy; rates falling from ½ per cent. on Thursday to ⅛ on Friday, the day of the publication of the report. On Saturday, $\frac{1}{32}$ and interest was the highest rate, and it was freely loaned at 7 per cent. per annum before the day closed. During the week rates ranged as follows: ¼, ½, ⅛, and $\frac{1}{16}$ of 1 per cent. on Monday; ⅛, ¼, and $\frac{3}{16}$ of 1 per cent. on Tuesday; ¼, ⅜, ½, and ¾ of 1 per cent. on Wednesday; ⅜ and ½ down to 7 per cent. gold per annum in the afternoon, Thursday; ⅛ and ¼ in the morning, and $\frac{1}{16}$, $\frac{1}{32}$, and 7 per cent. gold in the afternoon, Friday; and on Saturday the rates were 7 per cent. per annum to $\frac{1}{32}$ and interest, closing easy at the legal rate at 3 P.M. At the close of the week, the indications are in every way favorable for easy money in the future, or at least until the commencement of the usual fall stringency. Still there may be further disturbance until legal tenders constitute a larger part of the remittances from the interior than they have heretofore. The bank statement is favorable, but the reserve is not sufficiently increased to take the banks up to or above the legal requirement.

The total liabilities are increased $267,000, and the reserve shows an increase of $1,108,100. The banks hold $983,950 in specie and legal tenders less than the 25 per cent. required by law, a gain of $1,041,350, which places the National banks above the required reserve, and leaves the deficiency to be divided amongst the State banks. The following are the statements for the past two weeks:

	April 12.	April 19.	Differences.
Loans	$271,516,900	$270,190,600	Dec. $1,326,300
Specie	16 134,300	16,116 400	Dec. 17,900
Circulation	27,714.400	27,713.300	Dec. 1,100
Deposits	186,899.200	187,167,300	Inc. 268,100
Legal tenders	35,493,800	36,619,800	Inc. 1,126,000

The following shows the relation between the total reserve and the total liabilities:

	April 12.	April 19.	Differences.
Specie	$16,134,300	$16,116,400	Dec. $17,900
Legal tenders	35,493,800	36,619,800	Inc. 1,126,000
Total reserve	$51,628,100	[$52,736.200	Inc. $1,108,100
Circulation	27,714,400	27,713,300	Dec. 1,100
Deposits	186,899,200	187,167,300	Inc. 268,100
Total liabilities	$214,613,600	$214,880,600	Inc. 267,000
25 per cent. reserve	53,653,400	53,720,150	
Deficiency in legal reserve	2,025,300	983,950	Dec. 1,041,350

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$232,963,200	$37,227,400	$270,190,600
Specie	14,706,500	1,409,900	16,116,400
Legal tenders	32,523.200	4,096.600	36,619,800

The stock market has been very active and the fluctuations wide, but hardly anything like a panic has occurred, notwithstanding what has been said by the daily papers, and but three failures of any importance have taken place among Stock Exchange firms. Several brokers are in trouble, but they are parties who generally become embarrassed by reason of overtrading and a reckless style of transacting business about twice a year. The lowest prices were made Wednesday afternoon and Thursday morning, as will be seen by reference to the table of prices published below. The greatest fall was in Union Pacific and Western Union Telegraph, caused by one of the firms who failed having been loaded up with these two stocks, and the majority of the sales at low prices on Wednesday were for their account. Report says that a prominent operator who suffered severely in the late North-Western corner was a large seller at the lowest prices of the week, and that his losses have been greater than those of any one in the "trade." The entire market rallied on Thursday afternoon, and the easier money market of Friday and Saturday imparted a buoyancy to everything, the market finally closing at about the highest prices of the week. The investment stocks shared in the general improvement of the speculative stocks, New Jersey Central being in demand at 99 to 99½, Iron Mountain at 90, and Delaware, Lackawanna, and Western at 99.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending April 19, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	100⅝ 102	100¼ 102⅜	97⅜ 101	98⅝ 100½	98⅝ 101⅜	100½ 102⅜	194,400
Lake Shore	91½ 92⅝	90⅜ 92¼	88½ 91⅜	89⅜ 91½	90⅜ 92½	92½ 93⅜	129,900
Erie	65⅜ 65⅜	64⅜ 65⅛	63⅝ 64⅜	63¼ 64⅜	64⅜ 66½	66⅜ 66⅝	52,300
Do. pfd	74 74	74¼ 74½	74⅜ 74⅝	73⅜	74 75½	....	.....
Union Pacific	33⅜ 33⅜	32½ 33⅞	25 32¼	28⅜ 32	31½ 32⅝	32⅜ 33½	77,700
Chi & N. W.	....	....	76 76	....	77⅞ 79⅜	79⅝ 81	11,700

Pacific Mail	56¼ 57⅜	56 58¼	53⅜ 56¼	53⅜ 56⅜	55½ 59¼	59¼ 60⅝	197,900

The Treasury purchased no 5-20's last week. The Government bond market has been quite active, and the fluctuations have been of importance. Considerable sales of bonds were made early in the week by parties desiring to raise money, and the repurchasing of them later in the week caused a rise in the whole list, and developed a great scarcity of bonds. The shipments since the first of the present year amount to something like $20,000,000, and the demand from the foreign bankers continues.

The high rates for money have made business in State and railroad bonds exceedingly dull. Prices have changed but little, and, with the improved condition of the money market, it is fair to count upon higher prices for investment securities of all kinds.

The State of Alabama is adopting a strange mode of paying her debts. The latest news is that the Legislature has passed a law to take up the different railroad bonds guaranteed by the State. The law provides that bonds of the State be given for the guaranteed railroad bonds in the proportion of $1,000 of the former for $4,000 of the latter.

The gold market has been active, the price ranging between the extremes 117 and 119⅛. The closing price on Saturday was 117¾, against 118½, the opening price on Monday morning. About $500,000 gold was shipped to this city from London last week, the dulness of the market for, and low price of, sterling bills making the shipment a profitable transaction.

The specie shipments from this port for the week ending April 19 amount to $842,603, mostly in silver. The total shipments since January 1, 1873, amount to $16,348,423, against $7,471,715 in 1872, $20,001,692 in 1871, $7,324,944 in 1870, $10,345,166 in 1869, and $20,611,866 in 1868.

Office of Fisk & Hatch,
No. 5 Nassau Street, New York, April 21st, 1873.

☞ The SIX PER CENT. GOLD BONDS of the CHESAPEAKE AND OHIO RAILROAD COMPANY, being secured by a First Mortgage on a COMPLETED Road—which is one of the GREAT EAST AND WEST TRUNK LINES, commanding a large through business, and which, from the immense Mineral, Agricultural, and other valuable resources of the country it traverses, is assured of a very remunerative local traffic—are among the most substantial and satisfactory investment securities in the market; and, at the present price, 87½ and accrued interest, yield a liberal rate of interest on their cost.

They are in denominations of $100, $500, and $1,000, coupon and registered; principal and interest payable in gold coin in New York; interest May and November.

We buy and sell at current market rates the WESTERN PACIFIC SIX PER CENT. GOLD BONDS originally negotiated by us, and now quoted at the Stock Exchange, and widely known as favorite securities in the principal money market. Coupon Bonds of $1,000; principal and interest payable in gold in New York; interest January and July. Price to-day, 94¾ to 95.

We also buy and sell GOVERNMENT and CENTRAL PACIFIC BONDS, receive deposits, on which we allow interest, make collections, and do a general banking business.

FISK & HATCH.

The Nation.

NEW YORK, THURSDAY, MAY 1, 1873.

The Week.

THE scandal about the American Commissioners at Vienna has ended in the suspension of them all, including General Van Buren, the chief, and the appointment of a new board, consisting of Messrs. W. T. Blodgett, Le Grand B. Cannon, Theodore Roosevelt, and J. S. Schultz. The plain truth of the matter is, that it is these gentlemen, or persons like them, who should have been appointed originally. The American Department will now be managed by them in a creditable manner, and they are creditable and proper representatives of American industry; but they cannot relieve us of the disgrace wrought by their predecessors. The "European despots," we need hardly say, are enjoying it highly; and the German press is rolling it under its tongue as a sweet morsel—and with how many such morsels we have furnished the scoffers of late! The trouble has all arisen, we need hardly say, as usual, from "politics." In spite of the "reform" of the civil service, the work of gross jobbery goes on. We should be sorry to believe that General Van Buren has been guilty of any connivance at the sale of the commissionerships; at the same time, the selection of him for the chief place on the Commission was inexplicable. He has no special connection with American art, science, literature, industry, or commerce, and represents no American institution except the stump. His assistants are mainly small politicians, who "worked" during the summer, or traders "on the make." For instance, one of them from the great city of Philadelphia is an ex-collector of delinquent taxes, and, as the *Public Ledger* well remarks, "fancy a consultation between [great representatives of European science and industry] the Krupps, Frauenhofers, and Bessemers, and Siemenses, and Bunsens, Tyndalls and Brasseys and Mundellas," and this poor "worker." In the meantime, "chaos" prevails in the American Department at Vienna, and the old Commissioners refuse to surrender their official papers to the new.

The Treasury Department has, in self-defence, published the correspondence relating to the Phelps-Dodge affair. There is nothing new in it, except the report of the detective or "Special Agent," as he is called, Mr. Jayne, and that of District Attorney Bliss. Mr. Jayne's letter is highly rhetorical, amusingly so when one remembers that his share of the sum extracted from the Dodges is $22,583, which is very good pay in these times for one little job. In his eagerness and excitement over the prospect, he in one place indulges in a climax which ought to find a place in the 'School Readers.' He says he discovered in the possession of the firm "certain papers, purporting to be copies of invoices from the manufacturers of the goods," which differed from the invoices filed with the Custom-house, in regard to the prices paid, from threepence to four shillings per package; "in omitting in many cases the additional charge per package from the Custom-house invoice"; and "in omitting from the Custom-house or Consular invoice the cost of transportation from Wales, the place of delivery, to Liverpool, the place of shipment." If, he says, the same violations of law were practised by the firm in all their importations, the loss to the Government would be about $15,000 a year. The loss which has been proved, however, is all told only $3,000, and this, Mr. Davis says, was more than covered by the losses of the Dodges to the Government under their own rule. Mr. Davis, who was District Attorney when the proceedings began, declared his belief that no fraud was intended, in this differing from the worthy Jayne, who had no more doubt about the guilty intent than about his own existence.

But Mr. Davis went on the bench at an early stage in the proceedings, and was succeeded by Mr. George Bliss, whose share in the prize is also $22,583. He simply repeats the facts as they appear in evidence, expresses his belief in the frauds, but not with any great earnestness, and announces that the amount legally forfeited is $1,726,060, but he advises the Secretary not to go before the Court with his claim, "inasmuch as he believed it would be exceedingly difficult to obtain a verdict for the amount claimed," it being "so enormous in comparison with the undervaluation and fraud." The total amount of duties lost to the Government is, he says, $1,664 68, so, like a prudent man, he urges the acceptance of the offer made by the Dodges to compromise for $271,017 23. The anxiety of Jayne lest this offer should be refused, and he thus lose his money, is very comical. He urges its acceptance for three reasons, which he gives seriatim with great naïveté: (1) because "the sum would more than reimburse the Government"—(of course it did, and left a small fortune to the informer, and to Messrs. Bliss, Jayne, Arthur, and Sharpe besides); (2) because "the firm is composed of a large number of partners, and the uncertainty of human affairs, taken in connection with the unavoidable delays of the law, is a strong argument in favor of acceptance"—(a somewhat cloudy statement, but meaning apparently that Mr. Jayne takes a sombre view of the future, and hates litigation, and likes cash payments); and (3) "because the intent of the law would thus be fulfilled." In short, he wanted the thing settled up, first because it was profitable, and next because it was right. The compromise was finally made, and $271,017 23 paid over by the Dodges. Of this the Government gets one-half, the knavish clerk who acted as informer, and who ought to be in the penitentiary, actually gets $67,754 31, and the rest is divided between the District Attorney and the leading Custom-house officials. What a business for a civilized and Christian Government to be engaged in!

A very slow-dropping fire of refusals to take the "back pay" still continues, but, as we suppose, the large majority of both Houses have made off with the spoils in spite of the threatening of the newspapers. One Massachusetts journal advises Mr. B. F. Butler just to run for governor, that's all, and see "how he will be laid out and covered over." Senator Schurz, who has always contemned this barefaced "steal," Mr. S. S. Cox, and Mr. Peters, of Maine, are the latest gentlemen we have heard of who have returned the money to the Treasury, and something like forty senators and members, all told, are known to have refused to put it into their pockets; but of these several have discovered some hocus-pocus device for placing it where they fancy it will do most good to themselves in the political future. We commend to all such the more amusing and equally honest and honorable course of one of their Minnesota colleagues. He lobbied like a spring beaver in favor of the appropriation; then he gallantly and virtuously voted against it like a man; and finally, as soon as it passed, he telegraphed home, where they had been digging the cellar of a new house for him, that "they had better begin to haul sand."

General Garfield, who was severely censured and called on to resign by a formal resolution at a convention of his constituents, for his course in voting for the retroactive salary bill, has published a long defence of himself, which is, in substance, that he had charge of the Legislative Appropriation Bill; that he resisted the attempt to attach the salary clause to it by every means in his power in the House, voting against it steadily, but constantly finding himself overborne by heavy majorities; that in the Conference Committee, of which he was chairman, he opposed it again, but was again beaten; that he had then no alternative but to abandon the bill to Butler, and go into the House and try and secure its defeat; that had he done so and succeeded, an extra session of Congress would have

been made necessary, entailing far greater expense than "the grab," and opening the way once more to an unusual amount of dangerous legislation such as the refunding of the cotton tax, a large number of doubtful "claims," and leading to the defeat of the first successful attempt to bring the Pacific Railroad to proper accountability. He, therefore, devoted himself to making the bill as it stood as good, or rather as harmless, as possible, and secured the addition of the clause deducting mileage from "the grab." There is certainly nothing in all this to destroy confidence in General Garfield's integrity or usefulness, though we are satisfied he was mistaken as to his duty. Some such great shock or protest as the defeat of the Appropriation Bill on a question of common honesty, would have been valuable in a way not to be estimated in dollars and cents; and had General Garfield fought for it, he would have rendered the country the highest service in his power. But he has not shared personally in the plunder, and he has too many years of usefulness and honor behind him, and has shown himself on too many occasions one of the few Congressmen on whom the eye of an American citizen can rest with satisfaction, to be lightly laid on the shelf by any constituency.

The so-called Governor of Louisiana, Kellogg, has recently addressed to the so-called Attorney-General a letter, which must appear a very ill-considered document, even in the eyes of those persons who feel compelled to give Kellogg, at a safe distance, their political countenance and support. How can he be justified in making the insinuation that the late massacre in Grant Parish was "directly planned and ordered by this man [McEnery] and his associates"? This charge, levelled against a respectable gentleman, is merely atrocious; and is seen to be more so when accounts more trustworthy than it is reasonable to expect from Kellogg make it highly probable that the trouble had for a principal cause Kellogg's own nerveless and profligate attempt to conciliate his political enemies by dividing certificates of election among them and his friends, regardless of which of them in a given case had been "elected." If the massacre was not planned and ordered by McEnery and his friends, says Kellogg, it was at all events "the result of their treasonable acts against the State government." The said State government, be it remembered, is Kellogg's, and the one which was pronounced, even by Senator Morton and his committee, to have been set up by the merest usurpation of power. It will strike most people that, under the circumstances, there is a good degree of impudence in Kellogg's directing his Attorney-General to proceed to the prosecution of McEnery for treason, but this is what he has done.

McEnery, on his part, has been making a three hours' speech at Monroe (April 19), in which he explained his views and intentions. Most that he said was not new, but some of his remarks are interesting. Kellogg, he says, in the course of three weeks appointed three sheriffs of Grant Parish. The negroes were extremely dissatisfied with his action. For twenty days the town of Colfax was in the hands of rioters, and the "*de facto* Governor of Louisiana" could not take it away from them, while the militia which he, McEnery, would have called out would undoubtedly have respected the orders of a government based on the people's will, and not on intimidation, and the outrages would have been prevented. Mr. McEnery then advised peaceful resistance under the forms of law to the Kellogg tax-collectors, and assured his hearers that, refusing to pay taxes and being proceeded against for the non-payment, their cases could be carried up to the United States Supreme Court, which would not decide against them. He was every day, he said, in receipt of assurances from the North which made him confident that the State would receive justice at the next session of Congress—a confidence which may not be misplaced; but we fear. Governor Converse, of Vermont, has, we see, cautiously expressed to Mr. McEnery his regrets that Louisiana is in so much trouble, and the Texas and Kentucky Legislatures have with more decision taken the same ground. But there has not been any just and proper public expression at the North of our opinion of the proceedings of this Kellogg gang of tenth-rate politicians who have seized on the State. They are left undisturbed. And *cui bono?*

Within the past few years the prosperity of Boston has been steadily increasing. Although the magnificent promises of the Hartford and Erie Railroad about "bringing the products of the West to deep water" were not carried out, other railroads have been bringing them instead. The Boston and Albany line, for instance, which in 1860 transported eastward 838,000 tons of freight, brought 2,000,000 in 1872. This year the Hoosac Tunnel will be completed, if nothing goes wrong, and vast expectations are indulged in by schemers, and operators, and railroad men as to the effect of the opening. The $12,000,000 and the quarter of a century's labor expended in building the tunnel would certainly not have been thrown away if the result of it should be as is now predicted, to transfer the Russian grain trade from Odessa to Boston, the Western grain trade from New York to Boston, and in the end, perhaps, to reduce New York itself to the condition of a howling wilderness. One of the seers, who has been lifting up his voice on the subject, says: "We shall do what is right when we occupy the position God has given us, and bring this little city, worthy of the Puritans and the Pilgrims, worthy of Massachusetts, to stand on the great line between Asia and Europe. I do believe it; I know it is so, and believing and knowing it, I cannot keep still. It is this that moves me." Several ways of doing this have been suggested, one of which—the State ownership of the tunnel lines—we referred to a few weeks since. The exact amount of advantage over New York which this road will give Boston we should be glad to communicate to the public if we knew ourselves.

Mr. Lowe's financial statement is the great topic of the English newspapers received by the last mail. We gave some weeks ago the principal points of it, as regards the amount of the receipts and expenditure. He announced a surplus of $30,000,000, in the past year. The public debt has been reduced by $98,400,000 since 1869, and of this amount $34,305,000 within the past year. During the coming year he estimates that the customs duties will be $105,155,000. The tax on spirits is estimated at $95,000,000, a formidable amount, and one likely to exert an increasing and pernicious influence on English politics. When Sir Robert Peel imposed the income tax, thirty years ago, it was estimated that it would produce $3,640,000 for every penny to the pound sterling imposed (or every cent to $1 20). It now proves that for every penny to the pound imposed it yields $5,000,000 more than it did then. The duties are to be again lowered during the coming year—the sugar duty by one-half; the income tax by one penny in the pound. Neither the bad harvest, nor the strikes, nor the political disturbances in France and Spain have affected the revenue. The enormous sum raised by taxes on the sale of spirituous liquors of course argues the existence of prodigious intemperance, as well as moderate drinking, and is likely to give the "liquor question" an importance in England it has never had elsewhere, and it will have a fiscal bearing of the first order. Mr. Lowe admits, indeed, that a large part of the increase of the revenue during the past year has been due to increased consumption of spirits by the working-classes, and this in turn was due to the high wages consequent on great business activity.

The Australian colonies have at length come to an understanding with the Home Government upon a subject which has furnished a bone of contention between them for many years. The Australian politicians are nearly all protectionists, and share the contempt of some of ours for Adam Smith, whom they do not consider "a practical man"; but they are, in one respect, a great deal more sensible and logical than our protectionists. They, for instance, are never guilty of such amazing folly as maintaining that free trade between Vermont and Massachusetts is a great blessing, and, in the same breath, that free trade between Vermont and Canada would be a great

curse. What they say is that free trade between two political communities, whether they fly the same flag or not, is mischievous, which is good honest doctrine, which one can understand and respect. Each of the various Australian colonies has, therefore, always clamored for permission to tax imports from the others, so as to protect "home industry," but never could get it till now. The Imperial Government has at last yielded, however, and a bill is before Parliament permitting each colony to regulate its customs as it pleases, provided it imposes no differential duty on the goods of any country, and neither imposes nor remits duties in contravention of subsisting commercial treaties between Great Britain and other foreign powers. They will now all have a delightful time keeping out each other's odious products, and building up their own workingmen, or, in other words, trying to do away with the effects of steam, machinery, telegraphy, and nearly all other recent achievements of material civilization.

There is more trouble impending in England on the question of neutral duties. A considerable section of English "society" sympathizes with the Spanish Carlists, partly because their cause is the cause of "gentlemen," like that of the Confederates, and partly—though only a small number of persons is affected by this consideration—because it is the cause of the Church. So a committee has been formed, and has begun to solicit subscriptions in aid of the Carlist treasury through advertisements in the Catholic newspapers in London, and the Spanish Minister, doubtless having the memory of the American war in his mind, has complained of the performance to the Government as one which ought not to be tolerated within the limits of a friendly state. Whereupon the matter was referred to the law officers of the crown for their opinion, and that opinion is, "that the advertisement being a request for gifts, though a contract for the purpose would be illegal and not capable of being enforced in an English court, it did not amount to any infraction of the law at all." It appears, however, that a precisely similar case arose during the Greek war of independence, fifty years ago, and the opinion of the King's Advocate, of the Attorney-General, and of the Solicitor-General (Copley, afterwards Lord Lyndhurst) was taken upon it, and they advised Mr. Canning that subscriptions raised by citizens of a friendly state for the purpose of aiding the operations of one belligerent against another, "were inconsistent with neutrality and contrary to the law of nations," and that pretended loans at low rates of interest would fall within the same category, but they acknowledged that they did not well see how such offences were to be punished, owing to the difficulty of proof. Since then, subscriptions of this kind have been made in aid of various "causes," some popular and some reactionary, but no prosecution has been attempted or apparently even thought of. The stir in the present case is doubtless the result of the trouble with this country. The London *Spectator* has, apropos of the affair, some words of earnest and much-needed warning to sympathizers in foreign quarrels, and they are words which many people out of as well as in England would do well to listen to. It points out with great force the wrong and inexpediency of meddling at all in disputes which you do not thoroughly understand, as is the case with nearly all internal disputes of foreign nations, and, above all, of encouraging people to overturn established governments, or engage in civil war, by "hailing" them or lending them money, when you do not intend to run any risk yourself, but only to look on and enjoy the fun, or when you know perfectly well that your opinion about the merits of the quarrel, or its probable result, is not worth five cents.

Affairs in Spain seem to grow more lively, but also more hopeless. The Committee of Permanence left by the Cortes, in imitation of that of Versailles, to look after the Government during the recess, has got into a quarrel with the Executive for having appointed Señor Pi y Margall Minister of the Interior *ad interim*, in place of Señor Figueras, who had taken leave of absence in consequence of the death of his wife. The accounts of what followed are not very clear, but Marshal Serrano appears to have taken it into his head to try a *coup de main* against the Government, in the interest of the Committee, but the troops refused to follow him, and some volunteers, who did espouse the cause of the Committee, were soon after compelled to lay down their arms by a force of regular artillery. The Government then dissolved the Committee, which is of course of itself a revolutionary act, but the "Reds" were not altogether satisfied with this, and, as they distrust everybody, they appear to have taken possession of the city, with the view of guarding against any further "reactionary" attempts. The Executive is not able to gainsay them, because it has no troops on which it can rely, and is indeed in a state of pitiable helplessness, aggravated by the complete emptiness of the treasury and the total extinction for the present of the public credit. Señor Castelar appears to be coming to his senses a little, and is satisfied now that the abolition of the conscription was not such a fine thing after all. Accordingly, he wishes to compromise with the artillery officers, and get them back into the army as the nucleus of a reorganized force. They are or were the *élite* of the Spanish army, the best born, best educated, and best disciplined, and the strength of their *esprit de corps* may be inferred from the fact, that since their resignation, on the appointment of General Hidalgo to the command in Calatonia, the richer ones have supported their poorer brethren out of their own pockets. They are now all lost to the Government, and are probably leaning to Don Carlos, who, if he is not gaining ground, is certainly not losing it.

The correspondent of the London *Times* reproduces the leading article of a newspaper published at Madrid, which, before the days of the French Commune, would have been considered a hoax, but now seems probable enough. It professes to be the organ of the Sans-Culottes, or "The Shirtless" (Los Descamisados), and this is their programme:

"Anarchy is our only formula. Everything for everybody (*todo para todos*), from Power even to Woman. From this beautous disorder, or rather orderly disorder, true harmony will spring. The earth and its products being the property of all, robbery, usury, and avarice will cease. With the destruction of the family tie and the establishment of Free Love, public and private prostitution will conclude, and the ideal of the Greek legislator be realized, in which the young shall respect and love their elders, seeing in each old man a father, and in each woman a mother or a sister. Getting rid of the bugbear called God (*Dios*), and reducing His mission to affright the children, there will terminate those *industries* called religions, which only serve to feed the mountebanks (*farsántes*), as Dupuy calls them, the *curas* (priests), whose mission is reduced to deceive and trick the foolish.

"This is our programme; but, before putting it into practice, it is necessary society should be purified. A blood-letting (*sangria*) is essential—short, but grand and extraordinary. The putrid branches of the social tree must be cut off that it may grow vigorous and healthy.

"These are our desires and aspirations; and, now that you know them, tremble, ye *bourgeois*, for your tyranny is coming to an end! Make way for the shirtless (*descamisados*)! Our Black Flag is unfurled. War to the family! War to property! War against God!"

The election in Paris, so much talked of, has at last come off, and has resulted in the defeat of the Government candidate, M. de Rémusat, and also of the Conservative, Baron Stoffel, and the election of M. Barodet, the ex-Mayor of Lyons, and a furious Radical adventurer, who figured prominently in the worst excesses of the Reds in that city during the war. The two moderate candidates between them only polled 152,500 against Barodet's 166,000. This result is undoubtedly the rebuke of the Paris Radicals to Thiers for the course of the Government towards Lyons, and as such he has doubtless received it, but he has a remarkable capacity for not being troubled, and probably hardly expected a majority in Paris, where the Radicals after all have only about half the vote. Of seven other elections to fill vacancies in the Chamber, the Radicals have triumphed in the Departments of Jura, Corrèze, and Marne, but in Morbihan the Conservatives, as might have been expected, have carried the day. The general result is that one Legitimist, four Republicans (Conservative), and three Radicals have been elected. A modification of the ministry is said to be a probable result, M. de Rémusat, Léon Say, and Jules Simon going out; but this is made doubtful by M. Thiers's self-confidence and obstinacy.

TRANSPORTATION AND THE TARIFF.

IT is greatly to be hoped that the Western farmers, who are now so much roused against the railroad corporations, and are making such a formidable show of "Granges," will come to some conclusion before long as to what they want, and put it down on paper in a practicable shape; otherwise the movement will die out like the Know-Nothing movement, some phases of which it already resembles, leaving the corporations stronger and more tyrannical than ever. Thus far, nothing in the shape of a policy worthy the attention of intelligent men has been produced. What the farmers' grievances are we all know; now let us have the remedy in black and white, and in a form which will bear expression in legislation. It is hardly worthy of sensible business men, such as the great body of the Western farmers are, to go on pouring forth vague declamation against "heartless monopolists," like the complaints of a meeting of a trades-union or of a woman's-rights convention. Nor is the plan of having "reasonable rates" of freight—or, in other words, the cost of transportation—fixed by a jury or a commission, which has been adopted in Illinois, very creditable to the intelligence of men who like to sell their wheat and cattle at the market rate. We have had enough in all conscience, during the last fifteen years, of attempts to set things to rights by the aid of mediæval expedients. It is time that we once more began to go forward again, and tried to profit by the experience of past ages instead of copying it.

The farmers' uprising, undoubtedly, whether it be well or ill managed—whether it grow in its present shape into a real political organization, with a policy and platform, or pass through a cloud of rhetoric into something new—is, as we ventured to predict a fortnight ago, "one of the early skirmishes of the impending war, which, unless we greatly err, is destined to produce industrial, social, and, above all, political changes in this country of the most startling description." It is important enough already to make the discussion now raging in some of our Eastern papers, as to what the Republican party or the Democratic party ought to do next, seem almost puerile. But the new movement will not become a real political force until it is based on a calm and rational view of the facts of the situation. First and foremost among these is the difficulty of successfully managing a great railroad. This does not seem, perhaps, very formidable to an excited orator at an anti-monopoly meeting, but it is nevertheless, in the eyes of a rational man, one of the most difficult feats of modern civilization. It is indeed so difficult that the supply of persons equal to the task is, in this or any other country, very small. Cheap transportation might doubtless be obtained by the States at once by an amendment to the Constitution which would enable them to seize on all the railroads, and compel the managers to work them at low rates. But cheap and safe transport—if, indeed, there be any cheap transportation which is not also safe—cannot be permanently secured by either the Government or corporations without good management. Now, what does the good management of a railroad mean? It means, in the first place, the selection of a small army of employees, for a great variety of duties, requiring the utmost honesty, fidelity, exactness, and punctuality; and the maintenance of discipline in this army, by day and by night, in winter and summer, over a line of hundreds of miles, year after year. It means, in the second place, the purchase in the best market of vast quantities of supplies of all kinds for buildings, track, and rolling-stock, and the appropriation of each article to its proper purpose with the least possible amount of misuse or waste. It means, in the third place, the running of hundreds of trains daily and nightly in such manner and with such accuracy and punctuality that there shall be no collisions, and no lagging, and such forethought that no wheel, or rail, or bridge shall prove defective. This great, indeed we might almost say wonderful, work has come, by a sort of process of natural selection, to be committed to the hands of what is perhaps the ablest body of men in the United States. It is among them, and not in Congress or the State legislatures, that our real statesmen, and commanders, and financiers are to be found. They are by no means, in all respects, an admirable body of men; their influence in politics we hold to be bad, and almost wholly bad; but they do their own work, for which they are responsible before the world, admirably well. Their business is to conduct their roads carefully and profitably, and this they do; it is not their business to legislate wisely for the people of the United States, and this they neither do nor make any pretence of doing; and when we hear of their having corrupted a legislature, or bought up a judge, the blame lies not so much with them as with those who provide cheap and nasty legislators and judges. The purity of the legislature and the bench is our affair; the welfare of "the road" is the affair of the manager.

Now, the motive which influences them in giving themselves up to the direction of railroads is simply love of administration and love of money. These are perhaps low motives, but they are the motives by which nearly all the business of the world is done. There is in the present state of human nature no substitute for them. If, therefore, we were to interfere with the management of railroads to such a degree as to deprive their owners of the control of them, and of the power of making money out of them, the first result would be a rapid diversion of the talent and capital now engaged in running them to other pursuits. There is hardly any more doubt about this than about the composition of water. If the state began to meddle much with the cost of transportation and the regulation of traffic, no enterprising man would continue to hold railroad stock, or to work a road under the inspection of boards of politicians. He would sell out and withdraw. If the state then guaranteed a certain rate of interest on capital invested in railroads, a large class of "prudent investors," trustees, widows, spinsters, and elderly men retired from business, would doubtless keep their funds in them, as they do in Federal and State securities and city bonds; but this class does not supply administrative talent. It would probably not produce one man capable of operating a hundred-mile road, so that the management of the roads would have to be taken by the State itself; or, in other words, by the dozen cunning-looking gentlemen who meet in seedy black clothes in hotel parlors a few weeks before election, and call themselves "The People." We presume there are but few persons still enthusiastic enough to believe that these persons or their agents, however they might succeed with one road in each State, such as Mr. C. F. Adams, Jr. proposes they should carry on, would be capable of taking charge of the entire railroad system of the United States. Let those who are dissatisfied with Scott's or Vanderbilt's railroad service, think of what Tom Murphy's would be. In short, whatever the defect or inconvenience of our present system of having our transportation done by private enterprise, there is no substitute for it possible. A very large proportion of the talent of the country is now engaged in it, and we cannot afford to drive it away by undue state interference. In other words, the state could not provide as cheap and safe carriage as we now have by any process within its reach, or likely to be within its reach, and the extension of state activity would, in the present and probable condition of our politics, be simply an increase of the material out of which our Murphys, Ameses, Caseys, and Butlers are made.

If the Western farmers will look a little more deeply into the matter, they will see that the remedy lies not in more State interference, but in less; that what has most contributed to bring the class of men who are engaged in the conduct of the great industrial enterprises of the community (and with whose services it cannot dispense, into a position of hostility to it) and make them a source of political corruption, is special legislation, or, in other words, legislation bestowing special privileges on particular sets of persons. The system of passing acts giving the control of the market to persons engaged in the production of certain articles, is one which no community in our day has virtue enough to resist. It has, in our case, not only debauched Congressmen and converted them into the hangers-on or paid agents of the great industrial chiefs, but it has gradually beguiled the industrial chiefs into looking on the country, not

so much as a political organization with laws to be obeyed and rights to be respected, as a field of speculation to be exploited. It has worked, too, a complete and corrupting alliance between the great railroad managers and the great manufacturers, by which money helps money, and every legislature in the country—as might be expected, that of Pennsylvania especially—is filled with the henchmen of the combination, and bound to do their bidding, and made as impervious to public opinion, or indeed any outside influences of an honest sort, as a parcel of plate-layers or ticket-agents. If the farmers wish to break this combination up, and bring back our great operators into just relations to the community, they must strike at the sources of what is corrupt in their power, and first among these is tariff legislation and all its appendages. In other words, the question of transportation is part and parcel of the tariff question, and cannot be dealt with apart from it. Transportation is made dear by the dearness of supplies; that is to say, the railroads are taxed enormously, and through the railroads the farmers, for the benefit of special industries. There can be no cheap transportation without cheap iron, cheap cars, cheap stations; and, what is more, there can be no markets for American produce abroad so long as the sale of all foreign commodities, except gold, is made as difficult as high duties and vexatious custom-house regulations can make it. Agricultural produce at the West is now a glut; it must become more and more of a glut, if either more railroads are opened or the cost of transportation on the present roads is diminished, as long as new markets are not provided, or, in other words, as long as access to the crowded regions of the Old World is artificially impeded. Of course there may come a time when there will be population enough in the West to eat up all its corn and pork; but, at the present rate of agricultural and railroad development, this will not be witnessed by either the present generation or the next, and the cry of the "Granges" ought to be for a clearing of the outlets to the Old World in all ways. To secure this, it is not enough to cheapen transportation; we have to offer a market to the foreigner for his commodities in order to get him to take ours.

THE EXTRAORDINARY ELEMENT IN THE CASE OF PHELPS, DODGE & CO.

THE case of Phelps, Dodge & Co. is certainly destined to become a *cause célèbre* in our mercantile history; and, if we are not much mistaken, will, by awakening public attention to the character of the laws and the fiscal policy under which the business of the country is transacted, exert an important influence also upon our political future. The statement of their difficulties with the Government, which the firm has recently published, is a document so remarkable, that were it not for the accompanying confirmatory letters of the late United States District Attorney, Hon. Noah Davis, and the Special Treasury Agent, Mr. Jayne, the alleged facts would seem almost incredible; and yet the concurrent circumstances of the case which have not been publicly related, and the deductions which a review of the whole affair legitimately warrants, are if anything still more extraordinary.

During the past summer a contract was being negotiated by the house of Phelps, Dodge & Co. with certain manufacturers in Europe for the purchase of the entire annual product of a specialty of metal fabrication; and as the project, from the amount of capital involved, was one of no little risk and of great importance, the entire discussion and correspondence relative to it were made in the highest degree confidential, and a member of the firm ultimately sent abroad to perfect and complete the arrangements. But the steamer which bore him had hardly taken its departure when the firm was waited upon by a competitor in business, who, after making known his acquaintance with the proposed contract and its conditions, as well as the sailing of the partner referred to, preferred a demand for participation for himself and others in the enterprise, accompanying it at the same time with a threat that unless the terms were accepted "he would burst the whole business." It is only necessary to say that the demand was at once resented, and its author treated as he deserved. But the revelation that what were supposed to be business secrets in the firm had become known, and the further fact that an attempt was subsequently made in Europe to make good the threat uttered, led to an investigation; when it was ascertained that for some time previous it had been the practice of several *reputed* respectable New York metal-brokers and merchants to visit the store of Phelps, Dodge & Co., secretly and at night, for the purpose of inspecting their letter-books and invoices—admission being given them by dishonest clerks and watchmen, who had been bribed to betray their employers' interests.

An arrest and prosecution of at least one of the principals concerned in this disgraceful transaction immediately followed; but as it was shown that admission to the store was allowed by the agents of the firm, and as it could not be proved that any article had been feloniously removed from the premises, no specific criminal offence, for which punishment might be awarded, could be established. But in the course of the trial it came to light that among the employees who had been guilty, from mercenary motives, of betraying the trust confided to them, was a clerk who, to the sin of dishonesty, added the deeper one of ingratitude. This man, a creole Frenchman or Spaniard, of supposed West India origin, had been given employment in the outset, when not needed, by a member of the firm, simply out of compassion for his utter poverty and friendlessness; and had subsequently been educated, promoted on a liberal salary to the position of assistant invoice clerk, and even retained in position when ill-health had almost entirely incapacitated him for any useful and efficient service. This rascal, for such is the only proper term that can be applied to him—who, by the way, it should be stated, had gained admission to the store at night under the plea of serving his employers by bringing up his arrears of copying—foreseeing as the result of the legal investigation that his own dismissal from employment would be one certain issue, took immediate steps to secure himself against any contingent detriment by assuming the rôle of an informer; and having in his capacity as assistant clerk become acquainted with certain invoice irregularities, in place, as was his duty, of informing his employers, he stole the documents in question, and put himself in communication with the Custom-house officials.

As to the manner in which he operated to make his stolen capital available, it is sufficient to say that men of high standing in the legal profession were only too ready to engage, for a share in the spoils, in the work of hunting down an old and leading firm of New York merchants, and by such the case was worked up and placed in the hands of the Custom-house detectives.

Now, whether the firm of Phelps, Dodge & Co. were or were not engaged in an attempt to defraud the revenue, is a question which we do not here propose to discuss. But we simply draw a picture of the events that preceded their accusation and arraignment, and ask our readers and the public to take a good look at it, and then ask themselves how long a community which tolerates such a dry-rot of all manliness can legitimately profess to be moral or even civilized? Or, in the face of such precedents, what probability is there of New York City speedily becoming the commercial centre of the world's exchanges, the continued recipient of foreign capital, or an entrepôt of the commerce of all nations?

But if the relation of private parties to this case has been most extraordinary, the position of the Government, both in respect to the law and its administration, in this same matter, has been no less singular. And in saying this we by no means intend to reflect on the course of the minor officers of the revenue, who play the part of prosecutors and detectives. The law under which they act is permissive, if not mandatory; and when the end in view is pecuniary gain, human nature is pretty certain to run in similar channels, whether it be enthroned in the Custom-house, presides over a Chatham-Street "loan office," or rides on a red cart in the person of a Yankee tin-peddler. But when we come to deal with Washington and the higher officials who preside over the destinies of the

nation, we have a right to expect something better. We have a right to expect that they, at least, shall fully recognize the principle that the primary object of all government *is to remove obstructions;* and of a free government, to promote the interests of the people and prevent wrong and injustice. But axiomatic as are these principles, they are the very ones which appear to have obtained the least recognition in the determination and administration of our recent revenue policy; and in the place of them we have had interference and obstruction as the characteristic feature of Congressional legislation; and in the Departments, a proclamation by works that Government exists primarily for itself, and that its interests *per se* are first, and those of the industry, trade, and commerce of the country secondary and subordinate, or, as the late Secretary of the Treasury substantially expressed it, in an official conversation during the past winter, "that he regarded the interests of the Government and the interests of the merchants as diametrically opposite."

In the light of such precedents and sentiments, and as bearing upon the industry, commerce, and morality of the country, it is interesting next to trace the influence and action of the Government in the Phelps, Dodge & Co. difficulty, from its remote inception to its full fruition and culmination. In the first place, the attempt to collect a revenue from duties on tin and tin plate (the articles in respect to which undervaluation is alleged) is something economically indefensible. Neither of these commodities is produced in the United States, and no infant manufacture, or citizen in such a state of pauperism as warrants him in asking the Government to impose a tax for his benefit, seeks or demands it. But, at the same time, tin and tin plates are so indispensable in our social economy, and enter into so many forms of domestic industry, that it is not too much to say that, for every dollar tax by which their cost is primarily enhanced by the Government, the consumer pays, in the way of profits, interest, and commissions on the successive sales and transformations that precede their final use, at least from fifty to seventy-five cents additional.

The tax, then, in place of being specific, or by the pound, as it might be—thus obviating any possibility of fraud on the part of the importer—is made *ad valorem;* and when Commissioner Wells, some years since, with the general concurrence of importers and appraisers, and with a view of simplifying the law and its administration, made a special recommendation to Congress in favor of converting the existing *ad valorem* on tin plates into an equivalent *specific*, the recommendation received no more attention than if he had proposed some standard by which the length of dogs' tails should be equalized and adjusted. And the reason, furthermore, why specific duties, as a preventive against undervaluations, have not been more generally substituted in the frequent readjustments of our tariff laws, is undoubtedly to be found in the circumstance that the essence of protection is obstruction, and every protectionist, when called upon to legislate, instinctively feels, even if he cannot give a reason, that the removal of any obstruction in the way of importations is in itself a movement in the direction of greater freedom in exchanges; and that, in comparison with such a result, temptations, snares, frauds, and national demoralization are evils of minor consideration.

But although the substitution of specific for *ad valorem* duties would effectually prevent frauds in importation, except through the direct complicity of the agents whom the Government appoints to enumerate, weigh, and measure, it would still seem as if the law in other respects had been purposely disregarded to make the business of importing as difficult and personally hazardous as possible. Thus, for example, instead of one concise code, we have statute running back to 1799 piled upon statute, until the law has become so complicated that it is within bounds to say that there are not ten men to-day, in all the United States, who have any clear comprehension of all its requirements, provisions, limitations, and interpretations. Again, the law requires invoices, oaths, certificates, and declarations, not once, but in triplicate, of shippers, consuls, owners, and consignees, in respect to the most minute particulars of cost, market value, freights, charges, and commissions; and yet, in actual practice, and when it is to the advantage of the Government to do so, all these forms may be set aside, and the duties assessed on the judgment of certain persons, supposed to be competent, sitting as appraisers. And when these appraisers, whose function and office would seem to be judicial, have once given their judgment, and the same has been accepted alike by the Government and the merchant, the duties paid, and the merchandise delivered, sold, and consumed, it is held to be right, as it is the practice of the Government, to go back at any time within a period of five years and reopen the whole matter for further adjudication; and, as in the case of Phelps, Dodge & Co., exact fines, amounting to confiscation, for technical infractions of the law, which, by the admission of the Government agents themselves, have resulted in practically no loss to the revenue. And as illustrating still further the arbitrary character of the law regulating foreign commerce, it may be stated, that even in cases where the duty is so much per pound, per yard, or per dozen, and where value is of no consequence, if it so happens that the invoice does not correctly state the value, the goods are liable to confiscation, and in at least one instance during the past year, of this exact character, have in fact been seized for forfeiture, and the consignee threatened with imprisonment. And in the case of goods imported, where the duty is *ad valorem*, but the value indefinite or difficult of determination, and when for such very reasons—as in a recent importation of South African diamonds—the goods are forwarded to the care of the Collector for appraisement, and not to the owner or consignee, the absence of an invoice, giving details which cannot be known to any one, has not only been held to render the importation liable to forfeiture, but on such flimsy basis proceedings for forfeiture have actually been instituted.

But the law, harsh, arbitrary, and barbarous as it is, is not wholly unmerciful, inasmuch as it allows the head of the Treasury Department "to mitigate or remit any penalty or forfeiture," when the same "in his opinion shall have been incurred without any intention of fraud." Now, in the case of Phelps, Dodge & Co., an infraction of the law was without reserve admitted, and, as Mr. Boutwell has stated, the practice of the Treasury undoubtedly warranted the Secretary in assuming an admission of illegal action, and an offer to settle, as equivalent to a confession of anything which the form of procedure might stipulate; but the fact nevertheless remains, that we have the assertion of the firm and the certificate of the District Attorney, *first*, that the offence was not intentional, and, *second*, that the total loss to the revenue during an extended period, and as the result of Custom-house transactions and payments representing millions, was a sum comparatively insignificant. Under such circumstances it would seem to have been the part of a great Government, whose revenue laws are acknowledged to be a bundle of inconsistencies, to have fallen back on the old maxim, "De minimis non curat lex"; and even on the assumption that the utmost that could be charged was true, to have dealt tenderly with the reputation of one of the representative and most enterprising commercial firms of the country, the members of which, when it was a question whether the Government itself would have a continuance, had contributed of their own number to the ranks of the army, and had given of their substance to the cause of the country what in old time would have sufficed for a "king's ransom."

But what did our great model and enlightened Government, acting through its official representatives, actually do? It exacted a penalty of $271,023 17 for a detriment to the revenue which it has been certified was not in excess of $1,664, and which the Treasury, by compromising, acknowledged to have been unaccompanied by fraudulent intent; and exacted it furthermore with the full knowledge that the diversion of one-fourth of the whole amount paid into the pockets of a scoundrel of a clerk, who for lucre had sold out his employers, would in itself constitute such a premium and incentive to rascality as to substitute an atmosphere of suspicion and con-

cealment, in place of confidence and good feeling, throughout the entire mercantile community. There is no necessity, in forming an opinion about this part of Phelps, Dodge & Co.'s case, to consult Brightley's Digest, or to trouble our heads about actual costs, market values, or what has or has not been the practice of the Treasury. If the facts in respect to the inception of the difficulty, the procurement of evidence, the absence of intent, the amount of loss to the revenue, the penalty exacted, and the disposition of the penalty, are as represented—and it is difficult to see how the above statements can be questioned—the action of the Government has been simply infamous, and in almost any other constitutional country would have not only driven the ministry from power, but would have compelled national atonement not only for the money paid but for damages incurred to the uttermost farthing. Legislation, we all know, has driven our commerce from the seas; but administration seems now to supplement legislation by driving American merchants out of existence, and substituting in their place men of no nationality, who will say to the Government as their prototype Shylock said to his persecutors, "The villany you teach me I will execute, and it shall go hard but I will better the instruction."

BARON RICHTHOFEN'S TRAVELS IN CHINA.

II.

SHENSE is chiefly interesting as the original China—the China of 2,000 years ago. Here lived the dynasty that first conquered and consolidated the country into the immense Empire that has so long defied the centuries. The province is more varied, geographically, than Shanse, being divided by nature into two grand divisions—Northern Shense, which, like Shanse, is a high plateau covered with loess, and Southern Shense, which is drained by rivers to the Yangtze, has no loess, descends to the ordinary level of interior countries, and has alluvial plains. The two portions are so distinct and so decidedly divided by the Tsing-ling-shan range of mountains that communication is very difficult; so much so that the political condition of one portion does not affect the other. In the Taeping rebellion those destructive religionists held Southern Shense for several years, but, with the exception of two slight raids, they did not penetrate into the northern half. On the other hand, the Mohammedan rebellion, which half depopulated Northern Shense, did not pass the Tsing-ling-shan.

Of Northern Shense there is much ground lost in rough and bare mountain-sides and defiles, and everything that is of value in the province centres in the large loess basin of the Wei River. This river is the largest affluent of the Yellow River, and the region it runs through is the perfect type of loess. In some places the river-bed is 600 feet deep in the loess, the sides terraced up field after field, and the wall-faces filled with caves inhabited by thousands of people.

The Wei basin is one of the original centres of civilization. It is the greatest agricultural country in the northwest of China, and here first population thickened, arts arose and flourished, conquests followed, tributary tribes and nations contributed from their scanty wealth, until at length a great empire rose, overshadowing this portion of the continent. It has had to pay dearly for its pre-eminence, having been again and again the scene of frightful revolutions, in which great part of the peaceful population would be swept away; Chinese wars, from time immemorial, being conducted on the most bloody and cruel principles. When taking a town or village in a country considered hostile, though no especial offence may have been given, the accepted rule is to kill everything living—men, women, babies, donkeys, dogs, and cats. In the longing for blood, no four-footed beast of prey equals the human tiger when once created by the license and impunity of barbarous warfare.

The Wei basin also has its seasons of famine, for the loess, so friendly to man in most respects, has one great drawback—it must have water. Without that it is an arid, surface-baked region. There are no springs in it, and the drinking-water in loess regions is drawn altogether from springs and brooks at the bottom of the ravines where the loess rests upon the original formation. As these ravines are deep, and the water, therefore, not available for irrigation, the crops depend entirely on rain. When a drought comes, therefore, the crops fail, and the effect is all the more severe because the ordinary production is so sufficient that there are no outside sources of supply available when need appears.

The Wei region possesses, in addition to its fertile properties, a commanding position strategically. The roads which centre at its capital not only reach east, west, and south in China, commanding the communication over mountain ranges between provinces, but strike out to the westward through Central Asia to the borders of Persia and the Caspian Sea. A remarkable wedge of productive and comparatively level land lies between the mountain ranges of Thibet and the Himalayas and the rough defiles of the broken border of the table-land of the Mongols, stretching 3,000 miles westward.

To quote again Baron Richthofen's words:

"Along the Nan-lu the fame of the Tsin dynasty spread to the Persians and Romans. Fourteen centuries afterwards, Marco Polo travelled on it on his way to the residence of Kublai Khan. The Chinese emperors were, at an early period of history, awake to the importance of the possession of this channel of international traffic, because it gave them the dominion of Central Asia. That portion between Lan-chau-fu and the Kia-yü-kwan gate (now within China) has for 2,000 years been defended with the utmost pertinacity, and not unfrequently at a great sacrifice." "In many epochs of its history the Chinese Empire was effectually locked up by closing that gate, and opening it expressly for those only who had permission to enter." "Since the time when the Emperor Hia-wu-ti, of the Han dynasty, nearly 2,000 years ago, first extended the supremacy of Chinese rule to the frontiers of India, Persia, and Bokhara, and, with the view of strengthening it, established Chinese colonies and Chinese high-roads, lined with cities, through the whole extent from Kansu to the far west, the tendency has prevailed to preserve those distant boundaries. Alternately, succeeding emperors had to relinquish their hold of the regions beyond the Kia-yü-kwan gate, and contrived to re-establish it; but at no time did they lose complete possession of the channel east of it. The present dynasty succeeded in establishing the rule in the far west firmer than any other before. Commercial relations were never more flourishing than when the Mohammedan rebellion broke out and the Chinese lost, in 1865, not only the whole of the Tien-shan Nanlu and Pelu (the two great western roads through the district described), but also the Kia-yü-kwan gate itself, and the whole portion of Kansu beyond Lan-chau-fu."

Kansu is the province of the northwest of Shense, and Lan-chau-fu is its capital. The Chinese, now using troops with foreign arms, and more or less habituated to foreign drill, have recovered Kansu, and will probably soon have repossessed themselves of the Kia-yü-kwan gate, if that be not already accomplished. Baron Richthofen thinks they will even recover the great western line of communication to Central Asia. Of this line he says, when speaking of railroads:

"Little doubt can exist that eventually China will be connected with Europe by rail. No direct connection of this kind is possible south of the Wei basin, and any road to the north of it would have to run altogether through desert countries. The same reasons which have confined the commerce of China with the far west during thousands of years to the natural road which I have described, will be decisive for the establishment of steam communication. It is a remarkable coincidence that this whole road is well provided with coal. Kansu is reported to rival Shanse in the richness and extent of its coal-fields. One intelligent informant, a native Catholic priest, who has travelled extensively in the Nanlu and Pelu (the great western line of roads), asserts that from Lan-chau-fu to Hami coal is used for domestic purposes at every station on the road, and that the same is true of the whole extent of the Pelu. The region which is supplied from a coal-mine in China by land transport alone does not exceed a radius of a hundred miles. If full credence is given to the statement, it follows that the coal formation must be assumed to exist, with few interruptions, through thirty degrees of longitude. There is scarcely an instance on record where so many favorable and essential conditions co-operate to concentrate all future intercourse on so long a line upon one single and definite channel."

Shense produces the best of the native opium, and it is one of the principal exports. Speaking of its cultivation, the Baron says:

"In the departments of Kien-chau and Fung-tsiang-fu (where it is cultivated), the lower portion of the loess basin consists of rolling ground, which is interrupted by a few deep gullies. The poppy is not cultivated on the top of the swelling ground, which is too dry; but every slope, however gentle its inclination, is terraced. Those terraces which are well shut in on two or three sides are selected for the poppy. I saw extensive fields cultivated with it, and in some portions of the country it formed the most conspicuous winter crop next to wheat. In this case the poppy takes the place of an ordinary and uncertain crop of wheat, peas, beans, or rapeseed, and, as opium is a much more valuable crop than these, and is largely exported, its planting is perfectly justified from the standpoint of common economy. The area of the fields planted with poppy will rather increase than decrease. As regards the attempts on the part of the Government to check its cultivation, it appears that no power would be able to stop now the production of a narcotic for which the people have attained a craving. They are unanimous in the accusation that the mandarins were the first in every province to smoke opium, and that the greatest relative number of smokers is still found in the official residences. If the mandarins attempted to suppress it, the people would revolt. An instance was related to me in the district of Ping-yang-fu, which produces much opium. An extra tax of 400 cash is there levied on every mow of land planted with the poppy (about two dollars an acre). In 1870 the money was not paid. Before harvest time, the district mandarin sent out his men, and had the pods of all the poppy plants cut off. In the following year, the tax remaining unpaid, the soldiers returned to repeat the destruction; but the people of the whole district made armed resistance, and drove them off. They then collected their opium without paying any duties."

Wheat is the staple agricultural product, and that, with cotton and opium,

the principal exports to other provinces. Si-gnan-fu, the capital, was preserved from the Mohammedan rebels by its high and strong walls. It is a place of great trade, where converge the great roads which reach "to the ends of the earth" on either hand. Since 1100 years before Christ it has been a famous city, and from that period to 1130 years after Christ it was the seat of empire, and during a portion of that time the seat of empire of China was the capital of half of Asia.

"Around Si-ngan-fu there are constantly dug up from the soil not only curious coins of various of the ancient dynasties, but bronzes which date from the first Chou dynasty (1100 to 250 B.C.), and are not surpassed in taste and finish by the productions of later periods."

And quoting from Dr. Williams's account of the Tang dynasty:

"During the 287 years they held the throne (618 to 905 A.C.), China was probably the most civilized country on earth, and the darkest days of the West formed the brightest period of the East."

The road into Southern Shense crosses the Tsing-ling-shan, and was made for military purposes about 1,600 years ago. Previously there was no communication with the southwest except by circuitous and distant routes. From Si-gnan-fu to Han-chung-fu, the principal city of South Shense, the distance is about 300 miles, of which 150 is over a double range of mountains which Baron Richthofen describes as of extraordinary character and most difficult of access. His description is too long for an extract, but the principal feature is that the whole region is a collection of rugged and precipitous summits, with deep, naked ravines between "a perfect sea of rugged summits and crests." The road winds through the wildest gorges, creeping up the sides of precipices, sometimes hewn in the rock, sometimes supported on lateral poles covered with planks. Crossing the beautiful valley of the Upper Han, the traveller again entered upon a mountain road, the continuation of the other, and carrying communication to Szr-chwan. This portion of the road is even more celebrated than the other. It is also about 300 miles long, reckoning from Han-chung-fu to Ching-tu-fu, in the heart of Szr-chwan. A little over 100 of these are through the mountains. The road was made over 2,000 years ago, and in a foot-note Baron Richthofen gives the following legendary account of its construction. Szr-chwan was then a separate country, inhabited by the aborigines called Man-tse. When the Chinese Emperor reached the range of mountains which separates it from Southern Shense, he found it impassable, and resorted to artifice to gain a passage:

"He offered relations of amity to the King of the Man-tse, and, in token of friendship, well knowing the avaricious character of that prince, offered him two cows which had the remarkable faculty of converting in their stomachs common food into pure gold, having previously taken care that the fame of the wonderful animals should spread and reach the ear of the King. Five delegates were sent to receive the costly present, but, on their arrival at the Emperor's court, were given to understand that the animals, requiring the greatest care, could only walk on well-constructed roads, and must cross rivers on bridges. The Man-tse King then constructed the fine road which exists to this day. The Chinese Emperor entered the country with his army, and took possession of it."

MONTALEMBERT'S SUCCESSOR IN THE FRENCH ACADEMY.

PARIS, April 11, 1873.

I FEEL very keenly my inability to describe to you the reception of the Duc d'Aumale at the French Academy, which took place on the 3d of April. I have already once tried to give you an idea of these literary field-days; but on this occasion the literary interest was, as it were, half absorbed in the political features of the spectacle. There was something very suggestive in the presence of a son of Louis Philippe standing in his green uniform of an Immortal, between those two other Immortals, M. Guizot and M. Thiers. As a young child is presented to the Christian world by a godfather and a godmother, a new, gushing Academician is thought to require the support of two patrons. Before this trio, one might well have remembered that charming verse of Racine which he places in the mouth of a lover:

"J'oublie en vous voyant ce que je viens vous dire."

Only it was what the Duke had to say that I sometimes forgot while I was looking at him and his two neighbors. To be sure, the speech was not quite new to me, for I had been admitted with a very small number of people to the honor of a first rehearsal, so I allowed myself sometimes more than I ought perhaps to have done to look upon the noble, eagle-like features of M. Guizot, and upon the wiry, caustic, sardonic face of M. Thiers. Here was the man who, when the barricades of July, 1830, were still erect, ran to Neuilly and pressed the Duke of Orleans to accept the crown, and to throw himself at once in the way of the Republic, now become the President of another French Republic—the Prince once courted by him at the Tuileries, now a mere citizen, not only in the republic of letters, but in M. Thiers's Republic. M. Guizot seemed more like a remnant of a past age. He lives no longer in the present, he can still look on the Duc d'Aumale with the same eyes as at the time when he greeted him on his return from Africa. But M. Thiers is the present; he has attempted to mould plastic France into new moulds. I tried to fathom his feelings, while the Duke spoke with a clear, military voice, and every time the audience applauded some delicate or chivalrous sentiment.

I could not help remembering a curious passage of Chateaubriand's 'Mémoires d'Outre-Tombe' on M. Thiers, written many years ago, and which I found by chance in looking through those volumes, which, to me, are the most interesting of Chateaubriand's works. The picture of Thiers is quite an elaborate one, and I will only give a few passages: "M. Thiers is the only man whom the Revolution of July has produced. He has founded the school which admires the Terror. . . . Does M. Thiers care for principles? Not in the least. He has vaunted massacres, and he would preach humanitarianism in just as edifying a manner; he has given himself out as a fanatic of liberty, and he has oppressed Lyons, shot in the Rue Transnonain, and defended the laws of September against the press. If ever he reads this, he will take it for a eulogium." What would not Chateaubriand have said after the Commune? What was the Rue Transnonain to Belleville? In one sense, however, Chateaubriand is unjust, as the best lover of liberty is obliged to defend order. Further on Chateaubriand says: "M. Thiers can do any of these three things—declare himself the representative of a republican future, or sit on the Monarchy of July like a monkey on a camel's back, or restore the Empire. This last solution would be more after M. Thiers's taste: but the Empire without the Emperor—is it possible?" This was written in 1837, at the time when M. Thiers began to glorify the first Napoleon. He has since been sitting, as Chateaubriand says, on the camel's back, and now he is the representative of a republican future. He has, chameleon-like, taken on successively all the colors of the French political rainbow. But I must make one more citation, though it begins by a cruel allusion to the treacherous arrest of the Duchess of Berry in the Vendée:

"Deutz and Judas aside [Deutz was the Jew who sold to M. Thiers the secret of the Duchess's concealment], I recognize in M. Thiers a supple spirit, prompt, fine, malleable, *probably an heir of the future*, who understands everything except the greatness which issues from the moral order; without jealousy, without smallness, and without prejudice, he stands out in relief against the obscure background of the mediocrities of the time. His excessive pride is not odious, as it does not consist solely in the contempt of others. M. Thiers has great resources, variety, happy faculties; he is little embarrassed by differences of opinion, is not vindictive, is not afraid of being compromised, renders justice to a man not for his probity or for what he thinks, but for what he is worth—which would not hinder him from strangling us all in case of need. M. Thiers is not yet what he can become; years will modify him, if the inflation of his self-love allows it. If his brain remains solid, and he is not carried away by a *coup de tête*, the affairs of state will reveal in him an unexpected superiority. He must promptly increase or decrease; there are chances that he will become a great minister or remain a *brouillon*."

Chateaubriand had a great depth of perception, and, notwithstanding his tremendous vanity, he could be just. His judgment of Thiers is certainly remarkable and almost prophetic. The brain of M. Thiers has remained solid; a forest of short vertical white hair still covers it as thick as in the days of his youth; there is hardly a wrinkle in his glassy forehead, as yellow as wax; his penetrating eye shoots glances even through a pair of spectacles; there is a terrible solidity in the jaws, in the curves of the mouth and of the chin.

In the evening, after the reception of the Duc d'Aumale at the Academy, the President was conversing on the subject with a deputy of the Department of the Aude. This deputy complimented him on having had such a distinguished godchild. "Yes," said M. Thiers; "he made a very good speech, and before a very interesting and distinguished audience. This sort of audience is very reserved, remarkably reserved. The Duke made one or two allusions to his ancestors, to the monarchy, and there was little applause; there was also an allusion to the Holy Father, and there was almost no applause. There was hearty applause only when, alluding to me, he called me a courageous pilot skilled in steering the ship of state. That was very well said; and then, it is just what the country wants: no more kings and princes—pilots, pilots, pilots." He repeated the word three times with his silvery-harsh little voice.

The audience was truly brilliant at the Academy on the 3d of April; and though I had already seen many receptions, I don't remember having seen such a profusion of great names, of elegance, and of beauty. The whole family of Orleans was present, as well as the Montalembert and Mérode families, as Madame de Montalembert was a Mérode. It is the custom for all the members of the family of the Academician whose eulogium is pronounced to be in mourning. Madame de Montalembert, who is an invalid,

had come on purpose from the south, and she was in one of four tribunes which are reserved for the most important persons present.

Two days after his reception, the Duc d'Aumale gave a dinner to the Immortals. He tried, on this occasion, to revive a fashion which had been set by the Chancellor Pasquier, who received the Academy at dinner after each reception. Many were absent. Victor Hugo is at Jersey, Emile Ollivier is in Italy; he has not yet been *received*, and his reception is postponed *sine die*. M. Thiers had promised to come; but at the last moment he excused himself by a telegram: the affairs of the state kept him at Versailles. M. de Rémusat was suffering from a slight indisposition; M. Jules Favre, Octave Feuillet, the Empress Eugénie's favorite novelist, Jules Sandeau, who was also a guest at Compiègne, and a few others, were suffering from what I might call a political indisposition. Passions still run so high that even in the Olympus of the Immortals there is no peace.

Academical dinners of the old Chancellor Pasquier, which were kept up till he died, were in their time very famous. Poor Alfred de Musset was once a victim of them. He was notoriously shy, and never accepted any invitations. He lived a solitary life, lounging for whole days on the Quai Voltaire before the book and engraving stores, or in some dingy coffee-house. He took to drinking when he was still young, and it is said that some of his finest compositions, such as *Rolla*, were written under the morbid influence of absinthe; this was his favorite drink. On the day of his reception into the Academy, he prepared himself with his ordinary beverage for the emotions of the day. It was a perfect martyrdom for him to make his appearance in uniform before a number of people, and to deliver a speech which he himself pronounced a series of platitudes. All went on well, however; his voice trembled a little, but he went through the long agony with as good an attitude as could be hoped from one who was so morbidly timid. In the evening he went with his colleagues to dine at the Chancellor's, and there the poor man, already overpowered with his emotions, and helped with wines of all kinds, finally entered that stage of thought when even timidity vanishes. He became a little convivial, and almost gay. When coffee was offered to him by a magnificent servant in livery, he noticed that his cup was only half filled. "Fill it all," said he to the servant. The servant filled it, but was careful not to make the coffee overflow. "What!" said Musset, "don't you give the *bain de pied* here?" The *bain de pied*, or foot-bath, is the overflow of the coffee in the saucer on which the cup is placed. In the *cafés* of the Quartier Latin and all the popular *cafés*, this "foot-bath" is always added to the portion, and is considered as his due by every customer. Poor Musset had his *bain de pied* at the Chancellor's, but he was never again invited there, and I think that this was the last Academical dinner given by the last man who bore in France the antique title of Chancellor.

It was the Duc d'Aumale's intention to revive an old custom, but on the first trial he could bring together only twenty-six out of the forty Immortals. Politics have invaded everything, and, in a certain way, spoiled everything. I have said very little, I find, as I approach the end of my letter, of the speeches made at the Academy, or of Montalembert; but I think that a speech is essentially made to speak for itself. The eulogium of Montalembert can hardly be well analyzed, as its principal merit consists in a great delicacy of touch, elegance, and in an easy manner of walking, with good grace and without any apparent pain or effort, over burning ground.

Notes.

PART VIII. of Spruner's 'Hand-Atlas für die Geschichte des Mittelalters und der neueren Zeit' (New York: B. Westermann & Co.) contains the map of Southwestern Germany also to be found in the last number of Petermann's *Mittheilungen*; besides this, one of Germany in the time of Frederic the Great—in fact, 1742–1803—with a score of plans of famous battles from 1741 to 1760; and one of Germany, 1815 to 1866, accompanied by smaller maps of the seat of war in Schleswig-Holstein (1864), in Bohemia (1866), the field of Königgrätz, the Zollverein before 1833 and before and after 1841, etc.——A timely map—roads east of the Caspian leading to Khiva—appears in No. 43 of the Berlin Geographical Society's *Zeitschrift* (New York: L. W. Schmidt), with descriptive text by F. Marthe.——Part V., completing Volume IV. of the Proceedings of the California Academy of Sciences, embraces the interesting conferences of Mr. William H. Dall on his return from Unalashka; of Prof. Agassiz on the arrival of the *Hassler* at San Francisco; and of the bogus Arctic explorer, M. Pavy. The account of the discovery of a true though not a typical glacier on Mt. Lyell is new to us, and new to most readers will probably be the evidence afforded on p. 233 of the former use of the boomerang by the Indians in the vicinity of Los Angeles. This weapon, a picture of which is given, is rarely met with. Dr. James Blake, in support of the thesis that "the earliest traces of man's existence on the earth have been found in this country," adduces not only the disputed Table Mountain skull, but two serpentine sinkers of primitive make, found buried eight feet below the surface, within a few feet of the summit of the coast range, or 1730 feet above the sea. Perhaps a still older art relic is the "medicine" (?) carving of a fish, in slate, found at Turkey Hill, Ipswich, and described by Mr. F. W. Putnam in the Bulletin of the Essex Institute (Vol. IV., No. 11). Mr. Putnam, by the way, has reprinted by itself his paper on "Mounds at Merom and Hutsonville on the Wabash," from the Proceedings of the Boston Society of Natural History (Naturalists' Agency, Salem).——We made last week a very absurd blunder in trying to give the name of the late editor of *Notes and Queries*, Mr. William J. Thoms.

—Messrs. Holt & Williams, we are glad to learn, will shortly republish in this country Mr. Fitzjames Stephen's work on 'Liberty, Equality, and Fraternity,' which originally appeared during the past winter in letters in the *Pall Mall Gazette*. Mr. Stephen has recently returned from India, where he passed a few years as the successor of Sir Henry Maine—the author of 'Ancient Law'—in the office of Legislative Member of the Council, and has made some very important and valuable additions to Indian jurisprudence. He is now again in active practice at the English bar, and it is a striking illustration of the exuberance of vigor with which so many English professional men are gifted that he should have been for years, as is well known, a frequent contributor to the *Pall Mall Gazette*, furnishing in particular a large number, if not all, of the striking pieces of speculation on ethical and ecclesiastical questions which have formed so remarkable a feature of the contents of that paper. As an intellectual athlete, we doubt if any English writer of the present day can be compared to him, or has furnished more impressive examples of dialectical strength. He is, however, not always discreet or merciful, and many of his excursions among the Sentimentalists have been marked by deeds of great barbarity. The present work was suggested by and indeed may be called a reply to Mr. Mill's 'Liberty,' and contains one of the most thorough overhaulings of the moral, religious, and political bases of society which they have recently received. That his philosophy of life is in some respects unsound, we think it would not be difficult to show, but everybody who wants to see all the recent attempts to set things right analyzed by a master-hand, and in English which stirs the blood, will have a great treat in reading him.

—Messrs. Scribner, Welford & Armstrong have received the first volume of the new edition of Burton's 'History of Scotland,' and have made arrangements to keep it regularly on hand for the American public. The new edition is to be completely revised in eight volumes; many parts of it, it would appear, wholly rewritten. In this way whatever discrepancies may have arisen from the order in which the several volumes of the original edition appeared—the last period first—will no doubt be removed. The present volume comes down to the captivity of William the Lion and the treaty of Falaise, A.D. 1174, by which Scotland submitted definitively to the feudal sovereignty of England. The treatment of this early period is eminently cautious and well balanced. Mr. Burton has sifted thoroughly all the great controverted questions, and presents the opposing arguments with great fairness and perspicacity; but he is in no haste to commit his own judgment, and in general, where it is possible, is inclined to take a moderate, middle ground between opposing views. A distinguishing feature is the attention paid to archæological points—as well to prehistoric archæology as to the Roman remains. Ecclesiastical relations also receive a large share of his attention; but one is surprised to find no general sketch of the geography of Scotland. As this work has now an established rank as the best history of Scotland, the new edition will undoubtedly find many purchasers and readers in this country.

—Dr. Woolsey, of Yale College, has an article on the Treaty of Washington in 1871 in the April *New Englander*, which is a very interesting contribution to the literature of the subject. What he says about the indirect claims is especially worthy of attention. He concludes that the belief of the British Commissioners that these claims were to be excluded from the consideration of the arbitrators was the result of a misunderstanding, the testimony of the American negotiators being very direct and explicit on the other side. But he goes further and says he does not think the British view was authorized by the protocol; that is, that what the American negotiators meant by an "amicable settlement" must have been "a settlement within the Board of Commissioners," and not a settlement before a board of arbitrators. This interpretation has always seemed to us a very strained one. It would have a probable air if the alternative presented to the Commissioners was the one which presents itself to two disputants in private life—settlement by compromise or by a lawsuit. We can under-

stand their thinking of an appeal to the courts as a hostile proceeding, because this is the last argument of the citizen; but that the representatives of two nations trying to remove what, according to the settled practice of mankind, was fair cause for a bloody war, should have considered nothing but off-hand agreement at their first meeting an "amicable settlement," and should have deliberately refused that appellation to decision by a board of arbitrators, it is difficult to believe. Dr. Woolsey makes it all the more difficult by his assertion, after a calm review of the case, that the mention of indirect losses in the case "seems either to have been an afterthought or to have been kept back until toward the end of the preparations for the Tribunal at Geneva," inasmuch as no mention is made of them in the confidential memorandum submitted to our Commissioners by the State Department, and inasmuch as, according to Mr. Bancroft Davis's report, although the first five chapters of the case were sent to several persons for examination and remark, the sixth chapter, in which alone the mention of these claims is made, "was not sent out for criticism as the others had been." Consequently, Dr. Woolsey concludes "that at the eleventh hour it had been resolved to call in the auxiliary forces of indirect losses, and make a grand attack on the enemy's flank as well as front." We greatly fear the curious bit of hermeneutics about the phrase "amicable settlement" was called in also in the middle of the twelfth hour, to give the flank attack a decent appearance. Dr. Woolsey suggests as a list of injuries not calling for compensation as between nations: (1) those which the negligent party could not have foreseen; (2) those of which the negligence was only one of many causes; and he considers all damage computable and calling for compensation which could have been foreseen and prevented, was the effect of the cause alleged, and was an injury to property. He holds that the United States will receive the award as trustees, and will be bound in distributing it to respect the reasons which governed the Tribunal in fixing on the amount, and that the insurance companies are entitled to salvage, and not to compensation for losses in their business, confirming the opinions expressed on both these points in this journal, and differing widely from Mr. Ben Butler and his pupils.

—Dr. Ernst Ebermayer has written a work on the 'Physical Effects of Forests upon Atmosphere and Soil,' and those to whom the German original is not accessible may profitably go to a review of it in the *Academy* of April 15. The author is superintendent of the Forest School of Aschaffenburg, and has seven stations under his direction in Bavaria which were established in 1867. Five years of observations here and at a private station on the property of a nobleman in Bohemia are summed up in Dr. Ebermayer's treatise, and the following are some of his deductions. Forests tend to moderate the extremes of temperature, and so to render the climate less severe. A free water surface within a forest evaporates 64 per cent. less than in the open, partly because less exposed to the winds; a forest soil will evaporate (if cleared of brushwood, etc.) only 38 cubic inches of water, or (if uncleared, with the leaves and undergrowth remaining) only 15 cubic inches, against 100 evaporated from the open soil. Herein evidently lies the chief secret of the drying up of springs and water-courses attendant upon the destruction of forests. Land from which the timber has been entirely felled loses a potent means of drainage, and often becomes swampy till replanted; and, on the other hand, overdrainage of land may seriously retard the growth of trees already standing. Dr. Ebermayer does not find that forests increase the rainfall of a country so much as has been ascribed to them. The actual amount of rain collected on the ground of a forest is about three-fourths of that which falls on the cleared land outside. The branchage and foliage retain a portion of the moisture. Conifers retain more than deciduous trees, and the Scotch fir most of all.

—"J. C.," Zanesville, Ohio, writes us as follows: "The last-received number of the London *Athenæum* (April 5, 1873) contains a clever and interesting review of Dr. Wilson's new book, 'Caliban, the Missing Link.' The writer, having disposed of several matters therein, the 'Darwinian theory,' 'Caliban's island,' etc., refers to some textual criticism that the learned doctor makes on the play of the 'Tempest,' which he (the reviewer) 'commends to the reader, and takes an opportunity, before concluding, of adding one to the number.' He then, with a considerable flourish of trumpets, proceeds to bring forth his one emendation, 'to which he would draw special attention, because it is possibly new. If it is not so, he can only exclaim, *Pereant qui ante nos nostra dixerunt!*' Did he not know that by his malediction he was consigning to perdition the editor of the best-known and most celebrated edition of Shakespeare that we possess—the Variorum of 1821—and all other editors who have adopted this excellent text to print from? The principle on which he bases his correction is one well-known to students of Elizabethan literature, namely, the close similarity of the *o* and *e* in old manuscript, and the consequent confusion and mistakes arising from compositors reading one vowel for the other. After giving an instance from *Gower's* speech in 'Pericles' (act ii.)—'spoken' for 'speken'—which has been noticed by the editors, and remarked upon by Mr. Staunton in a recent letter on 'Unsuspected Corruptions,' he assumes that, by an error of this class, 'held' is misprinted for 'hold' in 'Henry VIII.,' act i., sc. iii., line 47 (Globe edition). Old *Lord Sands*, an excellent specimen of the brusque English gentleman, is rejoicing at a proclamation which remits to France several new fashions in dress and speech that English courtiers had recently introduced, and says:

> "'The devil fiddle 'em! I am glad they are going,
> For, sure, there's no converting of 'em: now
> An honest country lord, as I am, beaten
> A long time out of play, may bring his plain-song,
> And have an hour of hearing; and, by'r lady,
> *Held* current music, too.'

This is the text of the Folio, 1623, and of nearly every edition except that of the 1821 Variorum and those printed from it. In this edition Mr. Boswell prints 'Hold,' and in a note says 'Held' is the reading of the folio. Mr. S. W. Singer, also, in his valuable critical edition of 1856, prints 'Hold' with the Variorum, although in his first edition of 1826 he adheres to the folio. A late distinguished critic, Mr. W. N. Lettsom, also recommends the reception of 'Hold,' conceiving 'Held' to be a misprint (see Dyce's 2d Edition, 1864, vol. v., p. 578). The reviewer contends that good grammar requires 'Hold,' as we cannot say '*may held.*' Now, to say the least, this is very doubtful. *Lord Sands's* expression reads very well, and is an elliptical form of speech, a colloquialism, not uncommon in Shakespeare. Dyce gives an instance in the same play, act ii., sc. 1, where 'held for certain' occurs for '*it is* held for certain.' In the present case, 'have' of the previous line is carried forward in the mind, and the sense is, 'Now I may sing my 'good old song' in my plain, old-fashioned way, and have a respectful audience of an hour by my friends; ay, [have it] held, or [find it] held, current music, too.' This appears to me to give a better meaning than the Variorum, or Mr. Singer's text, or Mr. Lettsom's and the *Athenæum* reviewer's conjecture affords. In the latter case, '[may] hold current music, too,' would be only a repetition of the first clause of the sentence; while in the former, '[have it] or [find it] held current music, too,' gives an additional importance to the old gentleman's self-congratulation: he may not only be allowed to sing, but find his song applauded and recognized as 'good current' or fashionable music by the company. I may add that all the recent editors, Knight, Collier, White, Hudson, the Cambridge editors, Dyce, Halliwell, Clarke, Staunton, Keightley, and even Collier's MS. corrector, hold on to 'Held' of the folio, taking it to be not only the best reading, but yielding a simple and easy interpretation."

—M. Jules Favre has published a volume of literary lectures and addresses ('Conférences et discours littéraires'), with an introduction taking a very gloomy view of the French situation, the irreligion of his countrymen being in his eyes the chief evil. In the Commune he finds the logical product of the sort of atheism prevailing among the lower classes; and the state of more or less openly avowed atheism or indifference which characterizes all classes at the present day he appears to derive directly from the fatal lapse into Romanism of Henri IV. Here are his very words:

"Opening the annals of Europe, I encounter a memorable date which marks the point of departure of two opposing currents by which peoples are led either towards slavery or towards liberty. What would have come to pass if Henry of Navarre, thanks to his own valor and the poignard of a fanatical monk, victorious over his rivals, had not sacrificed his conscience to his interest by pronouncing his famous blasphemy: *Paris vaut bien une messe?* We may guess when, on the one hand, we see royalty and Rome, united in spite of their apparent quarrels, founding on the ruins of feudalism the most despotic power that ever existed in France; and, on the other, England, Germany, Holland, Sweden preserving and increasing the national franchise, encouraging free enquiry, and establishing their power on the independence and self-government (*initiative*) of their citizens. It is idle to repeat that the French genius did not lend itself to this moral and religious revolution; that the country owes to its pontiffs and its monarchs its glorious and brilliant unity. I do not believe a word of these convenient aphorisms employed by historians who excuse everything, or by statesmen who find their account in everything. And seeking in the very essence of our nature the reason of the facts which I am studying, I remain convinced that if France had embraced the cause of liberty, so far from reducing herself, she would have become, if not in material strength at least in ideas and institutions, the mistress and the model of all Europe."

—An esteemed correspondent in Switzerland sends us the fifth edition of Dr. Daniel Sanders's 'Condensed Dictionary of the Chief Difficulties in the German Language,' in the hope that we may bring this excellent work to the notice of such of our readers as have already made some progress in the study of German. We do so with great pleasure. This *Wörterbuch* consists of 188 pages 12mo, closely printed in double columns, but made extremely clear for reference not only by the methodical subdivision of each topic, but by the employment of type of various sizes, among which the eye soon learns

to discriminate. It gives us, subject to the alphabetical arrangement, the syntax and the idioms of the language, with abundant examples of the correct, disputed, and conflicting usages of the best writers; with here and there a comprehensive summary, such as: Declension of Adjectives; Feminine Nouns; Auxiliary Verbs; Classification of Verbs, etc., etc. Four pages are devoted to the indefinite article *ein* alone; while hardly ten suffice for the uses of *als* and *wie* in comparisons. And if any one thinks he has tolerably mastered the German, we commend him also to the articles on *all* and *lassen*. One of the most difficult subjects in any language is that of the proper preposition required by any given verb, verbal form, or adjective. Yet this has not been thought worth attention by our English lexicographers, except to a very limited extent, although we to whom the speech is natural are often at a loss to decide between what is right or permissible and the opposite, while foreigners are of course much more perplexed than ourselves. Here in Sanders, however, the word *aufnehmen* (to receive) is inserted for no other purpose than to illustrate the circumstances in which it is followed by *in, unter, bei,* and *auf*. But we think it unnecessary to explain further the aim of the *Wörterbuch*. It remains to add that, besides the specific reference to passages in the works of the great writers, the author constantly refers to his large general dictionary of the German language.

—On March 12, an interesting discovery was made at Pompeii of a marble Venus, something over a metre in height, wanting only two of the fingers of the right hand; the hair is yellow or golden, the edges of the eyebrows dark. The chlamys which falls from the left shoulder, and covers the lower part of the body, is yellow on the outside, while the inturned portion of the drapery retains traces of blue and red. The left hand holds the Paris apple, and the left arm reposes on a smaller figure, in which the same colors are observable. It is feared that the colors will very soon be lost, as they have been from other antique statues, and there is no means known by which they may be preserved. The statue will find a place in the National Museum at Naples.

—The colossal statue of Arminius erected by the Germans to commemorate, near the scene itself, the defeat of Varus in the Teutoberger Wald, has, oddly enough, been thought to need a *Latin* epigraph. More oddly still, Prince Leopold of Lippe-Detmold, in whose territory the monument has been set up, has assigned the honor of composing the inscription to an *Italian* professor, Michele Ferrucci, his former preceptor, who, nothing loth, has composed the following verses:

Heic ubi romano rubuerunt sanguine valles,
Duxque datus terna cum legione neci,
Hostibus heic terror post saecula multa resurgo,
Vindex germani nominis Arminius.

MR. CUSHING ON THE TREATY OF WASHINGTON.*

AN intelligent American or English reader who commences the perusal of this long-heralded book with varied expectations of learning something new, will finish it with disappointment and perhaps with disgust. There are many matters connected with the Treaty of Washington, with its original conception, with the progress of its negotiation, and with its consummation at Geneva, which have never been explained to the outside world, and which would be interesting to the most indifferent observer—intensely so to the student of diplomacy. We might naturally suppose that Mr. Cushing was the man of all others to remove the veil and to communicate the knowledge. He possesses every advantage: he is familiar with the history of diplomacy and learned in the international law; he has long resided at Washington, and has been consulted by many successive governments and cabinets in the most important and secret affairs of foreign state relations; although not a "High Commissioner," he doubtless sat at the elbow of the Secretary of State, and furnished many of the facts and most of the law to that functionary and his subordinates; he was a leading counsel at Geneva; and, finally, he does not occupy, and has not occupied, such an official position as would necessarily require him to be reticent and guarded in his statement of facts and narration of events. Mr. Cushing evidently does not look upon himself as restrained by any present or past quasi-official character, or else his bitter and, in some respects, calumnious attack upon Sir Alexander Cockburn would have been a gross violation of decorum, requiring perhaps an explanation from the Government. Mr. Cushing plainly writes in the capacity of a private citizen, untrammelled by any existing or former relations with the State Department, and as such, from his own standpoint of honor and decorum, he was at liberty to tell us what he knew of the inside history of the Treaty of Washington. In fact, he has told us nothing of the sort. After a careful reading of the book—a reading commenced with the desire and design of learning and not of criticising—we make the assertion that not one fact is communicated with which the public had not been made familiar long ago by the ordinary newspaper correspondents; not the slightest information is given as to the real substance of transactions which had been exhibited to the world only in their outward forms; not a principle or doctrine of international law is stated; not an argument is used which had not been stated and used by the writers on the American side of the question, from the first despatches of Mr. Seward to the last article in a popular magazine. The book, as a contribution to the history of the great international diplomatic controversy—certainly the greatest diplomatic controversy of modern times, if not of all time—is simply worthless. But its design is plain upon the most careless reading. It was not intended to be a contribution to history: it was intended as a mere vehicle to contain and carry the personal attack upon the English Chief-Justice which forms its centre and substance, and is its only *raison d'être*. We will give but one illustration of our statement, but this single example shall be a crucial test.

It will be remembered that, after the assembling of the Tribunal at Geneva, the dispute between the two Governments respecting the so-called "indirect claims" was continued with *apparently* increasing bitterness and obstinacy; and it had reached the point that failure of the whole scheme of arbitration seemed not only possible but probable. With all of this outside show, it was plain to the careful observer that our own Government was anxious to retire from its position, if it could do so and preserve what it called its honor. The American people had repudiated the "indirect claims" upon principle, and their servants at Washington saw the mistake which had been made, and were really eager to abandon the position, if the retreat could be executed in good order. Thus the affair stood on the 15th of June, when the British Government asked an adjournment of the Arbitration for eight months, in order to allow time for further negotiation. The Tribunal adjourned to the 19th. On that day its President, Count Sclopis, made the announcement and declaration which was at once accepted by both Governments, and ended the controversy. In this declaration the arbitrators say that, "in respect of these claims [those styled 'indirect' in the American Case] they have arrived, individually and collectively, at the conclusion that these claims do not constitute, upon the principles of international law applicable to such cases, good foundation for the award of compensation or computation of damages between nations." Thus the Tribunal in effect decided the issue raised upon these claims upon its merits against the United States. To use the language of ordinary litigation, the United States had sued upon a certain cause of action called "indirect claims." Great Britain had put in two answers: one denying the jurisdiction of the Court to try the cause of action, and the other denying the validity of the cause of action on the merits. The British Government insisted upon the former defence with great pertinacity, and for one reason only, namely, to prevent an adverse decision on the second defence. The controversy upon the jurisdiction had no other significance than this. On the other hand, the United States, urging the validity of its cause of action, maintained as a matter of course the jurisdiction of the Court. All at once the judges, in an informal manner, but in reality by a true judgment, decide the second defence in favor of the British contention, and thus make a decision of the preliminary defence unnecessary. How was this remarkable transaction brought about? It can hardly be possible that the proceeding originated in the Tribunal, and was enforced upon the litigants. Each Government must have assented to the scheme before the formal act was gone through with at Geneva. Did not the Governments themselves invent the plan? And if so, which Secretary contrived the method by which the arbitrators and counsel at Geneva were to posture before the world, in order that the United States might not seem to have receded from its original position? These questions have been asked many times, both in England and in America, and as yet no answer to them has been given. Mr. Cushing could have answered them, and, judging by the freedom of treatment which he uses towards the English arbitrator, he could not have been restrained from answering them by any considerations of propriety or decorum. When we first opened the book, we eagerly turned to the pages indicated by the index on which this subject is mentioned, but our expectations were utterly disappointed. Here, as elsewhere, Mr. Cushing does not venture beyond the merest outside act and appearance which the newspapers had described with greater minuteness. He acknowledges that there were interior transactions, that he could tell us stories of extraordinary interest; and it is thus that he piques and disappoints our curiosity: "It will be taken for granted that, in the interval between the 15th and the 19th of June, communications by telegraph passed between the respective agents and their Governments, and consultations took place between the counsel of both sides and the respective agents, either orally or in writing, and, with more or less formality, among the arbitrators, the result of which was announced by Count Sclopis as follows,"

* 'The Treaty of Washington: Its Negotiation, Execution, and the Discussions relating thereto. By Caleb Cushing.' New York: Harper & Bros. 1873.

giving the decision already quoted from. This citation illustrates the whole book. Wherever we might expect information, wherever the interests of both nations had centred in some passage of the negotiations, wherever there was something which had hitherto been concealed under a flow of mere words and a display of mere forms, this book leaves us exactly where it found us, and goes no further below the surface of things than did the correspondents whose narrations preceded it.

As has been already remarked, this book was written with a single object: it was designed and executed as a means of attack and retaliation upon Sir Alexander Cockburn, the British arbitrator. Undoubtedly the provocation was great. The opinion delivered by Sir Alexander had none of the elements of a calm judicial decision. It was a heated partisan argument; it contained several allusions to the American counsel and to their statements of facts and processes of reasoning which were insulting to the last degree. And it now appears that these allusions were specially directed to those portions of the forensic work which had been performed by Mr. Cushing. We would not be understood as justifying the British arbitrator's official conduct in writing this opinion, nor as palliating the offence which he gave to the United States represented by its counsel and to the counsel personally. This judgment is the proper object of criticism, and there could be no more appropriate and able critic than Mr. Cushing. But there is in this book rather a personal attack upon the Chief-Justice as a man than a searching and severe analysis of his official work; and unfortunately, in some respects, the charges which it contains are not based upon a foundation of fact. We shall call attention to a few of these instances in which veracity has been sacrificed to rhetorical point, or has succumbed to prejudice and passion. On page 88 it is said: "With the devotion of a Dalgetty, he placed his lance at the service of a chief, regardless of the merits of the cause." The insinuation is that Chief-Justice Cockburn is or has been an unprincipled political adventurer, a trimmer ready to serve any party or leader for the sake of preferment. The exact opposite of this is the truth. If Sir Alexander Cockburn has one characteristic which is prominent above all others, it is his personal independence. Every person acquainted in the most superficial manner with modern British politics knows that to impute to him time-serving and trimming is to make a charge absurd in its incorrectness. Many recent occurrences well known to every intelligent reader, and notably the controversy with Mr. Gladstone and Lord Chancellor Hatherly over an instance of ministerial favoritism in judicial promotion, will illustrate Sir Alexander's independence and self-reliance. Remembering the position which Mr. Cushing once held as a trusted leader of the Democratic party, and observing how he has employed his great learning and ability at Washington through several successive administrations, we should hardly have supposed that he would venture to use the comparison of an antagonist with Dugald Dalgetty to point an invective.

Again, on page 89 it is said: "When it was proposed to arraign Nelson and Brand as criminals in England for acts committed in Jamaica under proclamation of martial law, Sir Alexander Cockburn delivered a voluminous charge to the grand jury, which he afterwards published with additions and notes; notwithstanding the partiality and the urgency of which, the grand jury refused to find a bill; and it must be confessed that, as a charge, it was passionate, vague, declamatory, and confused; and as an exposition of law it is valueless when compared with the treatise of Mr. Whiting, in America, on the same subject." Two pages of criticism follow this extract. We must confess ourselves astounded at this particular attack. One would have thought that, to an American, to a citizen of a country in which the safeguards of personal liberty lie at the very foundations of the whole civil polity, the position which the Chief-Justice assumed in this celebrated charge, his outspoken denunciation of tyranny clothed with petty official authority and shielded by class prejudices and by the selfishness of moneyed and trading interests, and his zealous endeavors to protect and avenge the weak and humble, would have seemed deserving of high praise, and would have in some measure condoned the offences committed by him at Geneva. Is it possible that the influences at Washington have the effect to destroy the notions of individual liberty which were once the distinction and the pride of Anglo-Saxons on both sides of the Atlantic? A local outbreak in Jamaica had been dignified by the name of an insurrection, and had been put down by the military in such a manner as aroused a deep feeling of indignation among all true English Liberals. An attempt was made to bring the colonial governor and his subordinates to justice in Parliament. The Tories opposed as a matter of course; the Liberal Government made no movement, and the matter necessarily dropped. Chief-Justice Cockburn then delivered the charge in question to a London grand jury. It failed because the same mercantile spirit which enlisted itself on the side of the South for fear the cotton trade would be lost, was deaf to the claims of personal liberty and individual rights, which might come in conflict with the gains derived from Jamaica plantations. Mr. Cushing declares that the Chief-Justice's charge, "as an exposition of the law, is valueless, when compared with the treatise of Mr. Whiting on the same subject." We are familiar with the "treatise of Mr. Whiting." It is a collection of all the departmental orders and all the sophistical arguments which upheld the legality of arbitrary arrests and of military tribunals for the trial of civilians; which explained away all the stern prohibitions of the Constitution; and which were themselves brushed aside by the unanimous decision of the Supreme Court. It is a treatise which any European ruler meditating a *coup d'état* in the interests of imperialism might even adopt as a convenient text-book, but which in a constitutional government should be placed in a political index expurgatorius. Compared with it, Chief-Justice Cockburn's charge is like the breath of fresh air from the clear mountain-tops sweeping down into the enervating atmosphere of a malaria-stricken valley.

Finally, Mr. Cushing conveys the impression that the British Government itself has repudiated Sir Alexander Cockburn's opinion and conduct at Geneva as unnecessary and mischievous. This is a grave error of fact. It is true that immediately after the final decision Mr. Lowe, in some public address to his constituents, intimated that it would have been as well if Sir Alexander had voted in silence. Since that time, however, the opinion of the English people has been ascertained; this opinion has reacted upon Parliament, and the Chief-Justice is now sustained by the popular voice and by the leaders of both the great political parties. On the night of the 21st of March, the House of Commons debated a motion of Mr. Hardy, which involved the interpretation given to the "Three Rules" by the Tribunal of Arbitration. All the prominent speakers of both parties were in full accord as to the necessity of Governmental action protesting against the Tribunal's interpretation, and the only difference of opinion was as to the proper time for moving in the matter. In this debate, the action of the Chief-Justice was approved by all the representative speakers who addressed the House, by the Government, and by the Opposition. We have thus called attention to some of Mr. Cushing's errors of fact in his dealing with the British arbitrator; they plainly serve to weaken his case by drawing attention from the main issue, from a just and proper criticism of that arbitrator's judgment to immaterial questions and controversies.

Mr. Cushing is very naturally satisfied with the results of the Treaty and of the arbitration; in his view, they are stupendous triumphs of American diplomacy and statesmanship. In an especial manner he urges—and he does this the more emphatically because of the adverse opinion—that, by the adoption of the "Three Rules," and by the construction procured to be put upon them, the United States has not assumed any additional or unnecessary burdens, has not increased its neutral duties nor abridged its neutral rights. Congress, he says, among other things, always had the power to pass a neutrality law, and in fact did long ago pass such a statute, which contemplates exactly the same acts and duties on the part of the Government as those required by the Treaty. We have not the time nor the space in which to examine Mr. Cushing's statement of fact and of theory in detail. The *Nation* has fully discussed this particular subject, and has expressed its opinion in no reserved or doubtful manner. The book under review does not attempt to answer the course of reasoning by which that conclusion was reached, and we shall certainly not go over the ground again. But it may be proper to explain the exact point in issue. Certain neutral duties always rested upon the United States as well as upon every other nation. We may assume that these duties, although somewhat undefined, were accurately summed up and sharply set forth in the "Three Rules." Congress had long ago acknowledged the existence of these duties by passing the Neutrality or Foreign Enlistment Act. Now we might concede that thus far no greater burden of obligation had been placed upon the country; although we make this concession simply as a matter of present argument, because the Three Rules, in fact, go far beyond the requirements of the Neutrality Act, and the very change of form—from the elastic unwritten to the fixed and statutory clauses of the Treaty — is itself an increase of liability. Upon these Three Rules the Tribunal of Arbitration has placed a construction which the American counsel vehemently advocated, and which the British as strenuously opposed. This construction explicitly contains and sets forth the following propositions of universal law: (1) absolute international duties rest upon the neutral, independent of any provisions of its own municipal law; (2) its own municipal law is not, and cannot be, the criterion and measure of these duties; (3) "due diligence" spoken of in the rules is a variable quantity, and *depends upon the necessities of the belligerent.* All these propositions were maintained by the United States, and, having been accepted at our instigation, we shall be bound by them in future. It is simply absurd, it is a foolish denial of the plainest truth, to say that these propositions do not increase our neutral duties and burdens. Indeed, it has

been well said that if the last of the series passes into the general code of the International Law, it will be safer for a weak maritime neutral to take sides in any war and become a belligerent, than to remain a neutral and be subject to the reclamations which would flow from this rule. On the night of the 21st of March, Mr. Hardy moved an address to the Crown, praying that in bringing the Three Rules to the notice of foreign powers, as required by the Treaty, Her Majesty would express her dissent from the construction placed upon them by the arbitrators. There was no attempt to impeach the rules themselves nor the Treaty. It may be remarked in passing that if Mr. Cushing's argument is correct, the British Parliament has nothing to complain of, for it has recently passed an amended neutrality act which contains some provisions far more stringent than any in our own. The debate on this motion was interesting and instructive. Every one admitted that the reasoning of the Arbitration was wrong, however correct the decision might be. Some thought that this reasoning was merely *obiter*, and of no binding character; others that it was the *ratio decidendi*, and constituted the essence of the precedent. All agreed that in the proper time the subject of the motion should be attended to.

We have a single suggestion to make, based upon this debate. The decision has been made in our favor, either by means of, or independently of, the construction put upon the Three Rules by the Tribunal. Hereafter this construction, and the practical consequences which flow from it, must weigh heavily against us, and create burdens which some time it will be difficult to bear. We have no *material* interest in retaining this construction. No other nation but Great Britain has any interest in the Treaty, and Great Britain is anxious that we should join her in rejecting the interpretation given by the arbitrators. We suggest that the invitation should be accepted. It would be statesmanship to accept it. Must we insist upon maintaining a rule of law which will operate against us hereafter, simply because we procured the court to decide it and apply it in our favor *now*, especially when the adverse litigant, while fully recognizing the validity of the present judgment, is willing to abandon the advantage which he might have in future? Were it not for the spirit of exultation over the result shown in all the official reports and proceedings of the State Department, and in this publication of Mr. Cushing, we should expect, as a matter of course, that the proposal now made in the British Parliament would be eagerly adopted by our Government, and that the old American doctrine of neutral rights would again become a favorite with the Administration, and be upheld in all diplomatic negotiations. We do not, however, anticipate any such wise and statesmanlike course.

Fine Arts.

AN INFIRMARY OF OLD MASTERS.

THE collector of antiques treads a path full of snares, and though he is usually sustained by a good deal of the martyr's self-complacency, yet that cannot always be proof against the public scepticism and the compassionate civility of friends, while his own doubts, which he may never divulge to the world, must give him terrible moments in private. A collection of three hundred pictures, illustrating the oil-painting art from the time of its paternity in Jan Van Eyck, has been arranged and exhibited for a charity at the German Savings-bank in Union Square. We have been given no reasons for doubting the good faith of the scheme, and prefer, until better informed, to take the theory of the management, namely, that a private gentleman of means and culture is exposing to us the fruits of a lifelong hobby for collecting. This connoisseur, Mr. Louis Durr, after a tedious history of his antiquarian bargains and discoveries, after many a laborious washing-day spent in purifying his canvases, and after repeated comparisons in the European galleries, at last finds his museum in a shape for publicity. That some of his titles are guesses, that some of his originals may have to be degraded into copies, is likely enough, but at least there are illustrations of the styles characterizing almost all the great painters. For our own part we have found good and probable pictures enough to make our visits entertaining, and we had rather dwell on such as have pleased us than on such as our faith is as yet too weak to bear.

The study of old masters contains two elements which it is sometimes well to discriminate. There is the antiquarian element, and there is the artistic element. In the expert's mind they are apt to be much confused; a ruined Leonardo is far more valuable than a perfect Luini, though the latter contains better food for the taste. It requires great courage to say it, but we sometimes suspect that a Leonardo is admirable because it is a good picture, and not because it is a Leonardo. We own to some sympathy with the fearless artistic person who can move through a gallery, and lay his finger on the works that please him for certain qualities that they have, and can tell plainly what those qualities are, without distressing himself too much over the little paragraph in the catalogue which gives a picture's pedigree. There is something to be said for the imperturbable heretic who can enjoy a good thing whether it is proved a Correggiosity or not. Now, here is a gallery where the visitor, if he is skilled in telling good art from bad, may rove without trammel, finding out his affinities, and detecting excellences, with full liberty to change one artist's name for another whenever his study of the subject is deeper than the study of Mr. Durr. There is a fine canvas present, for instance, which we claim the privilege of admiring before we can decide whether it is by Ribera or Zurbaran. It is that with the half-length figure, No. 231, where, in a dusky Spanish glow of an impressive kind, is shown an old man half nude in his rags, who points with his compasses to a problem of Euclid's. The geometer has a thought-worn face, ugly and fascinating, something between Socrates and Michael Angelo; the drawing, whether of head, hands, or draperies, is finished and close; the tone, something warm for Zurbaran perhaps, rapidly deepens into fathomless shadows of the Spagnoletto kind. Whoever painted this genuine piece of art and character surely did a good work. Near by, however, hangs a large piece of pretence, brought from some church in Mexico, whose composition and motive resemble some of the groups of Spagnoletto, but whose touch is niggling and timid; we may suppose it to be a true Ribera of an early period, or, more probably, a copy for colonial use from some original hard to trace. What we wish to point out is the fact that such a picture may be better than the proof-engravings we amass sometimes, if even its authenticity cannot be proved, for the sincere study of a certain Spanish style. There are two compositions apparently painted or inspired by Murillo. One, a small sketch of the famous "Immaculate Conception," it is easy to call a copy, though that theory hardly accounts for its being so sketchy at once and so broadly good, nor for the eyes of the Virgin being lowered instead of elevated in the rapture so familiar to us. The other represents a king, surrounded by various figures, receiving a parchment from the Madonna; the lighting and arrangement are quite characteristic of Murillo, and one of the assistants resembles him in face; the grouping has a kind of affinity with the well-known specimen in Paris, where angels cook the dinner for a holy priest. In this rich painting, with its lights rolling around a focus like illuminated clouds about the sun, with its stately figures and mobile draperies, we venture to point out a canvas capable of yielding the kind of enjoyment proper to a work of Murillo's; it is numbered 225, and the finely imagined king in the foreground has been designated as Saint Ferdinand I., monarch of Castile, receiving from Our Lady the Code *de las Partidas*. A sketch of Saint Sebastian amongst his tormentors, strongly suggestive of Tintoretto, shows the graceful young saint in strong light like an Apollo; around him are the bold, unexpected groupings, in the style for which old Robusti would be no man's debtor, including his favorite female figure leaning around a pillar; all over the tumult there passes, windlike, that sense of life and impetuosity which is Tintoretto's gift, and which makes us sometimes fear to wink before his compositions, lest the rushing forms should pass out of the tableau; here, again, we think we find a study which, whether original or not, affords much of the instruction to be had in a real *motif* of the master's. A strong, crisp, clever dash at a Pietà has the characteristics of Annibale Carracci, to whom it is assigned; it is on copper, and is an able sketch from one of the eclectic schools, to whomsoever attributable. Close to the "Murillos," a "Supper at Emmaus," resembling but also differing from Veronese's treatment of the subject in the Louvre picture, seems to us a careful copy of some replica; but certain parts, as the Christ and the foremost disciple, are particularly good, and well interpret the fresh, healthy, ornate sentiment of that grand Venetian. A great decoration by Luca Giordano, signed, seems to us genuine, partly because it is not apparently worth copying: a romantic, graceful Paris, eligible cicisbeo for a goddess, hands the apple to a tiny-footed Venus, amidst the remaining contestants and some spectators; one of these, a river-god in a corner, makes a fine sketch, his white hair and beard spouting as cascades, and jets running from his eyes and lips. The picture contains shocking drawing, of which Fa Presto was perfectly capable on occasions, while he was, as Taine declares in his 'Italy,' a born child of the artistic race, hesitating between miracle-worker and sloven. In his case history yields us a parable of a new type, the Prodigal Father; and, regarding this clever performance mitigated by haste, we seem to see the spendthrift parent bending over and applying the goad to talent, that its greedy extravagance may be ministered unto.

Two heads by Philippe de Champagne, a Madonna and a Gabriel, are sufficiently impressed with his pale, false elegance; a portrait by Rigaud, the very inadequate "Vandyck" of France, has enough of his pretentious flutter and his academic correctness to be accepted; two female heads, labelled Greuze, are most limp and halting copies; a composition of cherubs

playing in the clouds with bubbles and an hour-glass may pass, we think, without dangerous challenging, for a Boucher; and there are some large color-sketches, showing a ready, free, but tortuous kind of strength, which not improbably represent the first thoughts of Le Brun for his series of "Alexander's Triumphs" in the Louvre. There are various Claudes, Watteaus, and Poussins about which we offer no opinion, and some Joseph Vernets which appear to us characteristic enough.

Just as there is a continual temptation for the schoolboy in the chapters of Susannah and Maccabees which he does not find in the canonical books, so do we find ourselves impelled to the apocrypha of the collection, which we hoped we could avoid mentioning. There is, it is almost needless to say, a Raphael present. It is a "Holy Family," like the Aldobrandini one in design, painted on paper, much retouched, and cemented to an old wormy board, which is marked with a seal; the cleaning process here revealed every evidence of a sketch—wandering pencil-marks and half-effaced heads. Every Raphael in existence being scrupulously catalogued and accurately located, we dare not yield our credulity to this interesting pretender; the utmost we venture to say for it is that the paper-panel-pencil-and-color method is an odd way to go about making a copy for the auctions, and that the little Saint John has a treacherous resemblance to Raphael's baby-studies. Another applicant for our suffrage is a very large canvas, which, black at first, turned out on cleaning to hold a "Martyrdom of Saint Lawrence," perplexingly like and unlike Titian's pictures of the subject in the Escorial and in the church of the Jesuits at Venice. Now, Titian was a shocking draughtsman, in the opinion of Michael Angelo, and colorists make the fact a merit; but if he ever drew such a back as that of the executioner here, who stirs the fire, he deserves to have been corrected with hot charcoal from under his saint's gridiron. The nomenclature of many such pictures as this would be greatly modified if our collectors kept in view the large number of copies made by skilful craftsmen in the last two hundred years for American churches of the Romanist belief. In this case, though, a comparison with the engraving after Titian shows intelligent changes in the figures, and alterations in the proportion, from the hand of no vulgar or slavish imitator. One more "Titian," and we may return to the pleasanter ways of comparative belief: a head on a panel, labelled as from the collection of General-in-Chief Alix of Westphalia, is lettered with "Pietro Aretino" in gold above, and "Txxx," beneath, and is conceived to be a likeness of the poet by his friend, painted in 1530. However, as it is not like Aretino, and not like Titian, and as the master can be shown to have signed hardly more than once or twice with a simple "T," the beholder will probably wish to wait for further evidence before yielding conviction.

In German and Dutch art the collection loses itself, and becomes almost invisible, drowned beneath the blackness of time. The "Dürer," No. 26, is a triptych where, out of the gloomiest of backgrounds, bend forth the heads of saints and a group of "Christ with the Tribute Money"; the work is properly marked and monogrammed, with the date of 1525; it has little of the look of the ordinary Dürer, being modern in draperies and sentiment. We are asked to suppose that the great German's trip to the Netherlands has superimposed some novelty in fashions and colors upon his style; and really the miniature finish of the faces, whether the picture's authorship be defined or not, makes it a valuable antique or an enticing counterfeit. A large panel, with a subject of "Christ Sinking beneath the Cross," from Dürer's "Passion," is so good and characteristic that for many purposes of the artist it may pass for Nuremberg work. Near the triptych hangs an unacknowledged head, the portrait of some bishop perhaps, richly framed in rosso antico, with inlayings of lapis-lazuli and onyx. An "Ecce Homo" of great quaintness and laborious finish is not improbably credited to Mabuse. A "Barbarossa," or at least a red-bearded knight, has a face modelled with all the best delicacy of the old schools, and is assigned to Lucas Kranach. A "Christ Blessing Children," a group with twenty-one heads, is accredited to P. Pourbus, born at Gouda in 1510. A head of a rough man in a cap, leaning doggedly on the hand, is awarded to Quentin Matsys, the blacksmith-painter, and seems to be strong, but is suspended so unfortunately beside a bright window that the most willing examination retires baffled from the decision. A multitudinous composition painted on wood with extreme elegance we see no reason for denying to Franz Francken the Elder; it shows the "Passage of the Red Sea," with the arches of water breaking up in a singular way to drown the hard-hearted Pharaoh. The specimens of this master at Blenheim are said to be inferior in beauty to this interesting example, which exhibits a strange daintiness in the midst of its overwhelming subject-matter. A small "Proserpine and Pluto," 173, is mobile, rich, and sketchy, and has much the look of a veritable Rubens. Among a multitude of Dutch cabaret scenes and kermesses, the interiors assigned to Adrian Brouwer seem to have a truly authentic look, and to be valuable examples of chiaroscuro. A "Cavalry Fight," No. 132, appears to us to have been very near the palette of Rembrandt; and at any rate to be about as valuable for purposes of study as most of the Dutch pictures accessible in this country. A "Hobbema," No. 129, we have less faith in; but in the case of this and of many other landscapes presented, we find the hint and the claim which a famous touch leaves in the spectator's mind: something less imposing, perhaps, than absolute conviction, but more instructive and reassuring than the suggestion left by the best engraving.

There are some valuable portraits. Dr. Bainbridge and his wife, in forcible, convincing fidelity, regard us from the canvas of Sir Godfrey Kneller, the picture numbered 212, and lately belonging to the collection of Sully the artist. The lady pinches a guitar, with the air of a précieuse; the husband, pride in his port, defiance in his eye, swells behind her, the ideal of a representative Briton. A somewhat faded female likeness of refined modelling, and recalling some of the portraiture in the feminine line of Van der Helst, takes the preceding number. A vast black Spanish picture, a lady in velvet with her children, we must decline to remember the sins of in our orisons as a true Velasquez. But in this and other cases where we feel the hardness of unbelief, we disburthen ourselves of a surmise without venturing upon full denial. The discrimination of old pictures is, under the most favorable circumstances, an attribute of long self-education. Many other qualities beside their purely artistic ones must enter into the question of their authorship. But while waiting for a Professor Waagen to give an opinion upon these carefully gathered specimens, we shall beg to retain in memory the pleasurable impression which many of them have given us.

FACTS ABOUT PHOSPHATE OF LIME.

Physiological observations have shown beyond a doubt that a certain quantity of Phosphates are required to supply the first basis for every new tissue, and there is no fibre of the human body that does not contain Phosphate of Lime. Many diseases, especially disorders of the nervous system, are now attributed to a diminution of this substance. Horsford's Acid Phosphate supplies this want in the highest degree.

FOR THE

VACATION TOURIST IN EUROPE.

A Compact Itinerary of the British Isles, Belgium, and Holland, Germany and the Rhine, Switzerland, France, Austria, and Italy. With Appendix, Expense Account, and Memoranda pages.

EDITION FOR 1873.

In one volume 16mo, roan, flexible, $2.

The present edition has been increased by the addition of fifty per cent. in material; it has been corrected and revised up to April, 1873, and contains also a valuable Appendix, giving practical information on many essential points, lists of eminent preachers and their churches, and a special chapter upon the Vienna Exhibition.

From the Pall Mall Gazette.

"The book is, indeed, a model of perspicacity and brevity; all the advice it gives will be found of immediate service. The 'Satchel Guide' tells the reader how to travel cheaply without a sacrifice of comfort, and this feature of the book will recommend it to many tourists."

From the Literary World.

'We cannot dismiss his book without a word of praise for 'his admirable 'Introductory Hints,' which seem to set forth the whole duty of the tourist in the compass of thirty pages.

From the Independent.

"We know of no European guide-book which so admirably combines brevity, accuracy, completeness, convenience of shape, and tasteful mechanical execution."

From the Christian Register.

"It seems to contain all that the most unpractised traveller would wish to know. The author has done a real service to the constantly increasing number of his countrymen, who, availing themselves of the present facilities, wish to spend their vacation season in European travel."

With two Steel Portraits, 2 vols. crown 8vo, cloth, $6.

MEMORIALS OF A QUIET LIFE.

BY AUGUSTUS J. C. HARE,

Author of 'Walks in Rome.'

FIFTH EDITION.

The Nation.

"The secret of the success of this book is to be found in the glimpses it gives us of the antecedents and surroundings of Julius and Augustus Hare. . . . As the record of the family life of a cultivated circle, containing some of the best elements of English life, and exhibiting many of its most striking peculiarities, it will well repay reading."

Blackwood's Magazine.

"The book resembles—and this is the highest praise we can give it—a book which took all England and France by storm—Miss Craven's 'Récit d'une Sœur.'"

London Graphic.

"This is in substance a memorial biography of the two brothers Augustus and Julius Hare, 'the most brotherly of brothers,' as Landor called them, the authors of the well-known 'Guesses at Truth,' and the intimate personal friends of Dr. Arnold, Baron Bunsen, Bishop Heber, Grote, Landor, Dean Stanley, and a host of literary celebrities, living or deceased. It is a fascinating and vivid picture of family life in its sweetest and best aspects, everywhere enriched with a cabinet of excellent portraits, with illustrative extracts from letters, diaries, and sermons, abounding in anecdote, in shrewd saws, and out-of-the-way information."

GEORGE ROUTLEDGE & SONS,

London and New York.

A HISTORICAL NOVEL.

PEMBERTON;

OR,

ONE HUNDRED YEARS AGO.

BY HENRY PETERSON, AUTHOR OF "THE MODERN JOB," ETC.

12mo, extra cloth, $1 75.

NOTICES OF THE PRESS.

"One of the most attractive works of fiction issued this season. As a historical novel, this work is a graphic representation of the Philadelphia of the Revolution, and, as a romance, it is well imagined and vividly related. The interest never flags; the characters are living human beings of the nobler sort, and the style is simple, chaste, and appropriate."—*Philadelphia Evening Bulletin.*

"It is written with spirit, and is a capital attempt at an American historical novel. The interest is well sustained, and the style is fresh and entertaining."—*Boston Saturday Evening Gazette.*

"It is full of the strongest elements of romance. The author has developed the rich material at his command in a dramatic manner, and, when he has drawn upon the resources of his imagination, he has so skilfully interwoven his fancies with the narrative as to brighten and give compactness to the entire fabric. It is a story which will fascinate the reader from the opening pages to the end."—*Philadelphia Inquirer.*

"It is, in short, history in a highly attractive garb."—*Chicago Interior.*

"Cannot but possess an irresistible charm to an American."—*Pittsburg Gazette.*

"As a whole, it is an artistic and delightful picture of the men and ways of those stirring years."—*Washington Chronicle.*

"This work is to the Revolutionary period what Ivanhoe is to the times of Richard the Lion-hearted—a strongly-written story."—*Mobile Register.*

"It deserves to be generally read, and, when read, it must be admired. It is not dull on any page."—*St. Louis Republican.*

"Mr. Peterson has woven an ingenious and at times a highly dramatic plot, which keeps the interest of the reader on the stretch from the first page to the last."—*To Day.*

"A remarkably entertaining novel, which, toward the last, becomes absolutely thrilling. . . . The women of the book are worthy representatives of that stirring time when our great-great-grandmothers were all heroines."—*Boston True Flag.*

"The style is graceful, fluent, and natural, and the various conversations between the different characters are marked with strong individuality."—*Philadelphia Public Ledger.*

"It is a record that will interest those who are not attracted by ordinary fiction."—*North American.*

NEW PUBLICATIONS.

HALF-HOURS WITH THE TELESCOPE. Being a popular Guide to the Use of the Telescope as a means of Amusement and Instruction. Adapted to inexpensive Instruments. By R. A. Proctor, B.A., F.R.A.S. 18mo, cloth, with illustrations on stone and wood. Price $1.

"It is crammed with starry plates on wood and stone, and, among the celestial phenomena described or figured, by far the larger number may be profitably examined with small telescopes."—*Illustrated Times.*

HALF-HOURS WITH THE STARS. A Plain and Easy Guide to the Knowledge of the Constellations, showing in 12 maps the Position of the Principal Star Groups Night after Night throughout the year, with introduction and a separate explanation of each Map. True for every Year. By Richard A. Proctor, B.A., F.R.A.S. Demy 4to, price $2 25.

"Nothing so well calculated to give a rapid and thorough knowledge of the position of the stars in the firmament has ever been designed or published hitherto. Mr. Proctor's 'Half-Hours with the Stars' will become a text-book in all schools, and an invaluable aid to all teachers of the Young."—*Weekly Times.*

MANUAL OF POPULAR PHYSIology. Being an Attempt to Explain the Science of Life in Untechnical Language. By Henry Lawson, M.D. 18mo, with 90 illustrations, price $1.

Man's Mechanism, Life, Force, Food, Digestion, Respiration, Heat, the Skin, the Kidneys, Nervous System, Organs of Sense, etc., etc., etc.

"Dr. Lawson has succeeded in rendering his manual amusing as well as instructive. All the great facts in human physiology are presented to the reader successively; and, either for private reading or for classes, this manual will be found well adapted for initiating the uninformed into the mysteries of the structure and function of their own bodies."—*Athenæum.*

STANDARD EDITION OF DICKENS.

THE WORKS OF

CHARLES DICKENS.

Profusely Illustrated with Steel Engravings, from Drawings by H. K. Browne, Cruikshank, and other Distinguished Artists. In monthly volumes, large 8vo, carefully printed in large type on superfine paper, and bound in extra cloth, $3 each.

Messrs. J. B. Lippincott & Co. have pleasure in announcing that they have concluded arrangements with the owners of the copyright and the English publishers for the issue, in the United States, of a Standard Library Edition of the writings of the late Mr. Charles Dickens. The design of the publishers is to make this edition the finest and most complete that has ever been issued. As they have at their command the papers of Mr. Dickens, and as they will, in the production of the Illustrations, be assisted by nearly all the artists and engravers originally employed in the embellishment of Mr. Dickens's works, their ability to accomplish the object which they have in view is fully assured.

Now Ready.

PICKWICK PAPERS. Two volumes, with 43 Steel Plates.

☞ For sale by all booksellers, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., PUBLISHERS,

THE WEEK IN TRADE AND FINANCE.

April 28, 1873.

MONEY is much easier. Commercial paper is more in demand, and prime names or first-class railway acceptances sell at from 10 to 12 per cent. Call loans vary from 7 per cent. currency to $\frac{1}{64}$ and interest; 7 per cent. gold being the most general rate. The most important feature is the return movement of currency to the city, which, so far as reported by the express companies, has been of considerable amount ($8,500,000), and including a fair proportion of legal tenders. The Senate at Albany has passed a bill providing for the forfeiture of interest, and not as heretofore of the principal, on usurious loans. This is considered very unsatisfactory, as it does not permit free and legal transactions in money at the current market rates.

The bank statement is favorable. The National banks in the Clearing-house hold $319,400 surplus above the legal reserve; the apparent total deficiency of about $300,000 in the 25 per cent. required by law being caused by a deficiency of $628,675 in the State banks. The statement is as follows:

	April 19.	April 26.	Differences.
Loans	$270,190,600	$269 301,900	Dec. $838,700
Specie	16.116 400	15,989,700	Dec. 126,700
Circulation	27,713,300	27,737 700	Inc. 24,400
Deposits	187,167,300	188,220.600	Inc. 1,053,300
Legal tenders	36,619,800	37,690,600	Inc. 1,070,800

The following shows the relation between the total reserve and total liabilities:

	April 19	April 26.	Differences.
Specie	$16.116,400	$16,589.700	Dec. $126,700
Legal tenders	36,619,800	37,690,600	Inc. 1.070.800
Total reserve	$52,736 200	$53.680 300	Inc. $944,100
Circulation	27,713,300	27,737,700	Inc. 24,400
Deposits	187,167,300	188.220,600	Inc. 1,053,300
Total liabilities	$214,880.600	$215.958,300	Inc. 1,077,700
25 per cent. reserve	53,720,150	53,989,575	
Deficiency in legal reserve	983,950	309,275	Dec. 674,675

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$232.177,900	$37,124.000	$269,301,900
Specie	14,471,000	1,518,700	15,989,700
Legal tenders	33,237,700	4,452.900	37,690,600
Deposits	161,862,500	26,358.100	188.220,600
Circulation	27,694,700	43,000	27,737,700

The stock market has been very dull, quotations remaining tolerably steady. The buoyancy which carried prices up last week was taken advantage of by parties to realize, causing considerable heaviness. The Atlantic National Bank affair also caused a fall of from ½ to 1 per cent. New Jersey Southern has become a speculative stock under the leadership of Jay Gould. It is rumored that the Cleveland, Columbus, Cincinnati, and Indianapolis Railroad will pass into the control of the Lake Shore party. That creditable and sole representative of American commerce, Pacific Mail, is again short of American ships, and proposes to make the China trip of 1st June with an English steamer, and trust for compensation to Congress —a policy exactly the reverse of the prudent maxim of trusting to Providence and keeping powder dry.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending April 26, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	101⅛ 102⅜	101⅝ 102	101¼ 101⅞	100⅜ 101½	101½ 101⅞	101⅜ 101⅜	70,900

Pacific Mail	59⅜ 61¼	58¼ 60¾	58¼ 59¼	57⅞ 59⅜	58¼ 59⅜	58⅜ 59¼	140.100

The Bull's Head Bank is reorganized, and again doing business. Its impairment of capital has been made good, and the proceedings in bankruptcy discontinued upon the payment by the bank of the legal costs and fees, which amount to $5,603 75. The Atlantic National Bank, at the very end of the week, has failed utterly and scandalously, through defalcations of its cashier, who has embezzled about $425,000 belonging to the bank and its customers.

Certificates of indebtedness of the Washington City Board of Public Works have lately been offered for sale in New York. These certificates represent a liability the total of which is absolutely unknown. The assessed value of real estate in Washington has been arbitrarily increased fifty per cent. for the purpose of evading the limitation of indebtedness prescribed in the creation of the District; and yet, with this increase, the percentage of indebtedness has not been kept within the letter of the law; and the "Ring" appear to have added to the city debt at the rate of $1,000,000 *per month* for the past eighteen months. It is probable that the total obligation exceeds $20,000,000. This, for a corporate existence of less than two years, and a mixed population of about 135,000, who are not engaged in trade or manufactures, is such convincing evidence of recklessness, rascality, and insolvency that it is to be hoped these certificates will be found as unsalable here as in their place of nativity.

Great interest attaches in railroad circles to the decision just rendered in the case of the Covington and Lexington Railroad Company *vs.* Bowler. The road was, some years since, sold at public foreclosure sale, and purchased by the defendant—a director in the Company—for himself. The decision of the Court is unanimous that, whether acting in good or bad faith, the defendant could hold the property only as trustee for the old Company, and that, on an accounting to him for expenses in satisfaction of judgments, repairs, and improvements, the plaintiffs are entitled to a share of all profits, and to resume control of the road. This important decision directly affects several suits now pending in similar causes; amongst others, those arising in the New York and Fort Lee and Hudson River West Shore roads, which, under the name of "New York, West Shore, and Chicago," have lately consolidated and reorganized, and the new president, Governor Page, is now on his way to Europe, with hopes that an Amsterdam "Syndicate" will take its first mortgage bonds. The previous history of this Company, the present suits, the fate of the Rockford and Rock Island and other bonds, the difficulties with the California and Oregon Railroad Company, the fact that near $60,000,000 of defaulted American railroad obligations are now held in Germany, do not seem sufficient warning to foreign capitalists, and, with railroad investments second in intrinsic value to no securities in the world constantly to be had here, our German friends charitably select such as would not be purchased at any price by a respectable American banking firm. The old securities of the West Shore road have long been offered at five or ten cents on the dollar, and we learn of bonds of the new Company for sale here already, probably before the first day's work has been done by the incoming administration of the "*reorganized*" affair, which, not *owning* so much as a locomotive, *owes* hundreds of thousands of dollars.

In Boston, Hartford, and Erie Railroad matters, bills have been filed in the different United States Courts through which the road passes, claiming that portions of the property are to be taken for the general floating debt, proved in bankruptcy. The amount of such debts is comparatively small, only a few hundred thousand dollars, and it is thought that, after their satisfaction, any surplus must go to the shareholders, if, as is asserted, the Berdell bondholders have relinquished all rights by taking possession of their mortgage security, it being held that in bankruptcy no party holding security can participate in bankrupt assets unless he has first given up the security he holds for the benefit of all creditors. Among property thus laid claim to is the stock of the Hartford, Providence, and Fishkill road, the Norwich and Worcester lease, and the Boston depots and water-front.

Government securities have continued active and high. As the market is practically bare of bonds, it seems likely that prices will advance. There has been little doing in Southern State bonds. The market is steady as far as quotations go, but there are few, if any, actual transactions. Business in railroad bonds is not large, but the prices are firm, particularly for old established roads, and sales at the board, as well as over the counter, are decidedly on the increase. In a few weeks' disbursements on account of interests, payments by the Government, and by States, cities, and corporations, will exceed the sum of $100,000,000, of which much the larger part, owing to the relatively high price of Government and good railroad stocks, will be reinvested in railroad bonds. Union Pacific land-grants have advanced to 75. The land sold by this road during the month of March was 17,626 acres, at an average price of $4 79 per acre, amounting to $84,461. The total sales to April 1, 1873, are 703,437 acres, at an average price of $4 27 per acre, amounting to $3,003,430. Gold closed for the week at 117⅜ to 117½, and has been less active on speculative transactions. Whether the advance movement is broken, and we are drifting into a permanent decline, is not well ascertained. The imports at the port for the last week were of the specie value of $2,088,748 of dry goods, and $8,252,015 of general merchandise. The specie exports for the week were $773,018, or, since January 1, $17,121,441, against $9,187,334 for the corresponding time in 1872. On the other hand, the exports of cotton from all the ports for the week were 60,872 bales, against 28,971 bales for the same period last year, and the total exports are 2,105,900 bales for the cotton year, against 1,746,825 bales in 1872, whilst the stock still on hand is almost double that of the previous year. It is stated that $1,000,000 of coin is on the way here from London, and it is probable that on Monday the Government will commence paying the May coupons. The rates in the gold market range from 7 per cent. for carrying to ¼ per cent. for borrowing.

The Nation.

NEW YORK, THURSDAY, MAY 8, 1873.

The Week.

THE Illinois farmers' movement seems to have thus far practically resulted in little more than a determination to have freights regulated by law. The railroad managers, meantime, are said to have arrived at a tacit understanding to interpose no obstacles to the pending legislation, but to comply strictly with any laws that may be passed. In case the "discriminating freight rates" are established, however, the companies, "in obeying the law, will be compelled to make important changes in the present system of management." Some of these changes will be rather inconvenient. The "time schedule" will be overhauled; trains will be run "on a paying basis only"; "lightning-express" trains will be abolished; luxuries will be dispensed with; and "soft-cushioned seats" will only be given to localities offering a paying business.

"If less than a car-load of freight is offered at any place, the car will be detached until it is filled up, and left to wait for the next train. The expensive high-pressure fast freight and passenger trains will be run on a more economical slow-coach basis. Half-full freight-cars and partially-laden trains will cease to run. Cars and freight trains will be left at localities until they are full, and then, and then only, will they be moved to their destination."

One thing the Illinois farmers may certainly rely upon, that no railroads will be run at a loss for any great length of time; and the ordinary profit means in these times not only profit on the money sunk in building and equipping the roads, but additional profits on various contracts with palace-car companies, white lines, red lines, and other transportation agencies of a very valuable and at the same time somewhat doubtful character.

As an illustration of the angry and irrational attitude of the farmers, we may refer to the convention held on April 30 at Princeton, Illinois. This meeting resolved, among other things, 1st, that railroad charters are not contracts, as they have been held by the courts to be; 2d, that the Illinois enactments relating to railroads are not repugnant to the Constitution of the United States; 3d, that the legislature shall pass laws establishing reasonable maximum rates, and that this legislation, whatever it may be, shall be enforced by the courts; 4th, that they will support no candidate for judge of the Supreme Court who does not agree with these resolutions—the last resolution being that a recent judgment of this very court in a matter having nothing to do with railroads "is a violation of the principle of free government." The Chicago *Tribune* says that on this platform the convention undertook to nominate some one for judge of the Supreme Court, but the gentleman named, who "is a respectable member of the bar," very naturally "wrote a peremptory refusal to be a candidate." No lawyer with any self-respect could do otherwise, for the platform is a direct attack on the independence of the judiciary, and an attempt to degrade it into the mere tool of the legislature. Delicate questions of constitutional law cannot be decided by a popular body like a farmers' convention; and even if they could, that would be no excuse for binding hand and foot the purest and most intelligent part of the government, and exalting in its place the most suspected.

The Honorable Samuel Shellabarger has published a long statement of his reasons for considering it a matter of imperative duty to take his "back pay," which, we fear, will not convince his "noble and only too generous constituency" that he is right, and the constituency in question wrong, in "this the first difference of opinion" between them. Mr. Shellabarger's main ground for taking the pay is that he steadily voted against it; and having been, contrary to his own intention, and solely by the action of his colleagues, placed in a position in which he is legally entitled to it, he thinks there can be "neither wrong nor indelicacy" in taking it. This is very much the same as if a gentleman in foreign parts, who had the misfortune of being obliged to consort with other gentlemen of very doubtful character, and some fine day should receive from his colleagues a valuable present, for which "no consideration had been given," should, after expostulating with them for some time, suddenly pocket the money, and return to his native country pleading that it was his duty to keep the gift, because there was no extradition law which covered the case. The argument that the increase of pay for services already rendered was not unconstitutional has very little weight with the public, who are not accustomed to regard the Constitution as a complete and final ethical guide; and the fact that other Congresses have voted themselves back pay does not make the matter at all better. If every Congress was to do it from now till the end of time, the public would not regard the precedent as making the practice delicate, or right, or decent. On the whole, Mr. Shellabarger's defence is rather calculated to amuse the readers of newspapers than to strengthen his own position—particularly that part of it in which he says he never allows himself for a moment to doubt the integrity of those who pushed the bill through. When a member of Congress has arrived at that pitch of innocence at which he confides in the integrity of his fellow-members, his state of mind is so widely different from that of the public, that the people feel he hardly "understands" them.

Apropos of the report that a Mr. Joseph Sloss, an Alabama Congressman, has declined to take his back pay, a contemporary remarks that "of course he is not a carpet-bagger." Now it may be as well for us to bear in mind that, abandoned rascals as a great many of the carpet-baggers have been, we of the North have had no such proud pre-eminence in rascality as it has been the careless fashion of the last year or so to assert. We might not win so very easily, after all, if we were to match Mr. Whittemore, for example, cadetship broker, etc., formerly of Massachusetts, against a certain gentleman "of good family," now and always of South Carolina, and at present holding an important office in his native State. This gentleman's disgusting conduct at the inauguration ball in Washington, the other week, has not, we observe, received anything like that amount of attention from the South Carolina press that it infallibly would have received had the honorable gentleman been a Northerner. This fact those of us whose business it is to make comments on carpet-baggism and other matters may properly recollect at such times as the carpet-bagger is up for objurgation.

Mr. Moses, for example, the present Governor of South Carolina, we may weigh however we like, and we shall find that in the matter of rascality, in its various forms of cynical indifference to decency, of rapacity, of corruption, of lawlessness and all the rest, he will probably yield to no other gentleman in South Carolina; but he happened to be born in that State, and for one word that the native South Carolinian editor, or the South Carolinian voter, or the South Carolinian woman will say about the virtuous Moses and his "steals," each will say one thousand words about the "steals" of Scott, born in Ohio. The Northern adventurers in no Southern State have never wanted for indigenous allies as greedy and shameless, whether or not as politically clever, as themselves. And the South, had she tolerated more of the entirely respectable kind of "carpet-baggers" than she would tolerate, need have suffered less than she has from her rogues, imported and native. The Mr.

Sloss of whom and whose "back pay" we have just made mention may help to point this moral. It appears that he has not declined the money, and probably does not intend doing so. Looking up this model of virtue, we find that he is, in fact, a native Southerner, and that he is set down in the books as having been elected by Democratic voters—presumably, therefore, not by carpet-baggers nor by negroes under the carpet-baggers' influence. However, we have no wish to institute these comparisons, but only to suggest that to this carpet-bag question, as to every other, there are two sides, and that for about a year some of us "Liberals" have been talking as if there were only one.

Word comes from St. Petersburg of the death of the Hon. James L. Orr, the United States Minister at that court. This death, though sudden, was not unexpected by such of his friends as knew the condition of his health when he left this country, for though a comparatively young man, and of an originally strong constitution, he had of late been very rapidly aging. He had been in his day something of an historic figure in the South, but in the North it will be thought his best claim to mention at the present day that he was one of the few prominent Southerners who, on the close of the rebellion, honestly held and acted upon the belief that the true course for Southern men, politicians or not, was to make the best of the situation and set to work to learn and to control the new political machine. This, we suppose, he did sincerely, though beyond doubt Mr. Orr was a fine natural-born politician, and had also sedulously studied that business. The North first knew much of him in the brief period when, between 1850 and 1860,the North and the South used to fight excitedly for the Speakership of the House. On one such occasion, in '57, he was the successful candidate, and made an excellent presiding officer. By-and-by came the war, and he rather reluctantly "went with his State," though he had previously done much secession talk, and afterwards served the Confederacy in field and council. The fact was that Mr. Orr, born poor, the favorite of the small farmers of the hill country of South Carolina, entertained of the Sea-Island and rice-plantation gentlemen, who were hottest for secession, an opinion quite different from that which those gentlemen entertained of themselves. Moreover, he had a native shrewdness which probably discovered far sooner than did their heated brains the final event of their policy. Of late he has "done the state some service," in the lower sense of those words, perhaps, as well as in the higher, but in the higher also. Mr. Orr had not quite completed his fifty-first year.

We said the other day that there was nothing in the Constitution to prevent the half-dozen ratifications given to Mr. Madison's salary Amendment eighty-odd years ago "from being carried forward as still valid, and counted in its favor, should any other States now feel like reviving it." A disposition to do this very thing has since been shown by the Ohio Legislature, in which, we believe, a motion to take up and ratify the Amendment, without any renewal of it on the part of Congress, has been entertained. The Chicago *Tribune* adduces some reasons for considering this step contrary, if not to the letter of the Constitution (as it cannot be shown to be), at least to the spirit of it. One of its arguments is, that "in the case of a bill before the legislature, a defeat of this kind would require the proposition to again go through the usual forms of presentment before it could be passed." The analogy fails, however, in this, that the life of a legislature is limited, while the continuity of a State is never interrupted. We saw, when the Fourteenth Amendment was hanging by the eyelids, New Jersey first reject and afterwards recall and ratify it, and a precedent established according to which rejection counts for nothing, while ratification (even if subsequent to rejection) is always valid. The interval here was short, to be sure, but that does not affect the principle, which, on the other hand, can have no relation to the duration of the Congress proposing the Amendment. For, in the first place, such a proposal might be its last act in its last session; and, historically, we know that the Eleventh Amendment was four years in getting ratified—a period equal to the life of two Congresses, and actually, as it happened, overlapping two Administrations. So far, therefore, as analogy and precedent go, the States of Rhode Island, Delaware, Maryland, Virginia, North and South Carolina, seemingly might be held to their ratifications of the so-called Second Amendment of 1789; the objections of New Hampshire, New York, and New Jersey might be revoked; and Massachusetts, Connecticut, and Georgia might now first consider the Amendment, unprejudiced by the fact that they neglected to do so at the date named. Nor need Ohio, although a State admitted long after the Amendment had been lost sight of, forfeit its right to pass upon it at its own pleasure.

The question, so long as our vast territory is scarcely more than half parcelled out into States, and so long as the existing States maintain their conservative attitude towards all amendments of the Constitution, can hardly be called a practical one. We do not see how any great harm can come from the exercise of the liberty asserted by the Ohio Legislature, even if it transcends the reasonable interpretation of the requirements of the Constitution. On the other hand, we think we see certain advantages in having a more explicit declaration of the term within which amendments might lawfully be considered—say, four or five years; and of the effect on a State, as disqualifying it for further action, of ratification, rejection, and non-consideration respectively. At present it is certainly no reproach to our fundamental charter that its vagueness is wholly in favor of the vitality of amendments, no matter how often rejected or how long under consideration. And on this side, doubtless, any attempt at precision should lean.

The relation existing between the managers of a powerful railroad company and small State governments in this country is not very unlike that which formerly existed between the large land-owners in England and rotten boroughs. An investigation is now going on into the affairs of the Vermont Central Railroad which brings this to light in a curious way. The Vermont Central was built between the years 1845 and 1850. The Vermont and Canada, an extension of the same line, was then built, and leased at 8 per cent. to the Central. At first the rent was paid; but in 1854 it suddenly stopped. The Vermont and Canada then went into court and got some receivers appointed, who were ordered to operate the road, paying the rent and also the interest of the first and second mortgage bonds of the Central. Strange to say, these receivers first failed to find money enough to pay the first mortgage bonds, and then the second; and then the money for the rent disappeared. Meanwhile, they had contracted on their own account a floating debt of several millions; and an attempt is now making to discover the explanation of this strange state of affairs. The first thing that comes out is the existence of a "secret service fund," used by the railroad to "retain" all the prominent men in the State. In the printed list we find the names of all sorts of officials: one was a senator last year, another an ex-district attorney and prominent politician, another a governor, another an auditor, another the present lieutenant-governor, another an ex-railroad commissioner, another an ex-senator and now a judge. The list is a very long one, and it is evident enough that the upshot of such a system is the complete inversion of the normal relation between the Government and the railroads, and the complete absorption of the former's functions. The next step in the history of the Vermont Central is still more curious, for it consists in the gradual rise into power, on the ruins of the corporation, of a family; for the Vermont Central, the State of Vermont, and the "Smiths" have been for some years in that part of the world synonymous. The investigation, if only in the interest of sociology, ought to be made thorough.

At the annual meeting of the Chamber of Commerce on Thursday of last week, Mr. William E. Dodge was re-elected President. This signal mark of confidence the Chamber followed up by heartily applauding speeches in which unshaken faith in the integrity and honor of his house was expressed, and by unanimously adopting

resolutions instructing a committee "to examine the laws relating to penalties and additional duties as now imposed, and to recommend such alterations of the same as will protect the honest importer from the forfeitures and fines which should fall only upon those who are dishonest and unscrupulous." Mr. Dodge himself, in acknowledging the honor conferred upon him, stated that except for the attitude in which his firm had been placed by the Government he should have declined a renomination. Referring to the excessive payment in settlement made by Phelps, Dodge & Co., he said that since they had fully understood the case, they regretted ever having paid a dollar; and this, as we have before had occasion to remark, is the only regret which the public can entertain on their account. While this rebuke to the Government for its outrageous treatment of one of the half-dozen representative firms of the country was being offered by the leading merchants of its chief city, at Vienna the opening of the Exposition on the same day gave equal occasion to Americans to blush for the care which the Government bestows on the commercial and industrial interests of the people, whether at home or abroad.

The strikes continue with varying success. In St. Louis, a strike of the coopers has been followed by an importation of Chinamen, and this again by the usual threats of violence. No one, it is said, dared to rent rooms to the Chinese, and the owner of the shops had to furnish them with lodgings. Private warnings of intended incendiarism were given by the white coopers. The police, as usual, were turned out to prevent disturbance. In Rhode Island, the mill operatives are striking for the "ten-hour" system. The most interesting of all the strikes, however, thus far, is that of the New York coopers. The grievance of these men is not that they have to work too long, or that they are underpaid, or that "Chinese cheap labor" is competing with them, but that their employers are able to import barrels from Portland, Maine, cheaper than they can manufacture them here, and they accordingly insist that no more new Portland barrels shall be imported to New York. This strike is perfectly justifiable on the principles of political economy taught by Mr. Carey and dimly believed in by "Uncle" Boutwell, as the brokers fondly called him, but the coopers are much more logical men than either Mr. Carey or Mr. Boutwell. They sweep away at one brush the transparent and slightly impudent fallacy that free trade between New York and Maine can be a good thing and free trade between New York and Canada a bad thing. They know and see that Maine barrels lower their wages just as much as Canadian barrels would, so they promptly and properly insist on their exclusion, and the refiners have promptly and properly agreed not to use them. This is real protection, and as such has our hearty admiration. If we cannot have a low and simplified tariff, we want to see every county or village "protected" against outsiders, and, indeed, every citizen freed from annoying competition.

Journalism has a happy summer before it. The old scores of last year's campaign have been pretty nearly settled during the winter, and as spring opens there seems a general disposition to forgive and forget. We observe with pleasure that almost all the leading newspapers congratulate the *Herald* on its enterprise and pluck in securing as its Viennese correspondents Berthold Auerbach and Louisa Mühlbach—the well-known novelists—and printing their despatches in German and English. The employment of these authors is said to have excited great amazement and interest in the minds of the German population of New York—and well it may, for more soul-stirring compositions we have never had the pleasure of reading. Auerbach begins his correspondence, not as one might expect of the tyro in journalism that he is, from the city of Vienna, but from Gernsbach, on the "verge" of the Black Forest. His first letter begins: "A May Greeting sent to the New World from Gernsbach in the Black Forest by Berthold Auerbach!" But the finest passages are those in which the correspondent imagines the Emperor Francis Joseph and Benjamin Franklin taking a walk through the halls of the Exposition. "Thoughtfully, but with a beaming countenance," Franklin examines the various electrical inventions around him; "onward he paces," and thinks, "What would the Olympian Games be compared with this?" "Onward walks Franklin," and "with intense joy" he contemplates the ingenious labor-saving contrivances of the age; but "a sense of intense pain clouds his thoughtful brow" as he contemplates the improved instruments of destruction; "but as he looks at the Stars and Stripes he is recalled to a sense of joy, and murmurs to himself words of delight, which he will only openly express at the Centennial Celebration of the Independence of the United States." Edmund Yates, too, is writing for the *Herald*, while William Howard Russell, who it seems is a doctor of laws, has been secured by the *Times*. Many an old feud is forgotten in the generous emulation of the moment, though we are sorry to see that some of our contemporaries refer to another *Herald* Vienna correspondent—Mr. John Russell Young—as the "notorious news sneak-thief." This, however, is the only thing which mars the prevailing harmony. Even the titanic and bloody controversy between the *World* and the "young disciples" of the *Tribune* has come to a timely end, the latter journal resolutely and prudently declining to "throw back the ball of discussion."

The will of the late Emperor Napoleon has been presented for probate, and being dated in April, 1865, and adapted to the political conditions of that time, is so violent an anachronism as to suggest a rather ghastly attempt at joking. It reads very much as we should suppose a Chinese mandarin's communication from the other world would read with Mr. N. P. Banks for a "medium." The meaningless platitudes which alike distinguish the people of the Flowery Kingdom and the Massachusetts ex-Governor, are here mingled with ancestor-worship which would extort the admiration of the court of Peking itself. As the Emperor declares his intention of dying in the Catholic, Apostolic, and Roman religion, it is curious and sad to notice his neglect of the saint of the 15th of August—the Neopolis, Neopolas, Napoleo, or Napoleone, who suffered martyrdom at Alexandria under the Emperors Diocletian and Maximian for the express purpose of bestowing a name upon the Corsican. Apparently he has not done his duty by Napoleon III., who says, "It is the soul of my illustrious uncle that has always inspired and sustained me," and that the like will apply to his son.

There has been a ministerial crisis in Italy, owing to the defeat of Signor Sella on the question of an appropriation for an arsenal at Taranto. In the latter part of March, the Radicals in Parliament, with the support of a large portion of the Conservative party, alarmed by the conclusion of the Franco-German evacuation treaty, which is likely to set the French at liberty to threaten Italy with a crusade before the present year will have come to an end, made a desperate attempt to obtain an increase of the army, which was firmly resisted by the Minister of Finance. In his opinion, a prosperous state of the finances was the very first condition of all political strength, and if he consented to any further outlay he would call upon Parliament to vote for fresh supplies. The result was a compromise, Signor Sella consenting to the relatively small augmentation of about $6,000,000 for the War Office on condition that Parliament should vote fresh taxes to an equal amount. Three bills for that purpose were immediately brought in, and we judge that one of these the House rejected in violation of its pledge. The Cabinet promptly tendered its resignation, but it was soon found that nobody coveted the premiership, and the King having revoked his acceptance, Signor Lanza returned to the head of affairs, and has withdrawn the bill on which his colleague broke down. The incident resembles the recent experience of the Gladstone Ministry, though we trust that Signor Sella has not been really thwarted in his purpose to make Italy pay as she goes. On the 3d of April he achieved a decisive success over the Left, backed by more than eighty members of the Centre, maintaining the unpopular but very productive, and at this time indispensable, *macinato*, or tax on grinding.

THE CONTRIBUTIONS OF THE GOVERNMENT TO PUBLIC MORALS.

WE discussed one aspect of the Phelps-Dodge affair last week—the economical one. The matter ought not to pass from the public mind, however, without some notice of another and still graver aspect of it—the moral one; the importance of which is increased by the spectacle of the frauds, defalcations, breaches of trust, venality, and, in short, general loosening of the bonds of honesty and fidelity which meets the eye in every direction, and over which patriots and moralists are lamenting so deeply. It is now and has long been generally conceded that governments owe something more to the cause of good morals than legislation against vice. They not only provide penalties for offences, but they refuse the aid of the judicial machinery for the enforcement of contracts which are *contra bonos mores*—or "against public policy," as the lawyers say. More than this, they are expected to refrain from making money by pandering to vicious tastes or habits. It is now generally conceded that a government ought not to keep gambling-houses or open lotteries, let them be never so profitable; many go still further, and say it ought not even to license houses for the sale of intoxicating liquors, or derive a revenue from permitting the manufacture of such liquors, or in any manner countenance or encourage their use. There are differences of opinion on some of these points; but we believe there is none whatever among civilized men, that a government ought in the transaction of its fiscal business not only to refrain from what is positively immoral, or mean, or tricky, or perfidious, but to set an example of scrupulous, high-minded integrity, such as private persons ought to follow. In other words, administration as well as legislation ought to have an educating influence on the popular mind, ought to present to the young a lofty standard of honor and fair dealing, ought, in short, to embody in practice, as far as possible, the highest national ideal of right living. It is still less permissible in a government than in an individual to cheat, to lie, to break promises, to defraud, or cozen, or indulge in sharp practice, or take advantage of people's weakness, or ignorance, or necessity. The imperceptible influence of an immoral government is far more mischievous than the perceptible. When it defrauds a man or denies him justice, the wrong done him is only a small part of the mischief; the greater portion of it is to be found in the impression made on the minds of the youth of the nation by the spectacle of rascality perpetrated by persons holding responsible positions, acting in the name and using the resources of the whole social organization. We verily believe, that after every allowance had been made for the influence of the war and of paper money in producing the recent marked decline in public morals in this country, it would be found that the greater portion of this decline was due to the practice which yearly becomes more striking, of collecting the riff-raff of the nation, its social, commercial, and professional bankrupts, every four years, and committing the charge of its money and its honor to their keeping. There is a deep and lasting connection between civil-service abuses, which seem so far away from us, and other abuses, which reach our pockets directly. In other words, the renown and influence of the Murphys and Caseys help to make the army of small rogues who rob our savings-banks and trust companies, and issue our counterfeit money and bogus bonds.

What has all this got to do with the Phelps-Dodge affair? Much, as we think we can show. The legal proceeding by which our Government punishes infractions of the revenue laws is, in form, a civil one. On its face, it is a civil suit for an amount of damages previously fixed by the statute. But, in reality, it is a criminal proceeding. The evidence to sustain it is procured by the criminal process of searches and seizures. The amount of damages recoverable bears no moral or mathematical relation to the injury sustained. It is, in all respects, a penalty, and may be a tremendous penalty, even from a pecuniary point of view; as when in the Phelps-Dodge case a million and a half of dollars was claimed, and over a quarter of a million actually extorted, by way of compensation for the loss to the revenue of little over sixteen hundred dollars. Not only, however, are the damages a real penalty, but the suit is, from its very commencement, an assault on character of the most terrible kind. Private individuals sue each other for all sorts of reasons—good, bad, and indifferent—and the public pays little heed to the plaintiff's story until it has heard the defendant's. But when the Government pursues a man in the courts, it raises in the popular mind a strong presumption of guilt against him. There is a traditional prejudice that such a suit, being undertaken on public grounds and in the public interest, cannot be dictated by private malignity or passion, and must have an array of facts behind it; so that, when the district attorney files his bill against a merchant to punish a fraud on the revenue, and the "special agent" seizes on his books and papers, and the telegraph spreads the news over the country, the fair fame of a lifetime often vanishes in a moment. The man's character is damaged to an extent which no subsequent refutation or vindication can wholly cure, because such are the intricacy and obscurity of our revenue laws that, even if the facts were clear of all suspicion, the defence must, from the nature of the case, be dry and tedious reading, while the charge can be contained in two lines of a spicy despatch.

Now, no man is arraigned on a criminal charge without a preliminary investigation before an impartial tribunal. He is taken before a magistrate who has no personal interest in his acquittal or conviction, before a grand jury who are indifferent also, and before a district attorney who, at worst, is animated in the prosecution by nothing stronger than professional pride. It is only after all these have agreed that there is fair ground for trying him that he is, as the law says, "put in jeopardy" before a court. When, however, the Treasury directs the prosecution of a merchant, entailing possibly the ruin of his business and of his reputation, it acts on the report of two persons, who both have a strong pecuniary interest in his conviction—that is, it decides to prosecute him, as it were, on the commitment of a magistrate who will make thousands of dollars by having him found guilty; and on the presentment of a grand jury who, if he *is* found guilty, will be allowed to divide between them a considerable portion of his assets. But this is not the whole nor the worst. In order to procure the information on which these prosecutions are founded, the Government does not employ policemen and pay them itself for their services, as in the case of other breaches of the law, and keep up among them by discipline a sense of honor and of self-respect and of regard for the rights of their fellow-citizens. On the contrary, it enlists in its service a class of detectives whose zeal is stimulated not by the prospect of promotion or by public spirit, or any of the honorable incentives to exertion, but by the prospect of sharing in a division of the criminal's property. Even if the experience of all nations and ages as to the effect of this mode of reward on police agents were not known to us, we should only need very little knowledge of human nature to predict the result of it on the morals of the officer and on the peace and welfare of persons exposed to his attacks. It is a common and justifiable practice of governments to offer rewards to educe evidence likely to lead to the conviction of the perpetrators of crimes already committed. But to offer large rewards to persons who will bring accusations and make them good is a well-recognized offence against public welfare, to which only the basest governments in the worst times have ever resorted, because it not only breeds one of the foulest classes of men, but places all good citizens at their mercy.

The detectives employed by our Government, and whom it dignifies with the name of "Special Agents," are constantly trying to procure materials for charges, and in order to do so are constantly endeavoring to put themselves in communication with "informers," with whom they afterward share the enormous reward. It is well known that it is not uncommon to use clerks as spies on their employers, or in other words to induce young men to engage in one of the lowest

forms of hypocrisy and perfidy of which a man can be guilty, and the one which most rapidly and surely eats out the very roots of manliness, honesty, and self-respect. We may depend upon it, anybody who has ever taken Custom-house pay as a spy, issues from his employer's counting-house in just that state of mind which makes slow and lawful gains irksome, and chances for fraud and defalcation welcome. In the Phelps-Dodge case, a confidential clerk first sells his employers' business secrets to business rivals, and spends his nights in helping them to ransack their books and papers. When he is detected and prosecuted and escapes through a technicality, far from flying, he puts himself in communication with the representatives of the United States Government, who welcome him as a valued coadjutor, and the result is that by this one stroke of rascality he walks off with nearly $70,000, or, in other words, a larger fortune than usually rewards a lifetime of honest and successful toil. It requires no great effort of the imagination to figure to one's self the effect of this man's performance on the thousands of youth who are serving in a fiduciary capacity in this city, and to whom long hours and small salaries are hard to bear. That he is a thief, a cheat, a liar, a hypocrite, a monster of ingratitude and baseness, is all hidden under the fact that he has assisted the worthy Jayne in bringing a charge of having defrauded the revenue to the extent of sixteen hundred dollars against a house whose importations are every year worth six millions, and the income of whose partners is counted by hundreds of thousands.

We may depend upon it that as long as the national Government lends its sanction to speculations of this kind, the fountain of corruption and dishonesty will not dry up or cease to spread. There is no way, we are glad to say, of keeping rascality confined to "the politicians." We cannot make politics a lazar-house, and prevent the contamination from reaching trade and commerce. Perhaps one of the alarming signs of the times was that little burst of janissary's insolence in which this detective, Jayne, spoke in his "report" to Mr. Boutwell of the merchants of New York as "the ordinary brood of importers," evidently looking at them much as one of Louis Fourteenth's dragoons looked at peasants, or a Mameluke looked at a rayah. When a person of his calling and position indulges in remarks of this kind to his official superior about the traders of the principal American city, and the superior has the audacity to publish the letter, we may be sure it is high time for the axe to be laid to the root of the tree. The worst charge that can be made against the house of Phelps, Dodge & Co. is that, having wealth and character, they did not stand firmly in the forefront of the battle which undoubtedly must be fought out before the great Custom-house nuisance is abated, and the lesson finally taught that Government exists for the convenience and aid of the citizen, and not for his confusion and annoyance.

ECCLESIASTIC SUBJECTION IN GERMANY.

PRINCE BISMARCK is trying an experiment on the Catholic Church which will be watched in all other countries with great interest, and which, although, as the English press has pointed out, it bears some resemblance in form to the performance of Henry VIII., in reality deals with the matter from a totally different standpoint, and one which well illustrates the change that has come over modern society with regard to religion. Henry VIII. put down Catholicism, it is true, as dangerous to the state and to the supremacy of the crown, but he also put it down as error, or at all events as only one expression of truth, and undertook manfully to supply another and better expression himself, and, mysteriously enough, succeeded in getting his own version accepted by the people. Bismarck, however, professes no interest whatever in the question of truth or falsehood of Catholic doctrines, and is evidently not troubled by the question of a state church. But neither, on the other hand, does he accept the great American principle of "a free church in a free state," which Count Cavour seized on as the best solution of the ecclesiastical problem in Italy, and which his successors are now slowly and laboriously endeavoring to carry into effect. Bismarck does not particularly care what doctrines are taught within the King's dominions, or with how much acceptance they meet, but he insists that there shall not be two sources of authority, or two powers capable of inflicting temporal penalties, or any set of persons bound to render obedience to anybody not authorized by the state to receive obedience, or trained for their duties without any interference from the state. In short, he will not hear of "a free church." He insists that the church shall be strictly subordinate to the state, and, in so far as it is visible, regulated by the state. He has accordingly introduced, and, as the Cable informed us on Saturday, has succeeded in carrying even through the Upper House, a batch of measures which constitute one of the most audacious assaults on ecclesiastical independence ever entered upon —audacious, because it is neither due to religious hostility nor to any desire to convert the church into a tool of the state. We gave some account of the leading features of these measures some weeks ago, but we may repeat again that they place the curriculum and discipline of all existing theological seminaries under the control and superintendence of state officers, and forbid the establishment of any new ones. Everybody applying for ordination must have been educated at a state university, and must undergo an examination in which there is no whiffling about "rival theories," but in which the candidate is obliged to swallow a good solid dose of philosophy, history, and literature prepared by Prussian officials. No bishop can put in charge of a parish any priest who has not gone through this course; he cannot put him in charge of one, even when he has passed it, without the approval of the President of the province. If any bishop or priest attempts to act in contravention of this provision, he exposes himself to a heavy fine; if the bishop attempts to inflict any ecclesiastical penalty on anybody for obeying the law, he not only pays a heavy fine, but he goes to jail. No person of non-German origin can undertake to enforce ecclesiastical discipline, and all questions of ecclesiastical discipline are hereafter remitted to the jurisdiction of a state court established expressly to take cognizance of them; and if any ecclesiastical superior wishes to punish a subordinate for anything done or left undone, before that court he must go. The four acts in which these stringent rules are contained must furnish curious reading to the Catholic prelates in Dublin, whose chief grievance is that the state does not provide them with a university in which they can teach their own peculiar history, philosophy, and astronomy to all comers. They must furnish almost as curious reading to our Catholic prelates here, who want to have a portion of the school fund set apart for such modes of instruction as Catholic clergymen choose to approve and provide teachers for.

The boldness of the proceeding in Germany is in part accounted for by the stern necessity under which Bismarck labors of providing for the consolidation of the Empire into a strong and compact political organization, undisturbed by internal dissensions over questions of authority or jurisdiction. The Pope has formally declared war against him and his ideas, and he is bound to show that he cares nothing about the Pope's thunders, and that the King's authority admits of no dispute. As yet the law only applies to Prussia, but there is little doubt that he will also secure its adoption by the German Parliament. His boldness is also due in still greater part to the thoroughly secularized condition of the German mind, and to the low estate into which the German clergy have fallen, both as regards social position and education, in relation to the educated classes of the community. A pastor counts for very little now in the eyes of the Prussian scholar, politician, or military man; and a priest counts for less. There is, therefore, in Germany nothing of novelty or shock about a proposition to lay the strong hand of the state on a whole ecclesiastical organization which there would be in any other country. The learned class is in no other so completely lay in its composition as it is in Germany, and in none has the work of education been for so long a period and so thoroughly withdrawn from clerical hands. In Italy or in France, a lay teacher, or a teacher emancipated from

clerical supervision, is still somewhat of a monstrosity, and in England the clergy have, almost down to the present year, had the universities and schools, high and low, wholly in their hands; and the new educational system is in great danger of going to pieces under the influence of the strong and steady opposition of the ministers of all denominations to teaching which they have no hand in preparing or administering.

The hands of Bismarck are undoubtedly strengthened, too, by the infallibility dogma, which is probably proving to what may be called the Conservative party—using the word in its largest sense—the most serious blow which it has ever received, or is ever likely to receive. We mean by Conservative party that portion of European society which believes, to state the matter roughly, that life is not all living, nor death all dying; or, in other words, that there is a hereafter, whatever its nature, in which man will either be rewarded and punished, or in which he will enter upon a larger and nobler sphere of activity than has been vouchsafed to him on earth. It is in reality difference of opinion on this matter which now underlies the great divisions in European politics as well as in religion. It is rapidly taking the place of the great disputes about the division of the sovereignty as well as the great disputes about the interpretation of the Bible and the authenticity of Church traditions. Everything in church and state now hinges on it. It has produced and is spreading the cardinal idea of the socialist democracy which is honeycombing European society, namely, that material well-being is the first and great end of life, and that all sacrifices of it to remoter considerations of any kind are marks of imbecility; and it is arraying behind the Legitimists, whether followers of Henri V. or Don Carlos, weightier interests than those of pope or king. In fact, the Conservatives are no longer fighting for what used to be called "a cause," but for property, marriage, inheritance—for, in short, nearly everything that makes life to all the well-to-do classes worth having. To them the church was a powerful aid as long as its reconciliation with science and progress was a thing which hopeful and reforming spirits might look forward to and talk of; but the proclamation of the infallibility dogma has cut the ground from under their feet, and delivered them naked to the enemy. The scientific men now make open sport of them, and the socialists are furnished with a fresh illustration of the imposture of the religionists in their attempt to palm off an old man in feeble health as incapable of being mistaken or deceived. So that when Bismarck strikes, he strikes a foe already demoralized and divided.

BARON RICHTHOFEN'S TRAVELS IN CHINA.

III.

SZR-CHWAN was well worth conquest. It is one of the finest inland countries in the world, and, even at this day of low water in the general character and circumstances of the Chinese race, it is occupied by a people who may well take rank with any. Intelligent, courteous, and energetic, they make the very mountain-sides bloom with cultivation, while throughout the Empire the province is spoken of as the garden of China and the repository of every sort of wealth. This is what Baron Richthofen says of the people:

"Among the inhabitants of the eighteen provinces the people of Szr-chwan are (according to my own experience with them) the most gentle and amiable in character, and the most refined in manners. They are also more cleanly and orderly in dress and habits than the Chinese in general. Although somewhat prejudiced against foreigners by stories spread among them, they give evidence by their behavior that they are not hasty and superficial in forming an opinion, and desire to improve it by personal acquaintance. Like the people of Shanse, they arrive at the conviction that men who have attained a high rank in industrial arts must have merit. They meet us with civility and respect, are not in the least shy, and, without evincing that rude curiosity so repulsive to us in many other places, they answer frankly and without hesitation any question put to them. It is no hazard to say that the zeal of the early missionaries has left in Szr-chwan a far more numerous community of Catholic Christians than in any other province. Whenever I arrived at a place where there lived some of them, they would come and confess frankly their faith before any assembled crowd. I got the impression that they are true and devoted Christians, but that, besides the religion, they have a profound veneration of everything connected with Europe. Also, in regard to the pagan population, I arrived at the conviction that they would like dealings with foreigners more so than the people of any other provinces, and soon become our devoted friends."

And again, when speaking of the plain and city of Ching-tu-fu, the finest district in the province, he says:

"Ching-tu-fu is among the largest cities of China, and, of all, the finest and most refined. The streets are broad (very unusual in China), most of them straight, and cross each other at right angles. They are carefully paved with square flagstones, scarcely one of which can be discovered to be out of place, and they are well graded and provided with drains on either side. Their appearance is even more picturesque than that of the streets of Canton, because there is more depth to the views. The houses are adorned with fine and carefully elaborated wooden fronts. Within doors is an unusual amount of luxury, cleanliness, and ease. Through the gate the view opens into a series of yards separated by open halls, every yard a garden, lined on two sides with well-made inner-house frontages. The institution of clubs is quite general in Ching-tu-fu. The houses devoted to them have, when lit up by painted paper lanterns, a touch of a magic appearance. People are remarkably well dressed, silk being a common material of wear. In shops all wood-work is polished, and they are kept clean. A large proportion of them are devoted to articles of luxury, such as silk brocades, silk ornaments of all kinds, silk shoes, costly furs, silver ornaments, articles made of, or set with, precious stones. More than twenty watchmakers find profitable employment, each having a shop with watches and clocks. Nowhere in China is art valued by the present generation as high as in Ching-tu-fu. All tea-houses, inns, shops, private dwellings, have their walls covered with pictures, many of them reminding one of the Japanese ink and water-color drawings in point of artistic touch. No traveller can help being struck with the great artistic perfection of the triumphal arches, worked in red sandstone, which abound in the country. They are covered with sculptures in *haut* and *bas* relief, representing scenes of mythical or everyday life, mostly with a tinge of the humorous. Some of them are masterpieces of Chinese art. In no respect is the refinement more perceptible than in the polished manners and gentle behavior of the people, in regard to which the inhabitants of Ching-tu-fu are ahead of the rest of China. Although in foreign dress I took frequent walks through the city, the people avoided all appearance of taking notice of me, considering any symptoms of curiosity as below their dignity, of course with the exception of the ever-present little urchins whose education is not yet finished. In the shops I was civilly addressed, and I met with the same civility on the part of the officials. These last said they made it a point of honor in Szr-chwan to treat foreigners well, and proved practically that they meant more than polite phrases. Yet, as I had occasion to remark in another page, the people of Szr-chwan do not like foreigners, partly because they are prejudiced against us by the most curious stories spread among them, and partly because they are on no good terms with the native Christians living among them. But if they could have the opportunity of frequent intercourse with educated foreigners, the probability is that they would like them better than the Chinese of other provinces do."

The population of the whole province is about 35,000,000, and the extent of ground is 250,000 square miles. It is, therefore, a full-sized kingdom in itself. The greater part of the population is in the eastern half, and it has about reached its maximum, any failure of crops bringing dire famines. There was one prevailing at the time of our traveller's visit; and without the gates of Ching-tu-fu above described were 20,000 people, in a destitute condition, being fed by the authorities and under military guard. The prevalence of famines in bad seasons is mainly owing to the isolated situation of Szr-chwan. The whole country is hilly and mountainous, of high elevation, being from 2,000 to 3,000 feet above the level of the sea, and is shut in on all sides by very rugged chains. Its only communication with the rest of civilized China is by the Yang-tze River as a main line, by the road heretofore described, and by minor roads to the head-waters of some small rivers that flow ultimately into the alluvial plain of the Yang-tze below the mountains. All these roads are more or less difficult for merchandise; that by the Yang-tze is obstructed by rapids and gorges, and the current itself is such an obstacle that even passenger boats are twenty to thirty days in reaching Chun-king-fu, the first great distributing point of trade coming from the east.

Only on the east does Szr-chwan touch civilization. On the west and north are mountainous countries inhabited by rough tribes; on the south, the province of Yünnan, for a long time in chronic rebellion, and lying desolate. Thibet lies beyond the mountain tribes northwesterly, and trade roads reach from the province to that country; but Szr-chwan is the civilized neighbor, and not Thibet. Everywhere throughout the province the roads are difficult, except in the one level plain of Ching-tu-fu; that is the only piece of level ground in it. There are a few main roads which are well paved with flagstones and are wide enough for two pack-trains to pass each other. Beside these an infinite number of foot-paths permeate the country, also paved and kept in good order. In steep places there are flights of steps, up and down which the ponies climb with surprising ease; but, except on the main roads, nearly all the carrying is done by coolies. Brooks and rivers are constant, so that bridges are everywhere needed, and are a specialty, so to say, in Szr-chwan. A fine and well-constructed bridge is a matter of local pride. They are built of cut-stone, generally red sandstone, and kept in perfect repair—sometimes arched, sometimes made with long slabs. The

baron saw such slabs 24 feet long, 4 feet wide, and 2 feet thick—heavy stones where the appliances for moving are so inferior. He says:

"In the wilderness of Western Szr-chwan, it often happens that a road must traverse a narrow chasm between rocks where, deep below, the water descends in foaming cascades. Then the chasm is spanned with five or six strong iron chains lying parallel to each other. These are covered transversely with stout planks. Other chains form a sort of railing on both sides. These bridges are frequent in the west. In other places of a similar character, where a passage for man only is required, wire bridges of an exceedingly elegant pattern are constructed. In rocky dens filled with huge granite boulders, between which grows a luxuriant vegetation, these delicate structures are a surprisingly decorative element."

This province is noted in China for the variety and value of its exports —silk, tobacco, opium, sugar, oil, salt, iron, hemp, and vegetable wax—all valuable. Its product of coal is very large and general throughout its extent, but consumed within its borders. It raises for itself tea, cotton, wheat, barley, rice, and all the vegetables. It is almost the only part of China where the hills, out of the loess country, are generally cultivated:

"It is probable that in no country of the world, not excepting Japan, an equally perfect use of the hillsides is made. As in those beautiful islands, the cultivation of the soil is not limited to agriculture alone, but consists in great part in the planting of useful and ornamental trees, such as bamboo, tung-tree, mulberry-tree, cypress, fruit, and fig trees. It is owing to these various circumstances that Szr-chwan is, considered as a whole, the most beautiful province of China."

It is very interesting to consider that this really civilized spot of earth lies from 1,200 to 2,000 miles from the sea, and has had so little communication with the Western world that its condition is entirely uninfluenced by our existence. Both foreigners resident in China, and Chinese themselves, none more so than the natives of Szr-chwan, have it greatly at heart to open the country to foreign intercourse. And this not only for the interchange of commodities, but because, if foreign steamers can accomplish the navigation of the upper Yang-tze, the worst of the horrors of the periodical famines will pass away; for the seasons in the up country and the lower valley of the Yang-tze are not alike, and the crops below would be available above in times of need. The Yang-tze is, however, very difficult, and has indeed been pronounced by some able observers to be impracticable for steamers. Baron Richthofen is more hopeful, and thinks that ingenuity and skill will conquer the difficulties. As before stated, foreign steamers now ascend to Hankow, 600 miles from Shanghai, and there a flourishing settlement of foreigners has existed for ten years. For 400 miles further the river is still easily navigable; but there, at the entrance to Szr-chwan, the rapids and gorges begin, and continue, with some intervals, to Chun-king-fu, 400 miles beyond. There are two stages of the river, the low in winter and the high in summer, the rise in some of the narrow gorges being 80 feet. The greatest difficulties and dangers are in winter, though very considerable also in summer. The whirls in the gorges are so powerful that, if a vessel is caught, she is spun round and sometimes engulfed, and sometimes dashed against the rocks. In the rapids, up which the Chinese track, there are sharp-pointed rocks, to touch on which, in the swift current, is destruction. The walls of rock through the gorges are of great height, and canals impossible, or even a track for a railroad. Baron Richthofen agrees with all other travellers in this view, and he says, if the navigation proves impracticable, and resort must ultimately be had to a railroad, the route will necessarily be, not up the line of the Yang-tze, but further to the north where some of the branches of the Han River penetrate into the mountains. He thinks a line anywhere would be difficult and costly. In the high stage of the river, the water, rising above the narrow channel which it has cut in the rock in the centre of the defiles, fills the whole width of the gorge, and then the high rocks scattered loosely over the space become the dangers, as it is impossible then to define the banks of the deep cut where alone a safe channel exists. An extract from another source gives a lively idea of the dangers of the river:

"The upward-bound boats have to be dragged by main force round projecting reefs and isolated rocks which form rapids. The trackers are often compelled to take out 200 or 300 yards of the bamboo tow-line, which is constantly chafing against sharp rocks. The line, of course, frequently snaps, and the boat, being in such case perfectly helpless, is carried away at the mercy of the current, and is fortunate if she does not encounter a rock before she is secured to the shore. The downward-bound boats simply commit themselves to the current, keeping in the middle of the stream, and having just power enough in their oars to keep clear of rocks. But the great indentations in the bank, which is for the most part a broken wall of rock, and the inequalities in width and depth of the river, cause great whirlpools in which the boat is spun round and round beyond any power of control, and in this helpless condition she is often swept through the most dangerous rapids at the rate of eight or nine miles an hour, seeming scarcely to have escaped one rock in the channel when she is almost hurled on to another. The native traders regard the passage with horror. One man, who had been engaged in business in Szr-chwan, was so alarmed when we came to a rapid, that he invariably got out and walked, though this involved several hours of arduous climbing over rocks before he could rejoin the boat. It is calculated that out of ten boats, seven only arrive safely."

Baron Richthofen well states the advantages that would follow the conquest of this river:

"A population, perhaps equal in number to that of Great Britain, surpassing that of all other provinces in China in refinement, in average wealth, and in wants; applying skill and industry, in no common degree, to the raising a quantity of valuable and very varied produce; well adapted to intercourse with foreigners; commanding the commerce of two other provinces—this population is connected with the rest of the civilized world by one inconvenient mountain road, and one large river, the Yang-tze. That river is the outlet of the produce of the country, and its feeding channel as regards the supply from without. It is the main road of travel, and the only way by which the people can hope to have calamities such as the present famine mitigated, however imperfectly. Now, by overcoming a certain number of impetuous passages on a river otherwise fairly navigable, steamers can go amidst that population, and penetrate into the heart of the country, or, at least, to regions 1,800 miles from the sea, richly supplied with cheap coal. The produce of the country would then be carried at cheap rates and comparative safety to the great markets of Central and Eastern China; the imports would increase, and foreign goods laid at the door of a population to all appearances eager to receive them; and, finally, the terrible scourge attending the failure of the crops would in future be reduced, so as to have none but a temporary effect."

The Chinese boats are wrecked in great numbers, both in the passages up and down, and the yearly loss of life is very large in crews and passengers. At every dangerous gorge and rapid there are wrecking villages, the inhabitants of which live entirely on the plunder they collect from foundered boats.

Baron Richthofen's plan of travelling through Yünnan being frustrated by the disturbed state of the country, he could only give the information he collected by hearsay of that metal-bearing province. The metal treasures of China seem to be collected there. The most valuable are copper, white copper, lead, spelter, tin, and iron. Silver and gold are found, but in moderate quantities. In a foot-note, the Baron remarks upon the very small quantity of gold found in China, and upon the fact that, where produced, it is a sure sign of extreme indigence among the population. The reason of this is that the return is so poor that only where no other industry presents itself will any laborers seek for gold. Everywhere that they are seen, the aspect of the gold-diggers in China is miserable in the extreme. From Sü-chau-fu, therefore, a large city on the Yang-tze, about 1,500 miles from the sea, Baron Richthofen descended that river by Chinese boat to Hankow, being thirty-seven days on the passage, and having occupied five months in the land journey from Peking to Sü-chau-fu. We have necessarily omitted many interesting details regarding the products of the several provinces and the habits of the people; but enough, perhaps, has been given to show both the general character of the country and its population, and the remarkable qualities of the traveller who reports upon them.

SOME NOTABLE ENGLISH BOOKS.

LONDON, April 18, 1873.

THE holiday which we are all enjoying at the present moment is by no means devoid of topics of conversation. To say nothing of political rumors, we have a variety of those little incidents in which newspaper editors have selfish motives to rejoice, though of course they deplore their occurrence. There is the wreck of the *Atlantic;* there is the reported murder of poor Sir Samuel Baker; there is the melancholy story of the barrister who stole books to save himself from starvation; there is the eternal Tichborne case, which is again cropping up; and, if we are tired of listening to stories of crime and misery, we have various reasons for discussing the merits of co-operation, of secular education, of the law of conspiracy as applied to strikes, and of a number of other subjects, such as delight the souls of social science associations. I shall, however, on the present occasion, turn from these enticing topics to dwell for a little upon two or three literary events which have an interest of their own. I will venture in the first place to call the attention of your readers to a book which is just coming out, entitled 'Liberty, Equality, and Fraternity.' The author is announced to be Mr. Fitzjames Stephen; but the book has already appeared in the form of letters addressed to the *Pall Mall Gazette*. Mr. Stephen, as it is no breach of confidence to say, is generally known to have contributed to that paper a number of the articles to which it chiefly owes its character. Although many persons, especially persons of a sentimental and enthusiastic turn of mind, are apt to complain of the said articles as cynical and brutal, and to bestow other damnatory epithets upon them, nobody who admires good, forcible English can deny their extraordinary merit as literary productions. Mr. Stephen, in fact, is probably the greatest living master of a style of writing which is characteristic of some of our best authors. Englishmen, I may say, whatever their defects in other directions, have a splendid faculty

for wielding the intellectual sledge-hammer. That vigorous common-sense of which we are apt to boast rather excessively, is yet a reality, and, in its way, a very admirable reality, in the writings of such men, for example, as Swift or Johnson or Cobbett. Mr. Stephen has a considerable affinity with authors of that class. Occasionally he is rather clumsy in expression; he indulges in few flowers of rhetoric, and he may occasionally shock the sensibilities of the connoisseurs who prefer the finer literary essences. But in terse masculine vernacular in smashing a fallacy and squelching a windbag he has no living rival. Of course, he is pugnacious and stamps on a good many toes pretty heavily. Positivists would excommunicate him forthwith; Ultramontanes curse him in the name of their faith; the gentle *Spectator* and its friends of the Broad-Church persuasion shriek at his brutalities; Mr. Mill's disciples, and especially the believers in woman, are utterly scandalized by his assaults on their pet commonplaces; and, in short, he finds few sympathizers and, indeed, few parties to whose knuckles he has not administered some not overgentle raps. But then he is perfectly capable of standing on his own legs. He can treat his enemies to the hug of a bear or a wrestler. Perhaps the writers with whom he is in the closest sympathy are Mr. Carlyle and his disciple, Mr. Froude. But then Mr. Carlyle, translated into strong, sound sense, deprived of his poetry and his peculiar dialect, is Mr. Carlyle no longer; and Mr. Froude has a vein of sentimentalism which is as alien as possible to Mr. Stephen's modes of thought. His likeness to our literary prophet consists chiefly in an uncompromising hatred of every kind of humbug and a certain mode of thought (for it is too indefinite to be called a system) which may be described as Protestantism stripped of all its dogmas.

Anybody who reads the *Pall Mall Gazette* learns very soon to recognize his style, and such persons will not require any elaborate analysis of his tendencies. The letters of which I now speak give a kind of summary of his creed, and they will, I venture to think, be worth reading by any one who takes an interest in the development of modern English speculation. For, though few people would accompany Mr. Stephen throughout, and many will be repelled by the clear assertion of the logical consequences of their own opinions, he represents very fairly a large body of more or less latent opinion. He takes for his text the doctrines of which the fullest expression is given in Mr. Mill's 'Liberty,' and he certainly shows them no quarter. It would be useless for me in this space to express any opinion as to his success in attacking theories which pass for first principles with our modern radicals. The questions involved are very wide and lead into all manner of collateral discussions. I will therefore merely say that anybody who wants to know what a staunch English reasoner, who refuses to be put off with words, has got to say against theories of the rights of women, the duty of the state to be absolutely neutral in view of all religious controversies, and so on, cannot do better than refer to these letters on 'Liberty, Equality, and Fraternity.' Probably he will be of opinion that a good many humbugs are very effectively exposed, whilst in many other cases the defenders of the ordinary principles would be driven to seek some firmer foundation than those platitudes on which they are accustomed to rest their case. I will add that, to me, the weakest part of the book seems to be the reconstructive. In dispersing all kinds of shams, the very small residuum of doctrine which Mr. Stephen regards as capable of affording satisfaction to a reasonable mind strikes one as a little too scanty for one's needs. However, I will content myself with referring your readers to a book which, if not conclusive or sufficiently comprehensive, is at least a striking protest against the theories which are apt at the present day to pass current without question. Much is due to anybody who will make one think by applying a definite and tangible test to all plausible theories without flinching; for if he does not destroy one's faith, he forces one to examine its foundations.

Various symptoms might be quoted to show that discussions of this kind are employing men's minds more than they have done for some time past. It would be hard to find a greater contrast to Mr. Stephen than Mr. Matthew Arnold, who has lately been putting forth his profession of religious faith. The passage (which all the critics quote) about the three Lord Shaftesburys is an odd instance of a lapse from good taste of a writer whose good taste is precisely his strongest point. The book is throughout a curious exemplification of the ferment which is taking place in our minds. Mr. Arnold puts into his graceful language and covers with a fine glow of religious sentiment an amount of real scepticism which would, a very few years ago, have made the hair of the orthodox stand on end. When God is blandly resolved into "a general stream of tendency," and this view is put forward as on the whole consoling to a religious mind, one begins to feel that the ancient landmarks are indeed shaken. Another book, not quite dissimilar in tone, is Mr. Greg's 'Enigmas of Life.' Both of them, if I interpret them rightly, aim at throwing a veil of religiosity over scientific conceptions, and making gentle emotion do the work of positive belief; the harsh contrasts which downright sceptics bring into violent relief are toned down as much as possible; and the attempt is made to smooth the transition from the old to the new, by treating ancient figments as tenderly as possible and sidling with averted gaze into the new attitudes of thought. There is, indeed, nothing very new or startling in the method. Rationalizers of many varieties, both in England and on the Continent, have been laboring for generations at the same task and with powers considerably greater. The only remarkable thing is that such speculators enjoy a popularity in England just now which has hitherto been scarcely conceded to them. We are moving with a rapidity which is daily becoming more sensible. Poor Mr. Maurice's speculations, which I remember to have caused infinite scandal some twenty years ago, would now be regarded as hopelessly retrograde. The dose of orthodox dogma which is necessary to sweeten rationalism for the popular palate is growing daily more homœopathic, and we are now satisfied by the thinnest of moonshine. When Mr. Gladstone has once more time to devote himself to theology instead of politics, he will find that the sentiments which so shocked him in Strauss's last book have already become commonplace; and he will have still more leeway to make up in order to bring himself into harmony with the outside world.

I will venture to mention two other books which have made or seem calculated to make a certain stir in the world, and both of which touch one important problem. A novel called 'Joshua Davidson' is a translation into terms of modern society of the career of the founder of Christianity. What would Christ have been if he had lived now? and what, therefore, was his real character? are the questions suggested by the book, though the answer does not seem to be very definite. It is in fact not much more than a smart reproduction of the revolutionary assertion that Christ was the first *sans-culotte;* and though written with a good deal of cleverness, I do not imagine that it has much value except as a proof of the popular interest taken in such speculations as those of Strauss and Renan. When novelists begin to deal with such problems, it is plain that the ideas connected with them have spread far beyond the circle of professors and writers. The other book to which I refer is a singular production called the 'Fair Haven.' Ostensibly it contains the remains of a certain John Prichard Owen, preceded by a brief memoir of his life. The memoir describes how Mr. Owen, brought up under orthodox influences, gradually lapsed into scepticism, and how his opinions then slowly underwent a process of reconstruction and became what is generally known as Broad Church. Soon after this happy consummation Mr. Owen unluckily became idiotic, and died after passing four years in that condition. His remains consist of an argument ostensibly intended to defend the reality of Christ's death and resurrection. The ordinary arguments on the subject are put forward with great care and elaboration. The intention of the author is apparently to do full justice to both sides of the question. The imaginary author—for Mr. Owen is a fictitious person—is ultimately convinced of the truth of Christianity; but the impression which is meant to be left upon the mind of the reader is that he was a fool for being so convinced. His lapse into idiocy is in fact symbolical of the true nature of his intellectual history. This, at least, is the impression made upon some intelligent readers; others may not impossibly consider the whole argument as a *bona-fide* defence of Christianity. Such a book is a literary curiosity, and it is written with an ability which should attract some attention. I have not, however, seen it noticed as yet in any critical quarter; but I mention it as possibly interesting to your readers, if only as significant of our religious tendencies at this moment.

Correspondence.

THE DEFENCE OF INSANITY.

To the Editor of the Nation:

Sir: I venture to call your attention and that of your readers to the very sound and able argument of Mr. Henry L. Clinton, delivered April 15 before the Judiciary Committee of the New York Senate, in favor of a bill in relation to the defence of insanity in criminal cases. (Pamphlet, pp. 41; Baker & Godwin, prs.) The passage of such a law would be an immense stride towards the public security.

Three things have operated strongly to prevent proper convictions by juries in capital cases:

1. The testimony of physicians such as Dr. Ray, who, looking solely (and properly enough for their profession) to the cure of diseased brains, are in danger of considering insanity and crime as identical, and to be treated accordingly.

2. The sentimentalist theory that the end of punishment is the reforma-

tion of the criminal. Both physicians and philanthropists need to be constantly reminded that the object of criminal justice is the security of society against future crime.

3. A feeling on the part of juries and the community that the act of the murderer was not morally wrong—that regarding the murdered man it merely "served him right." This is the efficient cause of such verdicts as the Sickles, the Mary Harris, the Cole, and others unfortunately numerous.

I have frequently considered whether some such a statute as the following might not be useful in preventing at least that entire failure of justice which seems now to be the inevitable result of the unwillingness of juries to take life in such cases, viz., "In all trials for murder, it shall be competent for the accused to give in evidence the seduction or rape of his wife, daughter, or sister by the person charged to have been murdered, and if such seduction or rape be established to the satisfaction of the jury, they shall render a verdict of guilty of murder in the second degree, notwithstanding the killing may have been deliberate or premeditated."

I throw out this suggestion, not without doubts whether it might not in some cases be taken as a license to kill, but still as a suggestion for a remedy of an unquestionably serious evil. Probably Mr. Clinton's act might practically accomplish all that this would. M.

PHILADELPHIA, April 28, 1873.

MINISTERIAL RESPONSIBILITY.

TO THE EDITOR OF THE NATION:

SIR: Your review of Mr. Cushing's book has not touched upon one point which seems to me not the least important. Mr. Cushing indulges in expressions of pity for the British Ministry because, during the progress of the arbitration, they were vexed and harassed by the attacks of the Opposition, and were placed in a false position through their responsibility to individual enquiry in Parliament, while on the other hand he admires the calm and undisturbed attitude of our Government. Now what, in fact, was the effect of the secrecy and irresponsibility of our Administration? That a claim which put every honorable man to the blush, and is described mildly by the term "sharp practice," was, by the joint action of the counsel and the Under-Secretary of State, put forth to the world as the deliberate act of the Government and people of the United States.

What, on the other hand, was the effect of British publicity and responsibility? The Ministry, through the negligence of Earl Granville, came very near allowing the indirect claims to be considered. It was Parliamentary enquiry, followed by the roar of public indignation, which compelled them to take a stand against the indirect claims, and it was most fortunate that this took place while it could with honesty, before the arbitration began; because if the nation had refused, as it certainly would have done, to abide by the award after it was made, it would have been disgraced, and there would have been imminent danger of war.

If, as Mr. Cushing seems to think, the Government should exist for the personal comfort of officials, it is a pity he did not flourish at the court of Louis Napoleon; but if for the benefit of the nation, his attack upon the British system is well suited to the rest of the book. G. B.

BOSTON, May 3, 1873.

Notes.

J. B. LIPPINCOTT & CO. have in press 'Comets and Meteors: their Phenomena in all Ages; their Mutual Relations; and the Theory of their Origin,' by Prof. Daniel Kirkwood, of the Indiana University; 'The Years of Youth,' poems by Horace Rowe; 'The New Theology; or, Brevities of Christian Doctrine,' by Henry B. Browning; and numerous novels. We are glad to observe that 'Macbeth,' of Mr. Furness's Variorum edition of Shakespeare, having been offered at $3, the same reduced price will now be put upon the preceding volume of 'Romeo and Juliet.' To understand how cheap this is, one must examine these elegant publications.——The third number of Mr. N. B. Dennys's *China Review* has a number of articles of general interest, the longest being the translated "Adventures of a Chinese Giant," a sort of Chinese Fanfulla; the "Symbols of the Yih-King"; "The Colony of Hongkong," from a lecture by Rev. James Legge, which supplements chronologically one delivered in Shanghai two months later by the venerable Dr. Williams, on the early days of foreigners in Canton, previous to 1840; "Chinese Medicine"; "Chinese Philology," in which Mr. Edkins runs a tilt against Dr. Eitel; "Notes on Chinese Mohammedan Literature," etc., etc. There are the usual Notes and Queries on Eastern matters, and short notices of books.——G. P. Putnam's Sons announce 'A Smaller History of England,' by Benson J. Lossing: a new Classical Atlas with text, by Leonard Schmitz, LL.D.; 'Absolute Religion,' by the late Prof. T. C. Upham; and 'Quickstar,' by the author of 'Blindpits.'

—A meeting of the American Social Science Association will be held at Boston, beginning May 13. The opening paper by Mr. Dorman B. Eaton on "Municipal Government" will carry a good deal of weight on account of the author's known large experience in the matter, as well as of his eminent ability. Mr. J. S. Ropes reads a paper on the "Resumption of Specie Payments," and Gen. Walker presents some considerations based upon the late census. There will be a paper by Col. Higginson on the "Higher Education of Women," and some statements are expected from officers of Vassar College in regard to the practical working of that institution. One of the most noteworthy papers to be offered is a "History of the International Society," by Mr. D. A. Wasson, whose long residence abroad and deep interest in the subject give him a certain fitness for the task. Interesting papers are also promised on "Laws in Relation to Pharmacy," and on "Some Physiological Facts in Relation to Crime," the latter from Dr. Jarvis. Altogether, the meeting seems likely to be of great interest, and to be fruitful of suggestions leading to practical results.

—"F." writes us, from the University of Wisconsin: "In Mr. W. J. Stillman's article of April 17, 'The Records of Primitive Civilization,' occurs the following passage: 'Remark here how singularly suggestive is the fact that *the Etruscan language has no analogy with any other known, nor can the inscriptions, though collated with everything hitherto discovered in ancient or modern language, be deciphered.*' Although older authorities, like C. O. Müller, Lepsius, Lanzi, Donaldson, Klenze, and others, advance mere theories concerning the ethnological relation of the Etruscan which might excuse the above statement, yet there were good enough reasons for believing that it belonged to the Aryan family. Prof. Ascoli of Milan, in his 'Glossology,' a comparative phonology of Sanscrit, Greek, and Latin, mentions the Etruscan as an Aryan dialect, although it had not been sufficiently investigated to afford a secure basis for comparison. Since then Prof. Ascoli's colleague, Prof. Elia Lattes, has published several treatises on Etruscan inscriptions, in which he arrives at the conclusion that the *Etruscan not only belongs to the Aryan stock, but is an Italic idiom.* Mr. Schweizer-Sidler, in a notice on Prof. Lattes's papers, informs us that Corssen has reached similar results, which will soon be published. In conclusion, I would call attention to a recent publication of Dr. Von Maack, 'Die Entzifferung des Etruskischen und deren Bedeutung für nordische Archäologie und für die Urgeschichte Europas' (Hamburg, 1873)."

—"You remark so often and so justly," writes G. E. W., jr., "on the want of thoroughness in the management of our public and private affairs, and sustain your opinion with so many instances of really good work in Europe and of halfway work in America, that I trust you will be willing to call attention to an example of well-earned success in a field where halfway work stands no chance. Mr. C. S. Sargent, Professor of Horticulture at Harvard, has now thrown open to the public his fine collection of azaleas at Brookline, and hundreds of visitors daily enjoy his generosity. Good wine needs no bush, and the fame of this exhibition spreads from mouth to mouth, so that those who live in and near Boston need no public announcement of the pleasure these plants offer them; but there are many lovers of horticulture in other parts of the country to whom it is only just to say that this collection is not only well worth a journey to Boston, but that it is the finest exhibition of azaleas the world has ever seen, the loan exhibition at Kew and the fine display at the Paris Exposition not being excepted. There are not many more than 200 plants; but every one of them would be considered an acquisition in any private collection, and most of them are incomparably fine specimens. The queen of the house is a 'Decora,' sixteen feet in circumference, its perfectly-shaped dome being about five feet high, and having more than three thousand superb blossoms. This plant is nearly thirty years old, and has always been trained with the greatest care. To a certain class of minds, its quality will be best expressed by the statement that $1,000 has been offered for it; and the average quality of the collection may be estimated from the fact that it is not at all out of place among its present companions. Professor Sargent, in connection with Mr. Hunnewell, of Wellesley, is now arranging for a show of rhododendrons, on Boston Common, late in May, which in its way will be equally remarkable."

—Mr. James Brooks, the well-known editor and politician, died in Washington on the last day of April, having not long since entered upon the sixty-third year of his age. He may be said to have begun his public life at the age of twenty-five, as in 1835 he was sent to the Legislature of Maine. His career was in one sense of the word a common one, for similar labors and successes have occurred in the experience of very many Americans

but it showed him to possess some uncommon qualities. He was of poor parentage; at eleven years of age he was a clerk in a country store; five years later he was teacher of a district school; at twenty-one he had graduated at the college in Waterville in his native State, and at twenty-five he had become an editor and a legislator, having in the meantime, if our memory does not mislead us, been the Washington correspondent of a Maine newspaper at a time when Washington correspondents were a great rarity, and when their letters did much of the work now done by the telegraph. In 1836, he came to New York and founded the *Express*, a journal now of little influence, and little known outside of this city, except to the politicians who knew its owner and to the professional journalist. It was and is, however, a valuable property. Mr. Brooks, a Whig in those days, and a highly partisan Whig, was first sent to Congress in 1849, and served two terms, after having previously served one term at Albany. In 1862, when he had become a Democrat because the Whig party had disappeared, and he was a pro-slavery politician—or was unable to go along with the Republican party—he went to Congress again, and he has been kept there pretty constantly ever since; in 1864, however, his seat was successfully contested by Mr. William E. Dodge. Unfortunately for his reputation, he sat in the Forty-second Congress. He was one of the few Congressmen who have been declared by a Congressional Committee to have been deserving of expulsion. We need not here and now dwell long upon this close to what should have been a different public life; but something it seems proper to say when we are invited to pay our "tribute of respect" to the memory of a Crédit Mobilier Congressman. Mr. Brooks has published at one time and another some records of his travels, which were extensive, but they have no place in literature.

—The name of the late Mr. John R. Thompson is familiar to the student of American literary history rather than to the reader of American literature. He was the friend of Edgar Poe, and all who have read the story of that unfortunate life know how indulgent a friend Mr. Thompson was. He was born in 1823 in Virginia, and was destined for the law, which he somewhat studied, but of which he was not fond. Like many quick-minded young men destined for that profession, he considered himself predestined for what the Virginians of forty years ago, in common with some of the rest of us, no doubt described as the Muses. Literary labor, or perhaps we ought to say the pleasures of the pursuit of literature not too laborious or severe, engaged his affections, and the law he very speedily left. In 1845, at the age of twenty-two, he began to be the editor of the *Southern Literary Messenger*, a magazine then ten years old. While conducting this miscellany, Mr. Thompson became pleasantly known to most of our writers of that day, and also to some of their English contemporaries, and these pleasant relation she would seem to have the more easily maintained by reason of his sunny, friendly, and unselfish disposition and character. Many different descriptions of him agree in their high praise of his good-heartedness and his courtesy, and if these praises appear too unrestrained and without measure, why, it is much to have called out enthusiastic and ill-measured praise and affection. What heightens the picture thus drawn is the fact that for a long time Mr. Thompson was the victim of ill health, which might well have diminished his unselfishness and kindness; for some years he has been looking in the face of an inevitable death, consumption having seized upon him. For the few years just passed since the close of the war, Mr. Thompson has been on the editorial staff of the *Evening Post*. During the war he was in England, and it is right to say that while there he was connected with the notorious *Index*. That was a paper extremely hostile to the Federal Government, and very ardent in its support of the Confederates. Mr. Thompson fully believed in the virtue and the fortune of the Southern cause, and his pen obeyed his conscience and his intellect; as these, with such enlightenment as was vouchsafed them, directed him, he shaped his course. This is a matter about which it is fortunately not necessary to say too much now. Of Mr. Thompson's literary productions, there is none that calls for much consideration; they all answered sufficiently well the purpose of the moment, and none of them was fated, probably none was designed, to last. He, however, translated exceptionally well some few French poems, and this is more than can usually be said of writers of his grade and his nativity.

—Mr. Forster's 'Life of Dickens' for a moment recalled to the attention of this generation the fact that his friend Macready was still among the living; for another moment, the death of Edwin Forrest, whose name will in this country at least be connected with Macready's as long as the name of either is remembered, brought back to recollection the most tragical event in modern theatrical history. Now we have news that Macready's long life has ended. He was born so long ago as 1793, and was by birth a native of "the nation of London," the "most kindly nurse," as one of the greatest of Londoners has called it, of a noble roll of renowned men. His father, a manager by profession, was also the lessee of several theatres. By one and another of these he made a certain amount of money, and as he, like many other managers and actors, regarded the actor's profession, considered as a career, with but little favor, he determined on fitting his son for better things by giving him a good education. The boy was sent to Eton and thence was on the point of proceeding to Oxford, but the revenues of the actor and manager are proverbially insecure, and his father's affairs became so very much embarrassed when Macready was about seventeen years old, that instead of going to the university the boy had to betake himself to the stage. He had however profited by his Etonian instruction, which laid the foundation of that reputation as a scholarly gentleman which he afterwards bore and which was so constantly referred to by his titled and literary friends. His successes at first in provincial theatres, and afterwards in London and in Paris, belong to the brilliant annals of the stage. That the Parisians liked him still better than the Londoners is asserted, and perhaps may serve to explain why we on this side of the water were rather inclined to think him artificial, cold, and dull. That seems to have been the general opinion about his acting, though the fact that he made three professional visits to this country indicates that people paid to see him and hear him, whether or not he could have ever become a general favorite. We may cautiously suspect, however, that in 1826, or later in 1843, or even still later in 1849, a quarter of a century ago, we were, on the whole, not so good dramatic critics as the Parisians of the same date. It is certain that a great many of our deceased fathers and uncles and aunts thought that Mr. Macready could not compare with the late Mr. Forrest, who was then young, and strong, and healthy, and who did, we must admit, occasionally flash out something that was very like a hot flame of genius. Mr. Forrest, whose violence and rant had on one occasion provoked some hisses from an English audience, was very much indeed of this opinion; and as he had the self-conceit and arrogance of a demon, he chose to believe these signs of disapproval to have been instigated by Macready's professional jealousy. How this notion resulted in the bloody death of twenty-two people, and the wounding of thirty others, is known to everybody, and many New Yorkers now living well recollect the Astor Place riot. Forrest and his Bowery friends probably suffered far less of the consequences of his crime than fell to the lot of innocent bystanders. The affair afforded ample illustration of a fact which may profitably be pondered by every New Yorker who remembers the 12th of July, 1871—namely, that when we do bring out our militiamen to deal with a mob, we are apt to deal with it in an excessively costly manner. But probably an outrage such as that perpetrated at Astor Place would now be dealt with by a body of policemen, as indeed the Orange riot probably might have been. Mr. Macready retired from the stage in 1871. He had of late years become a devout Methodist, and occupied himself much with schemes for the education of the poor.

—No English work of extraordinary merit has made its appearance during the past three months. From the lists of books published and books announced during that period, we select what seem to us the most noteworthy, excluding those already mentioned in these columns. Mr. Darwin is an author whom, as commanding universal attention, it is always proper to begin with. While his latest work on the 'Expression of the Emotions in Man and Animals' has not yet been laid on the shelf by the critics, he is preparing another: 'The Evil Effects of Interbreeding in the Vegetable Kingdom.' Another announcement has perhaps more interest for Americans as such: Mr. Motley's 'Life and Death of John of Barneveldt, including the History of the Primary Causes and Movements of the Thirty Years' War.' De Tocqueville's 'State of Society in France before the Revolution of 1789,' translated by H. J. Reeve; and Voltaire's 'Charles XII.,' with notes by Gustave Masson, are welcome borrowings in the field of history. Biography is represented by the fifth volume of the Duke of Wellington's 'Civil and Political Correspondence'; a further selection from the entertaining 'Diaries and Letters of Sir George Jackson (1809–1816)'; 'Life and Correspondence of Sir John Burgoyne,' by his son-in-law; 'List of Roman Catholics in the County of York, 1704'; and a 'Biographical Sketch of Sir Anthony Panizzi, late Principal Librarian of the British Museum,' by Robert Cowan. Geographical works and books of travel abound: 'Rio Grande do Sul and its German Colonies,' by M. G. Mulhall; 'Notes of Travel in New Zealand and Australia,' by Anthony Trollope; 'British Guiana, the Essequibo and Potaro Rivers,' with a map, by Lieut.-Col. Webber; 'Wild Wales: its People, Language, and Scenery,' by G. Borrow; 'A Book about Bristol,' by J. Taylor; a 'History of Plymouth,' by Llewellyn Jewett; 'Ireland in 1872,' by Dr. J. Macaulay; 'Through Spain by Rail in 1872,' by Alfred Elwes; 'Berlin of To-day,' by Henry and Edward Vizetelly; 'Harz Mountains: a Tour in the Toy District,' by Henry Blackburn; Tozer's 'Lectures on the Geography of Greece'; 'Egypt as It Is,' with a map, by Herr H.

Stephen; 'Lahore to Yarkand: Route of the Expedition of 1870,' by G. Henderson and Allan O. Hume; and 'England and Russia in the East,' by Sir Henry Rawlinson.

—Earl Russell's 'Essays on the Rise and Progress of the Christian Religion in the West of Europe, from the Reign of Tiberius to the End of the Council of Trent,' may lead off our theological list, which embraces also: 'Lectures on the Pentateuch and the Moabite Stone,' by Bishop Colenso; 'A Work Illustrative and Explanatory of the Various Books of the Bible,' edited by Rev. Prof. Plumptre; Matthew Arnold's 'Literature and Dogma'; W. R. Greg's 'Enigmas of Life'; 'The Asiatic in England: Sketches of Sixteen Years' Work among the Orientals in London,' by Joseph Salter; and Dr. Wm. Smith's 'Dictionary of Christian Antiquities and Biography' and 'Student's Manual of Ecclesiastical History.' In political and social science we are promised: 'Results of the English Census of 1871,' compiled and edited by James Lewis; 'Our Judicial System, as compared with those of other Nations,' by W. F. Finlason; 'Comparative Politics,' by Edward A. Freeman; and 'Lombard Street: a Description of the Money Market,' by Walter Bagehot. 'The Intellectual Life,' by P. G. Hamerton; 'Russian Folk Tales,' by W. R. S. Ralston; and 'Two Centuries of Ceramic Art in Bristol,' by Richard Champion, conclude our present summary.

LANFREY'S NAPOLEON I.*

THE second volume of M. Lanfrey's work appears, in all material points, fully to sustain the opinions expressed in our review of the first volume. The history of Napoleon is brought down to the Decree of Berlin in 1806. The Emperor's star has almost reached the zenith. We follow its astounding rise, wondering and pensive, but without being dazzled even for a single moment. If we had never heard the tale of the conflagration of Moscow, of the winter of 1812, of Leipzig, and of the "hundred days," M. Lanfrey's narrative would still not allow us to doubt for one instant that this sunward flight of the "meteor" is, from the beginning, nothing but the hurrying on to a terrible fall. The justice and the morality, or, in one still shorter word, the logic of history speaks out of every page with such a force and clearness that a child cannot fail to understand it. The historical facts, told with a simplicity and chastity quite remarkable in a Frenchman, enforce the moral unaided by any extra efforts of the author's moralizing faculties. Yet there is no lack of warmth. Every page strongly bears the impress of M. Lanfrey's individuality. With unimpeachable honesty he tries to write *history*, but not as the passionless muse of history would write it; it is M. Lanfrey, the man of stern political morality, and with a positive political creed, the sworn enemy of Cæsarism—nay, it is M. Lanfrey, the Frenchman, out of whose innermost heart every line is written. Everything is called by its right name, and that enables him to understand the legitimate bearing of everything. So he speaks (p. 572) of the *murder* of Palm, and goes on to say:

"The murder of this innocent man caused a shudder among all the German population. Shooting might have been an efficacious means in the half-savage provinces of Naples; but in the heart of civilized Europe, and in the midst of a people that had not yet been fashioned to servitude, the effect produced was far less that of fear than of anger and indignation."

He does not doubt that Napoleon would have eventually made true the threat addressed to Mack, that he would deal with the Austrians in Ulm as he had done with the garrison of Jaffa, and that the army would have executed the order if it had been given. But he makes the confession with a bleeding heart, for it is not only *Napoleon*, the *French* army, etc., he speaks of: it is always *we*, *our* army. We cannot, therefore, but sympathize with him as a man when he tries whether he could not possibly wipe off some of the shame clinging to the military laurels of this *our* army, although we must deny to him as an historian that the following description is a true picture of the army of 1805: "They were soldiers, but they were soldiers who remembered that they had been citizens; they were the tools of his despotism, but they had been formed by liberty; they were, in spite of everything, sons of the Revolution. Napoleon was less their master than their favorite. He was their work. He was not in their eyes a sovereign, but a sort of military tribune" (p. 466). The revolutionary recollections had at this time faded away into an imperceptible shadow. The army was drunk with Cæsarism—and worse than this. M. Lanfrey must himself confess: "They required not only honors but riches, great undertakings to occupy their activity, and nations to spoil to satisfy their covetousness."

It still, however, remains true that this unconscious desire to save a little more out of the general brilliant ruin than there really is to be saved, never degenerates into injustice towards the enemies of Napoleon. Occasionally M. Lanfrey even goes a little too far on the other side. Thus, for instance, he gives quite a romantic coloring to the death of Prince Louis Ferdinand in the battle of Saalfeld. On p. 586, he says: "He [the prince] made several charges at the head of his cavalry, and for an instant succeeded in renewing the combat. In one of these charges, carried into the thick of the fight, he was perceived engaged hand in hand with our horsemen, struggling to the last like a man who had resolved not to survive defeat, and refusing to surrender after having seen all his companions fall around him. A hussar, to whose summons he replied by a thrust with his sword, ran his sabre through his body." The sober, historical fact is that the prince was carried along by the general rout. But for a mere accident, he would have saved himself. Quartermaster Guindet, of the Tenth Regiment of Hussars, overtook him in the pursuit, one foot of his horse being caught in clearing a fence. This mistake is, no doubt, attributable to the author's want of knowledge of German authorities and sources—by far the greatest deficiency in the work, as we have already pointed out in the review of the first volume. It is certainly not of great importance whether the Austrians "passed the Inn on the 17th of September" (p. 465) or on the 8th (at Schärding), as the fact is; but it is annoying to meet with even such mistakes in a generally reliable and really praiseworthy book. Of very great importance is it, however, that several of the principal scenes in the great Napoleonic tragedy are too exclusively presented from but one point of view. Viewed from the front, so to speak—*i. e.*, from the French side—everything is perfectly clear, while a comparatively dim twilight reigns on the opposite side. The picture being taken as a whole, light and shadow are therefore not quite correctly distributed. The general impression we receive is partly erroneous, not so much on account of misstatements as because many things are omitted which ought to have been stated.

Let us take the catastrophe at Ulm as an instance. All M. Lanfrey has to tell us of Mack is that he was "a general already celebrated by his ill luck" (p. 455). Napoleon knew more of him, and upon this knowledge this boldest of all his campaigns was partly based. He knew him to be a genuine offspring of the whole rotten Austrian system, a great general at the "green table," every hour ready with a dozen new "plans," every one of them almost too sublime for such a military genius as Napoleon himself, but an unsurpassable bungler on a mere corporal's errand, and never in his life guilty of the slightest conception of the political situation. It was not only the great captain, but quite as much the keen-sighted psychologist, who planned the wonderful campaign of 1805; it was not only the incompetent general, but quite as much the naturally narrow-headed *man*, "dead drunk with self-admiration," who brought down this crushing disaster on the tottering power of Austria. Furthermore, leaving that quite aside, it was not only Mack, nay, not even principally Mack, upon whom the responsibility rested. It is not enough to say that the Austrians had but 70,000 to 80,000 men in Bavaria, and that, therefore, Napoleon was certain to annihilate them with his superior army of over 200,000 men, provided Mack was foolish enough to await him. We must know that, to gratify the animosities of the Vienna "Council of War," the Archduke Charles, the best Austrian general, was sent to Italy, where the decision of the campaign could not possibly fall; that the Austrians could have crossed the Inn several weeks earlier, and thereby forced Bavaria into an alliance; that Russia hurried to the rescue with tortoise speed, because she would persist in her distrustful squinting towards Prussia; that Russia as well as Austria had tremendous armies on paper, with which they threw sand in each other's eyes, manœuvring with the dead figures as if they were actual men of flesh and blood—in short, we must see the working of the whole system in order to understand that the campaign of 1805, like all the victorious campaigns of Napoleon, is not only the wonderful exploit of a towering military genius, but the legitimate result of the long-continued and general rotting of the old monarchies. Although the author has failed to show all that, yet there is a heavier burden resting on Mack's shoulders than M. Lanfrey has put on them. He says (on p. 469), speaking of the 8th of October: "This little struggle [at Wertingen] was the first affair of the campaign, and it was only by those who returned from it that Mack and the Archduke Ferdinand . . . *at length learned their true position.*" And on p. 471: "They had been forced, in fact, at length to open their eyes before the overwhelming evidence of a peril which the last soldier could understand as clearly as the chiefs of the army." Now, in spite of the really "overwhelming evidence," Mack's eyes were, at this time, so far from being opened to his "true position," that he still maintained on the 15th of October—*i. e.*, a week later and the very day the French took possession of the heights around the city—that "the army of the enemy is in the most terrible situation; it is impossible that it can hold itself more than a few days in the country."

All these deficiencies—and a great many more of a similar character might be pointed out—do not, however, essentially impair the value of the work,

* 'The History of Napoleon the First. By P. Lanfrey.' Vol. II. London and New York: Macmillan & Co. Pp. 604.

which, in our judgment, is principally of a moral and political character. Our historical knowledge has not been materially increased by it; but a true history of Napoleon I., written by a German or an English scholar, could never have found its way to the firesides of the French people. The "Napoleonic Legend" invented by M. Thiers could, so far as the French are concerned, be crushed only by a Frenchman. This M. Lanfrey is doing, and the sincere thanks of every true friend of political morality, genuine civilization, progress, and liberty are due to him.

THE MAGAZINES FOR MAY.

MR. ADAMS'S eulogizing of Mr. Seward, and his refraining from eulogy of Mr. Lincoln, have very recently caused many people to consider once more the relative services of the various distinguished civilians brought into prominence by the war, and the whole subject has become freshly interesting. Mr. Gideon Welles's article in the *Galaxy* will, then, attract many readers, and anybody who goes through it will find his expenditure of time and patience measurably repaid. We cannot say that it appears to be a very important contribution to history. Mr. Welles's object—not clearly avowed, however—seems to be to show that when Captain Wilkes seized Mason and Slidell, but allowed the *Trent* to proceed on her voyage, and thus put his own Government technically in the wrong, the Navy Department did not fully share in the general joy and gratulation, but on the contrary had some prevision of the trouble in store for us. The article rehearses a paragraph from the report of the Secretary of the Navy (Mr. Welles) for 1861, which indeed does not rejoice with a perfect joy over the *San Jacinto's* exploit, for it deprecates Captain Wilkes's "too generous forbearance in not capturing the vessel which had these rebel enemies on board," and asserts that "it must by no means be permitted to constitute a precedent hereafter." But there is nothing at all about the dubious legality of the arrest. A letter to Captain Wilkes Mr. Welles also cites, but this is of the same force, and in precisely the same sense, as the language of the report: "It is not necessary," the Secretary writes to Wilkes, whom at this moment the Bostonians were feasting, without giving much regard to the international aspects of his action—"it is not necessary that I should in this communication—which is intended to be one of congratulation to yourself, officers, and crew—express an opinion on the course pursued in omitting to capture the vessel which had these public enemies on board, further than to say that the forbearance exercised in this instance must not be permitted to constitute a precedent," etc., etc., etc. Here, again, we have no intimation whatever that to the "two elephants on our hands," as Mr. Lincoln called the rebel commissioners as soon as he heard of their capture, our title was fatally defective. Mr. Welles remarks, as if in justification of his letter to Wilkes, that a long interval of peace and of the rigid observance of neutral rights had made our officers extremely reluctant to treat neutrals with the harshness necessary in time of war, and that "it was felt to be impolitic to reflect upon the audacity of Wilkes" (though too audacious he might have been) while other commanders needed stimulating. Furthermore, the Navy Department was unwilling to chill the zeal of the people, who were extremely indignant with England, and to wound the feelings of a gallant officer who had displayed decision and intelligence. The congratulatory letter was therefore written. That it would have been written all the same had the Navy Department clearly known at the moment the law of the case, we are left to infer; but how safe an inference this would be we shall not undertake to surmise. We may readily concede that, in the early days of the war, Secretaries of the Navy and other officials "called, as most of them were, from private life," as Mr. Welles in another place reminds us, should have made many mistakes of ignorance and bad judgment. As regards the case of the *Trent*, Mr. Lincoln's Cabinet, if judged by Mr. Welles's statements, would appear to have been a little out in its law at first, and to have greatly underestimated the insolence and ill-will of the Palmerstonian Ministry. We can all recollect how troops and ammunition of war were immediately ordered to Canada; how the British squadrons in our waters were reinforced, and how a royal proclamation forbade the selling of arms and the shipment of saltpetre and other war supplies. And we can all agree with Mr. Adams that Mr. Seward's skilful and adroit note, diplomatically soothing the national pride by its assertion of the triumph of American principles in the rendition of the two emissaries, was a most useful and important achievement. It need not blind us to the fact that Mr. Lincoln was by no means the unknown and unrespected man that Mr. Adams's recent address might permit some of its readers to imagine; but certain it is—if Mr. Adams's knowledge of the facts be not at fault—that to Mr. Seward's great self-control, ability, tact, and readiness we owe a vast debt. We perhaps may well doubt if the country would have parted so far with its native good sense as to have entered on a war with England while the rebellion was still unsubdued; it would be unbecoming in an American to doubt that had such a war been entered upon we should in the end have had our way; but Mr. Seward's solution of the difficulty was infinitely the best, and saved an enormous deal of bad blood. We had been in the wrong, and he put us in the right; we had been tied up, as it were, and there seemed for us only a choice between a slap in the face and a knock on the head, and he adroitly put us in the position of a magnanimous belligerent, whose courtesy had been to his own detriment, but who would put up with the injury because he had long pleaded for a principle the adoption of which would make such injuries impossible. Reflecting on the quality and the magnitude of this diplomatic triumph and recalling the darkness of those days, we shall the more thoroughly understand the admiration with which it is regarded by a man like Mr. Adams—an expert in difficult negotiations and all the arduous transactions of state.

We may properly advertise the magazine reader that Mr. Welles gives marked attention to the lives and characters of Mr. Mason and Mr. Slidell, and that his study of those statesmen has some raciness. We forget whether we have before called attention to a certain comparison relating to Mr. Welles's writing, but we fear the loss of it more than the repetition: all of a sudden he broke a long silence, and began discussing sundry topics in which he and some enemies of his were interested, but about which the enemies had been having all the talk to themselves; it was thereupon remarked of him that he was a good deal like a log on which a Florida gentleman sat down one afternoon, and on which he reposed with complacency for some time, but from which he arose with precipitancy when he discovered that he was sitting on an alligator, and that it was getting ready to move. Mr. Welles is abundantly able to try conclusions with his adversaries, whoever they may be, and they may guard their own heads. As to how he strikes, the following passage may show. Apparently, he regards the "sacredness of the tomb" as very much dependent on the person who is in it. He is speaking of the bad end to which both Mason and Slidell finally came. Both, he says, "found themselves homeless and aliens" at the close of the rebellion, during the progress of which they had been disregarded suppliants at foreign courts. "Mason had a vagabond residence of two or three years in Canada," and afterwards "returning quietly and humbly to Virginia a broken-down old man, and finding his once pleasant home in the Valley of the Shenandoah desolated by war, he retired to the vicinity of Alexandria, where he died an obscure and miserable death in April, 1871." As for Slidell, he applied to President Johnson for pardon and a safe-conduct, and being answered that he could have no special privileges, "he therefore spent the rest of his days in exile, *passing the remnant of a vicious and intriguing career in reading French fictions*, and finally died in London in July, 1871, three months after his associate Mason had been entombed." Should this sort of summing-up of the careers of these two seem to any to be unduly harsh, it will be just to Mr. Welles to recollect that he was the humiliated and indignant spectator of their insufferable and contemptuous arrogance in the time of their prosperity, when the one of them felt, and the other affected to feel, or did really feel, that the Connecticut man and the Massachusetts man and the Illinois man were slaves and cowards,

> "As purchasable as the common stews,"

and when, as the Irish say, they made no bones of letting their opinions be known, in language as offensive as they could discover or invent. Those are old days now; but they are *the* days of some hearts, and by such can never be forgotten, well as it may be that in time they should fade out of the national memory.

Another historical article in the April *Galaxy* is by Mr. John Bigelow. "Our First Centennial, and How it was Celebrated," is the title of the paper, and it recounts how, on the day of our National Thanksgiving, last year, Mr. Cyrus Field gave a dinner in London, at which was present Mr. Gladstone, who made a speech. In the course of his remarks he said that England in waging against us the Revolutionary War was "in error—struggling against nature—struggling, I may venture to say, against Providence." Mr. Bigelow reminds us that one hundred years before—one hundred years almost to a day—Dr. Franklin, then residing in London as agent for the Colonies, came into possession of the celebrated "Hutchinson Letters," the publication of which did so much to enrage the colonists and to hasten the day of separation from the mother country. When the assertion in these letters that if a few more royal soldiers were sent over the patriots would keep themselves quiet, had called out the petition of the Massachusetts House of Assembly, asking the recall of Governor Hutchinson and Lieutenant-Governor Oliver, Franklin was commanded to appear before the Privy Council, and there he was shamefully baited by the Solicitor-General, the notorious Wedderburn. It is the

proceedings before the Council at this session that Mr. Bigelow compares and contrasts with the proceedings at Mr. Field's dinner—the celebration of our true centennial, for it was so early as 1772, says Mr. Bigelow, quoting for true the words of Mr. Parton, that "England had already lost her colonies, though no one suspected it." No one might have suspected it for many years more, we may add, since this kind of generalization is in fashion, had the English Ministry had any sense. Mr. Bigelow concludes his historical reviews and reflections by advising the United States that it will be "as well for her not to make honey of herself if she does not wish the flies to eat her, or, as the Haytiens say, 'make-believe die if she does not wish to be buried,'" and to remember that the same Mr. Gladstone who is now so sweet upon her is the same person who not very long ago asserted that "Jefferson Davis had created a nation."

Mr. Thurlow Weed has something to say on the Junius Controversy; Mr. Justin McCarthy, who is fond of M. Gambetta, asseverates that the French Assembly is "an embodied conspiracy," "a huge gang of plotters against the freedom of France"; Mr. L. Clarke Davis talks about "Actors Old and New"; "A Thorn in His Side" is a cleverish little story of mystification, by Mr. Edgar Fawcett; there are some "Casual Cogitations" by "Carl Benson," and much other matter. We commend Mr. Davis's gossip about the actors to the admirers of Miss Neilson. It is rapturous about this lady's beauty, justly and discriminatively severe upon her *Juliet*, rhapsodical abouther *Rosalind*, and generally a mixture of what seems to us highly extravagant praise with a dash of censure here and there as welcome as unusual.

Whoever would learn something about the fanatical painter Wiertz may find in the April *Harper's* a brief account of him, fanatically laudatory; and the same magazine has an excellent article which will be of use to intending visitors at the Exhibition in Vienna, and which is very good reading for anybody. Both are illustrated. "The Present and Future of Japan" is another readable article, and the most intelligible account of the singular changes going on in that country that we have anywhere seen in the same compass.

Scribner's Monthly has an estimate of Landor by Mr. E. C. Stedman, who does magazine justice to his great subject, whom he appears to understand well and admire much. Something about Gavarni is by Mr. Albert Rhodes, who cannot be praised for having done justice to his very good subject; indeed, he may be said to have done little more than taken the gloss off it, and it begins to be time to say thus much of this industrious writer, who would write no worse if he expended more pains and thought on a number of subjects considerably less. Burton, Speke, Grant, and Sir Samuel Baker are treated of in a rather slight illustrated paper, entitled "Four Great African Travellers," which is written by Mr. Henry M. Stanley. "Susan Coolidge" gives some practical advice to persons who meditate a trip to California. Go, she says, by all means; and visit the Yo Semite whether you are afraid of that part of the trip or not, for you will be thankful ever after that you did not miss the miraculous valley; take seven hundred dollars if you intend to be away two months; take a lunch-basket with some small trifles in it, for though the railway meals are wonderfully good (all things considered), yet they are but little diversified; by all means secure a place in a Pullman car; wear old and easy boots; take two linen dusters; if you are a lady, tie your head up in a veil, for the dust is something fearful, and in two days one comes to hate one's self by reason of the all-penetrating dirt. So the writer goes on, giving very specific counsel.

The various departments at the end of the magazine are filled very full, and the body of the magazine contains several stories and sketches that will be found acceptable, the one most valuable perhaps being the sketch of the progress of the Cuban insurrection.

Folks who begin to long to "go" on pilgrimages should or should not read the May *Lippincott's*, according as the partial or churlish fates have granted or ordained the power of indulging the wishes of the heart. A capital description of fly-fishing for salmon in the chill pellucid waters of a far northern tributary of the Saguenay will make the reader think with grief and woe of the fervors of Chestnut Street and Broadway, and the odors, unlike those of hemlock boughs and hackmatack, which haunt the July gutters in Philadelphia and New York. Very taking, too, and enticing to the free foot, is the scenery of Mr. Black's Thule, framing the figure of its princess; and not less delightful is the picture which Miss Margaret Howitt so pleasantly draws of the house in which she spent a summer in the Tyrol. We say nothing of the poetry in this number of the Philadelphia magazine, though we have seen worse as well as better, but of the prose articles there is none that is not worth reading. A list of them includes a third chapter of "The Roumi in Kabylia"; an account of the proposed Zoölogical Garden in Fairmount Park, which will be a very fine affair indeed, and to which we hope the attention of our own Park Commissioners is directed; an examination into the private fortune of Queen Victoria; two chapters of Mrs. Harding Davis's "Berrytown"; another paper on Wilmington and its Industries, which makes us acquainted with a really most interesting old-fashioned town; a good little love-story, with well-devised properties and scenery; and a sketch of American cricketing which American cricketers will enjoy.

Lars: A Pastoral of Norway. By Bayard Taylor. (Boston: James R. Osgood & Co. 1873.)—On several occasions Mr. Taylor has made manifest his affection for the Society of Friends and his high estimate of the value of their peculiar tenets, and still more of the value of their peculiar practice of these tenets in conducing to righteousness of life and holiness and peacefulness of spirit. His latest poem is another proof of this high estimate of his, and perhaps the best exemplification of it that he has given. Appropriately, then, this being so, he has dedicated this work to Mr. Whittier, now his friend, as formerly his encouraging adviser and his instructor in the Inner Light:

> "However Life the stream may stain,
> From thy pure fountain drank my youth
> The simple creed, the faith humane
> In Good, that never can be slain,
> The prayer for inward Light, the search for outward Truth."

The story of the 'Pastoral of Norway' is that of a very Norse and Berserker "pastoral" indeed. Lars, a herdsman, woodman, and hunter, and Per, a sailor and fisherman, are in love with the same maiden, Brita, who can hardly tell which one of the two handsome youths she likes the better, even if she likes either. We are introduced to her, the centre of a pretty picture, on a Sunday morning, when she is represented as chafing a little under the raillery of her young companions, and resenting the notion that soon she must choose between Per and Lars. Her feeling is partly coyness, and partly an uncertainty as to what her choice would be in case maidenly modesty allowed her to choose at all, and it is a more natural feeling, we should suppose, while her young companions are teasing her, than after both her suitors have separately and unmistakably offered themselves for her acceptance. However, these are deep matters. After church, Per demands the privilege of taking her home to Ulvik across the ford in his boat, Lars at the same time desiring to be her escort by land over the mountain road. Per, readier of speech, secures the prize; but, not to commit herself too far, Brita adroitly makes his invitation include all the other girls and young men of the party, and Per is obliged to be content with thus much of her company. This preliminary part of her dubiety Mr. Taylor manages with grace and cleverness. However, the same semi-coquettishness or uncertainty Brita shows a week or so later at the wedding-feast of Anders and Ragnil; and, as each of her lovers claims from her an amount of dancing incompatible with the gratification of the other, and each utters some hot-headed threats, there is evidently bloodshed in store:

> "The folk of Ulvik knew, from many a tale
> Of feud and fight, from still transmitted hates
> And old Berserker madness in their blood,
> What issue hung."

When they next meet, months afterward, at the dance which follows the great wrestling match at the close of harvest-tide, both the young men are exacting and wrathful, and as Brita still thinks she does not know her own mind, the question is fought out after the following fashion:

> "'No need!' said Lars. 'I choose for you,' said Per.
> Then both drew off and threw aside their coats,
> Their broidered waistcoats, and the silken scarves
> About their necks; but Per growled 'All!' and made
> His body bare to where the leathern belt
> Is clasped between the breast-bone and the hip.
> Lars did the same; then, setting tight the belts,
> Both turned a little: the low daylight clad
> Their forms with awful fairness, beauty now
> Of life, so warm and ripe and glorious, yet
> So near the beauty terrible of Death.
> All saw the mutual sign, and understood:
> And two stepped forth, two men with grizzled hair
> And earnest faces, grasped the hooks of steel
> In either's belt, and drew them breast to breast,
> And in the belts made fast each other's hooks.
> An utter stillness on the people fell
> While this was done: each face was stern and strange,
> And Brita, powerless to turn her eyes,
> Heard herself cry, and started: 'Per, O Per!'
>
> "When those two backward stepped, all saw the flash
> Of knives, the lift of arms, the instant clench
> Of hands that held and hands that strove to strike:
> All heard the sound of quick and hard-drawn breath,
> And naught beside; but sudden red appeared,
> Splashed on the white of shoulders and of arms.
> Then, thighs intwined, and all the body's force
> Called to the mixed resistance and assault,

They reeled and swayed, let go the guarding clutch,
And struck out madly. Per drew back, and aimed
A deadly blow, but Lars embraced him close,
Reached o'er his shoulder, and from underneath
Thrust upward, while upon his ribs the knife,
Glancing, transfixed the arm. A gasp was heard:
The struggling limbs relaxed; and both, still bound
Together, fell upon the bloody floor."

Brita, it will be observed, discovered, just as it was too late, that it was the man destined to be killed whom she really liked; Lars, then, has little to do but take himself out of the country, and this he does. He crosses the Atlantic as his mother's grandsire, Lief, the trooper, had done long before him,

"To those new lands the great Gustavus claimed,"

and wanders on through Delaware into Pennsylvania, neither knowing much nor caring much whither he goes, until one day at sunset he asks for a night's lodging at the house of a certain Quaker farmer, Ezra Mendenhall. To the Quaker's daughter, the gracious and saintly Ruth, whose favor he had won by speaking kindly to the cows as they came home, Lars is in good part indebted for an invitation to abide with the farmer for a time and work for him; this he does for months, feeling deeply the peace of the place, and being half unconsciously in love with Ruth, who, by the way, teaches him English, and is rather more than half consciously in love with him.

We may pass lightly over the episode of the bad young Friend, Abner by name, who had designed Ruth for himself, and who malignly harasses Lars, till Lars one day rises upon him, and would have slain him had Abner not fled; his pursuer accidentally knocking down Friend Ezra, who happens to be in the way, and who is much aghast at this revelation of the man of blood still resident in his quiet hireling. It is an episode which answers well enough its purpose of paving the way for Lars's full confession of his Norwegian crime. Confession leads to contrition and subsequent piety, and in due course Lars becomes Friend Thurston and the husband of Ruth.

By-and-by he feels it borne in upon him that he must return home and preach peace to his wild kinsmen and countrymen, and this he does; one of the most striking scenes of the poem being that in which Lars is challenged to the combat by Per's brother, and, although stripped and grappled to him with the belt-hooks as before he was grappled to Per, disarms him by his looks and words of brotherly love.

The poem is pleasing, with several pretty pictures, much good teaching and good feeling, and some characters in whose reality the reader will be glad to believe. Brita is perhaps the most poetically interesting figure, and the one for which the poem is best worth having. Her grandmother, too, is gracefully brought in, and the management of the brooch, if somewhat violent and needless at the last, is not more so than that of plenty of other "virtuous rings" and brooches which have been used in works of the imagination, while, at first, it is significant and of imaginative value. But, as we say, the poem is all agreeable reading, though none of it is especially fascinating, and though there may be a general suspicion of drabness—in several of the various literary forms of that non-poetical quality—some time before Lars endues himself with the sober-colored garments.

Memoir of Samuel Joseph May. (Boston: Roberts Bros. 1873.)—All biographies are good for suggestion, some few for example; this one is eminently of the latter class. No one can read it without paying homage to the rare spiritual nature of the subject of it, the late lamented Rev. S. J. May, of Syracuse. Theological or political differences will not stand in the way of this recognition of a spirit so genial, so tender, so full of loving-kindness, so true, so steadfast, so courageous. In reviewing his character from any point of view, one can hardly forbear conceding to him his own admission to Mr. Garrison after hearing him for the first time on the subject of slavery: "I am not sure that I can endorse all you have said this evening. Much of it requires careful consideration. But I am prepared to embrace *you*." The present volume consists of Mr. May's autobiography down to the year 1829; of supplementary extracts from his 'Recollections of Our Anti-slavery Conflict' and from his diary and correspondence; and of reminiscences concerning him contributed by a number of his intimate friends. Mr. May's life-work falls naturally under three heads: the pulpit, the school-room, and the organized movement for the abolition of slavery. He was, it is well known, a Unitarian clergyman, a disciple of Channing, with all of Channing's "sweetness and light" and with much more than Channing's independence and breadth of view, even if his inferior in native intellect. His ministrations began in Brooklyn, Connecticut, nearly fifty years ago, when he was the only Unitarian minister in all the State; they were afterwards transferred to South Scituate, Mass., and finally to Syracuse, N. Y., where at the age of seventy he deliberately retired from the pulpit, having arbitrarily fixed the term of his usefulness as a preacher. In this and in his pastoral capacity, it is sufficient to say of him that he had few superiors, winning the affection of his congregation and the gratitude not only of his parishioners but of every community in which he lived. His liberality was truly catholic. He admitted ministers of all denominations to his pulpit, and he could when required so far disregard forms as to admit "a good man and his wife to the church at the same time, by immersing him in the river and by sprinkling her on the bank." His practical sense, it ought to be remarked, was proof against the temptations of the pulpit to indulge in merely rhetorical and abstract denunciations of vice. Of this there is very good evidence in his method of dealing with intemperance in Brooklyn (pp. 107–109). Not only as the temporary principal of the State Normal School at Lexington, Mass., but in other ways, Mr. May was an efficient co-laborer with Horace Mann; and the deep interest which he took in the public schools of Syracuse was acknowledged by naming one of them after him and by making him President of the Board of Education. To his influence was largely due the abolition of corporal punishment in the city's schools. He also had something to do with instituting the lyceum system, the original design of which, it is well to remember, "was to popularize the knowledge of natural history and of the physical sciences." It was while engaged in lecturing on natural philosophy in Brooklyn that he took a characteristic revenge on one of his parishioners who had jockeyed him in a horse bargain. Whenever he noticed this man in his audience, Mr. May would remark "parenthetically, on using the term 'horse-power,' 'I do not mean my horse, for you all know he has no power.'" Probably he would have extended to horse-dealers his opinion "that lawyers, doctors, merchants, and journalists ought to be solemnly ordained at the beginning of their professional career."

Of Mr. May's anti-slavery services we have spoken on a former occasion, and do not need to enlarge upon them again. Among his personal characteristics, his manners have a just weight assigned them. They were truly "of exceeding grace and dignity. . . . He was emphatically well-bred." That his good-breeding, like his humanity and his high courage, were inherited will appear on a slight examination of his pedigree as given on the first four pages of these 'Memoirs,' and in the January and February numbers of the *Register* of the New England Historic, Genealogical Society.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

STANDARD EDITION OF DICKENS.

THE WORKS OF

CHARLES DICKENS.

Profusely Illustrated with Steel Engravings, from Drawings by H. K. Browne, Cruikshank, and other Distinguished Artists. In monthly volumes, large 8vo, carefully printed in large type on superfine paper, and bound in extra cloth, $3 each.

Messrs. J. B. Lippincott & Co. have pleasure in announcing that they have concluded arrangements with the owners of the copyright and the English publishers for the issue, in the United States, of a Standard Library Edition of the writings of the late Mr. Charles Dickens. The design of the publishers is to make this edition the finest and most complete that has ever been issued. As they have at their command the papers of Mr. Dickens, and as they will, in the production of the Illustrations, be assisted by nearly all the artists and engravers originally employed in the embellishment of Mr. Dickens's works, their ability to accomplish the object which they have in view is fully assured.

Now Ready.

PICKWICK PAPERS. Two volumes, with 43 Steel Plates.

☞ For sale by all booksellers, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,
715 and 717 Market Street, Philadelphia.

With two Steel Portraits, 2 vols. crown 8vo, cloth, $6.

MEMORIALS OF A QUIET LIFE.

BY AUGUSTUS J. C. HARE,

Author of 'Walks in Rome.'

FIFTH EDITION.

The Nation.

"The secret of the success of this book is to be found in the glimpses it gives us of the antecedents and surroundings of Julius and Augustus Hare. . . . As the record of the family life of a cultivated circle, containing some of the best elements of English life, and exhibiting many of its most striking peculiarities, it will well repay reading."

Blackwood's Magazine.

"The book resembles—and this is the highest praise we can give it—a book which took all England and France by storm—Miss Craven's 'Récit d'une Sœur.'"

London Graphic.

"This is in substance a memorial biography of the two brothers Augustus and Julius Hare, 'the most brotherly of brothers,' as Landor called them, the authors of the well-known 'Guesses at Truth,' and the intimate personal friends of Dr. Arnold, Baron Bunsen, Bishop Heber, Grote, Landor, Dean Stanley, and a host of literary celebrities, living or deceased. It is a fascinating and vivid picture of family life in its sweetest and best aspects, everywhere enriched with a cabinet of excellent portraits, with illustrative extracts from letters, diaries, and sermons, abounding in anecdote, in shrewd saws, and out-of-the-way information."

GEORGE ROUTLEDGE & SONS,
London and New York.

MACMILLAN & CO.'S

NEW BOOKS.

The New Poem.

BETSY LEE. A Fo'c's'le Yarn. 18mo, cloth, gilt, 75 cents.

THE DEPTHS OF THE SEA. By C. Wyville Thomson, F.R.S., Director of the Scientific Staff of the *Challenger* Expedition. Medium 8vo, cloth, extra gilt, with nearly 100 illustrations, and eight colored maps, $9.

ESSAYS in POLITICAL ECONOMY, Theoretical and Applied. By J. E. Cairnes, M.A., Emeritus Professor of Political Economy in University College, London. 8vo, cloth, $3 50.

THE MYSTERY OF MATTER, and other Essays. By J. Allanson Picton. 1 vol. thick crown 8vo, cloth, $3 50.

CONTENTS: The Mystery of Matter—The Philosophy of Ignorance—The Antithesis of Faith and Light—The Essential Nature of Religion—Christian Pantheism.

THE LIFE AND CORRESPONDENCE of James D. Forbes, late Principal of the University of St. Andrews. By J. C. Shairp, LL.D., Principal of the University of St. Andrews; P. G. Tait, M.A., Professor of Natural Philosophy in the University of Edinburgh; and A. Adams Reilly, Barrister-at-Law. With Portraits, Maps, and Illustrations. 8vo, $6 50.

STUDIES IN THE HISTORY OF the Renaissance. By Walter H. Pater, M.A., Fellow of Brazenose College, Oxford. Large crown 8vo, cloth, $2 50.

"The wealth of artistic lore and the singular beauty of its style make this one of the most attractive books of the present season. It is not less rich in the fruits of antiquarian research than in the philosophical analysis of æsthetic principles."—New York *Tribune.*

MACMILLAN & CO.,
38 Bleecker Street, New York.

THE PASSIONS IN THEIR RELATIONS to Health and Disease. Translated from the French of Dr. X. Bourgeois, Laureate of the Academy of Medicine, Paris, etc. By Howard F. Damon, A.M., M.D. 16mo, cloth, $1 25.

AUTHOR'S PREFACE.

The book addresses itself not only to physicians, but also to persons who are charged with the education and direction of men, to ministers of religion, to the heads of families; it is equally proper for married people and for young people. All have need of being enlightened upon the physical ills engendered by love and libertinism.

But the subject is a delicate one to treat; so we have imposed upon ourselves the obligation of having always present in our mind this maxim of Aristotle:

"To say what should be said, to only say what should be said, and to say it as it should be said."

JAMES CAMPBELL, Publisher,
Boston, Mass.

THE WEEK IN TRADE AND FINANCE.

MAY 5, 1873.

THE past week has been one of interest in Wall Street. The failure at the close of the week preceding of the Atlantic National Bank was the precursor of all sorts of wild rumors affecting the stability of both national banks and private houses. At one time these had such effect as to cause the rejection by some parties of checks on the Continental National Bank; and it was currently asserted that both this bank and the Manufacturers' and Merchants' National Bank were in difficulties. A prompt investigation, made by Mr. Tappan of the Gallatin National Bank and the Clearing-House Committee, showed these rumors to be utterly groundless, and that the Continental particularly was in a condition to pay off all liabilities at a moment's notice. These favorable reports having allayed the excitement as to the banks, the next sensation was the failure for a large amount of an old and highly respected Stock Exchange firm, followed, as usual, by anticipations of further failures and a renewed stringency in money; whilst, in order to depress stocks and cause a panic, the expedient was even adopted of telegraphing to distant cities hints of large failures here, provoking of course immediate responsive enquiries; and to add to the gloomy feeling came the news that the Comptroller of the Currency had directed the receiver of the "Eighth National" to compel payment from the unfortunate shareholders of an assessment of 54 per cent.

The Bank of England rates remain unchanged. The money market here has been active. The improvement noted last week was not progressive, owing to the calling in of a large amount of loans—some $1,500,000—by the Broadway National Bank, for the purpose of meeting the payment of maturing bonds and of interest on the city debt. Simultaneously with this contraction, the inevitable Tenth National reappeared above the speculative horizon—a creditor at the Clearing-House to the extent of $2,000,000. It would be a curious fact, though the suggestion might be resented by the bank officials, if this "lock-up" had any connection with the "bear raid" on the stock market. Commercial paper is quoted nominally at 10 to 12, but there is little if anything doing in it, and what there is is only with prime names. The rates on call loans during the early part of the week ranged from 7 per cent. to $\frac{1}{32}$ and interest. On Thursday the rate advanced to ¼ per diem, and the money market continued stringent up to nearly the close of Saturday, when a pressure to lend revealed an unexpectedly large supply, and the rates, which at the highest of the day had been 25 per cent. per annum, fell to 5 per cent.

The Express Companies report continued large receipts of currency from the interior. The "extra greenbacks" have been contracted, and now amount to an even $1,000,000. The bank statement is favorable, and indicates a much better and more satisfactory state of things approaching, provided artificial means are not used for evil purposes. The total gain in bank reserves is not only enough to take the reserves across the line, but to make $2,720,425 of surplus against a previous deficiency of $309,275; and the gain in specie and legal tenders is $5,049,200, whilst the banks have been encouraged to enlarge their loans about $1,500,000. The statement, compared with that of the previous week, is as follows:

	April 26.	May 3.	Differences.
Loans	$269,301,900	$270 721,100	Inc. $1,419,200
Specie	15.989 700	18,677,800	Inc. 2,688,100
Circulation	27,737.700	27,564,400	Dec. 173,300
Deposits	188.220,600	196,471.900	Inc. 8,251,300

The stock market has proved a very discouraging one for enterprising bulls. It is seldom that so many diverse means have been concentrated in the hands of the bears to produce a break in prices, and they have used their opportunities to the uttermost, at the same time manufacturing and spreading broadcast rumors of impending disasters, so that it is not surprising tha on Saturday the campaign culminated in a general giving way on the stock list. The retreat was led by that veteran Dick Swiveller, Pacific Mail, which from an opening quotation of 55¾ sold rapidly down to 49¾. The immediate excuse for this drop was a reported intention on the part of the shareholders of the Howe Sewing-Machine Company to test the integrity of a mortgage, which it will be remembered was executed by its president, Stockwell, on its property at Bridgeport, to secure certain indebtedness of his to the Pacific Mail S. S. Co. This mortgage is held as collateral security for the payment of $1,140,000, a small part of which has already been paid, and the principal point of interest to the "Street" is whether another part, in a note for $100,000, falling due May 1, was or was not paid. To the general public the interest is altogether of another kind, and embraces solely the question, by what authority does a corporation like the Pacific Mail S. S. Co., stepping outside of the functions for the performance of which it was given by the people a legal existence and privileges, presume to become an owner, speculator, or trader in the securities of other corporations, such for instance as Panama, out of a transaction in which grew its present entanglement with sewing-machines? One would reasonably suppose that a company which has not shown discretion enough to manage its own affairs, which, although endowed with a munificent subsidy on the plea of being an *American* enterprise, is continually falling back on *English* steamships or machinery (the engines for its new ships are being made abroad), and always in misery of some kind, might cease to concern itself with outside subjects.

Great efforts have been made to depress Western Union, but without much effect. Few panic-makers like to stultify themselves by attributing embarrassment to Vanderbilt, and as he is reputed just now to be behind this stock, stories detrimental to it fall comparatively lifeless.

The investment stocks have remained steady, differing at the close of the week but little from the prices of the preceding week.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending May 3, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	100⅜ 101½	100 100⅝	100½ 101	100¼ 100⅜	100⅛ 100⅜	99⅜ 100⅜	88,400

The lower price of gold has had little effect on Government bonds, owing to their scarcity in market and a continued demand from domestic and foreign buyers. The Treasury during May will purchase $1,000,000 5-20s, $500,000 each on the 7th and 21st instant.

Business in State bonds has been small and entirely speculative. The Charleston *Courier* publishes the following explanation of proceedings brought in the State courts by Messrs. Morton, Bliss & Co. to compel the Comptroller-General to levy a tax for the interest payment on South Carolina bonds:

"A well-known banking-house has begun proceedings in the State courts to compel the Comptroller-General to levy a tax for the payment of the interest upon certain bonds of the State held by the firm. The interest is long in arrear, and the platform of the Radicals requires them to suspend the payment of interest upon any part of the public debt which is of doubtful validity. Nothing was said as to the unquestionably valid debt. Good and bad shared the same fate. The $6,000,000 or $7,000,000 of new bonds carried down with them the $9,000,000 which consisted of the old debt and of the bonds issued in absorption of liabilities outstanding when the war closed. That is the position to-day. The holders of securities whose genuineness has never been disputed are no better off than the holders of bonds for which the State received little if any consideration. The Comptroller has taken the proper course in refusing to levy a tax until the courts have determined that he has the requisite authority, and have determined, furthermore, what classes of bonds are legal and binding upon the people."

The gold market has been irregular; the opening and lowest price of Saturday was 116⅝, highest 117, and closing 116¾. The total customs for the week were $2,114,000; total interest payments, $4,643,800; and total bond redemptions, $14,200. The steamer *Celtic* took out silver bars and Mexican silver $207,000, and the *City of Paris* $19,000. The whole specie shipment for the week was $401,318 16, only $7,000 of which was American gold, against which $500,000 specie has been received from abroad by the *Scotia*.

The Nation.

NEW YORK, THURSDAY, MAY 15, 1873.

The Week.

AMONG the numerous sensations of the week none has been more surprising than the news of the failure of the *Polaris* expedition, the death of its commander, Capt. Charles Francis Hall, the dispersal of his company, and the apparent loss of the vessel which took them out. Nothing has been heard from the expedition since the letter despatched to the Navy Department by Capt. Hall on occasion of his sailing out of the harbor of Tessiusak, Aug. 24, 1871. If the story told by the survivors be true, he succeeded in taking the *Polaris* to a point 82° 16′ N. lat., afterwards returning to winter in latitude 81° 38′, whence he made a short sledge excursion northward, and immediately on his return (Oct. 24) was smitten with paralysis, which terminated fatally on the 8th of November. Here, however, the romance only begins. After passing the winter at the scene of this melancholy catastrophe, the expedition starts for home in August, 1872, and, being beset with ice, drifts to lat. 77° 35′, where the steamer shows signs of becoming unseaworthy, and a resolution to abandon her is entertained. They begin on the 15th to unload the provisions upon the ice, till just as confidence is restored the ice cracks, breaks up, and off floats the *Polaris* into the darkness, leaving the greater part of the provisions on the floe, together with ten white men and nine Esquimaux (including two women and five children). One of the white men was Capt. Tyson, assistant navigator; another, Fred. Meyer, meteorologist; the rest, steward, cook, and seamen—the scientific corps remaining in the vessel. These castaways, with only two boats, suffered for eight months extreme privation, happily without loss of life, and, drifting and working their way as much as they were able landwards, were rescued from their ice-raft on the 30th of April by the steamship *Tigress* in lat. 53° 30′, near the coast of Labrador. The fate of the *Polaris* meantime is wholly obscure, nor is it known what if any contributions to science have been made by the expedition either before or since Capt. Hall's death. The story of the separation as told by the survivors is at best a singular one.

We fell into an error a fortnight ago in speaking of one of the rival sheriffs in Grant Parish, Louisiana, as black. Both were white, but we have now before us the sworn statement of the sheriff, whom we supposed to be black, Mr. D. W. Shaw, who acknowledges that he got fewer votes at the election than his competitor Nash, and was appointed, nevertheless, by "Governor" Kellogg. He says he in vain endeavored to persuade the negroes to leave the decision of the question to the courts, instead of seizing and fortifying the court-house. He declares "that they were very riotous, breaking open Judge Rutland's house, and smashing everything"; that "they also fired into Judge Richardson's house, compelling both, with all other whites, to flee across the river," and refusing all offers of accommodation from the opposite party. The three captains of the negroes were Leo Allen, whom we took to be the sheriff, Tilman, and Jack White, "and these, with their men, committed the wildest and most outrageous excesses, firing off guns, and threatening to murder the white men and keep the women." Finding them uncontrollable, Mr. Shaw left them previous to the fight. How credible he is we do not know, but his affidavit confirms the general account we gave of the transaction.

We have received from an occasional correspondent in Louisiana a letter which is too long to publish, but which has some interest. The writer is a Northern man, and something of a politician. He says there would have been no fighting if Congress had settled the question of validity as between Kellogg's government and McEnery's; as it is, there will be fighting until December; "the Latin, mongrel, and cannibal population of the State has shown itself unfit for self-government," and Louisiana should be reduced to a Territory and governed precisely as Arizona is governed; but since respect or a superstitious observance for the forms, at least, of American government is still entertained, the practical way out of the difficulty is still to be found, and our correspondent thinks he has found it: the negro leaders, he says, are at heart chiefly desirous of plunder and of the elevation of Pinchback, Warmoth's ostensible enemy but real friend. What they want, then, is a new State election under the shadow of the Federal bayonets. Kellogg they will not trust; his policy was to make a compromise with the Democrats, which would involve surrendering to that party the control of one of the branches of a fusion Kellogg-McEnery legislature, from which "most of the thieves" would be dropped, and that policy the negro leaders hate. For example, says he, "the great Martinsville fight grew chiefly out of the fact that the negroes elected as judges two native Republicans, whom I know personally to be infamous thieves"; but they had been elected and commissioned, and Kellogg had to install them, though this he would not do till he had endeavored to induce them to resign. We may remark, by the way, that what with the admitted attitude of the Louisiana whites toward Kellogg and the attitude of the negroes as here described, Kellogg has a happy prospect before him as "*de facto* Governor," etc. Now the remedy, says our correspondent, for all this is that General Grant should interpose with the negro leaders and make them go as far as Kellogg wishes in the way of compromise. "Everybody but the politicians says this," and "everybody knows that the negroes would instantly yield to Grant's expressed wishes in the matter." This proposed remedy shows, if we may say so to our correspondent, into what a condition of feeling and thinking a Louisiana office-holder can get himself. The legislators of the State should, he thinks, receive with obedient submission a message from the Commander-in-Chief of the Army and Navy of the United States on a matter pertaining entirely to the internal economy of their State.

As regards the permanent cure for the Louisiana troubles, the Washington correspondent of the *Tribune* reports "a strong Administration man" as saying lately some things which are as true with regard to the future as they are with regard to the past, viz.:

> "The President ought to have said to his officials in Louisiana a year ago, when Judge Scofield's committee returned from New Orleans, and the Chairman went privately to him and begged him to remove Collector Casey and Marshal Packard before the committee reported, 'From this time forward, I shall expect you to give your attention to your official duties and leave politics to the people of the State. You are to take no part in the organization of the Legislature, in influencing legislation, or in controlling nominations. If I hear of any interference on your part in local or State politics, or if I hear of any political troubles or controversies to which you are parties, I shall discharge you at once without enquiry as to the merits of the case, and put men in your places who will attend to their official duties.' 'Had the President issued such an order as this,' said the gentleman, 'you would have heard of none of these later troubles. There might have been party quarrels, but they would have been settled as in other States, had the President stood aloof and taken no sides.'"

There is little to be added to this, except that it is a national disgrace to have the United States troops used to sustain a State government which a committee of the United States Senate has declared to be utterly unauthorized and fraudulent.

The British-American Mixed Claims Commission has taken the testimony of General Sherman as to a much-disputed question—the responsibility for the burning of Columbia, South Carolina, and the cotton in it. General Sherman swears positively that when his army reached the town it was already burning, and that he not only gave no orders to fire it, but directed all his efforts to extin-

guishing the flames. He had made up his mind to spare Columbia, he says, beforehand, and his testimony makes it clear that the firing was either done by the Confederates under Wade Hampton, on their evacuation of the place, or else, without any authority, "by some person or persons unknown." General Sherman, in his evidence, referred to an escaped prisoner—a Capt. Byers—whom he found in Columbia, and who would be able to testify to the fact that he (Capt. Byers) "saw with his own eyes carts hauling cotton down in the streets for burning three days before he got in." This evidence, however, was excluded as hearsay. Of course it is the burning of the cotton, and only indirectly that of the city, in which the Commission is interested. The value of the cotton was very great, and it is refreshing to know that the United States did not burn it, particularly as there were general orders to burn cotton wherever it might be found, and the streets of Columbia seem to have been the only place in the long line of march where the Union forces busied themselves in saving property. There is one theory as to the firing which is perfectly compatible both with the assertions of the Confederates that they had nothing to do with it and the equally positive denial of General Sherman: this is, that after the Confederate troops had left the town, and before our forces entered it, the "bummers," who were always ahead of the army proper, did a little devastation on their own account.

Oakes Ames died to-day week, at his home in North Easton, Massachusetts, in the seventieth year of his age. As fair a general estimate of his character as we have anywhere seen we take to be that sent to the Springfield *Republican* by its Boston correspondent. It was all the better for him, the correspondent suspects, that his death occurred when it did, for the suits against him, now pending in the courts or soon to begin, could hardly have failed "to bring out some very disagreeable facts about him"—an addition to the facts already known which was not much needed, one would say. The case of Mr. Ames, he remarks, furnishes a very good instance of a man who ruins a good private reputation by seeking and holding public office. "As a man of business, a liberal giver of money, and a hard worker in his legitimate tasks, he deserved much credit and gained sincere friends," but as a public man he made a failure, "and that from a kind of moral incapacity which was not made up for by any intellectual power that entitled him to hold the places he filled." This is very temperate, but every one has the details of the picture fresh at hand.

The proprietors of the White Star Line have addressed a letter to the English papers, showing that they have in vain sought to have the condition of the ship *Atlantic*, at the time she sailed, investigated in Liverpool by the English Board of Trade, and offering proof that she had 967 tons of coal on board, and that the quality was the same as usual, and was reported on favorably by the captain and engineer after the run down to Queenstown; and declaring their belief, based on the consumption on previous voyages, that the engineer underestimated the supply on hand when he reported to the captain before the fatal divergence to Halifax, and that during the severest weather of the two last winters none of their ships had to put into any port for fresh supplies. The charge that the *Atlantic* was short of provisions they ridicule, and may safely do so, in view of the fact that every steamer carrying emigrants to New York is forced, under the requirements of the English law, and by a system of rigid inspection, to provide provisions for thirty-two days. She did, however, fall short of salt-fish, owing to the eagerness of the Catholics for that article during Lent. In fact, the Company has come very well out of the scrape in every point except the employment of Captain Williams after his dismissal by another line. The commander of a steamer who gets drunk on duty, as he did on the Guion line, shows his sense of responsibility to be too low to be cured by any subsequent pledge or reformation. Every steamship line which employs reformed drunkards as officers should state the fact distinctly on its passage tickets.

In France, things have been thrown into some confusion by the result of the Paris election. The Moderate Republicans, including even M. Grévy, the ex-president of the Chamber and the ablest of them all, are disheartened by it. It is said that the election by the leading constituency of the country of a prominent Lyons "Red" over a man of M. de Rémusat's antecedents and a member of M. Thiers's cabinet, almost immediately after M. Thiers had brought to a successful close negotiations which will relieve French territory of the presence of foreign troops by the beginning of September, will have several unfortunate effects. It will, in the first place, shake the growing confidene of the country people in the possibility of an orderly, moderate, and conservative republic, the only one to which they will ever permanently give in their adhesion; it will dishearten M. Thiers, who is clearly the best friend the Republic has had, and lead him to rely more than ever on the Right Centre, who are not sincere Republicans, if not to plot with the Right, who are not Republicans at all; and finally, it reveals a continued want among the French electors, even in the very fountain of intelligence, of that form of political sense which shows itself in readiness to compromise, and accept what you can get when you cannot get what you want. The Legitimists have in the meantime been trying to make capital out of the affair, and have held one or two meetings, marked by as much violence and folly of another kind as those of the Reds. It is clear that nothing can be considered as settled till after M. Thiers's death. The tug of war will come when he disappears, and the fate of the Republic will depend on what happens then.

The repulse of the Dutch in Sumatra appears to have been even more serious than first reported. They have lost five hundred men in killed and wounded, and among the killed is the general in command. The report published by the home government to allay the excitement in Holland, which was very great, acknowledges the fighting to have been desperate, the direct assaults on the Atchinese citadel not only having been repulsed, but the army having been harassed by attacks on its flank during the whole progress of the operations. The explanation of the cause of the hostilities given by the Minister of the Colonies is rather vague. It appears the Atchinese have been very deceitful and treacherous, have intrigued for foreign aid against the Dutch, and have committed divers outrages and offered various insults, for which atonement has been vainly sought during a long series of years, and the refusal of certain "guarantees" recently demanded of them led finally to the ill-fated attempt to chastise them. The operations were indefinitely postponed after the repulse, ostensibly owing to the prevalence of the monsoon, which made communication between the ships and the shore dangerous, and thus rendered the supplying of the army difficult.

The London *Spectator* finds, plausibly enough, some connection between this attack on the Atchinese and the recent conclusion of a treaty between Great Britain and Holland, by which the Dutch territory on the west coast of Africa was ceded to Great Britain, in return for which the latter waived her objections to the extension of Dutch territory in the Malay Archipelago. It is rather odd, it remarks, that just at this juncture the conduct of the Atchinese, as man-stealers and plunderers, should, after having been borne so long, suddenly become unbearable. In the meantime, the Dutch press throws the blame of the defeat on the British, whom it accuses of jealous hostility to "Dutch prestige" in the Archipelago, and of intriguing against it with the natives, and even hints that the gunners who worked the heavy artillery in the Atchinese defences were drawn from the English service, all of which the London *Economist* considers amusing, and doubts whether most Englishmen, either in India or elsewhere, were aware until now whether there was such a thing as "Dutch prestige" in the East.

The condition of the Spanish Republic is apparently no better. The Permanent Committee has been dissolved, the mob of militia

which rose in defence of it at Madrid has been disarmed, and the Ministry reigns supreme in Madrid; and the elections, in so far as they have been held, have resulted in a large Federal Republican majority, which means, in all probability, the continuance of the prevailing disorder, inasmuch as the Socialist element is predominant and gains strength in the Federal ranks. In the meantime the government at Madrid continues almost powerless as to the rest of the country, the negotiations opened with the artillery officers, looking to the reorganization of the army, having failed, and there are ominous rumors of the manufacture of large quantities of paper money, which is to meet the demands of the treasury by being put into forced circulation. General Contreras, who was sent to command in Catalonia after the proclamation of the Republic, and would have done so if the troops had let him, has published a letter in explanation of his resignation which throws curious light on the condition of the force. He found the officers had nearly all gone home, and the men were doing what they pleased, and treated all attempts to exercise authority as acts of hostility, and he vainly appealed to the government at Madrid for reinforcements to enable him to restore discipline. The Carlist "news" is of the usual composition—defeats, skirmishes, battles, and sieges, about which little seems to be known, and which have apparently no definite result. The friends of the Republic in this country, we observe, begin to talk about it in a more rational manner. What they say now is, that with all its disorders it is as good as the monarchy any day, and they acknowledge the monarchy to have been shockingly bad. This has a sensible sound. We have no doubt, if pushed a little harder, they will acknowledge that as the people is so will the government be, whether the form be monarchical or republican, and that talking of a "republic" as a complete remedy for ills which have their origin in sloth, ignorance, and want of political sense, is simple quackery. It is like saying of a man who cannot drive a stationary engine, that what he needs to prove his skill is the management of a locomotive. Moreover, there is no use in calling on us to consider a nation apart from its own weaknesses. The presence of bad men in it in sufficient force to resist the efforts of the good men to maintain order, is a constitutional defect which has to be cured. To talk of it as an excuse for bad government is like saying that a man would be very strong if he were not very scrofulous or had not diseased lungs.

The Clerical party seems to follow a general *mot d'ordre*, and to carry out a plan of campaign throughout Europe. In Switzerland and Germany, the Church is to remain strictly on the defensive; in Spain and France, it has openly taken the offensive; in Austria, England, and Ireland, it is preserving an attitude of simple observation; in Belgium, where it rules supreme already, it has established its general staff and real headquarters; while in Italy, where is the nominal commander-in-chief, it has already begun to unmask its batteries. The Holy Father himself gave the signal in various speeches, whereupon the Catholic press took it up, and is growing more impudent daily, thanks to the really unlimited liberty of the press enjoyed in Italy. Lent gave the preachers sundry opportunities to attack king, kingdom, and constitution from the pulpits with unheard-of violence. The Liberals picked up the gauntlet, and held conventicles on their side; in the churches, particularly in the *Gesù*, the freethinkers began hissing. On another day a row ensued at the very doors of the temple, and many of the rioters were arrested. All this, however, was but the prelude to another most dangerous demonstration which the Clerical party are busy preparing just now. They are organizing a sort of monster meeting in the shape of a pilgrimage to the birthplace of St. Francis of Assisi, very similar to the famous pilgrimages to Lourdes, which created such a sensation in France last year. The Liberals, and particularly the Radicals, on their side do not remain silent; the whole of Umbria is agitated; everywhere popular meetings are held; in Perugia there is a committee of patriots and another of freethinkers, who are preparing a counter-demonstration, and we may esteem ourselves very happy if these artificial agitations do not end in some sanguinary encounters. However, the remainder of the nation, *i.e.*, the immense majority of Italians, are so utterly indifferent at the bottom in all matters concerning religion, and even in political affairs, that it will be no easy task to work them into a passion.

The great event of the week in foreign news has been the panic on the Bourse at Vienna. We are at this writing without authentic details about it, except that it was caused by the failure of a prominent house, and was "wild" while it lasted, which was not long, as several bankers came forward with 12,000,000 florins to ease the market. Confidence, according to the late accounts, has however not been restored, and the affair has made itself felt in London and here. The Associated Press published on Tuesday a somewhat ludicrous "bear" dispatch, which announced that the "shrinkage in values," on the Vienna Bourse, caused by the panic amounts to $100,000,000, and that "the 'shrinkage' in American securities in Germany is estimated at $10,000,000." It would be interesting to know who made these "estimates," and what they are based on. It is hardly necessary to say that they are guesses of the wildest sort, and are somewhat nonsensical. "Shrinkage of values" is only real if permanent, or if the holders are forced to sell; but real "shrinkage" is hardly ever caused by a panic, and what it amounts to nobody can tell. The dispatch concludes worthily with the sapient announcement "that recent American legislation, and the hostile tone of a portion of the American press towards European capitalists, occasioned general anxiety among investors in American securities." It is safe to conjecture that the panic has been caused partly by the inflated expectations of profit caused by the Exposition, and partly by the state of things at Berlin, which is also one of "shrinkage," following on the extravagent speculation which succeeded the war, and which will probably not pass away until the remainder of the French indemnity is paid during the summer. The prevailing depression has, however, been increased by recent attacks of Herr Lasker on the Bourse, which he accuses of all sorts of naughty things in connection with his recent exposure of railroad corruption. He made a savage speech on this subject, which produced a good deal of distrust, early in April, and the effect of which the Board of the Exchange sought to diminish by forwarding a protest to the Reichstag. It is worthy of note, in connection with this, that Count Itzenplitz, the Minister of Commerce, who was implicated in the railroad abuses, has given in his resignation.

The latest news or reports from the Khivan expedition represent the Russian column from Tashkend as having successfully crossed the Kizil Kum desert, and effected a junction with that advancing from the Sea of Aral, and the combined force, having established a base at Kohne Urgendj, on the Oxus, a point reached by the boats from the Sea of Aral, and not much over six days' march from Khiva, continued their operations, and the place has fallen. This last report comes from St. Petersburg, without date or other particulars; but there seems to be no good reason for doubting it. The only difficulty the Russians had to contend with was that of getting into the oasis in which the city stands, and this overcome, its capture was sure, even if the Khan had been crazy enough to attempt resistance. It will now be interesting to see what course Russia will pursue. She has entered into a sort of "understanding" with England not to make her occupation of Khiva permanent, in consideration of another "understanding" that England is not to allow Afghanistan to attack her; but the best-informed portion of the Russian press maintains stoutly that Russia will be governed solely by her own interest and convenience in considering whether she will stay or retire. As the Russian press is not apt to speak positively on a point of this sort without authority, it is easy to see that Khiva bids fair to furnish materials for a first-class "complication."

THE GROWTH OF CORPORATE AND DECLINE OF GOVERNMENTAL POWER.

SOME thirty or forty years ago American society discovered that this country lies remote from European complications; that it has no great rival powers upon its borders, such as France is to Germany, or Germany is to France; that the dangerous classes which lie a weight of foreboding upon the minds of European statesmen, were only to be found in a few large towns, and in comparatively trivial numbers; that a large standing army, which in Europe is both a protection and a burden, was needless; and that the likelihood of future wars did not require every American, like every Prussian, to be in effect a soldier. In this safety of isolation American society said: "We will lay aside the responsibilities and sacrifices of citizenship, and religiously ascribing all virtues and all growth and progress to a republican form of government, will allow our own to go to the dogs, devoting ourselves meanwhile to the business of getting rich." The broadest views of duty were covered by the word "industry," and of elevation by the word "wealth." These ideas were flung about by the press, and caught up and adopted by society, so that every philanthropist who addressed a public school generally summed up his moral teachings in the prediction that all the good boys would work hard and get rich.

Such sayings as, "The world is governed too much," "The less government you have, the better," "Individual enterprise will accomplish everything, if you will only give it a chance," were adopted as incontrovertible maxims, and society set itself to giving individual enterprise all the chance it asked. At the same time, the science of government, which had received so much attention from the earliest statesmen, was allowed to die out in this country, and the business of governing was gradually abandoned to a class of professional politicians contemptuously called office-holders and office-seekers, and the task of serving one's country fell into general disrepute. It next became perceptible that the Government was always cheated, and that it began to be thought that this was inevitable, and, being inevitable, that there was nothing wrong in allowing it to be done. It followed soon that a large proportion of men who passed as respectable secretly carried this reasoning a step further, and held that, if the Government must be cheated, they might as well do the work and reap the harvest as anybody else.

In a country so undeveloped on the one hand, and so rich in resources on the other, there were innumerable fields for individual enterprise—and fields of such vast extent as to be beyond the powers of any single fortune. Hence it was inevitable that individual enterprise should seek the aid of combined capitalists, and that these combinations should take the form of corporations. It is a forgotten fact that, in the first days of American corporations, they were not well managed, and that men talked of their management then very much as some men now talk of the "irremediable imperfections" of the civil service. The shrewdness and economy of administration that were common in the business of individuals no one ever expected to see transferred to the affairs of incorporated companies. On the contrary, it was supposed that the employees of a corporation would always be well paid, with little to do, and that its contractors would certainly grow rich. There were also two restrictive elements in the problem which of late years do not exist—the corporations were then both small and local, *i.e.*, having no great wealth, and being owned, managed, and influenced by the local community in which each existed, and, to a great extent, for the interest and convenience of that community. A sufficient illustration of this will be found in the history of the all-powerful New York Central Railroad. One company was chartered to build a line of less than twenty miles from the Hudson to the Mohawk; another to build a line of less than eighty miles from Schenectady to Utica; a third to build a line of less than sixty miles from Utica to Syracuse. Such corporations were manifestly too small, too weak, and too local to control legislatures, or seriously conflict with the interests of the community which created them. They were practically, as well as theoretically, the creatures of the legislature, and created for the public convenience. If it had been told at that day that the President and most of the Directors of the old Mohawk and Hudson Railroad would be residents of New York, and transact its business there, and that its President would defiantly snap his official fingers in the faces of the citizens of Albany, and tell them that he would run his trains away from their hotels, and, if they complained, would run all of his trains through the town without stopping, the story would have been deemed as fanciful as that of 'The Coming Race.' In time, however, these several corporate links, with others of the great chain, became welded together, and since then consolidations here and "giant enterprises" there have brought great corporations upon the whole country. The immense power of great and concentrated wealth which is actively employed made itself almost immediately felt. Every eminent lawyer along the line of a road was its counsel; half of the judges of the State were stockholders or directors or ex-attorneys of the road; the sharpest, shrewdest, most active business men in every town were in some way interested, or connected with the company.

With such new forces springing into existence in every State, more numerous, if not intrinsically greater, than was ever known before in the history of corporate bodies, and growing rapidly into a magnitude that could never have been anticipated, and with the efficiency of American government constantly lessening, it is apparent that a time might, indeed *must*, come when Government would be really too inefficient to maintain the rights of society by duly restraining their aggressive powers. Such is not far from the condition of American society at the present moment. Indeed, as against the Government all the administrative talents of the country are to be found among the corporations. Their managers have learnt the value of ability and the wisdom of paying for it; while Congress, in its ignorance, has been abandoning the early policy of the country, and, by niggardliness to everybody connected with the Government (except its own members), has been driving the talent of the country out of the public service. What chance had the Government of retaining Mr. Thomas Scott in its War Department? Where is Assistant-Secretary Fox, who was practically the head of the Navy Department during the war? Does any one suppose that Mr. Vanderbilt could be induced to accept a secretaryship in exchange for his present office? Did not the last Solicitor-General resign the second legal position under the Government to become the law officer of a railway company? Is not the United States District Attorney in each of the two largest cities on the continent a comparatively young and inexperienced lawyer whom no corporation would entrust with the control of its legal affairs, but who is entrusted with all the law business, civil and criminal, of the Government? Contrast the array of counsel in the Crédit Mobilier Railroad cases—Mr. Curtis, Mr. Evarts, Mr. Cushing, and Mr. Bartlett—with the Attorney-General and his two juniors. Contrast, too, the liberal fees that will be paid to these really leading counsel with the salaries of the Attorney and Solicitor Generals. Manifestly society, as represented by Government, is beaten wherever it comes in contact with the great corporations, because society has allowed these corporations to secure as agents men who can outgeneral, outwork, and in any ordinary fight overcome, the men who are the agents of the Government. Corporations to a certain extent take the place in American society of the privileged classes in aristocratic Europe; for they constitute a feudal system which exacts service, if not homage, from an influential portion of every community, and which carries on a disguised warfare with the Government, sometimes in Congress, sometimes in State legislatures, in which warfare concentrated wealth and power are arrayed against the wishes and, in some cases, interests of society at large.

There is one peculiar phase in the contests that are beginning to be waged against corporations, which is the tacit acknowledgment that, in one sense, we cannot do without them. The Illinois farmer does not propose, like the Irish peasant, to pull up the track or burn the bridges, nor even to abate railways as a nuisance. It is essential to his welfare that railway trains continue to be run,

and that they be run by the very company with which he wars. In ordinary battles, the object is to stay the enemy's movements, to cripple his resources, to cut off his supplies; but such warfare would be more fatal to the farmers of the West than to the New York or London stockholders. The contest is one in which it is confessed by the assailants that they cannot exist without the existence of their adversary. Hence, it is a battle which must be confined within the limits of legislatures and courts, or, in other words, is a battle which can only be won through the instrumentality of good government. In Illinois, as in all of the Western States, railways were built by foreign capitalists. Deputations of progressive citizens came to New York with their hats in their hands, beseeching capitalists to come and build them a railway. When the roads were opened, there were the usual rejoicings, and celebrations, and promises of service on the one hand and of gratitude on the other; and then, almost immediately, began a state of enmity between the corporation and the community; and such is the condition of affairs to-day wherever there is a railway. The West is not rich enough to buy up its railways; it cannot do without them; and is too frequent a borrower to be able to frighten capital away by any unwarrantable act. Contrary to the advice of her most sagacious legislators, Illinois did not reserve in the charter of the Central a power of revision or repeal, and the rights which she cannot now take away, will finally come under the protection of the Supreme Court of the United States, if they are impaired.

To the general sense of our dependence upon corporations there are perhaps two exceptions. Mr. C. F. Adams, jr., and his progressive friends in Massachusetts form the one, and that part of the community which is in favor of buying up the telegraph lines and making them a part of our post-office system is the other. Massachusetts is not a borrower, like Illinois; her railways are owned substantially, if not wholly, within the State, and she is abundantly rich enough to make the purchase. The telegraph transfer to the Postal Department has been tried in Europe, and we have before our eyes the success of the English experiment. Yet in these two exceptional instances we are immediately met by the same obstacle of an inefficient, corrupt, and partisan government. Men in this world who are beyond the necessity of working for their bread work either for pay or honor. Society has seen fit to decree that the ambitious American shall find neither honor nor pay in the service of his country. Society, therefore, cannot command his services, and society having pushed this policy to the extreme, is now awakening to the fact that its government, be it general or local, is too inefficient to restrain a corporation or manage a railway.

THE LATEST REFORM MOVEMENT.

THE "Farmers' Movement" deserves all the attention that it has thus far received, and indeed even more. It ought to be looked on not simply as an attempt to secure cheap transportation, but also as the latest popular attempt to secure what is vaguely called Reform – a popular attempt of somewhat the same kind, though directed to a different immediate object, as the Cincinnati movement of last year and the free-trade operations of the last decade. It is indeed rather more popular in character than either of the others we have mentioned—for no movement can well be more so than one directed to cheapening the cost of corn and wheat—but it is like the others in this, that it is based on the idea that the country is laboring under the weight of abuses which are not merely moral, but material as well, which in almost all cases take, sooner or later, the form of tax, and which must be removed before the normal condition of prosperity can be restored. Just as the taxpayers of New York felt the rascalities of Tweed, and as every consumer in the country feels the oppression of the tariff, and every taxpayer suffers from the condition of the civil service, so the farmers feel the weight of railroad abuses—in their pockets. They find that they have to pay, if they desire to transport their goods to market, not merely the ordinary profit on building and maintaining the railroads, but the ordinary profit also on various swindling contrivances of the Crédit Mobilier sort, in the shape of contracting companies, freight companies, and so on, which makes every price three times its natural size. It is the general disbelief of the honesty of railroad management which causes the tone of anger generally pervading all discussions of the subject. Animated by this incredulity and anger, the farmers of Illinois determined to strike a vigorous blow at the "monopolists"; and, in order to make their proceedings fatally certain, it was decided to have a popular convention on the subject of cheap transportation. Accordingly, several conventions have been held in Illinois; and more recently a National Convention, representing several different States, has been held at the Astor House in this city, with this result. The Astor House meeting has resolved—(1) That cheap transportation ought to be secured by law and by building more railroads and canals; (2) That cheap transportation is essential to the welfare and prosperity of the country; (3) That cheap locomotion is "necessary for the maintenance of a homogeneous and harmonious population within the vast area of our territory"; (4) That dear transportation is a "burden upon the producer and the consumer which it is the part of wise statesmanship to remove"; (5) That certain leading railway corporations of the country are plundering the public, enriching themselves, and impoverishing the country through which they run; (6) That, besides this, they have "oppressed the citizen, bribed our legislatures, and defied our executives and judges, and stand to-day the most menacing danger to American liberty and to republican government"; (7) That the present system of railway management "must be radically reformed, and controlled by the strong hand of law, both State and national"; (8) That the railway "hirelings" who "prostitute public office to the base uses of private gain" must be "expelled and excluded" from the "halls of legislation"; (9) That the problem of cheap transportation must be worked out by the various parts of the country in such manner as "they may deem best"; (10) "That the people of the various States" ought to "organize" at once; "the power to accomplish the purposes desired rests absolutely with the suffering millions; relief is within their reach and control; united action and the near future will give, as certain as its need, for all time and the good of all, the true solution of the problem of cheap transportation."

This is certainly on its face a beggarly array of empty phrases, but their meaning is rendered plain enough by the action of the Princeton Convention, to which we alluded last week. The farmers at Princeton resolved, in effect, that the legislature should determine what are reasonable rates of freight; that the courts should consider the legislative decision binding, no matter what the private conviction of the judges might be; and that no man should be supported as a candidate for the Supreme Court who would not pledge himself in advance to decide all freight cases against the roads.

We now begin to get nearer a comprehension of the farmers' movement, and we shall be able to understand it still better if we recall the circumstances of the principal case which excited the anger of the farmers. The Legislature of Illinois having passed a law, at the solicitation of the farming interest, establishing maximum rates of freight, the Supreme Court decided—and no one doubts that the decision was good law—that the act was unconstitutional, intimating at the same time that the roads were bound to charge only "reasonable" rates, but that what was "reasonable" was to be determined in each particular case on its merits. This decision it was which exasperated the farmers to such a degree as to make them determine to wage war upon the courts, the legislature, and the railroads all at once. Judge Lawrence, of the Supreme Court, was the judge who was particularly obnoxious to them on account of the recent decision, and, his seat now becoming vacant, the question was how to fill it.

Up to this time, the farmers' movement had had one merit—it had been perfectly genuine. The men who had held the meetings

had been real farmers, animated, if by an angry and unintelligent, at least by a well-founded conviction that something was wrong somewhere. Thus far it was not unlike the earlier stages of the Cincinnati movement, before a platform had been adopted or "organization" begun. The Princeton meeting was to show a still more striking resemblance in the result. The object of the convention was the nomination of a judge to fill the vacancy caused by Judge Lawrence's retirement. Up to this time, there had been no offices to fill, and the politicians had been kept, or kept themselves, in the background. Now, however, there was a vacancy, and they scented their prey afar off. The usual manipulation of the "wires" began, and they were managed with the usual skill. That we do not exaggerate when we say that the politicians captured this little reform convention, and in the same way that certain other politicians captured the Cincinnati Convention last summer, we might show in various ways, but the best, perhaps, is the account of the character of the meeting published afterwards by one of the delegates. This is what he says:

"The convention of farmers called for nominating a candidate for Supreme Judge for the Fifth Circuit, met at Princeton last Wednesday. To say that it was a convention representing the farming interests of the district is a mean slander on the honest yeomanry of the county. The whole machine was managed and run by a few old, outworn politicians, who never did an honest day's work on a farm in their lives. From many of the counties no regular delegates were selected, and from others only here and there a township grange sent up a delegate, and by a vote of the convention they were empowered to cast the full vote of the county—in some instances one and two delegates casting twelve or eighteen votes; and this was the way the farmers were represented. The noisy crowd wanted something, but they couldn't tell what. The office of Supreme Judge went begging, and no one could be found willing to accept the nomination—every respectable lawyer in the district, of any legal acquirements, being pledged to support Judge Lawrence. But the 'farmers' must have a man they 'know to be sound on the goose,' no matter whether he ever looked into the lids of Blackstone or not. A number of names were presented, among them the Hon. A. M. Craig, of Knox, and, after the first ballot, which was an informal one, he was nominated by acclamation. This was done in the face of a letter written to the convention by Mr. Craig, in which he refused the use of his name, and stating in unmistakable language that he could not and would not accept the nomination."

From other quarters we get the same account. One paper says:

"Farmers as a class are not schooled in the dark and mysterious ways of the politician, and accordingly we find, from nearly every county in the district, professional politicians succeeded in worming themselves into the confidence of the farmers, and getting themselves appointed as delegates to the convention. On arriving at Princeton, these dead-beats and scalawags found that they were in a majority, and that very few, except fancy farmers and politicians, were in attendance as delegates. Consequently they took possession of the convention, and ran the machine in their own interests, and nominated a man for Supreme Judge, in spite of his letter declining it, whom they fondly hoped would act in subservience to their interests; but who, it is rumored, will not accept the honor sought to be thrust upon him."

To turn now to the so-called National Convention held at the Astor House in this city, and representing some seven States interested in the question of cheap transportation—what was its composition? If any one is so credulous as to suppose that it was a convention of farmers or landowners or men who had made a study of the freight question, he is very much mistaken. The reason why the resolutions adopted were vague, and why absolutely no remedy for the existing evils was suggested, was that the convention was very similar in the character of its composition to the Princeton meeting in Illinois. The Chicago *Evening Journal*, a paper very much in favor of the farmers' movement, says:

"The earnest workers in the cause of this reform at the West were not present at the convention. Why should they be? What was the use of tramping off there, a thousand miles or so, to attend a mere random gathering? Men of ample leisure and plenty of money did well to attend the convention; but the anti-monopoly movement of the West is no kid-glove affair, nor is it made up of broken-down politicians, professional philanthropists, or experimental farmers"—

while it sufficiently appears, from the published reports of the gathering, that its principal business was the listening to an address from Mr. Josiah Quincy, of Boston, a gentleman in no way connected with the agricultural interest, and whose panacea for all ills, local or national, is building a few miles more of railway.

This is the upshot of the farmers' movement; what may come of it hereafter we do not know, but thus far it has gone through all the phases which we have of late years come to regard as the necessary stages in the development of a popular "rising" of this sort. First, it was a real movement of real farmers in favor of cheap transportation. Then followed meetings, protests, appointment of delegates, and loud-voiced denunciation of the "politicians." Then comes the period of management, manipulation, "seeing people," "arranging slates," and so. The farmers do not understand this, and the politicians do. The whole thing ends by the disappearance of the farmers from the scene, the capture of the movement by the very politicians who are so much detested, and—believe it, posterity!—the formation of a national association which announces its intention of securing cheap freight by building a few more "national highways"!

The moral of this fiasco, as well as of that of the Cincinnati movement last year, we take to be this—that the "convention" system has broken down by its own weight, and that the only way to secure any substantial improvement in politics hereafter will be through entrusting the work to small bodies of men, selected by extra-political machinery. The only reason why the reform movement in this city and State has had any success at all is that instead of working through the old political organizations, it has worked in opposition to them all through. It has worked through such bodies as the Committee of Seventy, the Bar Association, and sub-committees such as that sent up to Albany to "watch legislation." The chronic intimidation of the politician by small posses of genuine reformers is now one of the principal duties of the latter.

CHIEF-JUSTICE CHASE.

THE present flood of mortality among distinguished men has been so great as to add to the sense of shock with which the public heard of the death of Mr. Chase; but it has long been known that he might go any day. He died on Wednesday of last week of paralysis. Mr. Chase was a New Hampshire man, and was born at Cornish in that State, in 1808. He was of a family noted for a genuine New Hampshire ability in politics, but his own immediate parentage, if highly respectable, was poor, and the future Governor, Senator, and Chief-Justice, being left an orphan at the age of twelve, passed to the care of his uncle, the Protestant Episcopal Bishop of Ohio. After this the common road so often travelled by the ambitious young New Englander lay before him—though, with the luck peculiar to him, and which we shall notice further on as aiding him throughout, this road was made easier to him than to most. He had to get his schooling, and he had to do that usual work at school-keeping which has made our American common school the school, as it were, of American statesmen; but his uncle, the bishop, had an academy, of which young Chase was free, and he was able to enter in advance at Dartmouth College, and graduate in two years; while of the not very large amount of school-keeping that he did, he did the most important part in Washington, where his seminary made him known to several distinguished men, such as Clay and Wirt, who were its patrons, and in the office of one of these, Wirt, he studied law. It is said that it was with difficulty that he was admitted to the bar; but we may be sure that the utter self-reliance or self-confidence which was so prominent a trait of his character prevented any doubts in his own mind of his full success as a practitioner. He at once began practice at Cincinnati, and in no very long time was not only fairly successful in his profession, but he was even a man of mark, for already he had taken a very bold and a very creditable stand in politics, and, as history developed itself, his view was seen to be singularly prescient. He was but twenty-seven or twenty-eight when he allied himself with the much-hated anti-slavery party. He was a believer in most of the doctrines of the Democratic party, but was unalterably of opinion that slavery and its extension were no proper planks of the Democratic platform. Indeed, his contention in the premises was that slavery was the creation of State law; Lord Mansfield's famous decision he regarded as embodying the only sound principle in the matter, and, adopting it as his own, he very courageously and consistently, with whatever soundness of constitutional law, upheld his watchword of "liberty national, and slavery sectional" in the face of much obloquy and even danger.

In Mr. Chase's own opinion and that of his friends and followers, his political conduct was never inconsistent with his attitude in his early days. Thus they justify what his enemies have condemned as his coquetting with the Democrats in 1857 and 1863. He would never, they say, have been anything but a Democrat had it not been that the Democrats adopted the un-

democratic institution of slavery; that once gone, he was again a Democrat. We need not stop here to examine into the question whether, if the spirit of slavery was in 1865 the essence of Democratic doctrine, it could in 1867 have been much else than that. But whatever calamity was or was not averted when the Chief-Justice failed to be nominated at Tammany Hall, we may be absolutely sure of one thing—that there was involved in that failure a very bitter disappointment to a man whose ambition and sense of masterful fitness made him eagerly long for the place—be the Democracy what it might. What other Chief-Justice of the United States ever so desired and sought the Presidency as to make thinly disguised electioneering tours for the purpose of keeping himself before the people? Undoubtedly it was his burning ambition for the coveted honor which made it possible for this proud and honorable man to degrade so greatly a dignity and place so high. It is the chief dimness on a most honorable record.

His career as a politician, or rather as a statesman, in the great struggle which so occupied the minds of that generation of the public men of whom we are now almost daily taking leave, is well known, and still better do we know his career as Secretary of the Treasury. Yet in this latter capacity some injustice has been done him which he can ill afford; for of necessity his financial procedure was of a kind, and on a scale, and under a pressure which made his work open to some serious objections; but it is not open to the heaviest objection of all: neither the origination nor recommendation of the legal-tender feature of his financial scheme is to be charged to him. He never wished that feature adopted; he has always maintained that its operation should have long since ceased. In his dissenting opinion, when a majority of the Supreme Court reversed the previous decision of an equally strong majority, he gave this exposition of what he had done as Secretary of the Treasury (12 Wallace R. p. 576):

"In no report made by him to Congress was the expedient of making the notes of the United States a legal tender suggested. He urged the issue of notes payable on demand in coin, or received as coin in payment of duties. When the State banks had suspended specie payments, he recommended the issue of United States notes receivable for all loans to the United States, and all Government dues, except duties on imports. In his report of December, 1862, he said that 'United States notes receivable for bonds bearing a secure specie interest are next best to notes convertible into coin,' and, after stating the financial measures which, in his judgment, were advisable, he added: 'The Secretary recommends, therefore, no mere paper-money scheme, but on the contrary a series of measures looking to a safe and gradual return to gold and silver as the only permanent basis, standard, and measure of value recognized by the Constitution.'"

Reviewing his subsequent acquiescence in the legal-tender part of the scheme, he adds:

"Examination and reflection under more propitious circumstances have satisfied him that this opinion was erroneous, and he does not hesitate to declare it. He would do so just as unhesitatingly if his favor to the legal-tender clause had been at that time decided, and his opinion as to the constitutionality of the measure clear."

As we have said, a chief characteristic of his life seems to have been success—not in the ordinary sense of a man's accomplishing what he undertakes, but as a result always magnified by circumstances to an extent which could never have been anticipated. Poverty imposed school-teaching upon him as upon Mr. Seward, but circumstances which led the one to the obscurity of plantation life brought the other to the national capital, gave him a successful school already well established, and enabled him to become a student under one whom many regard as the most eminent and accomplished of American lawyers. In the first idleness of his professional life, he did what a thousand ambitious young lawyers have done—he essayed bookmaking, and his edition of the Ohio statutes immediately brought him into notice, and has continued to be a standard work, we believe, to the present time. In public life his career began almost at the moment when he was able to mount on the very crest of the wave that was overthrowing old parties and things. As Secretary of the Treasury, he found a field the magnitude of which no imagination had previously measured. Financially speaking, some of his projects were costly and unsound, but admirably adapted to our ignorances, prejudices, and ways. It was not his business then to economize, but to borrow money, and keep the Government going at any cost. In this he succeeded, never allowing it to fall into the monetary deadlock which well-nigh ruined the country in each of its preceding great wars. Indeed, his action appears titanic when we contrast it with the feebleness which in 1814 brought the Treasury to absolute bankruptcy, and threw the support of the Western army upon the charity of a contractor, whose advances, by the way, have never been repaid to this day, and who paid for his patriotic credulity by being reduced from great wealth to insolvency, and dying in the debtors' prison at Washington, vainly memorializing Congress for justice. The heavy work of the Rebellion, in fact, fell upon the shoulders of three lawyers, none of whom had had the slightest previous experience in his department; each of whom made mistakes and committed errors; all of whom performed their work without allowing it once to stop, or in any just sense to become a failure; and who left the posts of their responsibility with shattered constitutions and shortened lives. The last of these three has now passed away, and his death is a long stride toward transferring the leading and controlling statesmen of the great civil war from the region of partisan clamor and detraction to the juster balances of history.

As Chief-Justice of the United States, there has been in Mr. Chase's life the same mingling of individual and circumstantial success. It has been his peculiar fortune to have taken a leading part in the legislative history which preceded the Rebellion, and in executive management during the Rebellion, and then to have passed judicially upon all of the important constitutional and legal questions that have arisen out of the Rebellion. Mr. Seward took part with him in the first and the second of these, Mr. Lincoln and Mr. Stanton in the executive, but Mr. Chase alone is prominent in all three of these most important chapters of the national history. The nine annual terms through which he has presided constitute a judicial period of little less importance than that period of constitutional interpretation which it was the fortune of Chief-Justice Marshall almost exclusively to fill. For many years to come the decisions of these nine terms will be referred to by lawyers, legislators, and constitutional students more than any others. In them the late Chief-Justice will always appear prominent and never far from right. He brought to the court no store of legal learning, but he brought comprehensive views, considerable power of generalization, and a just sense of constitutional rights and judicial responsibility. Of this latter he gave a signal example during the impeachment trial of President Johnson. Entirely unmoved by the clamor of the party managers and the party press, he maintained complete impartiality, which, however, could teach them neither dignity nor decency, and brought on him their most savage maledictions.

"If any care for what is here
Survive in spirits rendered free,"

he must now listen to some of the praises which are poured out on his life and actions with a touch of sorrow for men who so little know how to honor their great while these live, and so little able to respect themselves when their great have gone from among them, but cover with unmeasured laudation the man whom once they brutally maligned. In upholding the rights of the citizen against the exercise of arbitrary power by the Executive, and the responsibility of the Executive and Judiciary against the unconstitutional usurpations of Congress, and in striving to maintain the financial integrity of the country against a demoralization which allows a man to borrow gold and repay it in irredeemable paper, he has been firm and liberal and just; and his judicial services will be more highly esteemed when it is more clearly perceived that they uniformly tend to the maintenance of those principles which are the basis of national integrity, personal or political.

SAINTE-BEUVE'S CORRESPONDENCE WITH PRINCESS MATHILDE.

PARIS, April 25, 1873.

EVERYTHING which comes from the pen of Sainte-Beuve has a great value for the literary world; he was the most analytical mind of his time, and his additions to the literary history of France will always be very valuable. Little is known of the man himself outside of a very small circle of people; and this ignorance gives some interest to a correspondence of his which has just been published. The correspondent was Princess Mathilde, the daughter of King Jerome Bonaparte, and the sister of Prince Napoleon. This Princess married, a long time ago, Prince Demidoff of Russia, but the marriage was not a happy one, and she lived separated from her husband. When the Second Empire was founded, she became one of the goddesses of the Imperial Olympus; but, though a strong Bonapartist, which can hardly be wondered at, she affected to take no part in politics, did not show herself much at court, and devoted her time either in Paris or at Saint-Gratien, her country-house, to the art of painting and to the society of artists and of literary men. Her imperialism was rather of the poetical kind; she considered the first Napoleon as a god, she looked upon him as the armed representative of the French Revolution; she was only half satisfied with the policy of Napoleon III., who was not brilliant and fascinating enough to strike her imagination; and she had an ill-concealed aversion for the Empress Eugénie, who was too Catholic and bigoted for her taste. She was essentially what the French call an *esprit fort*, and was herself less at ease with the ministers, the great dignitaries of the Empire and of the Church, than with scientific men, Darwinians, physiologists, and with littérateurs, to whom she allowed the greatest liberty of language. Sainte-Beuve was just the man who could best satisfy her curiosity, her genuine

love of truth, her contempt of all social shams, and her somewhat cynical (if such a word be not found too hard) disposition to deal with facts rather than with established theories.

Judging from the correspondence which is before us, a real friendship seems to have sprung up between the Academician and the Princess, and it is to their credit that it outlived many years and many painful incidents. Whatever may be said of the intellectual peculiarities of the Princess, her character comes out of this correspondence to her advantage. She was evidently not only very amiable, very generous, but she had that faculty, so rare among persons of royal extraction, of forgetting herself, and of experiencing a real interest in subjective matters. Of course, she played somewhat the part of a Circe: she found the means, through Sainte-Beuve, of drawing nearer to the Empire many shy and clever men whom a direct invitation to the Tuileries would have frightened at first. But she could not have played this difficult part if she had not felt more or less in sympathy with their persons, their works, their experiments. If I judge her right from the letters of Sainte-Beuve, she must be very natural, intellectually speaking very active, and singularly desirous of pleasing her friends.

The part of Sainte-Beuve was more difficult. He had, to be sure, almost from the beginning cast his lot with the Empire; he did not believe either in the honesty or in the intelligence of the old leaders of the parliamentary government; he thought sincerely that the best government for France was an intelligent despotism, a monarch who knew how to speak to the heart of the great nation, who could strike the popular imagination, and form and realize great plans. But sometimes the despotism of Napoleon III. did not seem to him intelligent enough; he found the sovereign too lazy, too disposed to abandon the direction of public affairs to corrupt or stupid ministers. The old Liberal who had been the companion and friend of all the great men of the Restoration, rebelled at times against the Bonapartist; he was anxious to preserve his independence of mind and of judgment. When the 'Life of Cæsar,' by Napoleon III., appeared, he was asked rather peremptorily to review the imperial work, and he answered, "I shall wait till Cæsar opens the door of France to Condé"—a pointed allusion to the seizure by the police of the 'History of the House of Condé,' by an exiled Prince. Sainte-Beuve besides, it must be said, belonged to the "genus irritabile vatum." It must be supposed that the work of literary creation overexcites the nervous system, for men of letters seldom enjoy the quiet serenity of mind of men of the world. There was nothing of the "snob" in Sainte-Beuve, and I cannot agree with those who think that in his correspondence with the Princess he shows occasionally a sensitiveness which is not quite *genteel*. It seems to me that he was not overcareful of his dignity, but he certainly had a painful consciousness that he must preserve it, and that it was not quite safe among the courtiers of the Empire. His remarks on them must have been sometimes too sharp. Did he not say of himself, "I have wounded more men by my praise than others could have done by their censure"?

The Princess is always disposed to heal his wounds, to smooth his ruffled mind. When he finds his work too hard, and complains of the necessity of making a living, like a machine, by writing at regular intervals, she is anxious to procure him a good sinecure—a senatorship. She does not succeed at first, and one of the most angry letters of Sainte-Beuve was written just after a promotion of senators in which his own name did not appear. This letter and a few others have been very severely attacked; but it must be remembered that the two correspondents were on the most intimate terms. I will give you proofs of this intimacy. Writing to the Princess on the 'History of the Empire,' by M. Thiers, Sainte-Beuve says that the historian has done a useful work, but has not known how to use the precious materials of the immense correspondence of the Emperor. "He had," says he, "the very water of the Styx, and he has not tempered his style nor his sword with it. The whole thing will one day be done over. *What is not written will not last.*" Such a severe criticism of one of the most popular books written during the last twenty years was certainly not intended for publication. Speaking of an article of M. de Sacy on Madame de Sévigné, he says: "What a good fellow he is! How fond he is of his authors! Does he not inform us that he would have liked to be imprisoned with Madame de Sévigné? All very well; but would she have liked it?" This was surely not intended to be published.

Here is a judgment on Renan: "There are whole centuries which are dryness and sterility itself. We try nowadays to make them live again, and to find something equivalent to life. Renan is excellent in this sort of work. As for myself, it amuses me without convincing me. I will even say that I prefer naked, authenticated facts, as I can then make my own reflections and constructions; but I should never dare to give these interior dreams as the truth. The necessity of making brilliant newspaper articles, of showing talent every time one writes a few pages, may lead us very far." In another place he says: "Renan speaks admirably, but he is not a charmer; he speaks more to the mind than to the soul, and astonishes by his talent; what is charming in him does not belong to his nature, slightly proud, disdainful, and which has still preserved the folds of priesthood (*des plis du sacerdoce*)." Of 'Salammbô,' the novel of Flaubert, which made so much noise, he says: "I am in Salammbô. *Ouf!*"—which says much in an interjection. Could any portrait be more bitterly ironical than this which reminds one of La Bruyère: "Madame de la R—— [everybody in Paris has recognized the original] is a person who needs indulgence. She has always aspired and never attained; what she thought she had she could not keep. Her mirror has never contributed to her happiness. The always speedy ending of her half-successes has given justification to her mirror. Now she has crossed the line which novelists have always drawn as well as geographers; she has renounced the *rouge*, and adopted devotion"?

Sainte-Beuve, in the palmiest days of the Empire, is never quite reassured. "I look out every day," says he, "for the weather." He had made to himself an ideal of the Empire; he wanted the Emperor to do every day something new, something unexpected, and something good. When this programme was not fulfilled, he suffered. The malady from which he died (the stone) is apt to make men bitter. His intellect, if I might say so, was gay: his character was not. "Marcus Aurelius," he says in the 'Nouveaux Lundis,' "drained his chalice silently. He did not say, like this cynic philosopher, 'I am drunk of men': he thought it. Cicero said it also in his own style, and there came a moment when everything seemed odious to him except death. Cæsar, at the end, no longer took the trouble to defend his life: 'Let them have it if they like.' One arrives at this state of disgust by many roads; it is enough to have lived long and to have seen too much of humankind." He was constantly preoccupied with those invisible forces of opinion which governments generally ignore. "This country," said he, "is not reasonable. The same men who would be so miserable if we went where they push us, and who have already been once betrayed by fortune, recommence their efforts; we are incurable; we deceive ourselves with words. When a word is found which sounds well to the ear and to the imagination, everybody repeats it, and it becomes the cry of the nation: light nation, not safe, and only agreeable."

Nobody better than Sainte-Beuve knew that the revolutionary springs were undermining the soil trodden by the armies of the Empire. His catholic and inquisitive nature had been drawn towards the personality of Proudhon, the socialist. He felt in his own veins the virus which pervaded the nation. He had an almost instinctive horror of priests, speaks to the Princess of "this dry and hideous cardinal" and the "hommes noirs" who are odious to the generous heart of France. He believes in no religion, not even in any political doctrine, in any constitution. He ties the whole fabric of French society to a despot, and in the end he ceases to believe in the despot. Little did he foresee, however, how soon his fears would be realized: his kind correspondent has sold the Hôtel of the Rue de Courcelles, where Sainte-Beuve dined every Wednesday; the Emperor is dead; and nothing remains of the Senate but a contemptuous memory.

Notes.

THE Fifth Annual Report of the State Entomologist of Missouri not only possesses its customary value as a discussion, with illustrations, of noxious, beneficial, and other insects, but is even more calculated for wide circulation by reason of the introductory paper on the relations of entomology to agriculture, with brief instructions for collecting, preserving, and studying insects. The reading of these will doubtless have the effect of sending a good many for further information to Dr. Packard's admirable 'Guide to the Study of Insects.'——Dr. Hepburn, author of a Japanese-English and English-Japanese Dictionary, of which a second edition was printed at Shanghae last year, is now in this country, engaged upon a portable edition, from which the Japanese characters will be omitted. A few copies of the former are for sale by A. D. F. Randolph & Co., 770 Broadway. It contains about 28,000 Japanese terms rendered into English.——A Milwaukee admirer of M. Laboulaye, Mr. W. H. Bishop, publishes at the office of the *Journal of Commerce* in that city a translation of the 'Prince Caniche,' apparently as a labor of love. We have examined it cursorily, and should pronounce it on the whole well done, though needing revision. In the prefatory dialogue, for instance, we note two failures to preserve the original shade of meaning, one slurring over (as, the substitution of "everything" for *milieu*), two important omissions of sentences, and one downright error

(as, "it loves art upon art," for *il n'aime que l'art pour l'art*). In Chapter XX. there are similar omissions; *égoïste* is rendered by both "egotistical" and "selfish," *bonté* by both "goodness" and "bounty"—where "selfish" and "goodness" is the only permissible version; and for "I have you there" (*je t'y prends encore*) we get "I know you now." In spite of this carelessness, the translation is spirited and idiomatic.——A. J. Bicknell & Co. will publish this month 'Church Architecture,' by Frederick Clarke Withers, with designs for twenty-one churches and two school-houses.——A biography of the late Chief-Justice Chase has been for some time in preparation by Judge R. B. Warden.

—The 'Report of Progress, for 1871-72, of the Geological Survey of Canada,' by the Director (Montreal: Dawson Brothers), is of more than ordinary interest, as it contains Mr. Selwyn's journal of his geological exploration in British Columbia, and the report of his assistant, Mr. James Richardson, on the 'Coal Fields of the East Coast of Vancouver Island,' both entirely new fields of investigation for the survey. Mr. Selwyn's journey through the province was undertaken during the summer and autumn of 1871, occupying some four months. His route followed up Fraser River as far as the Thompson, and afterward along the latter stream to its head-waters. He penetrated to the northwest corner of the territory, exploring the region around Cranberry and Moose Lakes, and reaching nearly to the summit of Leather Pass in the Rocky Mountains. Considering the nature of the country, his disadvantages for travel, and limited time, he has brought back a large fund of information concerning the geological features of the country traversed. Mr. Richardson's report is accompanied with a rough map of the coal-fields of Nanaimo and Comox, Vancouver Island, showing the area of coal-measures and workable coal-seams. From the structural and palæontological evidences, he regards the age of the beds as cretaceous, and estimates the entire thickness of the coal formations to be at least 2,500 feet. He also gives analyses of coals from the different mines, and detailed geological sections through the coal-bearing beds. The report is valuable as bearing somewhat upon our own still more important coal deposits of Bellingham Bay and Seattle, on the eastern shore of Puget Sound, in Washington Territory. Mr. Charles Robb has compiled several tables, one for each of the provinces, showing in a concise manner "the results of mining operations during the last three years throughout the Dominion of Canada and the British American Provinces." Not only are the statistics given for the metals, gold, silver, lead, copper, and iron, but also for coal, plumbago, roofing-slate, and phosphate of lime as apatite. The mining of this last mineral for commercial purposes seems to be a growing branch of industry.

—One of the despairs of Shakespeare commentators, or at all events of their readers, has always been the epithet applied by *Mercutio* to Cupid:

> "Young Abraham Cupid, he that shot so trim,"

or, as most of the later editions have it,

> "Young Adam Cupid," etc.

"It is 'Abraham' in all the old copies," say the commentators, "but," add nearly all of them in substance, "it must be changed to 'Adam,' for Abraham means nothing, and evidently *Mercutio* here makes reference to Adam Bell, the famous archer; both he and Cupid shot arrows so trimly that they never missed the mark." Mr. Dyce, however, thinking that "Abraham" or "Abram" of course would not do, and perceiving that "Adam" was about as well authorized a substitute as "William Tell" or "Esau," ventured the conjecture that "Abram" was a corruption of "auburn." "Why, yes," says his followers; "the suggestion is more than plausible; and we at least owe to Mr. Dyce the efficient protection which it must give to the original text." An odd way, it will strike most people, to protect a text that does read "Abraham" by saying that it ought not to read "Abraham," and, on the contrary, ought to read something else. But Mr. Dyce's friends might rejoin to a caviller making this objection that he quotes several passages in support of his plausible suggestion in which "Abraham" is unquestionably "a corruption for 'auburn.'" To show how vast may be the chasm across which the true commentator will lightly throw the "unquestionable" sort of bridge on which to trip dry-shod, we quote three passages where "unquestionably" auburn is corrupted into "Abraham." The first is from a play called "Soliman and Perseda," which bears the date of 1559. It is as follows:

> "Where is the oldest sonne of Pryam,
> That Abraham-colored Troian? Dead."

Now, here surely it is not a solution of our difficulty that we get, but rather unquestionably it is our difficulty over again. The second extract is from a play dated 1602:

> "A goodlie, long, thicke Abram-colored beard."

But this passage is not a solution either. It multiplies our original difficulty by three; what, we are compelled to ask, is this "Abraham-color" which corruptly creeps into one text in 1559; then, thirty or forty years after, creeps into another, keeping out "auburn" in both cases; and finally, seven or eight years later yet, creeps into still another text and with the same result? Mr. Dyce's third reliance is on a passage in Shakespeare's "Coriolanus," act ii. scene 3, where the *First Citizen* objecting again to *Coriolanus* that once he called the multitude "the many-headed multitude," the *Third Citizen* rejoins to him thus:

> "We have been called so of many. Not that our heads are some brown, some black, some Abraham, some bald, but that our wits are so diversely colored."

Here, to our mind, is our original difficulty still further increased, until we are ready to say that, inexplicable as this word "Abraham" may look, there must have been in Shakespeare's time, and before it, a term "Abram-colored" or "Abraham-colored," which was often applied to the hair and beard, and apparently to some very commonly occurring color. Mr. Dyce being thus answered as regards the written authorities cited, may well fall back on the pictorial art, and say that "Cupid is always represented by the old painters as auburn-haired." To this defence the reply would be that "Cupid is not always represented by the old painters as auburn-haired."

—What, then, is a probable or possible explanation of the epithet which the witty and fanciful *Mercutio*, seeking for a nickname for Cupid, applies to the god? His words are as follows. *Romeo* is hiding from him, and *Mercutio* thus laughs at him:

> "Romeo! humors! madman! passion! lover!
> Appear thou in the likeness of a sigh:
> Speak but one rhyme, and I am satisfied;
> Cry but 'Ay me,' pronounce but 'love' and 'dove,'
> Speak to my gossip Venus one fair word,
> One nickname for her purblind son and heir,
> Young Abram [auburn, Adam] Cupid, he that shot so trim."

For a full answer to this question we must refer the reader to "A Shakesperian Excursus" in the *Catholic World* for May. It looks to us as if it were "a more than plausible suggestion," to use Mr. R. G. White's words, and as if we at least owe to its author some sort of "protection to the original text"; for "Abraham" it finds there, and "Abraham" it leaves there, and it leaves the strange term with something like an intelligible—if withal an intricate and ingenious—justification for its existence and position. Very briefly and imperfectly we give the main points of the explanation: "auburn" is a common adjective, and is therefore not a "nickname," which is what *Mercutio* wants for Cupid; "Abram" excellently answers his purpose, for it is a nickname (as in Abraham-men, a term for impostors and sturdy beggars: see "Lear"), and it is also the name of a color; this color is the color of flax or the lightest of sunny light-brown—a color so prized by the painters and the poets; the tree or shrub called "Abraham's balm" is a "kind of withy or willow commonly called *agnus castus* in England, the hemp-tree" (see the definition of *vitex* in the Latin-English Dictionary published at Cambridge in 1693); wigs, so much worn in those days, and from their size so prominent an article of apparel, were commonly made of flax and hemp, and, to some extent, from the resembling fibres of the "Abraham's balm" tree; these wigs were of the color proper to the little god; they were moreover of the cheap, tow sort which a footpad bought to pull for purposes of disguise over his forehead and his own hair. "Young Abraham Cupid," then, is a yellow-headed little impostor. We may add, for our own part, that he is the young "Abraham-man" of whose "painted bow of lath" *Benvolio* speaks in the early part of the festal evening, when he and his friends pause at *Capulet's* door, and he urges his party to go on forthwith into the ball-room with no spoken speech—"no without-book prologue"—from the masters, and no mock Cupid:

> ". . . The date is out of such prolixity.
> We'll have no Cupid, hoodwinked with a scarf,
> Bearing a Tartar's painted bow of lath,
> To fright the ladies like a crow-keeper."

No mock Love, no young Abraham-man, such as *Mercutio* professes later in the night to believe is really the archer who has wounded *Romeo*. In this latter view the color question is wholly disregarded, and Abraham Cupid is merely Cupid the impostor, the Cupid of the masqueraders. It will be seen that here is opportunity enough for research; but there is a *prima-facie* plausibility, we think, in the views here presented, both the more intricate one and the one which we have just hazarded; and in a case so puzzling a *prima-facie* plausibility is not to be despised.

—The news of John Stuart Mill's death reaches us too late for any attempt to estimate his position either as a politician or philosopher. We shall therefore recur to him next week, but must content ourselves now with joining in the general regret over the close of one of the purest and, all things considered, perhaps most fruitful lives of our time. For whatever one may think of Mr. Mill's philosophy, it must be admitted that no one man's influence on the current way of thinking in recent days about sociological questions has been more potent than his. This influence, in so far as it was

intellectual, for reasons we shall give hereafter, has for the last few years been on the decline among the class which first experienced it; but he probably gained every day that he lived in the personal confidence and respect of the thousands of readers in all countries whose minds he had cleared on many of the knottier problems of human existence, and whose hope his cheerful view of human possibilities every year did something to sustain.

—Mr. Herbert Spencer, who is contributing a valuable series of papers to the *Popular Science Monthly* on the study of "sociology," examines, in his April number, some of the difficulties which surround the study growing out of the "patriotic" and the "anti-patriotic" bias. The "patriotic" bias is that which exists in most people's minds in favor of the institutions or the conduct of the particular country of which they are citizens, leading them to take distorted or prejudicial views of facts—views of facts in the history of their own country which may perhaps be diametrically opposed to the views which they take of similar occurrences in the history of other countries. There is nothing very new in this part of the essay except the illustrative examples; but in the account given of the bias of anti-patriotism, there is.

"In England," Mr. Spencer says, "the bias of anti-patriotism does not diminish in a marked way the admiration we have for our political institutions, but only here and there prompts the wish for a strong government to secure the envied benefits ascribed to strong governments abroad. Nor does it appreciably modify the general attachment to our religious institutions, but, only in a few who dislike independence, shows itself in advocacy of an authoritative ecclesiastical system fitted to remedy what they lament as a chaos of religious beliefs. In other directions, however, it is displayed so frequently and conspicuously as to affect public opinion in an injurious way. In respect to the higher orders of intellectual achievement, undervaluation of ourselves has become a fashion, and the errors it fosters react detrimentally on the estimates we make of our social régime, and on our sociological beliefs in general."

This self-depreciation, in some cases, no doubt, is caused by disgust at the "jaunty self-satisfaction" inspired by excessive "patriotism." In others it comes from affectation of a wide knowledge of the world and of "culture." In the remaining cases it is due to ignorance. Passing over those cases in which there is some justification for self-depreciatory estimates, Mr. Spencer takes as an illustration of one for which there is no excuse the disparaging estimate of the part played by England in "discovery and invention." "There is an assertion occasionally to be met with in public journals, that the French invent and we improve. Not long since it was confessed by the Attorney-General that the English are not a scientific nation." The *Times* is also responsible for an intimation that "abstract knowledge" is given the go-by in England. These statements, Mr. Spencer says, can only be accounted for on the supposition that those who make them have a "culture exclusively literary."

—"A convenient way of dealing with this bias of anti-patriotism will be to take an individual example of it," and the example selected is no less a person than Mr. Matthew Arnold, of whose sociological speculations Mr. Spencer heartlessly observes that "the mode of procedure generally followed by Mr. Arnold is not that of judicially balancing the evidence, but that of meeting the expression of self-satisfied patriotism by some few facts calculated to cause dissatisfaction, not considering what is their quantitative value." For example, to reprove the Anglo-mania of Mr. Roebuck, Mr. Arnold comments on the murder of an illegitimate child by its mother, reported in the same paper with Mr. Roebuck's speech—an effective reply enough if infanticide were peculiar to England, or "baby-farming" not common in the neighborhood of Paris. Mr. Spencer asks what Mr. Arnold would think of it were he to take as a "test of Continental culture" the number of murders committed in England by foreigners "within our own memories," and were then to compare the "ratio borne by this number of murderers to the number of foreigners in England with the answering ratio among our own people." Or suppose, as a test of German administration, he were to take the disclosure of Virchow, the leading Berlin physician, "who shows that one out of every three children born in Berlin dies the first year," while the general mortality has been steadily increasing for twenty years. This evidence, Mr. Spencer thinks, would be more to the point than a single case of infanticide in England. Further, suppose French administration were tested by the statistics of mortality in the Crimea—greatly in favor of the English soldier—what would Mr. Arnold reply? Turning from Mr. Arnold's method to some of his specific statements, he first combats the charge that the English are deficient in "ideas," his method being so little like Mr. Arnold's that he is at the pains of going through the whole range of the sciences, and enumerating the recent English contributions to them—a long list, which will do a good deal to convince an unprejudiced person that Mr. Arnold's denunciations of his country must be taken *cum grano*. He also quotes from a number of foreign sources to show that, while Mr. Arnold is lamenting the absence of *Geist* in England, Frenchmen are asserting that there is more *Geist* there than either in France or Germany, and Germans admitting that England "has always been, and is particularly now," rich in scientific works. The peculiarity of this examination into Mr. Arnold's speculations is that it is conducted without any heat or animosity at all, in the interest of pure sociology.

—Mme. Edgar Quinet has published a diary of the siege of Paris, with a short preface by her distinguished husband, in the course of which he says that the five months of the siege were the best in his life, because in that period he "saw the French nature reach its greatest height":

"For the first time I beheld a France without reaction, without subterfuges, without Jesuitism, without servitude. How novel it all was to me! The performance according to the promise; no underhanded manœuvring—the spirit of a great nation hovering over the city; more management—everybody exalted and transfigured; every face radiant with the bursting of bombs; the long falsehood dissipated by the nearness of battle; steel and fire bringing the most hardened back to truth, to lost sincerity; a city which used to be called so frivolous, and which found it had a heart of bronze—inflexible so long as a mouthful of bread was left it; the enemy, which had counted upon disorder, astonished to encounter instead of the petty passions of a people in its dotage the patience, the energy of a new people—Sparta instead of Byzantium."

M. Quinet wrote on the 23d of March. It is probable that he has never read M. Labouchère's 'Diary of a Besieged Resident.' The same phenomena witnessed with different eyes, and with what a different report! Here is what the latter says of the radiant and transfigured fellow-citizens of M. and Mme. Quinet:

"If the thirty-eight million Frenchmen outside Paris are such fools as to allow themselves to be ruled by the two million amiable, ignorant, bragging humbugs who are within it, France will most deservedly cease to be a power of Europe. If this country is to recover from the ruin in which it is overwhelmed, it is absolutely essential that Paris should cease to be its political capital, and that the Parisians should not have a greater share in moulding its future policy than they are numerically entitled to."

As to the "outside" Frenchmen, M. Gabriel Monod, in his 'Souvenirs of the Campaign of the Loire,' had already testified. He saw among them neither the laying aside of frivolity nor the return to "la sincérité perdue"; on the contrary:

"Never had I been so painfully conscious of the incorrigible levity of our national character, or of the strength of those illusions by which so many minds are prevented from grasping the reality in all its deformity, or of that wilful blindness which not only makes the French unable to see the truth and unwilling to speak it, but makes them even detest to hear it."

HALL'S 'EXEMPLIFICATIONS OF FALSE PHILOLOGY.'*

IT is not a little remarkable how many kind gentlemen have undertaken within the past dozen years to lecture us about how we shall talk and write our English speech. There are, for instance—but we forbear to harrow up the memories of our readers, although it were easy to mention half a dozen conspicuous examples in a line. For it is upon the whole a dreary and barren literature, far more assuming and complacent than edifying, and founded on so insufficient a basis of scholarship as to deserve, in great part, the name of "false philology." Our minds have often been filled with impatience, not to say indignation and wrath, at these self-elected guides. And here is a book which is inspired by our own feeling; which attacks the critics of correct English, and exposes and denounces their errors and shortcomings.

Mr. Hall passes unnoticed, or with only a word or two of condemnation, some of those who have most moved our ire—as Alford and his antagonist Moon, Blackley, and Gould. He expends a few trenchant introductory pages on Landor and Coleridge, De Quincey and the London *Athenæum*. But his chief exemplar of false philology is Mr. Richard Grant White, as exhibiting himself in the volume, more than once mentioned of late in these pages, entitled 'Words and their Uses.' The second and revised edition of this work had not yet made its appearance when Mr. Hall undertook to expose its weaknesses; but the exposure will apply very nearly or quite as well to the new as to the old form of it, for we have not observed that the alterations recently made affect any of the points criticised. More than one additional revision may be made, we think, still leaving a plenty of matter for adverse criticism. Mr. White's dogmas and semblances of arguments have met with many severe answers, and from diverse points of view; his philological knowledge, as to the history of English words and forms, has been made the chief subject of one formidable attack; his ideas of general grammar, of another; his command of English authorities, and the soundness and good taste of his decisions on disputed points of usage, of yet

* 'Recent Exemplifications of False Philology. By Fitzedward Hall, M.A., Hon. D.C.L. Oxon.,' etc. New York: Scribner, Armstrong & Co. 1872. 12mo, pp. 125.

others; and it is in this last direction that Dr. Hall's criticisms expend themselves. They are throughout pungent and able, and they are founded on a wide acquaintance with English literature, a philological cultivation, and an acuteness and penetration to which his antagonist can make no pretence.

Mr. White is, however, on his own showing, pre-eminently a man of no pretence. In the new Preface to which he directed the other day our halting attention, he reiterates and emphasizes his former assertion that he is no scholar, and least of all that silly and stilted pedant which he defines a "philologist" to be. As for "usage" in language, he denies its value and spurns its authority, even adding a chapter to strengthen the misapprehensions on this point which he had disclosed and urged before, and setting up as his ideal of a word which has its own *raison d'être* in itself and needs no support from usage to make it good English, that bold venture of Lowell's, *undisprivacied*—a word easily pardonable to a genius like Lowell, but very far from being a safe model for imitation. He thus clears the field of everything which others rest upon as the grounds of argument, and proposes to be governed in his decisions only by "reason and taste." Now what these qualifications may be, as distinguished from those of which other language-critics avail themselves along with and by the aid of the philological training and acquaintance with English usage which he contemns, we are somewhat at a loss to see. Nor does it appear in the volume what they are; it is plain enough there that the author brings up every particle of philological knowledge that he has, and that his citations of English authorities are not a whit narrower than his reading allows. There is no such thing as taste and reason absolute in language; every case of doubtful propriety requires to be discussed on the foundation of history and usage, of analogy and adaptedness; and the true scholar differs from the make-believe only in the sufficiency and solidity of this necessary basis. If Mr. White had only his prejudices to explain and recommend to us (as, indeed, in many cases he has nothing better), there was no reason for his telling us so long a story. In these days of philological light and knowledge, no man has the right to come forward and lecture the community on the proprieties of speech, and then try to creep away from adverse criticism under cover of the plea that he is "no philologist": the plea itself amounts to a confession of judgment against him.

The main alteration made in this new edition of Mr. White's work is by the addition of the chapter already referred to, in which the author defends at greater length his old dogma that usage does not govern language. To our mind, it only illustrates anew his unclearness of thought upon the subject; in fact, usage does govern language, and absolutely; all that his counter-pleas mean is that questions of linguistic propriety may remain open a long time; that no partial usage, on the part of whatever class, avails to settle them; and that usage is fluctuating, and every man has the right to open the question in regard to any particular item of usage and get it changed—if he can.

Along with this, the most striking weakness of the book is perhaps its abhorrence of the element of synthetic form in language, and its assumption that reason and logic belong only to analytic expression, like that which forms the main part of English speech. *Amatur* and *amaverit*, as compared with *he is loved* and *he will have loved*, seem to him well-nigh barbarous; he looks down with a kind of pitying contempt upon the wealth of Greek conjugation and declension; and he extols to the skies his native language as "the grammarless tongue." All this, again, is the merest prejudice; we cannot call it precisely discreditable to Mr. White, because, by his own estimate, he is no scholar; it would be so if he were one. We have not noticed that he objects to any of the abundant remains of synthetic formation which still constitute the nucleus and the strength of English grammar; that he proposes, for example, to say *he come* instead of *he comes* and *he came;* his "taste and reason" approve just what English possesses, no more and no less; he professes the comfortable philosophy "whatever is, is right"—wherein he seems to us to trench dangerously near upon the doctrine he so stoutly opposes, that usage makes propriety in speech. How carelessly he can think and write about English grammar is shown by the fact that he ignores the form *thou lovest* as a part of English verbal inflection, and actually, in more than one place, declares it to have been lost from use by the same process of simplification which has rid our language of the Anglo-Saxon inflections in general. We had looked to find that palpable blunder corrected in the second edition; but it still stands in black and white on the pages where it stood before, although we have seen the author's attention called to it in criticisms of the volume.

Mr. White, however, is not absolutely inaccessible to instruction from his critics: Dr. Hall's elaborate refutation of his argument against *is being*, published in *Scribner's Monthly* a year ago (the subject is therefore only alluded to, not reargued, in the present brochure), has been so far taken to heart by him that he now (p. 337) declares the phrase to have begun "about seventy or eighty years ago," instead of, as in the first edition, "about fifty years ago, as I infer," to distress and torture every tasteful and reasonable friend of correct English. He might well, we think, have given Dr. Hall credit for suggesting this alteration of date, particularly as he does not draw an additional particle of profit from the counter-argument. This whole matter is thoroughly characteristic of Mr. White. His "taste" is offended by the phrase *is being done* and its like, and he denounces it without stint. So far, no one can object; a well-known rule forbids us to take up the cudgels against him upon that ground; perhaps we ourselves go a certain way in agreement with him, only that we are a little ashamed of our repugnance, knowing that it is in part artificial, the result of reflection, and fearing that it is no better than squeamishness. The average educated and cultivated English speaker, we believe, uses the phrase without suspecting that there is anything wrong about it, unless some purist has been spoiling his simplicity. Take as an example Mr. Earle, author of a stout volume on 'The Philology of the English Tongue': upon his mind (see the *Nation* for March 7, 1872) has never dawned a sense of the enormity of *is being*. And when it has come to that, the fight might as well be given up; the new locution has won its place in the language. But, not content with pronouncing against it from the *cathedra* of taste, Mr. White, according to his usage, cannot resist the inclination to prove that he has "reason" also on his side, and so argues the question through a whole chapter of thirty-three mortal pages: and this is his mistake; it is all merely a long tirade, a reiteration of "I don't like it," disguised under a variety of forms; sound learning and judgment and reasoning are alike wanting in the discussion. The author has recently professed in our pages that he found nothing in Dr. Hall's arguments which he had not already fully considered and rejected; but to our less prejudiced eyes (as we think them to be) his adversary is in the right throughout. Mr. White stigmatizes the locution in question as the fabrication of a pedant, adopted and propagated by pretentious fools; far from this being the case, it is as natural and legitimate a step forward in the development of English expression as any that ever was taken: it is simply the supplying of a corresponding passive to our continuous active tenses. *I do* a thing, and *it is done;* but the thing that *I am doing* seems to require that I describe it as *being done*, and I say that *it is being done*. This is distinctly pointed out by Dr. Hall, as it had been by others: if Mr. White cannot see the point, his perspicacity is not to be envied. Further, Dr. Hall shows that *is being* is no more a senseless repetition, like *exists existing*, than *has had* is a senseless repetition, like *possesses possessed;* and if *ens edificatus est* is bad Latin, so is also *edificans est*—and so on. We cannot deny a certain kind of "reason" to Mr. White in that in his second edition he buries these adverse arguments under the profoundest silence.

If, then, Dr. Hall imagined that his criticisms would have any real effect on his antagonist, he has probably by this time seen his error. With the reading and judging public, the case will doubtless be different. Which of the two shows the keener mind, and the wider and deeper knowledge, no one who reads both volumes will for a moment question. Without claiming the title, or putting forward any pretensions either to "scholarship" or to absolute "reason" and infallible "taste," Dr. Hall is really a scholar, and a profound one, known as such in three continents; for his contributions to Sanskrit and other Oriental learning have been a credit both to America, the land of his birth, and England, the country of his adoption, in India, the scene of the larger share of his life's labor. Not deeming Mr. White a foeman altogether worthy of his steel, we welcome his present production especially as an earnest of the greater work on "Modern English" which he announces as in preparation, and which we hope to receive from him within no long time, sure that it will be a valuable contribution to the knowledge of our native tongue.

THE HYGIENE OF BOAT-RACING.*

ON the 10th of June, 1829, the first English University boat-race was rowed over the "Henley" course. From that time to 1869 (inclusive) twenty-five races were rowed, and it is on statistics with regard to the health of the men who composed the crews in these twenty-five races that Dr. Morgan's conclusions are based. The total number of oars Dr. Morgan found to be 294, of whom 255 were alive at the end of the year 1869. Some idea of the care with which he has conducted his enquiries may be gathered from the fact that, out of these 255, scattered over all parts of the globe, he

* 'University Oars: Being a Critical Enquiry into the After-health of the Men who Rowed in the Oxford and Cambridge Boat-Race from the year 1829 to 1869, based on the Personal Experience of the Rowers themselves. By John Ed. Morgan, M.D., M. A. Oxon., F.R.C.P., late Captain of the *John* + (Coll. Univ.), Physician to the Manchester Royal Infirmary, author of the 'Deterioration of Race,' etc.' London and New York: Macmillan & Co. 1873.

has succeeded in obtaining letters from 251; and, in the case of the four men who have not answered the letters addressed to them, the necessary information has been supplied by their fellow-oarsmen. Dr. Morgan has also succeeded in getting detailed information as to the causes of death in the cases of the thirty-nine men who were not living at the end of the year 1869. It will be gratifying to all rowing men, as well as the public, to know that the results of these enquiries show, as conclusively as the nature of the subject permits, that college boat-racing, far from being a dangerous, is, when pursued under the proper conditions, a healthy sport. Dr. Morgan's statistics show, indeed, what any one might have anticipated, that racing may in certain cases be dangerous to men who are in delicate health; but this is not a peculiarity of racing: it is equally true of boxing, fencing, and gymnastic exercise. It would be interesting, by the way, to obtain statistics as good as Dr. Morgan's as to the effects of this last kind of exercise on the health.

To consider the deaths first: we find that, of the 39 men who had died before the end of the year 1869, fever had carried off 11; consumption, 7; other forms of chest disease, 2; accidental causes, 6; heart affections, 3; disease of the brain, 2; inflammatory attacks, 2; general paralysis, 1; calculus, 1; erysipelas, 1; Bright's disease, 1; cancer, 1; lupus, 1. Of all these, the only deaths which can in any possible way be traced to the effects of rowing are the 12 caused by diseases of the lungs and heart. For the purpose of determining whether this number is larger in proportion to the total number of deaths than the ordinary ratio in civil life, Dr. Morgan turns to the tables of the Registrar-General, and finds that in the seven years from 1848–1854, which afford fair average data for purposes of comparison, 40 per cent. of the deaths of males between the ages of 20 and 60 are ascribed to diseases of the lungs, 28·9 per cent. being due to consumption, 11·2 to other forms of chest disease; among the University oars, on the other hand, 17 is the percentage for consumption and 5 for other forms. With regard to heart diseases, the percentage among the University oars is 7·4. There is some difficulty in comparing this with the percentage furnished by the reports of the Registrar-General, because in the last fourteen or fifteen years there has been a marked increase in the general percentage of heart disease in England and Wales, 5·2 per cent. being the average for 1848–1854, and 8 per cent. for 1859-1869. With the conclusion derived from these statistics by Dr. Morgan no one, we imagine, will be inclined to quarrel:

"The reports, then, from which I have just quoted, sufficiently show that, as regards heart complaint, there is little appreciable difference in the mortality observed among University oars and that which prevails amongst other classes of men at a corresponding period of life. It may be urged that the deaths among the rowers are not sufficiently numerous to afford any very conclusive standard of comparison. Nevertheless they are, I am disposed to think, amply sufficient, when taken in connection with what has been said regarding the longevity of the rowers, to show that those hecatombs of young Englishmen who, we are told, sacrifice themselves annually on the altars of our popular pastimes, exist rather in the timid brains of alarmists than in the stern tables of statistical investigation."

"What has been said regarding the longevity of the rowers" is this: Dr. Morgan makes a calculation for the purpose of discovering how many years each crew, and each individual member of each crew, are likely to survive the race, assuming that each man was, at the time he rowed, 20 years of age, and comparing their "expectation of life" (derived from Dr. Farr's English life-tables) with the number of years actually lived by those oars who are now dead, and the number of years actually lived by the oars now living plus the number of years which, according to the tables, they may still expect to live. For example, of the eight men who pulled in the Oxford 1829 crew, one died in 1856, one in 1863, and one in 1868, their average age being 53. According to Dr. Farr's tables, the life-expectation of a healthy man at 20 is 40 years; *i.e.*, he may expect to live to the age of 60. These three men, therefore, fell short of their calculated expectation. Against this deficiency, however, we must offset the years which the five healthy survivors at the end of the year 1869 were *likely* to live. Assuming their ages to be 60 years in 1869, each one would be entitled to 14 years more, the value of the five lives together being 70 years. The result of this calculation is that "the life of the crew may be set down at 370 years; but the calculated value of the eight lives" (at 20) "would not exceed 320 years, hence this crew may be considered likely to live 50 years longer than eight ordinarily healthy men, each man, in fact, living on an average for about 46 years instead of 40 years after the race." It will be noticed that these calculations are based on the supposition of health; but this gives Dr. Morgan no trouble, because in cases where there is ground for believing that any of the survivors of a crew are in an unsound condition, he makes a deduction from the life-expectation—and as he knows, as well as such a thing can be known without medical examination, the physical state of all the survivors, he is able to ask his readers to place a good deal of reliance on the calculation. The general result is that each individual who rows is likely to survive, instead of the 40 years allowed him by Dr. Farr, 42 years, and the "balance" is still in favor of rowing if, instead of taking Dr. Farr's tables, we take the tables of insurance offices "which profess to accept none but select lives," and even "when, in addition to requiring this high rate of years, we become still more exacting, on the ground that nearly half the rowers are clergymen (whose lives are somewhat better than those of less favored mortals)."

Out of the 294 survivors, the minute enquiries of Dr. Morgan show that 115 were benefited by rowing; 162 were in no way injured; while 17 refer to themselves or are spoken of by their friends as having suffered. When we consider that in some of these 17 cases the connection between their injury and rowing is very difficult to trace, and indeed is in almost every case rather a concession to those who believe in the evil effects of the exercise than a legitimate inference; and that, in some of the clearest cases, it is just as likely or more likely indeed that the men injured themselves by getting into a boat when they were not in a fit condition to row, it is fair enough to say that the general result is strongly in favor of the sport. As an instance of the difficulty of obtaining reliable evidence of injury, Dr. Morgan mentions the case of one of the "injured men," who, according to the statements of a near relative, fainted after the University Race, and could not be restored for two hours. Strange to say, the other members of the crew have not the slightest recollection of the accident. Eleven years after this remarkable fainting-fit he was taken suddenly ill and died in a few days.

It will be noticed that these statistics of Dr. Morgan's are confined to a narrow field, for college boat-racing is not an old enough sport to admit of very extended enquiries. It cannot, although the first race was rowed in 1829, be said to have really begun before 1836, when the second race was rowed; but this much may be said to be proved, that the sensational articles which four or five years ago appeared on the subject in the newspapers, no less than the sensational descriptions of the dissolute but supernaturally athletic Stroke with which we have been made so familiar, are utter nonsense, and that any ordinarily healthy man may take to rowing as an exercise with a great probability of benefiting his constitution by it, increasing the capacity of his lungs, enlarging and toughening his muscles, and invigorating his whole system. At the same time, Dr. Morgan calls attention to the fact that there are certain kinds of constitutions which cannot stand the strain, and gives some advice on the subject which, as he is an experienced physician as well an old oar, may well be considered invaluable. The reader will find, besides the conclusions reached by the author, all the facts on which these conclusions are based.

THE DEPTHS OF THE SEA.*

THE 'Depths of the Sea' lays before the general public an account of the proceedings and results of the several expeditions undertaken by the English Government, from 1868 to 1870, as their share of similar explorations directed by the American and European governments during the last thirty years, having for their special object a careful examination of the bottom of the ocean. It is indeed most gratifying to scientific men to trace the development of the interest which has gradually grown up regarding the ocean, starting with the great surveying and exploring expeditions of the last century, accompanied, it is true, with a staff of scientific men, but in reality all having some ultimate political object, and culminating with the expeditions of the present time like those of the *Hassler* and of the *Challenger*, where the supreme direction is left to the scientific staff, and which were fitted out without having any practical result in view. Governments have only begun to learn how dependent they are for their welfare and daily material existence upon the work of dreamers and enthusiasts, so generally denounced by their more practical brethren. It is one of the most cheering signs of the times to have great scientific expeditions fostered by governments so long as private individuals have not yet been educated to take that out of their hands, as we trust they ultimately will do.

The task of reporter of what the English have accomplished could not have fallen into better hands. Professor Thomson is not only an able zoölogist, he is also an excellent botanist and geologist, and his discussion of the physical phenomena bearing upon the general questions of physical geography shows a good acquaintance with the theoretical side of its problems. He has, so far as the Gulf Stream is concerned, adopted the view of oceanic circulation held by the great American authorities, who have done so much

* 'The Depths of the Sea: an Account of the General Results of the Dredging Cruises of H.M.SS. *Porcupine* and *Lightning* during the Summers of 1868, 1869, and 1870, under the Scientific Direction of Dr. Carpenter, F.R.S., J. Gwyn Jeffreys, F.R.S., and Dr. Wyville Thomson, F.R.S. By C. Wyville Thomson, Regius Professor of Natural History in the University of Edinburgh, and Director of the Civilian Scientific Staff of the *Challenger* Expedition.' With numerous illustrations and maps. New York and London: Macmillan & Co. 1873.

to elucidate the nature of this most extraordinary "physical phenomenon of the northern hemisphere," in opposition to the views of his colleague, Dr. Carpenter, who, himself not a physicist, has been led to adopt and advocate again the antiquated and theoretical views of Maury. In an excellent introduction, Prof. Thomson discusses a few of the more interesting points in biology affected by the exploration of the ocean—the bathymetrical limits of life, the geographical distribution, the question of specific centres, Forbes's investigations and theories, the bearing of a theory of evolution upon the idea of species and the laws of their distribution, and the circumstances most likely to affect life at great depths. All this is done with the utmost impartiality and fairness; we cannot accuse him of imitating the example of the more enthusiastic German supporters of the doctrine of evolution, of stating so frequently as they do their theories as well-recognized facts.

In successive chapters, we are carried through a most charming narrative of the cruise of the *Lightning* and the two cruises of the *Porcupine*, and it is no fault of the narrator if the reader does not share his enthusiasm as the dredge is emptied of its interesting contents upon the deck. We join the dredgers in their delight at first seeing the wonderful Holtenia, a remarkable siliceous sponge; the interesting Calveria, a representative of mailed sea-urchins of former times; the gigantic Nymphons and Arcturus, first known from the abyss of the Spitzbergen Seas; the countless little worms and starfishes; and, last and not least, the ooze of the Atlantic filled with its coccolithes and coccospheres. It seems uninviting enough, yet its microscopical examination has furnished the means of explaining the possibility of existence of so many highly organized animals at such immense depths, and has even formed the basis of many a fanciful and more or less poetic theory of the origin of life. And when the dredge brought up the few fixed crinoids which are among the most cherished treasures of the expedition, we can almost imagine the dredgers back in geological times, and to have brought up a bit of the Jurassic period, when stone-lilies without number must have filled the seas of Great Britain.

The narrative is followed by an account of the appliances in use for sounding, dredging, and observing the temperature at great depths. We see the gradual growth of the dredge as first used by the old Danish naturalist, O. F. Müller, till it is adapted to its present form and can be used successfully to a depth of over two thousand four hundred fathoms, or three English miles! It is a sufficiently simple apparatus, yet to the biologist it promises as extraordinary results as those obtained for the physical sciences by the spectroscope. Standing as we do now on the mere threshold of this line of investigation, there seems no limit which we may not attain. It is not too much to say that when the depth of the ocean has been as carefully surveyed as the surface of the earth, and its secrets have been revealed to us, not from a few square yards only, as at present, we may glance back at the early history of life upon our planet as easily as the spectroscope analyzes for us at the present day the materials of the other suns outside of our own system.

Although from time immemorial certain species of fish and crustacea have been caught from a depth of over three hundred fathoms on the northern coasts of Europe and America, we go back as far as 1819 to the Arctic explorations of Sir John Ross for a few isolated facts, which have little by little led to our present knowledge of the existence of a most varied and wonderful fauna at great depths. Sir John Ross, and subsequently Sir James Ross, brought up on sounding-lines animals from depths of over eight hundred fathoms. As early as 1846, the Swedes sent several expeditions to Spitzbergen, and brought home extensive collections from a depth of over fourteen hundred fathoms, and it is the discussion of the results of these collections which enabled Lovén to lay the foundation of the theory that beyond a certain depth the bottom of the ocean is peopled by a fauna extending from pole to pole—a theory which each additional fact seems to corroborate, and which is strikingly illustrated by the existence of identical species in the deep waters of Norway, Florida, and the east coast of Brazil. The Swedes have kept up their explorations to the present time, and it is their example, that of Edward Forbes, Wallich, and of the elder and younger Sars, which started the great interest we now witness in such explorations. To the United States Coast Survey we owe the only systematic attempt made thus far to map out satisfactorily a large tract of the bottom of the sea, and the explorations of the Gulf Stream undertaken by the Coast Survey years ago, and now carried on by Professor Peirce, will remain a monument to the former Superintendent of the Survey, Professor A. D. Bache. The little we know thus far from these few explorations has revolutionized many of our former biological conceptions; and the readers of the chapter on the continuity of the chalk—that is, the biological connection of the cretaceous period with the present time, as maintained by Thomson—can form from it an idea of the vista which has been opened to naturalists by explorations of the depths of the sea.

It is a pleasure to read a book printed in such large type upon excellent paper and so well illustrated. The only fault we are inclined to find with the 'Depths of the Sea' is the increase of the bulk by the numerous appendices, "pièces justificatives," which have materially heightened the cost, and might have been omitted for the same reasons which cut off the more technical lists of the inhabitants of the deep. Too great stress is laid upon the results obtained by the English expeditions; the chronological sequence of the earlier explorations which have definitively settled the existence of animal life at immense depths is not sufficiently dwelt upon, and an ordinary reader would be apt to conclude, after reading the narrative of the part the English have taken in this investigation, that previously to the cruises of the *Lightning* and *Porcupine* the question of the existence of animal life beyond a certain depth remained much as it was in the days of Edward Forbes. This is of course unintentional, for no one knows better than Dr. Thomson what others have done, and it was perhaps unavoidable that such an impression should be left in a narrative distinctly intended to give to the English public an account of the cruises of the *Lightning* and *Porcupine*, and written in the midst of duties entailed upon the chief of the *Challenger* expedition, preparatory to sailing on a three years' cruise.

The Romance of the Harem. By Mrs. Anna H. Leonowens. Illustrated. (Boston: James R. Osgood & Co. 1873.)—Mrs. Leonowens's tales from the City of the Nang Harm or Veiled Women indeed deserve the name of romances, so wild and strange are they in incident and atmosphere. She, however, avouches their truth in every instance and in all details, except that the names of some of the persons figuring in them she has changed or suppressed. Ascending the great river Meinan, perhaps at the period of its annual Nile-like overflow, the traveller approaching Bangkok sees on his right a circular island inclosed within two parallel walls. In the space between the outer of these and the inner are the Royal Exchange, the Mint, the High Courts of Justice, the principal temples, the prisons, and the places of public entertainment, interspersed with fantastic gardens and pleasure grounds. It is the court quarter of "the Venice of the East." The inner wall which we have mentioned encloses the City of the Nang Harm—the harem of the Siamese King, with its royal palaces, its barracks full of Amazons, its female judges and officers of government, its thousands of female slaves plying the various mechanical trades, its hundreds and thousands of the wives and mistresses of the king—a city of women into which no man is suffered to enter except the king himself and the Buddhist priests who are every morning admitted under guard, in order that the inhabitants may have an opportunity to perform the sacred duty of alms-giving. Of this strange town the permanent population is estimated at about 9,000; and it is of the life inside its walls that Mrs. Leonowens, who was for a time the English teacher of the young prince, undertakes to treat in this volume.

She has succeeded in collecting from the lips of the actors in them half a dozen or so of Oriental tales, concerning most of which it is not too much to say that they are interesting, and that one or two of them, in poetical and tragical interest, are hardly surpassed by the most admired love-stories in the literature of the world. Mrs. Leonowens is not a Boccaccio, but the story of the voluntary slave girl, Boon, and her mistress, Choy, need not much fear a comparison with the story of the falcon, or of the pot of basil, or of Tancred and Sigismunda, or of Griselda. It is something as follows, and as we make but a brief and misrepresenting abstract of it we may remark, *apropos* of Mrs. Leonowens's claim to be considered a Boccaccio in literary grace and skill, that in this case she took down the language itself of the only survivor of the lamentable transaction she describes, and that the words have in some places very much of the force of deep and real feeling: Waiting one day in her school-room, the Englishwoman is approached by a young girl of twenty years, who presents her with a flower, and whose character is thus touched upon: "It was a common wild flower that grew up everywhere in great profusion, making a lovely carpet, blossoming as it did in every nook and crevice of the stone pavements within the palace. It was just like her to snatch up the first thing that attracted her, and then to give it away the next moment." This wayward pupil, by name Choy (surfeit), whose face wears a careless and almost wicked expression, abruptly makes known her intention of leaving off all her studies. She will learn nothing more; for that matter, she wishes rather to die, to kill herself, than live any longer. The teacher attempts to soothe her, but without success, until the girl determines suddenly to tell her friend the story of her disgrace and misery. She was the younger sister of the "first wife," Thieng, and from the age of ten had been set apart for the service of the king. She received the usual education of such girls, being taught music, dancing, poetry, and acting, and by-and-by was very expert, especially in her theatrical duties.

She had but one defect; her face was slightly marked by the small-pox, but this blemish was not noticed when she was fully arrayed for the stage, where one day she completely captivated the king. This, however, she had been able to do, chiefly because the impassioned ardor with which she portrayed the love of the heroine, Queen Théwâder, and which inspired the king with a like ardor, she owed to her having but an hour before and at first sight fallen violently in love with a young nobleman of the royal suite. He, with another, had been ordered to honor the actress by leading her chariot, and she had found opportunity of speaking to him. Becoming at once the favorite of the king, she is, nevertheless, restless with the tumult of her passion for the young nobleman, and detests her master, who is more infatuated than ever. By-and-by, from a new slave-girl, Boon, who has recently entered her service, she learns the name of the nobleman. She embroiders the letters of it upon a silken amulet, which she wears about her neck, although she knows that she lives in the lion's den, and she is never weary of devising schemes to communicate with him. The slave-girl is dutiful and enterprising, and soon Choy is able to send a letter with the words, "I remember." She receives another with the words, "I love much." A third and a longer letter goes in charge of Boon; but one of the many rough drafts of it is captured by the chief judge, and Choy and Boon find themselves in chains, and in the hands of the "Mother of Death," or female executioner, awaiting trial. It is here that the serious interest of the tale begins. As the women lie together in the same dungeon, Choy discovers by the fervor of Boon's reply, when asked if she has betrayed the name of the lover, and afterwards by the girl's own acknowledgment, that she is none other than this lover's wife. Seeing her husband pining and discovering the cause, she resolves to make the sacrifice, which he is too weak and too infatuated to decline.

"I was so sorry for Boon," said Choy to Mrs. Leonowens, "that I had not the heart to reproach her. I crept closer, and, laying my hand upon her bosom, we mingled our prayers and tears together. And I marvelled at the greatness of the woman before me."

Torture is the Siamese method of dealing with refractory witnesses or suspected criminals, and on the following day, Boon being obstinate in denying all knowledge of any guilt, was bastinadoed cruelly. Still refusing to accuse any one as the person for whom the letter was meant, she was publicly whipped, and finally was submitted to the infliction of the thumbscrew. At night the two women were carried back to the dungeon, Boon on a litter, and covered with blood: "She hardly needed comfort, her joy being great that she had not betrayed her husband." On the next morning the order of proceedings was the same as on the day before, the bastinado, the whip, and the thumbscrew being applied, and with the same result. It now was Choy's turn. "Boon's eyes fixed themselves upon me," she said, "with an intensity that made me shiver." Choy, frightened, hesitated and prevaricated, but the evidence of her sister, who had no opportunity to confer with the accused, exposed her falsehoods. She was then tied up and lashed. But though she was covered with blood, she held firm, and kept her secret. The bastinado, also, failed to subdue her, for she felt the eyes of her slave-girl upon her; but the torture of the thumbscrew broke her down, and calling on the wretched Boon to forgive her, she betrayed the name of her lover.

Boon and Choy were sentenced to be quartered; her husband, whom Boon made one last effort to save, was sentenced to be cut to pieces, and the bodies of all were to be given to the dogs. This sentence was carried into effect in the case of Boon and her husband, but the king was induced by the British Consul, Sir R. H. J. Schembergk, to spare the life of Choy, who lived on neglected, or remembered only to be despised—cursed with the memory of her own weakness, and the courage and self-sacrifice of the unhappy Boon, of whom neither her owner nor her husband was worthy.

Several other stories are given, which are of a similar character, as, for instance, that of Tuptim and the young Brahmin, and their barbarous murder; of the Rajpoot and his daughter; of the Laotian slave-girl; of the wife of Naikodah—all revealing the dark places of the earth, full of the habitations of cruelty, but revealing also some of the greatest and brightest qualities of human nature.

The more commonplace side of life in the palace Mrs. Leonowens's former book gave to the public; and, apart from these romances, there is not much in the present volume. Here, however, is one bit of school experience. Hidden Perfume's comparison is very true to the life:

"One day the steamer *Chow P'haya* brought his majesty a box of ice from Singapore, and I obtained some for an object-lesson. The women and children found no difficulty in believing that it was water frozen; but when I went on to tell them about snow, the whole school became indignant at what they considered an evident stretch of my imagination, and my dear simple friend, Hidden-Perfume, laid her hand gently upon my arm, and said, 'Please do not say that again. I believe you like my own heart in everything you have taught to me, but this sounds like the story of a little child who wishes to say something more wonderful than anything that was ever said before.' So my lesson of the snow proved a stumbling-block to me for several days; my pupils' imaginations had taken alarm, and they could not be brought to believe the simplest statements.

"I informed his majesty of my dilemma; he came to my aid, and assured the royal children that it was just possible that there was such a thing as snow, for English books of travel spoke frequently of some phenomenon which they designated as 'snow.'"

Betsy Lee, a Fo'c's'le Yarn. (New York: Macmillan & Co. 1873.)—This little poem first appeared in *Macmillan's Magazine*, where it attracted the favorable notice which it very well deserves. It is a "dialect poem," and we suppose we are not mistaken in pronouncing the dialect to be the seafaring variety of the Manx-English. The poem certainly deals with localities in the Isle of Man; and as certainly, the only land variety of Manx-English with which we have ever had any acquaintance differed somewhat from the speech here given. We confess, however, in justice and in deference to our author, that our solitary Manxman labored under a vehement suspicion of being in reality a son of another and larger island, neighboring to the Isle of Man and lying to the westward of it—Erin, in short—who for reasons of his own had determined on denying the sod of his nativity and on giving himself out as of a land and lineage not truly his own.

The spokesman in 'Betsy Lee' is an elderly sailor who has promised his younger shipmates a yarn:

> "I said I would? Well, I hardly know,
> But a yarn's a yarn; so here we go.
> It's along of me and a Lawyer's Clerk,
> You've seen mayhap that sort of spark!"

The story-teller had in his youth been in love with a girl whom he had known since childhood and who loved him in return. He followed the sea as a common sailor, yet as her father was but a poor gardener, the young man's suit prospered very well until the old man, falling heir to a small property, has some dealings with a lawyer, whose clerk falls in love with Betsy. The sailor, naturally despising this landsman—

> "With a mossel of hair on the tip of his chin"—

commits upon him an assault of a somewhat technical character, but still an assault, and highly insulting. Bad blood is thus bred between the two men, and evil results follow, greatly to the detriment of poor Jack. Of these we will say no more, the interest of the poem being partly in the story, we dare say, as well as partly in the bits of poetry and the pictures of manners. Of the poetry, a good specimen is the passage following, in which the old man looks back to the days when he and Betsy paddled and played abo the beach:

> "Now the beauty of the thing when childher plays is
> The terrible wonderful length the days is.
> Up you jumps, and out in the sun,
> And you fancy the day will never be done:
> And you're chasin the bumbees hummin so cross
> In the hot sweet air among the goss,
> Or gath'rin blue-bells, or lookin for eggs,
> Or peltin the ducks with their yalla legs,
> Or a climbin, and nearly breakin your skulls,
> Or a shoutin for divilment after the gulls,
> Or a thinkin of nothin, but down at the tide,
> Singin out for the happy you feel inside.
> That's the way with the kids, you know,
> And the years do come and the years do go,
> And when you look back it's all like a puff,
> Happy and over and short enough.
>
> . . . . . .
>
> Now, Bob! are you at it again? all right!
> Just somebody give the fellow a light!"

The last two lines relate to the more or less frequent interruptions caused by irreverent laughter and nudging from the young fellows when the story-teller now and again becomes "soft." Of the common run of the work, as distinguished from its more poetical parts, and of the narrator's manner, the following lines may serve as an example;

> "Well, Divil or no, the *Hector* come home;
> We raced that trip with the *Flying Foam*,
> And up the river the very same tide,
> And the two of them berthed there side by side;
> A tight run that, and the whole of it stuck
> In the paper—logs and all—good luck!
> And the captain as proud, and me like a fool
> Spreein away in Liverpool—
> And lodgins of coorse, for I never could stand
> Them Sailors' Homes, for a man is a man,
> And a bell for dinner and a bell for tay,
> And a bell to sing and a bell to pray,
> And a bell for this and a bell for that,
> And "Wipe your feet upon the mat!"
> And the rules hung up; and fined if you're late,
> And a chap like a bobby shuttin the gate—
> It isn raisonable, it isn:
> They calls it a Home, I calls it a Prison.
> Let a man go wherever he chooses!
> Ould mawther Higgins' the house that I uses—
>
> . . . . . .
>
> There's some comfort there, for you just goes in,
> And down with the watch and down with the tin,

And sleepin and wakin, and eatin and drinkin—
And out and in, and never thinkin—
And carryin on till all is blue,
And your jacket is gone and your waistcoat too.
Then of coorse you mu-t cut your stick,
For the woman must live, however thick
You may be with her: and I'm tould there's houses
Where the people'll let ye drink your trousis;
But Higginses! never! and it isn right!
Shirt and trousis! honor bright!"

As we say, we must leave others to speak of the accuracy with which the peculiar dialectis employed, and also of the accuracy of the portraiture, though this latter commends itself to credence by internal evidence, as it is called. We take both to be praiseworthy, for there is a very convincing appearance of naturalness and simpleness about almost every one of the lines; very few of them have the least look of having been imported into the "yarn" by a more literate or literary person than the supposed narrator. Anybody who likes poetry may spend a pleasant half-hour over 'Betsy Lee' and make the acquaintance of a fresh local flavor.

The Sixth Great Oriental Monarchy; or, The Geography, History, and Antiquities of Parthia, collected and illustrated from ancient and modern sources. By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford, and Canon of Canterbury. (London: Longmans, Green & Co.; New York: Scribner, Welford & Armstrong. 1873. 8vo, pp. 458.)—Professor Rawlinson has done a good work in directing the attention of English scholars to the part taken by the Parthian monarchy in the history of the world. A separate treatise, however brief, impresses the imagination more forcibly than an equally elaborate treatment in connection with general history, and here the main thing was to impress the imagination. Everybody knows that Parthia was the great rival of Rome, that Crassus was defeated by the Parthians with great slaughter, and that Phraates IV. put to death his twenty-nine brothers, but very few persons have an adequate sense of the real greatness and power of Parthia and its true relations to Rome. Mr. Rawlinson says in his preface:

"Writers of Roman history have been too much in the habit of representing the later Republic and early Empire as, practically, a universal monarchy, a power unchecked, unbalanced, having no other limits than those of the civilized world, engrossing consequently the whole attention of all thinking men, and free to act exactly as it pleased without any regard to opinion beyond its own borders. . . . To the present writer, the truth seems to be that Rome never was in the position supposed—that from first to last, from the time of Pompey's Eastern Conquests to the fall of the empire, there was always in the world a second power, civilized or semi-civilized, which in a true sense balanced Rome, acted as a counterpoise and a check, had to be consulted or considered, held a place in all men's thoughts, and finally furnished a not intolerable refuge to such as had provoked Rome's master beyond forgiveness. This power for nearly three centuries (B.C. 64—A.D. 225) was Parthia, after which it was Persia under the Sassanian kings."

As we have already remarked, the principal service of the book is to impress the imagination with this important fact of general history; for the annals of Parthia, taken by themselves, are in the highest degree barren and uninstructive. Mr. Rawlinson finds it hard to point out in the religion or institutions of the Parthians—in regard to which very little is known at any rate—anything from which instruction can be derived for us. Great as the Parthian empire was, and important as it was, as a counterpoise of Rome and a place of refuge for Roman exiles, it is only in its relation to Rome that it has any interest for us. In relation to Rome, the central point of interest is of course the disastrous expedition of Crassus, which is narrated by Mr. Rawlinson in a clear and interesting manner. The most important point that he makes is in correcting the common view, followed by Mommsen, but questioned by Merivale, that the Romans were enticed into the sandy desert. This is Plutarch's account; but Dio, a far more trustworthy authority, says expressly that the field of the battle was irregular and wooded. This is in fact the character of the country in the neighborhood of Carrhæ. The defeat of Crassus was therefore an ordinary case of ambuscade, like Braddock's defeat, aggravated, to be sure, by the treachery of Abgarus; but the Roman general, incompetent as he showed himself, was not quite so devoid of common sense as has been usually assumed.

The book is well illustrated with maps, coins, and works of art, and has a good index.

The Indian Travels of Apollonius of Tyana; and the Indian Embassies to Rome, from the reign of Augustus to the death of Justinian. By Osmond de Beauvoir Priaulx. (London: Quaritch.)—The pieces which compose this volume, we are told in the preface, have appeared in the Journal of the Asiatic Society, and have been put into a corrected and more permanent shape "for the satisfaction of the author." He tells us in the same preface that they were written previously to the publication of Reinaud's 'Relations Politiques et Commerciales de l'Empire Romain avec l'Asie Orientale,' with which in general tendency of view they differ radically, Reinaud making of the Roman Empire the *point de départ* of all consideration of the subject, while our author, in a very fair and often notably subtle analysis of all the historical testimony on this question, seems to bring into strong relief the terminal weaknesses of that Empire by working at it from the relations it held with the remoter world.

The analysis of the narrative of the visit of Apollonius is exhaustive and ingenious. It was at best a second-hand affair, being written by Philostratus from the note-book of the Boswellian period of the traveller Damis, and while it probably gives a correct general view of the journey, a certain class of incidents are occasionally magnified on one side by the veneration of the friend, and on the other by the consequentiality of the companion. It is full of the indications of an actual diary—little points of *vraisemblance*, details of travel, which make by far the most valuable portions of the narration; but when we get to the region of religious phenomena we pass at once into the wild and imaginary. Damis saw the Sophoi (Brahmans) walk the air, draw fire down from the sun, and hold it in mid-air, etc., etc. Yet, Apollonius, when Damis asks him if he could believe in the immortality-giving powers of the cup made from the horn of the unicorn, replies shrewdly, "Yes, when I see any Indian king immortal"; and in what is said of Apollonius himself he seems better to deserve the encomiums the Sophoi pronounced on him than the narration of Damis as a whole.

This contradictoriness of the narration itself with itself may otherwise be explained by the analysis the author gives of the evidence of its authenticity:

"Damis wrote a journal, and, though no scholar, was, according to Philostratus, as capable as any man of correctly noting down what he saw and heard. But Damis died, and his journal lay buried with him for upwards of a century, till one of his family presented it to the Empress, Julia Domna, the wife of Severus, curious in such matters. Again, the Empress did not order this journal to be published, but gave it to Philostratus, a sophist and rhetorician, with instructions to rewrite and edit it, and so re-written and edited he at length published it, but not till after the death of his patroness, the Empress."

Of course the sophist and rhetorician could not leave the curious fragment without sophistication and rhetorizing, and as often happens nowadays, all the trustworthiness disappeared under the coloring of the editor. Priaulx very effectually demolishes the pretensions of the later histories and so-called embassies, whose embassadorial plumes he plucks almost without exception. The net result of the study is to demonstrate that the knowledge of the great East possessed by the Romans at any time during the Empire was almost nothing.

The book has been very carelessly edited and corrected for the press, being full of passages obscure from bad construction and want of punctuation; but these faults do not diminish its value as a résumé of the knowledge we now possess on this interesting subject.

New Variorum Edition of Shakespeare. Edited by Horace Howard Furness. Vol. II.: 'Macbeth.' (Philadelphia: J. B. Lippincott & Co.)—In reviewing 'Romeo and Juliet,' the first volume of this edition (see the *Nation*, No. 305, May 4, 1871), we spoke of the "conscientious and unwearied fidelity" with which Mr. Furness had executed his laborious task; and, after an interval of two years, with the second volume before us, we do not know how more fitly to express the praise which is due him. As regards text and commentary, 'Macbeth' is treated in precisely the same manner as was 'Romeo and Juliet.' The appendix in the present volume of course has a character of its own. It embraces Davenant's version of the play "as it's now [1674] acted at the Duke's Theatre," in regard to which the editor remarks in his preface that "to this hour it retains a certain hold upon the stage, and influences disastrously the acting of 'Macbeth.'" This is followed by particulars as to the source of the plot of Shakespeare's tragedy, in which we are favored with liberal extracts from Holinshed especially, and from sundry old books and MSS. "The Date of the Play"; "The Witch" (with the witch scenes from Middleton's play of the same name); "The Text"; "Costume"; "Was Shakespeare ever in Scotland?" are other topics fully discussed in the sequel, which concludes with specimens of the best English and Continental criticism of the whole play, of the principal characters, and of single remarkable features. The account of the various German translations includes, as a sort of literary curiosity, a score of versions of

"Double, double toil and trouble,
Fire burn and cauldron bubble."

Mr. Furness remarks on these: "Is it not noteworthy that for one most common word 'cauldron' the German language, with all its wealth, appears to have no equivalent?" *Kessel* or *Kesselchen* is the word to which every one of the translators is shut up.

New Life in New Lands. Notes of Travel. By Grace Greenwood. (New York; J. B. Ford & Co. 1873.)—This book is made up of letters written to the New York *Times* during a journey to California, which included the usual excursions and visits on the way. The track is now well worn, and the author has seen and learned nothing more than all intelligent tourists will who start with good letters of introduction. It is amusing to notice how the little communities beyond the Missouri River, in their hospitable zeal to show strangers everything in the country, come finally to repeat the old round and say over the same story almost after the manner of vergers in foreign cathedrals. The author notes down in orthodox fashion all that is pointed out, and the book gives those who have not made the trip a fair idea of what they may see and experience. That it is, on the other hand, superficial, flippant in tone, and commonplace in sentiment, might perhaps be expected. But it was not necessary that the author should feel bound to repay the attentions of all her hosts, entertainers, and acquaintances with little personal puffs for each by name. In some cases, the sins against good-taste in this respect are very glaring, while, from senators down to inn-keepers, none are allowed to escape without at least being dubbed "genial." There are other "surface indications" which reveal the subtle influence of free passes and the courtesies of railroad officials wise in their generation. We do not get, to be sure, such a history of the Central Pacific Railroad as appeared lately in *Harper's Magazine*, but there is sometimes an unfortunate flavor of advertising. Moreover, in the far West, there are many things which "deadheads" do not see.

On the whole, we think it would have been as well if the author had suffered these letters to sleep in their original resting-place. When the sight of the Pacific Ocean prompts one to say that Balboa "did the correct thing in refraining from wrenching himself in attempts to express the inexpressible," we can forgive the bosh more easily in a newspaper than in a book.

Satchel Guide for the Vacation Tourist in Europe. Edition for 1873. (New York: Hurd & Houghton.)—The vacation tourist is not a person to be envied, on the well-known ground that he must crowd a great deal of sight-seeing into his scanty leisure, and that he must constantly keep moving from place to place. Against wasting his time from indecision or ignorance, and against fatiguing his brain with cramming, he needs especially to be guarded; and generally also economy is something which he has to consider seriously. The 'Satchel Guide' appears well adapted to quiet his anxiety on all these points. It rules Spain, Greece, Turkey, Russia, and Scandinavia out of his possibilities, and arranges that after visiting Ireland, England, and Scotland, he shall cross to Belgium and Holland, ascend the Rhine into Germany, take Switzerland next in course, and from there make excursions into France, Austria, or Italy. This is the general sequence of the route described in the 'Guide,' though many variations from it are provided for. If the vacation tourist's object is to cover much ground, of course he must stick to the main lines of travel. The information here furnished him is judiciously condensed without being made dry reading either. The commonplaces of the grand tour are either omitted or just alluded to with references to the larger guide-books. There is in the present edition, which has otherwise been greatly enlarged in matter, a special chapter in the Appendix devoted to the Vienna Exposition. For the next edition we suggest a substitution in the comparative table of currencies of the new *silver* coinage of the United States in place of the gold standard (two silver half-dollars=the five-franc piece). Is there any reason, too, why maps of the various routes should not be inserted? As the compiler professes to have been a pedestrian in Europe, he ought to be able to prepare a pocket guide to the out-of-the-way and unfrequented places of interest on the Continent. If this were done thoroughly for a single country, say for France, the vacation tourist would perhaps choose it as the better part.

Siam; The Land of the White Elephant, as It Was and s. Compiled and arranged by Rev. Geo. B. Bacon. (New York: Scribner, Armstrong & Co. 1873.)—This work belongs to the 'Illustrated Library of Travel, Exploration, and Adventure,' prepared under the general supervision of Mr. Bayard Taylor. The series already embraces works on Japan, Arabia, South and Central Africa, the Yellowstone, etc. Mr. Bacon has visited the country of which he writes, and possesses, therefore, the first qualification for his task. Some of the chapters are records of his own experiences of Siam, already published in the magazines, and they are not the least agreeable reading in the book. The scenery along the Meinan; the Venetian and the purely Oriental aspect of Bangkok; the manners and character of the people; the personal presence and conversation of the late first king—all these were matters of observation for Mr. Bacon, in regard to which he may be relied on to give a truthful impression. Royalty in Siam—as everywhere among barbarous or semi-civilized peoples—has its comic side, which Mr. Bacon shows off with a pleasant humor. To one who makes us laugh much can be forgiven, and perhaps our editor could hardly be expected of choice to dwell on the rude and cruel phases of Siamese government and society. Slavery has, we believe, not been so effectively abolished as is generally supposed; and Mrs. Leonowens's account of the royal harem we imagine to have a basis of truth. A rather inadequate map accompanies the entertaining narrative.

The Life, Character, and Writings of Francis Lieber. A discourse delivered before the Historical Society of Pennsylvania, January 13, 1873, by Hon. M. Russell Thayer. (Philadelphia: Collins. 1873. Pp. 50.)—The credit belongs to Philadelphia of having put in this permanent and beautiful form a lasting memorial of Dr. Lieber, whose life and services were so largely part of the best literary history of New York for the last twenty years. Well as he was known here by his useful connection with Columbia College, and by his larger field of usefulness as a publicist and a recognized authority on questions of international law, few persons knew much of his private and individual life, or of the checkered career by which he passed through the curious phases of a soldier in the German war of liberation, a political prisoner and refugee from the reactionary movement of Prussia, and a secretary and student of Niebuhr and Bunsen; a professor in a South Carolina College, a professor at our own metropolitan College, an adviser to the Government in the delicate questions of the legal aspects of the War of the Rebellion, and its representative and arbitrator in the Mexican Claims Commission. Along with all this there was a constant and almost too productive industry in authorship, of which only a few of the results are well known or known at all to us. Judge Thayer speaks in terms of the strongest praise of Dr. Lieber's private life, and he gives by quotation striking proofs of his success in anticipating and influencing public opinion in many matters of national and international importance, as well as the esteem in which he was deservedly held both at home and abroad by most competent authority.

Important Modifications of English Law in Pennsylvania. Address of T. Bradford Dwight before the Law Academy of Philadelphia, Dec. 5, 1872. (Philadelphia: Kay. 1873. Pp. 49.)—This well-printed pamphlet "treats discursively of some of the particulars in which our jurisprudence varies from the law of England, and traces, though not very minutely, the channels through which the currents of change have been flowing." The abolition of the feudal system, of entail and primogeniture, and of the English rules of testamentary dispositions of personal property, may well be recommended to students and to practitioners of law both in and out of Pennsylvania. The address shows diligent and conscientious study, and the broadening field over which our American jurisprudence is extending itself. Not only are the elementary books and the reports of decisions used, and well used, but early English ballads and good English history are made to throw light on topics that belong to the real and exhaustive study of law, in its best and broadest sense. The sight of this pamphlet makes us regret that there is no good system yet introduced in our bookselling trade which enables us to secure at once, and without trouble, copies of all valuable pamphlets, no matter from what part of the country they may be sent forth.

Just Published:

COUNT KOSTIA. By Victor Cherbuliez. Leisure-Hour Series. $1 25.

"Outdoes the French novelists with their best weapons. Besides his superiority in the construction of his plots, his treatment of his characters is most able, and his style of the greatest brilliancy."—*Nation.*

WHO BREAKS PAYS. By Mrs. C. Jenkin. A new impression. Leisure-Hour Series. $1 25.

"Worth reading."—*Nation.*

NEARLY READY.

LIBERTY, EQUALITY, FRATERNITY. By James Fitzjames Stephen, Q.C.

"One of the most valuable contributions to political philosophy which have been published in recent times."—*London Saturday Review.*

HOLT & WILLIAMS, New York.

Published this Day:

I.

BROWNING'S NEW POEM. Red Cotton Night-Cap Country; or, Turf and Towers. By Robert Browning. 1 vol. 12mo, $1 50.

"The knowledge of his poetry is widening. Men are beginning to perceive that it involves a subtler and more profound and varied experience of life than is possessed by any other living writer."—*British Quarterly Review.*

"'Red Cotton Night-Cap Country' is a great poem, and not to be measured by petty standards. Its insight is subtle as light, its dramatic power remarkable, its descriptive passages of singular beauty."—*Mrs. Moulton in New York Tribune.*

II.

OUR OLD HOME, AND SEPTIMIUS Felton. By Nathaniel Hawthorne. Illustrated Library Edition. 1 vol. 12mo, $2.

This forms the eighth volume of the Illustrated Library Edition of Hawthorne's Works, which has won a high degree of favor from the press and the public. 'Our Old Home' is a series of inimitable papers on English scenery, towns, cathedrals, customs, and people. Of 'Septimius Felton,' the remarkable story which was given to the world after Hawthorne's death, the London *Athenæum* says: "The book is full of Hawthorne's best and most characteristic writing. . . . The sad burden of the book is abundantly relieved by subtle charms of thought and style. No other author of our time could have written it."

*** For sale by all booksellers. Sent, post-paid, on receipt of price, by the Publishers,

☞ HARPER'S CATALOGUE mailed free on receipt of Six Cents in postage stamps.

A NEW BOOK BY REV. JOHN HALL, D.D.

QUESTIONS OF THE DAY.

BY REV. JOHN HALL, D.D.,

Pastor of Fifth-Avenue Presbyterian Church, New York.

12mo, handsomely bound, $1 75.

Coming fresh from Dr. Hall's pen, and discussing subjects of special and urgent importance at this time, this will be considered one of the most important books of the day.

Is the Sabbath Obsolete? Should we Pray? Is Christianity to be modernized? Is the Human Race One? What is the Church to do about Amusement? Is the Sabbath for us? etc. These are some of the subjects discussed in this volume.

No part of it has been before published in any form.

Also,

A New Edition (Fifth Thousand), with additional chapters, of

PAPERS FOR HOME READING.

BY REV. JOHN HALL, D.D.

12mo, with Portrait..... ...$1 75.

DODD & MEAD, Publishers,

762 Broadway, New York.

MRS. WHITNEY'S NEW STORY.

THE OTHER GIRLS. By Mrs. A. D. T. Whitney, author of 'Leslie Goldthwaite,' 'We Girls,' 'Real Folks,' etc. 1 vol. 12mo, $2.

This book, which is a companion volume to 'We Girls,' has in eminent degree the qualities that have made Mrs. Whitney's previous stories so popular. The deep interest of the narrative, the variety and lifelikeness of the characters, the pervading freshness and humor of the book, and its noble sincerity, give it remarkable and permanent attractions.

LITERATURE AND DOGMA. An Essay towards a better apprehension of the Bible. By Matthew Arnold. 1 vol. 12mo, $1 50.

In the preface of this remarkable book Mr. Arnold says, "An inevitable revolution, of which we all recognize the beginnings and signs, but which has already spread, perhaps, further than most of us think, is befalling the religion in which we have been brought up." The book itself is a notable sign of this revolution, which it seeks to guide to salutary issues by a truer understanding and wiser use of the Bible. It is written with a very earnest purpose, with great vigor and suggestivenes of thought, and with that perfect clearness of style whic distinguishes all of Mr. Arnold's writings. Its publication is an event in the history of religious literature.

AMONG THE ISLES OF SHOALS. By Celia Thaxter. 1 vol. small 4to, illustrated by H. Fenn, $1 50.

The Isles of Shoals have come to be regarded as classic ground, possessing a unique and fascinating interest. In this tasteful book, Mrs. Thaxter, who, by residence among these islands from early childhood, and by profound appreciation of their beautiful and terrible attractions, is peculiarly fitted to write of them, gives their history and traditions, and describes them with remarkable skill and felicity.

COMPLETION OF

ROBERTSON'S CHURCH HISTORY.

A History of the Christian Church, Vol. IV.

(A.D. 1303—1517.)

BY JAMES C. ROBERTSON, M.A.,

Professor of Ecclesiastical History in King's College, London. 8vo, cloth, price $3.

The three previous volumes, price $22 the set.

Free on receipt of price.

POTT, YOUNG & CO.,

Cooper Union, New York.

MACMILLAN & CO.'S NEW BOOKS.

A New Dialect Poem.

BETSY LEE. A Fo'c's'le Yarn. Fcap. 8vo, cloth, gilt, 75 cents.

"The poem is full of power and of rude touches of beauty, and the dialect form adds to its force. 'Betsy Lee' is a rare epic of humble life."—*N. Y. Evening Mail.*

"That it will attract notice for the genuine power that marks it throughout cannot be questioned."—*Boston Daily Globe.*

THE ROMANCE OF ASTRONOMY. By R. Kelley Miller, St. Peter's College, Cambridge. 12mo, cloth, gilt, $1 25.

"It should be read before the study of astronomy, to give a keener zest for that noblest of sciences, and it may be read by the lifelong student with infinite pleasure; both will find it as wonderful as their early impressions of the 'Arabian Nights.' It makes this little book all the more wonderful to know that it is new. Read it."—*The Churchman.*

THE CHILDHOOD OF THE World. A Simple Account of Man in Early Times. By Edward Clodd, F.R.A.S. 12mo, cloth, gilt, $1.

"A very clear account is here given of the progress of man. Although primarily intended for the young, it is adapted to the wants of more mature readers who wish to be informed concerning the light which has been thrown by modern research on the primitive condition of man."—*N. Y. Tribune.*

"In a style so simple as to be intelligible to children, the work before us elucidates facts and history worthy of the maturest intellect, captivating by its very clearness. We have never seen the subject of primitive man better set forth."—*Boston Daily Globe.*

"The simplicity of style of the book will commend it to the young, for whose advantage it was written; and its well-narrated facts will prove interesting to adult readers."—*Journal of Applied Chemistry.*

UNIVERSITY OARS. Being a Critical Enquiry into the After-health of the Men who rowed in the Oxford and Cambridge Boat-Race from the year 1829 to 1869; based on the Personal Experience of the Rowers themselves. By John Ed. Morgan, M.D., M.A. Crown 8vo, cloth, $3.

"The book is full of importance to those who take an interest in the manly sport of rowing, and, in view of the many important facts and the valuable advice it contains, should attract the earnest attention of our own college crews."—*Boston Daily Globe.*

A. Eubule-Evans's New Poem.

THE CURSE OF IMMORTALITY. By A. Eubule-Evans. Crown, cloth, $2.

THE CHURCH AND STATE, No. 3 Bible House, New York.

THE NEW YORK TRIBUNE.

THE NEW YORK TRIBUNE strives now, as it has striven heretofore, to be first of all and pre-eminently a newspaper. In the promptness, accuracy, fulness, clearness, interest, variety, and convenient and attractive arrangement of its news, its ambition is to be the foremost journal of the world.

Years of patient labor and costly preparation have created for it extraordinary facilities for the collection of intelligence both at home and abroad. Not only the common events of the day, but the tendencies of popular thought and the currents of political, social, intellectual, and religious discussion are faithfully reproduced in its columns. Its correspondents watch the growth and development of American communities ; the progress of republicanism in France and Spain ; the spread of democratic principles in England and Germany ; the ferment pervading the whole Continent, caused by the conflict between the advances of physical and social science and the philosophical, theological, and material ideas of a past epoch ; the exciting race between Great Britain and Russia for the Supremacy in Asia ; the wonderful awakening of Japan ; and the progress of European and American civilization in China. In all the great centres of activity, THE TRIBUNE has its agents, and no expense is ever spared to give its readers the fullest and quickest intelligence of what passes in every quarter of the globe.

American industry receives now, as always, a large share of THE TRIBUNE'S attention. The successes, the trials, and the wants of the productive classes are studied with particular care. The progress of Invention and of Labor-saving contrivances, the development of our resources, the preservation of our Public Land for the Landless, the utilization of our vast mineral resources, the extension of facilities for bringing producer and consumer together, receive from this paper the fullest attention and encouragement.

To scholars and to men of the learned professions and of studious leisure THE TRIBUNE endeavors to make itself especially acceptable. It has excited a widespread interest by the publication of full reports of the most valuable lectures, scientific and literary, and its careful and comprehensive summaries of scientific news, reports of discoveries and explorations, narratives of voyages, full records of the proceedings of learned societies, and attention to the cause of school and university education. While it can point to the admirable accounts of the discoveries and labors of Agassiz, prepared for it by ex-President Hill ; the reports of scientific and agricultural conventions from the pen of Prof. D. C. Gilman ; the papers of Prof. E. L. Youmans ; and the contributions of Prof. Spencer F. Baird, of the Smithsonian Institute, any more elaborate programme of its intentions would seem superfluous.

In politics, THE TRIBUNE is the champion of Equal Rights, irrespective of Race, Nativity, or color. Independent of partisan ties, but firm in its devotion to Republican principles, it endeavors to fulfil the ideal of its illustrious founder, Horace Greeley, as the advocate of that national policy to which the preservation of the Union is owing, but the frank and fearless enemy of wrong, whether in the Republican party or in any other. It defends its conviction to the extent of its ability ; but in its news columns it remembers that its readers have a right to see both sides of every controversy, and to get the whole truth of every question, whether it tells for or against the political theories of the conductors of the paper.

And finally, the TRIBUNE holds that the new era of journalism which is now dawning must be distinguished by decency of language, candor of statement, and moderation in debate. It eschews the coarse invective and vulgar insolence which have so often marred the political controversies of the past ; it avoids slanders and personal quarrels ; it is a paper for gentlemen and ladies—fit for the parlor, the study, and the home fireside, rather than the bar-room. In its editorial department it commands the pens of many of the ablest, most thoughtful, and most brilliant writers whom the newspaper profession has yet produced ; and it constantly aims at a higher literary standard and a wider and wider culture.

THE WEEKLY TRIBUNE contains a careful summary of news, a very large proportion of agricultural information, a careful selection of literary and miscellaneous reading, and the cream of the correspondence and editorial matter of the Daily Edition.

THE WEEK IN TRADE AND FINANCE.

MAY 12, 1873.

THE money market has returned to an easy condition, and no difficulty is experienced among borrowers in procuring money on call at or under the legal rates. The Street is taking a long breath, and calculating what it has cost to carry its load of stocks and other securities through the winter. Time loans were in good demand during the early part of the week at 7 per cent. and a commission of ½ to ¾ for 60 and 90 days; but as the week wore on, money was offered at the legal rate for that time, with ¼ commission added. The demand for commercial paper has enlarged, and the volume of transactions in it has greatly increased. The prevailing rates are 8 to 10 for first-class names, with a tendency to lower prices, actual business being on the basis of 7 to 9 per cent.

Considerable difference of opinion exists as to the future course of money. Many think that there will be a steady 6 to 7 per cent. market during the summer, with now and then an advance above legal rates. Others look for the glut of funds at this centre usually taking place at that season of the year. On Saturday the agitation arising out of the European news at first caused a fairly active market at 7 per cent., but the supply was at once shown to be greater than the demand, and the market softened until money was offered freely at 5 per cent., with some transactions as low as 4 per cent.

At a special meeting of the directors on Wednesday, the Bank of England rate of discount was advanced to 4½ per cent., and on Saturday the minimum rate was still further raised one-half per cent., or five per cent. On this news, foreign exchange became firmer, and the leading drawers of sterling advanced prices to 109⅞ for sight and 108¾ for sixty-day bills. Actually, the difference was a trifle more, from the greater concessions which drawers were willing to make upon sixty-day than upon sight drafts.

The Bank statement is exceedingly favorable, showing an increase of $3,966,800 in loans, $1,583,800 in specie, $1,892,600 in legal tenders, and $6,347,200 in deposits, with a decrease in circulation of $40,900. An analysis shows that the banks now hold $4,620,250 in excess of the reserve required by the law, a gain for the week of $1,399,325. The increase in deposits seems much less than it should be considering that the aggregate receipts of currency at this point for two weeks past have been about twenty millions of dollars. The following is the statement compared with that of the previous week:

	May 3.	May 10.	Differences.
Loans	$270,721,100	$274,687,900	Inc. $3,966,800
Specie	18,677,800	20,261,600	Inc. 1,583,800
Circulation	27,564,400	27,523,500	Dec. 40,900
Deposits	196,471,900	202,819,100	Inc. 6,347,200
Legal tenders	40,051,700	41,944,300	Inc. 1,892,600

The following shows the relation between the total reserve and the total liabilities:

	May 3.	May 10.	Differences.
Specie	$18,677,800	$20,261,600	Inc. $1 583,800
Legal tenders	40,051,700	41,944,300	Inc. 1,892,600
Total reserve	$58,729,500	$62,205,900	Inc. $3,476,400
Circulation	27,564,400	27,523,500	Dec. 40,900
Deposits	196,471,900	202,819,100	Inc. 6,347,200
Total liabilities	$224,036,300	$230,342,600	Inc. $6,306,300
25 per cent. reserve	56,009,075	57,585,650	
Excess over legal reserve	2,720,425	4,620,250	Inc. 1,899,825

The following statement separates the National from the State banks:

	National.	State.	Total.
Loans	$236,448,200	$38,239,700	$274,687,900
Specie	18,394,700	1,866,900	20,261,900
Legal tenders	36,727,900	5,216,400	41,944,300
Deposits	174,291,000	28,528,000	202,819,100
Circulation	27,480,500	43,000	27,523,500

The break in Pacific Mail of last week, carrying its shares down to 49¾, with simultaneous breaks in Union Pacific to 28⅝, and C. C. and I. C. to 32¾, occasioned heaviness and drooping prices through the entire list at the commencement of this week. A startling shock has been given to public confidence by the numerous failures and defalcations which have lately occurred, and particularly by the transactions known or suspected in Pacific Mail. Mr. Stockwell's "sewing-machine imbroglio" with that steamship Company, as it becomes better understood, is pretty severely commented on. It is reported that, in view of the late occurrences, prominent members of Congress assert that, on the reassembling of that body, immediate steps will be taken to rescind the mail contract. Mr. Stockwell has practically demonstrated his inability to carry it out according to its terms with American ships, and his company is believed to be "in extremities"; but even should it endure until the winter, he will then see his sewing-machine business more fully developed in it by a "lock-stitch." If there could be found a successor to Mr. Stockwell familiar with steamship business, possessing the confidence of the Government, disconnected from Wall Street stock-jobbing, and not occupied with other business, or participating with those foreign shipping interests which seek now to control every channel of American trade (and should, therefore, be the last to be indirectly benefited by a United States subsidy), it might yet be possible to revive this sole remaining maritime enterprise of a once proud commercial people. Otherwise, present appearances are that Pacific Mail will soon join such dead "fancies" as the Parker Vein, or C. K. Garrison's Atlantic Mail and Accessory Transit Companies, in the limbo of defunct American steam lines.

A recovery from the depression in stocks subsequently took place to a small extent, the market becoming stronger, but quite variable from day to day until Saturday, when the report of a panic on the Vienna market, with greater or less trepidation at Frankfort, Amsterdam, and Berlin, and the advance of Bank of England rates, again caused a decline, led off as usual by Pacific Mail, which dropped at once two per cent., and acted as if possessed by the personage named in all old indictments as an accessory before the fact. Erie fell to 63, and St. Paul sunk from 58 to 56⅝. New York Central dropped ⅜, because the Company has at last been wise enough to put an end to further locomotive seizures by announcing that on Tuesday next it will pay over to United States Collector Bailey the $400,000 tax claimed by the Government, under protest, and then institute proceedings to recover it. Thus ends, for the nonce, Commodore Vanderbilt's battle with the United States Treasury! The stock subsequently regained its fall. Stock of the Canton Company has fluctuated widely during the week on small transactions, the stock being owned by but few parties, and the fluctuations caused by a droll and successful attempt of the pious Drew to make certain "puts" he had sold profitable—to himself. New Jersey Central and Delaware, Lackawanna, and Western were also bid up several points on very small transactions. The agreement between these two roads has been mutually dissolved, and each returns to its individual status.

The annual report of the Lake Shore Road, just issued, shows earnings for 1872 amounting to $17,591,629, against $14,797,975 in 1871. The operating expenses, taxes, etc., for 1872 amounted to $11,839,525; the interest on funded debt and leases and dividends to $5,559,249 32, leaving surplus for the year $192,854 53.

The financial trouble in Germany has most likely put a stopper to investments there for the present in American railroad securities, but a very important movement has been started in England by organizing a corporation for enlarging the facilities for investment in American securities. This new institution is to be known as the "American Investment Trust." Its investments are limited to bonds of the Government, States, cities, countries, railroads, and other public works, or shares in such enterprises as are actually earning incomes. The certificates of the Association bear interest at 6 per cent., and are issued at 95, and redeemable by a sinking fund at 105. Any surplus after redemption is to be equally divided amongst the holders of certificates; these final divisions and the legal ownerships thereof being secured by what are called Reversion Certificates, one of which is issued to each ordinary certificate. The bankers of the Trust are Messrs. Glyn & Co., and the trustees are the same as those of the Foreign and Colonial Trust, which is reported to be doing a lucrative business. It is hoped that through this Company the better class of American securities will be popularized among the numerous small investors in England who have heretofore had no means for obtaining accurate knowledge, and have been so frequently duped by pretentious railroad frauds.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending May 10, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	100¾ 101⅜	101¼ 102⅛	101⅜ 102¼	101⅜ 101⅜	101⅜ 101⅛	100⅝ 101½	66,900

The Treasury purchased during the week $500,000 bonds. Offerings having been of $1,351,400, at prices from 115 49 to 116 49, and the awards made on a basis of 115 49 to 115 92, the Secretary sold $1,500,000 at 117 27½ to 117 39.

The Nation.

NEW YORK, THURSDAY, MAY 22, 1873.

The Week.

THE State Department has published the letters it has received from General Van Buren with reference to the Viennese scandal. They contain what the lawyers call a general denial, expressed in very vehement and, indeed, violent language, and ascribe all the trouble to "the accursed malignity, unhallowed ambition, and vanity of John Jay," whom the General depicts as a monster of perfidy, and insinuates that part of his hostility to him (the General) is due to his not wearing a white overcoat. In fact, the letters are wretched stuff. The Department has probably printed them by way of showing General Van Buren's unfitness for his place, and they do show it; but then they do nothing to justify either his appointment or his removal. Whatever defects of temper or judgment they reveal were known or ascertainable before he was put at the head of the Commission, and, having been put there, the public will hardly conclude that he has been fairly dealt with until it has seen the proofs of his malfeasance in office. He has written to the Viennese papers asking in the usual form for a "suspension of judgment," but the editor of the *Neue Freie Presse*, in a note, plainly intimates his belief in the truth of the charges. In the meantime, the latest telegrams report that the enquiry instituted at Vienna has resulted in a finding that the accusation of corruption has been fully proved, and even with aggravations.

It was at first said that the chief-justiceship would not be filled by the President without grave consideration and much consultation, and we still hope that this is true. Nobody ought to have the place who does not add popular confidence and respect to well-earned fame as a lawyer. It is now reported, however, that it is at the disposal of Mr. Roscoe Conkling, one of the senators from this State; and this, if true, falls in very well with the general expectation for a good while past. Moreover, Mr. Conkling is the kind of man that General Grant's recent appointments would lead us to think he would select in the present instance—as he has for some time ceased to disregard political considerations in filling offices, and there are a great many "political considerations" hanging around Mr. Conkling. Indeed, he is much better known as a politician than a lawyer. He is, however, an able man, and we have no doubt would forget on the bench the sinful games of the Senate and make a good judge. But then, in the cold atmosphere of the Supreme Court, what would become of his imagery, to the extraordinary wealth of which we have often called attention? Ossian, Homer, the Arabian Nights, rolled into one, can produce nothing that can be compared to some of his flights; in mixed metaphor, in particular, he is without a rival on either continent. The President has, during the week, made a very creditable attempt to fill the Russian Mission by offering it to Mr. Edwards Pierrepont, of this city, who, we regret to say, has refused it. It has also been offered to Governor Jewell, of Connecticut.

The latest story about the farmers' movement is that the gentleman named Craig, who was nominated by the Princeton Convention in the agricultural interest, is in reality pledged to the railroads, being attorney of one of the principal lines, and that the convention was, in fact, packed by the railroad people. This strengthens the hands of Judge Lawrence, who is running for the vacant judgeship as the candidate of the bar and independent opinion. It is a curious illustration of the existing condition of society that the principal difficulties of reform conventions should be in finding thrust upon them as candidates men who are in reality necessarily opposed to all their plans. Indeed, these reform commotions, both in the prodigious heat and energy displayed at first, and the extreme ignorance and gullibility exhibited in the later stages, have rather an Asiatic than an American look, and sometimes make one think that the world may be slowly working its way back "down the ringing grooves" of Progress to that condition of society in which reform movements consist of alternate advances, devastations, and retreats of vast hordes of semi-barbarous men under the leadership of powerful chieftains who live partly on the plunder of the enemy and partly on that of their subjects. A horde, headed by an Illinois Tamerlane in the disguise of an American chief-justice, armed with the power of *quo warranto*, *mandamus*, *injunction*, and *ne exeat*, would be formidable enough to make it almost a necessity to buy them off.

The *Tribune* of the 20th inst. contains a very amusing and at the same time interesting account of the proceedings of the so-called "Congressional Convention" which has recently been held in St. Louis. According to this correspondent, "no gathering having about it less of 'council' was ever witnessed on this green earth, and a 'Congress' at which not a member of Congress spoke became ludicrous at last, even to the actors in the farce." The Convention when it came together was organized by an Executive Committee, and had not a voice even in the selection of its speaker. The Executive Committee assigned the chair to Mayor Brown, and "no vote was taken on this or any other subject." Mayor Brown "welcomed" the guests, promised them "a plain, practical exhibit of the needs of the West and South for improved water-lines to the ocean," and called upon the Convention to discover a means of removing the existing obstacles to true prosperity. Then Governor Woodson welcomed the Convention again, and made a speech about "the great water element." Then there was more speech-making, and the chairman, who by the way was not a member of the Convention, resigned the chair to Governor Walker of Virginia, who occupied the rest of the time in an address upon the Kanawha Canal. The assemblage took a trip to Shaw's Gardens, visited some iron-works, "consumed much of Cook's imperial whiskey," passed resolutions of thanks to St. Louis and the West, recommended the subject of internal improvement to the serious consideration of everybody, and then adjourned. Certainly, the convention system is on its last legs.

The condition of politics in Arkansas since the end of the war has not at any time been very peaceful, and there was a time when the impeachment proceedings instituted against Governor, now Senator, Clayton seemed likely to result in civil war. The Governor, however, being a man of some ingenuity, "boarded himself in," according to the account then published, and keeping himself out of the reach of process for some time, in this way finally triumphed over his enemies. The commotion now seems to be of a nature too serious to be quieted by any such simple means. There are two factions in the Republican party in Arkansas, of which one seems to be headed by the present Governor, Baxter, while the other is led by a couple of judges (one of them the Chief-Justice) and by Senator Clayton. These last are the "Radicals," and correspond to the Kellogg faction in Louisiana. Finding that Governor Baxter cannot be used as they desire to use him, they have resorted to a device which has been for the past seven or eight years very popular in the South, that is, of getting him removed by judicial process (in this case *quo warranto*), and installing the Lieutenant-Governor in his stead. Baxter, however, "understands the people" thoroughly, and he has accordingly organized the State militia, put guards over the State House, has gained secure possession of the arms in Little Rock, has reofficered the militia, has

brought a battery to bear on the State arsenal, goes about, when he goes at all, under an armed escort, and eats and sleeps in the Executive office. There is reported to be a great deal of excitement in Arkansas, and it only needs the appearance of United States troops on the scene to cause a good deal of bloodshed. There is no Custom-house, however, in Arkansas.

Mr. Jeremiah McGuire, member of the New York Assembly for Schuyler County, has been making some curious "charges" against Mr. Cornell, the founder of the Cornell University. In 1862, Congress gave the State of New York 999,000 acres of land, the "scrip" for which was to be sold, and the proceeds invested as a permanent fund for the endowment of at least one college for the promotion of a half-industrial, half-liberal education. The Legislature afterwards appropriated the residue of the fund to Cornell University, first requiring proof to be made to the State Comptroller that the University possessed a fund of $500,000. Then began a series of acts which we have not space to go into in detail, the upshot of all which is, says Mr. McGuire, that provisions intended to make the fund safe have been grossly violated, and that Mr. Cornell has made a ring for the purpose of selling the most valuable part of the land-grant, which his "home organ," the Ithaca *Journal*, has declared to be worth $60 an acre, at nominal prices, the difference going into the pockets of the ring. Indeed, Mr. McGuire says that Mr. Cornell "conceded in a communication to the Rochester *Union*, in October, 1868, that it was his intention to put this timbered land into" a certain company "at $5 per acre, and settle with the State at that price," admitting in the same communication that the land was worth many times as much. The scandal is to be investigated at the request of Mr. Cornell, who denies everything.

The Mayor has been making his appointments under the new charter, and they have been on the whole, it is said by those who know the appointees, very good, except in the case of the Police Commissioners, and remarkably free from any trace of partisanship; what is more wonderful, they have been confirmed with unanimity, or almost unanimity. There was one slight delay on the part of the Aldermen, which the newspapers said was due to an attempt to form a ring, or to an attempt on the part of a ring already formed to force the Mayor into a compromise or "bargain." Some Aldermen did, we believe, complain that the Mayor had not consulted them in selecting his men, and this was severely rebuked by the press as an indication of a desire to usurp power and weaken the responsibility of the Executive. It was, however, the most natural thing in the world that the Aldermen should feel wronged that they were not consulted beforehand about the appointments. During the discussions on the charter, the defenders of the present division of the appointing power constantly cited the arrangement made by the Federal Constitution as the proper model to follow in municipal government also, and, as everybody knows, the senators are and have to be consulted beforehand by the President about all appointments, except perhaps members of the cabinet or judges. Indeed, the Senate may be said both to appoint and confirm. Under these circumstances, the Aldermen were justified in desiring to be "seen" by the Mayor before the nominations were made.

The *Times* has given its readers to understand several times within the past year that the editor of the *World* would shortly die, and made no secret of its belief that when he did he would be damned. It also solemnly declared on divers occasions that the *Tribune* was going straight to pecuniary ruin under the guidance of a parcel of foolish and wicked young men. The editor of the *World* has, however, declared within a few days, with the most disgusting cheerfulness, that he never felt better in his life, and the *Tribune* now announces that it is beginning the erection of a new building, partly on the site of the old one, and of colossal proportions. The description is, in fact, of the most exasperating character. The building is to have a front of ninety feet on Printing-House Square, and on Spruce Street of one hundred feet; is to be nine stories high, and, worse than all, to be surmounted by "a lofty tower." Moreover, the heartless projectors, as if to destroy hope in "the concern over the way," declare that it is to be absolutely fire-proof and "to be built to last for ever." They say, too, they are going to publish more details in a few days. In view of these facts, we fear we shall have to withdraw the prediction we made a few days ago of a quiet "journalistic" summer. Strife, we fear, will be renewed, and as the building rises the air of the Square will be again darkened with curses, "charges," and vituperation. We would remind the *Times*, under this afflicting combination of circumstances, of the lady who, returning from an unprofitable visit to church, declared that "when she saw the shawls of those Smiths, and then thought of the things her own poor girls had to wear, if it wasn't for the consolations of religion she did not know what she should do." We would ask the *Tribune*, in the interest of good feeling, whether it is absolutely necessary to put up the "lofty tower"?—whether it is kind and considerate, we need not ask.

Mr. Marvin H. Bovee has published another of his amusing letters on capital punishment in the *Tribune*. He still withholds the statistics for which we asked him, touching the effect of the abolition of the death penalty in those States in which it has been tried, in the proportion of homicides to population. Instead of this, he indulges in some reflections of his own on the thesis that men do not fear death. Look, he says, at soldiers, how they face death, and see what Lord Bacon says on this subject. Indeed, nothing is more entertaining than the air of authority with which the opponents of capital punishment descant upon men's indifference to death, as if the fear of death was a matter about which ordinary people had to get their information out of the encyclopædia or the classics. The fact is that if Mr. Bovee thought he was going to be hanged he would be dreadfully frightened, as we should ourselves if a similar misfortune impended over us. Upon the point whether the death penalty acts as a restraint, he gives us his own opinion that it does not, and produces a letter of Henry Ward Beecher's, dated May 22, 1868, expressing Mr. Beecher's opinion that it does not. He even concludes, from the fact that suicides are more numerous than homicides, that even a dislike of life widely prevails. But this is not all. He shows that 600 murderers have been pardoned, and set at full liberty, in the United States within the last fifty years, and he triumphantly asks the *Nation* to show that one of these persons has ever committed a second murder, from which he concludes that society has not suffered by their liberation. We think that if he proves anything by this, he proves that every murderer ought to be let off scot-free on his promising not to do it again. From the account he gave of the murderers in prison, of their general moral superiority to other men, in his last letter, it is plain that he considers them a valuable and ill-used class of society. He says it is "historically true that the large majority of those convicted of murder have been known as good citizens prior to the commission of that offence," though he does not mention in what "history" he found this remarkable tale; and so we suppose that the prevalent dislike of murderers, and indeed the dislike of being murdered, is an unreasonable prejudice.

At the meeting of the American Social Science Association, held at Boston on the 14th inst., the higher education of women was discussed by several speakers, including Col. T. W. Higginson, Professor Agassiz, President Raymond of Vassar College, President Eliot of Harvard, Mr. Wendell Phillips, Mrs. Howe, Mrs. Cheney, and Mrs. Livermore (whose daughter was excluded from Harvard College on account of her sex the other day). "It was a cheering and significant fact," the *Woman's Journal* says, "that President Eliot alone opposed the coeducation of the sexes," and we must say that, considering the character of most of the other speeches, this is true. Col. Higginson, for instance, said that "some argue that men and women being different, different mental diet is necessary;

but if this is true, why is not the physical diet made different as well?"—a question which was very well answered by Mr. Agassiz, who observed that men and women, at least when at table, did not eat the same food. Col. Higginson also maintained that "the desire for education proved that the one desiring it is able to bear it," while Mrs. Howe used arguments of a different and more conclusive kind, saying that she did think the very "Satan of human society" had taken possession of President Eliot. Mr. Wendell Phillips said that if he had a daughter who was refused admission to Harvard, "he would carry it to the Supreme Court of the State, if he supposed there was an honest one in the State," and, also, that if a young woman, "ardent for education," was told by President Eliot, "Your sex bars you," she might justly answer, "Hang it" (we don't see why she should be limited to such a feeble and feminine expression as this), "I don't care for that."

President Eliot said, and it ought to be observed that with the exception of the President of Vassar College, where coeducation has not been tried any more than it has at Harvard, he was the only experienced *teacher* present, that coeducation was in America a new experiment, and for its introduction good and sufficient reasons must be given:

"After visiting some thirty Western colleges which admit girls, he had arrived at a conclusion diametrically opposed to that of Colonel Higginson. He believed the tide was ebbing in this matter. Oberlin College began with the same course for men and girls, but now they were obliged to have separate courses. Girls even took separate degrees from the men, and followed literary courses instead of classical. The matron of the institution told the speaker she would not wish her daughter to take an Oberlin College course. In most of the Western colleges the lady pupils were residents of the towns where they were taught, and used the college as a sort of day-school, living at home with their parents. He believed that the minds of women were as different from those of men as were their bodies. The fact that the physique of American women was to the last degree unsatisfactory was too well-known to need argument. Women could not bear the mental stress which came from too hard study. Not only male but female physicians were agreed upon this point. The speaker would not be willing to take such a responsibility in reference to Harvard as to admit women, with his present convictions. It is common for girls, where the elective system is practised, to take a lower stand than men. In one school in Boston where the study of Latin was elective, only six out of several hundred took the study."

According to President Raymond, the health of the girls in Vassar College is very good. He "challenges the United States to produce 400 girls as healthy." Of course this does not contradict the statements of Mr. Eliot.

The foreign news of the week, except that from France, is of little importance. Over a "hundred fresh failures" are reported from Vienna, but as they produce very little effect elsewhere, it is to be presumed that they are those of small operators. The effect on American securities is apparently very slight, speculative German holders of them having mostly got rid of them within the past year. There has been another report of the capture of Khiva, and it has again been contradicted, but there is nothing improbable about such a report, and if not true now it will be before long. In France there are signs that the Conservatives are really "preparing for the worst," and mean to force another "issue" on Thiers. The resignation of M. Goulard, the Minister of the Interior, and of M. Jules Simon, the Minister of Public Instruction, led to the appointment of Casimir Périer in Goulard's place, and M. Waddington in Jules Simon's, and thereupon there arose a crisis. Casimir Périer is a conservative but a frank Republican, and highly objectionable to the Right, which is now preparing for open war against the Ministry, feeling, doubtless, the necessity of giving a definite turn to affairs before the German evacuation on the 5th of September. Arrangements were accordingly made to force the Government into an explanation of its policy; and on Monday last a motion to dissolve the Assembly was voted down by a large majority, and an "interpellation" was addressed to the Government, demanding a Conservative Ministry and a general declaration of intentions. Thiers will now probably try once more the effect of his parliamentary skill, but with much less success than formerly, as the defeat of his candidate at the Paris election has greatly weakened him.

The French Government, it is said, is making, or intending to make, an application to our Government for the delivery of General Fremont, under his recent conviction for swindling by the French court, and it is announced that the General hopes to have the land-grant of his bogus railway assigned to the French brokers for the satisfaction of the unfortunate bondholders, and thus have the sentence now hanging over him annulled. We do not profess to know whether the extradition treaty would cover his case, but we think there is no difficulty in concluding that he cannot satisfy French justice by a pecuniary compromise. He has been condemned for a crime, and he cannot atone for a crime as he would satisfy a debt, by restoring the money. If he cannot be got at under the treaty, however, the only inconvenience he will suffer will arise out of the necessity of keeping out of France. Apropos of this, we may quote the following from a private letter received recently from a highly respectable German, lately a citizen of this country (not Mr. Kapp, let us say):

"At no time has the American name been held so low in this country as at present. Independent of Crédit Mobilier, the escape of Tweed, the compounding of the Erie robberies, the message of Grant, the after-performance to the settlement of the *Alabama* difficulties, and other disgraces, which have given an all but fatal shock to the sympathies of the reading and thinking classes with the country and its institutions,—the fact that default in the payment of interest on about forty millions of American railroad and State bonds has been made in this country within a year and a half, has developed an all but morbid sense of the want of honesty in Americans generally among the public at large, by bringing loss and often ruin to thousands of families throughout Germany. The feeling against Americans is really so intense that all of that nationality not personally known are set down as rascals in these parts until they have proved the contrary.

"Of course I know that this opinion is by no means justified, and that the body of the American people are morally as sound as any other nationality; but I cannot help concluding from the facts before me that the more complicate the problem of government becomes in the States, from the thickening of population and the other causes that render the governing of older countries difficult, the less ability is shown by the people and its leaders in their attempts to solve it; which fact is no doubt due to the scarcity of thoroughly educated men."

Some very interesting facts connected not only with the coal and iron question, but with the labor question, were brought out at a meeting of the Iron and Steel Institute, in England, the other day. The president, in his address, acknowledged that the industrial supremacy of England depended largely on her supply of coal, but did not think it was likely to be endangered by Continental competition, owing to the scarcity of coal all over Europe. The really dangerous rivalry he thought was to come from the United States, "whose resources in ores of the finest description are unlimited, while as regards coal their [our] own wealth is in comparison but poverty." In the matter of coal, England is just now laboring under great difficulties. Not only is the working of the mines growing more difficult, but labor is growing more unmanageable and less productive, while the demands of the iron industry are daily growing greater. In 1869, 30,000,000 tons of coal were consumed in the manufacture of pig and malleable iron. At the rate of increase now going on, it is calculated that the iron manufacture will, in 1882, require 65,000,000 tons. But in the meantime the production of coal is actually diminishing; it fell off 14 per cent. per man last year, all owing to the idleness produced by the advance in wages. In October, 1871, coal miners received about $1 75 a day; in October, 1872, they received over $2; they now receive $3, which, considering the difference in the value of money, is about equal to five dollars in this country. The cost of subsistence is, on this scale, soon earned, and the rest of the time is spent in sheer idleness and guzzling. The "self-culture" which results from increased leisure is in fact nil, and the consumption of beer and spirits, as the revenue returns show, is very great. Eleven nominal days in the fortnight is about as much as they work, as the Monday, Tuesday, and Wednesday after pay-day are always lost. It is only by great improvements in the processes leading to greater economy of fuel that the manufacturers are able to make head against this state of things.

THE POLITICAL BEARINGS OF THE ERIE INVESTIGATION.

THE report of the Erie Investigating Committee to the Legislature so fully confirms the statements we have often made in the columns of the *Nation* as to the rise and progress of Erie Reform, that it is unnecessary to go over the ground again. There are two or three points in the report, however, which deserve attention, not on account of their relation to Erie but to the general political condition of the country. The first of these is the case of General Sickles.

General Sickles was, at the time when the Erie Reform movement began, Minister of the United States to Spain. He had no more to do with the Erie Railway than the Shah of Persia or the Great Mogul. He did not own a single share of stock, nor was he a trustee for bondholders. He was not even what is known to modern times as a receiver. The Erie Railway was a corporation incorporated under the laws of the State of New York, and not under those of the United States. The President of the United States was entitled to no voice in its management. Yet, notwithstanding these self-evident facts, the President of the United States gave General Sickles leave of absence from his post at Madrid to come home and engage in an effort to gain control of this road. Not only did he give General Sickles a leave of absence to come home, but on his arrival issued a preposterous order authorizing an inspection of the books of the Erie Railway—an order so absurd that it was afterwards revoked by the Secretary of the Treasury. If this leave of absence had been really granted in the interest of a true reform, perhaps the extraordinary lawlessness of the act might be pardoned for the sake of the good effected, but we all know what "Erie Reform" was. In reality, it was a movement, and this is especially stated and explained in the committee's report, to gain control of the Erie stock for the purpose of bolstering up a connecting road—the Atlantic and Great Western—and enabling the latter bankrupt corporation to batten upon the receipts of the former. This is so well understood on all hands now that the committee have even gone to the length of recommending the passage of a bill by the Legislature to prevent a lease of the Atlantic and Great Western by Erie. Again, not only was the reform itself a mere pretence, but General Sickles's only object in taking part in it was private gain; and he is now back in Spain, after actually having bled the treasury of the road which he came over to reform to the amount of $100,000. The services which he rendered, too, were no legal services, no services in the ordinary course of business, no services directed to securing the repeal of partial and corrupt legislation; they consisted simply in bribing a number of directors to resign their trusts, on promises of payment in ready money; and the evidence is so clear on this point that the committee are able to report the sums paid to each of them. Under these circumstances, it is certainly very mild language when the committee report that

> "The spectacle of a United States Minister to a foreign court leaving his duties there, and lending himself to the execution of a scheme of this kind, is not calculated to heighten our respect for or to inspire confidence in the integrity of the public service under our Government."

We may add that General Sickles, having succeeded in making a small fortune out of the Erie Railway, employed the rest of his time while in this country in stumping against the Greeleyites (it ought not to be forgotten how important for the Republicans during the past three or four years has been the intimate connection between Erie and Tammany)—so that the whole transaction may be summed up by saying that it consisted in a leave of absence given by the President to a Minister at a foreign court, that he might come home and help the former re-elect himself President, he being allowed as *quid pro quo* to plunder the treasury of a New York corporation.

In the second place, the attack upon General Barlow deserves attention, because it shows the extraordinary difficulties under which any one labors who undertakes in these days to fill a public office. General Barlow has been made the object of three distinct and very grave charges—first, of having received money in the campaign against Fisk and Gould of which he rendered no account; second, of attempting to corrupt the Legislature; third, of receiving sums of money from Fisk and Gould while he was ostensibly attempting, in the interests of public economy and morality, to get Fisk and Gould removed from the direction of the road. As to the first charge, there was no evidence at all; he accounted satisfactorily for every dollar he had received; as to the second, the only evidence was that he retained among a number of lawyers one who happened at the time to be a candidate for the speakership of the Assembly, and who was in fact elected speaker, but who was not shown to have helped, either by the appointment of committees or by biased rulings, or in any other illegitimate way, the party which was attacking the existing direction; as to the third, there was absolutely no evidence of any sort, except some monstrous stories, concocted by a number of gentlemen who had very good reason for feeling hostile to General Barlow, and whose inventions have been very severely animadverted upon by the Committee:

> "The testimony of Mr. T. G. Shearman, to the effect that, in the matter named, Gen. Barlow was acting a double part; that while professedly carrying on a suit in the interest of the English stockholders, he was secretly receiving a large sum from Fisk and Gould, with the understanding that no harm was to result to them from the proposed suits, was flatly contradicted by several witnesses. In the absence of any proof whatever, your committee cannot resist the conclusion that the whole story was a fabrication, and that the parties giving currency to the tale had probably been grossly deceiving one another. The effort of Mr. Shearman, by inuendo and false charges, to blacken the character of the Attorney-General, is deserving of the severest censure."

Besides this, General Barlow is shown to have been even what would be called by some persons fastidiously honest in refusing to receive a retainer from the parties employing General Sickles, not because he was not fairly entitled to it for work honestly done, but because there might be in the eyes of the very critical a question as to his right to do so. If he had taken it, no one could have blamed him; it would have been a sensible addition to the paltry pittance allowed him by the State; yet he refused it. The question will suggest itself to most people's minds how many men are likely to feel strongly tempted to remain honest in public office if those who do remain firm are to be subjected to the insult and calumny which have been poured upon General Barlow. Of course slanders such as those which have been circulated against him gain a certain weight from mere repetition, though they are disproved over and over again.

The third point to which we wish to call attention is the extraordinary frankness of this committee's report with regard to the corruption existing in the body of which they are themselves members—the Legislature. One of the subjects which was referred to them was the reported use of money to "influence legislation." Most legislative committees to whom such matters have been referred have evinced some delicacy in revealing the rottenness of the system of which they were a part. The Crédit Mobilier Committee, for instance, at Washington, last winter, though it was willing enough to recommend individual members for censure, was very chary of any general sweeping condemnation of Congress. But this investigation has been characterized by the most complete *naïveté*, or, as it should more properly be called, shamelessness, on the part of every one concerned. They almost make a joke of the whole thing. Gould testified that he had been for a long time in the habit of managing elections and nominations by money in four States; that on the whole it was easier to buy up a member in this way, by controlling the election, than it was to manage him after he became a member; and that he could no more remember the number of times he had done this, or the names of the members so purchased, than he could the number of freight-cars that passed over the Erie road from day to day. In the year 1868, more than $1,000,000 was disbursed for "extra and legal services." Gould testified, as to other expenditures of the same kind, that they had been charged to the "india-rubber account." It was proved, with-

out much difficulty, that at a meeting of the "Reform" directors, held July 8, 1872, the following resolution was passed:

Resolved, That the treasurer be authorized to pay $30,000 as this Company's proportion of the legal expenses of the New York Central Company at Albany last Winter to prevent legislation affecting prejudicially the interests of this Company.

And the committee says that "this resolution was passed upon a statement before the Board that the Central Company had expended a large sum at Albany to defeat the pro-rata freight bill and other bills in which there was a common interest. A voucher was drawn and approved by the auditing committee and secretary. When this came to the treasurer, he referred it to Mr. Watson, the president, who directed him not to pay it at the time, as he wished to satisfy himself more fully as to the nature of the claim. There is no evidence showing that the amount has actually been paid. Yet it appears conclusive that a large amount, reported by one witness at $100,000, was appropriated for legislative purposes by the railroad interest in 1872, and this was the Erie's proportion."

Six senators had been paid $5,000 each for their votes on the "pro rata" bill; a sum was paid in the House to defeat the "milk transportation" bill. Mr. A. D. Barber admitted receiving about $50,000 from one Dutcher in 1872, "to be employed about the Legislature." The committee have also examined, as so many committees have before them, into the question of the "existence of the lobby," and they gravely report that, "from the testimony of several witnesses, it appears that men outside the Legislature spend their time about the Capitol, from year to year, during the sessions, with no visible occupation, except to serve certain interests by their influence with members," etc., etc., etc., and that persons of this description are "popularly termed the lobby." We are glad that this matter is set at rest. There have been at various times doubts expressed as to the exact amount of corruption in New York. The astonishing rottenness of the existing régime will hardly be questioned by anybody who will take the trouble to look at the evidence taken by this committee. Nobody will look at it, however, because the subject is so stale that it has no longer any interest for the public. All being corrupt together, what is the use in our "investigating" each other?

THE "COEDUCATION" QUESTION.

THE debate on the question of the "coeducation of the sexes" which took place under the misleading title of the "Higher Education of Women," at the late meeting of the Social Science Association in Boston, did not throw any fresh light on the subject, but it threw light on some other things of hardly less interest. We call the title of Colonel Higginson's paper, which brought on the discussion, misleading, because its real object was not so much to prove the expediency of providing women with a better education as to prove the expediency of admitting them to Harvard College. In fact, the agitation about the matter in Boston, where women are really better off both at present and prospectively in educational matters than in any other part of the country, has largely taken the shape of an assault on that institution, and views with indifference the spectacle of male monopoly in New Haven, New York, and Philadelphia. Mrs. Julia Ward Howe's comparison of President Eliot to Satan, the great enemy of souls, therefore, furnished a somewhat appropriate close to the debate, which was further and rather fitly ornamented by a legal suggestion from Mr. Wendell Phillips, that women were entitled to admission to Harvard as of right under the common law. He seemed himself so well satisfied of the soundness of this view that he expressed great astonishment that President Eliot should have maintained a contrary opinion before any assemblage of Massachusetts citizens, from which one might naturally conclude that he had studied the question carefully and was willing to stake his great legal reputation on the correctness of his opinion. Unhappily, however, we shall never know whether he or President Eliot is right, because the only way in which the real state of the law can be got at is by obtaining a legal decision on it, and in Massachusetts this course is not open to reformers, inasmuch as the Supreme Court of the State is, according to Mr. Phillips, too dishonest to make its finding of any value. Under these circumstances, nobody's view of the law is of much practical use, and Mr. Phillips must not be hard on Mr. Eliot if he holds on to his own debased rendering of it.

In so far as Colonel Higginson's paper was an argument in favor of better means of education for women, we presume he will find few persons to disagree with him. Most thinking men and women are agreed that girls who want to go beyond what the primary schools can give them ought to have the means of doing so. But when he tries to persuade us that, in providing these means, we ought to treat difference of sex as a mere physical accident, drawing after it no difference in nervous force or mental or moral constitution, he undertakes a great deal more work than can be done in any essay. It did not augur well for the enterprise, either, that he should have put a false analogy of a somewhat obvious kind in the forefront of his battle. It was so obvious, indeed, that we feel sure that if we had a full report of the discussion we should find that some of his acute hearers called attention to it. His fallacy consisted in the use of what Bentham calls a "question-begging appellative," that is, he applied the name "food" to the knowledge which young persons acquire at schools and colleges, and the process of storing it away for future use he called "digestion," and then went on ridiculing the notion that women require different "food," or digest in a different manner from men. Did any one, he asked triumphantly, ever see a different kind of diet provided for women at dinner-tables from that prepared for men?—why, then, this silly talk about the necessity for a different kind of mental diet at colleges?

Professor Agassiz was, as far as we can judge from the *Tribune's* report, the only person who attempted directly to gainsay this statement of the case, and yet not directly either, for he simply suggested that there is a difference between the male and female taste about food, leaving the falsity of the analogy untouched; yet a better illustration of the mode in which the public is misled, even by able and honest men, has not been pointed out even in the 'Book of Fallacies.' The fact is that knowledge is not "food," and the process of acquiring it is not "digestion." The use of these terms in loose popular talk about educational matters is unobjectionable enough, but it will not do to base an argument on it for so sweeping a change as the introduction of coeducation into every college in the country. The acquisition of knowledge is not a process of nutriment or refreshment; it is, if properly pursued, *labor*, accompanied by physical waste. Any young man or woman who studies conscientiously and profitably is engaged in hard *work*, attended by destruction of tissue and loss of nervous force. It does not, therefore, make a fig's difference whether the learning of the higher mathematics is as good for a girl's mind as for a boy's or not. Neither the girl nor the boy when learning it is doing anything analogous to eating a good dinner. The physical process to which the mental process is analogous is not eating, but training such as an oarsman or pugilist undergoes. He gains strength by hard work, but he has to have great natural vigor to start with, and what he does is to stimulate reparation by waste of tissue. When, therefore, President Eliot or any other head of a college is asked to put boys and girls under the same course of training, he naturally and properly asks, Are they equally able to stand the strain on their physical powers which all "training," whether physical or mental, involves? And it is no answer to his question, or only a very trifling one, to say that the girls can eat just what the boys eat. Even if they can, we know that though a girl has all the muscles a boy has, not one girl in ten thousand can exert her muscles to the same extent that the average boy can. She can neither lift as much, nor walk, nor swim, nor ride as far; and this though her muscles are made of beef, potatoes, bread, and butter. In other words, no kind or amount of food produces the same results on a woman's frame that it produces on a man's. The women who work in the

field are not as strong or as enduring as the men who work in the field. The difference between Mrs. Julia Ward Howe's muscles and Colonel Higginson's is found rigidly preserved between those of Jeanette and Jeanot in the French vineyards. Moreover, if we may be allowed so gross an illustration, a woman cannot bear as much alcohol as a man can. An ordinary "moderate drinker" can take a pint of claret without feeling any effect from it whatever; almost any woman who consumed this quantity at one sitting would find herself in a sad state. Even the "thoughtful teetotaler" must admit that this is a test of the comparative strength of the male and female nerves which there is no mistaking or eluding. Now anybody who says that study, such as young men and women at college ought to perform, is not an exhausting process, that it does not produce many of the effects of severe physical toil—such as a sense of weariness, a loss of flesh, and hunger—either has never performed severe mental labor, or is a person of exceptional powers. That physical and mental toil produce ultimately the same effects on the individual's vitality is indeed a well-established conclusion of physiology, and it makes sad work of all proposals to make great scholars out of field laborers and mechanics. A man who works hard with his hands, and also works hard with his head, is apt to be burning the candle at both ends. A weak man, therefore, is not likely to become a great student without seriously impairing his stock of vitality, and nearly every woman in Massachusetts is a weak man. We would not for this reason shut women out from taking as much higher education as they feel equal to, but we should for this reason consider physical condition a fair ground for doubting the propriety of putting them into boys' classes, and we should consider that any girl who, in answer to questions on this point, offered to eat a beefsteak and an apple-dumpling in the presence of the faculty, was guilty of a very sorry joke.

The truth is that the coeducation of the sexes, as advocated by a certain class of thinkers and politicians, is simply part and parcel of the female-suffrage movement, and the success of that movement, in this country at least, largely depends on the possibility of satisfying people of the soundness of John Stuart Mill's belief that woman, as we know her, is simply a serf weakened in mental powers by man's tyranny; or, in other words, that sex is simply a physical accident and not a moral division of the human race. As they maintain that no disorders would result from the mingling of men and women in political contests, on juries, and the like, they are bound also to maintain that throwing them together at the most inflammable period of their lives would simply result in an increase of purity. In fact, they have covertly revived the old theory of the Golden Age in the far past. The common notion is that the first great step in civilization was the separation of the sexes, and the allotment to them of different duties and spheres, and the creation of a set of conventions for the preservation of female modesty and the protection of the family. But the new school insist upon it that the perfect state existed before that time, when every woman did man's work, and went her own way, and was only known from the men, as the lioness, or tigress, or cow from the male of her species, by difference of size, or the absence of a mane. This may be so; but it is not reasonable to ask us to accept it all on the assertion of a handful of ladies and gentlemen who certainly have no monopoly of human experience and have not run through the whole gamut of human passion. We by no means assert that it is conclusively proved that the sexes ought not to be educated together. We have nothing to add to what we have said on this point already (*Nation*, May 3, 1870); but we say that the subject is surrounded with difficulties, which are much more serious in an old and luxurious community than in new and simple ones like those of the West; and that President Eliot's attitude towards it is the rational, human, Anglo-Saxon attitude, the preservation of which with regard to all social and political questions is, we firmly believe, the condition on which the preservation of our government, and we might add of our civilization, depends.

JOHN STUART MILL.

MR. MILL was, in many respects, one of the most singular men ever produced by English society. His father was a prominent member of the small sect or coterie of Benthamites, whose attempts to reform the world, during the whole of the earlier part of the present century, furnished abundant matter for ridicule to the common run of politicians and social philosophers; and this ridicule was heightened, as the years rolled on, by the extraordinary jargon which their master adopted for the communication of his discoveries to the world. The author of the 'Defence of Usury,' of the 'Fragment on Government,' and of the 'Book of Fallacies,' had, however, secured a reputation very early in his career which his subsequent eccentricities could not shake, but the first attempts of his disciples to catch the public ear were not fortunate. Macaulay's smart review of James Mill's book on 'Government' gives a very fair expression to the common feeling about them in English literary and political circles during John Stuart's boyhood. About the value of the father's labors as a mental philosopher there are of course a variety of opinions, but he gave two proofs of capacity for the practical work of life which there was no gainsaying. He came to London an obscure man of humble origin, but managed, without ever having been in India, and at a period when authors were held in much less esteem by politicians than they were at a later period, to produce such an impression of his knowledge of Indian affairs, by his elaborate history of that country, on the minds of the Directors of the Company, that they gave him an important office in the India House, and this, too, in spite of the fact that he lived in a circle generally considered visionary—answering, in fact, in some degree to what we call the "long-haired people." Besides this, he himself personally gave his son an education which made him, perhaps, all things considered, the most accomplished man of his age, and without help from the universities or any other institution of learning. The son grew up with a profound reverence for his father as a scholar and thinker, and rarely lost an opportunity of expressing it, though, curiously enough, he began very early to look on Bentham, the head of the school, with a critical eye. The young man's course was, however, still more remarkable than the father's. Although brought up in a narrow coterie holding peculiar and somewhat unpopular opinions, and displaying, from his first entrance in life, as intense hostility as it was in his nature to feel against anything, against the English universities as then organized and conducted, though they were the centre of English culture and indeed one might say of intellectual activity, he saw himself, before he reached middle life, the most potent influence known to educated Englishmen, and perhaps that which has most contributed to the late grave changes in English public opinion on several of the leading social and political problems. Indeed, it is not too much to say that his writings produced a veritable *débâcle* in the English mind. The younger generation were a good deal stirred by Carlyle; but Carlyle, after all, only woke people up, and made them look out of the window to see what was the matter, after which most of them went to bed again and slept comfortably. His cries were rather too inarticulate to furnish anything like a new gospel, and he never took hold of the intellectual class. But Mill did. The 'Logic' and 'Political Economy,' as reinforced and expounded by his earlier essays, were generally accepted by the younger men as the teachings of a real master, and even those who fully accepted neither his mental philosophy nor his social economy, acknowledged that the day of old things was passing away under his preaching. His method, however, as applied to politics, was not original—in fact, it was Bentham's.

Bentham, who was perhaps, in the field of jurisprudence, the most destructive critic that ever appeared, had the merit which in his day was somewhat novel among reformers, and marked him out as something very different from Continental radicals, of being also highly constructive. Indeed, his labors in providing substitutes for what he sought to overthrow are amongst the most curious and, we might add, valuable monuments of human industry and ingenuity. His proposed reforms were based, too, on a theory of human nature which differed from that in use among a large number of radicals in our day in being perfectly sound, that is, in perfect accordance with observed facts, as far as it went. But it did not go nearly far enough. It did not embrace the whole of human nature, or even the greater part of it, and for the simple reason, which Mr. Mill himself has pointed out in his analysis of Bentham's character, that its author was almost entirely wanting in sympathy and imagination. A very large proportion of the springs of human action were unknown or incomprehensible to him. The result was that, although he exerted a powerful influence on English law reform by his exposure of specific abuses, he made little impression on English sociology, properly so called. This was in part due to his narrowness of view, and in part to the absence of an interpreter, none of his followers having attempted to put his wisdom into readable shape, except

Dumont, and he only partially and in French. The application of his method to the work of general reform was indeed left to Mr. Mill, who brought to the task an amount of culture to which Bentham could make no claim, and a large share of the sympathy of which there was also so little in Bentham's composition, and a style which, for expository and didactic purposes, has perhaps never been surpassed. Moreover, Mr. Mill lost no time, as most men do, in maturing. He was a full-blown philosopher at twenty-five, and discourses in his earliest essays with almost the same measure, circumspection, and gravity exhibited in the latest of his works, and with all the Benthamite precision and attention to limitations. He was however wanting, as his master was, in imagination, and wanting too in what we may call, though not in any bad sense, the animal side of man's nature. He suffered in his treatment of all the questions of the day from excess of culture and deficiency of blood. He understood and allowed for men's errors of judgment and for their ignorance, and for their sloth and indifference; but of appreciation of the force of their passions, his speculations contain little sign. For instance, he was the first to point out the fact that the principle of competition, the eager desire to sell, which furnishes the motive power of the English and American social organization, is almost unknown and unfelt among the greater part of mankind, but his remedy for redundancy of population, and his lamentations over "the subjection of women," are those of a recluse or valetudinarian.

His influence as a political philosopher may be said to have stood highest after the appearance of the 'Political Economy.' He had then perhaps the most remarkable following of hard-headed men which any English philosopher was ever able to show. But the reverence of his disciples waned somewhat rapidly after he began to take a more active part in the treatment of the questions of the day. His 'Representative Government,' valuable as it was as a philosophical discussion, offered no solution of the problem then pressing on the public mind in England which bitter Radicals or Conservatives could consider comforting. The plan of having the number of a man's votes regulated by his calling and intelligence was thoroughly Benthamite. It was as complete and logical as a proposition in Euclid, and in 1825 would have looked attractive; but in 1855 the power of doing this nice work had completely passed out of everybody's hands—indeed, the desire of political perfection had greatly abated. His lofty and eloquent plaints on the decline of social freedom helped to strengthen the charge of want of practicalness which in our day is so injurious to a man's political influence, and when he entered Parliament, although he disappointed none of those who best understood him, the outside multitude, who had begun to look on him as a prophet, were somewhat chagrined that he was not readier in parrying the thrusts of the trained gladiators of the House of Commons. It was the book on the 'Subjection of Women,' however, which most shook the allegiance of his more educated followers, because it was marked by the widest departures from his own rules of thinking. It would be impossible to find any justification in his other works for the doctrine that women are inferior to men for the same reason that male serfs are inferior to their masters. His refusal to consider difference of sex as even one probable cause of women's inferiority to men in mental and moral characteristics, was something for which few of his disciples were prepared, or which they ever got over; and indeed his whole treatment of the question of sex showed, in the opinion of many, a constitutional incapacity to deal with the gravest problems of social economy.

The standing of Mr. Mill as a mental philosopher appears to be very differently estimated by late critics and opponents and by himself, whether we consider the extent of his influence, or the relations of his doctrines to his nation and times; and there is a most singular inversion in these estimates of what we should naturally expect from friend and foe—an estimate of Mill's position and influence by his opponents which, compared to his own, seems greatly exaggerated. For example, Dr. McCosh, a thoroughgoing opponent, regards Mill's influence as the most active and effective philosophical force now alive in Great Britain, the strongest current of philosophic thought even at Oxford; and M. Taine, who some years ago discovered at Oxford that the British nation was not wanting in "general ideas" or principles in its modes of thought above the requirements of the accountant and assayer, found these principles in a really living English philosophy of which the head and founder was Stuart Mill—a philosophy which has brought forth one of M. Taine's most elaborate critical studies in his work on 'Intelligence.' In contrast with these estimates we have from Mr. Mill himself the opinion, in a letter to M. Taine, that his views are not especially English, and that they have not been so since the philosophical reaction in Scotland, Germany, and later in England, against Hume; that when his 'System of Logic' was written he "stood almost alone in his opinions; and though they have met with a degree of sympathy which he by no means expected, we may still count in England twenty *à priori* and spiritualist philosophers for every partisan of the doctrine of Experience."

This estimate of his own influence and of the importance to metaphysical discussion at the present time of the philosophy he "adopted," is entitled to much more consideration than ought in general to be allowed for an opinion inspired by the ambition, the enthusiasm, the disappointments, or even the modesty of a philosophical thinker. Nevertheless, the far different opinion of his standing as a metaphysician which his critics entertain is undoubtedly more correct, though in a sense which was not so clearly apparent to him. They see clearly that a philosophy of which he was not the founder, and never pretended to be, has gained through his writings a hold not only on English speculation, but on that of the civilized world, which it did not acquire even in England when it was an especially English philosophy, as it was "in the first half of the eighteenth century, from the time of Locke to that of the reaction against Hume."

What, then, is it in Mill's philosophical writings that has given him this eminence as a thinker? Two qualities, we think, very rarely combined: a philosophical style which for clearness and cogency has, perhaps, never been surpassed, and a conscientious painstaking, with a seriousness of conviction and an earnestness of purpose which did not in general characterize the thinkers whose views he adopted. It was by bringing to the support of doctrines previously regarded as irreligious a truly religious spirit, that Mill acquired in part the influence and respect which have given him his eminence as a thinker. He thus redeemed the word "utility" and the utilitarian doctrine of morals from the ill repute they had, for "the greatest happiness principle" was with him a religious principle. An equally important part of his influence is doubtless due to the thoroughness of his early training—the education received from his father's instruction—which, as we have said, has made him truly regarded as the most accomplished of modern dialecticians.

To these grounds of influence may be added, so far as his influence on English thought is concerned, the fact that he was not a metaphysician in a positive fashion, though he dealt largely with metaphysical topics. He represented the almost instinctive aversion to metaphysics, as such, which has characterized the English since the time of Newton and Locke, we might almost say since the time of Bacon. Metaphysics, to pass current in England, has now to be baptized and become part of authoritative religious instruction, else it is foreign and barbarous to the English matter-of-fact ways of thinking. Mill's 'System of Logic' was not intended as a system of *philosophy* in the German, French, or even Scotch sense of the term. It is not through the *à priori* establishment or refutation of highest principles that experiential, inductive, fact-proven principles of science are regarded or tested by the unmetaphysical English mind. Metaphysical doctrines prevail, it is true, in England to the extent probably that Mr. Mill estimates —twenty to one of its thinkers holding to some such views. Yet it would be a misconception to suppose these to be products of modern English *thought*. They are rather preserves, tabooed, interdicted to discussion, not the representatives of its living thought.

Mr. Mill estimated the worth of contemporary thinkers in accordance with this almost instinctive distrust of rational "illumination"; setting Archbishop Whately, for example, as a thinker above Sir W. Hamilton, for his services to philosophy, on account of "the number of true and valuable thoughts" which he originated and put into circulation, not as parts of a system, but as independent truths of sagacious or painstaking observation and reflection. It is by such a standard that Mr. Mill would doubtless wish to be judged, and by it he would be justly placed above all or nearly all of his contemporaries. Nevertheless, as a conscientious student of metaphysics, he held in far higher esteem than is shown in general by English thinkers the powers peculiar to the metaphysician—the ability and disposition to follow out into their consequences, and to concatenate in a system, the assumptions of *à priori* principles. Descartes, Leibnitz, Comte, and, as an exceptional English thinker, even Mr. Spencer, receive commendation from him on this account. It is clear, however, that his respect for this talent was of the sort which does not aspire to imitate what is admired.

ENGLAND.

LONDON, May 3, 1873.

A DEBATE which took place the other night in the House of Commons, though tiresome and futile enough in itself, has brought up some interesting questions. Mr. W. H. Smith, the very excellent and sensible Conservative gentleman who has replaced Mr. Mill as member for Westminster, brought forward a motion intended to embarrass the Government. He proposed, in substance, that the budget should not be adopted until

ministers had declared their future financial policy Amongst the measures which were promised in the Queen's speech was a readjustment of our present system of local taxation. Although Mr. Disraeli made one of his brilliant onslaughts upon the Government policy, the opposition did not venture, when the time came, to challenge a division. We therefore remain for the present uncertain as to what efforts will be made to relieve rate-payers by readjusting the burdens which they bear, or by shifting part of them to the shoulders of the nation at large. All that can be said is that the question is a very large and a very difficult one. Even when touched thus indirectly, it rouses some awkward passions. Who is to get the benefit of any readjustment? Are the burdens to be shifted from land to labor, or from the poor to the rich? Mr. Lowe, speaking in defence of his budget, laid down a very fertile principle. As it is decided that we are only to pay half of the American indemnity out of this year's revenue, a considerable surplus is available for the reduction of taxation. Mr. Lowe has decided to distribute this relief equally between the rich and the poor, by diminishing at once the income tax and the sugar duties. This description, indeed, is not very accurate, for the classes upon whom the income tax presses most heavily are those who are in the lower strata of the middle classes, and only one degree above the laboring classes. The doctrine, however, seems to be that for the future any relief from direct taxation is to be accompanied by a parallel diminution of indirect taxation; and the doctrine is defended by appealing to the jealousies of the working-classes. Let us educate our masters, was a phrase contributed by Mr. Lowe to the commonplace of political discussion, when, in spite of his vehement remonstrances, the working-classes had received, if not an actual, yet a potential supremacy in politics. He is now educating them to look carefully after their own pockets, and some more energetic Radicals than Mr. Lowe are beginning to be a little anxious about the result. They fear lest the working-classes should learn the lesson only too well, and discover that the possession of political power may enable them to throw off the burden of taxation upon their neighbors. The rich, indeed, may be able to take care of themselves, for money shows no signs of losing influence, whatever may be the case with rank. It is the luckless middle classes who find it daily harder work to make both ends meet, and Mr. Lowe is indicating to the laboring classes the means of giving an additional twist to the screw.

There is certainly one aspect of our modern finance in which this tendency appears rather unpleasantly. We have all been congratulating ourselves on the amazing buoyancy of our revenues, which has enabled us, amongst other things, to meet the American Claims with so much ease. Assuming, however, that peace is preserved, and that this rapid expansion of our income still continues, we shall probably be able to go on cutting off taxes year by year. But what is the revenue the growth of which has given so jubilant a tone to the budget speeches of recent years? That part of the revenue which, as Mr. Gladstone puts it, advances by leaps and bounds, is chiefly the revenue from drink. We have drunk ourselves out of the American difficulty. We have consumed such ever-growing rivers of beer and gin, and raised so prodigal an incense of tobacco-smoke, that the customs and excise have been more than ever productive. In that sense, the working-classes have contributed more than ever to the national revenue, and have hardly felt the burden. But this is a result which we can hardly regard with unqualified satisfaction. However, it is a commonplace of employers to say that higher wages only means more intoxication. It is very pleasant to justify one's unwillingness to give by tender consideration for the morals of the recipient. Still it must be confessed that some recent facts tend to justify the view that the immediate operation, at least, of the great increase of wages of the mining population has been rather to encourage idleness. The colliers, for example, have taken advantage of their strong position to diminish the hours of labor, as well as to earn a larger income. A good deal of evidence has been given upon this head before the committee at present sitting upon the coal question; wages in one district have increased, between October, 1871, and October, 1872, from 7s. 3d. to 12s. 11d. a day; and, in spite of these high wages, and an increase in the number of men employed, the amount produced continues to fall off. From such statements, put forward by the coal-owners, it is probable enough that very much has to be deducted; but the general fact is undeniable, and not perhaps very surprising, that a rapid increase in the rate of wages has led to a corresponding increase of expenditure in drink, which, in its turn, has been the main cause of the buoyancy of the revenues. Is there not something dangerous, it is asked, about a prosperity resting on such foundations? As long as everything goes on swimmingly, and we drive year by year a more roaring trade, Chancellors of the Exchequer will proclaim that people who get so drunk must be happy, and fill their coffers complacently from so convenient a source. But if trade is checked, if there is another commercial panic, or if our commerce suffers from the increased price of our coals, the wasteful laborers will be forced to give up drinking. It is much more difficult to resuscitate a tax than to get rid of it, and we shall have an awkward problem before us. The more taxes we have given up in our boundless reliance upon the drinking capacities of the British public, the harder it will be to find any new resources. The question between taxing the poor and the rich will arise when we are all in a bad temper, and Mr. Lowe's successors will regret that the old machinery has been allowed to fall into disuse. In short, the tendency of late years has been to rest our whole fiscal system more and more exclusively upon drink and upon direct taxes; and the plan is open to many objections, both from the advocates of temperance and from those who dread a collision of interests between classes.

I do not presume to say whether the picture is not drawn in too gloomy colors by the persons whose opinions I have tried to represent. The most prominent fact which comes out—the extraordinary rise in the wages of certain classes—can hardly be considered as altogether melancholy, though it were to be wished that they generally made a better use of their advantages; and, though the consequent rise in the price of coal and other necessaries is anything but agreeable for consumers, the tendency to raise the rate of wages is contagious. The agitation of the agricultural laborers, so long the most stagnant class in the community, continues to increase. Mr. Arch, their leader, is a man of mark. A very ill-judged attempt was recently made to put him down in a small country town in Berkshire. He was holding a peaceable meeting in the market-place, and the usual amount of speechmaking was being done from wagons drawn up to provide a temporary platform. Hereupon some zealous official charged Mr. Arch with obstructing the highway. The statute which afforded the pretext for this charge had obviously an entirely different intention. It was directed, not against agitations, but against obstructions caused by boys playing games in wrong places and similar petty nuisances. The magistrate before whom he was brought had, therefore, the sense to dismiss the charge as frivolous, and Mr. Arch was allowed to continue his career. He is a man of more ability for speechmaking than is at all common in the class from which he springs. He can talk fluently, with very few grammatical solecisms, and with a rather larger allowance than might be wished of those platitudes in which ordinary stump-orators delight. He has studied, in fact, in the only school in which the English agricultural laborer has much chance of acquiring oratorical facility. He has been a Dissenting preacher, and a little of the peculiar style of that profession still sticks to him. However, he is to all appearance a man of genuine ability and sincerity, and one can only hope that he will not be spoilt by the attentions which he receives from demagogues of a superior class. It is hard indeed for a man to retain his simplicity when suddenly elevated into the region of political agitation. But whatever his personal career may be, there can be no doubt that he has initiated a very remarkable movement. Agricultural laborers, indeed, are made of stuff not easily moved, and, after all that has been done, not speedily accessible to agitation. Yet they have shown capacities in which few people believed a year or two ago, and it is difficult to prophesy what may be the end of the movement once begun.

Correspondence.

THE PHELPS-DODGE CASE.

To the Editor of the Nation:

Sir: I infer from articles in the *Nation*, I think No. 409, that there was neither legal nor moral offence proved against Phelps, Dodge & Co. Do I not? But other sources of information tell me that the younger members of the firm *intended* to defraud the revenue. What is the truth in this case? We value your authority in these matters, and would know what is the truth.—I am, yours truly, H. E. Croley.

Littleton, Mass., May 14, 1873.

[The facts of the case, as we understand it, were that Phelps, Dodge & Co., received consignments of goods, of one of which (for example) the following was the formal invoice, on which duties were paid:

INVOICE.

Liverpool, June 1, 1871.

Messrs. Phelps, Dodge & Co.,
To Phelps, James & Co., Dr.

Per City of Paris:	
2,700 boxes I C plates, 28s.	£3,780
40 boxes XXXX. 40s.	80
20 boxes XXX, 35s.	35
Paintemester:	
125 boxes I C, 28s.	175
Total	£4,070

By a subsequent mail there came, for example, the following memorandum from the Liverpool house:

MEMO.
Per City of Paris, June 1, 1871:
40 boxes XXXX.....40s. 9d.
125 boxes I C.....28s. 6d.

The explanation of this memorandum is, that the prices marked in it were the prices at which a balance of goods deliverable under a former contract had been adjusted. In some cases, the prices in the memorandum were less than the prices in the invoice, so that, as Judge Davis pointed out in his letter, the firm had really overpaid the Government a larger sum in duties on the total invoices, amounting in value to $1,200,000, than they withheld from it if the memorandum prices were the true ones. Now, these memoranda were not concealed. They were pinned to the invoices, and kept on the invoice-book, and the rascally clerk, when he gave information, carefully took with him the ones in which the prices marked exceeded those of the invoice, but left behind those in which they fell below them. It is doubtless true that the firm were mistaken in supposing that they ought not to have paid duty on the memorandum price, which was "the cost price," but as they lost by the mistake, on the most favorable supposition, and on the most unfavorable only made $1,600, we should presume, as would anybody but a detective seeking blackmail, that it was not a fraudulent mistake, even if they had no character at their back. To believe "the younger members of the firm" intended to defraud the revenue of a sum like this, would be, considering the profits of their business, to believe them arrant fools as well as great knaves.—Ed. Nation.]

SIR A. COCKBURN'S EMBARRASSMENTS.

To the Editor of the Nation:

Sir: Although no one, not even Englishmen, can now doubt that the choice of Sir Alexander Cockburn as arbitrator for Great Britain was not happy, yet, so far as I am aware, no attempt has been made to explain how it came to pass that a man holding the great office of Chief-Justice of England, and enjoying the highest reputation as a judge, won by long years of service—a man, moreover, who is generally considered by those who know him as remarkably brilliant in conversation, and agreeable as a companion—came to draw on himself such a torrent of abuse as is poured forth by Mr. Cushing in his book. And though many years of undisputed sway as head of his Court, together with advancing age, may have increased the infirmities of a temper naturally inclined to arrogance, it must have required an extraordinary complication of annoyances to have produced such a result as has been described by the learned counsel. It is also somewhat remarkable that, though the tribunal met in December under more than ordinarily trying circumstances, no complaint whatsoever is made of the conduct of the Chief-Justice on that occasion.

On a calm review of all the events of the entire period, it seems hardly to be going too far to say that this and every other difficulty which surrounded the final deliberations of the Court during the summer, may be traced more or less directly to the wretched struggle which took place over the "indirect claims" during the winter and spring—a struggle all the more deplorable as, on Mr. Cushing's own showing, it might so easily have been avoided.

Mr. Cushing says that for six weeks the British Ministry took no notice of the insertion of these claims, and that it was only finally driven into action by popular clamor. It was, indeed, quite evident at the time that the Government was hanging back, and ministers were not a little abused on that account. It seems pretty clear that if Mr. Gladstone and Lord Granville had been left to themselves, they would have allowed that, like other disputed points, to be passed on by the arbitrators at the proper time, in perfect confidence that the decision would be such a one as was actually given. If, therefore, only the necessary number of copies of the "Case" had been quietly sent to the Foreign Office, and the rest securely locked up, instead of being scattered broadcast over Europe and America, no one outside of official circles would have known that any such question had been raised, no conflict would have arisen between the two Governments, no one would have suggested the possibility of a rupture between the two countries, the Chief-Justice would not have been placed in the false and distressing position in which he afterward found himself, and last, but not least, Mr. Cushing would never have written his book.

No such good fortune, however, was in store. During the winter, Sir Alexander, together with most other Englishmen, apparently became convinced that the treaty would be set aside, or that, even if it were saved, a long adjournment of the arbitration would be inevitable in order to give time for the negotiation of a new article. It is probable, too, that he viewed such a result without much regret, for he is supposed never to have regarded the "three rules" with favor. These feelings, combined with a constitutional dislike of hard work, caused him to neglect to study the documents as they were placed before him, so that, according to Mr. Cushing, he was absolutely ignorant of the whole of the great mass of evidence and argument when the day of the final meeting arrived. How little idea he had that anything could be done at that time may be inferred from the fact that he is said to have left London in June with hardly a sufficient supply of clothing for an absence of a week. The sudden pacification, therefore, fell on him like a thunderbolt, and found him totally unprepared, but surrounded by men who were thoroughly familiar with all that had been published, and who had in consequence, for the most part, arrived at their conclusions. The effect this state of affairs produced on Sir Alexander was perhaps natural, if not altogether reasonable; he could never fully realize that his colleagues were not in the same unenlightened condition as himself; and as he, having read nothing, waited to be convinced, and keenly felt the need of more argument before giving his decisions, it seemed to him as if the reluctance of the other judges to hear repeated over again that which had already been said was the result of partiality and prejudice.

After the famous declaration in June, the Court adjourned for a few days. This interval was seized on by the Chief-Justice for a trip to London, in order, as it was supposed, to fetch back his trunks. The reading of provisional opinions then began at once, so that absolutely the only preparation he could have had before delivering his judgment on the great case of the *Florida* must have been the little he could glean from a sack full of books which he took with him on the train. Thenceforward, in order not to lag behind, he was obliged to undergo the severest and most unremitting labor during the hottest months of summer, and, unfortunately, the frame of mind in which he addressed himself to the task was not judicial. Being behindhand, he was naturally led to meet the American arguments first; then, without knowing at all accurately what Sir Roundell Palmer had said in reply, he went to the evidence, not to draw from thence the materials for an impartial decision, but to find matter with which to answer propositions which were new to him, and which struck him as false, but all of which had been before elaborately discussed by counsel; he thus, insensibly to himself, drifted from the position of a judge into that of an advocate. His situation, as described by Mr. Cushing, must now have been most painful. Worn out by fatigue; oppressed by the idea that he was in a hostile atmosphere; exasperated by the opinions of Mr. Staempfli, who, to judge by the record of the proceedings, seems to have been much inclined to place international duties on land and at sea exactly on the same footing—a principle calculated to disturb the equanimity of any English lawyer; yet more irritated by the 'Plaidoyer' of Mr. Cushing (a pamphlet which it is impossible to read without suspecting that it was written with the express intent to annoy), he exhausted himself in vain protests, and grew bitter under defeat. That, tired and harassed, he should have given way under the pressure, and so acted as to offend, is a subject for regret, but hardly for surprise. It is curious to observe how completely his whole tone changes when he suddenly escapes from the mesh-work of wretched perplexities in which he had fallen, and for a moment stands on firm ground. In the case of the *Alabama*, where he felt himself thoroughly at home, he gave an opinion worthy of the occasion and of his own great reputation. Neither is it worth while to make the Chief-Justice out to have been worse than he really was, and in one trifling fact Mr. Cushing's memory is at fault: it was not Sir Alexander for whom the tribunal was obliged to wait on the day of the public reading of the award. He was, it is true, a few moments late, but Lord Tenterden was the person who really caused the delay.

The embarrassments of one man may seem of but little consequence, but they sometimes produce results of vast importance. Mr. Cushing's book is the best evidence that the course of Sir Alexander Cockburn acted strongly on the other members of the Court. Under more favorable circumstances, it is possible that the judgments given might have assumed a somewhat different form from the one they took, and it is highly probable that some plan might have been matured for receiving a unanimous signature of the award. The law as actually laid down must abide the verdict of future years; but if it is condemned, its fall will be largely due to the folly which first inserted the "indirect claims," and the wild recklessness of consequences which afterward scattered state secrets through the streets as lightly as if they had been electioneering documents. It may well be that the Chief-Justice of England was not a man well suited to fill the delicate position to which he was called; but had it not been for the unreasoning storm which was

fanned into fury by the newspapers, it is safe to assert that the extraordinary irritability of mind would never have gained possession of the British arbitrator, which rendered him worse than useless in the labor of conducting to a successful issue the great task which devolved on the tribunal at Geneva. K.

Notes.

WHILE the dispute is going on as to the propriety of publishing examination papers in college catalogues, and indeed of giving any currency whatever to them, Mr. R. F. Leighton, Master of the Melrose High School, offers a complete collection of the papers used for admission to Harvard College since 1860, and gives notice that each year's papers will be added to succeeding editions. (Boston: Ginn Bros.)——Shepard & Gill, Boston, announce for immediate publication 'Life in Danbury,' by J. M. Bailey. Mr. Bailey's views of life in this little Connecticut village are so like the ordinary experience of life, particularly housekeeping life, in all parts of the country, that his humorous delineations have long since ceased to be enjoyed solely by the readers of his paper, the *News*. He has been fairly successful in keeping up the level of his humor, but the collection to which the above title will be given will preserve only the best of his pieces, while including sketches never before published.——'Half-Hours with Insects,' and 'Our Common Insects,' by Dr. A. S. Packard, jr., are announced by Estes & Lauriat, Boston, and may safely be recommended in advance to students of entomology as well as for popular reading.——Roberts Bros. have in press 'Thoreau, the Poet Naturalist,' with memorial verse, by William Ellery Channing.——The Boston Public Library has just acquired by purchase about 12,000 volumes of the private library of the late Thomas P. Barton, of this city. It is in all respects a highly valuable collection, but is most to be prized on account of its Shakespereana, amounting to some 2,000 volumes, and including a very perfect copy of the first folio. No other library in the country, it is said, whether public or private, can in this department now compare with the Boston Library.

—The indulgent reader, duly mindful of editorial conditions of time and space, has doubtless excused our distorted perspective in passing over Baron Liebig's death to write the obituary of James Brooks, and in otherwise taking note of the distinguished mortality of the past few weeks. True fame, in fact, can as little contend (except in the long run) against the notoriety of the hour as the gods against stupidity. We wish here, however, to make amends for omitting mention of the death on May 6, in this city, of the veteran General José Antonio Paez, one of the most remarkable Americans of our time, and one of the purest characters in the turbulent history of the South American republics. In reviewing his autobiography, of which the first volume was published in 1867, we gave (see *Nation* of April 9, 1868) an outline of his eventful career, which we have not room to reproduce. We may, however, quote from that review what Gervinus said of him in his 'Nineteenth Century':

"His clinging to ancient habits and customs, as well as to his unschooled simplicity of condition, his mode of companionship in arms, and his fatalistic daring, remind one of the early conquerors, the Pizarros and Almagros, who, however high they rose in external honors, remained plain and simple, agreeably to their descent. Like them, Paez struggled up to the highest merits and dignities, by far the most conspicuous of the many self-made men of color who, from overseers of cattle-farms like him, worked themselves up to be generals; who, descending from the formerly down-trodden zambo, mulatto, or mestizo races, but now lifted up by the exalting nature of the events of time, rose to views and aims, knowledge and actions, such as we look for only among the most advanced classes of mankind."

"Free from selfishness and greediness, uncorrupted by false ambition, untouched by ill-will or envy," and never hesitating "publicly to acknowledge his faults in frank repentance," continues his eulogist, who draws a parallel between him and Bolivar. The ex-president and ex-dictator of Venezuela, who as late as 1861 was recalled from exile to be the saviour of his country, died at the advanced age of eighty-three.

—How M. Thiers passes his time from day to day in domestic and official routine, is described by a correspondent of the *Indépendance Belge*. The President, who is now in his 77th year, preserves exactly the same habits and the same simplicity which characterized him in private life. His two familiars are his valet Louis and his friend M. Barthélemy Saint-Hilaire. He rings for the former at 5 o'clock in the morning, and puts on a buttoned-up frock-coat, cravat, and easy shoes. His stiff thick hair enables him to dispense with a cap of any sort. At six, refreshment is served, and with it arrives M. Saint-Hilaire, who went to bed after reading the evening papers, and now comes to indicate the most noteworthy articles contained in them. He is followed by the general secretary, who receives instructions as to the President's correspondence. At seven the receptions begin. Various chief officers of the Departments precede the Prefect of the Seine, the Prefect of Police, and the Chief of the City Police, who are due at half-past seven; and they are followed by more cabinet officers until nine o'clock. Then for two hours M. Thiers receives the Ministers themselves, Deputies, functionaries *en passage*, and private persons who have obtained letters of audience. Newspaper editors bent on "interviewing" the President generally make their appearance before ten o'clock. From eleven to twelve, cabinet meeting; from twelve to one, breakfast, sometimes with invited guests, chosen at random from the morning's callers, M. Thiers displaying a good appetite: "il prend généralement trois plats." Conversation and sometimes more visitors occupy the time till two o'clock, when the President retires for his second toilet, and, as is his invariable custom, shaves himself in his shirt-sleeves. Audiences again, but brief ones, the President standing; at three a ride out, either for pleasure or to the Chamber, returning at half-past five. Letters, cards, and despatches which have arrived in his absence are then looked over in the office of M. Saint-Hilaire, when, after inspecting the work of his secretaries, M. Thiers takes a nap on a chair or sofa for an hour or so, and rises to his third toilet—frock-coat for friends, dress-coat for company. After dinner, he remains in his salon till midnight, his last visitor being M. Calmon, Prefect of the Seine.

—The German Rhine, at its source near the head-waters of the Ticino, marks the northern limit of a belt of border-Alpine dialects known as *dialetti ladini*, which agree with the other Romance languages in having Latin for a common base, but still form a family distinct from all the other dialects of the Italian peninsula. The localities in which they are spoken, beginning in the Swiss canton Ticino, hug more or less closely the chain of the Alps till in a broad belt they touch the sea between Venice and Trieste. They have been made the subject of an exhaustive study by G. I. Ascoli, who has begun the publication of an *Archivio Glottologico Italiano*, with a number or volume of 700 pages, containing only one of his seven chapters on the dialects named. It is said to give promise that the whole work will rank with those of Grimm, Diez, and Bopp. A map of the district studied is given, and in a long preface the author discusses the question of the unity of language, incidentally ventilating his belief that the future literary style of Italy will not be Tuscan, but a new outgrowth of all the dialects. A 'History of Italian Travellers,' by the late Prof. Gaetano Branca, gives a brief summary of the most notable travels performed by his countrymen during the Middle Ages—a period distinguished by many other if lesser worthies than Marco Polo, whose fame has eclipsed them all; the results of modern research in regard to Cabot, Columbus, and Vespucius; and, in the last two chapters, a valuable account of Italian travellers from the sixteenth century to the present day—the fruit of original research. The author was Secretary of the Italian Geographical Society. Here we may properly mention the appearance of a new geographical periodical called *Cosmos*, published at Turin, and edited by Guido Cora. It satisfies a want which the Bulletins of the Geographical Society did not, and the first number has received the very high praise of Dr. Petermann. It is elegantly printed, and is accompanied by maps of a fine quality. Still more remarkable for its typography is the volume of 'Inedited Writings of Muratori,' published at Bologna last autumn on occasion of the centenary of the great historian. The first part contains a full *catalogue raisonné* of the manuscripts preserved among the Muratorian archives in the possession of his descendants, which are very rich in important original documents.

—The Florentines seem as far off as ever from finishing the façade of their Cathedral, and the latest failure to secure a satisfactory design has elicited a work from L. Setticelli, mainly historical ('Sguardo storico sulla facciata del Duomo di Firenze'), but partly theoretical, and in this latter aspect provoking a lively architectural controversy. The vicissitudes of the façade are well-known—one design being partially constructed, then suspended, then wholly demolished to make room for another; Arnolfo's thus giving way (1334) to Giotto's, and Giotto's (1558) to all sorts of experiments on the Cathedral's front, ending at last (1688) in plaster, decorated with a flat coloring in imitation of architectural forms. What Signor Setticelli brings out is the discouraging fact that since 1491 every century has witnessed one or more architectural competitions for the completion of the façade; while from 1860 to 1870 there were no less than three, embracing 127 projects. Of these, the one finally pronounced most worthy had already been offered at least twice before, and, after all, was rejected; leaving the façade just as it had been for the past two centuries. American architects who have learned the vanity of competitions, as

well as the younger members of the profession who have still to experience the lesson, may be advised to read this work, which it would be useless for us, writing under the shadow of the Post-office building in the Park, to recommend to Government officials, or to committees like that one which has to provide for the Centennial Exposition in Philadelphia in 1876. Some instruction for American readers may also be found in a Report read to the Southern Union Association of Naples, on the subject of 'Obligatory and Free Primary Instruction in Italy.' This society holds firmly to the doctrine of compulsory education, but sees decided moral advantages in having the school-tax imposed directly on those whose children profit by the public schools. As Signor Sella has demonstrated, the greatest need of the Italians is to be made to *pay* for the privileges of good government; and it might easily be shown that the same need exists in the United States to an extent not commonly recognized. One of our most popular delusions is that we get for nothing what we are really paying dearly, and much too dearly, for. The United States, along with England, is used as a standard of comparison with Italy in the valuable work by Tomaso Arabia, called 'Studies on New Italy and her Constitution,' of which the first volume has appeared at Naples.

—The use of dogs as a draught-power is a noticeable feature of the local traffic of Berlin. Milk-carts, bakers' and grocers' wagons, locomotive fruit and mineral-water stalls, furniture-cars, and the lighter vehicles of all descriptions, may be seen drawn by two or three dogs harnessed like horses, or by a single dog harnessed by the side of a woman or a boy. Two thousand one hundred and eighty-six dog-carts are duly registered among the licensed conveyances of the city. The loads with which dogs, as well as horses, are tasked, and the treatment which both classes of animals receive on the streets, would keep Mr. Bergh and his staff in a very lively state of interference.

—Shakespeare still leads the classic stage of Germany. The report of the Royal Theatre of Berlin for 1872 shows that of 278 performances during the year, 77 were of the works of classic authors. Among these Goethe and Lessing were represented each 13 times, Schiller 18, and Shakespeare 25, nearly one-third of the whole. In the present season the historical plays of Shakespeare have been a prominent feature of the Berlin stage. "Tieck," said Goethe, "is fond of comparing himself to me, which is much as if I should compare myself to the great William." This homage of Goethe to Shakespeare is shared by many of the most ardent admirers of 'Faust' in the cultivated circles of Germany.

—Dr. G. Pertz, Librarian of the Royal Library of Berlin, has resigned his office on account of the infirmities of age (78). Under his long administration the library has greatly increased in size, and the system of cataloguing, of classification, and of distribution has been carried to a high degree of perfection. Strangers have always found Dr. Pertz courteous and accommodating in according to them the privileges of the library for special studies. As a member of the Royal Academy of Berlin, he has taken a prominent part in the advancement of literature and science, and he has created a worthy monument of his own learning and industry in his 'Monumenta Historica.' No successor has yet been named for this important post. There is talk of erecting a suitable library building, the present quarters in the King's Palace being narrow, inconvenient, and unsafe, but the enormous price of eligible building sites in Berlin may cause a longer delay of this necessary improvement.

FROUDE'S ENGLISH IN IRELAND.*

"EVERYTHING," writes Mr. Froude, "which England most valued for herself, her laws and liberties, her orderly and settled government, the most ample security for person and property, England's first desire was to give to Ireland in the fullest measure. The temper in which she was met exasperated her into harshness, and at times to cruelty, and so followed in succession alternations of revolt and punishment, severity provoked by rebellion, and breeding in turn fresh cause for mutiny, till it seemed at last as if no solution of the problem was possible save the expulsion or destruction of a race which appeared incurable."

These sentences announce the character of 'The English in Ireland.' It is not a history; it is not an essay on the causes of England's failure to conciliate Ireland. It is an historical apology for English rule, and a defence of the political and moral doctrines held by the school of which Mr. Carlyle is the founder and Mr. Froude a distinguished disciple. Now, such an apology cannot, from its nature, be a satisfactory production. It cannot be a good history, for the author is unconsciously driven to warp the narrative in support of a foregone conclusion. It cannot, on the other hand, constitute a valuable contribution to political science, for the writer is inevitably led to insinuate opinions under the guise of narrating facts, and is tempted to suggest conclusions which he himself could hardly maintain if compelled to argue them out at full length and in so many words. The inherent defects of this style of composition are heightened by Mr. Froude's idiosyncrasies.

He is a writer of considerable power, who has produced several novels which read like life, and a history which has many of the merits of a novel. But whether writing as a novelist or a historian, he has always in reality been a controversialist. He has, in common with his school, shown considerable controversial power, but his power has always been exhibited, not in downright argument, but in the adroitness with which he insinuates his views by an appeal to the imagination rather than to the understanding of his readers. We do not assert that this form of indirect argument is in all cases blameworthy. We do assert that it is open to grave objections. The habit of inuendo is at any rate almost fatal to honest dealing with the facts of history. Mr. Froude, for example, would never dream of maintaining that the true cure for Irish difficulties was to put all Irishmen to the sword. Yet the conclusion of the paragraph already quoted certainly hints at an inference which none can doubt Mr. Froude would indignantly repudiate. Here, indeed, we come across another characteristic which perpetually disfigures the writings both of Mr. Froude and of his school. Mr. Carlyle and his disciples all affect a kind of literary brutality which would excite more moral disgust were it not perceived to be a slightly ridiculous affectation. There is every reason to suppose that Mr. Froude is as humane as any other English gentleman. But when he takes pen in hand he obtrudes a delight in slaughter, and a desire for a recourse to a blood-and-iron policy, which would be revolting in a soldier who knew by experience what was meant by bloodshed. Mr. Froude's defects, as well as his merits, have been long known to the world. Unfortunately, his essay on Irish history, though it gives great opportunities, which he does not neglect, for the display of literary talent, and though it enables him to show a freedom from some prejudices which mislead ordinary writers, yet also sets all his faults, his utter want of impartiality, his recklessness in general assertion, his affectation of inhumanity, in the strongest light. He has attempted a task which no living Englishman or Irishman has the calmness of mind to perform with success. If an impartial history of Ireland is ever to be written, the world must either wait for that distant period when the controversy between England and Ireland shall have finally closed, or hope that some rare foreigner like De Tocqueville or Gneist may investigate a subject which no inhabitant of the United Kingdom can survey unblinded by the mist of political passion or religious prejudice. He has further attempted the task without possessing that judicial turn of mind which could alone make success possible, and has attempted it under conditions which make failure certain. He has chosen, of his own accord, to come forward as an advocate. His work must be judged as a piece of advocacy, and the true question to ask is, not whether it is an impartial history, but whether it, on the whole, supports the theories which our historical apologist has undertaken to maintain. Perhaps, after all, the best that can be said for his book (and this is no small praise) is that his facts constantly refute his theories. Indeed, persons who have observed the curious variation in Mr. Froude's estimate of the characters and the institutions which he has from time to time undertaken to defend, may suspect that he first forms his views and then hunts with very creditable assiduity for his facts. No one can forget the very different estimate of Elizabeth suggested by the earlier and later volumes of his 'History of England,' and indubitably it is at times difficult to understand the process by which his narrative is supposed to back up the theories expressed in the sentence quoted at the commencement of our review.

Mr. Froude's strength, as well as his weakness, is well seen in the pages which he has devoted to the government of Cromwell. The Protector is in his eyes, as might be predicted, a faultless hero. During Cromwell's rule the Irish people were, he considers, "governed wisely and firmly, under a rule impartially just, by the laws, as far as intellect can discern them, appointed by the Maker of the world." The general features of this perfectly just policy are then fairly enough summed up. "The owners of the soil had forfeited their rights and were deprived of them. The religion out of which the worst of their crimes had originated was proscribed. These two things accomplished, Ireland was identified with England, and made a full participator in every advantage which England possessed. The separate Parliament, fruitful mother of so much mischief, was swept away. Irish representatives came to Westminster, and the two countries were made one under Cromwell's administration. For the first and last time, the sole object of the English Government was to further to the utmost possible

* 'The English in Ireland in the Eighteenth Century. By James Anthony Froude, M.A. In two volumes. Vol. I.' London: Longmans, Green & Co. 1872. New York: Scribner, Welford & Armstrong.

degree the advancement and prosperity of Irish industry." Now, Mr. Froude's admiration for Cromwell's system is from one point of view perfectly just, and may be shared by liberals, whether Englishmen or Irishmen, who would repudiate most of the doctrines on which this admiration is grounded. Writers like Mr. Lecky, justly filled with indignation at parts of Cromwell's policy, may think that they dispose of it altogether by the assertion that "his name is still powerful in dividing the two nations, and that as early as the reign of Anne it was equally execrated in Ireland by Catholics and Protestants, by Dissenters and by Churchmen." But such an assertion goes but a very little way towards helping us to estimate the Cromwellian system. Oliver's policy is simply misrepresented by talk about its conformity with "the laws appointed by the Maker of the world," and so forth.

It was the policy, not of a God-sent hero, but of a great English statesman, who recked little or nothing of the fate of the native Irish, but who was determined to promote the interests of the English colony. Cromwell's great merit, and unfortunately it is amongst the English rulers of Ireland an unparalleled merit, is that, if he oppressed the Irish Catholics of whatever descent, he was rigorously just to English Protestant settlers of every denomination. He treated Englishmen in Ireland exactly in the same way as Englishmen settled in Middlesex. Under his rule, every privilege which an Englishman possessed on one side St. George's Channel he retained when he crossed to the other as a colonist. Under the Protector the English in Ireland became for the first and last time a body of equals living under just and equal laws. Anglican supremacy expanded into genuine Protestant supremacy. Irish trade was released from all fetters, and the English in Ireland had representatives in the Parliament of England, Ireland, and Scotland. In his policy towards the colonists, Cromwell, in short, anticipated the policy which modern liberals have, after infinite labor, been able slowly and imperfectly to carry out. He had, it must be admitted, advantages which no other English ruler has ever possessed. He could carry out religious equality in Ireland because it existed in his time in England. He had the command of an immense military force, and, paradoxical though the assertion appears, could the more easily do justice to the English in Ireland, because he was not hampered by respect for the liberties of Englishmen. England's free constitution has been an immense blessing to herself, yet, for reasons which are obvious enough, but which we cannot here work out, it is pretty clear that a free English Parliament would find more difficulty in governing a colony justly than would an English dictator. Still, the credit which is due to Cromwell for having used his power to establish a just system of government amongst the English colonists is immense, and if Mr. Froude had contented himself with eulogizing the Cromwellian policy as a system of justice to the English settlers, we should scarcely have objected to the terms, inflated though they are, in which this eulogy is expressed.

Unfortunately, Mr. Froude makes no distinction between the good and bad sides of the system. The slaughter at Drogheda, the deportations to Connaught, the relentless persecution of the Catholic religion, are apparently, in his eyes, worthy of as much praise as the equity which gave Ireland freedom of trade or the foresight which anticipated the provisions of the Union. Indeed, Mr. Froude, in his anxiety to do honor to his hero, shows a zeal for slaughter and persecution which seems scarcely to have been shared by Cromwell, who knew from experience the horrors of war, and who, if not a humanitarian, meant to be guided by the precepts of the Bible. Our historian, for example, alludes to the massacre of Drogheda without showing any feeling that a transaction which will always be a deep stain on Cromwell's reputation needs an apology. Oliver himself thought differently. In a despatch (quoted, we should in fairness add, by Mr. Froude) he justifies the massacre in the following terms: "I am persuaded that this is a righteous judgment of God upon those barbarous wretches who have imbued their hands in so much innocent blood, and that it will tend to prevent the effusion of blood for the future, which are satisfactory grounds to such actions which otherwise could not but awake remorse and regret." Whether the grounds were in reality satisfactory may be doubtful. It is at any rate a relief to know that Cromwell felt, though his eulogist cannot understand the sentiment, that the massacre of 3,000 men ought naturally to "work remorse and regret." On one occasion, indeed, Mr. Froude ventures to criticise Oliver's conduct. The Puritan leader could make up his mind to expel the Catholics to Connaught, but he recoiled from the proposal to put every Catholic to the sword. Some of his officers were prepared to proceed to extremities, and presented a petition which alluded pointedly to the "order to the Israelites to root out the heathen lest they should cause them to forsake the Lord their God." Mr. Froude's comment is remarkable. "The argument," he says, "was apposite, and, as the event proved, not ill-grounded." Fairness forbids the supposition that he means all which his comment implies, but the sentence quoted is a fearful instance of the result which follows from hinting at extreme opinions in the form of reckless inuendo.

An author who can deliberately allude to the policy represented by the penal laws as a policy which "merits no blame and needs no apology," cannot be expected to feel anything but admiration for Cromwell's mode of dealing with Roman Catholicism. To refute Mr. Froude's arguments in favor of persecution would not be a matter of great difficulty, but it would be impossible even to discuss them in the space remaining at our command. It is more to the purpose to point out, as can be done shortly, that Mr. Froude's eulogies of Cromwell are, even where they are just, really inconsistent with the thesis he apparently at any rate maintains. The Protector's theory is that he ruled the English in Ireland on the same principles on which he governed other Englishmen, but that this should be his glory is the bitterest of satires on the nature of the English rule in Ireland at all periods, except during the ten or twelve years of Puritan ascendancy. On this point Mr. Froude and Mr. Froude's critics are entirely agreed. The Protector fostered Irish trade. The government which succeeded him destroyed it. The Protector attempted to unite all Protestants. The systematic policy of every succeeding English ruler was to make one sect of Protestants supreme over every other denomination. Oliver may be reproached with severity, but no man can charge him with inconsistency. After his time English rule was marked by laws of unjust severity, carried out with capricious uncertainty. The Puritan leader gave the English in Ireland all the benefits of the Union. Subsequent rulers rejected the prayer for union when union would have been hailed by Irishmen as a blessing, and imposed the Union by intrigue when it was detested by every Irishman who had not been brought to assent to it by bribery. Every eulogy which can justly be bestowed upon the Protector involves the deepest condemnation of the whole system of English government from the accession of Charles II. to the death of George III. Mr. Froude, in short, turns out in this, as in other cases, a fatal apologist. He intended to eulogize Henry VIII., and the result of his history is to show that the Anglican Church which Henry established has been from first to last politically, at any rate, a curse to England. Froude's design again was, no doubt, to exalt the character of Elizabeth. His labors have resulted in placing her before the world as a narrow-minded skinflint, whose false economy all but ruined the great designs of her statesmen. His defence of the English in Ireland leaves on the reader's mind the impression that every principle on which the English rule depended was, if you except the enactment of the penal laws, even in Mr. Froude's judgment, a mistake. The apology becomes an indictment which any Fenian leader would be glad to endorse. The main principle, again, which Mr. Froude labors to establish is, that among the nations might makes right, and that success is the only criterion by which right can be discerned. Grant, for a moment, that his doctrine is true, and it becomes the severest condemnation of the men he intends to defend, for no one can doubt that the English Government in Ireland has, on the whole, been a failure. The truth is that the history of that Government, even as given by Mr. Froude, is of itself almost enough to confute the doctrine that might is right. There has at no time been any want of power on the part of England. Ireland has been conquered and reconquered, and conquered again, and has even under the most favorable circumstances found resistance impossible. But in spite of all this England has, on Mr. Froude's own showing, never, except possibly for ten or twelve years, been able to confer on Ireland the blessing of a good government. The history would to our minds be in some respects far less depressing, if we could follow Mr. Froude's example, and treat England and Ireland like two persons, one of whom was constantly in the right and the other constantly in the wrong. But the slightest acquaintance with history shows that such simple solutions of lengthy historical transactions can never be satisfactory.

Look at the matter calmly, and you will see that the action of the English and Irish alike was, at any given moment, not the result of exceptional wickedness or folly on either side, but flowed naturally enough from the state of civilization and the general circumstances of each country. Mr. Froude's great fault is, that instead of tracing calmly the causes of England's failure to effect a real union with Ireland, he has devoted his powers to the maintenance of a hopeless paradox. He has missed a great opportunity. Some truths, as for example the impossibility of any permanent alliance between English liberals and the Roman Catholic priesthood, or the injury inflicted on Ireland by the fluctuations of English sentiment, he perceives with great clearness. If he would have set forth with calm impartiality the errors which had been committed in the government of Ireland during past times, some of which it is highly probable are being at this moment repeated, he would have rendered a great service to England and Ireland alike.

He has preferred to write a book of which the only practical effect can be to rekindle every feeling of animosity between the two countries, which Mr. Froude himself would, we doubt not, wish to allay, and if possible to extinguish.

DARWIN ON EXPRESSION.*

IF the theory that all the races of men are descendants from one common stock be true, it might be reasonably expected that in forms structurally related to each other the emotions would be manifested in an essentially similar way; that the expression under similar conditions would be alike; and that the concomitant physiological phenomena exhibited by them would be nearly identical. If, further, there should be found to exist a noticeable analogy in the character of the manifestations of the feelings between those races and the inferior animals, the cumulative evidence in favor of their derivation in common from more or less remote progenitors would be increased. And if it became apparent that such manifestations were either themselves serviceable to the animals exhibiting them, or that they might, in all probability, be a heritage from forms known to exist in a former epoch, and to which they were obviously serviceable, the hypothesis of "natural selection" would be strengthened by corroborative evidence; for it must be remembered that while there is always a tendency to deviation, and that deviation may be quite abrupt, the opposite and conservative tendency of atavism often operates for an indefinitely long period in the perpetuation of characters (and sometimes apparently very insignificant ones) which have become once developed. And the significance of community of characteristic features must be somewhat in ratio to the independence of such traits of individual peculiarities of structure; or, in other words, the more they are removed from direct connection with the necessities of the animals, the greater will be their classificatory values. We should simply have here an exemplification of the well-known principle that morphology is a better exponent of relationship than teleology or functional adaptation.

Such were the considerations which doubtless led Mr. Darwin into an almost untrodden path of study, and which have resulted in adding to the series of works published by him on "natural selection" and its applications the one before us, 'The Expression of the Emotions in Man and Animals.' In order to obtain details respecting such phenomena, the author, in 1867, circulated quite widely a form of printed questions, numbering sixteen, respecting the expressions of the various emotions, and soliciting observations on the various races of men; the answers to these, as well as the results of his own studies of animals and investigations into the literature of the subject, are embodied in the new work. This work is nearly uniform in typography with the later editions of some of Darwin's other works, but is distinguished by the presence of a number of photographs (in addition to woodcuts) illustrating the face in various phases, and exemplifying the dif ferent expressions. Some of these are excellent (though not very well printed in our copy), and form a study of themselves; but it becomes evident, on submitting them to a number of persons, that while some of the expressions illustrated are at once recognized, others are ambiguous, or at least different shades of passion are not discriminated.

In the first three chapters the author discusses the "general principles of expression," the chief principles being three in number. Under the first, (1) *the principle of serviceable associated habits*, are discussed those cases in which the action manifested was of obvious utility to the animal under certain conditions; and when analogous conditions arise, even though the action may be unnecessary, it is instinctively and involuntarily repeated. An instance of this is a subject of almost daily observation: in case of impending danger to the eyes, the eyelids close for their protection, and even when a person is forewarned and fully convinced that no disaster will result, he is rarely able to stand the test of keeping his eyes open when an object is flourished near them. Almost equally is that same sympathetic action observable in the theatre, when a pistol is fired, by the involuntary shrinking of more than the feminine portion of the audience.

There are other actions which have no assignable direct cause, and the only plausible explanation that has been offered to account for them is the hypothesis that they are the result, as it were, of a revulsion from an opposite state of mind—(2) *the principle of antithesis* of Mr. Darwin. If, for example, a savage but affectionate dog sees a man approaching at a distance, he is apt to put himself in an attitude that would be at once recognized as a hostile one—the body stretched upwards, the legs stiff, the head slightly extended, the eyes glaring, the tail erect and stiff, and the hair bristling; if finally, on nearer approach, the man is found to be a beloved master, the attitude becomes at once reversed—the body becomes depressed and sinuous, the legs flexed, the head is directed humbly upwards, the eyes glisten, the tail wags, the hair at once lies smooth; the animal *fawns*, and exhibits the strongest contrast to the attitude just dropped, and the only explanation discoverable for the new actions is the revulsion from the one stage to the other. If, too, a dog with hostile intent prepares to meet another, he assumes an attitude like that first described; if, however, a man brandishing a whip comes to the rescue of the threatened beast, he is apt to reverse his position at once, and, half crouching, and with tail bent under, to run slinking away. But the last attitude is perhaps more complicated than the fawning one, inasmuch as the first principle is exemplified and the instinct of defence manifested (according to Mr. Darwin in another part of the volume) in the carriage of the tail and otherwise. A strong contrast to the several attitudes of the dog is exhibited by those of the cat, which, when about to meet an enemy, crouches, and, snarling and with depressed ears, prepares to spring; but, on the contrary, when pleased, erects its body, curves its back, and stretches upwards its tail, and, in fact, manifests its emotions in a manner almost opposite to that which the dog exhibits, while the contrast between its own attitudes when enraged and pleased becomes most significant when the inverse contrast in the dog is recalled.

Still another set of actions is accounted for by Mr. Darwin by a third principle; (3) *the principle of actions due to the constitution of the nervous system, independently, from the first, of the will, and independently, to a certain extent, of habit.* The most striking exemplifications of this principle, according to him, are the blanching of the hair which sometimes occurs, in abnormal cases, after extreme terror or grief, and (in a less degree) the trembling of the muscles common to man and other animals.

These several principles, independently or conjointly, are believed to furnish an explanation of almost all the phenomena of expression exhibited by man and the other members of the animal kingdom; for it must not be forgotten (and Mr. Darwin is thus circumspect) that there are expressions which it is not possible to relegate with certainty to the operation of any single one of the causes in question, and, as will doubtless recur to the reader, the last principle is a quasi-negative agency and a sort of "refuge for the destitute" to which it is convenient to refer any expression which comes not under the other more precise categories; and so ample is the room for diversity of opinion that the actions we have referred to as exemplifications of the first principle might be regarded by some as best explicable by the third.

But the three principles named, such they are, furnish the clues to the interpretation of all the actions manifested by the body, and these are treated of in chapters on the (4) means of expression in animals; (5) special expressions of animals; (6) special expressions of man: suffering and weeping; (7) low spirits, anxiety, grief, dejection, despair; (8) joy, high spirits, love, tender feelings, devotion; (9) reflection, meditation, ill-temper, sulkiness, determination; (10) hatred and anger; (11) disdain, contempt, disgust, guilt, pride, etc., helplessness, patience, affirmation, and negation; (12) surprise, astonishment, fear, horror; (13) self-attention, shame, shyness, modesty, blushing. And in the final chapter, (14) concluding remarks and a summary give a *résumé* of the deductions of the author.

The enumeration thus given will best show the scope of the work; as for each manifestation of the emotions, it is analyzed with masterly skill from an anatomical and physiological standpoint, and the way for appreciation of the descriptions is prepared by an introductory chapter on the muscles of the face. There is undoubtedly room for considerable diversity of opinion as to the aptitude of the explanations offered for the varied phenomena discussed, but that they are at least plausible few will deny, and that none better have been offered is equally or even more indisputable. There are, indeed, no alternatives between conflicting hypotheses for the explanation of the phenomena in question, and we have to choose simply between Darwin's explanations (or, in a few cases, similar ones by Spencer), or no explanation at all, unless we are prepared to offer those that will better stand the test of examination and confronting with the facts to be explained. We say that there are no alternatives, for statements of the older physiognomists and even physiologists are really simply tantamount to the assertion that the phenomena are because they exist, while the pretensions of Sir Charles Bell and the lesser advocates of the same views, that the varied expressions in man are a special endowment upon him for specific purposes, and are distinctive of humanity, preclude investigation into possible causes, if any exist, inasmuch as the premises in dispute are assumed. So long, indeed, as man was regarded as an isolated being, created in his completeness, with language and immediate aptitude for the highest civilization, investigations like Mr. Darwin's were impossible. However strong a similarity might be observed between man and his fellow-tenants of earth, they were grudgingly admitted, every difference magnified to the greatest possible

* 'The Expression of the Emotions in Man and Animals. By Charles Darwin, M.A., F.R.S., etc.' With photographic and other illustrations. New York: D. Appleton & Co. 1873.

extent, every similarity kept as far as might be in the background, and any similarity which the reluctant mind could not but take cognizance of was regarded as the result of simple coincidence. Quite distinct, too, is the domain covered by Mr. Darwin and the mode of treatment of his subject from those of the physiognomists of the Lavater school; and the statement that physiognomy is statical and expression dynamical is an apt simile, and suggestive of the differences between the two.

There is no disguising that the tendency and even the aim of the work are to strengthen the evidence of the derivation of man from the lower animals. The attempted explanations of many of his expressions are based on the hypothesis of such origin, and it is evident that no concession is yielded to prevalent views like that granted by Mr. Mivart and many others; body and mind are alike considered to be derived from the brutes. Few if any expressions (except in degree) are conceded to be peculiar to man. While there are some of the exhibitions of the emotions which are directly traceable to good cause, and the connection of which with the impulse of preservation from injury is evident, they are not in the majority, and many are not thus explicable; and in the latter category, in the words of Mr. Darwin, are "such as the bristling of the hair under the influence of extreme terror, or the uncovering of the teeth under that of furious rage, which can hardly be understood except on the belief that man once existed in a much lower and animal-like condition." In the doctrine of atavism or retention of ancestral characteristics, and the concomitant admission of descent from a form which uses its teeth in battle (such as the gorilla), such attributes find a ready explanation; and when it is recalled how many characteristic expressions, such as the movement of the same muscles in laughter, in pain, in vexation, in disgust, and in anger, are common to man and the animals confessed by all to be his nearest associates, it must be difficult for even the most prejudiced to restrain the involuntary thought that the similarity is at least suspicious; and some will doubtless go so far as to admit that since a solution for this community of characteristics can be found in the admission of the derivation of man from an inferior type, a strong probability must attach to such a hypothesis. But in whatever light we may view the question, those observations guided by a dominant idea, if only such idea is kept in check, and not left to the control of the imagination, must be productive of much fruit in rich and suggestive details and inferences respecting the peculiarities and distinctive features of expression in man and kindred animals; and if only by pointing out this method of investigation, Mr. Darwin has deserved well of those who believe that "the noblest study of mankind is man." Whatever may be the ultimate verdict on the question of his origin, man will have no good reason for apprehension; and even confirmation that he has originated with the brutes from a common ancestry can only be derived from an increase of knowledge and a consequent exaltation of his condition; of reversion to a primitive stock there is no danger. If evolution be true, the prospect for the future, even on earth, with past progress as a meter, becomes almost unimaginable in its greatness, and the dream of the novelist respecting 'The Coming Race' may be realized in its noblest elements in the future of our own.

Fine Arts.

THE ACADEMY EXHIBITION.

UNDER the circumstances which make our national collection on each returning May a fortuitous collection of atoms, the spirit of disappointment is forestalled. What surprise is felt must be at the imposing general likeness to an organic arrangement and the almost deceptive hints of a final cause. Agreeable disappointment at the look of things has therefore become a habit. This year the display is spread with every sign of amplitude and decorum, and is in the greatest danger of being taken by the intelligent visitor for a measure of the national art; it is therefore of some importance that his attention should be called to the discrepancy between the list of members and the list of exhibitors, and that he should be told of the disposition—restricted to New York artists—toward the practice of absenteeism as a matter of professional magnificence. Causes various and sufficient doubtless account for our missing this year the desirable touch of Ward, Palmer, and Thompson in sculpture, and of Homer, Guy, La Farge, Church, Bierstadt, Henry, Bispham, the Beards, and others, with the brush. As it stands, the Academy explains its living meaning much better in the collateral exhibition formed of the pupils' work, where the display is at least as creditable in kind as could be made in any part of the world.

Portraits and scenes of character as usual are the successful lines of figure painting; for we can hardly rank as an exception the historical picture of Columbus which a Berlin artist has been at the pains to contribute, and which is pompous without distinction and large instead of grand. Mr. Page, however, contrives to give largeness of the right kind to a simple work of portraiture, and we think he has never made a better hit than in this expressive and admirable likeness of himself; his color and theory are here seen in their most agreeable air of quiet conviction, the grasp is calm and assured, the generalization quite masterly, and there is an easy freedom, which, preserving an agreeable individuality, avoids the look we have fancied or seen in some of Mr. Page's portraiture of preparation and taxidermy. Supposing this to be a recent painting, it goes to indicate that the veteran is nearing his zenith rather than his horizon. For genre-work, nothing can well be more simply right and beautiful than Mr. Eastman Johnson's picture of a lady in her garden catching a bee in the cup of a hollyhock; the purity of the sunshine, the spaciousness, breadth, atmosphere, and other mere landscape qualities of the little scene, are as happy as the ease of posture and delicate, highly-bred expression; the very bees of Plato were humming around his palette when he burst forth with this fortunate bit of self-expression. His more ambitious picture is also more formal: a young and a mature female figure lean toward each other on the ground, with more or less of the pose of Correggio's Magdalen; the leaves of the forest around them are set into the picture with well-behaved regularity, while the grace and caprice of Nature are justified in the fine painting of an infant whom the elder lady is about to bathe in the stream, and whom her arm supports as it hesitates to try the water. Notwithstanding the slight appearance of rigidity here and there, the picture is well and energetically brushed. His smallest contribution, showing a boy in the sulks, is a return to a somewhat earlier accent of Mr. Johnson's, and is of the manner sufficiently characterized as the Ecouen manner. So, by the bye, is Mr. Thom's scene of young peasants hiding their orchard booty in a barn, which recalls the style of Paul Soyer. M. Constant Meyer's "Village School in France" is another outcome of the same sort of study; and if it is not quite up to Balzac as a mere *scène de la vie de province*, it shows a strong talent for individualization in the urchins' heads and actions. These examples verge upon what we shall be comprehended in calling boudoir painting, a branch in which some careful examples are sent to the exhibition by American painters in Paris. These gentlemen seem generally to be figuring, with a marked attention to their own behavior, in garments that are new to them; the styles of Pécrus and Escosura are worn with an anxious irreproachability and a sense of tightness. Mr. Helmick, in this kind, offers a pair of savants, one of whom implacably reads the other fast asleep. The humor is well pronounced, the character satisfactory, the finish almost too nice, but somehow we smile laboriously. Mr. Daniel R. Knight, whose "Othello and Desdemona" attracted attention a couple of years ago at the Academy, and promised a future of great dramatic power, sends on three canvases, which, with a slight suspicion of the same uneasy correctness, are of a higher rank in cabinet painting. The best is an Italian scene, with a woman falling asleep over a fruit-stand whose sweets are devoured by children; the female figure is modelled up with the utmost precision and care, and the expression of rigid helplessness, as the knitting drops and the form falls over in one piece against the wall like a disniched madonna, is of excellent truth. The smaller works by Mr. Knight, the stiff old beau stooping for a lady's handkerchief, and the rusty virtuoso who examines a carving with his lens, are somewhat snappy with overcultivation, like "Morleena Kenwigs," but their subjects figure well in that sort of treatment, and Mr. Knight shows himself a man of tact in choosing situations where he can exaggerate as virtues the defects of his qualities. An artist of another stamp, M. R. Oakey, essays the dash and recklessness of a newer school; as we examine the "Weary of Waiting" from his brush, where a lady is flung all of a heap among the encircled stripes of her white bournous, we are tempted to fancy what capital Whistler would have made out of the situation. This Swinburne of the pencil essays to gather tea-roses which turn sulphurous in his hands, and draws with charcoal in a large and sweeping style; but, though talent is shown in everything he exhibits, the watchword for him is self-examination rather than brio. Mr. Magrath indulges us with liberalism of a different and older stamp—liberalism in subject rather than in handling; he displays plenty of jolly bottle-nosed humor in his comic monks, who reel through the monastery cellar with a won't-go-home-till-morning expression, or pause with quiet appreciation before Titian's Venus in a gallery. These Boccaccio satires, however, can be in America but attenuations of a line already exhausted with tenuity; and what chills the laugh so soon as humorous study that we know is calculated, not observed? For home character, we think there is a strong sign of vitality in such a work as that of Mr. Thayer, the "'Brown Tract' Guide."

A singular sculptural feeling, a sylvan mystery of light, and withal an Americanism as marked as ever belonged to Winslow Homer, are found in this portrait of a grave and stalwart young woodsman caressing a fine dog, while his foot is planted on a panther he has killed. Mr. Perry, out of a pair of purely homespun subjects, is best seen in the lesson from the Dutch tiles, wherein his youthful Knickerbocker, with blonde hair cut in the style of Vandyck, and grave suit of velvet, spells out the square blue pictures around the mantel of some old manor of Manhattan. Mr. Wilmarth, in a group where a bright lad brings up a caged squirrel to the presence of his mother and little sister, shows portraiture very pleasantly disguised under a slight pretence of incident-painting. Of academic studies by young hands there are not enough, but there are at least two of merit. Mr. Charles Bridgman paints with simplicity and vigor one of those stunted, old-womanish children who are seen in Brittany apparently masquerading in the adult dresses of their ancestors. A subtler piece of work is the representation, by Miss A. M. Lee, of a young girl. The model, whose face has character but no fascination, is posed in bright damask petticoat, streaming hair, and bare arms, in front of some tapestry, a large brass platter borne in one hand; the solidity and flesh-quality of this young lady's execution are truly remarkable in her school and, if we may say so inoffensively, her sex; for Miss Lee paints in London, where she seems to recur, by a single gesture of her mind, to the art of Reynolds and Gainsborough, rather than to any modern Royal Academician; and her position as a brilliant young American in the "set" to which Whistler, and the Rossettis, and Morris, and many more such mutual admirers belong, evidently is relieving her of none of her self-imposed artistic care and conscientiousness.

The above-mentioned, though by no means all the noticeable, figure-works are as many as we can afford to specify. The bulk of the exhibition now, as always, is given over to the landscapes. Of these we need only particularize the pair by Mr. McEntee, filled with that soul of lamentation and those entrails of feeling which he alone among our painters can confer upon the skeleton-Nature of November. One of his present contributions, a cloud-shadow drinking up the brightness of the shore and advancing to chill the belts of sea, is, even for him, a rare expression of sentiment. Then, we have such occurrences as Mr. De Haas coming forward with a reminiscence of Achenbach; and Mr. Dubois's brace of offerings, before whose Fontainebleau we say, with a flash of recognition, "It is a bit of Troyon," and before whose September scene we observe, not without approval, "It is Diaz, with some beech-trees in the corner out of Corot." Travelled art, certainly a useful craft, inasmuch as it brings our antipodes nearer, is represented by such painters as Mr. Gifford and Mr. Tiffany in Oriental subjects; the first gives us valuable notes of tone and quality; the latter is still flying, with vigorous activity, after the elusive secrets of Decamp's light and Delacroix's color.

HOLT & WILLIAMS, N. Y.,

Have just Ready:

LIBERTY, EQUALITY, FRATERNITY. By James Fitzjames Stephen, N.C. Post 8vo, $2 00.

"One of the most valuable contributions to political philosophy which have been published in recent times."—*London Saturday Review.*

"One of the most thorough overhaulings of the moral, religious, and political bases of society which they have recently received. . . . Everybody who wants to see all the recent attempts to set things right analyzed by a master-hand and in English which stirs the blood, will have a great treat in reading him."—*Nation.*

SCINTILLATIONS FROM HEINE. Leisure Hour Series. $1 25.

It is well known that some of the best bits of pathos and humor in all literature are scattered through Heine's prose works. This volume includes a careful selection and translation of them.

LATELY PUBLISHED:

COUNT KOSTIA. By Victor Cherbuliez. Leisure Hour Series. $1 25.

ON THE EVE. By Ivan Turgenieff. Leisure Hour Series. $1 25.

HISTORY OF ENGLISH LITERATURE. By H. A. TAINE. 2 vols., cloth, $7 50.

Sent. post-free, on receipt of price. Address PUBLISHER OF THE *NATION*.

"CHRISTIAN EVIDENCE SERIES."

THOUGHTS ON THE FIRST Principles of the Positive Philosophy, considered in relation to the constitution of the Human Mind. By Benjamin Shaw, Barrister-at-law. Cloth, 25 cts.

THE STORY OF CREATION, as told by Theology and Science. By T. S. Ackland, M.A. Cloth, 75 cents.

MORAL DIFFICULTIES CONNECTED with the Bible. By James A. Hessey, D.C.L. Cloth, 75 cents.

MORAL DIFFICULTIES, Second Series. By same author. Cloth, $1 25.

Either of the above post free on receipt of price.

POTT, YOUNG & CO., Cooper Union, New York.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS, Franklin Square, New York.

LIPPINCOTT'S MAGAZINE.

An Illustrated Monthly of

POPULAR LITERATURE AND SCIENCE.

Just Issued,

THE JUNE NUMBER,

COMPLETING VOLUME XI.,

WITH

NUMEROUS BEAUTIFUL ENGRAVINGS.

CONTENTS:

1. A New Atlantis. Illustrated.
2. The Roumi in Kabylia. Concluding Paper. Illustrated.
3. A Reminiscence of the Exposition of 1867. By Ita Aniol Prokop.
4. Slains Castle. By the Lady Blanche Murphy.
5. Our Home in the Tyrol. Chapters 3 and 4. By Margaret Howitt.
6. Saint Romualdo. A Poem. By Emma Lazarus.
7. A Princess of Thule. A Serial Novel. Chapters 8 and 9. By William Black, author of 'The Strange Adventures of a Phaeton.'
8. The Emerald. By A. C. Hamlin, M.D.
9. Berrytown. A Serial Story. Chapters 8–10. By Rebecca Harding Davis.
10. Bowery England. By Wirt Sikes.
11. Day-Dream. A Poem. By Kate Putnam Osgood.
12. Our Monthly Gossip: Mr. Gladstone and his Family; Whitsunday among the Mennists; The Raw American, by Prentice Mulford; Farewell; Notes.
13. Literature of the Day.

LIPPINCOTT"S MAGAZINE

is for sale by all Book and News dealers.

TERMS.—Yearly Subscription, $4; Single Number, 35 cents.

Specimen Number, with Special and very Liberal Premium List and Club Rates, mailed, postage paid, to any address on receipt of 20 cents.

Each number contains 144 pages. 50 cents a number, or $5 per year. To be had of all newsdealers. Published by

THE CATHOLIC PUBLICATION SOCIETY, LAWRENCE KEHOE, General Agent, 9 Warren Street, New York.

THE WEEK IN TRADE AND FINANCE.

MAY 19, 1873.

THE money market for the week has been remarkably easy, with rates ruling steadily at 6 per cent. to 7 per cent., and sometimes a drop to 4 per cent. or 5 per cent. On Monday there was a sharper demand up to 7 per cent. gold, which was the only appearance during the week of the least stringency. The business in commercial paper has greatly improved, dealers reporting quite a brisk demand for prime paper at 8 to 9, and sales of extra choice names are made as low as 7 per cent. These easy sales evince decided confidence in the financial soundness of borrowers, and must soon have an encouraging effect on railroad and commercial enterprises. On good railroad stocks as collateral money has been obtained during the week for 90 days as low as 7 per cent. with a commission of 1/8 to 1/4 added.

The efforts at Albany to repeal the Usury Law have been defeated, for this session at least, in the failure, by a vote of 45 to 74, of the Winslow Bill; and although this bill was but a makeshift and entitled to little respect, its loss is to be regretted, as it might have become the thin entering wedge of reform in a matter much needing redress. Why should not a capitalist be as much at liberty to sell his money without legal restrictions as the farmer his corn?

In our last we noticed the financial troubles in Vienna, which have continued, and towards the close of the week have involved numerous failures in that city, and much disturbed the financial centres of Europe. The irredeemable Austrian paper money has, as in the case of the French *assignats*, the contemporaneous English currency, and, later, the "legal tenders" of the United States, led its possessors into all sorts of wild speculations. The Vienna collapse seems very similar to that succeeding our "oil stock" inflation of a few years back; and although speculation in Germany and Austria has been quite general, yet the greatest losses appear to have fallen on professional operators; so that the better classes of securities will undoubtedly be benefited ultimately by the clearing out of worthless trash in the present panic.

The Bank of England rate on Saturday was again advanced, this time to 6 per cent., with the effect of advancing the price of gold here; people rightly judging that the purpose of increasing the Bank rate was to draw gold hence, the Bank having lost in one week £500,000 in bullion, and the Bank of France also showing a loss of 750,000 francs.

The City Bank statement is again favorable, promising continued easy working of the money market, and reflecting the movement of currency this way. The legal tenders and gold, as well as deposits, were increased, and accommodations were extended to borrowers, through the medium of an expansion of loans, to the extent of $3,386,000. The net gain in the reserve is $350,025, leaving the banks in excess of the legal requirement $4,970,275

The following is a comparison of the past with the preceding week:

	May 10.	May 17.	Differences.
Loans	$274,687,900	$278,074,400	Inc. $3,386 500
Specie	20,261,600	20,698,900	Inc. 437,300
Circulation	27,523,500	27 489,200	Dec. 34,300
Deposits	202,819,100	207,834,100	Inc. 5,015,000
Legal tenders	41,944,300	43,102,200	Inc. 1,157,900

The following shows the relation between the total reserve and the total liabilities:

	May 10.	May 17.	Differences.
Specie	$20,261,600	$20,698,900	Inc. $437,300
Legal tenders	41,944,300	43,102,200	Inc. 1,157,900
Total reserve	$62,205,900	$63,801,100	Inc. $1,595,200
Circulation	27,523,500	27,489,200	Dec. 34,300
Deposits	202,819,100	207,834,100	Inc. 5,015,000
Total liabilities	$230,342,600	$235,323,300	Inc. $4,980,700
25 per cent. reserve	57,585,650	58,830,825	
Excess over legal reserve	4,620,250	4,970,275	Inc. 350,025

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$239,320,500	$38,747,900	$278,074,400
Specie	19.006.000	1,692,900	20,698,900
Legal tenders	37,784,400	5,317,800	43,102,200
Deposits	178,835,500	28,998,600	207,834,100
Circulation	27,446,200	43,000	27,489,200
Percentage of reserve to total liabilities	27 53-100 p.c.	27 14-100 p.c.	27 12-100 p.c.

The stock market has been weak, and a decline has occurred in all speculative stocks on the list. The general "shrinkage" has been from 1 to 4 per cent., but in Pacific Mail the quotations have run up and down the whole gamut from 45 1/8 to 55. It has often been noticed in the history of the Stock Exchange that a serious depression takes place after the relaxation of a long-continued monetary stringency, and holders, then discouraged at no advance, finally dump their stocks at a loss on the market, after holding out during the siege. Something of this kind seems to be taking place now.

Much interest is felt in the election of officers of the Pacific Mail to take place on the 23th instant. The present management expects to be retained, but, judging from a year's experience of Mr. Stockwell's abilities as a steamship man, we sincerely hope that a more competent person may be chosen. Certainly, if there be any shareholders who look for dividends to legitimate earnings of the Company rather than to profits derived from stock fluctuations, they should make an effort to end the present infamous policy of combining railroads, sewing-machines, and steamships by selecting a president who knows the difference between a needle and a handspike.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending May 17, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	100⅛ 101	100¼ 100⅜	100½ 100⅝	100⅜ 100⅝	99⅜ 100⅛	99⅝ 100⅛	65,600
Lake Shore	90 91⅛	99⅜ 90⅜	90⅜ 90⅞	90⅜ 90⅜	89⅜ 90⅜	89⅜ 90⅛	120,200
Erie	61⅜ 62⅝	59½ 62	5?⅛ 59⅞	59⅜ 60⅜	59½ 61⅛	60⅜ 61⅛	145,200
Do. pfd.	73	72 75	....	71½ 73	 73	....	....
Union Pacific	31⅛ 31⅞	31⅛ 31⅝	30¼ 31¼	30⅜ 31	30⅛ 31⅜	31⅛ 31⅛	68,300
Chi. & N. W.	80	 81	....	....	82 78	....	1,300
Do. pfd.	89 91	 88	85¾ 86	85⅛	84¾ 86	....	400

C. C. & I. C.	31⅛ 33⅜	31⅝ 33	30½ 32	30 31⅜	29½ 31½	29 30½	56,200
W. U. Tel.	85⅝ 86⅜	85⅛ 86¼	85⅜ 86⅛	86 86⅜	84 86⅜	84½ 85⅜	213,500
Pacific Mail	52¼ 54⅛	52 53⅛	46½ 52	46⅜ 48⅜	45⅛ 48⅝	45⅛ 47⅜	292,000

Government bonds were quiet during the first half of the week, business being checked by the foreign troubles, but, with the advance in gold, prices became buoyant, closing on the basis of 120½ to 120⅝ for 1867's. Only $1,000,000 of the called bonds have thus far been received at the Department in Washington. As the gratifying intelligence came that United States bonds gave way but little abroad, purchases have had to be made here to cover what had been hastily sold "short" on the first panic, thus adding to the activity and firmness of the market, and illustrating the mistakes made by even experienced operators.

In Southern State bonds there has been slightly more business and some of the issues are firmer. A demand for Georgia bonds at 80 has commenced, part of which is traced to purchasers in that State, which would seem to argue a confidence in value. Railroad bonds have been active, principally those sold at the Board, though there has been an enquiry for some of the new issues now on the market. The monetary stringency of the past winter causes a lowering of the prices at which new loans are brought forward, and thus favors purchasers. The consolidated 7 per cent mortgage bonds of the New Jersey Southern Railroad, dated April 7, 1873, and maturing April 1, 1903, have been admitted to the free list on the Stock Exchange. The contest between the United States and the New York Central and Hudson River Railroad has ended by the payment to the former of $421,000, due as the balance of tax on the scrip dividend, together with a penalty of $230 36. The hero of the watering-pot has in this instance succumbed to circumstances represented by the Secretary of the Treasury. Union Pacific land-grants are rather higher lately; the Company's land sales in April amounted to 11,471 acres, at an average price of $4 92, amounting to $54,447; the total sales to May 1 have been 714,903 acres for $3,064,877, an average of $4 28 per acre. It is reported that Judge Pierrepont and Thos. A. Scott have made arrangements to place on this market the Texas Pacific Railroad 7 per cent. currency bonds at the rate of 93. Some apprehensions are felt as to the effect of the projected iron strikes on the various railroads engaged in iron and coal freightage. The works at Phœnixville have stopped all orders, and the suspension is proving disastrous not only to the companies, but to manufacturers in all parts of the country who use large quantities of iron. Eight leading works have now stopped, and it is expected some in Western New York will soon close.

The price of gold had received an impetus which had carried it up at the close of our last report to 118⅜. From this point it ranged down during the week to 117⅜, closing at 118⅛. The possibility that gold will be shipped at least to some extent next week revived the courage of the bulls, though there have been no new developments as to speculative movements. The rates for carrying were 6, 4, and 5 per cent. The exports of specie for the week ending May 17 were $881,723, making a total since January 1 of $19,119,820, against $18,094,482 for the same time in previous year. The exports, exclusive of specie, for the week have been $5,998,713; since Jan. 1, $100,640,538, against imports of $7,938,263 for the week, and $173,221,177 for the year. The Treasury disbursement has been $1,000,000 on account of the regular weekly gold sale, and $1,211,000 on account of coin interest, the bonds redeemed footing up $21,100. The custom receipts for the week have been $2,331,000. Foreign exchange has been strong, at the advance of 109¼ for sixty-day bills, and 110⅜ for short sight. Reports relative to a leading house drawing exchange have been much exaggerated, and the loss arising from the misconduct of a Mobile correspondent is not probably over $200,000, and will not be felt by the wealthy firm in question.

The Nation.

NEW YORK, THURSDAY, MAY 29, 1873.

The Week.

THE President has at last formally come to the relief of the Kelloggites in Louisiana by issuing a proclamation calling on the McEneryites "to disperse and retire peacefully to their respective abodes within twenty days," which we presume they will have no difficulty in doing, as few, if any of them, have left their homes. Indeed, the resistance to Kellogg is mostly passive. The preamble to the proclamation asserts that Kellogg's election and that of his officers "has been duly certified by the proper local authorities, and judicially determined by the inferior and superior courts of the State," which is untrue, and that "Congress had at its late session tacitly recognized the said Executive and his assistants, then as now in office, by refusing to take any action with respect thereto," which is true, and we must confess leaves the President, after he had once taken charge of Kellogg's cause, no alternative but to get through with it. But General Dick Taylor asserts that the President read him a message in which he recognized McEnery, but which he (the President) was forbidden to send to Congress by Senator Morton, who directed the composition of the one recognizing Kellogg, which actually was sent in, on the ground that the recognition of the former would cause the "great party" the loss of 80,000 colored votes. This story, which we believe to be authentic, shows what a queer place "inside politics" is.

The best possible commentary on the preamble of the proclamation will be found in Senator Carpenter's two recent speeches in New Orleans, which were so excellent both in matter and manner, and contained so much good sense, good law, and healthy politics, as to make one sigh for more Congressional eloquence of the same sort. Senator Carpenter was a member of the committee of the Senate which examined this Louisiana matter, and he says that so far from the title of the Kellogg officers having been "duly certified by the local authority, and judicially determined by the inferior and superior courts of the State," "one election board had no returns, and one had returns which were declared frauds," so that the State courts could determine nothing about the matter. It was, therefore, carried into the United States Court, and a judgment on it was obtained from Judge Durell, on which the President acted when he first recognized the Kellogg government. But, says Senator Carpenter, "the trouble with Judge Durell's judgment is that he had no jurisdiction in the matter." His judgment was not only unauthorized by law, but it was not even clothed in the forms of law. He "seized the State House by an order made out of court, without due form of process, not sealed by the court, and not signed officially, and not directed in the name of the President, as it ought to be." And Mr. Carpenter sums the whole matter up by saying that even if these defects of form were cured, if what Judge Durell did could be done constitutionally, "a mere judge could at any time turn over a State." Senator Carpenter repeated and adhered to the decision of the Senate Committee, that Kellogg, whom General Grant is supporting, was not elected at all; that McEnery, if elected, was elected by fraud; and that the only remedy is a new election, which he thinks Congress will order when it meets. In the meantime, he advises the people of Louisiana, and especially the colored people, to attend to their business and let politics alone, and to beware of establishing oppressive precedents or using the courts for the illegal annoyance of their enemies; because, he says, if the Republican party should be driven from power, these precedents would assuredly be used against their inventors.

Colonel McKenzie, who is in command on the Mexican frontier, has solved the question of protecting the Texans against Indian raids from the Mexican side in a very rude fashion. He crossed the Rio Grande with 600 men of the Fourth Cavalry on the 17th instant, penetrated the Mexican territory to the distance of eighty miles, and attacked a camp of Kickapoo Indians near the Santa Rosa Mountains, killing nineteen warriors, wounding an equal number, capturing forty squaws, and recovering a considerable quantity of stolen property. Forty warriors of the tribe are supposed to be in the meantime operating in Texas, and will on their return find their "homes" desolated. This energetic measure was undertaken on Colonel McKenzie's own responsibility under pressure from the frontiersmen, who have for a long while past been harried in the most terrible manner by the Kickapoos, who come to the line in large bands, disperse to their bloody work in little parties, difficult either to follow or intercept, and then seek safety across the river with their booty under the Mexican flag. One of the difficulties in the way of repressing Indian forays nowadays, as was found in the case of the Apaches, whom General Crook has just been bringing to their senses, is the adoption by the savages, to a considerable extent at least, of that particular species of civilized costume known as the "simple dress of an American citizen"—viz., a swallow-tailed coat and pantaloons of black cloth, and a stovepipe hat. It was in this dress that the Apaches did most of their recent raiding, as it gave a band when seen at a distance on the prairie the appearance of a party of Methodist preachers on circuit, and consequently prevented the spread of alarm about cattle and horses. Whether the Kickapoos have clothed themselves in similar fashion we do not know, but it is a trick of some value to a cattle-lifter. The Mexicans are said to be greatly excited over Colonel McKenzie's performance, and it will be difficult for our Government to deal with it satisfactorily. It would be easy enough for General Grant to find justification for ordering it himself; but what is to be said in defence of such high-handed proceedings by a military officer on his own motion, and within telegraphing distance of Washington? Public opinion, however, in Texas will probably support him so strongly, and the Mexicans have been so faulty, that discipline will probably be allowed to suffer.

Further tidings from the rescued of the *Polaris* expedition have been published during the week. They repeat, in all the essential particulars, the story first telegraphed, but they leave undetermined the exact nature of Capt. Hall's illness, and they by no means clear up the mystery of the dispersion of the party. Two of the Esquimaux intimate, or are understood to do so, that Capt. Hall was poisoned by his sailing-master, Capt. Buddington. On this point Capt. Tyson and his white associates are silent, but they openly charge Buddington with abandoning them, both at the breaking up of the ice, when there was ample time to get all hands on board, and afterwards when the steamer was, on two separate occasions, in plain sight of the floe, with nothing to hinder her from bearing down to the rescue. We can hardly learn the truth about all this until the *Polaris* is heard from. Meantime, it will be safe to give the absent the benefit of our doubts.

The vetoing of the Local Option Bill in this State by Governor Dix, on grounds which we have enumerated elsewhere, reminds us that a similar measure, known as the Permissive Bill, has just suffered a decisive defeat, and by a largely increased majority, in the House of Commons. This result is mainly ascribed to the influence of the liquor-dealers, or "licensed victuallers," as they are called, which has been greatly increased by the extension of the suffrage, and which may be measured by the fact that the revenue received from them and the distilleries last year amounted to about $100,000,000 in gold. It has been found at recent elections that all borough candidates who had incurred the hostility of this body were doomed to defeat, and as a general election is generally un-

derstood to be near at hand, members of the House have been taking the lesson to heart. The majority against the bill was, however, increased, in the opinion of the *Economist*, by the astonishment and disgust excited among moderate men at finding that the fanatical teetotalers were really making converts among Liberal members of the House for "the dangerous principle that a majority—whether a bare majority or two-thirds, or any greater proportion—is justified in interfering with the free action of a citizen on the ground that he is acting contrary to his own interest," and they accordingly determined to give these backsliders a lesson by letting them know that the "teetotal party is very noisy, very active, but in reality very weak."

The charges brought in the Assembly against Mr. Cornell, in connection with the disposal of the State's land scrip, have been frankly met and very convincingly refuted by Mr. Andrew D. White, President of Cornell University. In a speech to the Faculty and students on the 16th instant, he shows that when the State Comptroller had, on account of the glut of State scrip forced upon the market, been able only to sell about one-twelfth of New York's portion (990,000 acres) at eighty-three to eighty-five cents per acre, and could get no further, Mr. Cornell stepped forward, and engaged to take the remainder of the scrip at fifty and sixty cents per acre, giving bonds to locate the lands, pay the taxes on them, sell them, and pay over all profits to the Cornell University, making no charge whatever for his services. This he did with great judgment for more than half a million of acres, so that the scrip still on hand rapidly appreciated, and he disposed of it at prices ranging, as would appear, from eighty-six cents to a dollar. Turning next to dispose of the land he had carefully located, he offered it in various ways at five dollars an acre without success, and when offered four dollars for a hundred thousand acres by Mr. John McGraw, another benefactor of the University, he refused to accept it unless requested to do so by the whole body of the trustees, including the Governor and other leading State officers. This request was readily procured to be made.

Of course some of the land thus sold was worth a much larger sum per acre, but Mr. Cornell rightly refused to destroy the market for the collective property by allowing small purchasers to single out the most eligible lots. The rejected offers of this class of buyers have furnished the ground of the accusation that land worth $60 an acre was parted with at nominal figures. As for the "settlement" which Mr. Cornell asks of the State, Mr. White says its object is "simply to enable him to transfer the mortgages and other proper securities received in payment for the lands to the custody of the State, and then, when a sale is consummated, to be relieved from further responsibility in the transaction." Mr. McGuire's motive in bringing these charges against Mr. Cornell and the University (which is falsely declared not to have complied with the requirements of the act of Congress of 1862 as to the studies pursued), Mr. White leaves us to infer from his account of the failure of the "People's College" at Havana, Schuyler County, to secure the whole Congressional endowment, when bestowed upon it on conditions which it neglected to fulfil, though they were much less onerous than those subsequently exacted of Cornell. A Mr. Cook was the founder of the People's College, and Mr. McGuire was at that time his attorney. At the request of the Legislature, Governor Dix has named as a committee to investigate the charges Horatio Seymour, William Wheeler, and John D. Van Buren.

Mayor Havemeyer, after winning a good deal of approbation by his earlier appointments, has made up his Police Commission in a way which it is no exaggeration to say has astounded all that is best among his supporters. The Police Commission is by far the most important of the City Departments; that on which people's comfort and safety are most dependent; and that, we need hardly say, through which most political influence can be exercised. We should naturally expect, therefore, that one of the first results of a reform movement would be to put it into the hands of a few of our very best citizens, and give it a superintendent of the highest standing as regards character and ability. But now mark what has happened. One of the worst men in the old Board was a person generally known as "Hank" Smith, a politician of the lowest order and disreputably connected with a savings-bank defalcation and all sorts of "operations" of a doubtful class. The *Times* described him day by day during the last Presidential canvass in terms only applicable to a convicted thief, but gave the credit of all his wickedness to the Greeleyites. Well, the very first act of the four Custom-house publicists—Murphy, Bliss, Gardner, and Davenport—who charged themselves with the duty of drafting a charter for the city and forcing it through the Legislature, was to provide that "Hank" should be retained in the Police Board, and he was so retained by statute. Now comes Mayor Havemeyer, and appoints to sit beside "Hank" Mr. Oliver Charlick, an unscrupulous railroad operator, and along with him Mr. Hugh Gardner, one of the four publicists aforesaid; and Gardner's first act after the Board organized was to move the appointment as Police Superintendent of an old man of sixty-seven, named Matsell. Now who is Matsell? He was Superintendent or "Captain" of police for many years prior to 1857, when the police was a band of unorganized and wholly undisciplined nondescripts, half politicians and half bailiffs. He served in this capacity under Fernando Wood, and supported that worthy in his armed resistance to the Metropolitan Police Act in 1857. After the decision of the Court of Appeals affirming the constitutionality of the act, he retired into private life; and how does the reader suppose he has passed his declining years ever since? Why, in editing and publishing a filthy paper, illustrated with indecent woodcuts, called the *Police Gazette*. He is now dug out of the mire in which he has passed sixteen years of dishonored old age, to take the command of our police, under a reform charter and by a reform Mayor.

Comment on all this is happily superfluous; but we commend it to the careful consideration of all decent people. The one redeeming feature about it is that we know who is responsible for "Hank," Charlick, and Matsell; and it is neither Democrats alone nor Republicans alone, but one of those combinations of both by which "the men inside politics" in our day make the public virtue and indignation and pride as much matters of barter as leather or cotton. For Mayor Havemeyer's share in the transaction, the only apology we can offer is that Murphy, Bliss, and Company showed him the shameful way on which he has entered. But we think the Committee of Seventy are certainly bound to declare to their constituency whether they think this is reform, and if not, what they do think it. The affair affords one more illustration how completely politics has become a trade, and how little weight public opinion or public standards of morality have among those who follow it, and how little politicians are divided by party lines. Murphy is a Republican and Charlick a Democrat, for much the same reason that one man goes into the shoe business and another into the buggy business; and one stands by "the Constitutional Amendments" and the other opposes them for much the same reason that they love oysters, champagne, and "poker."

The Boston *Advertiser* recently contained an article which caused us to doubt if we had not been making a mistake in looking on Mr. B. F. Butler's intentions about the Massachusetts Governorship as something too ridiculous for comment. That has been our opinion, our faith in the General's star, except when he has opportunity for a good deal of hidden wire-pulling, never having been great, and it being always our expectation to see him beaten when decent people get a fair chance to show their estimate of the gentleman. But the *Advertiser* apparently deemed it necessary, one day last week, to go into a long and particular account of Butler's back-pay proceedings in the end of last February and beginning of March. It is a good article for the editors of the Bay State to keep on file

for reference. We trust the *Advertiser* contemplated that use of it, and that it surveys the future as one having a well-grounded hope. We observe also that Pomeroy is reported as getting ready to offer himself as Caldwell's successor from Kansas, and "his friends say that if the election were to take place to-day there would be no doubt of his success." There ought not to be.

The Ohio Republicans held their State Convention on Wednesday of last week. The resolutions were brief and not wholly devoid of buncombe, but recent events gave them, taken as a whole, a rather new flavor. Further grants of the public lands to corporations were "pronounced against"; as were also the back-pay grab and "all Crédit Mobilier transactions, whatever be their form." Congress must promptly and unconditionally repeal the Salaries act; and punishment must be visited on unfaithful public servants, "who, having betrayed the confidence freely extended to them, shall not be shielded from the disgrace of their acts by any partisanship" of the Republicans of Ohio, whatever be the course of the Republicans of South Bend or North Easton. The seventh resolution concerns transportation, and declares that "all abuse in the management of railroads, excessive rates, oppressive discriminations against localities, persons, or interests, should be corrected by law, and the people should be protected from such wrongs and all improper and arbitrary use of the growing power of railroad and other corporations." The nominations were of a good character, from Governor Noyes downwards.

The *World* has anticipated us in calling attention to a report, made by the London correspondent of the *Tribune* in its issue of Thursday last, of a conversation with Mr. John Stuart Mill at Avignon in the summer of 1866. The correspondent makes Mr. Mill say that "he regarded free trade as not an absolute doctrine, but a question of circumstances" (as if any economist of standing had ever regarded it as anything else), and then that "he [Mr. Mill] did not presume to say that the United States might not find protection expedient in their present state of development; he did not even say that if he were an American he should not be a protectionist." Now it so happens that, three months before this interview took place, the opinions which the *Tribune* correspondent repeats were attributed to Mr. Mill by common rumor, on the strength of a well-known passage in his 'Principles of Political Economy.' That rumor drew from him a letter dated February 26, 1866, and published in the Chicago *Tribune*, in which he says:

> "The passage has been made use of to show the inapplicability of free trade to the United States, and for similar purpose in the Australian colonies, erroneously in my opinion, but certainly with more plausibility than can be the case in the United States; for Australia really is a new country whose capabilities for carrying on manufactures cannot yet be said to have been tested; but the manufacturing parts of the United States—New England and Pennsylvania—are no longer new countries; they have carried on manufactures on a large scale, and with the benefit of high protecting duties, for at least two generations; their operatives have had full time to acquire the manufacturing skill in which those of England had preceded them; there has been ample experience to prove that the alleged inability of their manufacturers to compete in the American market with those of Great Britain does not arise merely from the more recent date of their establishment, but from the fact that American labor and capital can, in the present circumstances of America, be employed with greater return and greater advantage to the national wealth in the production of other articles. I have never for a moment recommended or countenanced any protecting duty except for the purpose of enabling the protected branch of industry, in a very moderate time, to become independent of protection. That moderate time in the United States has been exceeded, and if the cotton and iron of America still need protection against those of the other hemisphere, it is in my eyes a complete proof that they ought not to have it, and that the longer it is continued, the greater the injustice and the waste of national resources will be."

The *Tribune* replies to this by quoting the passage from Mr. Mill's book in which he acknowledges that protection may be expedient in new countries; but his letter to Mr. Horace White is nevertheless in flat contradiction of the speech attributed to him by its London correspondent.

We have discussed elsewhere the change in the French Presidency. It was clearly foreshadowed by the defeat of M. de Rémusat by M. Barodet at the Paris election, which caused a heavy fall in the French rentes, and was precipitated by the election of Ranc, a leading member of the Paris Commune, at Lyons. This man, who had earned shooting fully as much as most of those who fell at Satory, has never run away, and, as our Paris correspondent remarked some time ago, has made no secret of his possessing a safe-conduct from M. Thiers. The Right succeeded in driving M. Jules Simon, who was their great bugbear, out of the Cabinet, but his successor, M. Casimir Périer, gave them fatal offence by publishing a letter in which he declared that the re-establishment of a monarchy was impossible, that a republic alone could furnish a basis for the union of the Conservative parties, and that the country longed for its definite foundation. This announcement from a new Minister, followed by Ranc's election, satisfied the Monarchists that they must strike quickly. Accordingly, M. Thiers addressed the Assembly on Saturday in reply to the "interpellation" demanding a declaration of policy from the Government, and warmly advocated the definitive establishment of the Republic. The "order of the day, pure and simple," was then moved by the Left, and defeated by 362 to 348. A motion by the Right declaring that the form of government was not under discussion, and regretting the unconservative character of the recent reconstruction of the Ministry, was then carried by 360 to 344. A night session was then resolved on, at which M. Thiers offered his resignation, which was accepted by 368 to 339, and the Assembly refused to listen to a eulogy on him. All attempts of the Left to secure an adjournment were then defeated, and the Assembly proceeded to elect a successor, and chose Marshal MacMahon, by a vote of 390, the Left abstaining.

The Marshal has accepted the office "with pain," and, acknowledging that the Assembly is "the depository of the national sovereignty," promises, "as an honest man and a soldier, to continue the work of liberating the territory and restoring order, and to maintain tranquillity and the principles on which society rests." Our papers now give his biography, we think, for about the sixth time since 1859, with the addition even that he is "a descendant of Brian Boru." He is certainly a descendant of one of the Jacobite emigrés of the eighteenth century, and of good family, and is as gallant a soldier and honest gentleman as ever lived. But he is no statesman, so far as is yet known, and not much of a strategist. A correspondent of one of the English papers well said of him during the Franco-German war, that no one could look into his manly, high-bred face without feeling that he would be a good man to ride after in a desperate charge, but without preferring also, on the whole, that the silent old fellow at the Prussian headquarters should decide when the charge was to be made. Perfect quiet reigns in France, and will doubtless continue to reign.

The Pope has been seriously ill lately, and is evidently fast declining. He is eighty-two; the attacks he is subject to become more and more frequent; there is an apprehension that he may not be able to rise again from his bed, where he still continues to receive princes, prelates, and ambassadors; in short, the political world is on the alert as to what may happen. There is no other conversation than on the imminent Conclave; each party has already its pretender; and the population are already laying their wagers on Cardinal Panebianco, the Moderate, and Patrizi, the friend of the Jesuits. There is no doubt that everything is duly prepared in both camps for the emergency. Still, the Conclave must always be a great lottery. The Italians are shrewd, and Bismarck knows his mind. It is true that the enemies of both, the Jesuits, are shrewd and determined; but things have come to the point that almost all conservative interests are against them, and it is the conservative interest, after all, which in the long run will almost always have the better of the adversaries—Right or Left, it hardly matters which—of the social and political *status quo*.

THE CRISIS IN FRANCE.

THE Right in the French Assembly have, according to the last accounts, played their game, if not with wisdom and discretion, certainly with boldness. The conflict with M. Thiers on which they entered as soon as they found that he inclined to consider the Republic the definitive form of the Government, was brought to a close on Saturday last by his resignation, and the election of Marshal MacMahon by a vote of 390 to fill his place. This change, no matter by what name it may be called, and how carefully veiled by legal forms it may be, is in reality a revolutionary act, somewhat similar to that which took place at Madrid the other day when the Ministry dispersed the Permanent Committee by force of arms. In performing it, the Right distinctly sets up the "gouvernement de combat" which they so long sought at the hands of M. Thiers; and by selecting the commander-in-chief of the army, a man who is a soldier above all things and refuses to be considered anything else, as the President of the Republic, they distinctly intimate that they are as ready to meet the Reds "in the streets," to use the most expressive phrase of French politics, as in the halls of council. In other words, they say plainly that, having the physical force of the country in their hands, they mean to keep it, and use it, if need be, if not to govern France in their own way, at least to prevent its being governed in the Radical way, without any regard to the construction put by their opponents on the powers or duties of the Assembly. They will not dissolve until they think it safe to dissolve, and they will not be controlled in their action on any point by any political theory. They will do what the necessities of the situation seem to them to require—no more perhaps, but no less certainly.

What has precipitated this crisis is the Paris election. Ever since Gambetta made his unfortunate speech a year ago, in which he spoke of the necessity of having the country governed by a new social stratum (*couche sociale*), the Right has been in a fever of suspicion and alarm, which no explanations or disavowals on his part were sufficient to allay. Their fears have seemed ridiculous, if not worse, to the greater part of the public, both in this country and in England, but on what ground we have never been clearly able to understand. We do not lose our wits here over violent speeches, whether aimed against the Government or against property, because we have been accustomed for three hundred years to seeing all political disputes settled, if not by a fair vote at an election, at least by lawful and civilized warfare, carried on within certain well-defined limits. Within that period of Anglo-Saxon history, there have been three great controversies which it was admitted on all sides the ordinary processes of politics were unable to close. One was the controversy between the King and the Parliament in 1640; another, the controversy between the colonies and the mother-country in 1776; and the third, the controversy between North and South in 1860. In all three cases the disputants, when argument had been exhausted, drew the sword in a *justum bellum*, in which property and the lives of non-combatants were respected, and the existing social organization and the established principles of government accepted on both sides as fundamental facts, which neither was competent to modify or abolish. In other words, the controversy was brought down, as in a legal pleading, to a single definite issue, to decide which, and which alone, battles were fought. But since 1789, France has seen three armed controversies also, in each of which not only was the form of the government put at stake, but the very foundations of society. In 1792, in 1848, and in 1871, French Conservatives had to fight, not after a fair vote, but after a few frantic speeches and songs, and not to decide who should exercise the powers of government, as those powers have been settled by the history and traditions and practice of the Western world, but to assert their title to their property, the sanctity of their marriages, the legitimacy of their children, the validity of their fathers' wills, and though last, not least, their own right to live in their own country. Men who are engaged in controversies of this kind are apt to be dreadfully in earnest, and though it is easy enough for one sitting in an easy-chair in New York, with the writ of habeas corpus and the Dartmouth College Case behind him, to feel amused by their antics, it is not so easy to show that their fears and their fancies are wholly groundless. When Gambetta demands the committal of French affairs to a new social stratum, Frenchmen naturally read his words in the light of recent French history, and infer that he calls for a social revolution, as the most active and influential set of his followers understand that phrase.

Nevertheless, it is pretty clear that the Right in the Assembly has been steadily losing the support of the great body of the voters through the country, although there is no doubt they are just as hostile to the Reds as the counts and marquises are. Now this has been due, not, as some people have supposed, to growing confidence in Gambetta, but to growing confidence in M. Thiers; not to a growing love of a republic, but to a growing belief that the Republic was established. M. Thiers, and not the Assembly, has been for two years the central fact of French politics, and by the process which is witnessed in every revolutionary period in French history, the popular confidence and affection have settled on him as the representative of law and order—as *the* Government, in short. He took Paris; he restored the army; he paid the indemnity; he arranged for the evacuation of France by the Germans; he is, in short, the "saviour of society" for the time being. When, therefore, he came to loggerheads with the Assembly a year ago, and gave in his adhesion to the Republic, and proposed that it should be definitively established, and held out the olive-branch to the Radicals, the country sided with him, as it sided in 1851 with Louis Napoleon. When an election occurred, the voters cast their ballots for the man they thought M. Thiers wished to be elected and the state of things which he approved of, just as in 1852 they cast them for the men Louis Napoleon wished to be elected and for the state of things *he* approved of. To them the Assembly is a band of empty talkers, M. Thiers is a great and wise man and is "the chief of the state." To anybody familiar with the condition of the French rural mind, the notion that a great change of *opinion* has been going on in France on the questions at issue between Thiers and the Right, is simply an inference drawn from a supposed analogy between French political processes and our own. Opinion has not been changing in France; faith in M. Thiers and his work has been growing.

Now, Thiers was disposed to act in a conciliatory spirit towards the Left; he was anxious evidently to convert them from wild beasts into sensible politicians; and prior to the Paris election it was supposed that he was succeeding, and that with their support and that of the country he would be able to bear down the Right, and bring about a dissolution of the Assembly, or at all events the adoption of a permanent republican constitution, before his death or retirement. When, therefore, he put forward one of his own ministers, M. de Rémusat, a Republican of Conservative opinions and antecedents, as a candidate for Paris, it was felt that the election would be a crucial test of the success of his policy. If a constituency like Paris had accepted a man like Rémusat, it would have proved that M. Thiers was master of the situation, and the Right would probably have been awed into submission. All his friends, therefore, and indeed all the friends of Conservative Republics, implored the Radicals with tongue and pen to beware what they were doing, and to support M. Thiers's man, in order to strengthen his hands against the Monarchists, who have since Louis Napoleon's death been strengthened by the adhesion of the Bonapartists. The Radicals, however, were not men to be wheedled into wisdom or moderation. They not only did not support M. de Rémusat, but they went to Lyons, of all places in France, for a candidate of their own, and selected M. Barodet, a leading actor in the Red disorders there in 1870 and 1871, and a demagogue and adventurer of the most advanced kind, and elected him by a large majority. Of course, this blow was ruinous to M. Thiers. It proved that he had had no real hold on the Radicals, that their alliance with him was hollow and delusive, and that their notion of the proper remedy for French ills had undergone no modification in the direction of sanity or restraint.

M. Thiers immediately afterwards reconstructed his Cabinet, but still in a Republican sense, and the Right, feeling that their hour had come, at once sought to force him into submission or resignation. He has chosen the latter.

What is to come in the immediate future there is no use in trying to predict. The step which the majority in the Assembly has taken is an unmistakable appeal to the army, and it is not unlikely that their action hereafter will be guided by Marshal MacMahon's state of mind and the condition of the troops. There is no pretence, and indeed can be none, that he is a politician or statesman, or represents any particular set of opinions on great public questions. He is chosen President simply as the representative of the organized force of the community, as the man who is most competent to kill people who attempt resistance to the Assembly. The wise course, it would seem to an outsider, for the Assembly to follow would be, now that it has secured the control of the administrative machinery, and has provided for the maintenance of order, to dissolve and provide for the election of a new Assembly charged with the duty of drawing up a constitution. But we confess it seems more probable that the Right will cling to power until they have settled the form of government to their own satisfaction. To everybody who blames them, we reply that they are acting according to their light; that they are what they are and where they are; that France is still without a constitution, and 300,000 men are needed to keep the peace in French cities, not because dukes, counts, and marquises are fools and knaves and villains, but because that portion of the French community which loves order, and law, and liberty has not had the wisdom or discretion or strength to provide proper guarantees for them—which is very much like saying that, when a man has an ulcer on his leg, it is neither the ulcer nor the leg that is to blame, but the unwholesome condition of his blood.

TEMPERANCE LEGISLATION.

GOVERNOR DIX'S Message, vetoing the Local Option Bill, would be very entertaining reading if the evil with which it deals—careless legislation—had not attained such monstrous proportions. The object of the bill was to enable the legal voters of any town or city to determine by ballot whether the sale of intoxicating drinks should be permitted within its limits for other than "medicinal, mechanical, chemical, or sacramental" purposes, and to provide machinery for the enforcement of prohibition where prohibition was resolved on. Governor Dix has pointed out that it ties the voters up to the alternative of permitting the sale of all intoxicating drinks, including spirituous liquors, or none, including beer and cider. Now there is a difference of opinion, and he holds apparently a justifiable one, on the point whether it is expedient to prohibit the sale of beer and cider even on temperance grounds, and he thinks that any town or city which chose to recognize and respect this difference of opinion should be allowed to do so. In other words, he thinks towns and cities should be allowed to select the drinks they will permit or prohibit. On general principles, he is probably right on this point; but we doubt very much whether the distinction would be found capable of enforcement in practice in the existing condition of manners and opinion. There is in no State in the Union such a profound popular appreciation of the mischief and immorality of taking intoxicating drinks as is necessary to support a general measure of prohibition, and the result is that no general measure of prohibition has yet succeeded. The advocates of such measures are generally a small, active, and fanatically earnest body of men, who give time and money without stint to the endeavor to get their views embodied in legislation, and their views have such a show of reason and morality and even religion about them, that very few persons care to oppose them publicly. Indeed, those who openly and energetically take ground in favor of free drinking may almost be counted on one's fingers. The policy, therefore, which the enemies of temperance legislation have generally adopted in States in which the temperance feeling is strong, has been one of silence and acquiescence as regards the passage of prohibitory laws, followed by determined but also silent opposition to their enforcement. Indeed, the prevalence and success of this policy are one of the jokes of the temperance "cause." The more rigid the prohibitory law, too, the less chance there is of its execution—a fact with which the opponents of such measures are perfectly familiar, and know how to turn to account, but which the temperance men can rarely be got to see, owing to that peculiar mania about the power of legislation which has taken possession in our day of the whole reform and radical army in every country, and the absurdity of which Herbert Spencer has been pointing out in his admirable series of papers in the *Popular Science Monthly*. Indeed, the more stringent the provisions of a law are, the better the reformers like it, as it furnishes a sort of outward and visible sign of the success of their efforts which the practical execution might not do. The framing and passage of the statute they consider their peculiar work; the frustration of it is the work of the Devil, or "the Reaction," or the "Epicureans," or whatever the name may be which in any particular country is now given to the principle of evil. The anti-temperance feeling is, therefore, a slightly jocose one. The "Alcoholists" make no speeches, and write no articles in defence of their views; they simply look on and chuckle inwardly over the failures of the temperance men. A person who evades or disregards a prohibitory law does not lose reputation by it; a man who drinks wine or whiskey in defiance of the statute loses neither his own respect nor the respect of his neighbors in consequence of it. This being the case, it is easy to see how hard it would be to prevent the sale of whiskey or gin while permitting the sale of beer or cider. If the question be reduced to one of the percentage of alcohol contained in any particular drink, it will hardly have much moral weight with the average man. The beer or cider seller is not likely to have much scruple about supplying a customer with an occasional glass of whiskey or brandy, and this particular mode of evading the law hardly any practicable surveillance could prevent. So that, though General Dix's objection is reasonable enough on its face, and one to which the state of opinion in this State gives great force, it is hardly likely to meet with acceptance from those who attach great importance to direct temperance legislation.

His exposure of the defects of the machinery for enforcing the law is, however, very valuable and instructive as an illustration of the way in which nearly all work which creates no offices is done in Albany, and also, let us add, of the gullibility of the temperance men. The excise law actually in force gives the boards of excise in cities, towns, and villages discretion in the granting of licenses. Under the Local Option Law, however, they would have been forced to grant them to all persons who filed a certain bond with certain sureties, so that there would be no legal limitation to the number of dealers authorized in any particular locality to sell whiskey for "medicinal, mechanical, chemical, or sacramental use." Moreover, nobody is under it authorized or empowered to exact any guarantee as to the purpose for which liquor is bought. The purchaser could, on entering the liquor store, assign whichever he pleased of the legal uses of his favorite "tap," and the dealer would have to take his word for it. The worst old toper in the town could buy gin or brandy for "chemical or sacramental use," and the bar-keeper could only laugh over it. Moreover, a large number of officers are required, if they know of any person within the town who is in the habit of becoming intoxicated, to give notice of the fact to all licensed dealers, and these are thenceforward all bound to refuse liquor to such person. There is something very ludicrous in the notion of enforcing such a provision in any of our large cities; but it is still more ludicrous when coupled, as in the act before us, with a prohibition against selling any liquor to be drunk on the premises. If a toper was compelled to consume his liquor at the place of sale, the dealer, to whom his name was of no value as a warning, might become familiar with his features, and thus be enabled to cut off his supply, but as the bill stands its enactment would simply, under the most unfavorable circumstances, compel drinkers to send their bottle in charge of a sober youth, or of a

tippler unknown to the police, and have it charged on the pass-book to "the mechanical, medicinal, chemical, or sacramental account," as the fancy seized him.

Nevertheless, it is, as General Dix says, a great pity to throw any obstacle in the way of repressing intemperance, and no bill having that for its object, however absurd in its provisions, ought to be lightly opposed. But nearly all the legislation which the friends of temperance have thus far brought about, has had for its first results to make attempts at repression ludicrous as well as abortive. It is not that it fails—for all laws fail—but it fails so utterly and completely that it leaves people wondering whether anybody but knaves or visionaries could have been concerned in getting it up. There is apparently in the present state of manners but one thing that temperance men can do, and that is, render the consumption of spirituous liquors somewhat more difficult than it is now. Upon the harmfulness of them there is no difference of opinion; upon the harmfulness of light wines, beer, and cider there is considerable difference of opinion, even among the best people. It would seem therefore to be the part of wisdom to attack what you can attack in greatest force, and with strongest public opinion at your back. The first weapon, therefore, of the temperance reformer ought to be judicious taxation on the manufacture and sale of the liquors he wishes to strike at, and corresponding encouragement of the manufacture and sale of liquors which he considers less harmful, or likely to take the place of the others, and by judicious taxation we mean taxation stopping at the point where it becomes more profitable to evade the law than pay the duty. There is no mode of making liquor scarce equal in efficiency to dearness, and dearness is never so effective as when it is accompanied by a cheap alternative. That is, you increase the dearness of whiskey without touching its price by making wine or beer cheap. The next instrument is a good licensing system, restricting the number of places in which, in any town or village, liquor may be sold; but this, as indeed the taxation, depends on a good system of inspection. Unless you have honest officers to levy the taxes, to enforce the licenses, laws are vain; and this brings us back, as do all attempts at reform, to the great reform of all—civil-service reform. The notion that things can in any department of our affairs be changed for the better when the agents of the state, through whose eyes it sees, through whose hands it strikes, and through whose character it inspires respect, are a parcel of corrupt knaves and adventurers, engaged during a brief period of office in laying up treasure for the idle days to come, is a sad hallucination. All talk of reform which does not take the purification of the civil service—that is, the provision of honest officers of the law—as its basis, let it be never so earnest, is as vain as the howling of dervishes.

"FEDERALISM" IN FRANCE AND SPAIN.

PARIS, May 9, 1873.

VERY few people in France read the significant account of the festivities which are taking place at this moment at St. Petersburg. The alliance of the two Emperors of Russia and Germany was never so close as it has now become; and the influence of the Czar has brought the Emperor of Austria and the new Emperor of Germany into closer contact. The interview of the three Emperors which took place last year was not particularly warm; but this year another interview will take place in Vienna itself during the great Exhibition, and the meeting at St. Petersburg is only a forerunner of this great political event. The comments of the official press, inspired by Prince Bismarck, leave no doubt on the character of these meetings of sovereigns. When the present Emperor of Germany was only Prince William, he was sent to St. Petersburg to assist at the inauguration of the Alexander column. He was accompanied by a few old warriors of 1813, 1814, and 1815. A hundred thousand Russian soldiers paraded before the column erected in memory of the Emperor who had entered Paris as a conqueror, and Nicholas, turning to Prince William and his followers, and pointing to his own army, said: "Gentlemen, here you see the reserve of the Prussian army before you." These very words were remembered during the late military festivities at St. Petersburg. Every day the Emperor of Germany receives the report of his Kaluga regiment; the two Emperors act and talk like brothers in arms, and this is what the *Provinzal-Correspondenz*, directly influenced by Prince Bismarck, writes on the subject:

"As the meeting of the three Emperors last September was welcomed as a guarantee of a pacific policy, so our Emperor's journey to St. Petersburg and the coming interview at Vienna are interpreted in a like sense now. The union of the three Emperors gains additional and immediate weight from the fact that the prospect of quiet and progressive development in the western states of the Continent is becoming more and more obscured."

This allusion to the western states of Europe is significant enough, coming immediately after the Radical elections which have taken place in France, and the *coup d'état* of the Madrid Government against the Permanent Commission of the Cortes. Spain is in a state of complete anarchy. A year ago the supporters of the throne of Amadeus were considered as the most advanced Liberals, but now these very men, Zorrilla, Sardoal, Rivero, are obliged to fly for their lives. The men who are in power in Madrid represent little more than the passions of the Madrilene mob; they cannot hinder the *intransigentes* from entering the houses of suspected persons and from searching for them. Castelar is a sort of Spanish Jules Favre; he writes eloquent despatches, exchanges courteous letters with M. Thiers, and speaks of a Spanish conservative Republic. Elections will soon take place for a new Constituent Assembly, but no party will enter the lists except the party now in power, and the new Assembly is likely to be only too unanimous. It will represent Spain as the Chamber of Amadeus represented it, which means that it will not represent it at all. Spain is on that fatal road on which the Mexican Republic has so long travelled. In the countries of Latin extraction, the word republic does not mean the will of the people, obedience to a constitution which is considered by all parties as the higher and highest law, organization of parties which can legally follow each other in power and need no revolutions to take each other's place: this word means simply the rule of force, the subjection of the conservative, hard-working, honest, laborious millions to an audacious minority, which can make revolutions, draw lists of provisional governments, throw them down from a balcony, disarm the army, and arm the populace.

I think I can perceive two frightful symptoms of decay in the Latin races: two of the most elementary and primitive instincts seem to be abolished—the instinct of self-preservation, and the instinct which teaches the relation of cause and effect. Italy alone seems to have preserved them; and her future is not so dark as that of Spain or of France. Even the Republicans in Italy, such men as Mazzini and Garibaldi, have seen the uses of a national dynasty. The Savoy dynasty gave to Italy, by the marriage of Prince Napoleon with Princess Clotilde, the alliance of Napoleon III., and this alliance helped Italy to conquer Lombardy and to commence the work of unity; the Savoy dynasty was able to form the alliance with Prussia which gave to Italy Venetia and afterwards Rome; the Savoy dynasty keeps the federalist tendencies of Italy subordinate to the great necessity of union. Victor Emanuel, who is not a genius, but who personifies in himself the historical forces of a dynasty, has been able to achieve and is able to defend Italian unity. Those who live in a real republic must always remember that the instruments of government in old countries have been formed by time. What I call the instruments of government are the organs which give vitality to the nation. What are these organs? They are generally a dynasty, an army, and powerful administrations of finance, of justice, of industry, etc. This machinery, in all Latin countries, is all the government, as there is no self-government; if you break it or derange it, all goes wrong. Such was already the case in Gaul under the Roman occupation; when Rome was so threatened on all sides that she was forced to recall the six legions which were constantly located in Gaul, those countries which under the Roman administration had been in some parts very prosperous, became at once the easy prey of the Northern invaders. Federalism in Spain and the Commune in France do not mean any combination like that which ties together the States of America and the Cantons of Switzerland: it means simply the destruction of all the instruments of a centralized government, the return to an atomic state of society which would have no general laws, no national debt, no national army, no national navy; in fact, it means the destruction of the national unity.

A few years ago, the feeling of unity was so strong in France as to admit of neither doubt nor contradiction. All the works of our great historical school, of Augustin Thierry, of Guizot, and others, tended the same way. All the faults, even the crimes, of royalty and afterwards of the Revolution were excusable for this reason, that the result of their efforts had been the constitution of a France united for ever, "une et indivisible." This unity, alas! is now in peril. France has not only lost two provinces which she had possessed for centuries, and which furnished some precious elements

to her nationality; during the war, a curious hostility manifested itself against Celtic Brittany. Gambetta once denounced the poor Mobiles of Brittany in terms which were almost inspired by hatred. In the South, various local leagues sprung up spontaneously, and the most noticeable was the League of the Southeast, composed of the departments of the valley of the Rhone, from Lyons to Marseilles. It is not uncommon now to hear men of the North speak with contempt of the population of the South. The rich departments of the southern part of France, which have hardly ever received any infusion of Celtic or of German blood, are inhabited by a people which has in reality little in common with the more austere, more serious populations of the North. Paris forms in the middle of the North a province in itself; it is the hot-bed of revolutions, the city of popular commotions, of the Saint-Bartholomew, of the siege of Henri IV. and the Council of Ten, of the great Terror of 1793, of the Commune of the 18th March. In a country thus composed nothing can preserve unity but a political law which is not and cannot be constantly threatened. There is, unfortunately, no republican constitution protected by time and by tradition; there is a national dynasty, but, owing to many circumstances, this dynasty has played no part in the recent events. It offers itself to the nation, not as a necessity, but merely as a convenience; and it may even be said that it does not offer itself to the nation at all. The Bonaparte dynasty misunderstood its mission; Napoleon III. had a vague idea that he must promote the material interests of the country, and achieve its unity by the development of the national wealth. His name will ever be associated with the establishment of free trade, with the rebuilding of Paris, with the new Opera, and a hundred other palaces; his mistake lay, as Renan has justly remarked, in his belief that glory was as necessary to France as wealth and equality. He used the sword, and he perished by the sword. What France would ask now from a royal or imperial dynasty is order, the preservation of her wealth and of her unity. She cares little for parliamentary institutions and self-government. She speaks much of revenge, but she does not wish to make war, and looks upon the army merely as on an instrument of order. A man who should know how to assure order for a number of years would soon be looked upon as a god, and he could do almost as he pleased. His parliament would become as subservient as the Corps Législatif of Napoleon III. France needs a Bismarck, who was obliged so long to act with the anti-Liberal party, and who first made Germany united, knowing that once united she would be free, but that disunited she could not gain much from local liberties.

But the pride and the ambition of Thiers have barred the way to a monarchical restoration. The strong minister who could consolidate the broken parts of France around a firm dynasty has not appeared. We have been led into a land of dreams and of illusions: let us make new experiments, let us try something unknown, and make the "loyal essai" of the Conservative Republic. But now it seems as if we should soon be obliged to make the "loyal essai" of the Commune. For what is the meaning of Barodet's election by 180,000 electors in Paris? It means the Commune. And what means Rane, who will next Sunday be elected in Lyons? The Commune. Rémusat, the scholar, the philosopher, who sacrificed his life-long opinions and affections on the altar of the Conservative Republic, has been ill-rewarded by the people. The masses do not understand the shades of politics. Give us a king or give us a republic. But when they speak of the Republic, it must be a republic with, by, and for the Republicans. Even Gambetta is to-day looked upon as a Conservative. The other day, in a court of justice, a man said to the President, who told him that his opinions were *advanced*: "Of course they are; can a Republican ever be advanced enough?" It must be well understood abroad that the Republic here means a steeple-chase of folly, of socialism, of revolution. M. Thiers and a few others have undertaken to reconcile all the partisans of monarchy with their ideal of a Republic. This is easy enough; but how will he reconcile the Republicans with this ideal? This is not so easy. The symptoms are everywhere apparent that they have failed in this undertaking, and that their régime has only been a halting-place of the revolution.

Correspondence.

WENDELL PHILLIPS ON THE COEDUCATION OF THE SEXES.

To the Editor of the Nation:

Sir: A judge of the Supreme Court of Massachusetts sat before me during Mr. Wendell Phillips's recent speech at the Social Science meeting at Boston, on the admission of ladies to Harvard College. I do not know how he was impressed, but, if he were an honest man like myself, it was something as follows: Judging from Mr. Phillips's remarks, his main argument, were he before the Supreme Court on the question, would rest on the assumption, first, that the early donors to the funds of Harvard College were men who would keep abreast of the public sentiment on the coeducation of the sexes; secondly, that the sentiment of the present time is unequivocally in favor of that method of education in colleges. The Supreme Court, if it were honest, would doubtless assume that the large-hearted benefactors of higher education two hundred years ago should be judged by the sentiment prevailing among the same class now, and would ask Mr. Phillips for his facts. The facts would be that in the older portions of our country millions of dollars have been given during the past twenty years to increase the endowments of institutions already in existence which have given no signs of accepting for themselves the experiment of the coeducation of the sexes, and hundreds of thousands to establish institutions for the higher education of woman exclusively. Whereas, with the exception of Mr. Sage's offer to Cornell University, scarcely anything in comparison has been offered for the cause of higher education at the East with the condition of coeducation annexed.

If, failing here, Mr. Phillips appealed to the West, what better would he have to say? What is there in the charters of Western institutions that ties them, irrespective of its influence on the general educational trust committed to them, to the coeducation of the sexes? Are the endowments of Oberlin, for example, to which so much reference was made at that meeting, pledged unconditionally to the experiment of the joint education of the sexes? Whether any specific conditions to this effect are attached to any endowments of that or of other Western institutions or not, I do not know; but this I know, first, that the board of control consider it within their province to provide, and do provide, separate instruction to the sexes where that is deemed for the general good, as now, for example, in physiology; second, that they consider the boarding-place of the student as so related to the discipline of the school that it must be subject to their approval. If, now, the town grows larger, and the society of the place more heterogeneous, and the religious influences to which President Eliot referred as in part accounting for the success thus far less marked—and experience shows that such religious influences as have served to control the mass of minds there for the generation past are not secured to any place by an absolute law of nature—it is not impossible there will be need of, and there is nothing to hinder the board of trustees from practically, separating the sexes, and making it two schools under one control. So the conditions of the endowments of Western colleges would be of little service in proving Mr. Phillips's proposition.

Prof. Agassiz forcibly said in the discussion under consideration that Harvard did not have half money enough to educate her boys as the cause of higher education in this country demanded. It would be time enough to ask her to make the elaborate preparations necessary for discipline at Harvard under any system of coeducation when she could do her present work well. It seemed to an honest listener that the more honest the Supreme Court, the more likely it would be to concur in the weighty remark of President Eliot, that the authorities of Harvard College have too vast an educational trust committed to them to risk it at present in an experiment so fundamental, and so hesitatingly approved by the public, and so doubtful, as that of the coeducation of the sexes in a university is.

An Honest Layman.

Andover, Mass., May 24, 1873.

[There is one consideration bearing on this question by which it is reasonable to expect the managers of male colleges to be influenced, but of which we have seen no notice in any of the recent discussions. Male colleges are now engaged in training that portion of the human species which does and has always done the heavy work of the world—the legislating, trading, building, fighting, producing, and exchanging. An opinion that women will take a large part in this work has of late sprung up, but it has as yet not got much beyond the stage of tea-table and lunch speculation. To ask any manager of a boys' college, therefore, to try the coeducation scheme, is to ask him to imperil the efficiency of what is unmistakably his business, for the sake of trying an experiment which may or may not lead to something. He can do this if he pleases, but he may be a very sensible man and refuse.—Ed. Nation.]

Notes.

Little, Brown & Co. send us the last volume of their uniform edition of the United States Statutes at Large, embracing those passed at the 3d session of the XLIId Congress. There are the usual indexes to the public acts and resolutions, to the private laws passed at the same session,

and to the treaties and postal conventions, of which the full text is given. ——The London *Practitioner* has added to its already valuable contents a "department of public health," beginning with the number for May. Under the head of "International Hygiene," it states that Turkey, alarmed by the violent outbreak of plague in Persian Kurdistan in 1870, made an appeal to the other European powers which will shortly result in the formation of a mixed sanitary commission, appointed by them with the concurrence of Persia. "To this commission will be submitted, at the suggestion of England, in addition to the question of plague, the further question of the possible danger to Europe of the introduction of cholera by the quicker and more direct route of traffic opened between Persia and Russia, through Transcaucasia to Poti, and thence by steamer to the ports on the Black Sea."—— Noyes, Holmes & Co., Boston, have in press a 'Life of John Warren, M.D., Surgeon in the Revolutionary Army, and First Professor of Anatomy and Surgery in Harvard College,' by Edward Warren, M.D.——G. P. Putnam's Sons will hereafter be the publishers of Dr. Brown-Séquard's *Archives of Scientific and Practical Medicine*, and of his various works on nervous affections. They will shortly issue an American reprint of the London *Science Gossip*.——The Supreme Court of Pennsylvania has sustained the executors of the late Dr. Rush in their litigation with the Philadelphia Library, and the result will be the erection of an uncommonly fine fire-proof library building on the corner of Broad and Christian Streets—a part of the town considered not very respectable, and certainly now at some distance from the centre of the best population. As soon as completed, it will be offered to the Philadelphia Library, when the question of accepting the legacy under its peculiar conditions will recur, and perhaps reasons be found for not declining it. ——We have received from the New York Historical Society a catalogue for 1873 of its Museum and Gallery of Art. A large part of this valuable collection—at least the antiquities of Egypt and Nineveh—we hope will one day become the property of the Metropolitan Museum of Art.——Hurd & Houghton announce 'The Isles of Shoals,' by John S. Jenness, illustrated. ——Mr. James E. Munson warns booksellers and the public generally that Mrs. Eliza B. Burns has infringed on his copyright in her recent work on 'Phonic Shorthand.'——We would call the attention of our city readers to the public announcement that Miss Mary Carpenter, of England, the well-known philanthropist, will deliver, by invitation of the National Prison Association, an address on Prison Discipline and Reformatory Treatment of the Young, in the Church of All Souls, on Thursday evening next, June 5. Miss Carpenter is a member of the distinguished family to which Dr. W. B. Carpenter, her brother, belongs, and is a most eloquent and effective speaker.

—No doubt many of our readers have had their attention called to the undertaking of Messrs. James R. Osgood & Co., of Boston, who propose to reproduce, by means of the heliotype process, all the best examples in the Gray collection of engravings in the library of Harvard College, with whatever finer specimens may be loaned them for this purpose by private persons. They have already made considerable progress, their list of prints thus far published containing nearly fifty titles. The artists represented in the collection are mostly those of whom the general public knows but little, but of whom some knowledge is necessary in order to get even a superficial notion of the history of the art of engraving. Thus we have a very good specimen of a Florentine "Niello," supposed to be by Maso Finiguerra; two plates from the series by Mantegna, "The Triumph of Cæsar"; a print by an unknown hand—the Master of 1466—the subject, "Solomon compelled by one of his Wives to worship an Idol"; several of Albert Dürer's works, including his more famous masterpieces, "The Melencolia," "The Knight, Death, and the Devil," "St. Jerome in his Study," "St. Hubert," the "Shield with the Skull," "The Knight and the Lady," and also a copy of the striking etching on iron, "The Great Cannon," which needs to be done over again from a better example. Then, there are a half-dozen specimens of Lucas van Leyden's cold and unimaginative but occasionally interesting art, and also a number of good selections from Rembrandt's etchings. Other copies are from Marc Antonio, Cort, Masson, Van Dyck, and we are promised a great many more. It is hardly necessary to say that we consider this a most useful enterprise. It is true that the artistic value of the heliotype copies is as yet but secondary to their value for study, and unless it be remembered that the conditions for attaining excellence in a publication of this nature are vastly inferior here to what they are in France—where they are nearly perfect—there may be some disappointment in store for those who have been led to expect *fac-simile* copies of the masterpieces of engraving. At their best these copies represent little more than the composition, and the general effect of the lines or of the light and shade. Apparently the heliotype process cannot give depth nor *chiaroscuro*—that "light in dark" which is Rembrandt's superficial charm—nor that clearness of line in which Dürer excelled. The publishers, however, promise us copies of the best examples of these and of other masters that can be procured, and to this end they are anxious to secure the co-operation of amateurs and collectors. They are, as we have reason to know, very much in earnest in the matter, and we trust that there will be sufficient encouragement to make it worth while for them to persevere.

—We do not without diffidence venture to dissent from a conclusion reached by *Nature* in comparing the school founded by Mr. John Anderson on Penikese Island with a fellowship recently offered by Trinity College, Cambridge. What the pecuniary value of this fellowship is we are not informed, but it is offered for natural science, and zoölogy is one of the subjects by which it may be obtained. To obtain it, candidates must send in original papers, published or in manuscript, containing their own observations, experiments, or discussions of scientific questions; and they may be also examined on the subjects of these papers or on kindred topics. In this way, *Nature* thinks, the electors are morally certain to discover "a genuine zoölogist," and "it is difficult to believe that any candidate who, at the time of election, has completed sufficient good work to satisfy the electors, can possibly, on account of its intrinsic interest when he has arrived so far, give up the further pursuit of scientific work." On the other hand, *Nature* seems to predict failure for Prof. Agassiz's Marine Naturalists' School, either for want of pupils, or because these, if secured, will be but "an assemblage of amateur students, whose work, as it must be from the lack of sufficient stimulus to great mental effort, is poor from its want of thoroughness, and therefore comparatively useless in the long run, only encumbering the subject, and leading lookers-on to suppose, from the few results arrived at, that the science is not worthy of deeper consideration." *Nature* is probably by this time aware that Prof. Agassiz receives during the present year as students only persons actually engaged in teaching natural science, and that the applicants have far exceeded the present accommodations of the establishment. The school, therefore, appears to satisfy a general want, and to meet with no lack of enthusiasm, while it is certain of accomplishing a definite kind of good in common with all other normal training-schools. As regards the stimulus which its pupils will have to make the most of their opportunities, we should know exactly what to expect from the influence already exerted by Prof. Agassiz on his classes at the Cambridge Museum, and by Prof. Shaler in his field excursions in geology. In fact, we do not see why the theoretic objections brought against this branch of the Museum do not apply to the Museum itself, whose graduates have thus far done anything but bring zoölogy and biology into disrepute. Whatever the chances may be that the work actually done at Penikese in the long run will not equal in positive value that of the winner of the Trinity fellowship, we are confident that the former will far surpass the latter in its immediate effects on the national interest in science and the willingness of Government to favor scientific enterprises, for which it already enjoys an honorable distinction.

—We have received from Professor Charles Frederick Hartt, of Cornell University, a copy of a paper forming part of the 'Transactions of the American Philological Society for 1872,' which is the precursor of what will doubtless prove a valuable contribution to the philological study of our American aborigines. It consists of notes on the "Lingoa Geral" of the South American Indians, or the modern form of the old Tupí language. It is a tongue still spoken by the various tribes of the Amazonian countries, though destined rapidly to be displaced by the Portuguese, as it itself has displaced the older form of the Lingoa Geral known to the Jesuits. These two languages now differ greatly, Professor Hartt says; and a speaker of modern Tupí would not understand the Tupí in which the old Jesuits preached and wrote, after they had reduced it to writing and made grammars and dictionaries of it. Indeed, it is probable, and almost certain, that when these missionaries designated the Tupí of the Coast as the Lingoa Geral, or general Brazilian language, they did it hastily so far as concerned the Indians of the interior. It is highly reasonable to suppose that in different parts of this vast region many local peculiarities prevailed which distinguished the Tupí of the central and western Amazonian region from that of the coast of Southern Brazil. However that may be, the advance of Portuguese civilization and other causes strongly operative on the speech of barbarous and unlettered tribes, have made the Lingoa Geral of to-day as different from that of two hundred years ago as Italian is different from Spanish, and even more so. Of this modern tongue there has hitherto been no published dictionary or grammar. Five years ago Professor Hartt, who was engaged in preparing a work on Brazilian geology and physical geography, found it necessary to study the indigenous geographical names of the country in order to arrive at their orthography; and as he could get no books upon the subject, he determined to take advantage of a visit made to the Amazonian country in 1870 to acquire a knowledge of the Lingoa Geral. In travelling

he secured whenever possible guides who spoke Tupí, and, using a phonetic alphabet, soon acquired a good-sized vocabulary. As he became somewhat familiar with the language, he "took down from the lips of the natives hundreds of sentences illustrating its grammatical structure, and, finally, having trained two guides to dictate in Lingoa Geral, was able to collect dialogues, stories, legends, and myths." Everything was written exactly as spoken, and afterwards, with the aid of natives, corrected again and again, and in 1871, on a second visit to Brazil, the work was increased and still further revised. The whole is now in course of preparation for the press.

—Curious as it may be, it was entirely to be expected that far away under the equator on the banks of the Amazonian streams the investigator of folk-lore should come upon the same tales that are told to children in nursery rooms under the Arctic circle. The adventure of our Jack the Giant Killer, who challenged the Welsh giant to eat with him, Professor Hartt heard related in the Tupí language in a Brazilian forest: the "kurupíras" are anthropomorphic wood-spirits characterized by reverse feet, who lead the traveller astray, perhaps to destruction, but who, though generally maleficent, sometimes do man a good turn; many myths relate how the hunter has been presented by one of them with unerring arrows that cannot miss the mark. Man may sometimes outwit them; and it is told of one of them that a hunter played on him Jack the Giant Killer's trick, and induced him to cut himself open and thus commit suicide. So, too, the Tupí Oiára, or water-sprite, like the mermaid and lurley of Northern mythology, entices human beings to her home beneath the water. Again, the Amazonian Indians narrate the story of a match at running between a tortoise and a deer. The former stations her relatives along the course at short distances, and beats her antagonist—"a fable found also in Africa and Siam," remarks Professor Hartt; found also in the Sea Islands, we will add, and substantially the fable everywhere found which illustrates the general truth that the race is not always to the swift. The swan maiden the Indians have also; only with them it is a dress of parrot feathers that the spirit lays aside; she is seized by a man before she can resume it, and becomes his wife and the mother of a new tribe. Beast and bird myths Professor Hartt found numerous in the Tupí. One of these is about a second wise tortoise. He wagers with a big fish that he can pull the fish ashore, and then going to a tapir, he wagers that he can pull the tapir into the water. The tapir and the tortoise proceed to the water's edge, where the fish awaits the contest, and the tortoise, tying both of them together with a *sipó*, wins the wager, for, after a long struggle, both fish and tapir confess themselves exhausted by the endeavor which, as each supposes, he has made against the efforts of the perspicacious tortoise. The ibis, in a less ingenious but equally effective manner, cheats the night-hawk:

"Once on a time the night-hawk spoke like people. His shirt was very pretty, because it was so red, but the ibis's shirt was black and ugly. The ibis looked at the night-hawk, and was pleased with the night-hawk's shirt. The ibis came to the side of the night-hawk. 'Lend thy shirt to me,' he said to the night-hawk. 'Why dost thou wish to borrow my shirt?' The ibis answered, 'I wish to amuse myself; and go to dance.' 'Until when?' the night-hawk asked. To this the ibis answered, 'Until three days after.' The night-hawk he took off his shirt, and gave it to the ibis. 'Here it is, do not cheat me; I await thee.' The ibis went away; never did he return; he went completely away from the night-hawk; never did he appear in his sight again. The night-hawk awaited him, but he appeared not. And the night-hawk wept; he cried, and said, 'Ibis, bring my shirt to me!' Always he cried on account of the ibis."

This is why the night-hawk goes clad in sombre attire while the ibis is of gay plumage, and perhaps it is to answer the question, "Why is the ibis red?" that the fable was invented; if so, it goes into a large class—as, for instance, the class containing the fable which makes the aspen shiver because it furnished wood for the cross of Christ; the one which marks the haddock with a thumb-and-finger mark because Saint Peter held him by the right hand and took the tribute money from the fish's mouth with the left, and a thousand other similar fancies, known to more ambitious poets than those of the cave and hut and hearthstone as well as to these. We do not know enough of our Tupí to guess whether the demand of the night-hawk for his shirt resembles his natural cry, and Professor Hartt does not inform us.

—An old mystery has at last been solved, or at any rate brought as near solution as it is likely to be for a long time, by the labors of M. Th. Jung, a staff-officer of the French army. In the archives of the War Department, M. Jung, who has for several years been occupied in historico-military studies, has discovered a mass of documents throwing a great deal of light on the vexed question of the identity of the celebrated state prisoner known as the "man with the iron mask," and establishing his connection with a "vast conspiracy, whose ramifications spread themselves throughout Europe, with the avowed object of taking the life of the King of France." At the beginning of the year 1673, the royal secretary-at-war, Louvois, "was advised of the active preparation of a plot to take the life of the king during his journey from Paris to Maestricht, of which the siege was soon to be opened." Through Père Hyacinthe, one of Louvois's secret agents, it was discovered that the chief of the conspiracy had been in Paris in 1672, but was then (1673) at Brussels, with a band of ten conspirators. Funds for the enterprise were supplied by a certain Groët of Amsterdam, and the "treaty" signed by the conspirators was in the hands of one Abraham Kiffied in Brussels.

"The chief of the band was young and elegant, by birth of Lorraine, formerly captain in the cavalry of the empire. Like all the adventurers of the period, he bore several names. At Paris he was the Chevalier de Kiffenbach, at Brussels the Chevalier des Harmoises. Highly educated for that period, he spoke several languages, lived handsomely, and had the reputation of having carried off the wife of a Bohemian colonel."

Concerning this person, the most minute details are communicated by Père Hyacinthe. On the 27th of March, the Chevalier leaves Brussels.

"Meantime, guards had been placed at all the fords and passages of the River Somme in the neighborhood of Péronne. During the foggy night of the 28th and 29th of March, 1673, a group of horsemen approached one of these passages. The one who appeared to be the chief of the band first struck into the ford, with which he appeared to be familiar. Tall, well-formed, young, he wore a plush doublet ornamented with silver buttons, and a large cloak, whose collar concealed his face. A broad felt hat ornamented with a black plume, soft boots of yellow leather, and a broadsword, completed his accoutrement. He had hardly reached the summit of the opposite bank, where his horse began to shake off the water, when a fire of musketry was opened upon the party, his horse's bridle was seized by several soldiers, and he himself dismounted and bound hand and foot in a few moments. His followers saved themselves as best they could. Taken to the prison of Péronne, he gave his name as Louis de Oldendorff, native of Nimeguen, but his assertions did not accord with the papers found upon his person nor with those contained in his portmanteau. Four days afterward he was at the Bastille."

For twenty years M. Jung traces the prisoner's history through Pignerol, Exiles, Ste. Marguerite, back to the Bastille, where he dies on the 19th of November, 1703. This man was neither Louis, Count de Vermandois, nor Francis of Vendôme, Duke of Beaufort; nor was he the Duke of Monmouth, nor Mattioli, nor a natural son of Anne of Austria, nor Fouquet, Marquis of Belle Isle, nor a twin brother of Louis XIV., nor Avedick, the Armenian Patriarch. Singularly enough, his name was the very name which appears entered at the time of his death on the journal of Du Junca, "lieutenant du roi" at the Bastille, a name in itself of no importance whatever—Marchiel. The importance of this man to the Government seems, from M. Jung's account, to have arisen from the papers found upon him, probably implicating persons high in power. Those who are interested in looking further into the matter may find an interesting essay on the mystery itself, together with a valuable "synoptical table of Iron-mask literature," compiled by Col. James F. Meline, in the June number of the *Galaxy*.

—Last week died Alessandro Manzoni, the most honored and revered name of the century in Italian literature. As poet, dramatist, and historical novelist, he early endeared himself to his countrymen, and perhaps we should not readily find a parallel for the popularity which his *chef-d'œuvre*, 'I Promessi Sposi,' has maintained for nearly half a century during its author's lifetime. He was born in 1784, and witnessed all the painful and all the glorious vicissitudes of the Peninsula in that stormy interval, outliving both of the Napoleonic liberators of Italy, and both his younger compatriots, Cavour and Mazzini, and attending Italian unity in its steady march from Turin to Rome. His death was preceded three weeks (April 28) by that of his oldest son Pier Luigi Manzoni, who passed away at the age of sixty, and who, without ever attaining celebrity as a writer, had for thirty years been a diligent student of the ancient Celtic dialects in France and Great Britain, his design being to connect these studies with the relics of Celtic nomenclature in Northern Italy, his native *pays*. The notes which he has preserved will, it is promised, be collected and published.

THE LIFE AND LETTERS OF PRINCIPAL FORBES.*

As the late Principal Forbes is principally known to the public by his writings on glaciers, we will pass over, as of more limited interest, the sketch of his early life, of his work as a professor and as a university reformer, due to the pen of Principal Shairp, and devote the space at our disposal to a brief review of the glacier controversies in which Forbes, Agassiz, Rendu, and Guyot have played such important parts. As the

* 'Life and Letters of James David Forbes, F.R.S., D.C.L., LL.D., Late Principal of the United College of Saint Andrews. . . . By John Campbell Shairp, LL.D. . . .; Peter Guthrie Tait, A.M. . . .; A. Adams Reilley, F.R.G.S. With portraits, maps, and illustrations. 8vo.' London and New York: Macmillan & Co. 1873.

larger portion of the volume before us is filled with an account of Forbes's Alpine travels, and of his researches into the natural history of glaciers, we give to this question the importance assigned to it by Forbes's biographers.

English readers have thus far heard but one side of the question, thanks to Forbes's zeal as a writer. His numerous articles and letters on glaciers in scientific periodicals, his travels in Norway and the Alps, and occasional papers, have kept his name so constantly before the public in connection with this subject, that he has succeeded in persuading most of his countrymen that he, and he alone, was the father of everything worth knowing about glaciers, and that none of his predecessors are entitled to much credit for what they may have done. His supporters have at last gone so far as to attack Tyndall, the only Englishman who has given credit to the pioneers of the glacial theory, for daring to go back and revive a controversy which the friends of Forbes thought "had long since been extinguished." It is not our purpose to enter into this more recent phase of the discussion further than to thank Professor Tyndall, as every fair-minded investigator will do, for having, in his popular sketches of glaciers, given credit to whom credit is due.

The authors of the 'Life and Letters' of Forbes had, of course, the fullest faith in his "scrupulous and chivalrous honor," thinking that neither the interest of truth nor justice to the dead could suffer such remarks as Tyndall's to pass unchallenged. They have given us, from Forbes's own letters, all that was necessary to show a course of duplicity towards the man with whom, to quote his own words, "he served his apprenticeship in glacier observation," unparalleled in the annals of science. If justice to the dead could not suffer such mild statements as those of Tyndall to pass unanswered, it is high time that the insults which have been heaped upon the living by Forbes himself during his lifetime, and by his friends since his death, should be noticed. Prof. Agassiz, who has been the object of all this abuse, never defends himself against personal attacks; he can well afford to leave to posterity the decision of his claims; but he must pardon his friends if, feeling that they cannot allow such falsehoods and misrepresentations to circulate without reply, they come forward now and make a plain statement of the other side of the question.

There are two kinds of investigations in the solution of the glacial problem—the geological and the physical; of these, the first was approached by the early explorers of the Alps, and was embodied, previous to Agassiz's researches, in the theories of Venetz and Charpentier. In 1836, Agassiz, under the guidance of Charpentier, explored portions of Switzerland, and became satisfied of the general correctness of these views. He continued, in 1837, further explorations of the Bernese Oberland, and, in the opening speech of the Helvetic Society of Natural Sciences, held at Neufchâtel in July, 1837, and of which he was the president, he gave the first account of his theories of glaciers, based upon his recent explorations. Studer, Elie de Beaumont, and Leopold von Buch were present—the ablest triumvirate of European geologists which could at that time be assembled. Agassiz was laughed to scorn. However, having made interesting glacial discoveries in the Jura, he invited the Association to come and see for themselves; but nobody would then acknowledge, what is now universally recognized, that the traces he showed had anything to do with glaciers. The painful position of the young enthusiast, facing the ridicule of the greatest geologists of the age, who, with Von Buch and his followers, were bent upon crushing the views of a "Gelbschnabel" who dared to encroach upon their field, can be easily imagined. Undaunted, however, Agassiz continued, in 1838, 1839, and 1840, to study what the glaciers of the present day really do, and what phenomena can be ascribed to their special agency. In order to accomplish his purpose more thoroughly, he established himself permanently, during his summer vacations, on the glacier of the Aar. Here for nine consecutive summers, and once during the winter, from 1837 to 1845 inclusive, investigations were steadily carried on by Agassiz and his party. Any one who will take the trouble to consult the 'Etudes sur les Glaciers,' published in 1840, can easily see what results they had obtained prior to that date. The bottom and sides of the glaciers had been reached in order to ascertain what mechanical effects the glaciers produce upon the rocks over which they move; measurements had been made, rough, it is true, of the rate of motion of the glacier at different points; the exterior and interior structure of glacier ice had been carefully examined; the moraines and their mode of formation had been discussed; a large number of observations of temperature of the glacier at different depths had been taken; the effect of infiltration of water into the body of the glacier had been watched, and the changes undergone by the snow in the higher regions of the Alps, until it is finally changed into glacier-ice, had been carefully studied. We find, also, the oscillations of glaciers discussed in this work, and the solid foundations laid of the glacial theory as far as the former great extension of glaciers over the larger part of Europe is concerned. To test this theory, Agassiz undertook, in 1840, a journey to Great Britain for the special purpose of hunting up traces of glaciers. He announced his intention publicly in advance; it was received with ridicule, and even *Punch* indulged in good-natured thrusts at Agassiz and Buckland in their search after "moor-hens" (moraines). They went together to the lake regions of England, and to parts of Scotland, and, after they separated, Agassiz extended his rambles to Ireland. The result of this exploration was to prove distinctly the former presence of glaciers in England, Scotland, and Ireland, where no one had ever suspected their existence. A statement of these results, accompanied by a map exhibiting the glacial phenomena of the three kingdoms, was laid before the Geological Society of London at one of their meetings in November, 1840.

It was not strange that to a naturalist like Agassiz the physics of the glaciers should have had at first but a secondary interest. Having, however, once sketched out the great geological features of the theory, he felt the need of more accurate information as to the physical problems connected with glacial phenomena. Not himself a physicist—indeed, without any special training in that direction, he naturally sought the assistance of one of the most eminent physicists of the day, and, finding that Professor Forbes, whom he met in 1840 at the Glasgow meeting of the British Association for the Advancement of Science, was interested in the subject, he invited him to pay him a visit during the following summer at his long-established settlement. Forbes accepted this invitation, and joined Agassiz on the glacier of the Aar in August, 1841. To those who know the circumstances of this little colony, and they were then notorious in scientific circles, and are still well remembered, Forbes's childish dissatisfaction, as expressed in his biography, Appendix B, p. 545, at the presence of others in an investigation which had been organized long before, and carried on systematically during several consecutive summers, is quite incomprehensible.

During the three weeks of Professor Forbes's stay upon the glacier of the Aar, Agassiz turned over to this novice in glacier work, with a generosity but ill requited, all the results of the laborious investigations of the preceding four summers, all his initiative experiments, all his processes, means, and appliances for work, disguising none of the early failures inevitable to new investigations by which future success had been reached, giving him, in short, the advantage of his whole experience on the subject. In a letter addressed to Prof. Forbes by Prof. Agassiz on March 24, 1842, when he first discovered that Prof. Forbes had published independently, as results of his own, the observations made upon the glacier of the Aar during his stay with the Swiss party, he says:

"The idea that in thought you conceived the project of an independent publication did not come to me for an instant; I should have thought I did you injustice by such a supposition."

The following summer (1842), Forbes established an independent station on the Mer de Glace, and, with the advantage of knowing all the preliminary elementary steps which he had learned from Professor Agassiz, he succeeded in making, at comparatively small cost and little outlay of men or means, some decisive measurements, which he published without loss of time. He then compares his own mode of work with that of Agassiz. We leave the reader to judge whether his slur upon the man whose hospitality he had accepted, whose tent he had shared, whose guides and assistants, whose instruments and apparatus of all sorts, had been placed at his disposition, together with all his previous scientific results, is in accordance with that spirit of "scrupulous and chivalrous honor" which his biographers ascribe to him. He writes to his friends in October, 1842, after his first summer of independent glacial work:

"I am not sorry that the world should have an opportunity of comparing the results of Agassiz's mode of working with those of mine. His force consisted of a paid surveyor, a paid draughtsman, a chemist, a geologist, a trumpeter—I know not whom besides."

Unfortunately for Agassiz, he knew not "whom he had besides" when he invited Forbes, who was his own trumpeter, and blew his blast so successfully that he succeeded in persuading his countrymen that he first proved the former existence of glaciers in Great Britain, already clearly shown by Agassiz in 1840; that he had been the first to measure the motion of glaciers, and to discover the true structure of glacier-ice, all of which had been done before he visited the glacier. In concluding the sentence quoted above (page 295 of his 'Life and Letters'), Forbes says, continuing his comparison of himself with Agassiz:

"I avoided society and the disturbances attendant on notoriety, and, with one assistant only, except on rare occasions, have performed all my summer's work—my ordinary expenses being eleven francs a day"!

A laudable economy, no doubt; but he forgets that he had the benefit of the preparatory and more expensive experiments made by Agassiz, and that "the society and the disturbances attendant on notoriety," by which he characterizes the little settlement on the Aar, were not sought by Agassiz. He was a Swiss on his own ground, not unmindful of the claims of hospitality; and though the visits he constantly received were often annoying interruptions, he received them with his natural courtesy.

The chief point of the controversy respecting the work of the summer of 1841 turned especially on a conversation between Forbes and Agassiz respecting certain blue bands present in the ice. These bands had been observed before at various times, and Professor Guyot, who had been constantly associated with Professor Agassiz in his glacial work, made a report upon them to the Swiss Society of Natural Sciences, in 1841, drawn up from observations taken in 1838.

The true nature of these bands remained, and still to this day remains, a mooted point among glacial investigators. It was only after Professor Forbes had left the camp that the most important observations were made concerning them, when Mr. Agassiz followed them into the glacier for a depth of 120 feet. It was in relation to this that he wrote, in a private letter of October of the same year, to Humboldt, that the penetration and direction of the veins of blue ice in the glacier had been among the most interesting results of the summer's work. Some passages of this letter were communicated by Humboldt to the Academy of Sciences at Paris, and Forbes immediately claimed the results as his own, and accused Agassiz of a scientific theft. To this Agassiz replied, in a letter printed at the time for circulation among his friends, explaining the circumstances, and never afterwards took any notice of the matter.

From that time forward, however, Professor Forbes claimed as his own the most important results of glacial work both in England and in Switzerland, and he and his friends never ceased to cast slurs upon Agassiz, to impeach his veracity, and to ridicule his mode of investigation, as may be seen throughout that portion of his 'Life and Letters' devoted to the subject of glacial investigation. That a physicist like Forbes should have been able to treat the subject from a dynamical point of view, to make more accurate measurements than the geologists had done before him, is not surprising. Indeed, it would have been astonishing had he not handled the physical side of the subject with comparative ease. We undoubtedly owe him some very shrewd deductions from the physical properties of ice and the theory of heat, and some extremely clever theories which time may prove or disprove; and we have also to thank him for having rescued Rendu's theory from oblivion. But when he speaks of Agassiz as a careless observer who trusts to his guides for his measurements, who brings to his work a happy faculty of taking things for granted, as a man impossible to convince by reasoning, neither an original investigator of glacial phenomena nor a sound thinker upon them, we can leave the accuser in the position of a slanderer, and for justification of the accused refer to his 'Etudes sur les Glaciers,' and the 'Système Glaciaire,' with its magnificent atlas. As a natural consequence of the course of Forbes, it is not astonishing to find in a short life of him written by Geikie, and quoted at length in this volume, such sweeping claims made in his behalf as the discoverer of the former presence and extension of glaciers in Great Britain. Geikie is, as a geologist, bound to know better. He is, or should be, familiar with the history of the subject, and for him to put forth such claims is simply ridiculous.

When we come to Tait's estimate of Forbes's contributions to the natural history of glaciers, and read that Forbes was "the Copernicus or Kepler of this science," that he was the only one "who deserved to succeed," it is difficult not to smile, remembering the record of De Saussure, of Venetz, of Charpentier, of Rendu, of Agassiz, Guyot, and the whole band of Swiss explorers associated with him on the glacier of the Aar, like Merian, Mousson, Escher von der Linth. We cannot help throwing back upon Professor Tait the words in which he sums up his estimate of the work of others in the same field, and saying that his overappreciation of Forbes's glacial work is "absolute nonsense." His estimate of the value of scientific contributions to natural philosophy is more likely to carry weight with geologists than his affectionate appreciation of Forbes's memoirs on glaciers. As to the comparative merits of the glacial investigators, the scientific world will eventually decide the points at issue. The data are accessible to all critics. Tyndall introduced the wedge in his 'Glacier of the Alps,' where he seems to us to have done no more than bare justice to Professor Agassiz, though Professor Forbes and his friends consider even this an infringement upon his rights. The question has been reopened by the injudicious attacks upon Agassiz's veracity by Forbes's biographers, and they will have no one but themselves to blame if the claims of the latter are reduced to their true value by the searching examination to which they will now be submitted. Justice will be done in the end, as it always is eventually in matters of original scientific work, to the true founder of the modern glacial theory.

GREG'S ENIGMAS OF LIFE.*

I.

MR. GREG arrests his readers' attention. He, as it were, "buttonholes" the public, and compels them to give heed to questions to which they often refuse a hearing. The enigmas he proposes are riddles as old as the hills, or, at any rate, as the existence of mankind. The significance of life, man's prospects of progress on this earth and of a future existence elsewhere, are themes which have been discussed in all ages, and which will, in all likelihood, be discussed for all time to come. The lapse of centuries takes nothing from their importance, but in a certain sense it lessens their interest, for the men of to-day are inclined to cast aside the consideration of problems which have taxed the ingenuity of all ages, and which, since they still remain unsolved, may possibly be unsolvable. To these fundamental problems of life Mr. Greg nevertheless has endeavored to bring back the thoughts of the world. The three editions through which his work has run in England are proof of his success; what are the causes to which this success is due? The enquiry is a curious one; the answer to it throws light on the character of a remarkable writer, and on the condition of English and American opinion.

Mr. Greg's success is obviously not owing to any novelty in his subject. His enigmas are, as we have just said, as old as speculation; nor is he indebted to the startling or paradoxical nature of his solutions. He can hardly be said to propose answers to the problems with which he deals. "In the later years of life," he writes, "the intellectual vision, if often clearer, usually grows less confident and enterprising. Age is content to *think* where youth would have been anxious to *demonstrate and establish*; and problems and enigmas which at thirty I fancied I might be able to solve, I find at sixty I must be satisfied simply to propound." One only of the seven essays of which the book consists can be even represented as paradoxical, and the "Non-survival of the Fittest," if it startles a few readers, can hardly appear paradoxical to any person who has reflected upon the nature of civilization and on the true meaning of the theory of natural selection. Nor, again, does Mr. Greg owe much to his style. He writes in good, plain, forcible language which exactly conveys his meaning, but he does not excel in beauty of expression, and he has not the vanity to pretend that he can, after the manner of some popular writers, settle the greatest difficulties by the invention of a new phrase, and supply the place of carefully chosen arguments by the invention of more or less happy epithets. Indeed, neither literary imagination nor imagination of any kind is precisely Mr. Greg's strong point. In some of his theological essays he most unfortunately seems inclined to compete with the writer of 'Revelations' in descriptions of a future life. His success is not such as to make his admirers wish him to indulge further in these laborious flights of fancy. His success, again, cannot be attributed to those qualities in which the most popular modern writers excel. Their strength lies in wide sympathy, insight, and appreciative criticism, and they show great skill in applying to all topics the historical method of criticism. Mr. Greg's strength certainly does not lie in this direction. No one can call him sympathetic. He is keen enough in defending his own positions, but certainly not endowed with insight into the position of his opponents. His treatment of every subject is dogmatic and controversial rather than historical. How an opinion grew up is a matter with which he slightly concerns himself. His main effort is to estimate its value according to his own criteria of truth or falsehood. We doubt, for instance, whether there exists any other modern writer of equal ability who would have dealt with the dogma of the resurrection of the body in the same manner as Mr. Greg. Most critics would have traced the doctrine to its source, and, even if they held it false, have devoted a good deal of pains to explain and, so to speak, justify its existence. This is not Mr. Greg's method of treating what he holds as error. He assaults the dogma boldly, and argues against it with the same controversial energy which he would apply to overthrow the follies of a protectionist. Here, in fact, we come across the secret of Mr. Greg's power. He belongs to a school of thinkers very different from the school who have for a long time been in the ascendant. He represents in many respects the opinions and feelings of the past rather than the present generation. You see, in every line he writes, the friend of Senior and the disciple of that school of which Whately and Senior were distinguished leaders. He lacks some of the merits of authors more in harmony with the sentiment of the time, but, as a compensation, he possesses qualities rarely found in

* 'Enigmas of Life. By W. R. Greg.' London: Trübner & Co; Boston: J. R. Osgood & Co.

modern writers on social or theological topics. These qualities give a peculiar flavor and also a peculiar value to his work.

The main characteristic of Mr. Greg's mind is hardness. Whatever else you may say against him, you cannot call his writings "soft stuff." This intellectual hardness is seen, and, on the whole, to advantage, in his whole attitude towards political economy. That science is an abomination and stumbling-block to sentimentalists of all schools. Sentimental humanitarians denounce it as inconsistent with Christianity. Writers who attack humanitarianism, but are swayed by a curious sentimentalism of their own, deride it as the dismal science. In truth, persons of all classes who appeal to the feelings naturally oppose a science which treats human nature, not as a thing for rhetoric, but as an object for intellectual investigation.

Curiously enough, the constant assault on the doctrines of political economy, as opposed to the natural feelings of mankind, has told and told most unfortunately on economists themselves. A modern treatise on political economy is almost always marked by a strangely apologetic tone. The writer labors to show that there is nothing in his science inconsistent with the most humane sentiments. He throws into the background doctrines which may jar on his readers. He often is inclined to sacrifice logic in order to conciliate sympathy. Mr. Mill's treatise on political economy, for example, is in most respects above all praise, but no candid reader can deny that it is occasionally marred by the author's yielding to sentiment what he would hardly concede to argument. You at any rate miss something in the modern political economist which you find in such a writer as Ricardo, who mixes as little sentiment with questions of rent or wages as he would bring into a mathematical demonstration. Now, Mr. Greg is the sternest of political economists, and is, further, an economist who is not ashamed of the doctrine he professes, but puts it forth fearlessly in its hardest and most uncompromising form. No doubt his zeal for economical orthodoxy, combined with his passion for controversy, leads him into incessant disputes. Novelists, historians, essayists, any one who deviates from the narrow and strict path of economical truth, is sure to be assaulted by "W. R. G." His fervor for true doctrine leads him occasionally astray. He recently, for instance, attacked Mr. Goldwin Smith quite unnecessarily on the ground of supposed false teaching on the subject of luxury. In the hurry of the moment, "W. R. G." used expressions which, until explained away, seemed nearly to commit him to something like economical heterodoxy; and when they were explained away, it appeared that between him and Mr. Goldwin Smith there existed scarcely any difference of doctrine, and that the dispute had arisen simply from a difference of sentiment. Mr. Greg, in fact, really dislikes anything which diminishes the apparent harshness of economical truths. Most writers are under the temptation, in dealing with questions between capital and labor, to let sympathy with artisans who appear at any rate to stand at a disadvantage in conflict with their masters, warp their economical conclusions. Mr. Greg knows no such weakness. His views of political economy have always led him to give his full sympathy to masters rather than to men. He has often corrected the popular error of supposing that the weaker party is necessarily in the right. He has always spoken out with manly boldness, and recently pressed trades-unionists so hard with the force of his reasoning that he was menaced with that physical violence which forms the last argument of artisans no less than of kings. It is, at any rate, a comfort to find a writer who will boldly defend a piece of legislation which has met with more obloquy than any enactment of equal value, and will openly tell his public that "we have spoiled and neutralized the one really scientific piece of legislation which England can boast of—*the new poor-law as first proposed.*"

This eulogy of a most unpopular law is an example of the second and by far the most valuable quality of Mr. Greg's writings. They are marked by a very peculiar outspokenness and directness. In 'The Enigmas of Life' he speaks out in clear, definite language very rarely to be found in theological writings. A detestable habit prevails with the authors of the day of hinting at conclusions which they do not venture directly to draw. There is about even our best and most honest writers a curious tone of mystery and reserve. They seem to hint that there is something behind which they might say if they would, but, for some reason known to themselves, do not care to utter. Now, this reserve, which is mainly an affectation, is injurious to the writer and reader alike. The former flatters himself that he has in reserve for the support of his opinions an unknown force which very frequently has no existence whatever. The latter occupies himself in reading between the lines instead of simply weighing the value of his teacher's direct assertions and arguments. Mr. Greg shows the greatest desire to make the whole of his position clear to his readers. He loses the impressiveness which may be gained by mystery, but he obtains all the more careful hearing from every man of plain common sense. A fair specimen of Mr. Greg's merits and defects may be found in his views on human progress. "Some," he writes, "believe only that a considerable number of human evils may be materially mitigated; others, more buoyant, have convinced themselves that with time, patience, and intelligent exertion, every evil not inherent in or essential to a finite existence may be eliminated, and the yawning gulf between the actual and the ideal at last bridged over. This faith is mine. I hold it with a conviction which I feel for scarcely any other conclusion of the reason. . . . I am not prepared to give up this life as 'a bad job,' and to look for reward, compensation, virtue, and happiness solely to another. I distinctly refuse to believe in *inevitable* evils." This cheerful creed at first sight resembles the sentimental optimism of which we hear enough, and more than enough, in all magazines or papers addressed to what is called the million. But it is at bottom something entirely different from the sentimentality which bases its hopes of indefinite prosperity on the fact that we have invented the steam-engine and the telegraph, combined with the very dubious hypothesis that good-will and good-nature are day by day extending their influence. Mr. Greg's belief is, as he terms it, "a conclusion of the reason," and is based on very distinct and, within certain limits, forcible arguments. He sums up the evils of our social condition under the three heads of disease, destitution, crime, and shows with great elaboration that each one of these three causes of misery can be counteracted. He further examines the agencies which in his opinion threaten to arrest the cause of progress. He finds them to be the alleged inevitable struggle for mere existence, the multiplication of the race from its least eligible specimens—what has been termed the "non-survival of the fittest," and, thirdly, the increasing prevalence of democratic views which tend to place power in the hands of ignorance. After carefully examining each of these obstacles, he gives his grounds for holding that none of them really need stop mankind in their career towards the perfect development of human nature.

Now, the whole of this theory of progress is noteworthy. It stands in singular opposition to the hopelessness which, under all the platitudes about prosperity and development, prevails among the thinkers of the day. This is an age of little faith and of little hope. The enthusiastic hopefulness which marked the commencement of the French Revolution is all but incomprehensible to the present generation. The buoyant cheerfulness which supported the spirit of the liberal writers at the commencement of the century during a generation of opposition has nearly died out. Mr. Greg's peculiarity is that he still retains the tone of manly hope which characterized the school in which he was trained. We confess to a considerable admiration for a writer who boldly and rationally decries the theory of inevitable evils. It is, in our judgment, almost impossible directly to confute the train of reasoning on which Mr. Greg relies in support of his views. Take any one definite evil, such, for example, as drunkenness, and it is impossible to deny that this particular evil may be got rid of; but if each single curse of existence can be warded off, it is very difficult to see why gradually the whole mass of human miseries may not be removed. If any person doubts the validity of this train of reasoning, he can do nothing better than read the chapters in which Mr. Greg has worked it out with a force and amplitude of detail of which no abstract can give a fair conception. Despair at human progress arises in a great measure from looking at all the evils of life in the mass. So regarded, they are enough to crush out all hope from the most hopeful, but if they are taken one by one, even the least sanguine may confess that they are each singly not past a remedy. Mr. Greg's turn of mind inclines him to reduce every question with which he deals to a clear definite form, and hence to get rid of that intellectual vagueness and mistiness which often obscure our views of social questions. Hence, in treating of progress, he has been able to divest a difficult question of a good deal of its difficulty, and by taking facts singly and examining them carefully, to produce solid argumentative grounds for a belief that sounds at first sight like the expression of irrational optimism.

Mr. Greg's views of progress are, in our judgment, in the main sound; but they indisputably exhibit, if not the weakness, certainly the limitation of his intellectual vision. You cannot directly combat his arguments, but you soon see that he has omitted several considerations which would at once be urged by a disbeliever in human perfectibility. Mr. Greg does not understand, and therefore does nothing to meet, the sentiment which lies deep in most person's minds, that all the improvements in society which imagination can picture are but too likely to leave untouched the contrast between the infinite nature of man's desires and the very finite nature of the objects he can actually attain, which is the source of half the real misery of the world. But Mr. Greg further fails to observe that the method of piecemeal reform which he recommends, reasonable though it appears, has never throughout history been in reality put in practice. His inattention to the

historical method of dealing with social problems blinds him in this matter to what would be obvious enough to far less vigorous thinkers. He himself points out that the advance of mankind has not gone on at an equable pace, but has in fact been made at two or three short periods of extraordinarily rapid progress. What he does not notice is that these periods have always been times of great intellectual or rather spiritual excitement. In other words, material progress seems to depend on what may be termed moral crises, in which the world is transformed by enthusiasm for some idea. What you want, in fact, at bottom for the reform either of individuals or of nations, is not petty rules for improvement but a new spirit; but this new spirit is not to be obtained by any maxims which thinkers can invent or propound. Mr. Greg fully appreciates the maxims by which men ought to be guided in their advance towards virtue; but he does not see the necessity for that impulse, spirit, or enthusiasm, call it by whatever term you please, which can raise these truisms into truths. He fails, in fact, to grasp exactly what hosts of very inferior writers perceive—the great part, that is to say, played in human progress by sentiments which cannot be reduced to rule. This defect must be noted, yet it rightly detracts but little from Mr. Greg's influence. Hundreds of writers on social or theological topics can appeal with effect to the sentiments of the public. Mr. Greg addresses the understanding of his readers; and readers a little sickened of sentimentality naturally pay heed to a teacher whose arguments may not be irrefutable, but who has the great merit of relying for success not on rhetoric but on honest reasoning. This is a great and rare merit in a political writer. It is even a greater and rarer merit in one who deals with theology. Hence the religious or theological portion of Mr. Greg's work is that which will make most impression on the public mind; but this is a subject which requires another article for its separate treatment.

Bits of Talk about Home Matters. By H. H. (Boston: Roberts Bros.)—The first half of this book bears a close and consistent relation to the subject announced on the title-page; in the last half the chapters, essays, or "bits of talk" pertain rather oftener than not to the general conduct of life, with little obvious or very immediate reference to home and home life. Our author's chief concern is with the treatment of children, and her remarks are addressed to (not to say aimed at) a class whose means permit them to take summer board in the country, to go abroad and settle in English lodging-houses, to burn maplewood fires, to keep saddle-horses, and frequent the opera; in short, to gratify most of their wants. What first strikes the reader with surprise is that this class is thought to stand in any special need of censure for cruel and oppressive treatment of their children; and his surprise is not diminished when he reflects that the same class has always furnished the examples of what foreigners are accustomed to regard as a very lax and *laissez-aller* sort of family discipline in this country. Among them, if among any class, we have had pointed out, and usually with the intimation that we ought to blush for it, that irreverence of youth for age, that Republic of the Family as 'H. H.' styles it, that disregard of authority even when authority is asserted, which have made the American spoiled child notorious and highly disreputable. In fact, the contrast between the independent and expansive "training" of the American nursery and the repressive system of the English, is one of the commonplaces of observation on the part of American travellers in the mother country. It is, too, but a few years since we were partly amused and partly disgusted by some frank revelations by the British matron of the way in which, with her own hand, she "wallopped" her grown up daughters. We thought then, and probably said in our newspapers, that we had got beyond all that; that domestic corporal punishment, at least in all well-bred American families, was a thing of the past, as much so as flogging or "tunding" in our public schools. However, 'H. H.' is evidently convinced to the contrary, and opens her fire with a harrowing tale of child-murder under the guise of correction by a Presbyterian minister in Western New York. We have the greatest sympathy with her feelings on this matter, and are ready to maintain with her that blows inflicted by a parent on a child are an indignity to which the one ought not to stoop nor the other be subjected. We hold it to be sound doctrine that constant appeals to the reason of a child, unfailing cheerfulness, and tact in averting disappointment and collision are the best guaranties of his good behavior, and we should recommend 'Bits of Talk' for its examples of the application of this doctrine but for the unfortunate use of them as evidence of the infallible working of the rule laid down, as well as for the untenable positions into which her abhorrence of violence has led the author.

Carrying into effect the principle of Christian charity and non-resistance, the late Rev. S. J. May once invited to ride with him on the highway a wayfarer who he felt convinced had laid plans to assault him, perhaps kill him. No doubt he acted wisely as well as humanely, but it would be absurd to recommend the same course in similar circumstances as certain to meet with the same success whenever tried, as if there were not ruffians whom no kindness could melt, who are insensible to gratitude, and who would not hesitate to improve the advantage afforded them by their victim. A rule is not necessarily to be abandoned because of its exceptions, but the exceptions must be admitted and provided for. This is precisely what 'H. H.' is unwilling to do. After advancing the very doubtful proposition that a child ought *never* to be reproved in the presence of others, she illustrates it with an excellent instance of tact in a case where reproof seemed inevitable. A child instead of being sent away from table is made apparently to excuse himself. "'But what would you do,'" asks 'H. H.' of the mother afterwards, "'if he were to refuse to ask to be excused?'" Then the tears stood full in her eyes. 'Do you think he could,' she replied, 'when he sees that I am only trying to save him from pain?'" We feel bound to answer that mother, through 'H. H.', that many a Charley as good as hers could do just that thing, and we will add that we should neither despair of him nor perhaps think the worse of him. Is it, indeed, not proverbial that children impose more upon their parents than upon others not so near to them in their affections, behaving with perfect propriety among strangers, and taking license to be unruly and mischievous under their mother's eyes and in spite of her never so gentle and sagacious protest? This is an everyday paradox which requires no doctrine of natural depravity to explain it. The question of flat disobedience being raised (and not answered by a flood of tears), it is interesting to see what 'H. H.' would do with it. She gives us in a subsequent chapter another proposition, to the effect that a parent has no right to require anything of a child simply *because* he is its parent. In other words, she brushes aside the notion of filial duty, of a habit of obedience, any further than a child can be made to assent to the justice and reasonableness of each act required of him. In the relation between parents and children she finds nothing reciprocal. "The truth is," she says, "all the obligation, in the outset, is the other way. We owe all to them." Her plan, therefore, is to substitute "influence" for authority or command. But take the case just cited. The mother's influence failed to check with repeated glances her boy's rudeness at table. What did she summon to her aid—more "influence"? No; she enforced her parental authority. Influence for the long run, authority for the special emergency. "Helplessness in the hands of power—that is the whole story," says our author. But then, to cite another of her examples, what else have we when she advises daily discipline of children in choosing?—"Will you have the apple, or the orange? You cannot have both." Power offers the alternative, helplessness accepts but cannot revoke. Of the same thing a much more striking instance is given, quite unconsciously, in the chapter on "breaking the will." A four-year-old who had great difficulty in pronouncing the letter G, and at last refuses to say it any more, is taken in hand by a "wise mother" after she feels she cannot avoid the issue. She keeps him in the room and stays with him herself for three days before he yields, which he does at last. We are quite willing to applaud this mother, but only because she made a judicious use of power over helplessness, and because she proved to her son that her will was stronger than his, and that in any conflict between them his must give way. 'H. H.' may, if she pleases, treat this as Willy's "fight with himself" and not with his mother's superior wisdom as well as power, and as an example of not "breaking the will." To most of her readers, we are sure, it will appear in its true light.

We have already overstepped the limits we had proposed for this review, which would be incomplete, however, if we did not add that the chapters on children are fruitful of suggestion and are unexceptionable in spirit, as they are agreeable in style. We have indulged thus freely in criticism because if, on the one hand, we would not do anything to bolster up the régime of domestic harshness and violence, on the other we would not obscure the difficult problem of education with mistaken sentimentality and illusions based on the deception of words. Perhaps even between the tyranny of the child as so often exhibited in France, and the tyranny of the parent, we should prefer the latter. That it exists in this country to the extent implied by 'H. H.' we do not believe; and if called upon for evidence that she has deceived herself, we should draw it from her chapter on the "awkward age"—an age surely known in all walks of life, in the kindliest as well as in the rudest households, but which our author boldly declares has nothing to do with "the thinness of cheeks, the sharpness of arms, the sudden length in legs and lack of length in trousers and frocks," but only with the lack of consideration and courtesy with which children turning adults had previously been treated.

Scintillations from the Prose Works of Heinrich Heine. I. Florentine Nights. II. Excerpts. Translated from the German [with a preliminary

chapter on Heine] by Simon Adler Stern. (New York: Holt & Williams; pp. 185, with Index.)—This new volume of the Leisure Hour Series is a capital addition to the growing harvest of German classics made part of our own literature by successful translation. That difficult task is increased a hundredfold in Heine's case, where the man's German nature was so curiously altered by his love of French ideas, and yet Mr. Stern has succeeded in putting Heine into an English dress, and in doing it so well that those who read the great original will still find pleasure in seeing with what patient ingenuity and studious zeal our uncouth English has been subdued to the interpretation of the wittiest of Germans and the most delicate of word-painters in French or German. Mr. Stern's preliminary chapter can fairly hold its own as against Matthew Arnold's popular essay on Heine, and he has perhaps erred in quoting so largely from it, when he shows such familiarity with the intricacies of Heine's literary character, in which so much of good and bad, of earnest jest and frivolous seriousness, is confused and confounded. The 'Florentine Nights' recall, but not in the way of mere imitation, Goethe's 'Wilhelm Meister.' Carlyle's success in translating that into the unfamiliar English of nearly fifty years ago, when German was a little-known tongue, is nearly equalled by the grace and easy flow of Mr. Stern's translation of Heine's least Gallicized German. The story of the 'Florentine Nights' is charming in its vague and uneventful wandering, with its strong suggestion of the great original, the 'Arabian Nights,' and its still stronger contrast. Yet even in this love-tale occur some of the best examples of Heine's biting vein. His description of speaking English has often been imitated, but never improved: "Englishmen take a mouthful of consonants, chew them, crush them, spit them out again, and they call that speaking!" 'Scintillations' is a rather fanciful literary title, and even "Excerpts" does not fairly describe that part of the book. In the translation there are, along with some inelegancies of English, rather too many French phrases, not a few of which are almost technical, and therefore likely to pass uninterpreted. The faults of the press are few, but in a second edition we should hope an effort would be made to correct the punctuation and such evident misprints as "Pallagoni" and "Wantram."

Exercises in Greek Prose Composition. (By Elisha Jones. Chicago: S. C. Griggs & Co. 1872.)—Scholars who in their younger days have been obliged painfully to toil through the old Arnold's 'Greek Prose Composition,' of which the plan was a mystery and the details were mistakes, will be happy to examine this work, of which Part First, for beginners, is now issued. Our impression of it is a very favorable one. The constructions which the author introduces are well illustrated by the Greek sentences chosen as models: Chapter XX., on the Indirect Discourse, seems particulary satisfactory in this respect. The thorough teacher will not feel compelled to give his class English sentences supplementary to those which our author has provided, nor yet to score out others because they have nothing to do with a working knowledge of Greek writing.

One exception to the work we must take. Each page, beautiful in all other respects, bristles with grammatical references. We are sorry that the student is told to consult his grammar in so many instances where the principles should be quite in the boy's possession already.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*	
Austin (G. L.), Life of Franz Schubert	(Shepard & Gill)	$1 25
Browning (R.), Red Cotton Nightcap Country: Poetry	(J. R. Osgood & Co.)	1 50
Castlemon (H.), The Sportsman's Club in the Saddle	(Porter & Coates)	1 25
Colesworthy (D. C.), The Year: Poetry	(Lee & Shepard)	
Cooke (J. E.), Her Majesty the Queen	(J. B. Lippincott & Co.)	1 50
Dana (A. H.). Inductive Inquiries in Physiology, Ethics, and Ethnology	(A. S. Barnes & Co.)	1 25
De Bernardy (C. W.), Hand-Book to Vienna and the Exposition	(Porter & Coates)	1 50
De Vere (Prof. M. S.), Modern Magic	(G. P. Putnam's Sons)	2 00
Dictionary of the Derivations of the English Language	" "	1 00
Dictionary of Synonyms of the English Language	" "	1 00
Edwards (Mrs. Annie), A Vagabond Heroine	(Sheldon & Co.)	1 25
Heine (H.), Scintillations	(Holt & Williams)	1 25

Fine Arts.

THE DI CESNOLA COLLECTION.

TEMPLE-RELICS FROM GOLGOI.—I.

THE trustees of the Metropolitan Museum, finding that the enormous contribution of Gen. di Cesnola could not be completely unpacked during the season, and having got into shape an excellent loan collection of art and *bric-à-brac*, began to exhibit last Monday, in their new temporary quarters, No. 128 West Fourteenth Street, with such material as was ready. This was clearly the best course, as, if the autumn months had been waited for, their opening would have lacked the advantageous presence of the discoverer, who returns to his consulate in September. But it inflicted necessarily a great wrong upon the exhibition of antiquities, depriving it of an *éclat* in its first outburst which can never be regained now. The most imposing portion, the statuary, is but partly unboxed, and no completeness in the cabinets of glass or pottery can quite atone for the want of *esprit de corps* which affects as yet these Cypriote colossi; they are now standing, as old dramas say, dispersedly, in a loitering company about the stairs, into whose ranks an occasional god floats up out of the earth, as the professional moulders harmonize his members in a unity of heated cement, and send him warm from the basement. Any attempt to reconstruct the interior of the Golgoi emple, whose dimensions and furniture are nevertheless so completely in our possession, is not undertaken as yet by the Museum, and must be made by the visitor's mind, after bringing together much scattered material. Yet just as it is, the assemblage is in many respects one of the most captivating and stimulating in the world.

We have kept pace to some extent in the *Nation* with the discovery and acquisition of these remains; and our article of January 23 last, quoting General di Cesnola's own description of the ruins at Golgoi as he found them, precludes the need of much preliminary setting in order. We simply remind the reader that on the night of March 6, 1870, the American Consul was informed of the unearthing of a colossus and some minor pieces in the environs of Athienau (an inland town back of Larnaca), where the French antiquarian De Vogüé had already dug with slight result. Immediately leasing the ground in the name of his chief dragoman, our representative began his explorations, and by excavating towards the valley, instead of uphill, from the trenches of De Vogüé, he quickly struck the foundations of the ancient temple. This sanctuary soon yielded its whole contents to the lucky explorer, among which were a thousand statues. It was a small shrine, only thirty feet by one hundred in the length of its sides, buried about two yards deep in a hard clay apparently partly formed from its own walls of unburnt brick; no part of the building above the foundations was preserved, and bases of columns were found only at the doorways; its earthen walls, wooden pillars, and perhaps wattled roof had decayed, while the statuary, sharply broken as if by an earthquake or a sudden iconoclasm, was mostly adjustable with ease, and perfectly fresh in surface. Into this limited quadrangle the hieratic art of Phœnicia, Egypt, Greece, Assyria, and probably Persia had settled through an incalculable period of time, sometimes sharp in type and definition, sometimes mutually mingled, with the most incalculable inflections and disturbances. This populace of images now bodily in the midst of us is the noblest part of the booty from Cyprus.

No figure distinctly assignable as the divinity-in-chief has been found; the supreme patron cannot even be named with certainty, but everything points to the worship of Aphrodite. M. Georges Colonna Ceccaldi, a youthful amateur who was present at a part of the work of excavation, and who has published several reports in the *Revue Archéologique*, professed to recognize in a tapering cylinder lying among the fragments the base of a cone, emblem of Venus, adored at Paphos in a similar shape, and of whom the creed was brought to Golgoi by Golgus, son of Adonis and the goddess. This remains conjectural, but meantime the honors of the statuary are borne off by figures not divine, but those of priests or worshippers. Upon these, differing as they do from all sculpture elsewhere obtained, and of periods incalculably remote, the attention is fixed, in a perfect maze of curiosity, study, comparison, suggestion, reminiscence, and surmise.

One head, that of the colossus *par excellence*, especially excites wonder and conjecture: from its enormous almond eyes, which, if properly placed, would hang in the air between thirty and forty feet above the ground, it is hard to say how many centuries look down upon us. The fragments of the statue to which it belonged have not been identified with certainty, and it is seen as the enormous capital to a very modest shaft. Its necessary alti-

tude would seem almost too great for the height of so small a building, and although it was found within the walls, it may possibly have been before reversal a watcher without the door. In this head the Cypriote type, which we soon learn to trace by a comparison of the other sculptures, is seen in its blankest distinctness and most exaggerated measure. It is singular and intelligent, but the expression seems one of the superficies only; it is impossible to say what all these smiling faces around us are really thinking about. The colossus in question has long flat eyes, receding forehead, and acute facial angle, the weakness of the chin disguised by the ample fan of a beard, which, though covered with a bag, reveals the four ringleted locks in which it is divided; the nose is swelled, slightly aquiline, and pointed; Assyrian curls appear under the edge of the cap, which is that of a large number of the statues, and similar to the one worn in Cyprus to this day. It is a close bonnet, fitting to the head, and running up to a point; in this case, the jugular flaps, which might be drawn down over the ears, are returned closely over the cap; in other statues the same jugularies are tied in front with an ornamental knot, and the point is often decorated with the head of an animal. The mouth of the giant is fixed in a half-moon smile, common to most of the statuary. This eternal rictus of a thin flat lip on all the archaic faces present begins, after a detailed examination of the museum, to haunt the mind. From its rigidity it is, even when unmalicious, not reassuring. It bears a slight resemblance to the expression in archaic Greek sculpture; but what is very curious is that, for a perfect correspondence, we must go completely over to the early art of Italy. It is Etruria, in figures such as those mortuary reclining ones from Cervetri preserved in the Campana room of the Louvre, which yields us these receding foreheads, acute profiles, and all-promising amiability. This correspondence is an item of evidence in the theory skilfully maintained by our correspondent, Mr. Stillman, of the identity of the Etruscans with an ancient race of builders and sculptors who carried the tide of primitive art eastward through Greece, the other Mediterranean islands, and Asia Minor. A curious difference exists, though, in the permanence of their stock, as upon the mainland or insulated. No modern Pelasgic (Etrurian) faces are to be found in Italy; but in the island of Cyprus the type is most strikingly preserved, and the workmen of General di Cesnola—acute, subtle, bland, and none the worse for a little watching—dug up in many cases their own portrait busts at Golgoi, three or four thousand years old, and strikingly like. The photographs, retained by the explorer, of indigenous islanders are incontrovertible proofs of descent and identity.

The colossal head above noted, on which Egypt, Babylon, and Assyria seem to have severally pressed a chisel, is of a date extremely hard to approximate. But behind it in the museum, and to the left, stands the greater part of a figure which may be almost immeasurably older. It is Egyptian in general character, and like the giant seems to have been smoothed by the effacing influence of time; complete, it would be perhaps nine feet high. The hair is thickly clubbed, descending to the shoulder; the ear, as always in Egypt, is opposite the eye; the shoulders and pectorals are perfectly Egyptian, and adorned with the triple collar of royalty; but the face is not without that expression of a reserved meaning common to the true Cypriote countenances, and a bag is indicated for the beard, which, however, does not trespass beyond the regular oval of the chin; there is a belt set with stars, and flaps of short drapery cover the thighs above where they are broken off. It is in relation to figures of which this is a marked example that the eminent Keeper of Greek and Roman Antiquities in the British Museum, Mr. C. T. Newton, hazards the conjecture:

"Are any of them memorials of that earlier subjection of Cyprus (the Kefa of hieroglyphic texts) which, as may be inferred from Egyptian monuments, had taken place as early as the reign of Thothmes III. [about 1500 B.C.], or even earlier?"

Statues of the heroic size may be assigned to a situation in the temple forming a double row along the nave; the pedestals were discovered in position, generally furnished with sockets to receive the base of the statues, from which posture the latter seem to have been violently overthrown, with the effect of breaking them above the feet. The large figures are finished only in front, being in fact alto-reliefs on a flat slab; when set up, they were placed against a wall, or back to back, for which arrangement broad-topped pedestals were formed, with a double socket.

The Egyptian treatment is very common among these figures, though not in a single instance perhaps does a statue cause the veritable Egyptian illusion. The most obvious explanation seems to be that a succession of Cypriote nobles or kings, at an epoch when the island was a dependency of Egypt, erected their votive statues in the temple, draped, except in small ineradicable details, according to the fashion of their conquerors. A similar solution is obvious for the marks of Assyrian influence.

PUBLISHED THIS DAY.

PROFESSOR HADLEY'S ESSAYS.

Essays Philological and Critical. Selected from the papers of James Hadley, LL.D. 8vo, clo., $4.

"In extent and accuracy of knowledge, in retentiveness and readings of memory, in penetration and justness of judgment, I have never met his equal. Whatever others may have done, he was, in the opinion of all who knew him most fully, America's best and soundest philologist."—*From the Preface by Prof. W. D. Whitney.*

LIBERTY, EQUALITY, FRATERNITY. By James Fitzjames Stephen. Post 8vo, $2 00.

SCINTILLATIONS FROM HEINE.

Leisure Hour Series. $1 25.

Count Kostia Leisure Hour Series, $1 25.

HOLT & WILLIAMS, New York.

DODD & MEAD invite attention to their large assortment of FAMILY and PULPIT BIBLES, of which they offer a large variety, in all styles of binding, and in price from $3 75 to $75. Dodd & Mead, Publishers, 762 Broadway.

A. DENHAM & CO.,

Publishers and Importers of English and Foreign Books, 17 Murray Street, near Broadway, New York. PRICED CATALOGUES of our English and Foreign Books issued monthly, and sent free.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

BOOKS BY MAIL.

The Publisher of the *Nation* will hereafter forward by mail any book for which an order may be sent him, on the following conditions, which must be strictly observed:

1. That the money be forwarded in advance whenever the price is known.

2. That enquiries as to price or other particulars be accompanied by a stamped and addressed envelope for the reply. (These enquiries should be as *specific* as the knowledge of the writer will permit. It is presumed that in most cases the name of the work, of the author, or of the publisher can be given.)

3. That both money and books shall pass through the mails at the risk of the purchaser.

"We know of no European guide-book which so admirably combines brevity, accuracy, completeness, convenience of shape, and tasteful mechanical execution."—*Independent.*

A MEMORIAL OF ALICE AND PHŒBE CARY.

With their later Poems. By Mary Clemmer Ames. Cloth, $2.

From the *Cleveland Leader*: "Mrs. Mary Clemmer Ames, a lady who has won renown as an able, clear-sighted newspaper writer, has reared to the memory of Alice and Phœbe Cary one of the most beautiful and fitting monuments ever built within the covers of a book."

THE WEEK IN TRADE AND FINANCE.

MAY 26, 1873.

WALL Street has rarely witnessed a duller week than the one just past. Money has remained easy, the rates on call loans ruling between 5 and 7 per cent. throughout the week, while money was loaned as low as 4 per cent. The ease in money has naturally stimulated the demand for commercial paper, although business in it has somewhat decreased, owing to the fact that most of the paper for sale at high rates was taken off the market, and holders of that now remaining are indisposed to sell except at comparatively low rates. The suspension has taken place of a number of large firms comprising a lumber combination, that of Messrs. Dodge & Co., of this city being the most important; the suspensions in question seem to have been brought about by a combination of circumstances such as the late severe stringency in the money market, the high freights on the Lakes, and the unusual backwardness of the season; the firm was hampered by being obliged to carry along other houses in the combination who were weak, and whose paper we hear bore the endorsement of Messrs. Dodge & Co. No doubt seems to be felt that, if a reasonable extension is given, most of the firms that have suspended will be able to pay everything, and that, after having done so, some of them will have a large surplus. The aggregate liabilities of the combination are stated to be as high as $9,000,000.

The Bank of England lost £440,000 in bullion last week, but no further change was made in the discount trade, which remains at 6 per cent. as last reported. Up to Saturday, foreign advices show a better and more settled feeling both in London and Germany; the effect that may be produced by the political disturbance in France remains to be seen.

The weekly statement of the city banks is unfavorable. The deposits and circulation have increased $1,932,800, and the reserve has fallen off $415,600, which is equal to a net loss of $898,800 to the banks for the week.

The following is a comparison of the past with the preceding week:

	May 17.	May 24.	Differences.
Loans	$278,074,400	$279,846,300	Inc. $1,771,900
Specie	20,698,900	20,632,600	Dec. 66,300
Circulation	27,489,200	27,493,800	Dec. 4,600
Deposits	207,834,100	209,762,300	Inc. 1,928,200
Legal tenders	43,102,200	42,752,900	Dec. 349,300

The following shows the relation between the total reserve and the total liabilities:

	May 17.	May 24.	Differences.
Specie	$20,698,900	$20,632,600	Dec. $66,300
Legal tenders	43,102,200	42,752,900	Dec. 349,300
Total reserve	$63,801,100	$63,385,500	Dec. $415,600
Circulation	27,489,200	27,493,800	Inc. 4,600
Deposits	207,834,100	209,762,300	Inc. 1,928,200
Total liabilities	$235,323,300	$237,256,100	Inc. $1,932,800
25 per cent. reserve	58,830,825	59,314,025	
Excess over legal reserve	4,970,275	4,072,475	Dec. 898,800

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$240,949,100	$38,897,200	$279,846,300
Specie	18,592,000	2,040,000	20,632,600
Legal tenders	37,623,200	5,129,700	42,752,900
Deposits	180,489,600	29,272,700	209,762,300
Circulation	27,450,800	43,000	27,493,800
Percentage of reserve to total liabilities	27 3-100 p.c.	24 46-100 p.c.	26 72-100 p.c.

Nothing but dulness has been felt in the stock market. Beyond the fluctuations in a few speculative stocks, like Western Union and Pacific Mail, the changes have been unimportant. The topic of interest was the probable result of the approaching election for officers of the Pacific Mail S. S. Co. We gather from the various conflicting rumors regarding it that Jay Gould holds the "whip hand," and that upon his vote depends the result. People who ought to know better try to reason that in the event of his gaining control of the Company, the price of the stock will go down, and bankruptcy and ruin follow his administration of its affairs; from what we have seen of Gould's management of companies, we rather think that if it suits his interest to try and improve the property of any that he controls, he will do so—if not, then take Erie for example. Western Union has been quiet, and the parties operating for a rise are resting on their oars and waiting apparently for something to turn up, the present dull state of the general market being such that it is useless to try the "washing" process for the purpose of stimulating speculation.

The investment stocks keep pace with the dulness in other stocks. We notice that there has been a falling off in the price of Chicago, Burlington and Quincy. It is likely that the decline has taken place owing to sales made by owners who are dissatisfied with the policy of the management in not buying up the bonds of branch roads which were placed among the stockholders of the Chicago, Burlington and Quincy during the last few years, and which the Company agreed to purchase every year with the earnings of the branch roads after paying interest. The agreement was that 40 per cent. of these earnings should so be used and the neglect of the Company to carry out the agreement has caused general dissatisfaction. New Jersey Central and Delaware, Lackawanna and Western are firm, with a good investment demand for the former.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending May 24, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	100⅜ 100⅝	100¼	100⅜ 101	100⅜ 100⅞	100⅜ 100⅜	100⅜ 100½	48,500
Lake Shore	90¼ 90⅝	90¼ 91	90⅜ 91⅛	90⅜ 91	90½ 91	90⅝ 90⅝	70,700
Erie	61⅜ 62½	62½ 61¼	6 ¾ 64	63 64½	63⅛ 64¼	63 63¼	70,900
Do. pfd.	75	72 73	74	73 73¾	73⅜ 75	....	....
Union Pacific	30⅜ 31¼	30⅜ 31⅛	30¾ 31	30⅝ 31	30½ 31	30½ 30⅝	24,600
Chi. & N. W.	 80	....	75	....	75½	....	....

W. U. Tel.	85⅝ 86⅛	85⅜ 86⅜	85½ 86½	85¼ 86	85⅛ 86	84⅜ 85⅛	99,200
Pacific Mail	45 47⅜	44⅜ 46½	44⅜ 48⅜	44¼ 46⅜	45¼ 46⅜	45 45⅜	206,700

The foreign demand for United States bonds continues as active as ever, and the demand is still greater than the supply. The total amount shipped since April 1 is stated to be $15,000,000, the 5-20's of 1867 constituting the bulk of the shipments. Prices are strong on a basis of 121½ to 121¾ for 1867's.

The Gold market has attracted considerable interest, owing to the fact that a leading operator in stocks has for a time transferred his interest to the Gold Room. The short interest in gold is estimated as high as $40,000,000, and this is said to be the basis upon which a bull movement is to be inaugurated by the person referred to. The short interest is pretty well divided between the foreign bankers, the importers, and speculators. The impression prevails that cash gold will be made scarce, and that the shorts will be compelled to pay "shaves" for its daily use and cover maturing contracts falling due within the next two or three weeks. The *Daily Bulletin* of to-day says:

"It would seem that there is no article about which buyers and sellers are so prone to run into extremes as gold. After a steady advance in the price from 112 to close upon 120, upon considerations which appear to have commended the assent of a majority of those directly interested in the variations of the premium, affairs appeared to be taking a turn favorable to a reaction. The exports of produce showed a flattering gain upon those of last year; there was a steady demand for our securities from London, in the face of a violent panic at Vienna; the advance of the Bank of England rate of discount to 6 per cent. failed to depress our bonds at London, and the rates of sterling bills on this market immediately declined; these things caused operators, foreign bankers, and merchants to jump to the conclusion at once that the time for a decline in the premium had come, and simultaneously all became sellers of gold which they did not possess, but which they had to borrow in order to make their deliveries. Thus, within two or three days, a 'short' interest was created in the market far exceeding in amount the whole supply on the market. These excessive sales are likely to defeat the very decline which the sellers had anticipated. It matters little what may be the existing conditions affecting intrinsically the value of gold when the speculative situation is of such a character as this. If a clique holds the entire supply, and has it loaned out, it has it in its power, by calling in the loans, to compel the borrowers to pay any rate of interest to keep up the loan, or any premium to purchase for a settlement. From all we can learn of the present speculative situation of the market, it would seem that another Black Friday may occur at any time."

The imports for the week amounted to $7,105,811 general merchandise, and $1,497,417 dry goods, making a total of $8,585,218. The shipments of specie were unimportant, and consisted mainly of silver bars.

SLAVE SONGS OF THE UNITED STATES:

A Unique Collection of Original Melodies—words and music—obtained among the Negroes of the South; preceded by an Account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal. By Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from Birth to Maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." Cloth, 12mo. A separate volume for Boys and for Girls. Price, singly, 75 cents; for two, $1 25. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

NOTES ON ENGLAND.

BY H. TAINE.

NEW YORK, THURSDAY, JUNE 5, 1873.

The Week.

THERE has been no more light thrown on the Vienna scandal by the Government during the week, and the feeling grows stronger that the State Department ought to make some further explanation; but this it cannot do until it receives the report of the Commission of Enquiry. General Van Buren has written another letter, this time to the *Tribune*, which is much more temperate than his letters to the State Department, but is of the like tenor and effect, and tells nothing new—that is, he denies everything, and relies much on his services to the Commission and the Republican party. The *Tribune* has, however, received a letter from Mr. William J. Stillman, who is well known to readers of the *Nation*, which does clear up a good deal. It has, he says, been proved that Meyer, who is General Van Buren's head man, did attempt to get money, in the shape of a "loan," from persons applying for a concession for a restaurant, and did get $1,000 in this way, without receipt or memorandum, from one Hitzel, and that concessions were made to two persons named Boehme and Wiele for bar-rooms, for which they paid from $2,000 to $3,000 in the shape of "loans" and "school-house donations," part of which went to General Van Buren; but they found on their arrival that their concession was worthless. It is only since the investigation has been begun that attempts have been made to hush the matter up by treating the money as "loans," and offering to return it and so on. It appears, moreover, that Boehme and Wiele were to pay Meyer a percentage on all sales. These are, it would seem, specimen cases.

We think some additional light could be thrown on the case on this side of the water by a little enquiry, which we are surprised has not been made, into the character and antecedents of this Meyer. We believe it would be found that the selection of him by General Van Buren as his first-assistant was in itself a scandal and a ground for suspicion, and a sort of insult to the public. We will add another piece of information, not generally known, but suggestive in its way. General Van Buren, after receiving his appointment, did an excellent thing, which seemed to show that his mind was at that time turned in the right direction, by calling a meeting of distinguished men in the various departments of American production, whether industrial or artistic, at the Union League Club, to whom he expounded his views and from whom he sought advice. Out of these an advisory committee of thirty-one very well-known names was formed to assist him in his work in various ways, but their special duty was to be that of passing upon the general character and suitability of American contributions to the Exhibition. Had this committee done what it was expected to do, and was ready and willing to do, all would have gone well; but it is a positive fact that General Van Buren never convened it, and never held any further communication with it, and that the State Department never knew of its existence until about ten days ago. In short, instead of calling the representatives of American science, art, and industry about him, he put himself into the hands of the worthy Meyer, who went to work at once to prepare the way for American bars at Vienna, so as to give the Europeans a true and just idea of our renowned "mixed drinks."

Another Farmers' Convention has been held at Indianapolis, and on this occasion it seems to have been a meeting of real farmers, and not "an assemblage of thieves." The "National Agricultural Congress" is the name of the body, and it

"Recognizes as constituent bodies every form of society having for its purpose the advancement of agriculture and the protection of the farmer, whether known as farmers' clubs, associations, Granges of husbandry, farmers' unions, or by whatever name they may be designated, as well as the National Department of Agriculture, the State Boards of Agriculture, and Agricultural Colleges."

Twenty-five States were represented by delegates in actual attendance, and the proceedings were marked by more than usual good sense. Among other things, the Congress passed resolutions "deprecating" the politicians' practice of receiving favors from railways, recommending the exclusion from the National and State Governments of the "proprietors and servants" of railways, recommending that efforts be made to secure the regulation by the General and State Governments of all railways, calling attention to various schemes for securing cheap transportation, and declaring

"That a railway being practically a monopoly, controlling the transportation of nearly all the country through which it passes, and that as competition, except at a few points, cannot be relied upon to fix rates, therefore it becomes the duty of the State to fix reasonable maximum rates, affording a fair remuneration to the transporter, and without being an onerous charge to the producer and consumer. That inasmuch as Belgium has succeeded in regulating the rates upon railways by government lines, we ask an investigation of the proposition to control the rates upon existing railways by trunk lines, built and controlled by the State authorities, and run at fixed, uniform, and cheap rates. That wherever a railway corporation owns or controls a line or lines in two or more States, it is the right and duty of the General Government to regulate the rates of freight and fare upon such lines, under the constitutional power to regulate commerce between the States."

The Congress wisely declined to make any recommendations as to the eight-hour law, and also refused to advocate any more land-grants to agricultural colleges. It also gave a proof of its honesty by refusing to adopt a resolution directing the appointment of a committee to request "the usual courtesies" of the railroads centring in Indianapolis, the sentiment of the delegates being apparently "that the people are distrustful of any man who carries a railroad pass in his pocket."

From the third annual report of the Secretary of the Congress, it seems that there are already 10,000 agricultural associations in the country, with an aggregate membership of 400,000 farmers—a statement which ought to give the public some idea of the importance of the present movement. It ought to be observed also that the popular notion at the East, that the Patrons of Husbandry and Grangers are poor men, laboring for their daily bread, and winning a scanty subsistence by hard manual toil, is entirely incorrect. The farmers of the West are, in reality, like the planters of the South (who, by the way, seem to have shown themselves at Indianapolis) capitalists and employers of labor, engaged in the business of production, in a manner almost as unlike that of the small farmer of the East as the business of the manufacturer of boots and shoes is unlike that of the old-fashioned shoemaker. As an illustration of the capitalist character of the class, we may say that the rejected eight-hour resolution to which we have just referred was not by any means a resolution favoring the eight-hour movement, but was directed against it. It was rejected because the members of the Congress felt that, as representatives of the labor-employing interest, it was impolitic to bring the movement into collision with the labor movement. The very slight interest shown now by the farmers in free trade is probably partly due to recollections of the disastrous result of the free-trade rising of last year, and partly also to the fact, which some of our contemporaries seem to forget, that real opportunities for a reversal of such a historical policy as protection only occur now once in four years.

The moderation shown by this Congress is all the more important because of the irrational excitement displayed in previous conventions. The farmers ought to be very careful about frightening investors by their way of talking and legislating against railroad

companies. They have already caused alarm on foreign markets which may do infinite mischief here by lowering the value of all American securities through seriously retarding the development of the Western country. The London *Times* is already blowing a blast of warning to the moneyed men, and the state of feeling in Germany is almost too bad for description. Grave doubts are expressed whether Europeans will send goods to the Centennial Exposition after the example that has been afforded in Vienna of the class of men we think competent to manage such undertakings and of which our juries would probably be composed. It is idle to suppose that judges nominated by caucuses for the express purpose of deciding in a particular way on questions of property, will command any more respect or confidence than Barnard or Cardozo. Western men know the value of capital, and they know the conditions on which it is obtained and kept, and they know where the West would be to-day if it had been unable to borrow or offer security to investors.

In Minnesota the cheap transportation question is going through a novel phase, the Supreme Court of that State having decided that the Legislature may fix maximum rates of freight, notwithstanding the Dartmouth College case and the inviolability of legislative contracts. The ground of decision seemed to be, that while the State grants a railroad by its charter an inviolable right to take some toll, it by no means gives the right to take any toll it pleases, and therefore may fix a maximum under its general regulative power. We have not seen a copy of the decision, but there seems some doubt that the *Tribune's* statement, that it is not in conflict with the recent Illinois case, is correct. The general notion has always been that railroads, just like any other common carriers, were bound to fix "reasonable" rates. Whether a State can create a commission with power to establish reasonable rates, and then make these rates conclusive, has never, so far as we know, been decided. At present, the only way to find out what is "reasonable" is for every shipper, in each particular case, to go into court, and litigate the question of fact before three or four juries, and, after they have all disagreed, pay his costs and counsel fees, a sadder but no wiser man.

An assault was made in the *Tribune* a week ago by an excited rhetorician, signing himself "Jan Vier," upon the police of the Central Park, in which he represented that the force had fallen into the hands of an impracticable theorist, who employed the men in what he called a "chain gang"—that is, in walking furiously around the roads, to the great injury of their health, the destruction of their happiness, and to the neglect of their proper duty of keeping order and giving information; and he described the Park as having become, under this régime, a noted resort for criminals of various classes, who committed theft, fornication, and highway robbery over its whole area almost unchecked, while fast and reckless driving was hardly interfered with, and in one case a boy in a boat was hit with a pebble. And the wretched wag even went so far as to express anxiety about the safety of his own children, who, he would have us believe, frequent that scene of iniquity. The letter was a very plausible document, of the Sub-Junius order, and appears even to have imposed in some degree on the editor of the *Tribune*, who backed it up by an enquiring paragraph. The revelations made by it were nearly as tartling, and quite as amusing to those who really use the Park, as those which Mr. Marvin H. Bovee makes about the small value we all set on our lives and our general readiness to be hanged; but they have had a good effect in drawing forth Mr. Frederick Law Olmsted from his honest seclusion to tell the public what he knows about the matter.

He says the robberies, assaults, fornications, and furious driving are figments of the worthy "Jan Vier's" imagination; that e police force has been compelled to do regular patrol duty to get the better of the habit of lounging and skulking on the "beats" bred by several years of "politics" and one of Ring rule; that Mr. Olmsted is himself the youthful theorist who has introduced the change, or, in other words, the man who, sixteen years ago, organized the Park police, and furnished the discipline and rules under which, well or ill, it has since lived—and, indeed, the man who, more than any other, may be said to have made the Central Park the thing of beauty that it is; and that the force, now once more under his management, is well, hearty, and improving. He might have added that he was one of the very few men in the public service who give their whole hearts and minds to their duties, who eschew "politics" and all its intrigues, villanies, and rascalities, and do what they are employed to do silently, honestly, thoroughly; that he belongs, in short, to a very small class, which the American people will somehow have to enlarge and cherish within the next twenty years, if they mean to maintain anything worthy of the name of government, or prevent the "great experiment" from becoming one of the reproaches instead of one of the glories of liberty.

It has been discovered in the management of the Holly Tree Coffee Houses, that it is not possible to banish pie from any popular bill of fare in this country. The promoters of some of these useful establishments attempted, in the interest of health, to withhold this seductive compound from their customers, but it would not do, and they are now supplying it. The fact is that even a "movement" against pie would not succeed. If an anti-pie convention were held, it would be "captured" by the bitters and quack-medicine men. The Committee on Resolutions would be composed of Schenck, Drake, Radway, Hostetter, and Ayer. The resolutions would contain no mention of pie whatever, but would in bitter terms denounce dyspepsia and "general debility," and call for "the purification of the blood" and the supply of "tone" to "the system," and the punctual payment of the pensions of the soldiers and sailors. A picture of the goddess Hygeia would adorn the platform, and a nomination to some high office would probably be offered to some noted pie-baker, and the original anti-pie men would then be informed that they were a narrow but honest set of fellows, rather wanting in practicalness, but who had nevertheless "builded better than they knew."

The Pennsylvania Constitutional Convention is considering the question whether the courts shall have jurisdiction of all contested election cases—"State, municipal, and local." A section recommending this reform has passed through two readings. The only country which has already made this change in its constitutional machinery is England, and there the experiment is of such recent introduction that it as yet impossible to say what its effect will be. There can be no doubt, however, of its importance, nor of its value as an illustration of the fact that the present constitutional movement exhibits as its most promising trait a deep distrust of so-called popular bodies. To give the judiciary the right to decide contested election cases is to give the judiciary a power far greater than any that has been conferred upon it since its erection into an independent branch of government at the time of the formation of the American Constitution, and there is only one reason of a practical character given for the change—that the people have discovered by sad experience that representatives of the people cannot be trusted with it. There can be little doubt that the change, in so far as it strengthens the hands of the judiciary at the expense of the legislature, is in the right direction, and at the same time it makes the elective system still more ridiculous than it now is. Elected judges who have the right to decide election cases will be pretty sure to be looked after closely by the managers.

In Ohio, one of the principal questions before the Convention is that of minority representation. A committee on apportionment and representation has the matter in charge, and three-quarters of the members are in favor of the principle of the reform, but there is some division of opinion as to the particular kind of minority representation that shall be introduced. We hear of advocates of the "cumulative vote" and "small districts"; and on the other hand, there are the

advocates of the "free list" and "large districts." As to the district question, there is really not much room for difference—the larger the districts, the wider the range of capable men to select from; the smaller and more numerous the districts, the more opportunity for compact organization, purchase of votes, and general corruption. As to the "cumulative vote," it is inferior to the "free list" in merely securing party representatives, while the "free list" secures representation really individual. For instance, if the Republican and Democratic votes in Ohio were in the proportion of six to four, the cumulative vote would at its best secure a legislature containing for every four Democrats, six Republicans; the "free list" (with some modifications which we have here no space to go into) secures not only all this, but in addition has the great merit of giving each voter an opportunity of registering his choice among all the candidates, and giving this preference weight in the final count.

The whole subject of minority representation is, however, abstruse to the mind of the average voter, and it would be as well for the Ohio Convention to remember that the reform will prove worthless unless judges of contested elections can be provided who can be absolutely trusted; and from this point of view it will be seen that the question in Pennsylvania and that in Ohio are quite nearly related. Meanwhile, in New York, the Legislature to which the recommendations of Governor Hoffman's commission were referred has adopted the ingenious device of striking out all the more important recommendations—those which would take away much-abused power from itself—and then going quietly home. A more complete evidence of the utter contempt of the politicians for the people has rarely been given in these latter days.

Kellogg of Louisiana has drawn on the General Government for two howitzers, two Napoleon guns, two Gatling guns, a number of muskets and rifles, and various cavalry accoutrements, and the requisition has been met. It was made under an unearthed statute annually giving to every State for militia purposes a certain small quantity of munitions of war, and as Louisiana had for some years neglected to take her share, the Kellogg Government now finds ready to its hands a convenient store of war material. Meantime, Governor McEnery, in a very judicious proclamation, counsels a passive resistance indeed to the Kellogg Government, but dissuades from active. To some impatient minds who read such speeches on Louisiana matters as are made by Mr. Dawes and other Republicans, and such articles as the thick-and-thin Administration papers print, its prudence recalls the times when Mr. Dawes's ancestors made the Boston tea-party and by-and-by went into very disloyal and partisan-like rebellion. But they waited a while first, and composed many just such public documents as this, and afforded a good deal of sport to the organs of their time, and measurably restrained their wrath, and in the end had their reward, as the organs had. Certainly the recital of the recent history of Louisiana may well make a Louisianian indignant, but there is justice as well as prudence in trusting to the generally honest intelligence and intentions of the country. "It is apparent to you," says Mr. McEnery, "as well as to all the people of the United States, that the President is resolved, at all hazards and at all costs, to sustain by the military arm of the nation" the usurped power of Kellogg and his friends; he orders and requires the establishment of a government put in place "by the midnight order of Judge Durell" and by the use of United States troops; he commands that the elected judges, sheriffs, recorders, justices of the peace—in brief, all the duly chosen officers of government, whether State, parochial, or municipal—shall peaceably submit to removal, and that a government of a board elected without returns shall be obeyed. This and more the President having ordered on pain of war with the United States, Mr. McEnery also advises it, and he urges peaceable submission, justly referring to the fact that sufficient evidence has already been given that a Kellogg government without outside aid is powerless to fulfil the least duty of a government.

A second prominent Canadian politician has just died, the Hon. Joseph Howe having followed Sir George Cartier after a short interval. He has very long been the most prominent Nova Scotia public man, and was known across the border as well as across the water. Mr. Howe was descended from a loyalist family which left the States for the Provinces at the time of the Revolution. He began life as a printer's apprentice, became an editor and an active politician of far more than the usual ability of provincial statesmen, and of perhaps no more and no less than the usual consistency of leaders in that kind of politics. He died the Governor of his native province, and his appointment to this much-esteemed office was the event in his career of most interest to Americans, significant as it was to some extent of the increased and increasing detachment of Provincial politics from English. Mr. Howe was born in 1804.

In England for the moment the great O'Keeffe case, which is pending before Dublin courts, seems to occupy a larger share of public attention than anything else. O'Keeffe was a parish priest in Kerry, *ex-officio* manager of the district school, and greatly beloved by his congregation. He quarrelled with his bishop, however, and sued him successfully for libel, whereupon he was suspended by Cardinal Cullen on the authority of a Papal rescript, for impleading his superior in the secular courts, and the Board of Education removed him from the office of manager, in consequence of his loss of his sacerdotal position. The action of the Board he brought before Parliament, and he then sued Cardinal Cullen for libelling him in the terms of the order of suspension. The Cardinal answered that a priest is bound by his agreement not to sue other ecclesiastics for things said of him or to him in his character as priest. A majority of the Irish Queen's Bench ruled that this agreement was legal, and not, as the minority held, against public policy; that the plaintiff had by his own act conferred on the Cardinal the power which he exercised. The points actually decided by the Court were—and they have some bearing on the Cheney case here—that a rule of the Roman Catholic Church, that a priest is not to sue another in the ordinary tribunals for slander spoken of him in his character of priest, is not illegal, though it is no defence to an action, and does not oust the court of its jurisdiction; but that a rule forbidding a priest to seek any redress whatever in such a case would be illegal and void.

The news from France is that everything is quiet, and that nobody seems disposed to make any disturbance. Gambetta has been making speeches of a very sensible sort in the provinces, and Marshal MacMahon has got up a cabinet which contains nobody who can be called seriously objectionable, and several men of tried capacity. The new Government will, it is said, abandon the new commercial treaty with England, which probably means that they will fall back on the old one, as the free-trade element preponderates in it. It does not make very much difference, as the cardinal feature of M. Thiers's policy, the tax on raw materials, had been virtually abandoned as a failure before he went out of office. The Germans are said to be displeased with MacMahon's message to the Assembly, but why does not clearly appear. The dissatisfaction, if it exists, is probably rather with his accession to office than with anything he has said or done, because he can hardly have a policy in which "revenge" will not occupy a prominent place. But the next event of any moment in French politics will undoubtedly be the dissolution of the Assembly, though when that will occur it would puzzle the wisest man to say. Until it does, the outside pressure in favor of the proclamation of the Republic will undoubtedly increase, as the mass of French voters are strongly attached to whatever form of government actually exists, and grow more so, the longer it lasts. If any permanent form can be now set up without violence, a great deal will have been gained for the cause of good government generally. The growth of a passion among the peasantry for the republican *theory* of government is one of those pleasant fictions which light up the gloom and weariness of foreign newspaper offices.

SOME REFLECTIONS ON THE CASE OF HENDERSON.

THE officers of the Treasury, in the case of Phelps, Dodge & Co., unveiled to the somewhat astonished eyes of the American public the unpalatable fact that we are living under a system of revenue laws framed by incompetent hands and administered with a ruthless disregard to even the appearances of justice. The Supreme Court of the United States has gone a step further in the same direction, and disclosed the monstrous fact that the laws of the United States allow the Government to take one man's property for another man's crime. Indeed, we do not state the case quite strongly enough; we should have said, for another man's intention to commit a crime. In the case of Phelps, Dodge & Co., the demerits of the matter lay between Congress and the administrative officers of the Government; in this case, between Congress and the judiciary, with a general result in both cases that the revenue laws of the United States are administered on the one hand and construed on the other for the benefit of Treasury agents and informers, and that it is no longer safe for an American merchant to import goods from a foreigner or buy them from his neighbor.

In 1868, one Mr. Henderson went into the market at New Orleans and bought one hundred barrels of distilled spirits. It would seem that if a man went into the market and bought personal property from the manufacturer in good faith for its full value, and without notice, actual or constructive, of the intervening rights of any other person, he should acquire the title to his purchase. It seems, however, according to the Supreme Court, that the revenue regulations are so excessively stringent that "cautious merchants in consequence of those regulations are often disinclined to purchase spirits at the place where distilled lest they should be subject to forfeiture," and prefer to buy "of other parties who have made deposits in the bonded warehouses." Mr. Henderson apparently belonged to this cautious class, whose "caution" is of itself a commentary upon the powers of our Treasury agents, and he did not venture to buy the spirits of the maker at the place of manufacture, but did buy them "while in a bonded warehouse of the United States." Having paid the manufacturers, and as he supposed acquired title to the spirits, he next proceeded to settle with the Government, and to that end "paid to the United States Collector the taxes due on the spirits and removed them from the warehouse according to law, without knowledge on his part at any time of any fraud on the part of the distiller, either actual or alleged," being in every sense of the term "a purchaser innocent and *bona-fide*." Having thus settled with everybody in the world who asserted any right or interest in these spirits, he shipped them to St. Louis, naturally, but mistakenly as it turns out, supposing them to be his own property. On their arrival at St. Louis they were libelled by the Government of the United States through its district attorney on the ground that they "were manufactured at some place within the United States *to the said attorney unknown*," and "were removed from the place where distilled *with intent to defraud* the United States." Now, as it is not easy to understand how a district attorney could have known that spirits were removed from the place where distilled with intent to defraud, when the "place where distilled" was unknown, we are inclined to believe that there never was any fraud connected with the case, but that the revenue officers at St. Louis, having not much to do in the idle summer-time, bethought themselves of harrying one of the mercantile "brood" for amusement and perhaps to get a little easy prey in the form of a compromise. Be this as it may, nothing else of fraud appears in the case from beginning to end, and the seizure of the Government is to this day based on no other ground than the removal from an unknown distillery to a bonded warehouse of the United States "with intent to defraud."

Mr. Henderson's lawyers were apparently overconfident of their client's case, and as the cheapest and shortest way to be rid of the libel, they entered into an agreed statement of facts with the district attorney, whereby it was mutually admitted that the charge of removal with intent to defraud was true, "but that Henderson subsequently to removal from the distillery and before removal from the bonded warehouse and before seizure, paid the tax on said spirits and was a *bona-fide* and innocent purchaser thereof." With this admission written down in the record, the Government went to trial for the avowed purpose of wresting from the "innocent purchaser" the very property upon which he had paid and they had received the manufacturer's tax.

In the District Court, judgment was given against the Government, and the judgment was affirmed on appeal to the Circuit. But the revenue officers seemed to know that innocence counts for very little in revenue cases, and they carried the case up to the Supreme Court in the name of their aggrieved principal, the Government of the United States; and a majority of the Supreme Court being of the same opinion, reversed the decisions below and directed judgment of forfeiture of the property to be entered in favor of the United States.

It is however to be noted that the late Chief-Justice, with Messrs. Miller and Field, dissented; and Mr. Justice Field, in his dissenting opinion, says with a very fine touch of judicial sarcasm:

> "The presumption is that the majority of the Court are right in this decision, and that the minority are mistaken in their views of the law governing the case. It is, therefore, with diffidence that I venture to dissent from their judgment—a diffidence which is greatly augmented by the declaration of the majority, that it is impossible to escape the conclusion which they have reached. But for this conclusion, I should have supposed that it would have been impossible, at this day and in this age and in our country, to obtain a decree confiscating the property of a citizen for anything which a former owner of the property may have intended to do, but never did in respect to it. I should have said that the intentions of the mind, lying dormant in the brain, had long since ceased to be subjects for which legislatures prescribe punishment."

The *law* of a decision by the highest judicial tribunal cannot be profitably discussed. The bar sometimes accept it as "good law" and sometimes criticise it as "bad law," and legal journals review it and point out mistakes in the premises, or misapplications in the authorities, but the chances are that the Court has been able to give to the questions involved a closer scrutiny than the people who doubt the conclusion. Nevertheless, there are some principles of constitutional and legal ethics as to which most intelligent and conscientious men can judge. Of such is that one, accepted in all civilized countries, that where the Government goes into a court of justice as a suitor, its rights of property are to be adjudicated with the same impartiality and upon the same legal principles that would prevail if the suitor were a citizen or another corporate body. The only exceptions to this are, first, that governments are not supposed to be guilty of torts or intentional wrongs—which means simply that they are not to be cast in examplary damages, but are to pay the reasonable value of the property taken or injury inflicted; and, second, that they are not to be held responsible for the carelessness or unauthorized acts of their agents. But it is nowhere believed that one measure of justice is to be applied to the governmental and another to the ordinary litigant, or that courts of justice are to become a kind of foster-mother to nurse governments through the ordinary hardships of litigation. During the last fifteen or twenty years a system of decisions has been built up in the Supreme Court under which an entirely different rule is applied to the liability of "U. S." than is applied to the liability of "John Doe" and "Richard Roe"; and of these decisions this Henderson case is the last, though we are by no means sure that it is the worst. The Supreme Court has also gone out of its way several times to say that as to many classes of cases entitled to judicial redress, Congress "has wisely" reserved them for its own determination, when it is perfectly well known that Congress is utterly incapable of awarding judicial redress, and that private claims have often proved the most fruitful seed for Congressional corruption; and it has fallen into the ignorance of saying that immunity from suit is an attribute of sovereignty, and that suits against Government are permitted only by the "liberality of legislation," when it is beyond dispute that in almost every country in Europe the Government is liable to the subject in all matters of property as completely as one of its own corporations, not from the liberality of legislation but by immemorial usage.

Now there are two principles of law peculiarly applicable to these cases of Henderson and Phelps, Dodge & Co., which have been entirely ignored by both the Government and the Supreme Court. In courts of equity, it has always been held that a party seeking equity must do equity—which means that a man seeking to set aside a transaction cannot keep the fruits of it in his pocket. In courts of law, it is settled that where a man stands by and sees an innocent purchaser buy property from a third person, he will be estopped from afterwards setting up any claim of his own; or, as a former judge of the Supreme Court quaintly stated it, "where a man has been silent when in conscience he ought to have spoken, he shall be debarred from speaking when conscience requires him to be silent." In the case of Phelps, Dodge & Co., the firm laid down erroneously a rule of computation which in the great majority of instances worked against their own interest, but in a few instances against the interests of the Government. The Government received the benefit of this rule, yet nevertheless, keeping the money in its treasury, could walk into court and demand an enormous penalty for the few instances where it had received a trivial injury; and it is now almost certain that if the suit had gone on, the Supreme Court would have enforced the penalty on the one hand, and on the other would have dismissed a suit brought to recover back the overpayments. In the case of Henderson, the Government, being the custodian of the property, looked on and saw an innocent purchaser buy it without asserting any title of its own; more than this, it delivered the property to the purchaser; more than this, it exacted from him as a condition to delivery an enormous tax; and then it walks into court asserting itself to have been the owner at the time, and actually carries off the property without the pretence that it will ever refund the tax which it exacted.

Do our readers now wish to know the reason or apology under which the law officers of the Government dare to hunt down two innocent merchants, against the moral sentiment of about every respectable person in the community? We will state it in the words of the Solicitor-General: "It is notorious that spirits have often been removed to United States bonded warehouses from distilleries in accordance with conspiracies between distillers and warehousemen, in order to defraud the Government by having the spirits secretly drawn off from the barrels, and *under agreements with the revenue officers* to have them released upon worthless security." And we will add the apology of the Supreme Court: "Distillers intending to evade the payment of the duties may find it a most effectual way to accomplish their unlawful designs, in case they can *by bribery or otherwise secure the co-operation of the inspector, storekeeper, or collector,* to remove the spirits to a bonded warehouse." In other words, it is bad government which has gradually changed our highest judicial tribunal from being the guardian of the law to being the guardian of the Government, and which has built up a system of statutes and decisions under which the strong is favored as against the weak, and the corrupt as against the innocent. In the general abandonment of the duties of citizenship, no class of the community has been more in fault than our merchants, and they are now suffering probably severer punishment than any other class—a punishment which is of itself one of the curious reactionary effects of weak government, and is being dealt by most unexpected hands.

THE CAUSES OF THE FARMERS' DISCONTENT.

THE farmers' movement, although slow to spread to the East, and although it is yet inchoate and undefined, has assumed national importance, and deserves, by virtue of the possibilities involved in it, the careful study of the economist and the politician. At the present moment, the chances seem to be evenly balanced that it may either be mistaken in its consciousness of its own origin and meaning, and be misdirected in its measures and aims, or that it may prove the beginning of a movement which shall break in pieces the system which has been elaborated and fastened upon the country during the last twelve years. If it is to have the latter issue, it is of the first importance that those who participate in it should understand the situation.

Now, first among the existing economic circumstances of the country to which the distress of the farmers is due is the depreciated currency. He who affirms this to Western men is, indeed, likely to find that he speaks in dull ears. The present currency of the country so far surpasses in practical advantage any currency ever before possessed by the West that it seems to have taken strong hold on the confidence of the people of that part of the country. It possesses a uniform value, and is easily and cheaply transported. This proves, however, the outrageous badness of the old currency of the Western States, not the intrinsic goodness of that now in use. The West opposed the Legal Tender Act of 1862 almost *en masse*. The ruin of 1857 was recent enough to exercise strong influence over the minds of the Western legislators of that date. Their instinct was correct. The Legal Tender Act and the National Bank Act created and placed at the disposal of the banking interest a power which could not fail to be oppressive to the new sections of the country and to the agricultural interest. At the same time, those acts created a system which was artificial, divorced from the legitimate and beneficent operations of banking, and, under a suspension of specie payments, freed from the restraints which are the safeguards alike of the banks and of their customers. The paper money era has developed with us all the phenomena which have marked its history elsewhere. Speculation has become the prevalent form of business, and has assumed gigantic proportions, and has attached more and more to paper securities. Money has been drawn into the great stock markets. The mobility of the currency, which is one of its chief merits in the eyes of many persons, has strengthened this tendency. The population has been enticed from country to town, from agriculture to trading, and city real estate has risen in value, while farm land has declined. Farm land has been held, even in the West, more for a prospective than an immediate profit, and the realization of this prospective value has been more and more deferred. In the meantime, prices have risen throughout the whole range of the farmers' necessaries. The spasmodic fluctuations in the price of money, and of materials affected by the tariff or manipulated by "corners," has stood in grave contrast with the steady rise of wages on the one hand, and the steadiness of the price of staples, which is governed by the foreign market, on the other. These things are the legitimate and necessary consequences of an irredeemable paper currency, and, in view of them, the wonder is, not that the troubles of the farmers have come to a crisis, but that the crisis has been so long deferred. The inflation of railroad capital is due to the same cause as other inflations. Much declamation has been spent on the wickedness of the railroads in watering stocks, but this is only the form by which railroad property has been inflated in order to keep pace with the general inflation. It is not a new evil: it is only another development of the same one.

Among the resolutions passed at the first meeting of the Illinois farmers was one implying that the tariff was suspected of a share in the mischief. It seemed, indeed, to be only a random shot, as if an enemy had been only vaguely suspected under the mask of this old and plausible acquaintance; and at the subsequent meeting in New York, all reference to the tariff was dropped. Remonstrances had come from many quarters that the farmers might better attend to the matter in hand, and some such feeling governed the action in New York. The attack on the railroads was only made more violent, unreasoning, and futile. That the railroad transportation charges are the immediate form in which the evils of the situation make themselves felt by the farmers is not to be denied; but, as we have recently shown, the railroad charges are not a cause but a consequence. The railroads are entrenched in the existing economic circumstances, and nothing can dislodge them which does not change those circumstances. The farmers did not go out of their way when they assailed the tariff, any more than a physician turns aside from the task before him when he gives remedies for indigestion to cure a headache.

Mr. Carey and Mr. Greeley taught the American people assiduously for a quarter of a century that protection was the secret of national prosperity. For the farmers especially they entertained a sincere interest. They lamented that grain should be burned for fuel in the West. They declared that under protection manufactories would spring up at the farmer's door to make a market for this food, and utilize it to support productive industry. Mr. Carey and his disciples went further. To them it seemed that to export grain was to export the chemical constituents of the soil, to impoverish the country, and give its substance to foreigners. Transportation charges were a sore grievance to them all, seeming to be waste and loss.

No sooner had the Southern members left Congress than this system was put in operation. We have had twelve years of the experiment. The system has been rounded out to the full realization of the ideal of its projectors. They have never pretended that the experiment was not fair; on the contrary, only a year ago they were loudly asserting that the country was prosperous, that this prosperity was due to protection, and that the experiment was a success. They have never asserted that the system must, for a beneficent purpose in the general interest, bear hardly on the farmers. On the contrary, the prosperity of the farmers under protection was to be the boast and triumph of the system. Now, however, we are met by an outburst of indignant protest from these beneficiaries of protection, who, though they have enjoyed during this period a series of unexampled harvests, declare that their circumstances are unendurable, and that find a way out they will, though it be over the great corporations which rule the rest of us without opposition, or over a degraded legislature and intimidated judiciary. They never burned so much grain as now. They have lost one market without winning another; and as for the hardship of competing with "Russian wheat," all they ask is to be allowed to compete with it. Transportation charges have been increased and multiplied, middlemen have increased in number, rings to which toll must be paid have sprung up on every hand, and now certainly the time has come to enquire whether the great experiment has not turned out with us, just as it has turned out everywhere else on earth, a mistake, a delusion, and a fraud. Are not the specific forms of evil natural products of the great fundamental principle? Are not the high charges for transportation due to the enhanced cost of every ounce of iron, every stick of timber, every piece of metal, every yard of cloth, which has gone into the construction of railroads for the last ten years? Must not the army of railroad employees have higher wages when they buy protected clothing and furniture? If stock is watered, is it not because it would cost twice as much (in to-day's dollars) to build the road as it did twenty years ago when the line was built and its capital computed? Are not the rings and middlemen the offspring of a system which has taught this generation that the means to secure success are not to attain to superior excellence, but to get "the long end of the lever"? If the farmers want to recognize their enemy, these are questions for them to consider.

The method of redress now proposed is an interesting illustration of the education which is exerted upon men by a broad principle, and of the unconscious consistency which governs the human mind. The trouble is due to the interference theory, which ascribes to legislation the power to make men prosperous, free from vice, and happy. It has been extended so far that public aid in various forms has been given to all sorts of projects, and the system of making the public bear all the expense and risk of "developing our resources," while a few shrewd manipulators take all the profits, and indeed a good share of the prime cost of the operation, has been pushed to the most extravagant refinements. It is astonishing to observe how such an evil system returns again and again with accumulated mischief to plague the inventor. A Western county bonds itself for a railroad, and binds itself to heavy risks and long-continued payments. These bonds go abroad, and upset the exchanges, and distort the premium on gold. The wheat of the same county goes to the foreign market, and the return for it is wasted and squandered through the exchange and the gold premium—secondary consequences of the original mistake.

But when the sufferers come to correct their grievance, they know of no remedy; their minds are educated to seek no remedy other than a new application of legislative interference. The men who have bound their towns and counties for a railroad form an anti-railroad league. They complain that the railroads are ungrateful and domineering. Have they, then, never seen spoiled children? Do they know so little of human nature as not to know that it is the manner of those who have been petted to become ungrateful and intractable? The seeds of the present difficulty are in the original error of the interference policy, whether in its wider or its narrower applications, and the crop answers to the seed. It can never be eradicated by planting it anew. If the farmers of the West can come to see the true causes of the ills they labor under, and attack them at the root, they may burst the shackles which bind not only them but the whole country; but if they extend the same theory, and try to win back prosperity by town aid to rolling-mills, starch factories, and other kindred enterprises, or by manipulating legislatures and intimidating judges, they will only sow for the future a harvest of shameful repudiation, wretched bankruptcy, and degraded political history.

THE LATE STUART MILL.

London, May 15, 1873.

THE great event of the last fortnight—to very many of us at any rate—is the death of Mr. John Stuart Mill. Just before leaving England a few weeks ago, he appeared to be in more than his usual health and spirits, and we were in no degree prepared for the sudden extinction of so great an intellectual light. Politically speaking, Mr. Mill's loss is of no very great importance. Whatever the value of the doctrines which he advocated, he was as much a follower as a leader. When speaking on woman's rights or the land laws or the franchise, he gave to his party the weight of a great authority, but he scarcely contributed any new element of opinion. It was something, of course, for the extreme democratical party to be able to say that Mr. Mill agreed with them, but perhaps the agreement, so far as the outside world was concerned, told more against Mr. Mill than in favor of his allies. That a man of such wide cultivation and such extraordinary intellectual power should, so to speak, swallow the popular radical creed whole, was somehow not quite satisfactory. What is the use of being a great philosopher if, after all, you can add nothing to the ordinary cry of every popular agitator? To some such feeling, though of course there are deductions to be made from the statement, it was owing, as I fancy, that Mr. Mill was regarded as having rather lowered himself by his political action and as having descended too easily from the judgment-seat into the open arena.

Upon that subject, however, I have recently spoken, and I need not dwell upon it at the present time. Neither will I venture to express any opinion as to the general merits of his speculative action. The influence which he has exercised upon English thought and indeed far beyond English limits, is too conspicuous to justify any comment. I will merely observe that for the last quarter of a century Mr. Mill has been the intellectual leader of all young Englishmen. Within that time, for example, there has been a marked tendency towards a revival of philosophical speculation in our universities. At the beginning of the period, Oxford was still shaken by the movement of which Dr. Newman was the chief leader. Mr. Mill's influence became powerful in the reaction which followed, and under his guidance more than under that of any other man, the current has since been running with increasing strength in the direction of rationalism, positivism, and all manner of other heterodox "isms." He exerted a similar though a less conspicuous influence at Cambridge. It was a really grotesque phenomenon to persons behind the scenes to watch the vigorous opposition made by the outside world to the removal of religious tests from the University, whilst, in the University itself, Mr. Mill's works had become recognized text-books, and under their guidance the whole thought of the place had drifted far away from all accepted landmarks. To try to keep young men within orthodox limits by making them sign professions of allegiance, whilst giving them for their chief intellectual sustenance Mr. Mill's 'Logic,' was, as Milton puts it, to shut the park gates by way of impounding the crows. The whole of the present generation of cultivated Englishmen under five-and-forty may be said to have been brought up at Mr. Mill's feet, though of course they have not all accepted the master's teaching.

In the earlier part of that period, Mr. Mill was little more than a name to most

of us. We did not suppose that he had any actual flesh-and-blood existence. He was a mere impersonation of logic and political economy, who was supposed to be incessantly secreting syllogisms in some philosophical laboratory. Here and there, in the 'Political Economy,' there are expressions from which one might gather that Mr. Mill could feel keenly as well as think clearly, but only a few select friends were at that time admitted to his voluntary seclusion. His complete retirement, really caused by an excessive sensibility, was popularly supposed to be due to a cynical contempt for his fellow-creatures. I have a lively recollection of a few apparitions of Mr. Mill some ten or twelve years ago, when he was first beginning to emerge from his retirement. Nothing could have been imagined more contrary to my preconceived notions than the slight fragile man, trembling with ill-suppressed nervousness and, at times, blushing like a girl for some inappreciable cause. I had expected—foolishly enough—to see an ideal philosopher, not perhaps in the flowing robes, but at least with the dignified mien of one of Raphael's apostles, and my surprise was not less than would be the surprise of most people if the portrait of the ideal St. Paul were suddenly replaced by a faithful likeness of the man as he appeared to his contemporaries. If Mr. Mill's presence was not dignified in the conventional sense, it revealed at once that emotional side of his nature which has been made prominent in his later works. The author of 'The Subjection of Women' seemed to take the place of the expounder of Malthusian principles. But in a few minutes there was no difficulty in constructing a more complete image of the whole man. It was at a meeting of the Political Economy Club that I first had the honor of being in Mr. Mill's company, and the subject, not at first sight a very attractive one, was the propriety of allowing cab-fares to be regulated by free competition instead of fixed by a tariff. Unpromising subjects often branch out into unexpected variety of suggestion. On this occasion, however, I do not remember, and perhaps it would be a breach of confidence to reveal, the opinions expressed by the other philosophers present. The arguments used have slipped through my mind, though I have a vague recollection of having chewed many dry husks of statistical information. But I do remember very distinctly the impression produced upon me by Mr. Mill. His nervous and agitated manner disappeared with the first sentence; the statistical and economical magnates around me listened with rapt attention whilst a series of sentences flowed from Mr. Mill's lips, as perfectly formed as though he were reading the proof-sheet of a carefully prepared essay, and arranged with the most logical lucidity. How much attention Mr. Mill had given to the subject of cabs it is of course impossible for me to say; but I could never have imagined that to so barren a text there could have been appended such a mass of interesting reflections. Somehow or other, he kept to his subject, and yet forced one to think of cabs, not as a mere isolated phenomenon, but as part of the general system of things. Always dwelling upon topics within the comprehension of police officials and town-councils, he yet brought into the discussion such a wealth of thought and knowledge that cabs have been ever since raised in my opinion. Coleridge would doubtless have been more poetical and more metaphysical, if started on one of his flights into the infinite from a cabstand; and Mr. Carlyle would probably show a more vivid insight into the phases of human character connected with cabs, but as an exposition of practical philosophy in its bearings upon cabs, Mr. Mill's discussion appeared to me to be as near to perfection as possible. In fact, Mr. Mill could talk like a book, and, what is far rarer, like a very excellent book. His conversation was frequently like a chapter out of the 'Liberty.' It was his habit, I believe, to have everything closely arranged in his head before putting anything on paper. The actual writing was therefore extremely rapid. I am almost afraid to say, merely from recollection, what was the period employed in the actual composition of the 'Logic.' My memory tells me that he had written the whole in three months. That would imply over ten octavo pages a day; and considering the extreme complexity of the subject and the difficulty of steering the way safely through all manner of logical intricacies, such a speed of execution would be something astonishing. Of course it implies that the whole substance was already carefully prepared. Like some other distinguished writers, he was fond of taking long walks, during which his reflections were gradually moulded into a form fit for expression. Within the last year or two, he was still equal to doing thirty or forty miles in a day without excessive fatigue, though from his appearance no one would have imagined that he possessed great pedestrian powers.

Mr. Mill's speeches were very much injured in their effect by the weakness of his voice, but as compositions they were as perfect as anything that he wrote. When he first appeared in Parliament, he was apparently very nervous, and had a curious habit of occasionally stopping and shutting his eyes for many seconds between two consecutive sentences. To his hearers it appeared at first that a breakdown was imminent, but he always caught the thread of his argument, and proceeded anew with a uniform flow of disquisition. His least satisfactory performances were at moments when strong feeling was carrying him away. The disproportion between the passion and the physical power of utterance was too marked; for a genuine orator requires an organ of corresponding power and volume to give effect to the expression of strong emotion. And yet the genuine strength of Mr. Mill's feelings and the generous breadth of his sympathies undoubtedly gave him power over popular audiences, as it will endear him to the memory of many friends who do not implicitly adopt his theories. No warmer-hearted man ever lived. His loyalty to his friends was touching in a high degree, though it doubtless betrayed him into occasional weaknesses. Everybody remembers the dedication to the memory of his wife of the book on 'Liberty,' in which, to say the truth, it is impossible not to suspect that his judgment had been considerably biassed by his feelings. Something of the same tendency appears in several of his later works. Mr. Mill believed in his friends with something like vehemence. He believed not merely in their moral worth but in their intellectual power. The feeling was amiable and generous in a high degree; for most of us are perhaps conscious that there is something not altogether displeasing to us in the weakness as well as in the misfortunes of our friends. Some little grain of jealousy perhaps mingles with most human friendships, or possibly we fear to trust our judgments when they apply to those in whom we are deeply interested. From any such defect of cordiality Mr. Mill was most honorably free; but I fancy that some allowance must be made for this unconscious bias before we can accept the very warm eulogies which he has passed upon theorists whose merits are not so conspicuous to the outside world. In losing Mr. Mill, we have not only lost the most thoroughly trained intellect amongst English philosophers and politicians, though one whose powers of assimilation perhaps rather exceeded his powers of origination, but we have also lost one whose generous warmth of feeling gave a higher tone to contemporary politics and leaves many tender memories behind him. There is no one ready to take his place, though we may console ourselves with the reflection that he had pretty well delivered his message to the world. It is said that he has left many remains, and amongst other writings an autobiography continued to a recent date. A few years ago he said that he had finished some writings for which he thought that the time of publication had not arrived; but I know not whether the observation referred to 'The Subjection of Women,' which has since appeared, or to some works which have not yet seen the light.

Correspondence.

THE SPECIFIC DEMAND OF TRANSPORTATION REFORMERS.

To the Editor of the Nation:

Sir: You demand that the movement for cheap transportation reform should be more specific. So far as concerns the recent convention in New York, this stricture is entirely just. That gathering was manifestly engineered by men who had no conception of the real issue at stake. The series of resolutions adopted dealt wholly in vague generalities, as if the attempt was to say a good deal without saying anything. But the movement in Illinois is not open to that censure.

The cheap transportation movement got fairly under headway in advance of the election for delegates to the convention which framed the present constitution of the State (1870). The general attention of the country was not attracted, nor was there any marked demonstration among our people; but care was taken to elect delegates who would faithfully represent popular sentiment on this subject. The result was the assertion in our organic law of the doctrine that the Legislature has a right to "pass laws to correct abuses and prevent unjust discrimination and extortion in the rates of freight and passenger tariffs on the different railroads in this State." According to the principle laid down in the Dartmouth College decision, this doctrine conflicts with the Constitution of the United States, for the charters of our railroads give the holders of them unlimited authority in the matter of transportation charges. The validity of the clause quoted is a point on which our lawyers and jurists disagree. On the second of next June the first contested judicial election under the new constitution will occur. Besides a large number of circuit judges, there will be elected at that time two members of the Supreme Court. The full bench consists of seven justices, the senior in point of service being chief-justice. The distinctive issue raised in this election is, Shall the railroad feature of the State constitution be recognized as valid, and the laws enacted in accordance therewith be enforced, or shall it and they be set aside on the ground of conflict with the Federal Constitution as interpreted in the Dartmouth College case? In one of the Supreme Court districts there is practically no conflict; the candidate who is sure of election was a mem-

ber of the Constitutional Convention, and sustained the railroad article; and the only other candidate in the field is unequivocally pledged to its support. In the other district the contest is intensely hot. One candidate, Judge Craig, is avowedly friendly to the plan of transportation reform set forth in the constitution, while his opponent, Chief-Justice Lawrence, refuses to commit himself, but has the ardent support of the enemies of reform. He rendered an official opinion last winter upon the railway question as presented by legislation as it then stood, taking care not to commit himself upon the question of the validity of the State constitution. Such being the facts as regards the judicial campaign in Illinois, it is certain that, whatever else may be said of it, it is specific.

Turning from the pending judicial election to the transportation laws of Illinois, we find definiteness. Whether the legislation is judicious and effective or not, is not the question under discussion in this connection.

The first Legislature which met after the present constitution had been adopted passed one law regulating passenger tariffs, another regulating freight tariffs. The latter was killed by the Supreme Court, and it is expected that a decision invalidating the former will be rendered shortly. The recent Legislature virtually assumed as much by passing a law applying equally to freight and passenger business.

The new law will go into effect July 1. It is based primarily upon the idea that discrimination for or against any shipper or shipping point is unjust. It requires an inflexible schedule of charges for all periods of the year, every patron, and every station, except that the issuance of commutation tickets to passengers is authorized. The railroads centring in Chicago announce that they will obey this feature of the new law. If they do, the feasibility of the plan will be demonstrated one way or the other. Hitherto it has been customary to reduce charges from competing points below actual cost, and make up the loss by exorbitant rates from non-competing points. This is surely a very definite change.

The new railway law of Illinois has one other feature. It is quite as pronounced as the first, and still more revolutionary. It provides that every railroad company in the State shall haul cars offered it at reasonable and impartial rates. The railroad and warehouse commissioners of Illinois are required by law to make out a schedule of rates for car hauling, as well as for the transportation of passengers and ordinary freight consignments. That Board has until January 15, 1874, in which to make out the schedule. The railroads have not yet announced their programme on this point, but it is certain that with this car principle recognized and appreciated competition would spring up in the transportation business along every railroad line, and the cheap-freight problem would be in a fair way to solve itself. Mr. Adams is half right in holding that competition is the true solvent for the transportation problem, only competition cannot be secured by building new lines of railroads, but by establishing a basis for competition on the same line. If the railroads of the country depended in whole or in part upon the profits of transporting cars rather than miscellaneous freight, they would encourage competition and be enriched by it. Whether this plan is feasible or not, it is surely worth while to test the experiment.

Permit me to say in conclusion that this railroad question deeply stirs the popular heart at the West, however it may be at the East. Demagogues are trying to pervert it, as a matter of course, but the movement will push on in spite of the politicians, gaining definiteness and momentum all the time. F. G.

CHICAGO, May 24, 1873.

[We think the contest over the judges is what does most to give the movement a wild or visionary appearance in the eyes of people at the East. The question whether the State constitution shall or shall not be overruled by the United States Constitution as interpreted by the United States Supreme Court, which our correspondent says is "the distinctive issue" raised in the pending canvass, is in reality a magniloquent form of the question whether the State of Illinois shall through her judges overthrow the Government of the United States. Moreover, it is difficult to get outsiders to believe that the people of Illinois are in earnest in proposing to submit the legal rights of property of individuals under charters and deeds to be discussed on the stump and determined by a popular vote in the election of judges. The Western railroads are thus far private property, the result of capital invested under certain guarantees, one of which was that all controversies affecting it should be decided by independent courts, acting without fear or favor. Nobody would invest money in a State in which the nature and extent of his property were liable to be made an issue at every election. When any body of American farmers tell us they are going to adopt this plan in order to secure their rights, we prefer in compliment to tehir intelligence and honesty to believe that they are indulging in empty buncombe, and that they know it. If any such doctrines as are now broached in Illinois about the duty of judges should be adopted by any political party at the West, Western men may rely on it money will become scarcer in that region than they have ever seen it, and that they will be troubled with no new railroads, or any other new thing requiring capital, for a long time to come. Even the wild talk that has been indulged in has already had its effect on the money markets. Of the proposition to make all railroads, with their present accommodation as regards tracks, stations, etc., haul all cars that may be offered them "at reasonable rates," we shall only say of it that it strikes us as childish, but perhaps we are mistaken. As regards uniform rates of freight, some evidence was taken on this point before a Government Commission in England in 1866, apropos of a proposal to have the Government purchase the railroads and manage them on this plan, which was very interesting. The evidence showed that one great feature, and a very valuable one, of the management of the English lines by the companies, was what was called its "elasticity"—that is to say, the rates were adapted to the peculiar needs of manufacturers and producers along the road. Men who forwarded great quantities of freight to London from a distance were accommodated at low rates, partly because of the small proportional amount of handling required by their goods, and partly because they could not otherwise carry on business at all, as a uniform rate would give a monopoly of the market to those nearest London and near the sea. In this way an enormous amount of industry is kept alive in all parts of the country, which under a uniform-rate system would perish. Railroad managers or business men can be trusted to make these discriminations under the guidance of their own interest, but the Government could not.—ED. NATION.]

Notes.

GEO. ROUTLEDGE & SONS have in preparation a new work by George MacDonald, called 'Gutta-Percha Willie.'——Mr. George H. Felt, to whose forthcoming work on 'The Kaballah of the Egyptians' we made some reference last year, has himself assumed the publication of it, and may be addressed for information or by intending subscribers at No. 47 Liberty Street, in this city.——Hurd & Houghton announce a uniform edition of the complete works of Lord Macaulay, at a low price, but in a very handsome style. There will be sixteen volumes at $36, or (students' edition) eight volumes at $14.——Judge Thayer's memorial discourse on the late Dr. Lieber, noticed in No. 411 of the *Nation*, has been substantially reproduced in German in the *Weser-Zeitung*, beginning with the weekly issue of May 10 (New York: E. Steiger).——We learn from the *Academy* of the successful formation of an "English Dialect Society," which already consists of about forty members, the subscription being half a guinea per annum. Full information of the Society's objects may be had by addressing Rev. W. W. Skeat, Cintra-Terrace, Cambridge, England.——No. 4 of the *China Review* (Jan. and Feb.) has for its opening article an interesting account of Tauism, and, as Dr. Ernst Faber's 'Lehrbegriff des Confucius' is reviewed at length in the same number, the reader gets a fair idea of two of the three great schools of Chinese doctrine. The "Adventures of a Chinese Giant" are brought to a close, being entertaining to the last; and we can also commend the papers on Chinese Verse and Chinese Almanacs.—— *L'Année Géographique* for 1872 may now be had of Mr. Christern. The post of honor in its résumé is justly assigned to Mr. Stanley, whose "intrepid Odyssey" is briefly narrated. Three maps accompany this rich treasury of geographical information—one, of the great lakes of Central Africa, to illustrate Livingstone's discoveries; another, of the San Juan Archipelago; and a third, of Joseph Halévy's travels in Arabia.——A work which will interest mothers, on 'Infant Diet,' by A. Jacobi, M.D., is announced by G. P. Putnam's Sons.——Holt & Williams will publish from advance sheets Louisa Parr's new novel, 'Hero Carthew,' as one of their

Leisure Hour Series.——The new Oratorio Society of this city, of which Dr. L. Damrosch is conductor, has met with excellent success in filling up its membership, which now amounts to eighty. Dr. F. A. P. Barnard has been chosen President, and Dr. F. Zinsser Vice-President.——A revised edition of the works of William H. Prescott, the historian, will shortly be begun in monthly parts by Lippincott & Co. Mr. John Foster Kirk will be the editor.

—The latest noticeable event in the history of Central Park was the unveiling, on Saturday last, of the new fountain on the border of the Lake, near the head of the Mall. We wish we could congratulate the fifty or sixty thousand people who daily use the Park on the acquisition of this work, for it is too conspicuously placed not to compel attention; but it is of a character to call for protest. The Park already contained so many pieces of unsuccessful statuary in proportion to its valuable possessions of this kind that there was a very general agreement among those who thought about the matter that the public would have been the gainer if, from the beginning, all statues whatsoever had been rigorously excluded. In that case, we should have lost one or two good works, but we should also have lost the gas-fitters' "Commerce," the singular "Auld Lang Syne," the "Morse," and half-a-dozen other things which will be in fashion when flowers and trees and grass have ceased to please, but, as the joke goes, not till then, and for which, in the meantime, everybody would be glad to see substituted the flowers and trees and grass and other natural beauties of the place. In many ways this fountain is bad. The author of it began by deciding that it would be agreeable to associate in thought a cool fountain of sweet water beautifying a pleasure-ground with the Bethesda "pool by the sheep market," and surrounded by a great multitude of the blind, halt, withered, and impotent. That orthodox critics make the angel of this pool to be the mere invention of a copyist, and entirely without true Scriptural warrant, is perhaps not to be objected against the artist. However that may be, this objection is swallowed up in the general objection to bringing in the sheep-market pool at all. The execution of the idea is as bad as the choice. The lower basin is simple and pleasing, but all else is clumsily feeble or feebly and conventionally pretty. We have said that the work is of a character to call for protest; really, the character of the works of taste approved of late years by our Park authorities cry out for a transfer to this city of the misdirected energies of our various sophomore classes. An intelligent and indiscriminate use of gunpowder would be the true criticism for most of them.

—Common men, as they read their mail matter, have no notion of the remarkable and curious nature of some of the letters which their editor daily reads. This reflection is made in view of two letters before us at the moment—one printed by the editor of *Nature* in the last number of that periodical; the other an impassioned appeal, in manuscript, addressed to ourselves. Our correspondent begins with some judicious remarks about the ability of this journal and the discernment habitually displayed in its columns in the discussion of numbers of hard and intricate questions. One question, however, we have left unsolved, he thinks, and he requests for it unprejudiced consideration. We observe that the editor of *Nature*, in his somewhat similar situation, took the resolution of turning over his enquiring correspondent to another correspondent, who answered the enquiry at once and in a manner to save space, as his reply will in all probability cut short off a possible controversy. The enquiring correspondent first "supposes a case," and then wanted to know something. His supposition was as follows: "Suppose," he said, "a strong man is suddenly struck dead by lightning"—certainly not so hard a supposition as that a strong man should be gradually struck by lightning. However that may be, the man being dead, what then, says the correspondent, "has become of the potential energy he possessed the instant before he was struck?" "To this," says the editor, "we have received the following reply," and he prints half a dozen lines from his other correspondent, who, in effect, tells the enquirer that if he wishes to become possessed of the potential energy in question the best thing he can do is to go and eat the corpse; "the great bulk of potential energy would be got," he says, "by anybody who chose to eat the body." The problem offered for inspection by our own correspondent we shall in like manner turn over to our readers. To use "Celestius's" own words, "It is ethnology." What baffles him, he says, is that men such as himself, for example, and we, the conductors of this journal, should be held to be of the same stock as "the Bosjesman who lives in dirt-holes, the Jonny Wawa who grovels in mud and filth, the ignorant Ibo who mutters his inarticulate prayer to sun, moon, stars, and stones," the grunting Saboo, and several other persons, whom he describes in a tone of such bitterness as would alone determine us against attempting to settle the difficulty in which "Celestius" finds himself. It indicates plainly with what extreme reluctance he would accept our decision should it chance to be against him. Indeed, in the case of "that Alfourian," who comes next after the Ibo, "Celestius" would probably yield only to force; "that Alfourian," he says, "with flattened face, transverse nostrils, thick lips, mouth and jaws like a bulldog's, teeth projecting, and eyes like an alligator's, his ears round, pendulous, and flapping"—a poor enough picture assuredly, be it of editor, correspondent, or distant relatives of these. The description of our aboriginal Americans, too, is harsh, and shows traces of having been composed since the opening of the Modoc troubles; it is not the calm, carefully matured work of a trained statesman. Some of the adjectives render it unsuitable for publication, we regret to say. However, the character and scope of the problem which has given pause to the mind of our correspondent is evident enough without further quotation. His eloquence deserves illustration, and Mr. Roscoe Conkling, that purple earthquake of oratory, and Mr. John A. Bingham, may have themselves begun no better than this:

"Shall we class with these the beauties who luxuriated in the hanging gardens of Babylon, the beauties who walked and revelled in the olive groves of Academe, and those who sat enthroned in the imperial palaces of the Cæsars, and those who hold sumptuous festivals in the gay salons of proud France, merry England, and glorious Columbia? Did Bosjesmen, Wawa, Alfouro, Papuas, Australian, Feejee, Nasty Jack, and Eskimo spring from the same common mother as the beautiful Helen of Greece, Cleopatra of Egypt, Joanna of Aragon, Rosamond of England, Mary of Scotland, Boadicea of Wales, and the pretty, talented belles of Columbia?"

—Officers in our army and navy, both those of the line and those of the staff, and particularly the latter, who have been in the habit of thinking themselves aggrieved by their position relatively to the line officers, will be interested in a little pamphlet recently printed in London (T. Richards, 37 Great Queen Street). It is entitled 'Notes towards the History of the Medical Staff of the English Army prior to the Accession of the Tudors,' and it is the work of Dr. W. R. E. Smart, C.B., Knight of the Legion of Honor, and Inspector-General of Hospitals and Fleets. It contains a good deal of information, and, besides its interest for army and navy men, it has some interest for general readers of history. English medical history begins, says Dr. Smart, in the year of our era 43, when Claudius landed in Kent, took command of the army of Aulus Plautius, and, crossing the Thames, took Colchester (Camalodunum) by siege. The Senate in the next year decreed him a triumph, the title of Britannicus, with remainder to his infant son, and bestowed honors on his military followers. Among these was Scribonianus Largus, *medicus*, who afterwards wrote a book of formulæ for the composition of medicines, which had the honor of being quoted a century later by Galen. We may add that if Dr. Smart will look at the sixth chapter of Sir Thomas Brown's 'Vulgar Errors' he will see that Galen was not alone among his professional brethren in being indebted to Dr. Smart's Roman friend: "Marcellus Empericus," says Sir Thomas, "hath word for word transcribed Scribonius Largus De Compositione Medicamentorum"—the same Marcellus being no better than a determined plagiarist: "he hath not left out his very peroration," says Sir Thomas, "but cleanly conveys the whole work." In the Saxon period our author notices that in 993 a decree of the Lateran Council degraded surgery by forbidding ecclesiastics to practise it, as "involving the shedding of blood," and he points out that the barbers, skilful in the use of cutting instruments, and much associated with the priests, naturally fell heirs to them as surgical practitioners. Over this period Dr. Smart passes lightly, though not without quoting some curious medical prescriptions and surgical formulæ laid down by the Saxon leeches; and later, but before beginning upon the strictly military aspect of his subject, he traces briefly the changes introduced into the practice of the healing art, and the rise of the "myre," the "physician," and the "apothecary," the establishment of schools of medicine, and the fostering of the corporate bodies of barber-surgeons. 'Domesday Book,' which dates from twenty years after the battle of Hastings, mentions two medical attendants who were in the train of the Conqueror, and who reaped, as the reward of their services, broad acres enough to reconcile the youngest assistant-surgeon of our day to service under Admiral David Porter himself. Twenty-three holdings had Nigellus, *medicus*, first of British military doctors, direct from the crown, of which one of six holdings in Wiltshire contained nearly four square miles. In all, nearly 8,000 acres of taxable land Nigellus held from the crown, as well as eighteen hundred from Count Roger de Montgomery; and in addition to these, he owned many mills, salt-pits, fisheries, ponds, rights to fatten swine in the forests, and four fair houses in Southampton. These latter, indeed, may probably have been put into his hands to be used as the first of British military hospitals. But it is in the time of Edward I. that we come upon the regular medical staff. The wardrobe accounts of that monarch's expedition into Scotland in 1300 would astonish the Annapolis Academy. We find the *Phisicus regis* and the *Cirurgicus regis* each getting the pay of his contemporary admiral of the royal fleet; while each *valettus* of the king's physician and surgeon had the pay of a captain at sea

and of an esquire (*scutifer*) in the army on land. Later, at the time of Agincourt, we find the wages of the physicians and surgeons somewhat lower, but still above those of an esquire, who received a shilling a day, which was the pay of an assistant surgeon. The reader will wish that Dr. Smart's 'Notes towards a History,' etc., etc., may be digested into an orderly and more voluminous treatise than he proposed to himself in the paper before us, which is a little confused in arrangement, and, of course, anything but full, for it was originally made to be read at one sitting before a medical society. Incidentally, Dr. Smart gives the authentic version of the famous story of Queen Eleanor and the poisoned wound of her lord, Prince Edward, with which Dr. Goldsmith has made so many boys and girls acquainted.

—'Onomatopœia in German' ('Ueber Klangmalerei in der Deutschen Sprache'), 1873, pp. 56, is the title of a lecture by the indefatigable Dr. J. G. Kohl, in the series of popular lectures edited by Virchow and Von Holtzendorff. The author does not undertake to go very deeply into the philosophy of language; in fact, some of his philological positions are rather untenable. But like everything written by Dr. Kohl, this lecture is very readable and full of feeling for the language of which he writes. One use may be made of it of which the author never perhaps thought. The ordinary student of German in this country toys a bit with Schiller and coquets with Goethe; if, over and above this, he (or she, perhaps we must add) can ask in fair German, "Have you the nails of the carpenter?" his education is completed and he "knows German." But he never really gets down to "hard pan," never masters the rich vocabulary, and leaves out of sight a large class of words not so common in books, sometimes bordering on a local *platt* and accounted vulgar, but always racy with a smack of Germanic soil. Perhaps nothing short of imbibing the language with the ear instead of picking it up with the eye can give the learned control of this rugged and homely element. But even the book-student can gather many ideas from Dr. Kohl's groups and combinations. One class of words in particular is neglected in the study of all languages—the interjections: in grammar they are banished to an obscure part of the book, and in teaching they play no part at all. But if we took a phonographic report of an animated German conversation, and cut out the interjections, half the light and shade would be gone, and the language would have an emasculate and foreign character. Dr. Kohl's illustrations of the different powers of Ah! Eh! Ih! Oh! Hu! will be found instructive, though a thorough treatment of this subject would require quite a book by itself.

ENIGMAS OF LIFE.*

II.

MR. GREG is an authority on political economy, and has never made any claim to be a great moral or religious teacher, yet the success of his book has been due mainly to the essays on theological topics. For one reader who has studied the remarkable critique on Malthus or the original speculation on the "Non-survival of the Fittest," ten have read and reread the essays entitled "De Profundis and Elsewhere," which, though interesting, are not in themselves the best specimens of Mr. Greg's power as a thinker. The explanation of the interest excited by Mr. Greg's theological views lies partly in the taste of the day, for a very slight knowledge of current literature shows that "intelligent readers" have an absolute passion for theological controversies. If any one doubts this, let him consider whether any political question whatever would have raised as much discussion amongst the English public as was recently excited by Professor Tyndall's enquiry whether there was any reason to believe in the efficaciousness of prayer. A prevailing fashion explains something, but it does not explain the whole of the interest felt in Mr. Greg's theological doctrines. His success is, after all, mainly due to those qualities of his mind on which we have already insisted. Outspokenness and common-sense are rare enough in all fields of speculation, but they are certainly more rarely exhibited in the province of theology than elsewhere. Mr. Greg's peculiarity is this: he applies to religious problems exactly the same qualities which he brings to the solution of social enigmas. He does not, like most persons, change the tone of his voice when he comes into church, and therefore his sermons, even if not in their essence original, arrest attention because they are delivered in the tone of a sensible layman, and not in the artificial voice usually adopted by preachers of all descriptions. The following passage is remarkable in itself and betrays to an intelligent critic the secret of Mr. Greg's influence:

"It was my lot to inherit from Puritan forefathers the strongest impressions as to the doctrines of religion at a time when the mind is most plastic and most tenacious of such impressions, . . . and though I recognize as fully as any man of science the hollowness of most of the foundations on which these impressions were based, and the entire invalidity of the tenure on which I held them, yet I by no means feel compelled to throw up the possession merely because the old title-deeds were full of flaws. The existence of a wise and beneficent Creator and of a renewed life hereafter, are still to me beliefs, especially the first, very nearly reaching the solidity of absolute convictions. The one is almost a certainty, the other a solemn hope, and it does not seem to me unphilosophic to allow my contemplation of life, or my speculations on the problems which it presents, to run on in the groove worn in the mind by its antecedent history, so long as no dogmatism is allowed and no disprovable datum is suffered for a moment to intrude."

The view here laid down is open to much criticism of various kinds, but no one can dispute that the statement of Mr. Greg's belief possesses independently of its intrinsic merit or demerit several noteworthy features. The most prominent is its deliberate clearness. You know what the writer believes, and why he believes it, even though you may hold his belief erroneous, and the grounds on which he supports it untenable. Now, contrast this for a moment with half the theological literature of the day, and you will at once perceive the rareness of Mr. Greg's outspokenness. Mr. Arnold's 'Literature and Dogma,' for instance, has some points of similarity, and many more points of contrast, with Mr. Greg's 'Enigmas,' but in nothing are the books contrasted more than in the care with which one author keeps in the background and the other thrusts forward the nature of his own belief. Mr. Arnold's work has merits of its own, but even admirers can hardly deny that the author's own position is in the strictest sense of the word ambiguous. We have heard of a lady who holds 'Literature and Dogma' the great and satisfactory defence of Christian doctrine. We have certainly met with persons who considered the book atheistic. We are not ourselves concerned to settle the dispute between Mr. Arnold's orthodox and unorthodox admirers. Our whole point is this: that he, unlike Mr. Greg, but like almost all the authors of the day, makes his theology a sort of secret, though to many readers the mystery may seem to be an open secret enough. Take again a book which has excited considerable attention—the biography of 'Joshua Davidson.' The writer is constantly calling on the English world to speak out and say whether they are Christians or not, but the one thing the author himself or herself appears incapable of doing is following his or her own precept. The theme of the work is this: You must either be a Christian and then a communist, or a political economist and then not a Christian. But whether the writer holds that Christianity is right or political economy is right, is in words at least left a studiously open question. Recently, again, one of our ablest and most honest essayists asked definitely the question, "Are we Christians?" but after repeating the query with masterly lucidity for twenty pages or so, unfortunately omitted to give it an answer.

Now, from all this ambiguity and uncertainty, from this fatal habit of mystery and indefiniteness, Mr. Greg is free. He says in effect, in the passage we have quoted, I am a theist and I believe in a future life, but I am well aware that there is much to be said in opposition to my views, and that I am led to them, not so much by any one theory as by the results of my education and training, and in consequence of my general view of life. Now, one great advantage of this clear statement of an author's own belief is that the reader obtains one fact which is in itself of considerable value, that is, the fact that a man of ability whose judgment is worth listening to believes certain theories on certain definite grounds. This fact is itself of consequence, because it gives us information as to the beliefs of a whole host of persons. It is almost certain that the same feelings which consciously influence a thinker of ability, unconsciously and indirectly weigh with persons who have never, even to themselves, put their thoughts into the form of a definite creed. Mr. Greg's views may be right or they may be wrong, but we cannot doubt for a moment that they are the views of thousands whose sentiments are not fairly represented by the dogmas of confident orthodoxy or by the dogmas of equally confident heterodoxy. Of course, one's estimate of Mr. Greg's intellectual capacity must depend upon one's estimate of the ultimate truth of his theories, but his value as a teacher is to a certain extent independent of the validity of his doctrine. A teacher does much who makes men really see what it is they believe and why they believe it, and thus much at any rate the author of the 'Enigmas of Life' has accomplished. He has given precise expression to the real feeling of hundreds of educated laymen with regard to the existence of a deity and the chances of a future life.

Our columns are not intended for the discussion of theology; it is, however, open to a merely literary critic to point out what is the exact position which Mr. Greg, with the laymen he represents, occupies. His language might suggest for a moment that he held that falsest of all false creeds, that you may encourage yourself to believe dogmas which you know you have

* 'Enigmas of Life. By W. R. Greg.' London: Trübner & Co.; Boston: J. R. Osgood & Co.

intellectually no satisfactory reason for believing. A careful consideration of his words shows that this is not so. What he urges is that the question, for example, of a future life is beset with difficulties. The arguments against it are strong, but if you yield to them you will find that you are still harassed by another series of arguments equally strong in its favor. In either case, you must be prepared to hold an opinion beset with perplexities. In weighing arguments on each side, you must let your decision be determined, not by sentiment, but by your general views of life and religion. We do not for a moment assert this position to be unassailable. What we do assert is that it is by no means obviously untenable, and that it is one constantly occupied by men of common sense with regard to problems of politics or society, no less than in relation to the enigmas of religion. Two doctrines play a prominent part in Mr. Greg's theological scheme. The first is the denial of divine omnipotence. "Half the difficulties," he writes, "which lie in the way of believing in a personal God as the ruler as well as creator of the universe, are of our own making, and arise out of the inconsiderate and unwarranted use of a single word—*Omnipotent*." His argument amounts briefly to this: Pain and sin are facts the existence of which is undeniable. You may reconcile their existence either with a belief in divine goodness or with a belief in divine omnipotence, but you cannot reconcile it with the belief at once in the absolute goodness and in the absolute omnipotence of God. Now, to disbelieve in divine benevolence is to destroy religion altogether. To question the boundlessness of divine power is simply to get rid of a notion arising from our lax use of words, which leads us to confound power to which we cannot place a limit with power which is absolutely infinite, *i. e.*, with omnipotence. Of the existence of omnipotence we have, he further urges, no proof whatever. His conclusion, therefore, is that we may save our faith in divine goodness by rejecting a quite gratuitous hypothesis as to the extent of divine power. His second great dogma is that the ordinary belief in eternal punishment is not only erroneous but absolutely gratuitous, and hides from view the really important fact that if men exist for ever their faults are sure to bring their own due penalty, and that there is therefore no necessity for inventing a hell for the punishment of offences which will as certainly entail their own due and just punishment as a tree will bring forth the fruits it is suited to bear. Now, any one will at once remark that these two dogmas are in no way whatever peculiar to Mr. Greg. They must have suggested themselves again and again to any thoughtful person occupied with religious problems. Mr. Greg, however, makes them in some sense his own by the clearness with which he expresses them and the force with which he drives them home. To use an expressive piece of legal slang, he "labors" his points as to omnipotence and as to the true nature of future punishment with infinite assiduity and with a great deal of skill. On each matter he says something which is certainly worth saying, if only because he gives expression to thoughts which hundreds of men have entertained, but perhaps only one here or there has put clearly into words. His reflections, indeed, upon the true penalties which await sin in a future life form some of the best pages in his work, and read like an expressive passage from a striking sermon.

But if Mr. Greg's treatment of the doctrines we have summarized exhibits the strength, it also betrays the weak point, or, to speak more accurately, the limitations of his mind. It is, for example, characteristic of an intellect which is logical, rather than philosophical, to believe that something very like a verbal distinction can get rid of a substantial metaphysical and theological difficulty. Grant, if you like, that the lax use of the word omnipotence has led to confusion and error. Point out further what no one can doubt, that there is great difficulty in reconciling the conceptions of the perfect goodness and the absolute omnipotence of God, the question still remains, why is it that thinkers whose acuteness can hardly have failed to detect both the confusion and the difficulty on which Mr. Greg insists, have nevertheless clung to the belief in the omnipotence of the Deity? The answer surely is that, though by giving up this dogma you avoid one class of difficulties, you yet involve yourself immediately in a whole host of other perplexities. Now, we do not for a moment assert that Mr. Greg may not be right in holding that the wisest course is to cast aside a notion which has little moral value and certainly opposes hindrances to a belief in the doctrine of natural religion. What we do insist upon is that Mr. Greg has never even realized, and has still less disposed of, the problems which arise the moment you conceive the Deity to be a being of limited power; and further, that it is extremely characteristic of Mr. Greg's intellect wholly to overlook the considerations which might be opposed to the validity of his own easy method of solving a great riddle. If, again, you take his views of a future life, you will perceive that his mind is limited not only in respect of intellectual breadth, but also in respect of imaginative power. As long as he dwells upon the future penalties of sin, he is, if not always conclusive, yet, to use a term of the pulpit, powerful. When he attempts to describe the rewards of virtue and the futurity of perfect bliss, he is more wordy and magniloquent than impressive or eloquent. No great blame need attach to him for his failure to describe what, considering the nature of human faculties, is perhaps indescribable. But we confess that Mr. Greg's own difficulties in drawing a picture of heaven might have made him, to say the least, a more lenient critic of the writer of Revelations. There may be something to be said, no doubt, as to the Oriental metaphors used by the Seer of Patmos, but we doubt whether his work would, looked at even from a merely poetical point of view, have gained much if, for the gorgeous imagery in which it abounds, we substitute allusions such as Mr. Greg apparently desires to "gentle streams, and shady groves, and woodland glades, and sunny valleys, and eternal mountains, and the far-off murmur of a peaceful ocean."

Still, though neither breadth of view nor a poetic imagination is a power with which Mr. Greg is endowed, and though where such powers are needed he almost inevitably fails, the great effect which his book has produced, and we venture to predict will produce for some time to come, both in England and America, may well give him a justifiable satisfaction, and is sign of a healthy public feeling. He has spoken with firm and manly good sense on the very subjects to which good sense is most rarely applied, and the public have readily recognized the voice of a teacher who says what he means and means what he says. He has not succeeded, and he did not expect to succeed, in solving the deepest problems of theology; but he has succeeded in forcing the attention of the world to the very enquiries which laymen and clergymen alike are apt, under one excuse or another, to dismiss from their minds. Thousands of persons who have heard sermon after sermon unmoved and inattentive, will at least be forced by Mr. Greg's book to ask themselves whether they have or have not any real belief worth calling a conviction on such subjects as the future existence of the soul or of the nature of the life which awaits it in another world. It is a great achievement to have compelled a busy and frivolous generation to recognize at any rate the existence of the "enigmas of life."

MAGAZINES FOR JUNE.

THE *Catholic World* prints many good articles in the course of the year, but the ambassador's warning against too much zeal might be pondered with advantage by some of its contributors. The gentleman who this month civilly refers to Martin Luther as "the beery monk of Wittenberg" and "the sensual reformer," we may single out for particular mention, for we feel sure that his fine Roman hand we have observed before, and that his habit in writing is to consult too little the interests either of good manners or of controversial effectiveness. In both these respects he is of very bad example to the weaker brethren, whose zeal and hunger for polemics are often apt to need less of fanning than of tempering and allaying. "Archheresiarch"—another term of endearment which he applies to his enemy—might have answered every purpose, one would say; and reference to the great reformer's drinking habits, and to Catharine von Bora, we must consider entirely uncalled for. It is Catharine, we suppose, who is meant when her husband is charged with sensuality. These indecorous expressions we find in the first page of an essay entitled "Jerome Savonarola," of which we may remark in general that it goes into that class of the *Catholic World's* articles which have this much of value, at all events—that they give to the common run of readers an unaccustomed point of view, and so are likely to be of service. Another such article is the story translated from the German of Joseph Edward Charles Bishoff, a writer of Roman Catholic novels, as we gather from a biographical notice prefixed to the story. 'The Trowel or the Cross' is the title of this production. The first chapters we have read with a renewal of a feeling often experienced before in contemplating the troubled life of the European—a feeling, namely, of thankfulness that our own lot has been cast on a virgin continent, where but few of the more desperate social problems need be fought out in our day. This quarrel, for instance, which is set forth in 'The Trowel or the Cross' it is our posterity who will have to fight out, and not we. And if Mr. Bishoff is half a prophet, a most fearful job our wretched descendants are going to find it. The "trowel" of his title-page stands for freemasonry, and the "cross" for religion, and especially for that form of religion which is represented by the Society of Jesus. Between these two forces there is to be a relentless and terrible conflict, for which the masonic lodges are already preparing; and that they are not without some well-grounded hope is made manifest by what we overhear one of Mr. Bishoff's personages saying to another as they walk secretly in the forest:

"The lower orders must be indoctrinated by our masons and apprentices; our newspapers must confuse and alarm them concerning the claims of the infallible Pope. Besides, the German emperor is a free-

mason, the Crown-Prince of Germany is a freemason, all the ministers of our country are freemasons, and many ministers of other German countries are freemasons. In Spain, we are already so powerful that the grandmaster, Zorilla, gave the royal crown to a prince of his own choice. In Rome, for 1800 years the seat of the popes, the 'Grand-Orient' of our order will erect his seat above the chair of an imprisoned and helpless Pope. As I have already remarked, affairs are everywhere so propitious to our cause that the trowel will surely conquer the cross!"

Both the Emperor and the Crown-Prince are free and accepted masons, then, but a third interlocutor by-and-by remarks to the two whom we have already seen that "neither William nor Fritz" is aware of the real object of the masonic "world-union"; "neither dreams that after the downfall of the altar follows that of the throne," and that in obeying the grandmaster's orders in warring upon religion they are really digging a pit in which they will themselves be whelmed. The foes most feared by the worthy devisers of these schemes are naturally the good Jesuits. "If the spirit of freemasonry is to obtain the victory," says the grandmaster, "then the Jesuits must first be exterminated by every possible means." To this decree, however, some of the grandmaster's subordinates are inclined to object; that is to say, they admit that the Jesuit is the enemy of the mystic order, and the bulwark of the church, and as such must be put down; but they think that probably the dissemination of science may be depended upon to destroy Jesuitical power, and that thus the slaughter or banishment of these popish pioneers may be rendered unnecessary. The grandmaster, however, disposes very summarily of this notion by calling attention to the fact that as for science the Jesuits just know all about it, and he intimates that were issue to be joined on that ground the masons and the secular world generally would find that the wrong passenger had been waked up. No, the Jesuits must flee or die; and they had better die. The discussion goes on at some length, and at last it is thus closed by the Herr Professor, from whose language, moderate a mason as he is disposed to be, we may learn what would await us had not the followers of St. Ignatius been vouchsafed us for our need:

"'Well, professor,' enquired the grandmaster, 'are you at last convinced that the Jesuits must be first driven out, and that this can only be done by force?'

"'I am not convinced of your last assertion; but yet I submit, in obedience to my oath as a freemason, most worshipful grandmaster,' replied the professor. 'I shall endeavor, in my sphere of labor, to be restlessly active, so that we may attain our great end. I shall do my best to destroy religious faith in all the young men confided to me, by appealing always to the light of science. Our universities of the present day are justly considered to be the most successful mothers of religious unbelief. To the destruction of altars, to the downfall of thrones, to the universal fraternization of all nations by means of a universal republic without a God, without heaven, without hell; for liberty in our pleasures, for liberty of will, for liberty in life and death, shall my whole strength be dedicated in submission to the rule of our order!'

"The grandmaster nodded his head approvingly."

By all this it will be seen that Mr. Joseph Edward Charles Bishoff is an intellectual giant, and that it was in a happy hour that he set himself to the labor of producing lifelike works of fiction.

The poetry of the June number of this magazine consists of the Ninth Canto of Dr. Parsons's 'Purgatorio'; a sonnet by Mr. Aubrey De Vere, entitled "The Music of the Future," and expressing the hope or the belief that poetry may become more religious; a "May Carol," from the same hand, in which poetry has become religious and remains fine poetry; and a copy of verses to a "madonna," who is named for the Virgin Mary, who is addressed as a young woman is usually addressed on the subject of love and kisses, and who turns out to be a child. It is an unfortunate little exemplification of false taste.

The *Galaxy* opens with Mr. Justin McCarthy's account of M. Gambetta, whom Mr. McCarthy admires, and that to the extent of showing that M. Gambetta is at his best when he is addressing and captivating twenty thousand people at an open-air meeting in a French provincial town. Why not eighty or ninety thousand, is not stated. Still, in spite of this sort of exaggeration and similar evidences of haste, Mr. McCarthy continues to unite more fluency on more topics of a certain kind with more safeness of assertion and reasoning, than any other magazine writer of his calibre. In this way he is quite a wonder.

Other articles in the June *Galaxy* are by Mr. W. L. Alden, a pleasant humorist, who, however, is here rather tragical; Mr. John Burroughs; Dr. Coan; Mrs. M. H. W. Pumpelly, the mother of the well-known traveller; General Custer, whose "Life on the Plains" is more readable than usual this month, though not at its best, nor ever quite worthy of the General's opportunities; Mr. Cranch and others, among whom are Colonel J. F. Meline, whose long and careful discussion of the Iron Mask mystery we have already commented on, and Mr. De Forest, who continues his "Wethered Affair." Had we not recently been urging the desirability of courteous and moderate language in criticism, and so recently that any slip on our own part would at once be noticed, we should here set down some extremely strong remarks about these latest chapters of Mr. De Forest's story. They certainly call for condemnation. How a clever writer could permit the advent into his work of so extraordinary a creature as the Fulton Market schoolmistress exceeds our comprehension. Dr. Coan's article is an examination of the modern notion of the "sacredness of human life." He quotes Wilson (Kit North) to the effect that "there is many a humble dog whose life far transcends in value the lives of many men, women, and children"—a sentiment, as Dr. Coan remarks, which seems of quite heathen quality to most of Wilson's readers, but which a greater Scotchman than Wilson, and an equal dog lover, Scott, may well enough have held. Something like it he puts into the mouth of another famous Scotchman, Claverhouse, who in a way was not a sentimentalist, dear as his shade is to a certain order of sentimentalists. Our author notes the curious fact that the economic value of men, as ascertained ten years ago in three or four different markets, was about a thousand dollars. That sum or a little more would have covered the cost of an average negro field-hand; it is about the sum which a careful estimate puts upon the head of each family of German emigrants; it is about what was paid as bounty money to each of our recruits during the civil war, and may be taken to represent the value of the man to the War Department, and also to indicate how much he considered his risk of losing his life to be worth. But as to this last method of making the calculation, one might hesitate to accept the inference. It was not to promote longevity, indeed, that our volunteers went to the front; but probably not one in ten of them who took the bounty money expected that his life would be lost, or looked upon the money as what the risk was precisely worth. Probably the thousand dollars as little represented the value set upon life or risk by the "substitute" who took the bounty as it represented the value which the purchaser set upon his own.

Mr. "Philip Quidlibet," reviewing portions of Mr. Adams's eulogy of Mr. Seward, points out that a plausible surmise in reference to Mr. Seward's later career would be that in the evening of his life his interest passed from the internal affairs of state to the international. And on quitting office, he at once made a tour of the globe. The writer also remarks upon a passage in Mr. Seward's history not brought out in Mr. Adams's address, though upon one result of it Mr. Adams animadverted rather sharply: Mr. Seward, he said, was allowed to retire from public life with fewer honors than if he had been the most insignificant of presidents. But the extremely exasperating and, we may say, pig-headed course of President Johnson had thoroughly, and to a great extent justly, angered the people, and of this course Mr. Seward had for years been the apparent abettor; indeed, he was open in apology for Mr. Johnson, and in some of the least edifying performances of that most unedifying of Presidents, Mr. Seward, to the mortification alike of his friends and foes, was in public association with him. We need hardly wonder that he went out of office with no attendant demonstrations of applause.

"The French Imbroglio of 1793" is the title given by Mr. Parton to the latest pages of his biography of Jefferson. It is readable; unless, indeed, one's moral indignation at Mr. Parton's way of handling his facts and one's intellectual dissatisfaction with the deeps of the Partonian philosophy get the better of one's pleasure in the lucidity and rapid movement of the narrative and the author's singleness of purpose and eagerness. These qualities of Mr. Parton's style and spirit are so effective, that were there no such things as judges knowing in the law and juries with a prejudice in favor of facts as they are, Mr. Parton might be described as a good advocate, dangerous to historical truth, and useful to his clients. As it is, we expect no marked failure of justice by reason of his appearing in court. Nevertheless, it is not in nature to relish some of his exhibitions of partiality. For example, Hamilton being no friend of Jefferson, and being of a temperament and turn of mind the opposite of Jefferson's and oppositely useful to the state, it is roundly asserted that "he could be false to women for the same reason that he could disregard the will of the people. He did not look upon a woman as a person and an equal with whom faith was to be kept, any more than he recognized the people as the master and the owner whose will was law. Original in nothing, he took his morals from one side of the Straits of Dover and his politics from the other." We need not examine the large assortment of sweeping generalities here gathered into half a dozen sentences. But the matter of fact which "throws light upon his political course," and proves that he thought "woman not a person," and so on, is this: An exceptionally dirty and deplorable rascal offered to sell to Hamilton's political enemies some letters which would show that the Secretary of the Treasury had at one time had some pecuniary transactions of some sort or other with the disreputable person then offering the letters

for sale; presumably, said the Jeffersonians—and it was not said in a corner, nor under the breath, but with all the clamor possible on earth—presumably these pecuniary transactions involved the Secretary of the Treasury in the illegality of speculating in the public securities. Investigation followed by a committee of Congress; the members of the committee were perfectly satisfied as to the true character of the relations between Hamilton and the man Reynolds, and so reported; but one of the Congressmen took notes of the interviews with Reynolds and Hamilton, and these by mischance fell into the hands of an anti-Hamiltonian pamphleteer. What that gentleman did with them the imagination will readily picture. He published them, and the sharp correspondence which ensued between Hamilton and the Congressman who had originally taken the notes not proving satisfactory to the former, he put forth a very famous pamphlet. In this he showed with a curious frankness that he had allowed himself to be entrapped by a couple of blackmailers, of whom the wife had seduced him and the husband had extorted money as the price of silence, and continued extorting it in small sums until Hamilton at last wrenched himself free from the precious pair. Confessing the miserable truth about this harpy five years after she had taken flight, is being "false to woman," says Mr. Parton. It was a very unsavory business, much to be regretted, but what there is in it to justify Mr. Parton's political and psychological reflections, the reader can see.

We have been requested to point out a marked resemblance between the *Atlantic's* poem called "By the Shore of the River" and a poem published some years ago by a Miss Nancy Priest, and called "Over the River." In both the river is the river of death; in both there is a boatman who ferries the dead to the other shore; in both the other shore is fairer than this; in both there is a wayfarer who has seen many loved ones cross over, and who, apparently, is now willing, and more than willing, to cross over also. Such then being the general similarity of idea in the two poems, we give from each some lines which fairly show the degree of resemblance in the details and the phraseology. The *Atlantic's* poem speaks thus:

"Silently came a black boat o'or the billows;
Stealthily grated the keel on the sand;
Rustling footsteps were heard through the willows;
There the dark Boatman stood, waving his hand,
Whisp'ring, 'I come, o'er the shadowy river;
She who is dearest must leave thee for ever.'

"Suns that were brightest and skies that were bluest
Darkened and paled in the message he bore.
Year after year went the fondest, the truest,
Following that beckoning hand to the shore,
Down to the river, the cold, grim river,
Over whose waters they vanished for ever."

Miss Priest's thus:

"Over the river the boatman pale
Carried another, the household pet;
Her brown curls waved in the gentle gale,
Darling Minnie! I see her yet.
She crossed on her bosom her dimpled hands,
And fearlessly entered the phantom bark;
We felt it glide from the silver sands,
And all our sunshine grew strangely dark;
We know she is safe, on the farther side,
Where all the ransomed and angels be:
Over the river, the mystic river,
My childhood's idol is waiting for me."

To secure a verdict of plagiarism in this case would be difficult, even had we evidence that the later of these two writers had before him while in the act of writing his poem the poem of his predecessor, and had deliberately modelled his own upon it. If there is anything of which all poets are free, it is the skiff of Charon and the river of death and the promised land to which their friends have gone before.

Mr. Robert Dale Owen, whose account of his school-days in Switzerland was so pleasing in last month's *Atlantic*, writes agreeably in this month's magazine concerning his voyage down the Rhine, and some of his father's friends and some of his father's vagaries, which last were beginning to be flagrant at about that same period. "The Hare and Many Foes," by Mr. C. D. Shanley, and "Danish Society—its Revival," by Mr. Clemens Petersen, are fresh and readable; and fresh, without being particularly readable, is "The Three Marys of Sharpsville," of whom, however, housewives will like to read. Mr. Howells's "Chance Acquaintance," with its very engaging Miss Kitty, comes to an end—and an end that will please the many gentlemen who have taken a deep interest in Miss Kitty's disposal of her affections, and who early recognized in young Mr. Arburton what his English friends would call "a cad." "Miss Mehetabel's Son" appears to be a rather insufficient and unskilful working up of a good idea.

In *Harper's Monthly Magazine*, Mr. Charles Nordhoff has a brief essay in which he asks "What Shall we do with Scroggs?"—Scroggs, as his name perhaps indicates—being an habitual criminal. Alaska, as a penal colony, is the right place for him, Mr. Nordhoff thinks, and there he should be placed under guard, "in a position of stern adversity," to use the words of Captain Maconochie, "from which he must work his way out by his own exertions, by diligent labor, and a constant course of self-command and self-denial."

Forty Years at Raritan. Eight Memorial Sermons, with notes for a history of the Reformed Dutch Churches in Somerset County, N. J. By Abraham Messler, D.D., Pastor of the Church of Raritan. (New York: A. Lloyd.)—The eighth of these memorial sermons embraces a retrospect of forty years of service in a single pulpit, and, for those who listened to it, the bare statistics of the work of the pastor and the work of death in the congregation during that long period must necessarily have had an interest and a meaning of which the ordinary reader is hardly capable. To have survived all but five or six of the men who, as heads of families, were concerned in making out his call and effecting his settlement as pastor; to "have married persons, baptized their children, received them into the communion, and again baptized their grandchildren"—such has been Dr. Messler's experience, and the obvious reflections which grow out of it furnish the substance of his quinquennial discourses. Of much greater permanent value and general interest are the Historical Notes which make up the second half of the volume. These are a useful contribution to the civil as well as ecclesiastical history of New Jersey, and deserve a fuller index. None of the ministerial biographies equals in interest that of the first pastor of the Raritan churches, the Rev. Theodorus Jacobus Frelinghuysen, who, in culture, force of intellect, and liberality, has furnished a lasting example to his successors, and who was the ancestor of the family which in our politics has acquired a national reputation. There are a few good anecdotes, as of the absent-minded Rev. Mr. Van Harlingen, who always rode on horseback, and at church had a particular post to which he uniformly fastened his horse. This suggested to certain mischievous youngsters the prank of substituting another and more frisky animal for his own, with the result which had been anticipated, though the good man was able to dismount before being thrown. To guard against any similar deception, he ever afterwards carried in his pocket a piece of chalk, with which he marked the saddle under the flap. The following extract from Dr. Messler's eulogy of the Rev. Dr. How, a native Jerseyman who had preached four years in Savannah, is curious reading now:

"He naturally venerated the past, and loved to read the writings of the reformers. He loved them so much that he had no patience—perhaps this was his fault—with pretensions to new things. When the discussion on slavery opened, he took the ground that in itself it was not sinful. He had been in the South, and sympathized with the Christian people there. He knew well how conscientious and beautiful the character of many of them was; and it revolted all his feelings of justice and propriety to hear the bitter denunciations heaped upon them by men who were not worthy to unloose the latchet of their shoes; and, like a noble man as he was, he defended them earnestly and like a Christian gentleman. . . . He was a powerful preacher, and gave to his hearers the very marrow and fatness of the Gospel" (p. 222).

Fine Arts.

THE DI CESNOLA COLLECTION.

TEMPLE-RELICS FROM GOLGOI.—II.

ONE clear date, in relation to the authority of Assyria over Cyprus, is afforded by a stele discovered at Larnaca, among the ruins of a rich edifice, and now in the museum in Berlin, representing Cyprus as paying tribute to Sargon, a king reigning in the eighth century before Christ. At this epoch commercial relations were cultivated between the Assyrians and Cypriotes, and among the products exported from the isle were sculptures in stone, for which of course the artists must have studied the taste of the grand monarchy. A multitude of the figures betray this Asiatic authority.

A splendid image, nine feet high, and in perfect preservation, gives in its most seductive form the impress of Chaldean hieratic influence. It is the colossus with the fluttering dove. The arms here are detached from the sides, and hold forward in one hand a libation-cup, in the other a dove whose wings are spread; the bird was fastened to the hand with two square wooden pins, and in like manner the forearms were attached to the figure with similar bolts easily replaced. An Assyrian face, softened to the utmost allurement of voluptuous good-nature, is covered with the familiar helmet-like bonnet of Cyprus, here richly embroidered; the beard is heavy and curled, but the six slender and effeminate ringlets escaping from the cap fall down as low as the armpits. The small mouth (without moustache) has been tinted red, and there is a trace of color on the necklace. The robe is bordered and flounced, but the feet are bare. The artist in this case has worked to the very limit of his ideal, and the head, in its own style, is of unsurpassable excellence. One is strongly tempted to claim this, not as a priestly, but as a divine figure, the perfected symbol of the creative power, Hermaphrodite Venus, whose worship was centred at Amathunta, on the southern coast of Cyprus. Among the smaller images, several of this deity are seen, divided by Mr. Newton into two types. The fair giant of nine feet was found in the night between the 6th and 7th of March. Another of heroic proportions, now placed on the right as you enter, and opposite the enormous head, is in perfect preservation and of thorough but rude finish, and entirely Asiatic in character; the enormous arms, bare but for their double bracelets, are extended stiffly along the sides; in statues of a later date this attitude is always explained by sacrificial accessories—a sprig like a *goupillon* or sprinkler, and a covered box, easily carried so as to show that it does not contain a liquid, and presumably filled with incense or perfume; here, however, the hands are empty, though closed; the feet are bare, and the narrow garment reaches them; the curled forelocks and beard give the face an Assyrian impress, but it retains the Cypriote family look, and on regarding the profile one is surprised at its Jewish character; an artist would consider it a godsend, for this barbaric, country king, worshipping Ashtoreth candidly and stiffly among a hieratic family of greater polish, is the satisfying image and ideal of Solomon.

The statues are all in a light-gray or drab calcareous stone found in Cyprus, and were doubtless painted; the fine earth which enclosed them, and which was found almost as much compacted as the ashes of Pompeii, and which could be liberated only after repeated soakings from the sculptures it amalgamated with and preserved, had, however, absorbed almost all trace of color. Of the same stone were the flags, which were neatly squared and some four inches thick.

It is impossible even to indicate the endless vagaries into which the types and their combinations drift. The changes rung upon the Egyptian and Asiatic character are varied to the most capricious extent; in the older styles the hair is lightly treated, or not at all, and the beard indicated only by its fan outline and the engraved trace on the cheek showing the limit of the beard-case. A livelier manner of treating the capillary features is, however, soon apparent, though still conventional; they are rudely massed, and then covered with a pricked pattern resembling *bonneterie* or knitting-work; the whole cheek will be wrought with this fine reticulation; a circumflex plaster of it will indicate the moustache, or the brows will be formed of arches in bas-relief, made up of a herring-bone pattern; the eyebrows are, notwithstanding, sometimes engraved in intaglio, each hair radiating appropriately. The *bonneterie* treatment merges very steadily and gradually into the Assyrian wealth of short curls, and there is a large head where the frisette on the brow is in a transition state, deeply honeycombed in a squarish zigzag pattern; this soon becomes the snail-shell ringlet of the Chaldean figures from Nineveh. The multitude of physiognomies becomes less interesting and more like the contents of antique museums as it undergoes the Hellenic influence. This makes the features cosmopolitan, and deprives the countenance of its strong localism; a throng of heads appear in the characters of third or fourth-rate Greek art, showing infinite variety of type and coiffure. As the wreath displaces the bonnet as a sacrificial equipment, the hair becomes elaborately curled, imbedding the crown of myrtle, of palm, or of ivy-leaves and corymbi of the berries. Instead of the encased beard, the helmet-cap with jugularies tied ornamentally in front, we have the smiling features of a large-eyed acolyte ten years old, crowned with leaves like the palm or willow; one remarkable miniature head with beard encased wears the modern Turkish turban of many convolutions; one, with enormous frontal development, is bald, its defect concealed, in the style of Cæsar, by a wreath. The distinct Hellenization of parts of Cyprus is first related in connection with the heroic period, when Teucer is said to have brought settlers from the Attic island of Salamis after the Trojan war. Far anterior to him, legend provides a Phœnician colonizer in the person of Cinyras, the founder of Paphos. Egyptian authority in the beginning of the nineteenth dynasty, if not perhaps two centuries earlier, in the time of Thothmes III.—Assyrian with Sargon—afterwards the Persian and Macedonian—these varied influences were bent successively on the island, leaving indelible traces on its religion, its art, and its industry. Towards the close of the Peloponnesian war, a native Cypriote king, Evagoras I., endeavored to imitate the splendors of Athenian civilization; and to his epoch we may attribute some of the sculpture which strikes the eye as a sort of provincial Greek. The archæological interest of the museum here begins to wane, making a last standpoint, however, at the fine figure of a Hellenic priest, heroic size, his brow banded with the snail-shell curls, a suspicion of Cypriote sensuality in the deeply indented corners of his mouth, but in general bearing and likeness a Greek sacrificer, robed in priestly draperies, carefully elegant, the signet on his ring-finger, the incense and aspergillum in his hands.

One is naturally desirous to believe these strange hieratic figures as ancient as possible. It must be remembered, however, that religious art had the habit of keeping to old types from a sentiment of reverence, and that not all the heads with Egyptian head-dresses can fairly be assigned to the days when Abraham and his progeny were patriarchal sheikhs.

The worshippers who filled the modest temple of Golgoi with statues, tablets, and votive images were not all marine monotheists. Besides Venus, the temple offered sanctuary, as a Catholic church its chapels, to various intercessors. Hercules and Apollo were the favorites. The former is represented over and over again in all sizes. A fine large image of him in Egyptian workmanship shows him coifed with the lion's head, and clasping to his body his club and bow; the block supporting this statue has a highly curious painted bas-relief representing the same hero killing the dog Orthros (provided here with three heads), and taking away the cattle of Geryones from Eurytion, who defends them; the treatment here is modified Assyrian, indicating a difference of epoch between the divinity and the pedestal. Geryones, with six limbs and three shields, is very common. Among the smaller images of Hercules, one curiously shows the lappels of the Egyptian cap escaping through the jaws of the lion's head forming the helmet. Of the painted tablets in low relief which decorated the walls of the temple, some are very curious, and one, of Greek spirit, represents Apollo Musagetes, seated, a cup in his right hand, his lyre leaned against his knee, receiving the homage of eleven dancers, while a symposion is going on in a corner where six wreathed persons recline and drink. The conflict of race and religion becomes more confusing as the collection is gradually separated in the mind; here are Greek heads fit for Jupiter, yet with something indescribably Eastern about them, and with set curls recalling the effeminate bust of Jupiter Trophonius at the Louvre. Here is a life-sized archer drawing his bow as he kneels; a broad quiver embossed with a lion's head is at his side; the work is free and modern, the attitude identical with that of Teucer on a coin. The Persian influence, forbidding rather than encouraging the representation of human figures, is not to be looked for among the statuary; but here is a pair of lions seated back to back in high relief, and under them the familiar winged globe. The lions resemble early Greek work like the well-known lions of Mycenæ, but the winged globe is on fire, with spreading rays; may this not point to the fire-idolatry of Persia?

Besides its stone devotees, the shrine was furnished with temple-shaped lamps, and hung with a vast quantity of votive objects like the waxen features preserved in Catholic churches. Fingers, hands with a perforation at the wrist, a hand with a poppy-pod, ears set with ear-drops and perforated in the centre, pairs of eyes, bouquets of jonquil, and a dove as large as a hen, are some of the curiosities preserved; but these are among the cabinet objects, which, including General di Cesnola's splendid *trouvailles* in the cemeteries at Idalium, we must reserve for a future notice.

JUST PUBLISHED.

*LORD HOUGHTON'S MONO-*graphs—Personal and Social. 12mo, with Portraits of Walter Savage Landor, Charles Buller, Harriet, Lady Ashburton, and Suleiman Pasha. $2.

"An extremely agreeable volume. . . . He writes so as to adorn everything which he touches."—*London Athenæum.*

UNDER THE GREENWOOD Tree. A Novel by Thomas Hardy. 16mo. Leisure Hour Series. $1 25.

"The best prose idyl we have seen for a long while past."—*London Saturday Review.*

"Those happy persons who have leisure and opportunity to sit 'under the greenwood tree' could hardly do better than choose it for a companion."—*Pall Mall Gazette.*

"For light, happy touches of life and humor, we know of no rustic dialogues to be compared with these but in the earlier and best pages of George Eliot."—*London Standard.*

NEARLY READY.

HERO CARTHEW. The new Novel by Louisa Parr, the author of 'Dorothy Fox.'

RECENTLY PUBLISHED.

PROFESSOR HADLEY'S ESSAYS. Essays Philological and Critical. Selected from the papers of James Hadley, LL.D. 8vo, clo., $4.

"In extent and accuracy of knowledge, in retentiveness and readiness of memory, in penetration and justness of judgment, I have never met his equal. Whatever others may have done, he was, in the opinion of all who knew him most fully, America's best and soundest philologist."—*From the Preface by Prof. W. D. Whitney.*

HOLT & WILLIAMS, New York.

LIBERTY, EQUALITY, FRATERNITY.

By JAMES FITZJAMES STEPHEN, Q.C.

Post 8vo, $2.

"*One of the most valuable contributions to political philosophy which have been published in recent times.*"—London Saturday Review.

"*One of the most thorough overhaulings of the moral, religious, and political bases of society which they have recently received. . . . Everybody who wants to see all the recent attempts to set things right analyzed by a masterhand, and in English which stirs the blood, will have a great treat in reading him.*"—Nation.

HOLT & WILLIAMS,

25 Bond Street, New York.

"A Priceless Acquisition for Biblical Students."

THE BLANK-PAGE BIBLE. With Maps, References, Tables, and Index. 8vo, Half bound in Morocco, price $8 50.

The practice of interleaving the Bible has never been more ingeniously carried out than in the plan developed by Messrs. Bagster. In a volume of not more than ordinary bulk, beautifully printed in clear and legible type, we find the advantages above detailed united in a manner highly valuable and practically useful. To the Biblical student, and especially to the clergy, this Bible must prove of the highest value. The blank pages are ruled with faint lines, printed at the back of the text on the left-hand page."—*Church of England Quarterly.*

"Among the many forms of beauty under which the Bagsters send forth Bibles to the world, we doubt whether there has yet been one that has more happily united usefulness and elegance."—*Christian Times.*

"Simple as this contrivance seems, it does great credit to the inventive ingenuity of the publishers in meeting the almost undefined wants of Biblical students, to whom this beautiful volume will form a priceless acquisition."—*Journal of Sacred Literature.*

Imported and Published by JOHN WILEY & SON, 15 Astor Place, New York.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS, Franklin Square, New York.

Fourth Avenue and Twenty-third Street, New York.

A NEW, THOROUGHLY REVISED EDITION

OF

WORDS AND THEIR USES.

BY RICHARD GRANT WHITE.

No recent popular work on the English language has attracted so much attention, either from critics or from general readers, as Mr. Grant White's now universally-known volume, 'Words and their Uses.' Like its author's earlier work, 'Shakespeare's Scholar,' it at once took, both at home and abroad, an acknowledged place in critical literature.

From the London Saturday Review.

"A protest against sundry common instances of misuse of English words, written without pedantry, and with no pretence of learning. On the whole, his observations are just, and his explanations clear and reasonable. Every one who can persuade a writer for the press to read and inwardly digest Mr. White's by no means tedious volume may congratulate himself on having rendered a real service to a long-suffering country and a misused mother-tongue."

From the New Englander—Quarterly Review.

"Mr. Grant White's volume is the most valuable of its class, and he appears better qualified for the office of censor than any of his predecessors. One who sets himself up as the critic and guide of the common speech ought to be, in the first place, a man who has done good and widely acknowledged service in the field of English letters. . . . Now, as we have said, there is not one of Mr. White's forerunners with whom a comparison in these various points would not result in his favor. His former deeds in literature are known to all, and ensure him a respectful hearing from all. . . . His philological scholarship, too, is at least in advance of the rest."

From the North American Review.

"Most praiseworthy in design, generally commendable in execution, and certain to be beneficial in result."

From the New York Times.

"This work is one which ought to be in the hands of every beginner in literary composition, and which might be read with amusement and profit by the most experienced writers. Mr. Grant White is never dull, and he has an absolute way of expressing his opinions which is not without its charm. Moreover, he is, we need hardly say, a very thorough scholar, and what he has to tell us is relieved by so much humor that it is impossible to get out of temper with him even when we disagree with him most."

From the New York Tribune.

"We take leave of this interesting volume with thanks to the author for the valuable service which he has rendered to the English language. His work is a substantial offering to the interests of good letters in this country. It will serve to raise the standard of American scholarship, and assist our writers to recognize their errors, which is a prime condition of the attainment of excellence."

From the New York Evening Post.

"Too much cannot be said in praise of the literary spirit as expressed in the book as a whole. There is nothing narrow or petty or provincial in it. Mr. White has the true critical spirit, broad, liberal, manly, appreciative, and direct; and his book cannot fail to teach something of this to all who read it, and so to do good service in the campaign of culture against the Philistines."

From the Galaxy.

"That essay on 'The Grammarless Tongue' will be remembered as the most suggestive, original, and complete explosion of a scholarly superstition to be found in recent literature. Our dear mother-tongue, so long remorselessly tortured on the rack of old formulas and inflections stolen from dead languages, and still smelling of their grave, thanks Mr. White for this noble effort to release her. From the date of that essay scholastic English grammar is as dead as scholastic theology, and only wants time to find out that it is dead to get under the ground for very shame."

From the Nation.

"It is not a little remarkable how many kind gentlemen have undertaken, within the past ten years, to lecture us about how we shall talk and write our English speech. . . . Our minds have often been filled with impatience, not to say indignation and wrath, by these self-elected guides. . . . If Mr. White had only his prejudices to explain and recommend to us (as indeed in many cases he has nothing better), there was no reason for his telling so long a story. . . . His taste is offended by the phrase, Is being done, and its like, and he denounces it without stint. . . . It is merely a long tirade or reiteration of 'I don't like it,' disguised under a variety of forms; sound learning and judgment and reason are alike wanting in the discussion."

From the Saturday Review—Second article.

"We are glad to welcome a protest from the other side of the Atlantic against the prevalent corruptions of the tongue common to Englishmen on both sides. . . . As long as people will talk about *decimate*, *transpire*, and *initiate*, we are thankful to Mr. White or to any one else who will speak a word for the purity of our tongue. . . . His remarks may be of much use in England as well as in his own country. . . . The chapter headed, 'Is Being Done,' though Mr. White is quite right, might, we think, have been cut shorter."

One volume, crown 8vo, price $2; Roxburgh style, top edge gilt, $2 50.

Sent free of charge on receipt of price.

SHELDON & CO., No. 677 Broadway.

THE WEEK IN TRADE AND FINANCE.

JUNE 2, 1873.

THE week in Wall Street has experienced no change from the extreme dulness of the previous one. Money has remained easy at 3 to 7 per cent., with the ruling rate at 6 per cent. Business in commercial paper has been dull, with a gradual settling of rates to 7 per cent. for prime, and 8 per cent. for good mercantile names. The failure of Messrs. Dodge & Co., lumber dealers, spoken of in our last, seems to have caused no great feeling of distress, the troubles in that business being entirely confined to the different firms composing the combination then referred to. The change in the Presidency of the French Republic caused no excitement in our different markets. The minimum rate of discount remains unchanged at the Bank of England, and stands at 6 per cent. The Bank gained £129,000 in bullion this week. The bank statement for the week ended May 31 is favorable, the banks having gained $846,925 in their net reserve. The decrease of $1,150,600 in specie is more than offset by a gain of $1,579,400 legal tenders, while the liabilities of the banks in the shape of circulation and deposit show a decrease of $1,672,500.

The following are the statements for the weeks ending May 21 and May 31:

	May 24.	May 31.	Differences.
Loans	$279,846,300	$277.958.800	Dec. $1,887.500
Specie	20,682.600	19,482,000	Dec. 1,150.600
Circulation	27,493.800	27,447,100	Dec. 46,700
Deposits	209,762,300	208,136,500	Dec. 1,625.800
Legal tenders	42,752,900	44,332,300	Inc. 1,579,400

The following shows the relation between the total reserve and the total liabilities:

	May 24.	May 31.	Differences.
Specie	$20,632,600	$19,482,000	Dec. $1,150,600
Legal tenders	42,752,900	44,332,3 0	Inc. 1.579,400
Total reserve	$63,385,500	$63,814,300	Inc. $428,800
Circulation	27,493,800	27,447,100	Dec. 46,700
Deposits	209,762,300	208,136,500	Dec. 1,625,800
Total liabilities	$237,256,100	$235,583,600	Dec. $1 672,500
25 per cent. reserve	59,314 025	58,895,900	
Excess over legal reserve	4,072,475	4,918,400	Inc. 846,925

The following table separates the National from the State banks:

	National.	State.	Total.

Specie	17,769.200	1,712,800	19.482,000
Legal tenders	39,496,800	4,835.500	44,332,300
Deposits	180,016,400	28,120,100	208,136,500
Circulation	27,404.100	43,000	27.447,100
Percentage of reserve to total liabilities	27 61-100 p.c.	23 25-100 p.c.	27 9-100 p.c.

The suit of the United States against the Union Pacific Railroad Company and the election of a new board of directors in the Pacific Mail Steamship Company, have made the stocks of these two corporations fairly active; but with these two exceptions the market has remained in about the same condition in which we left it last week—dull. The tone of the market has been heavy, and prices on the speculative fancies were generally lower. Friday was a close holiday, otherwise the alarming despatches from Boston relative to the large fire which took place there on that day would in all probability have created an activity which would have been welcome to the brokers. But the Board was closed, and the holders of stocks were left "hanging by the eyelids" until later despatches arrived assuring them that things were not so bad as had been represented. The first effect of the result of the Pacific Mail election being made known was to send up the price of the stock 2½ per cent.; but at the advance holders availed themselves of the opportunity to sell, and the stock fell off to 39¾—the lowest point reached thus far in the present decline. The statement put forth by the Company is not favorably commented upon—in fact, not believed to be entirely true; it certainly misrepresents the value of its steamers, but this is but a repetition of what the Company has always done in making its annual statements. Union Pacific has declined to 25¼ in consequence of the commencement of the Government suit against the Company early in the week.

Prices of investment stocks have been firm on New Jersey Central, Delaware, Lackawanna and Western, and Delaware and Hudson Canal, and, weak on Michigan Central, and Chicago, Burlington and Quincy. There are rumors of a consolidation between the Delaware, Lackawanna and Western Railroad and the Delaware and Hudson Canal Companies. We have not yet learned any of the proposed details, but in case any consolidation is effected, the stockholders of the latter are justly entitled to, and will receive, a liberal dividend in equalizing the value of the two properties in the market.

The Middletown and Willimantic Railroad Company is last on the list of railroad defaulters. Its bonds were brought on the market some two years ago by a prominent firm of Wall Street brokers with a blare of trumpets and the significant advertisement of *"to be sold at par and accrued interest."* Reckless management, extravagant engineering, suspected or known collusion between a certain professional official and contractors, particularly in bridge-building, so disheartened those of the bondholders who had any sense that the bonds were forced on the market by them until the price reached 70, from which it has now dropped to 32, with "no takers."

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending May 31, 1873

Advices from Europe are very unfavorable to the success of some of the American railroad loans which have recently been taken over there for negotiation. Old and well-established enterprises coming on the market for loans, either to take up existing mortgages or to renew equipment and superstructure, meet with a favorable reception; but new matters, particularly of the kind known by the euphemism of construction companies, have no show whatever, and are very properly regarded as would be an association of burglars for the division of stolen plunder. Affairs such as that of the West Shore and Chicago, lately spoken of in these columns, are already reported to have been totally and ignominiously declined by European capitalists, who rather curtly and exactly characterized it as a new "Crédit Mobilier," without the appliances or ability that made the old one successful in fraud.

We hear that the coupons on the bonds of several new roads in the West will be passed when next due, and the fact is getting to be well established that we have been building more rapidly than the business of the country warranted. In all probability a large number of new enterprises will have a hard time of it for the next year or two.

Firmness has characterized the market for United States bonds, although the transactions in them for the week have been quite small in amount. $5,000,000 of the called 5-20's have been received at the Treasury in Washington for payment, and advices from London report the arrival in that city of the Treasury officials with $10,000,000 of the new 5 per cent. bonds sent out for the Syndicate. The resumption of the payment of the interest upon the bonds of the State of Louisiana has caused an advance of 5 to 6 per cent. in their market price. The land grant and income bonds of the Union Pacific Railroad Company have declined seriously, in consequence of the Government suit before alluded to.

The gold market has not been so active as might have been expected considering the large purchases made by the gold clique alluded to last week. The market has apparently taken care of itself. The rates for borrowing gold show no indication of a "corner." The Government disbursed last week $3,936,200 for called 5-20's, against which it took in from customs $1,574,000 for the same period. The internal revenue receipts for the month of May amount to $12,330,000. The specie shipments for the week ending May 31 were $526,992, of which $484,992 were in silver bars.

ILLINOIS TEN PER CENT. LOANS

BURNHAM, McKINLEY & CO.,
Counsellors-at-Law and Loan Brokers,
CHAMPAIGN, ILL.

Money loaned on improved farms in Central Illinois at ten per cent., semi-annual interest. Have been twelve years in the business. Send for circular.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from Birth to Maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." Cloth, 12mo. A separate volume for Boys and for Girls. Price, singly, 75 cents; for two, $1 25. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

NOTES ON ENGLAND.
BY H. TAINE.

"The Notes contained in this volume comprise the frequent observations of ten years. They were all revised after his last visit in 1871."

NEW YORK, THURSDAY, JUNE 12, 1873.

The Week.

AFTER much scouting and surrounding, Captain Jack and all his principal confederates have been captured, and are now held in irons by General Davis, who, it appears, was making preparations to hang them summarily until stopped by orders from Washington. In the meantime, the Governor of Oregon has claimed them for trial by the civil courts of that State, Captain Jack's recent murders having been committed on its soil. The Attorney-General has, however, given an elaborate opinion which makes the Modoc conflict with the troops "a war," and, of course, makes Captain Jack a belligerent, and his meeting with General Canby a parley under a flag of truce, and therefore makes the murders an offence not against the law of the land but against the laws of war, and recommends the trial of the prisoners by a military commission. Considering that Captain Jack is a roving vagabond and cut-throat who had unlawfully left his place of abode, and had been ordered back to it by the United States police, and that his army consisted of thirty or forty vagabonds and cut-throats like himself, the contrast between the facts of the case and the Attorney-General's ponderous deliverance on it is somewhat ludicrous. It would seem to be time enough to accord Captain Jack "belligerent rights" when he asks for them, and when justice or fair play seems to require them. But in addition to this, we think experience has now abundantly proved that the sooner the Indians are made to understand that they are held to the same obligations of industry and good order as other people, and exposed to the same penalties, the better. The trial and execution of Captain Jack and his men by the civil authorities would have the good effect of bringing home to the Indian mind the fact of a power behind the soldiers far mightier than the soldiers, and not to be eluded either in lava-beds or anywhere else.

A contemporary suggests that as Ohio is this year to elect a United States Senator, General Schenck would do well to come home and try his chances, the Senate being a much better place for stock operations than the Court of St. James, "and the commercial morality of the United States being sufficiently represented abroad without him." It adds that it cannot conceive of the names of Mr. Dallas, Mr. Adams, or Mr. Motley, predecessors of Mr. Schenck, appended to "the prospectus of a bogus silver mine." It thinks that Mr. Schenck has survived his usefulness as our diplomatic agent in England. All this is apropos of the appearance of an open letter addressed to the American Minister by an English holder of Emma Mine stock. This gentleman calls General Schenck's attention to the following facts: that he signed the original prospectus of the Emma Mine Company, which offered about 70 per cent. dividends; that when people objected that shares in a mine which were going to produce dividends like that would not go begging for buyers, they were answered that all that was true enough, but that this affair was entirely exceptional, and that the American Minister's name would not be risked in any enterprise of a doubtful character; that when afterwards he wrote a letter withdrawing his name for reasons of state, this letter was published by the Company as an additional voucher of the correctness of the prospectus and accompanying reports; that the mine has in fourteen months yielded, not at the rate of £700,000 annually, but at the rate of not quite £74,000, or about one-tenth of what the prospectus promised; that not only has the whole value of the mine disappeared, what is left of it being pretty much all limestone and not silver, but there is a debt of more than £50,000, and the original owner threatens seizure; that the mine was all but worked out when it was put off on the Englishmen; that the stock has dropped from £33 a share to £4, with no purchasers, and so forth; and so forth—a dismal list of items for the unhappy stockholder, who naturally does not spare America and Americans in his strictures.

What makes it worth while to keep this matter before the public is that General Grant, with his unfortunate obtuseness in regard to certain considerations, now selects one more Ohio statesman to honor the diplomatic service. We do not say that we suspect that General Schenck had any deliberate intention to deceive and defraud his British stockholders; but it is apparent that, honest or dishonest, he was so ignorant of the proprieties and duties of his office, or he was so boorishly regardless of them, that he went headlong into an indecent blunder. Of similar thickness of skin is Mr. John A. Bingham, who goes out as Minister to Japan. For twenty successive years he served in Congress, and he saw fit to close his career by supporting Butler's back-pay measure and by an equally hardy defence of himself for purchasing and holding Crédit Mobilier shares. It is true that his constituents had just remanded him to private life. And it is true, too, that he had no reason, so far as we have ever heard, to think that his course in these two cases would not be overweighed at the White House by his services on the Grant stump last summer, which certainly were zealous and worth a mission to anywhere. We remember his pleading the Fifth Commandment as pertinent and conclusive in the matter of Mr. Casey's custom-house and Mr. Kramer's Danish mission, and so on; while as for General Grant's single-handed payment of the public debt, he used to swear, almost with tears, that the like of it had never been seen in ancient or modern story. One possible qualification for the Japanese mission he has: he has no master in what the late Nicholas Biddle used to call "Western orientalisms" of oratory. And also, if all reports are true, there are fine opportunities among the Japanese for putting in practice his notions of the degree of commercial activity compatible with official decorum. So we may hear from him any day.

We have commented elsewhere on the election of the farmers' candidate to the Illinois Supreme bench. The Chicago *Tribune*, in analyzing the causes of this election, says that while it is due in great part to the blind desire of the farmers to take revenge on the Supreme Court and the corporations together, it is also due to several other causes which it would be worth while for the public to notice. The Princeton Convention, which nominated Mr. Craig, was captured by a number of politicians and railroad employees, who had no interest in the farmers' troubles except as they might furnish a means of livelihood or plunder; and after this had been done, the Chicago, Burlington, and Quincy Railroad, one of the most powerful corporations in Illinois, finding how things were going, supported, if not actively, at any rate by non-resistance or other indirect means, this very farmers' candidate; their reasons for doing so being apparently either that Craig was really their attorney, or else because they knew their man, and they dreaded the influence on their interests of the honesty and intelligence of Judge Lawrence, the judge whom the farmers opposed because they thought him the friend of these corporations. Besides this, there was a petty local dispute between the towns in which the rival candidates resided, and the vote in these towns shows that this dispute was much more operative on the minds of the voters than either the question of the integrity of the judiciary or the appeals of the farmers. The contest seems to have resulted, according to the *Tribune* account, in the election of a judge about whom no one knows anything, and who labors under the somewhat grave suspi-

cion of having sold himself to the party he was running against, even before the vote was taken.

The most remarkable incident of the week in this part of the world has been the murder of Mr. Walworth by his own son, in the coolest and most deliberate manner. The father, although a son of the late Chancellor Walworth, appears to have been a worthless person, who had maltreated his wife, and thus compelled her to separate from him, and had for some years pursued a literary career in New York, composing poor serial novels for obscure papers. During this period, however, he appears to have kept up his persecution of his wife in one form or another, but principally by writing her insulting or threatening letters, some of which fell into his son's hands. This son, a lad of nineteen or twenty, had naturally espoused his mother's cause, and last week asked his father to meet him at his room in a hotel. According to his own story, at the interview which followed, he requested the father not to annoy his mother by writing to her or otherwise during a visit which he (the son) proposed to make to Europe this summer, and the father promised accordingly, but subsequently made use of some scornful or offensive expression or gesture, which led to the son's at once shooting him with a pistol. As he fired four shots, he most probably discharged two, if not three, of them into the father's prostrate body—which is probably the severest punishment a parent ever received for impoliteness towards his offspring. The son then walked down-stairs and told the hotel clerk with perfect coolness what had occurred, and asked to have a waiter sent up to look after his father's remains, conceiving, we presume, that under the peculiar circumstances of the case he was discharged from that duty himself. He then telegraphed to his uncle that he "had shot father," and enquiring the way to the police station, and having been politely directed to it by the clerk, walked off to it, and requested to have himself taken charge of. He has ever since displayed the utmost calm, and declared himself, before the coroner's jury, "guilty of no crime." Indeed, he has exhibited all the marks of one of the most hardened villains that have ever come before a court of justice, and we would advise his friends to let him wait for trial quietly, just as he stands, and without any of the attempts at whitewashing or exciting "sympathy" which were unfortunately entered on in some quarters last week. They will not get this community to discuss with them whether it is not sometimes lawful for a youngster to butcher his father for annoying his mother, and they may rouse indignation that will deprive him of a fair trial, and deprive his family of the deep commiseration to which they are entitled on every possible ground.

The Court of Appeals has unanimously granted Stokes a new trial on a variety of points, only two or three of which have, at this writing, come down by telegraph. The principal ones are the judge's charge that the law presumes murder from the fact of killing, and his ruling in excluding proof of Fisk's threats to kill. Of course there is no disputing with the Court of Appeals, but as Stokes is going to be tried a third time for a murder committed publicly a year and a half ago, the lay public are naturally asking themselves whether some mode of bringing criminals to justice cannot be devised which will contain fewer traps for the judges. It would seem as if a judge would have to be a man of more than human wisdom and acuteness to get safely through our present criminal procedure to a conviction. The news of Stokes's respite has, we are told, produced "great enthusiasm" among the other murderers in the Tombs, who feel that it is not so bad a world after all, and apparently, in spite of the reports of the anti-capital punishment men, seem to cling to life with considerable tenacity.

The Boston insurance companies have taken the trouble to "investigate" the recent fire in that city, and report to the municipal authorities a state of affairs which is in the last degree disgraceful. The Committee appointed by the companies finds that "in the city proper there are but seven steamers," that "for each steamer but three men are permanently employed." The remainder of the force, "when an alarm is given, may be two miles or more away." "As a rule, the hose-carts are attached to the steamers, instead of being drawn by horse-power separately." The Committee also finds that the water-pipes in the business streets are too small, and do not furnish an adequate supply of water; that the "hydrants are insufficient in number and capacity"; that the "supply of hose is much too limited"; that "the Fire Department has not the right of way in the streets"; that teams and trucks are liable to block up the streets, "drive over and disable the hose, obstruct, hinder, and prevent the firemen from doing what, under more favorable circumstances, they might accomplish." The Committee adds: "We also regard your system of giving alarms as defective."

The Committee further report, that "by your system of city government, there appears to be no one man or no one department responsible; that in many things the Fire Department is subordinate to the City Committee of Aldermen and Common Council; and that defects cannot be remedied, or supplies purchased, except by a circuitous route through the various branches of the city government, in which delays are liable." The Committee suggests that the city government had better act promptly, for if it does not, the insurance companies will, as an act of self-preservation, "pursue the only remedy within their reach—cancel their policies, and discontinue business in Boston; and this course is now being seriously considered by many companies, among which are some of the largest insurance companies doing business in Boston." Meantime, they give this advice to the owners of property: "Each man look to his own buildings, see what can be done to protect against fire; each block organize a protective company." The officers of the Boston Fire Department have also held a meeting. They agree with the insurance companies as to the "right of way" and the "insufficient supply of water," and say that if there were any truth in the cry that the Fire Department is unequal to an emergency—which they greatly doubt—the responsibility would rest not on the department, but on the system by which it is governed. Gradually warming to their work, they passed a resolution endorsing themselves and declaring that the efforts lately made to throw discredit upon the management of the department are "unworthy of those claiming the title of gentlemen."

To turn to another side of this question, we may say that if the insurance companies had taken ordinary precautions three or four years ago in enquiring into the character of the risks they were issuing, they might have prevented both of the Boston fires. The competition between insurance companies has been for a long time fierce. The main object of each company has been to insure more people than its rivals, without any regard to the great danger which, experts were telling them, hung over our large cities. The "National Board of Lake Underwriters," comprising all the companies engaged in the business of "lake and inland" underwriting, and representing $16,000,000 of capital, met at Cleveland, Ohio, on the 5th inst., and has issued a circular signed by nineteen companies, and addressed "to merchants, bankers, and others who require the protection of insurance capital." This circular says that although it is a "notorious fact that for years past the premiums received on the lakes have not been sufficient to meet the losses incurred, nevertheless many underwriters, in their avidity for business—and some no doubt to make large commissions—have forgotten that business cannot be done below cost without a retribution at some future time." It therefore announces that the Lake underwriters will "no longer lend their means and influence to practices which must eventually result in great injury to all concerned," but are going to return to "the old tariff of 1872." This old tariff was one "which long experience has demonstrated to be the minimum rates at which the business can be safely taken." They recommend the insured to look a little more

closely into the value of their policies—advice which is certainly worth taking, considering the frightful losses by fire in the last few years, and the collapse of companies after the Chicago and the first Boston fire.

We can all remember how important was the defeat of Senator Hawley by Mr. Ferry, last spring. The white hat was flung into the air, for Liberal Republicanism had begun, Radical defeat was "in the air," and the downfall of the party of hate was assured. The party of hate, on the other hand, was naturally furious over the "treachery" of the Republican representatives who bolted from the caucus, and were very bitter and scornful over the "professors" who thought caucuses tyrannical. The Democrats were greatly jubilant, for here was possible proof that the grand coalition was to win. But the true explanation of this event is now said to be this—and we commend it to the attention of all persons who still lend ears to the tale of the beneficence of the great Republican party, and the enormously vital issues which it still represents. General Hawley is a Hartford man. Both Hartford and New Haven are capitals of the State, and both wished to remain such, while most sensible persons outside of those cities think that one capital is plenty, and that to support two is nonsense. So to a New Haven man the Hartford man is as one who worships in Samaria and not in Jerusalem, and when Mr. Hawley came up for election he was not elected, for New Haven influence, cast in with the Democrats, secured Mr. Ferry's election. But this neat little manœuvre of the New Haven Republicans has wrought them woe in several ways recently, and now a crowning woe. First, they tried to nominate a New Haven man for governor. Hartford would have none of him, and, getting control of the convention, nominated a citizen of their town. New Haven trumped this card by refraining from voting for the Hartford man, or by voting for his antagonist, a worthy Democratic gentleman, and a citizen of their city, who was in consequence elected. At the same election they "swapped votes," and for the sake of getting friends of New Haven into the State Legislature, "killed" Governor English, the most popular Democrat in the State, as a Congressional candidate, and elected his Republican opponent to represent the New Haven district. Upon the meeting of the Legislature, then, New Haven found that she had exasperated both Democrats and Republicans all round, and that in punishment of her wicked devices and works, more than two-thirds of the Assembly were resolved to make Hartford sole capital. This decision is now reported as certain to be ratified by the people; and New Haven is in affliction. What is to become of the lobby, too, is a matter of serious concern. For some years that body has earned its livelihood by working on the terrors, now of New Haven, now of Hartford, and usually of both cities together.

A *Tribune* correspondent has been having a long interview with "Governor" Kellogg of Louisiana. Kellogg gives a flourishing account of the condition of the State; says that there never has been any real resistance to his government; that he is mainly occupied in reforming the finances which Warmoth had brought to such a bad pass, and in equipping and disciplining the militia. His method of restoring confidence may be inferred from his operations regarding the interest due last January and February on the State bonds. This overdue interest he recently gave notice would be paid, but, to avoid any difficulty about providing the funds, his Attorney-General went into equity, and procured an injunction forbidding the payment. Kellogg tells the *Tribune's* correspondent that asking for troops from Washington was not his own idea, but that "the people of the North" and some probably more easily identified persons at Washington had come to the conclusion that a civil war was raging in Louisiana, so there was nothing for it but to humor them. Louisiana will, as soon as Kellogg's army is mobilized, be one of the best States in the country for those to live in who understand its institutions, particularly its code (which Kellogg says is very peculiar), and who have no morbid or pedantic notions which tend to make them oppose Progress.

The only information as to the policy of the new French Government is to be found in a circular issued to French representatives abroad by the Minister of Foreign Affairs, the Duc de Broglie, in which he says that the foreign policy of M. Thiers will be maintained by his successors, and that it was not any fault found with it by the Assembly which led to his overthrow, but fears that he was not furnishing the country with sufficient guarantees against revolutionary attempts. There is nothing new in the situation of Paris. Everything is quiet, and Gambetta preaches peace and respect for law, and the probabilities are that we shall have a year or two of the present situation. It furnishes a curious illustration of the nature of this situation, and supplies some confirmation of the view we have taken of the real value of the late elections, that prominent members of the Right should say, as they are reputed to do, that they would have been satisfied to let Thiers alone if they could have had the appointment of sixteen prefects and thirty magistrates. This is, in short, another way of saying that the man who controls the French bureaucracy can to a large extent regulate the composition of the French legislature. It would be interesting to know, however, how long the Right thinks it can maintain a "government of combat" in a country governed by universal suffrage. The exceeding vagueness and mistiness of their plans were happily described by M. Thiers in his late speech, when he said, with a malicious sparkle in his eye, that "there was only one throne, and it would not seat three."

In Spain things have reached a more advanced stage of disorder. General Velarde, who was supposed to be doing good service in the province of Barcelona by reorganizing the army and quelling disturbance, has sent in his resignation, his troops having mutinied and put him and his officers to flight. We are told, however, that General Cabrinety is marching against the mutineers with a strong force, and he will doubtless make mince-meat of them if his "strong force" does not turn on him. The Carabiniers at Grenada, too, have had a good fight with the citizens of that place, but after five hours of it surrendered to the citizens, who must have had an agreeable day. At Vicalvaro the soldiers had a fight of their own, which also seems to have been a lively affair. Indeed, the Spanish army appears to be in a fine condition. Señor Figueras, however, is tired of this sort of thing, and, in the Cortes on Saturday, announced that his duties were too much for him, and that he must resign the Presidency of the Provisional Government, which he accordingly did. Before retiring, however, he moved the proclamation of a "Federal Democratic Republic," and the Cortes adopted his proposal by 210 to 2, but wisely rejected another motion to celebrate the event by a national holiday, foreseeing, perhaps, the possibility of having to proclaim some other kind of republic before long. A new ministry was formed, with Señor Pi y Margall at the head of it, and he submitted his list to the Cortes, which, after a violent debate, refused to accept them, and Señor Figueras and his colleagues were finally induced to resume their posts, only to be plunged into a fresh crisis on Tuesday. The finance bills proposed by the Government were rejected, whereupon the Ministers resigned, and Señor Figueras reported himself unable to form another Cabinet. Meantime, the Irreconcilables, or "Intransigentes," as the Spaniards call them, have issued a manifesto containing their programme, in the shape of drafts of about fifty "decrees," which propose a great number of sweeping changes, though not so violent on the whole as might have been expected. The most prominent feature in their political creed is hostility to parliamentary government, which they consider a mere humbug; they would have all legislation done by executive ordinances.

THE DEMOCRATIC PARTY AND ITS OPINIONS.

THE *World* has been occupied for several weeks in efforts to get "the Democratic party" to take up the question of free trade and make it the cardinal article of its creed. We have, in common with the rest of the public, watched these efforts with considerable interest, but solely as remarkable pieces of intellectual gymnastics. In fact, the debate it has been carrying on in its columns has been in the nature of those dialogues into which religious and moral teachers occasionally throw their exhortations to the young and their refutations of infidels, and in which the same mind supplies Mr. Jones's clinchers and Mr. Smith's feeble and ineffective replies. The *World* has searched the Union through for an antagonist who would maintain that the Democratic party ought *not* to take up free trade, and has found no such person. In fact, there appears to be in all parts of the country a painful readiness to treat the aims and intentions of the Democratic party as questions of lunar politics. If anybody were to get up and allege that the Democratic party ought to be a free-love party, or ought to advocate the exposure of female infants, he would have the controversy altogether his own way. Nobody would "roll back the ball of discussion" to him. Under these circumstances, there was but one thing for the *World* to do, and that it has done. It has carried on the argument with itself. It has filled the rôle both of an adviser of the party and of the party, and, we need hardly say, has carried everything before it. The party has hardly had a word to say for itself. It has been forced to acknowledge that it was a free-trade party from the beginning, and that even in its silliest moments, as when it nominated Greeley for the presidency, it was secretly working for free trade, and that the only thing now left for it to do is to work for free trade harder than ever.

The *World* is, we presume, somewhat surprised by the general want of interest in the discussion, as well as by the impossibility of finding an opponent. And yet, to us, the explanation of the phenomenon seems plain enough. Two causes combine to produce it: one is a widespread belief that the Democratic party no longer exists as an organization; the other, a decided unwillingness on the part of everybody, except the *World*, to answer for it in any way; and none of the shrewd managers or "practical men" are willing to say what it will or will not do, what doctrines it holds or rejects. If anybody, for instance, was to visit Mr. Tilden or Mr. Seymour today, and try to extract from him a statement of Democratic doctrine, he would fail totally. Neither of these gentlemen would venture on any description of its aims or beliefs, and, if pressed hard, would probably escape under cover of denunciation of the policy of the Administration in Louisiana. This, we need hardly say, is the natural consequence of the Baltimore performance. There was not in the whole category of political possibilities anything so improbable in April, 1872, as that the Democratic Convention would nominate Horace Greeley for the Presidency. The mere supposition contained every known element of absurdity, and yet the convention did this very thing in the July following, and did it with acclamation. Of course, the first effect of this was to render all prophecy about Democratic doings absolutely worthless, and to cause every man of ordinary discretion to abandon the business; the second was to destroy all interest in the sayings of persons professing to represent the party. A party is worthy study and observation solely as a body of persons supposed to hold certain opinions on great questions of public policy, and to be ready to express them by its nominations and at the polls. But if such a body, on a great occasion, declares that it has no opinions in particular, and is ready to support almost anybody who is likely to be elected, it would be folly to waste one's time watching it any longer; and this conclusion the press and public have, we think, fully reached. Consequently, even if a formal acceptance of the *World's* preaching were issued by the National Committee to-morrow, it would not produce the least impression on the popular mind. Why should it, when it would not afford the slightest guarantee that the party would not nominate Henry C. Carey for the presidency and distribute 'The Unity of Law' as a campaign document?

The fact is that newspapers, the *World* included, can find much better work to do than providing opinions for either of the existing political organizations. Neither of them has anything worthy of the name of a creed. The Republican party is held together as an organization solely by the possession of the Government offices. This makes it a real business concern, with accounts to keep, earnings to make, dividends to distribute, and claims to adjust. It consequently does not need opinions, and, to do it justice, makes no pretence of having any. Indeed, there is no body of political doctrine in existence which will furnish authority for the policy of the Administration in Louisiana, and yet the party papers all defend it. The Democratic party, on the other hand, or the headquarters, or "cadre," or whatever it is called, which represents the organization, is a mere debating club, in which any question which has two sides is welcome, but in which the discussions have no relation to the actual affairs of the day. Nobody whose business is the formation or moulding of public opinion need trouble himself much about the sayings of either of them. If the *World* can get enough persons to look at free trade as it looks at it, and rate it as highly as it does, a free-trade party will be formed in spite of everybody; and it is far better to do this, than to go about looking for employment for a decayed organization. So, also, it is a much more profitable occupation to try to bring the public to some general agreement about the principles on which this Government now rests, and the forms with which it should be surrounded, than to try to get the Republican party and its "Christian statesmen" to mend their ways. They cannot be made to mend their ways. But some consistent and coherent body of opinion about the nature of the polity under which we live, or ought to live, may be created, and will have to be created soon if at all, and this work must be done in the main by the press.

The country came out of the Revolution in a state of confusion which in some respects resembled that in which the late war has left us. New necessities, relations, and duties had been created by the struggle, and a new power had been created in order to carry it on, the limits of which, however, had still to be defined. The formation of a permanent government was a serious task, which it took several years to accomplish; but the men who engaged in it, and the people behind them, had an enormous advantage over us in the possession of a stock of deeply-rooted and firmly-held opinions or prejudices on certain leading points, such as the judiciary, personal liberty, taxation, standing armies, paper money, personal character; and consequently the problem they had to solve was not the adoption of fundamental principles, but the best mode of surrounding these principles with guaranties.

Our position is much more perplexing. We have lost almost completely the old ideal of judicial independence, and are actually getting into the way of electing judges to do the will of the majority by interpreting constitutions intended under the old traditions to protect the minority. We are so far at sea about paper money that we have not only used it lavishly, but we have used it to raise a forced loan (or, in other words, to tax a small body of persons without their consent); and are so far confused in our minds about the right to issue it, that this right has recently been claimed and exercised by one man without check or rebuke. We are supposed to be tenacious of State independence, and jealous of the interference of standing armies in civil affairs, and yet we look on calmly while the President allows troops to be used as a sheriff's posse to overturn a State Government. We profess to think highly still of personal character as a part of our political machinery, and yet many of our leading politicians have lately indulged in public lying without serious detriment, and Ben Butler is a hopeful candidate for the Governorship of Massachusetts. Now, the most striking characteristic of all this is confusion—the mixture of all sorts of processes and ideas, despotic, military, constitutional, semi-barbarous, civilized, pagan, and Christian, and,

bad as it is, it is not an inapt representation of the condition of public opinion, which, it must not be forgotten, is made up of contributions from a very heterogeneous body of persons, not fed, as the men of 1776 were, on Coke or Blackstone, but filled with all sorts of notions derived from all sorts of régimes—some from the canon law as administered by the priest of a Connaught parish, some from the paternal despotism of Prussian barracks, some from the ferocious rigors of Hesse-Cassel, and some from the whip-rule of the Southern plantation. In other words, to a large body of the American people, a considerable portion of the talk of our best men about government and legislation, the principles which should regulate them, and the conditions which should surround them, are jargon as unmeaning as the nomenclature of chemistry or geology. American public opinion has, in short, to be reorganized, and the press has to do it, and had better keep to its work.

THE "GRANGERS" AND THE JUDGES.

THE election of Mr. Craig to the judicial bench in Illinois by the "Grangers," for the express purpose of deciding a legal controversy in a particular way, is attracting considerable attention all over the country, and, so far as our observation has gone, has been condemned in strong terms by all the leading newspapers. Indeed, it is impossible to regard it as anything but a dangerous and virtually revolutionary proceeding, which must make all thinking men desire to keep clear of "the farmers' movement" in its present shape, however much they may sympathize with the hostility to the railroads in which it has originated. The election has been commented on very severely, and particularly by the Chicago *Tribune*, as a fresh illustration of the dangers of an elective judiciary. We do not remember, however, to have anywhere seen attention drawn to the fact that even as an illustration there is an alarming novelty in it. In the controversy over the mode of appointing judges which has been going on for the last thirty years, the advocates of the elective plan have enjoyed the enormous advantage of having at their back a popular theory of government, of great weight and capacity, which not only covered the case of judges, but the case of all other officers, and absolutely cowed their opponents, if not into complete silence, at least into half-hearted resistance. In 1846, a man who questioned the ability of "the people" to elect honest and capable judges found himself somewhat in the position of a man who, in the fifteenth century, should have denied the sacred origin of the king's authority or questioned his wisdom: doubting the popular fitness to choose judges was looked upon as an indication of disaffection to the whole principle of popular sovereignty and of a generally retrograde spirit. He could not easily get the question argued on its merits, or indeed argued at all, without enveloping his opinions on *all* political questions in a cloud of doubt and suspicion. It is true the theory on which judges were made elective was comparatively new, and was not American; indeed, as a writer in the Cincinnati *Gazette* pointed out the other day, it was simply a bit of French ideology, which had, circumstances favoring, and by a process with which we are now all familiar, been thoroughly worked into American political thought, and had become the stock-in-trade of a large band of young spouters, some of whom afterwards grew into wise and valuable men, but others, and a very large number of them, into good-for-nothing old "statesmen," with a keen eye for "management" and a cunning hand for "wires" and "pipe." But it *was* worked in very effectually, until indifference to popular favor, or want of suave manners on the bench, became one of the worst defects a judge could have. The consequence was that the opponents of the new system hardly ventured to speak out their full thought or utter their worst forebodings about its working. They declared their fears that judges would be somewhat influenced in their decisions while on the bench by a desire to stand well with parties or politicians when the time came for their renomination, and that consequently the examples of rugged virtue and independence which the old bench had afforded would no longer be seen. But nobody ventured to predict that constituencies like New York would put on the Supreme Bench obscene ruffians like Barnard, or drunken blackguards like McCunn, or sneaking swindlers like Cardozo. How could "the people" do such a thing? they would have been asked. Do not the people desire justice and love decency? In short, their objections were drawn rather from the probable, perhaps imperceptible, influence of their dependent position on the judges' own minds, than from any likelihood that the judges' constituents would deliberately put any strain on their integrity. An honest judge may be secure in the hands of the people, they said; but he will not *feel* secure, and his want of security will, in spite of him, affect his manner of discharging his judicial functions.

For a good while, political managers were a little careful in avoiding the appearance of throwing a judge overboard for his opinions. But even after this regard for decency had been given up, the objections made to a judge in caucuses and conventions continued to be general in their character. He was not in thorough sympathy with "the party," it was said; or his manners on the bench were offensive; or his opinions on some point of national politics were tainted with some form of heresy. If he was put aside and a new man was selected to fill his place, the latter was commended to the voters in language handed down from the days of tenure during good behavior. He was praised as a lawyer of learning and integrity, in the enjoyment of a large practice, and as distinguished for his philanthropic labors or his charity; and if his politics was spoken of at all, it was dwelt on simply as that of a faithful adherent of certain great principles.

Now, the novel and startling feature in the late judicial election in Illinois is, that all the disguises by which the absurdity and deformity of the elective system have hitherto been veiled, even here in New York, have been thrown aside. No pretence is made that Craig is a better lawyer than his opponent, or that he is a good lawyer at all, or that he is any suaver, or that he is "sounder" on any great humanitarian issue. Nor can it only be said, in opposition to him, that he is a weak or subservient or intriguing man, or one likely to be influenced in his judgments by political pressure or personal favor. What is said both for and against him is, that he has been chosen to decide, in a particular way settled by the caucus which nominated him, all cases arising in a question affecting the property of a large number of persons, so that, as has been pointed out, all arguments before him by counsel will be simply empty form. Now, this is a new and more advanced stage of that process of judicial deterioration which the elective system brought in with it, and it is entered upon without disguise by one of the most intelligent communities in the Union—that, in short, which it is admitted on all hands two years ago adopted perhaps the best State constitution now in existence. It is hardly necessary to point out the evils which this unfortunate performance foreshadows. If the people of Illinois do not repent it, of course it knocks the bottom out of their whole political system. It makes their constitution worthless—for a constitution interpreted by the majority at every election is so much waste paper. It renders the writ of habeas corpus and all the other guarantees of personal liberty of little or no value to anybody assailed by a strong tide of popular passion or prejudice, and it shakes the legal security of all property held in sufficient masses to attract popular attention or excite popular hostility, and must consequently keep the capital of all honest investors out of the State. Nobody with an ounce of prudence would put money in a place where his right to it, or the amount of his gains from it, would form the subject of discussion on the stump once a year and be settled by a popular vote controlled by secret caucuses, and all investors at home or abroad will do well to keep out of Illinois till the State chooses to set up an independent judiciary. For aught anybody can tell, the next move may be against mortgagees, and we may see judges elected to rule that all interest on such securities must count as part payment of principal. Of course these wild-cat decisions would probably not stand in the United States Supreme Court, but no wise man would care to have his future staked on the

result of a controversy between this Court and the people of a State.

We have said that the action of the Grangers has shaken "the legal security" of property in Illinois. It is not, however, likely to deprive the worse kind of railroad managers and other operators of all the security they need. There is nothing this class dislikes and fears more than the existence of an upright and independent judiciary, and there is no class more favorably disposed to the elective system. They have of late years made a regular business of controlling nominations for the legislature, and they have of late years taken to controlling nominations for the bench. One of their first moves in this State, when they began their "raids," was to purchase two or three judges, and it was through the help of these judges solely that they were able to carry on their Erie and other frauds. The best defence of the community against them, as we have seen here, is a pure and incorruptible bench. This, however, cannot be had under the plan now adopted in Illinois. A judge who takes a nomination under the conditions imposed by the Illinois Grangers is necessarily a base man, and deliberately prepares himself for perjury. It is folly to suppose that a bench filled with such men would be corrupt only with regard to the "issue" on which they were elected. They would be corrupt in everything in which anything was to be made by corruption. A judge's honor is like a woman's chastity—a single stain destroys it. Therefore, after the farmers have provided themselves with a thoroughly compliant bench, they will find that it will rapidly pass out of their control, and into that of the oligarchy of moneyed intriguers who have already so largely taken possession of the politics of the country. They would doubtless speedily drive honest railroad men out of the State, but their places would be taken by worthies who, whether in caucus, court, or legislature, would beat the Grangers utterly, and "capture" the judges as fast as they were elected, and convert the bench into a sink of open and unblushing and indecent corruption, like the legislatures of New York and Pennsylvania. Perhaps, under the fostering hand of these men, we should at last see the judges at the close of the term laughing over indignant denunciations of their frauds by members of the bar, and pelting each other with paper pellets or blowing tin horns as they adjourned the court. We need hardly say that what has occurred in Illinois is profoundly discouraging to reformers. That the first move against a gross abuse should take the shape of another and still grosser abuse, is very disheartening. It is, of course, to be hoped, and may perhaps be believed, that it is a mistake made in the first moment of excitement, which may yet be retrieved, but on this point the local press is more competent to speak than we are.

FRANCE.—THE EVE OF REVOLUTION.

PARIS, May 23, 1873.

IT is a strange and not altogether a pleasant sensation to write on events which are extraordinary, still developing, and the result of which is covered with the dark veil of uncertainty. Such must be the sensations of the general during a long and confused battle. I remember that in the year 1867 I went in the dawn of morning to the celebrated battle-field of Sadowa. My coachman, a jolly Bohemian, observed to me that it was just a year since the King of Prussia, at the same hour—between five and six in the morning—had followed the same road. "The weather, sir, was just the same; the mist covered the whole plain." "Could you tell me," said I to my amiable driver, "what the thoughts were of the King of Prussia?" He could not, and perhaps the Emperor of Germany could not do it himself at this day—so many emotions must have dimmed those of that famous day in Bohemia. But I suppose that, without exaggeration, it can be said that to-morrow will begin a parliamentary battle which will be long remembered in France. It will be a sort of Sadowa, an historical turning-point, one of those events which shut one horizon and open a new one. The battle will be fought without steel guns and Chassepots, no dead nor wounded will be left on the battle-field, but there is not a house, not a home, in this great country where its result is not waited with anxiety, and where it will not be received either with exultation or with despair. What is really at issue is the whole future of France, and it is somewhat irritating to think that the result will not be decided by two conflicting armies, each animated by an ardent and devoted spirit, but by a little group of wavereers, of sceptics, of lazy or shrewd politicians, who will throw their force on one side or on the other. The "Irish Brigade" gained many a battle in the English Parliament; our Irish Brigade is a battalion of about sixty men who have no faith, no doctrine, but who are led by some invisible force, or rather by their innate instincts, sometimes towards conservatism, sometimes towards radicalism.

It could hardly be expected that after the election of Barodet and of Rane, the member of the Commune, after the defeat of all the conservative Republicans as well as of all the Monarchical candidates, the Chamber should not ask M. Thiers to give an account of his administration. He had said in his message, "The Republic will be Conservative, or it will not exist." The Chamber will tell him now: "M. Thiers will be Conservative, or he will not be President." M. Thiers had foreseen this tempest, and had taken in his sail; he dismissed two ministers—one, M. Jules Simon, a member of the Government of the 4th September, who was peculiarly objectionable to the Right, and another, M. de Goulard, who was detested by the Left; he comes before the Assembly with a Cabinet which is the very essence and substance of that Thiersian ideal, "the Conservative Republic." This Cabinet is wholly composed of men who have been what they are no longer—Orleanists, and who are now what they will perhaps not always be—Republicans. It was not enough to embody as it were in this small ministerial nucleus what M. Thiers considers as the government of the period—we have been served at the same time with the constitution of the future.

This curious document is well worth studying; it is the work of the firm "Rémusat, Thiers, Dufaure." These three men, putting their heads together, have borrowed from the United States Constitution just as much as could be found applicable in France. The Republican government in their theory will have three instruments: a Congress or Chamber of Deputies, a Senate, a President. The Chamber of Deputies will be elected by universal suffrage; only, as the last elections have been found too radical, the vote for individual candidates by *circonscription* or *arrondissement* will be substituted for the vote by general ticket (*scrutin de liste*); this system would give more influence to local grandees and less to party nominees. The general ticket is preserved for the Senate. Each department is to return three senators, who will be elected by universal suffrage and by a general ticket, that is to say, each elector, while he will be represented by only one deputy in the Lower Chamber, will be represented by three senators in the Upper Chamber. The Government has renounced the idea of having the senators named by the General Councils, as your senators are named by the State legislatures; this was thought to be too great a sacrifice to the Conservative spirit. Universal suffrage has become here a kind of superstition, and nobody dares to invoke any other force than the force of numbers. M. Thiers has turned the difficulty in this way; as he means the Upper Chamber to be essentially the conservative element in the Government, he has made categories out of which alone the senators can be chosen. Nobody will have the right to be a senator if he has not belonged to the Lower House for a number of years or to legislatures of former governments, if he is not a dignitary of the administration, of the army, of the navy, of the church, of the Institute, etc. This Upper Chamber, though elected by universal suffrage, will be, in consequence of these narrow categories, an aristocratic Chamber; it will not be, like the House of Lords, composed of noblemen, but of placemen, of the *élite* of the administrators and old politicians of the country. I don't know if in a country like France, where the old régime has left hardly any visible trace, a better mode could have been found for the organization of an Upper Chamber. I should prefer, however, to see the new senators elected by the General Councils as representatives of the department; or, as the department is too small a unity, I would have formed groups of three or four departments, and the General Councils of these groups, united in convention, should have named senators who would have represented a little province. In this case, there would have been hardly any necessity for making categories of eligible senators; a meeting of four General Councils would have been likely to name only men of great importance in their province, and therefore little inclined to radicalism.

M. Thiers has adopted the plan of a convention for the presidential nomination. He would have all the deputies, all the senators, and three delegates for each General Council of France meet together on equal terms, and have a session of eight days, during which they would name the President. This assembly would have as many as a thousand members, which would give some hard work to the wire-pullers; it would represent the people through the Lower Chamber, the administrative bodies through the Upper Chamber, and the provincial influences through the General Councillors. The President, in the new project, must be at least forty years of age. When Gambetta read this article, which seems directed against him, as he is only thirty-six years old, he said: "I will move an amendment to this article; the President shall not be more than seventy."

On the whole, the new project, in which you must see at once the growing influence of American ideas in France, is rather ingenious. Our statesmen have understood that there must be something more in the state than the expression of a constantly moving, growing, changing majority. The States furnish you a territorial basis for the representation of other forces, arising from history, time, tradition. Your senators have the character of ambassadors. Our departments are too small, they have no history of their own; the level of the Revolution has brought down the walls which separated our old provinces, which were natural divisions, founded on geology, on ethnography, on idioms. We must build up something new out of the departments, and, without altering the French unity, attempt to create some machinery which will not give absolute and complete sovereignty to mere numbers.

This new constitution of M. Thiers was presented to the Chamber on the second day of the session; it will perhaps be the legacy of M. Thiers's Government to the Chamber. Few minds have yet given any attention to its details; it has been characterized by some as a mere "chinoiserie" and by the English *Times* as an ingenious "article de Paris." Nobody seems to take it much *au sérieux;* the question of the day is the question of *Hamlet* —"To be or not to be." Three hundred and twenty deputies have signed an interpellation asking the Government of M. Thiers to give an account of its administration, and to-day the battle will begin. The Duc de Broglie will begin the attack, and M. Thiers himself will enter the lists. He is not wanting in courage, and even if his opponents try to leave him out of the debate, he will undoubtedly come forward, screen his weak Cabinet, and say: "Ecce, adsum qui feci." At the same time, he will say to his adversaries: "Strike me if you can, if you dare; remember that if I triumph, the Republic will triumph with me. I fall or rise to-day with her." I have spoken with many deputies during the last few days, and I find that the Chamber is so nearly divided that a very few votes will either upset or maintain M. Thiers. The majority for or against him must be extremely small. In either case, the prospect is perilous. If M. Thiers has a majority, he will owe his victory only to the votes of Rane, Gambetta, and such men, and will become more and more the instrument of radicalism. The Opposition, by uniting with the Extreme Left, which calls every attempt to make a constitution an "ignoble comedy" (these were the words of Gambetta at Nantes a few days ago), will hardly allow M. Thiers to realize his constitutional schemes. The Radicals are now essential to M. Thiers's safety in power, but they will not hear of a Second Chamber, nor of the constituent powers of this Assembly. They want a dissolution. In one word, M. Thiers can no longer govern without the men who wish to dissolve the Chamber and who ridicule all his constitutional projects. The Republican party follows him only on such occasions as he fights a duel with the Monarchists; he can no longer give complete satisfaction to anybody. He cannot be said to be in equilibrium between two parties; he is alone between two parties. If, on the contrary, there is a small majority against him, then M. Thiers will change his ministry, sulk like Achilles in his tent till the liberation of the territory, and abandon the whole political work to his new ministers; but this abnegation will not be long, and the crisis will only be deferred. In all his communications with foreign powers, M. Thiers has intimated that even an adverse vote of the Chamber would not force him out of the Government. There is, however, something so despotic in M. Thiers's character that he will surely not long submit to the polite and quiet tyranny of a ministry forced on him by a parliamentary majority. M. Thiers will probably be tempted to find his support, then, outside of the Chamber, in the popular manifestations of the great towns, in the press, in the movements of the multitude, in those invisible, dangerous, and uncontrollable forces which are represented by the word "revolution." All the world knows now the engagement M. Thiers entered into secretly during the Commune with M. Barodet at Lyons, with some other representatives of the great cities; France has now on its surface a hundred volcanoes, each of which can begin to smoke as soon as an electric wire is pulled at Paris. The Radical or revolutionary party never was better or more completely organized; it has a formidable minority in the Chamber, it has secret friends in power, fifty prefects at the head of so many departments, an immense number of subprefects. It has even generals in the army, judges and magistrates, any number of officers of police named during Gambetta's rule. May France not once more see "plus quam civilia bella."

THE AFTER-SEASON AT ROME.

Rome, May 20, 1873.

ONE may say without injustice to any body that the state of mind of a great many foreigners in Rome is one of intense impatience for the moment when all other foreigners shall have departed. One may confess to this state of mind, and be no misanthrope. Rome has passed so completely for the winter months into the hands of the barbarians that that estimable character, the "quiet observer," finds it constantly harder to concentrate his attention. He has an irritating sense of his impressions being perverted and adulterated; the venerable visage of Rome betrays an unbecoming eagerness to see itself mirrored in English, American, German eyes. It is not simply that you are never first or never alone at the classic or historic spots where you have dreamt of persuading the shy *genius loci* into confidential utterance; it is not simply that St. Peter's, the Vatican, the Palatine, are for ever ringing with English voices: it is the general oppressive feeling that the city of the soul has become for the time a monstrous mixture of the watering-place and the curiosity-shop, and that its most ardent life is that of the tourists who haggle over false intaglio, and yawn through palaces and temples. But you are told of a happy time when these abuses begin to pass away, when Rome becomes Rome again, and you may have it all to yourself. "You may like Rome more or less now," I was told during the height of the season; "but you must wait till the month of May to love it. Then the foreigners, or the excess of them, are gone; the galleries and ruins are empty, and the place," said my informant, who was a Frenchman, "*renaît à elle-même.*" Indeed, I was haunted all winter by an irresistible prevision of what Rome *must* be in spring. Certain charming places seemed to murmur: "*Eh*, this is nothing! Come back in May, and see the sky above us almost black with its excess of blue, and the new grass already deep, but still vivid, and the white roses tumbling in odorous spray over the walls, and the warm radiant air dropping gold into all our coloring."

A month ago I spent a week in the country, and on my return, the first time I went into the Corso, I became conscious of a change. Something very pleasant had happened, but at first I was at a loss to define it. Then suddenly I comprehended—there were but half as many people, and these were chiefly good Italians. There had been a great exodus, and now, physically, morally, æsthetically, there was elbow-room. In the afternoon I went to the Pincio, and the Pincio was almost dull. The band was playing to a dozen ladies, as they lay in their landaus, poising their lace-fringed parasols; but they had only one light-gloved dandy apiece hanging over their carriage-doors. By the parapet of the great terrace which sweeps the city stood three or four quiet observers looking at the sunset, with their Baedekers peeping out of their pockets; the sunsets not being down with their tariff in these precious volumes, I good-naturedly hoped that, like myself, they were committing the harmless folly of taking mental possession of the scene before them.

It is the same good-nature that leads me to violate the instinct of monopoly, and proclaim that Rome in May is worth waiting. I have just been so gratified at finding myself in undisturbed possession for a couple of hours of the Museum of the Lateran that I can afford to be magnanimous. And yet I keep within the bounds of reason when I say that it would be hard as a traveller or student to pass pleasanter days than these. The weather for a month has been perfect, the sky magnificently blue, the air lively enough, the nights cool, too cool, and the whole gray old city illumined with the most irresistible smile. Rome, which in some moods, especially to new-comers, seems a terribly gloomy place, gives on the whole, and as one knows it better, an indefinable impression of gaiety. This contagious influence lurks in all its darkness and dirt and decay—a something more careless and hopeless than our thrifty Northern cheerfulness, and yet more genial, more urbane, than mere indifference. The Roman temper is a healthy and happy one, and you feel it abroad in the streets even when the *scirocco* blows, and the goal of man's life assumes a horrible identity with the mouth of a furnace. But who can analyze even the simplest Roman impression? It is compounded of so many things, it says so much, it suggests so much, it so quickens the intellect and so flatters the heart, that before we are fairly conscious of it the imagination has marked it for her own, and exposed us to a perilous likelihood of talking nonsense about it.

The smile of Rome, as I have called it, and its intense suggestiveness to those who are willing to ramble irresponsibly and take things as they come, is ushered in with the first breath of spring, and it grows and grows with the advancing season, till it wraps the whole place in its tenfold charm. As the process goes on, you can do few better things than go often to the Villa Borghese, and sit on the grass (on a stout bit of drapery) and watch its exquisite stages. It is a more magical spring than ours, even when ours has left off its damnable faces, and begun. Nature surrenders herself to it with a frankness which outstrips your most unutterable longings, and leaves you, as I say, nothing to do but to lay your head among the anemones at the base of a high-stemmed pine, and gaze up crestward and skyward along its slanting silvery column. You may look at the spring in Rome from a dozen of these choice standpoints, and

have a different villa for your observations every day in the week. The Doria, the Ludovisi, the Medici, the Albani, the Wolkonski, the Chigi, the Mellini, the Massimo—there are more of them, with all their sights, and sounds, and odors, and memories, than you have senses for. But I prefer none of them to the Borghese, which is free to all the world at all times, and yet never crowded; for when the whirl of carriages is great in the middle regions, you may find a hundred untrodden spots and silent corners, tenanted at the worst by a group of those long-skirted young Propagandists, who stalk about with solemn angularity, each with a book under his arm, like silhouettes from a mediæval missal, and "compose" so extremely well with the picturesqueness of cypresses, and of stretches of golden-russet wall overtopped by the intense blue sky. And yet if the Borghese is good, the Medici is strangely charming; and you may stand in the little belvedere which rises with such surpassing oddity out of the dusky heart of the Boschetto at the latter establishment—a miniature presentation of the wand of the Sleeping Beauty—and look across at the Ludovisi pines lifting their crooked parasols into a sky of what a painter would call the most *morbid* blue, and declare that the place where *they* grew is the most delightful in the world. The Villa Ludovisi has been all winter the residence of the lady familiarly known in Roman society as "Rosina," the king's morganatic wife. But this, apparently, is the only familiarity which she allows, for the grounds of the villa have been rigidly closed, to the inconsolable regret of old Roman sojourners. But just as the nightingales began to sing, the august *padrona* departed, and the public, with certain restrictions, have been admitted to hear them. It is a really princely place, and there could be no better example of the expansive tendencies of ancient privilege than the fact of its whole vast extent falling within the city walls. It has in this respect very much the same sort of impressiveness as the great intramural demesne of Magdalen College at Oxford. The stern old ramparts of Rome form the outer enclosure of the villa, and hence a series of picturesque effects which it would be unscrupulous flattery to say you can imagine. The grounds are laid out in the formal last-century manner; but nowhere do the straight black cypresses lead off the gaze into vistas of a more fictive sort of melancholy; nowhere are there grander, smoother walls of laurel and myrtle.

I recently spent an afternoon hour at the little Protestant cemetery close to St. Paul's Gate, where the ancient and the modern world are most impressively contrasted. They make between them one of the solemn places of Rome—although, indeed, when funereal things are so interfused with picturesqueness, it seems ungrateful to call them sad. Here is a mixture of tears and smiles, of stones and flowers, of mourning cypresses and radiant sky, which almost tempts one to fancy one is looking back at death from the brighter side of the grave. The cemetery nestles in an angle of the city wall, and the older graves are sheltered by a mass of ancient brickwork, through whose narrow loopholes you may peep at the purple landscape of the Campagna. Shelley's grave is here, buried in roses—a happy grave every way for a poet who was personally poetic. It is impossible to imagine anything more impenetrably tranquil than this little corner in the bend of the protecting rampart. You seem to see a cluster of modern ashes held tenderly in the rugged hand of the Past. The past is tremendously embodied in the hoary pyramid of Caius Cestius, which rises hard by, half within the wall and half without, cutting solidly into the solid blue of the sky, and casting its pagan shadow upon the grass of English graves—that of Keats, among others—with a certain poetic justice. It is a wonderful confusion of mortality and a grim enough admonition of our helpless promiscuity in the crucible of time. But to my sense, the most touching thing there is the look of the pious English inscriptions among all these Roman memories. There is something extremely appealing in their universal expression of that worst of trouble—trouble in a foreign land; but something that stirs the heart even more deeply is the fine Scriptural language in which everything is recorded. The echoes of massive Latinity with which the atmosphere is charged suggest nothing more majestic and monumental. I may seem unduly sentimental; but I confess that the charge to the reader in the monument to Miss Bathurst, who was drowned in the Tiber in 1824: "If thou art young and lovely, build not thereon, for she who lies beneath thy feet in death was the loveliest flower ever cropt in its bloom"—seemed to me irresistibly a case for tears. The whole elaborate inscription, indeed, was curiously suggestive. The English have the reputation of being the most reticent people in the world, and, as there is no smoke without fire, I suppose they have done something to deserve it; but for my own part, I am for ever meeting the most startling examples of the insular faculty to "gush." In this instance the mother of the deceased takes the public into her confidence with surprising frankness, omits no detail, and embraces the opportunity to mention by the way that she had already lost her husband by a most mysterious death. Yet the whole elaborate record is profoundly touching. It has an air of old-fashioned gentility which makes its frankness tragic. You seem to hear the garrulity of passionate grief.

To be choosing this well-worn picturesqueness for a theme, when there are matters of modern moment going on in Rome, may seem to demand some apology. But I can make no claim to your special correspondent's faculty for getting an "inside view" of things, and I have hardly more than a picturesque impression of the Pope's illness and of the discussion of the Law of the Convents. Indeed, I am afraid to speak of the Pope's illness at all, lest I should say something egregiously heartless about it, and recall too forcibly that unnatural husband who was heard to wish that his wife would get well or—something! He had his reasons, and Roman tourists have theirs in the shape of a vague hankering for something spectacular at St. Peter's. If it takes a funeral to produce it, a funeral let it be. Meanwhile, we have been having a glimpse of the spectacular side of the Religious Corporations Act. Hearing one morning a great hubbub in the Corso, I stepped forth upon my balcony. A couple of hundred men were strolling slowly down the street with their hands in their pockets, shouting in unison, "Abbasso il ministero!" and huzzaing in chorus. Just beneath my window they stopped and began to murmur, "Al Quirinale, al Quirinale!" The crowd surged a moment gently, and then drifted to the Quirinal, where it scuffled harmlessly with half a dozen of the king's soldiers. It ought to have been impressive, for what was it essentially but the seeds of revolution? But its carriage was too gentle and its cries too musical to send the most timorous tourist to packing his trunk. As I began with saying: in Rome, in May, everything has an amiable side, even *émeutes!*

Notes.

GEO. P. ROWELL & Co.'s 'American Newspaper Directory' for 1873 merits all the praise we have given to the earlier issues of the same work for industry of compilation, clearness of arrangement, and typographical elegance. A "Sketch of the Growth of Journalism in the United States," based on Mr. Hudson's recent book, is prefixed to the Directory proper. It is entertaining, but we notice too many obvious errors in dates and names (*e.g.*, on pp. 17, 18, where we have marked four.)

—Mr. George E. Waring, jr., writes us, date of June 6: "By the side of the storied 'Frog Pond' on Boston Common stands an enormous tent, covering a novel and remarkable exhibition. The Massachusetts Horticultural Society has gathered from the private grounds near Boston, and from the most celebrated nursery of 'American Plants' in England (that of Mr. Anthony Waterer) a large collection of rhododendrons, which are now just bursting into bloom, and which, during the next twenty days, will be more gorgeous than any similar display of flowers we have ever had in America. Planted out (in beds and singly) in a way best calculated to show the manner of their use in garden decoration, are hundreds of the most perfect specimens of these plants. One standard, from Mr. Waterer, placed at an angle of the walks, has over eight hundred buds, which seem not to have been affected by the recent trip across the Atlantic, and it is worth all the trouble it has cost to secure it for this temporary use. The entrance to the main tent where all this gorgeousness is displayed is through a covered avenue lined with superb palms and other tropical plants, such as are rarely brought together. The exhibition, which has been arranged by Professor Chas. S. Sargent, under the auspices of the Society, will remain open until about the 25th inst.—there being substitutes to replace plants which shall go out of bloom, and keep up a full display. All who are (or are capable of becoming) interested in the æsthetics of gardening will be well rewarded for a trip to Boston Common. In deference to our national tastes, and by way of painting the lily, there will be 'music by the band' (Germania)."

—In the *College Courant* for May 31, President Tuttle, of Wabash College, gives some interesting statistics on the longevity of clergymen in the United States. He was moved to his researches in this direction by a desire to test a statement of Prof. Newton's, that mortality among this class is less than among men of equal ages in other occupations, and that "the actual *cost* of life insurance is less for them than for men in other occupations." President Tuttle made a laborious examination of Sprague's 'Annals of the American Pulpit' and of several denominational catalogues, embracing in all 2,442 names, whose sum total of years was 148,970. These subjects dated from as far back as 1575, 1638, 1642, 1683, 1685, for several of the leading denominations, and were generally brought down to about 1840. The average age of all of them was found to be a little over 61 years. Two reached the age of 103, one (a colored Baptist minister) the age of 101; sixty ranged

in years from 90 to 103, and only fifty-two died under the age of 40. "One out of every seven of the whole number was 88 years old or upwards at death. Between one-third and one-half of the whole were 70 years or upwards at death. Considerably more than one-half of the whole were over 60 years of age at death. Three-fourths of the whole were over 50 years of age at death. Seven-eighths of the whole were over 40 years of age at death." It would appear, therefore, as the writer points out, to be hardly worth a minister's while to insure his life at all, since his vocation does so much for him; and perhaps the statistics warrant the belief that mutual insurance within the denomination would be the cheapest to which the clergy could resort. One who studied this question narrowly would perhaps take the additional precaution to embrace Trinitarian Congregationalism, inasmuch as ministers of this denomination reach an average age of 65.8 years, the Baptists dying off at 64.1, the Reformed Presbyterians at 61.3, the Episcopalians at 59.8, etc., etc. And since all of us cannot be ministers, we may improve a hint given by President Tuttle when he shows, from the Bill of Mortality of Morristown, N. J., that out of 403 men deceased over 21 years of age, eighty-eight religious professors averaged 62.4 years, and all the rest only 48.9.

—Mr. Louis A. Garnett, manager of the United States Assaying and Refining Works at San Francisco, sends to the *Alta California* an interesting account of the new trade dollar shortly to be coined. He compares it closely with the Mexican dollar, to which it is to be superior not only in workmanship, but in quality, the comparison standing thus:

	Grs.	Fine.	Grs. p.s.	Value as comp. with our standard dollar.
New American trade dollar	420	900	378	1.0182
Average Mexican dollar	417.88	902.77	377¼	1.0162

There is also the further advantage of uniformity, the Mexican dollars varying in weight and fineness, and commanding different rates of premium according to their devices—a serious inconvenience in large business transactions. This dollar is not a unit in our currency system, but "simply a stamped disk of uniform weight and fineness, and was designed with special reference to our commerce with China and Japan." Under such conditions, it becomes of course an article of merchandise, manufactured for foreign use. The demand for it, like the demand for other merchandise, will depend upon whether profit or loss follows its export. Mr. Garnett gives the cost of coinage as 2½ per cent. If the coin is melted up on arrival in China, the expense of coinage is lost; and unless the United States Government or private shippers will bear this loss until the coin becomes current in the East, the demand for it will never appear. If it become current, and can be afforded to the exporter at a cheaper cost than the Mexican or bar silver, and in unlimited quantities, the effect will be to reduce the cost of exchange between the Western world—Europe as well as California—and the East, to the extent of the lessened cost. As shown by the correspondence in the *Nation* of March 20, the success of the coin in becoming current as a measure of value in China and Japan, would not change the course of Eastern trade or Eastern exchanges, as seems to be thought by the originators of the measure. All the silver produced in California and Mexico, in excess of their own wants, would continue to be exported as now; nor would it make any local difference, except a profit or loss to the United States Mint, whether it went away in bars of silver, in Mexican dollars, or in a fancy dollar of United States manufacture. The course of exchanges would continue to be governed, as now, by the ownership of the capital which carries on the trade. It may be remarked, in passing, that the extent of the use of the Mexican dollar in China is greatly overrated. It is fully current only at the foreign outports at the south. It is used for household and personal expenses at the northern open ports, and, to a very limited degree, in a few interior districts closely connected with foreign trade. It is quite unknown through the greater part of the Empire.

—The facts in regard to the Washington pedigree are very easily understood. George Washington was the great-grandson of John Washington, who emigrated to Virginia with his brother Lawrence. In 1791, Sir Isaac Heard, then Garter King-at-Arms, prepared a pedigree of the Washingtons, and sent a copy to our President for examination. Washington, with the precision and caution natural to him, stated that there was a family tradition that their ancestor came from one of the northern counties of England. Beyond this he neither knew nor professed to know anything. It was also a fact that the family in Virginia used a coat-of-arms. Sir Isaac conjecturally identified these two emigrants with the sons of Lawrence Washington of Sulgrave and Brington. Some years afterwards, Baker, in his 'History of Northamptonshire,' adopted this theory, and published the pedigree. From that time the pedigree was accepted as authentic, and was repeatedly published. In 1860, Mr. Simpkinson, Rector of Brington, published a book containing many interesting items relative to the Washingtons of that parish, whither the family went after selling Sulgrave. In 1866, however, Colonel Joseph Lemuel Chester, an American genealogist residing in England, was led to examine the essential point of this pedigree, viz., the identification of the emigrants to Virginia, and he completely destroyed it. In an article which is a model of careful investigation and analysis, Colonel Chester demonstrated that Lawrence Washington of Brington had sons, John and Lawrence, but that they could not be the brothers who went to Virginia about 1657. In the first place, the English John was knighted 21st February, 1622-3, married Mary Curtis, and had three sons before 1624. This Sir John Washington, Knight, was of Thrapston, County Northampton, and in October, 1678, his widow Dorothy made her will. It is of course impossible that *Sir* John Washington, who had wives Mary and Dorothy, and whose widow survived him, could be the emigrant *Mr.* John Washington, whose will of 1675 (Meade ii. 167) speaks of a first wife and two children buried on his plantation, and mentions a living wife, whom other evidences show to be Ann Pope. So in regard to Lawrence Washington of Brington, Colonel Chester proves that he was of Oxford, and a Fellow of Brazenose about 1624. He was lector and proctor there, and in 1633 he was presented to the living of Purleigh in Essex. He was ejected therefrom in 1643, but undoubtedly continued in a poor living in the neighborhood, though the exact locality has not been found. It is impossible to identify this clergyman with the Virginian planter. Of course this is but the briefest summary of Colonel Chester's article, but it is probably sufficient to show that Baker's identification was all wrong, and that in reality nothing was really known of the parentage of the emigrant Washingtons. Their pedigree is American only, neither better nor worse than that of the thousands of other families traceable to the first settlers.

—In striking contrast with the clear, well-reasoned, and weighty article by Colonel Chester, is the incoherent jumble of names presented in the ambitious essay on the same subject in the *Chronotype*, a monthly publication of the self-styled "American College of Heraldry and Genealogical Registry" in this city. It is impossible to criticise such an article seriously; it reads like a travesty on the work of sober genealogists. For example, Mr. Clements writes: "In 1632, Lawrence Washington, Knt., is said to have settled at Garsden. . . . There exists the clearest evidence that at this period Sir Lawrence was granted the living of *Pudleigh* [*sic*] in Devon." Now what is to be said of a man who so wantonly confounds Lawrence the clergyman with his grand-uncle Sir Lawrence of Garsdon, both being clearly shown on the same printed pedigree? Again, Mr. Clements states, on the authority of Berry, that a Lawrence Washington of Ballington, County Wilts, married Anne Merry, and had Martha, who married Arthur Berwick. Lawrence had a sister, Mary, wife of William Horsepoole of Maidstone, in Kent. This Lawrence, he thinks, came to America with "a connection, John." Elsewhere, Mr. Clements writes, "We think this John was a second cousin of Lawrence, referred to as the emigrant." The first criticism to make upon these statements would be that Mr. Clements cannot have investigated the subject properly if he is ignorant that the emigrants, John and Lawrence, were brothers, as their wills show. Secondly, he ought to know that Berry is by no means a good authority. Thirdly, the gazetteers do not record any parish of Ballington in Wiltshire or elsewhere. Fourthly, Berry's account agrees very fairly with Baker's pedigree of Sir Lawrence Washington of Garsdon, his son Lawrence and daughter Mary Horspoole. It is possible that Berry is right, and that Lawrence the son had two wives, though we require some corroboration of his statement; but the mention of this sister Mary Horspoole makes it certain that Berry was thinking of Lawrence, son of Sir Lawrence of Garsdon. Now all the peerages agree that this Lawrence of Garsdon had an only child, Elizabeth, who married the first Earl Ferrers, and was mother of Washington Shirley, second Earl Ferrers. Apropos of this Washington and Shirley marriage, let us give an extract from Mr. Clements's article:

"Earl *Farrars* [*sic*] who married Elizabeth Washington was a Shirley, and the Shirleys of the Peak intermarried with the Vernons of Haddon Hall. 'Mount Vernon' formulates these antecedents, and it accounts for Admiral Vernon's kindness to Lawrence Washington while the latter was in the service of his country under the Admiral's command at the siege of Carthagena."

This is a fair specimen of Mr. Clements's deductions. Wherever he finds a coincidence of names or an intermarriage in widely different branches of families, he proceeds to argue identities. In this case he probably cannot give as much information in regard to Admiral Edward Vernon's pedigree as we do in stating that the Admiral was son of James Vernon, Secretary of State, and was the uncle of Francis Vernon, Earl Shipbrooke in the peerage of Ireland. It is stated that the Admiral was descended from a branch of the family of Lord Vernon of Kinderton, and it is true that George Ver-

non of Sudbury (the grandfather of the first peer) married for his second wife Dorothy Shirley, sister of the first Earl Ferrers. But what sane writer would ever suppose that a remote relative of George Vernon was impelled to manifest a kindness to a Washington of totally unknown pedigree on the strength of his recollection of this marriage? On the contrary, what reason is needed to account for the name of Mount Vernon beyond the fact that Lawrence Washington served under the gallant Admiral? In his second article, Mr. Clements continues to string together the unprofitable results of considerable reading. He inserts on page 103 a pedigree of John Washington of Virginia, but he does not give his authorities. It is probably all wrong, and is certainly all unproved. The ancestry of the Virginian Washingtons is still a problem to be discussed by future genealogists.

—It is announced that Mr. Mill has left behind him a full autobiography with directions for its immediate publication, and also three complete treatises entitled 'Nature,' 'Theism,' and the 'Utility of Religion,' the first of which was to have been published in the present year. The last production of his pen was a tract for the Land Tenure Reform Association. This will at once be placed in the hands of that body for publication. The *Athenæum* hopes that the letters written by Mr. Mill to De Tocqueville may now be in possession of M. Gustave Beaumont's executors, and that the correspondence of the two philosophers may be given to the public. It is understood, says the *Pall Mall Gazette*, that the committee to secure a national memorial to Mr. Mill will include Mr. Gladstone, the Earl of Derby, the Duke of Argyll, the Marquis of Salisbury, Earl Russell, Lord Amberley, Lord Lawrence, Mr. Goschen, Mr. C. P. Villiers, Mr. John Forster, Mr. Stansfeld, Mr. Fitz James Stephen, Sir Henry Maine, Sir John Lubbock, Professors Cairnes, Huxley, Jowett, Tyndall, and Fawcett, Mr. Tennyson, Mr. Herbert Spencer, and others. It is said that Dean Stanley is willing to allow Mr. Mill's remains to be interred in Westminster Abbey, but that Mr. Mill's strongly expressed wish to be buried by the side of his late wife at Avignon may decide his family against this proposal. If so, the *Record* will be spared a good deal of pain. That journal says that it does not understand how the Marquis of Salisbury can allow himself to appear as one of the Mill Committee. "The chairman of a popular meeting in defence of the Athanasian Creed" makes a strange figure, the *Record* thinks, "in consenting to rear a national monument to the memory of a philosophic positivist."

—Mr. Leone Levi writes to the London *Athenæum* that the number of readers at the British Museum has diminished during the past ten years in spite of the enormous increase of population. In 1861, there were 130,410 readers—46 for every 100 inhabitants of London; in 1871, 105,006—or only 32 for every 100 inhabitants. He says the Museum is becoming less and less central in situation; the books in the common reading-room are of too promiscuous a character; and the catalogue consumes too much of the time of those who consult it. He recommends disburdening the Library of its vast number of duplicates, and fitting out with them branch libraries at well-selected centres of the metropolis. Then he would have, besides the common reading-room, a "series of special public reading-rooms, such as one for history, another for jurisprudence, diplomacy, and political economy, another for natural sciences, etc.," provided in each case with an officer conversant with the specialty, and a classified catalogue; and finally, in these rooms readers should have the luxury of taking books down from the shelves for examination. Probably the difficulties of classification experienced in catalogue-making would not prove practically an obstacle to the subdivision here proposed. The branch system has been tried with the greatest success by the Boston Public Library, and we may presume it not an extravagant fancy which anticipates the time when the main library will be connected by pneumatic tubes with its branches, thus putting what is called the Bates Hall Collection within reach of an indefinitely large circle of readers, without violating the conditions by which some of the most valuable books are restricted from leaving the Library building.

LIBERTY, EQUALITY, AND FRATERNITY.*

MR STEPHEN'S book is one which, however unwelcome it may prove to a large class of minds, was sure to come before long. Some such examination as he bestows on the political and social philosophy which has in all Western countries begun to mould both laws and manners, could not in days of free enquiry like ours be very much further postponed; and we confess that if shams are no longer to be tolerated, if illusions are no longer useful, if we are all hereafter to live on the "hard pan," and anything like a false bottom to our political or religious speculation is to be rigidly prohibited, Mr. Stephen has done a very valuable work. In fact, we venture to say that it will be found that in ninety-nine cases out of a hundred, the objection made to it by the school which he so mercilessly assails will be the very one which they themselves have made so light of when used against them by Christians—that his doctrines are dangerous, and likely to work injury "to the framework of society." Their pretensions to be able to supply the world with a rule of life which will enable it to dispense with the apostles and prophets, and indeed all forms of supernatural religion, and which will nevertheless get all the good out of human nature of which it is capable, and deliver human society from its manifold evils, have long offered a tempting object of criticism. Hitherto, however, they have escaped criticism from everybody but representatives of the old beliefs, natural-born tories, or else doctors of divinity. Mr. Stephen belongs to no one of these classes. He makes no pretence even to being a Christian; he confesses that he is by no means sure of the immortality of the soul. He believes that Christianity, either in the complete form in which the early believers embraced it, or in the mutilated form in which some modern humanitarians are trying to hold on to it, furnishes no proper basis for legislation and no adequate rule of conduct. In short, he is in no sense of the word a transcendentalist. But he is nevertheless full of scorn for what he calls the new "religion of humanity," with its three cardinal doctrines of "liberty, equality, and fraternity," which is offered us as a substitute for Christianity, and his examination of it is something which nobody who is interested in the social and religious problems of the day can afford to overlook.

His objections to it are fundamental. He says that its doctrines are not true, and, even if believed in, would not serve the purpose for which they are produced. He makes Mr. Mill's recent sociological books on 'Liberty' and the 'Subjection of Women' serve the purpose of texts for the discussion, not because Mr. Mill is a complete representative of humanitarianism, but because nobody else has put forward its claims on the respect and confidence of the world with so much force and ability, and because Mr. Stephen acknowledges that his own mind has been powerfully influenced by Mr. Mill's teachings. With regard to liberty in general, Mr. Stephen holds that it is in itself neither good nor bad, but indifferent; that before you can predicate anything of it you have to know the use that is going to be made of it; that it is like the hole surrounded by a pipe, the value of which depends on the pipe and on the substance which is to pass through it; that Mr. Mill's doctrine about social liberty is not tenable, because it is incapable of application. No such line as he proposes can possibly be drawn between the parts of human conduct which society ought to regard with indifference and those which it ought to disapprove or punish. A positive and prevailing opinion on conduct of all kinds society must have, or it would go to pieces for want of a moral bond. Any expression of this opinion, however faint, is coercion, and the difference between the coercion of opinion and the coercion of law—between, in short, persuasion and punishment—is simply one of degree. There is no real division between the domain of morals and the domain of law. Some acts society visits with simple disapprobation; for others, it hangs a man; but the distinction is based on expediency simply. Men are all "persuaded" as well as deterred by their fears. When you influence a man's decision by pointing out to him a slight class of evils likely to result from his pursuing a certain line of conduct, such as loss of money or the good opinion of his neighbors, you are said to persuade him; when you threaten to imprison or kill him, you are said to coerce him; but in reality the process is the same in both cases. The appearance of difference is caused by the fact that the instrument of coercion you employ in the one case is much more powerful than in the other. The notion that society can dispense with coercion, or, in other words, refuse to set up a standard of right and wrong in small things any more than in great, is chimerical. The carrying out of any such policy is sure in the long run to produce anarchy. The state is bound to teach morals; and if morals need a religious backing, it must teach religion. All pretence of indifference on this matter must prove fatal to its highest interests. It is useless to point to the relation of church and state in America as the example of the success of this indifference. "The way in which this arrangement is accepted as a final result" is, to Mr. Stephen, "a strong illustration of the manner in which people are disposed to accept as final the temporary solutions of great questions which are in fashion in their own day." He thinks it a temporary arrangement, and that a nation, in order to last, must be based on some theory of life and death and judgment, and not merely on a desire to be comfortable and make money. In other words, we have got rid of the religious difficulty here for the present, and already at some cost to our morality, but we have not settled it permanently. Mr. Stephen disposes of the distinction between "the spiritual and temporal power" by the same argument by which he disposes of the distinction between persuasion and coercion. He treats it as a relic of the early Christian distinction between

* 'Liberty, Equality, and Fraternity. By James Fitz James Stephen, Q.C. 'New York: Holt & Williams. 1873.

"the church and the world" and the mediæval distinction between the Emperor and the Pope. As a matter of fact, the clergyman and the judge both coerce, but one draws his penalties from one source, the other from another. One says, "If you do so and so, you will be damned"; the other says, "If you do so and so, you will go to jail." The process is exactly similar in both cases. It is folly to denounce protection or coercion as the great source of human misery, as one school of philosophy does, and just as great to denounce liberty as its source, as another school does. It is like glorifying the centripetal at the expense of the centrifugal force, or *vice versa*. Human progress is the resultant of several opposing forces, some confining, some liberating, under the restraint of which we pursue the ends of living.

"Reasonable men pursue these objects or some of them openly and avowedly. They find they can greatly help or impede each other in the pursuit by exciting each others' hopes or fears, by promising payment for this and threatening punishment for that, and by leaving other matters to individual taste. This last department of things is the department of liberty in the proper sense of the word. Binding promises and threats always imply restraint. Thus the question: How large ought the province of liberty to be? is really identical with this: In what respects must men influence each other if they want to attain the objects of life, and in what respects must they leave each other uninfluenced."

As regards equality, Mr. Stephen maintains that to say that a law is unjust is the equivalent of saying that it is inexpedient; the term cannot be applied to a law in any other sense. You may say that a judge is unjust, but only if he fails to apply the law, according to his understanding of it, to all persons affected by it. Justice, therefore, calls for equality only so far as equality is expedient, and for a law to be expedient, the rights and duties created by it ought to be adapted to the situation of the persons who enjoy or are subject to them. It ought to recognize the facts of society, and recognize equality and inequality as they exist by nature. Rights and duties should be so moulded as to clothe, protect, and sustain society in the position which it naturally assumes. If inequalities naturally exist, as they do, such as age, sex, and difference of capacity, the proposition that the law should not take note of them is absurd. He applies this, with a variety of illustrations, to various social relations. Moreover, he says that the change from status to contract, which has been pointed out by Mr. Maine, has done little or nothing to eradicate this inequality. It has destroyed coercion in one shape, but has not prevented its taking its rise in another. Nor is the principle of obedience disappearing from society, as Mr. Mill would have us believe. Force lies behind all law, and it is exerted in our day through different machinery from that through which it was exerted in the Middle Ages, but it is still exerted. It has, however, assumed such overwhelming weight in the case of government, that it has only rarely to be put forth. It is doubtful, too, whether anybody in the Middle Ages possessed as much control over the life and comfort of his fellows as is now lodged in the hands of a great employer of labor.

In dealing with the doctrine of fraternity, or "the worship and service of humanity" at large, Mr. Stephen takes up for discussion the shape in which it is described by Mr. Mill in his essay on utilitarianism, where he defines morality as an active promotion of the happiness of the human race; and the sanction for this he finds in a certain state of feeling, which he calls "the desire to be in unity with our fellow-creatures, and happily one of those which tend to become stronger." This forms, Mr. Stephen thinks, one of the most strongly-held articles in the new creed. He objects to it that, while it is inconsistent with Mr. Mill's doctrines about liberty, it imposes on men a duty which nobody in reality is capable of discharging; for you cannot promote men's happiness without knowing in what it consists, and this you cannot know except in a small number of cases, or in a very rough, general way. Therefore, in default of knowledge as to what our neighbor's happiness lies in, we substitute our own notion of what it ought to be in. Indeed, in this matter, as in others, "we can no more displace ourselves than we can leap off from our own shadows."

"Milton's line about Presbyter and Priest thus applies precisely to Humanity and Self. Humanity is only I writ large, and love for Humanity generally means zeal for MY notions as to what men should be and how they should live. It frequently means distaste for the present. He that loveth not his brother whom he hath seen is peculiarly apt to suppose that he loves his distant cousin whom he hath not seen and never will see. Mr. Mill, for instance, never loses an opportunity of speaking with contempt of our present 'wretched social arrangements,' the low state of society, and the general pettiness of his contemporaries, but he looks forward to an age in which an all-embracing love of Humanity will regenerate the human race.

"On one who does not think thus the anticipations of those who do produce a singular effect. They look like so many ideal versions of what the world would be if it adopted universally the theorist's views of human life. Love for Humanity, devotion to the All or Universum, and the like are thus little, if anything, more than a fanatical attachment to some favorite theory about the means by which an indefinite number of unknown persons (whose existence it pleases the theorist's fancy to assume) may be brought into a state which the theorist calls happiness. A man to whom this ideal becomes so far a reality as to color his thoughts, his feelings, his estimate of the present, and his action towards it, is usually, as repeated experience has shown, perfectly ready to sacrifice that which living people do actually regard as constituting their happiness to his own notions of what will constitute the happiness of other generations. It is, no doubt, true that, in a certain sense, he does thus rise, or, at any rate, get out of himself. Sympathy for others, interest in the affairs of others, impatience of what he regards as the wrongs of others do become far stronger motives to him than they are to most men, and do affect his conduct more powerfully, but this in itself is no merit. It certainly gives no man a right to any other man's confidence. Nothing, as I have already pointed out, is a greater nuisance, or in many cases a greater injury, than the love of a person by whom you do not want to be loved. Every man's greatest happiness is that which makes him individually most happy, and of that he and he only can judge. If A places his greatest happiness in promoting that which he regards as B's greatest happiness, B never having asked him to do so, and A having no other interest in the matter than general feelings of sympathy, it is a hundred to one that B will tell A to mind his own business. If A represents a small class of men of quick feelings and lively talents, and B a much larger class of ignorant people, who, if they were let alone, would never have thought of the topics which their advisers din into their ears, the probability is that the few will by degrees work up the many into a state of violence, excitement, discontent, and clamorous desire for they know not what—which is neither a pleasant state in itself nor one fruitful of much real good to any one whatever.

"The man who works from himself outwards, whose conduct is governed by ordinary motives, and who acts with a view to his own advantage and the advantage of those who are connected with himself in definite, assignable ways, produces in the ordinary course of things much more happiness to others (if that is the great object of life) than a moral Don Quixote who is always liable to sacrifice himself and his neighbors. When you have to deal with a man who expects pay and allowances, and is willing to give a fair day's work for it as long as the arrangement suits him, you know where you are. Deal with such a man fairly, and in particular cases, if he is a man of spirit and courage, he will deal with you not only fairly but generously. Earn his gratitude by kindness and justice, and he will in many cases give you what no money could buy or pay for. On the other hand, a man who has a disinterested love for the human race—that is to say, who has got a fixed idea about some way of providing for the management of the concerns of mankind—is an unaccountable person, with whom it is difficult to deal upon any well-known and recognized principles, and who is capable of making his love for men in general the ground of all sorts of violence against men in particular.

"Besides this, the great mass of mankind are and always will be, to a greater or less extent, the avowed enemies of considerable sections of their fellow-creatures; at all events, for certain purposes and up to a certain point. Those who love the human race as a whole must take sides in these enmities, probably against both parties, and this will increase the original trouble. This introduces one vitally important question, at which I can only glance, but which believers in the service of humanity and in the religion of fraternity ought to solve before they can find standing-room for their religion. The question is this: Are the interests of all mankind identical? are we all brothers? are we even fiftieth cousins? and, in any event, have we not a considerable number of family quarrels which require to be settled before the fact of our relationship (if any) can be regarded in any other light than as a bone of contention?"

Now, what is to be said to all this? That will depend a good deal on the side from which the subject is approached. Those who, like Mr. Stephen himself, as we judge, approach it from the purely scientific side, and who examine questions of morals as one examines the composition of a gas, will find little or nothing in his position that can be gainsaid. To them this earth is a somewhat dismal ball, and the life we lead on it a profound and inscrutable mystery, and our religions, philosophies, speculations about things past or to come, are, like our arts and sciences and inventions, only so many devices for sweetening a bitter cup or making a thorny way somewhat less cheerless. To them, all beliefs are but contrivances for supporting man in his struggle with the inevitable and incomprehensible, and it is open to anybody to study these contrivances, either with or without reference to their utility; that is, we are at perfect liberty to consider their origin as well as their efficacy, or their efficacy only. Mr. Stephen belongs to the school to which their fitness is only a secondary consideration, and he occupies himself mainly in showing how much illusion enters into their real character. For instance, he thinks belief in God and in a future life is a powerful instrument in keeping the world even as good as it is, and that a society without that belief would necessarily be a very different society from anything which now exists; but this is to him no reason for refraining from casting doubt upon this belief. There is one passage in Mr. Stephen's book, however, which will furnish those who are more occupied about the practical than the theoretical side of morals with a good defence for much of their teaching, and that is "that speculation on government, morals, and religion is a matter of vital practical importance," and it is so because the conduct of the mass of men is powerfully influenced by their opinions on government, morals, and religion, although it is notorious that their practice always falls lamentably short of their professions. The people who teach the doctrines about liberty, equality, and fraternity, therefore, which Mr. Stephen derides,

may very well say that—absurd as it may seem to talk about freedom of conduct and thought, as Mr. Mill does, or about men being "born free and equal," as Karl Marx does, or about men and women being equal, as Mrs. Julia Ward Howe does, or about the necessity of loving the whole human race, as the Peace Society does—the experience of mankind and the history of all religions show that preaching has to be made very strong and extravagant to obtain even the smallest modicum of practice. To get a man to feel kindly towards his fellow-townsmen, we have had to descant day by day, for many generations, upon his close relations to his countrymen at large; to get him to stop hating Englishmen and Frenchmen, we have to urge him furiously to take even Mandingoes and Chinamen to his heart; to get even personal freedom for blacks, and decent consideration for the poor and stupid, has required centuries of declamation on the inherent equality of all human beings; and to deliver women from personal chastisement or degrading tutelage, we have to be assured, in season and out of season, that there is absolutely no mental or moral difference between persons of the two sexes. This, no doubt, is a clumsy mode of accomplishing the object, and it is natural enough that a philosopher should be disgusted by it; but we cannot deny that, such as it is, a large proportion of the moral progress made by the world has been achieved by means of it.

RECENT NOVELS.*

GENERALLY the novelist performs a task very like that of a fashionable sexton who gives his best attention to weddings, but in 'Not Without Thorns' we have all sorts of suggestions that he will very probably have to attend to the other duties of his business. How husbands are domestic tyrants, how wives are silly, how persistently they both fail to understand one another—it is all shown here; and, in a way, it is well done, with an exactness, a morbid accuracy, if we may use the phrase, that is noteworthy, but with a singular lack of imagination, which leaves the story a disappointing one. In spite of their cleverness, such frank confessions do not rise above printed gossip, though that is not an unattractive fault to a great many people. But others, we are sure, will feel, after reading this novel, as if they had been prying into their neighbors' affairs, and that is why we call 'Not without Thorns' distasteful, although rather interesting.

Not dissimilar is Miss Healy's 'Lakeville,' which appeared some two or three years ago in England, where it was highly praised. It gives a very good picture of social life in a Western city, for Lakeville is easily recognized as Chicago. It is full of love affairs; there is the girl who marries the rich man for his money, and afterwards suffers for it; there is the girl who falls in love with a moustached hero who flirts with some one else, so that a bitter wound is inflicted on the deceived one's heart which time and a second choice relieve. There is, too, a prettily written account of life in France. On the whole, the story is far from unreadable, although it deserves the same strictures as 'Not without Thorns.' Both of the writers draw their characters tolerably well, and evidently have given considerable study to the ways of girls and to the phenomena of love-making—the ways of ogling, smirking, gaudily-dressed girls being the favorite ground of the author of 'Lakeville,' who, we fear we must say it, is just a trifle vulgar.

Mr. Eggleston's 'Mystery of Metropolisville' is very good. We know few new writers who so well give us certain sorts of characters that are American without thereby losing their right to be considered human beings, and who at the same time have an interesting story to tell. It is not impossible, indeed, to find elsewhere single figures cleverly sketched, as, for example, *Hiram* in the Rev. H. W. Beecher's 'Norwood,' and Mrs. Stowe's *Sam Lawson;* but the setting is not what it ought to be. 'The Mystery of Metropolisville' is by no means the most entrancing story that was ever written. To a great many people it may present no interest whatsoever. They would prefer to read a rehash of London society novels, in just the same way as they would prefer to pass a summer in Europe to travelling through the Western States; but any one who cares for a simple story well told, for characters who are genuine people and whose talk is always amusing, will get satisfaction at the hands of Mr. Eggleston. The book is full of humor, observation, and a healthy spirit which is sure to leave a good impression. Mr. Eggleston has forestalled the remark which readily suggests itself, namely, that he would do much better if there were fewer marks of haste in his stories, and perhaps the vivacity of the book is due to that very incompleteness; still one would be inclined to say that without more care he will not rise above being what he is now, and that is the condition of a man who promises more than he has performed.

M. Edmond About cannot be said to have wrapped his talent in a napkin. Far from it. He has polished it in every possible way, and he whisks the napkin under his arm, and calls on every one to admire his handiwork. As an example, we have to-day a translation of his by no means unamusing 'Rouge et Noir.' It needs no long description, no fervent admiration, but it deserves mention as a bit of work that comes from a portion of the globe where competition prevents a man from falling into slothfulness. It is an innocent sample of French cleverness.

'A Fair Saxon' reminds us of the music written by one's friends who have heard a great deal of the good masters' works, and who undertake to play to us something of their own composition, in which we recognize a trace of this man or of that, and no note that bears any mark of the player's own personality. In Tyrone, the hero of the story, there is a certain resemblance to Trollope's 'Phineas Finn'; not the resemblance of plagiarism, but of a certain family likeness. For the rest, there are some very American Americans, and there is a Fenian diversion which lends excitement to the story. It lacks some of the faults which disfigured the same writer's 'Lady Judith,' but yet it is not a remarkable work.

'Clyde Wardleigh's Promise' is a tale of life in Philadelphia, with enough social complications in the plot to justify the pretensions of that place to be considered a metropolis. In an uneventful way a great deal of harm is done by people who fall in love with the wrong persons, who fall back on their dignity, which proves but a broken reed, and leaves them all miserable—all, that is to say, who survive the shattering of their hopes. As may be gathered, this is a painful story, and it is one in which it is not easy to find any positive merit. Melancholy is a state of mind which it is easier to feel than to express.

'Count Kostia,' by Cherbuliez, has been added to the Leisure Hour Series of Messrs. Holt & Williams. This is the story by which that clever author first made his name known about ten years ago. Like all those he has since written, it contains a plot which it would be an uncharitable deed to disclose, and it is written with a sort of skill which it would be injustice not to commend. There is quite enough improbability about the story to leave it on the border-land between romance and real life, and to secure from the reader that uncritical readiness for appreciative enjoyment which we grudge to those novels that pride themselves on their literal exactness. What we ask for in works of fiction is the possibility of their being true and the certainty of their being interesting, and those qualities are both to be found in this entertaining volume, which, by the way, is very well translated. We have already spoken so often of Cherbuliez's qualities as a writer that we will not repeat ourselves to-day; in 'Count Kostia' the reader will find the cleverness, which is this writer's main trait, without the inhumanity which embittered 'Joseph Noirel's Revenge.'

"September died. October wore her crimson and gold right royally for thirty-one days of gorgeous pomp and wonderful magnificence, and then came brown November, clad in russet, with withered leaves for a coronet, and a naked branch for a sceptre. And still Ruth lay upon the bed in the front chamber, not suffering as she had suffered at first, but just as helpless." The sentence just quoted is taken from a novel called 'Sibyl Huntington.' We give it merely as a sample of a countless host of stories which make the novel-reader doubt the wisdom of the Germans in putting up statues to the inventor of the printing-press.

The Kirby family, readers of 'Little Kate Kirby' will discover, got into all manner of trouble, principally on account of the hostility of the cold, haughty, and wealthy Westmairs. An imitation of the tender passion, while on the one hand it wrought additional confusion, likewise brought peace to their distractions, and, after a flirtation which was very much like a game of chess, all ends happily.

From these caricatures of human beings and human passion one can gladly turn to so true, so simple, and so interesting a story as MM. Erckmann-Chatrian's 'Les deux Frères.' It is told by the teacher of a village

'A Chance Acquaintance. By W. D. Howells.' Boston: James R. Osgood & Co. 1873.

in what was the eastern part of France, among the Vosges Mountains, and describes the quarrel of two brothers who fall out from dissatisfaction with their father's way of dividing his property. One has a daughter, the other a son. The story, however, is not so much one of their loves as it is of the healing of the feud between their parents by the meeting of the children. This is set before us so delightfully as to call forth our thankfulness that the love of simplicity has not yet wholly died away among story-tellers.

Heine once said of a work, probably one in his own tongue, "I read the tedious book, fell asleep over it; in my sleep I dreamt that I went on reading; I awoke from fatigue—and this three times." Of a similar sort is Johannes Olaf,' a singular combination of unexpected, incongruous incidents, false sentiment, and repulsive immorality. The hero, who gives his name to the novel, falls in love with a poor girl with whom he establishes illicit relations, and these are narrated in a way that might well make German critics pause and look about them before they reproach French writers of fiction for their improprieties. In his intrigues he is aided by a girl, Franziska, who is in love with him, and who is represented as an otherwise respectable person. The woman who really fascinates him leaves him, and in the course of an adventurous life exercises a baneful influence on various other men of the story. After numberless vicissitudes, which we imagine are intended to represent something like Wilhelm Meister's career, Olaf becomes a mystical philanthropist whom Franziska, now married, still at heart adores. This, with murder, shipwreck, and sudden death, furnishes all the delectation which the reader can derive from the story.

Mr. Howells's 'Chance Acquaintance,' which appeared during the first half of this year in the *Atlantic Monthly*, introduces some of the people who had figured briefly in his 'Wedding Journey,' and weaves for them a love-story on Canadian ground, in a way that shows that one need not be an Arbuton to prefer the half-European flavor of that unamericanized part of the country to the less romantic scenery of the United States. But if the setting is partly foreign, the story does not lose in interest on that account, and the people who are brought before us are taken as types of two very different kinds of Americans. The heroine, Kitty Ellison, is a Western girl who has had none of the advantages of finishing schools, symphony concerts, and Lowell lectures, but has been brought up among sensible people who have had their work to do, and who, besides attending to that, had been sturdy Abolitionists at a time when slavery had more defenders than it has now. From the glimpses we get of her life, it is easy to see how well it encouraged the independence and individuality of her character, and the humor which is so prominent an American trait. The other actor in the play is Mr. Miles Arbuton, of Boston, who has had bestowed on him all that the heart of man could desire—wealth, good family, personal attractiveness of a certain sort, education, foreign travel, so that if young people had nothing better to do than to serve as examples of the truth of proverbs, it would seem as if here were a romance ready to break forth between two such different people. The lack of resemblance lies, too, much deeper than this. Kitty has all the charm which must belong to a young, pretty, kindly, sympathetic girl, while Arbuton has all the narrowness, coldness, and exclusiveness which are most disagreeable when they are found in contrast with what one would naturally expect from all the advantages he possesses, and, it must be said, with what one sees of such people in the flesh. With Kitty Mr. Howells has been remarkably successful; he has drawn a really charming girl, and how difficult and rare a thing that is to do every novel-reader can testify. All her part in the love-making, her innocence, her readiness to be pleased, her kindness towards Arbuton's foibles, her sensitive dignity, her charming humor, belong to a real human being, not to the familiar lay-figure which, one day practical, the next sentimental, goes through the conventional process of love-making with dull uniformity in the writings of the majority of novelists. The plot of the story is simply that of the wooing of this lovely girl by the cold Boston man, who despises America and things American, whose blue blood freezes in his veins at any reference to the South End of his native city. Many of the outside oddities of a shy, reserved man, and many of the peculiarities which distinguish the degenerate grandsons of Pilgrims, Mr. Howells has cleverly caught, but, to our thinking at least, has given us rather the distorted version of the hated Bostonian as he appears to us outside barbarians, than an accurate representation of even a very priggish man. We doubt if even in that home of the east wind there is a man who would carp at his sweetheart's dress ten minutes after she had accepted him, or who would really shudder when she tells him that his possible father-in-law was shot in Kansas. But we may be flattering Bostonians, and it should be said that the story is very prettily told, with its conclusion, which we forbear telling, successfully hidden till the last from the prying wonder of the reader. The many little touches of humor which every reader of Mr. Howells has learned to expect in his works, and which have given him his place as the best of the younger generation of American humorists, are to be found continually in this novel. The descriptions of the scenery, which must be familiar to many, are well done. In fine, we regard 'A Chance Acquaintance' as a step towards the production of "the great American novel." Kitty, alone, is enough to make any novel good. Every one will be glad that a man with the keen observation, the delicate humor, and the literary skill of Mr. Howells has chosen this new occupation for his pen, and we can all await with some impatience his next novel.

A Dictionary of the Derivations of the English Language, in which each word is traced to its primary root, forming a Text-Book of Etymology, with Definitions, and the Pronunciation of each Word. (New York: G. P. Putnam's Sons.)—This dictionary is a 12mo of 400 pages, one of Putnam's Educational Manuals. Its size and proposed contents are well judged, and the printer's work is well done; but the derivations have been prepared by some one unskilled in the modern science of language, who has taken his materials from dictionaries of the old time. Of Grimm and Diez, or even of Webster or Wedgwood, we see no traces. Of course there are blunders and shortcomings on every page. One scrap from the feast of languages, picked up from Max Müller or some other popular essayist, finds a place in the preface. The dangers of mistaken etymology are illustrated from Horne Tooke, who says, it seems, that *truth*, Anglo-Saxon *treowth*, is derived from *trow*, Anglo-Saxon *treow*, to think, and therefore truth is whatever a man believes; from which forlorn conclusion the student of this dictionary is to be rescued by learning that *true* comes from "Skr. *drdha* [*sic*], solid, constant, from *dhue* [*sic*], to be fixed; so that truth is something fixed, settled, something to be built on or rested upon, etc." The book bears the sole imprint of Putnam's Sons, New York, but this sounds like the old country, where the *Saturday Review* keeps putting it to its readers that a thousand years ago *Anglisc* meant the Teutonic speech of Caedmon, and therefore *English* must mean that now. Moreover, Horne Tooke is no proper *Bugbear Americanus*. It is Englishmen mostly who make great eyes at him. He was a radical in politics as well as grammar, and stood by the Americans in the Revolution, and suffered for it. He was for that reason a great favorite in America. His 'Diversions of Purley' was at once reprinted in Philadelphia and made familiar to all our scholars. The stimulus which it gave to the philological studies of such men as Jefferson and Noah Webster is well known. It is one of the most common books of that date in the old libraries. And still, among the gentlemen, especially the country gentlemen, of Virginia and other Southern States, where the old family library has had scant additions from the later generations who eschew Yankee books, Horne Tooke is much read, and his whims about the grammarless tongue are abundantly repeated and discussed. Perhaps it should be ascribed to his influence partly that the Southern colleges have so readily taken up the historical study of English and Anglo-Saxon in these later times. The name is not given of the author who made our little dictionary, and who knows, in spite of Tooke, what solid Sanskrit *truth* has to rest on—in the preface; it is not repeated in the body of the work.

Fine Arts.

PICTURES OF THE FLEMISH SCHOOL.

RUBENS is never seen to greater advantage than in his bacchanalian subjects, and a small picture of his in that motive, now placed in the keeping of Mr. Page the artist, is an epitome of the most that the Fleming was able to do. It is an easel-painting on copper, perhaps fifteen by twenty inches, and represents a saturated Bacchus led by a youth and pushed by a satyr or Pan; the relief behind the figures is dark, and a good specimen of Rubens's dashing landscape, while the *ordonnance* of colors on the flesh and accessories makes it perhaps a better exemplar for the student than the master's favorite instance of a grape-bunch. The artist reserves his finest flesh-tones for the central figure, contrasting them richly with the fawn-colored fur of a creeping tiger at the left, and on the other side with his warmest tint in a piece of flying drapery from the satyr. The composition has a characteristic grace of its own, violently opposed, of course, to the grace of any Greek bacchanalian group; the personages have the exaltation of beer, not of Chian wine; but they roll through the landscape with a sense of sinuous motion impossible for art to excel—a motion suggested in the first place by the tiger's magnificent tread, most perfectly caught, and then carried out by the pose and muscular action of the figures. The Bacchus heaves an asthmatic torso covered with masses of yielding flesh, such as the Flemish painter may be said to have invented; beside the puffy and infantine leg of the chief figure is set the straining limb of the bacchanal who drags him, corded with

sinew; and on the other side the satyr lowers his forehead to buttress up the vine-crowned head of the divinity, which four distinct chins are not able to preserve in equilibrium. For the true Rubens quality—for solid and pure color struck upon the picture at one jet, for faculty in drawing at first-hand with the brush, and for expression of the untrammelled flow and ease of life—this specimen is superb. It seems to be simply the current expression by the painter of a day's delight, the overflow of a prime physical exuberance in springtime. There is no hint that a pupil ever touched it, in the manner so common with the grand mural subjects. It is in perfect preservation, apparently always hidden safe from the restorer, and a few white specks where the pigment has sprung from the copper only seem to give it a date and attest its immaculate state. It is a little reservoir of Flemish vitality.

As an act of homage to Rubens and his school, we think few Americans can show so monumental a work as that of Mr. Alfred B. Copeland, who has brought home a quantity of rarely good copies. Among these, which have been displayed at the Somerville Gallery, some are very large, and it is evident that years of toil must have gone to the whole elaborate testimonial of fidelity and love. "The Presentation of the Infant Christ to St. Jerome," after the work at Rubens's place of sepulture, is a rich report from one of the master's grandest and gustiest pieces of display. Its audacious pomp of color, pride of drapery, and whirlwind of motion—increased by the painter himself, who rushes causelessly into his picture in the flashing arms of St. George—have been felt with much sympathy, and copied without negligence. In diminishing-work, Mr. Copeland is equally happy, and his study of the "Last Communion of Saint Francis" is a piece of pictorial jewelry, resembling the original as a view through the wrong end of an opera-glass would do. In taking up another master, the copyist entirely changes his style, and there is a good effort at bold sketching, and at the painter's peculiar fluted drapery, in the "Fisher Boy" after Franz Hals; to follow so rapid a workman, as the student evidently sees, there is no use of mending and returning on yourself; the only way is to dash at Hals a great many times, on a great many canvases; and then, selecting your luckiest, and carrying it off to keep, you may be able to show the public some of that immense daguerreotyping power which made Hals, with Rembrandt, as a critic says, "dominate and get beyond the whole Holland school." In copying Hals and Rubens, we observe, Mr. Copeland tries with all his might to lose himself in their vim and storm, just as he does again in aristocratic elegance and symmetry with Van Dyck; it is good pupillage, perhaps, but it is not favorable to future individuality and self-respect. "It behoves a painter doing copy-work," says Henri Delaborde, "and doing it sincerely, to put something of himself into his task of assimilation, just as a musician can and should, without changing or adding out of his head aught to the composition of a master, inform us in his execution, up to a certain point, what he is feeling about it for his own part." There, we think, is a good proverb for any copyist at the point of drowning. Mr. Copeland's whole exhibition is thorough enough and imposing enough to start a good many questions about the propriety of making and acquiring elaborate studies of old masters, a subject now being discussed in France, and discussed with a good deal of satire, apropos of the new museum of such copies opened by the Ecole des Beaux-Arts.

Franklin Square, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year beside a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

JOSEPH GILLOTT'S
STEEL PENS,

OF THE OLD STANDARD QUALITY.

The well-known Original and Popular Numbers,

303 — 404 — 170 — 351,

Having been assumed by other makers, we desire to caution the public in respect to said imitations.

JOSEPH GILLOTT & SONS,
91 John Street, New York.
HENRY HOE, Sole Agent.

H. WOOD, JR.,
Headquarters for Chromos and Frames,
659 Broadway, New York.
Attention is called to the beautiful picture of "Maidenhood," for sale by all Art Dealers.

HENRY K. VAN SICLEN,
BIBLIOPOLE, 133 Nassau Street, New York.
American or Foreign Publications sent by mail, postpaid, at Catalogue prices.

A. DENHAM & CO.,
Publishers and Importers of English and Foreign Books, 17 Murray Street, near Broadway, New York. PRICED CATALOGUES of our English and Foreign Books issued monthly, and sent free.

SPECIAL NOTICES.

TERMS: In advance, one insertion, four cents per word; five insertions, three cents per word, each. The enclosure of a stamped and addressed envelope will secure a numbered box, to which communications may be addressed.

A HARVARD GRADUATE of June, 1872, of one year's experience in teaching, desires private pupils, or a position in a classical school. Refers to the Faculty of Harvard. Address Box 25, *Nation* office.

A LITERARY GENTLEMAN desires a position with a publishing firm as reader, editor, and critic; would invest a little capital in a satisfactory connection. Address Thirty-five, Box 20, *Nation* Office.

A HARVARD STUDENT desires pupils. Address Box 16, *Nation* Office.

PLACE open for one student in an Architect's office, with every facility in the study of perspective and free-hand drawing. Enquire of "Architect," office of the *Nation.*

BACK NUMBERS of the *Nation* wanted. Nos. 1, 2, 3, and 111, for which 20 cts. each will be paid. Address Publisher *Nation,* Box 6732, New York.

CHOIRS SUPPLIED EVERY week with plain Hymn-Tunes. HENRY CLARK, Pawtucket, R. I.

CONTRIBUTION ENVELOPES (printed at $1 50 per 1,000) make it easy to pay and easy to collect Church expenses. H. Challen, Phila.

*"NEW PROCESS" FOR WIN*ter Wheat. The "Edelweiss" Flour is manufactured by Drone & Stultz at their Crescent Mills in Zanesville, Ohio.

WILLIAMS COLLEGE, Berkshire County, Mass. For information, apply to the President, P. A. CHADBOURNE.

*WOMAN'S EDUCATION ASSO*ciation, Boston. Examinations for Women. The first examination for women by Harvard University will be held in Boston, in the last half of June, 1874, under the charge of this Association. Notice of intention to be candidates must be sent to the Secretary before April 20, 1874. Circulars of explanation will be sent free to any address, and a pamphlet containing complete details, with specimen examination papers, will be forwarded upon the receipt of 25 cents. Address Mrs. CHAS. G. LORING, Secretary of Committee, No. 1 Mount Vernon Place, Boston, Mass.

LIBERTY, EQUALITY, FRATERNITY.

BY

JAMES FITZJAMES STEPHEN, Q.C.

"One of the most valuable contributions to political philosophy which have been published in recent times."—London Saturday Review.

"One of the most thorough overhaulings of the moral, religious, and political bases of society which they have recently received. . . . Everybody who wants to see all the recent attempts to set things right analyzed by a master-hand, and in English which stirs the blood, will have a great treat in reading him."—The Nation.

EXTRACTS.

"LIBERTY.—A narrower interpretation would be as follows: There is a period now generally reached all over Europe and America, at which discussion takes the place of compulsion, and in which people when they know what is good for them generally do it. When this period is reached, compulsion may be laid aside. To this I should say, no such period has as yet been reached anywhere, and there is no prospect of its being reached anywhere within any assignable time."

"Our own minds have become so much sophisticated by commonplaces about liberty and toleration, and about the division between the temporal and the spiritual power, that we have almost ceased to think the attainment of truth in religion as desirable if it were possible. It appears to me that, if it were possible, the attainment of religious truth and its recognition by legislation would be of all conceivable blessings the greatest."

"If prize-fighters were allowed to give foul blows, and hit or kick a man when he is down, they would hurt each other much more than they do, but their relative strength would be far less effectually tested. So with religion: what is wanted is not peace, but fair play."

"Shall we send our son to college? Shall we send our daughter to school, or have a governess? . . . On these and a thousand other such questions the wisest and most affectionate people might arrive at opposite conclusions. What is to be done in such a case? For something must be done. I say, the wife must give way. She ought to obey her husband, and carry out the view at which he deliberately arrives, just as, when the captain gives the word to cut away the masts, the lieutenant carries out his orders at once, though he may be a better seaman, and may disapprove of them."

"Each must act as he thinks best, and, if he is wrong, so much the worse for him. We stand on a mountain-pass in the midst of whirling snow and blinding mist, through which we get glimpses now and then of paths which may be deceptive. If we stand still, we shall be frozen to death. If we take the wrong road, we shall be dashed to pieces. We do not certainly know if there be any right one. What must we do? 'Be strong and of a good courage.' Act for the best, hope for the best, and take what comes. Above all, let us dream no dreams and tell no lies, but go our way wherever it may lead, with our eyes open and our heads erect."

Price $2 00.

HOLT & WILLIAMS, 25 BOND ST., NEW YORK.

THE WEEK IN TRADE AND FINANCE.

JUNE 9, 1873.

THE chief event of importance last week was the advance of the Bank of England minimum discount rate from 6 to 7 per cent. The decrease of bullion in the bank last week was £215,000. The continued increase of the discount rate does not seem to have had the effect which was desired—the prevention of the outflow of specie from the bank, and the withdrawal of gold from this country. Fortunately, the condition of our foreign trade is such that we have not been obliged to ship specie in order to pay our debts during the time that the bank rate has been raised. The Bank of France gained 2,750,000 francs in specie last week. The payment of 250,000,000 francs by France to Germany on account of the indemnity was promptly made on the 5th inst.

The money market at this centre has remained very easy at 6 per cent. and under. On Saturday, lenders had difficulty in placing their balances on call at anything better than 4 per cent., while very late in the day money loaned down to the nominal rate of 2 per cent. per annum.

Commercial paper is easy of late at 7 and 8 per cent. for prime names, with a very small supply on the market. We hear that extra choice names have been negotiated below 7 per cent.

The bank statement is unusually favorable, and the gain in reserve was such as to carry it up to $10,815,325 above the required 25 per cent.—a gain of $5,896,225 over last week. The principal gain was in specie—$6,502,800, which represents to some extent the large payments made by the Treasury on account of the called bonds. The following is the comparison of the averages for the past two weeks:

	May 31.	June 7.	Differences.
Loans	$277,958,800	$277,418,800	Dec. $540,000
Specie	19,482,000	25,984,800	Inc. 6,502,800
Circulation	27,447,100	27,434,100	Dec. 13,000
Deposits	208,136,500	214,475,800	Inc. 6,339,300
Legal tenders	44,332,300	45,308,000	Inc. 975,700

The following shows the relation between the total reserve and the total liabilities:

	May 31.	June 7.	Differences.
Specie	$19,482,000	$25,984,800	Inc. $6,502,800
Legal tenders	44,332,3 0	45,308,000	Inc. 975,700
Total reserve	$63,814,300	$71,292,800	Inc. $7,478,500
Circulation	27,447,100	27,434,100	Dec. 13,000
Deposits	208,136,500	214,475 800	Inc. 6,239,300
Total liabilities	$235,583,600	$241,909,900	Inc. $6,326,300
25 per cent. reserve	58,895,900	60,477,475	
Excess over legal reserve	4,918,400	10,815,325	Inc. 5,896,925

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$239,822,200	$37,596,600	$277,418,800
Specie	23 562,900	2,421.900	25,984 800
Legal tenders	39,522,100	5.785,900	45,308,000
Deposits	185,011,400	29,464.400	214,475,800
Circulation	27,391,100	43,000	27 434,100
Percentage of reserve to total liabilities	29 70-100 p.c.	27 82-100 p.c.	29 47-100 p.c.

The stock market, partly owing to the absence of leading operators at the West attending the election meetings of a number of important railroad corporations, and partly to the yacht race on Thursday and the Jerome Park races on Saturday, was very dull, and at times almost entirely neglected. A report that the Ohio and Mississippi Railroad Company had issued a large lot of new bonds, the issue of which was unauthorized, created a rush to sell the stock, which carried the price down to 37½. It was subsequently ascertained that the Company had authority to issue $1,000,000 in bonds, of which amount $400,000 were to be used at once for the purpose of tracking the road with steel rails, while the balance are to be held back for the present. The truth of the matter being made known did not improve the market value of the stock.

Three of the ex-directors of the Pacific Mail Steamship Company stated in a card last week that the recent report of the affairs of the Company was made entirely upon the authority of Mr. A. B. Stockwell, and that a full statement ought to be made public. The new board promised early in the week to make a full and correct statement, and it made its appearance on Saturday. It may be correct so far as it goes, but it certainly is not very full, inasmuch as it places no valuation upon the Company's steamers. The report (which we publish below) had no effect upon the market price of the stock, which was quite steady to-day above 40.

In the investment stocks we notice a further decline in Michigan Central to 99. Chicago, Burlington, and Quincy is dull at about 103½. Delaware, Lackawanna, and Western is strong, and has been in good demand all the week. To-day there were considerable sales at 105¾ to 105⅛. New Jersey Central has been dull, with the prices ranging between 105¼ and 103½.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending June 7, 1873:

	Monday.		Tuesday.		Wed'day.		Thursday		Friday.		Saturday.		Sales Sh's
N. Y. C. & H. R.	101¾	102⅝	101⅝	102	10 ⅛	101½	101¾	101½	101	101½	100¼	101½	53,100

Pacific Mail	39	40½	38¼	39⅜	39⅛	40⅞	39⅞	40¼	40¼	51	38⅜	40¼	224,100

The Government bond market has remained strong with a constant demand for bonds from shippers. The Treasury programme for June provides for the purchase of only $1,000,000 bonds—$500,000 on the 4th and 18th each.

The holders of the bonds of the St. Joseph and Denver City Railroad Company are to have a meeting in this city on Wednesday, the 11th instant. It will be recollected that it was this Company which defaulted upon its interest last February. The meeting may bring out some developments as to the manner in which Western railroads are built. At any rate, it is pretty sure to bring together a large gathering of people, many of whom can ill afford to lose the amount they have invested in this kind of property.

The following is the "full and complete" statement of the Pacific Mail Steamship Company before referred to:

STATEMENT OF ASSETS, MAY 31, 1873.

Cash in Bank		$31,940 87	
Cash in hands Howe Machine Co., London		28,000 00	
Drafts on U. S. Navy Department remitted by agents, and collections for freight due by New York agency		66 696 00	
$100,000 U. S. 5 per cent. bonds, hypothecated		115,500 00	
Due by Union Pacific Railroad Co		67,543 82	
		$309,680 69	
LESS—			
Due Panama R. R. Co.—call loan	$100,000 00		
" May bills for supplies unpaid	30,000 00		
" " " coal freights "	20,000 00		
" Panama agency drafts accepted	16,000 00		
" In May on account of contracts, for steamers and engines	123,000 00		
		289,000 00	
			$20,680 69
Cash in hands of pursers and agents, estimated			135,876 28
INVESTMENTS—			
500 shares Panama Railroad stock, value	$55 000 00		
2 085 shares California Dry Dock, cost	101 335 99		
			156,335 99
			$312,892 86
Call loan due by Isaac Taylor, unsecured, borrowed of the Company Feb. 1867, now in suit	25,000 00		
Notes, Howe Machine Co., endorsed by A. B. Stockwell, due, $100,000 each, July 1, Aug. 1, Sept. 1, Oct. 1, Nov. 1, Dec. 1, and Jan. 1, and Feb. 1, 1874, and $40,000 May 1—all of the above disputed	840,000 00		
		$865,000 00	
Coals, amount on hand, estimated	$1,150,000 00		
Outfits and supplies on hand estimated	350,000 00		
		$1,500 000 00	
*New steamers—estimated cost of eight, built and in process of building	$4.500,000 00		
Less amount paid on account of same	2,663,881 13		
		$1,836,118 87	
Repairing wharf at Aspinwall, estimated		75,000 00	
Amount for which provision is made, in payments of about $200,000 monthly		$1,911,118 87	

STATEMENT OF PROPERTY.

REAL ESTATE, ETC.—

The Company own a large amount of valuable real estate, wharf property, etc., etc., at San Francisco, San Diego, Oregon, Acapulco, Panama, Aspinwall, Hong-kong, Shanghai, Yokohama, Hiogo, Nagasaki, etc., etc., estimated by the report recently made $2,009,831 77

Total number of steamships, thirty-four.

The Company deem it unwise to append any valuation to these vessels, it being their purpose to have them properly appraised at as early a date as practicable.

STATEMENT OF RECEIPTS, EXPENSES, AND REPAIRS FOR THE YEAR ENDING MAY 1, 1873.

Gross Receipts		$5,785,210 63	
Total expenses, including all repairs, etc., etc		4 958 521 61	
			$826,689 02
Steamers lost during the year:			
America	$1,017,942 22		
Sacramento	600,000 00	Valued as per estimates last published.	$1,657,942 22
Guatemala	†60 000		
†Less Insurance	20,000		
	40,000 00		

* Of these the *Colon* is now in service, having sailed 10th May for Aspinwall, making the voyage—2,000 miles—in seven days; average consumption, 20 tons coal per day.

† 10,000 of this amount is in suit.

The Nation.

NEW YORK, THURSDAY, JUNE 19, 1873.

The Week.

THE New Orleans *Republican*, "the official journal of the State of Louisiana," publishes what purports to be a telegram from General Dick Taylor to Mr. Kellogg, the "Governor" of that State, dated Feb. 28, 1873, in which he says: "Act boldly and generously; the President will sustain such action. Do not listen to small office-holders. Act to make friends of good people. I speak by authority. You will be sustained." This the *Republican* calls "a bombshell in the Fusion camp," and says it "smashes to atoms" the story published by the *Nation* that the President had read General Taylor a message sustaining McEnery, which was afterwards overruled by Senator Morton. About this we shall only say that our informant professed to have received the story from General Taylor's lips, and we do not think anything short of General Taylor's own contradiction ought to convict him of falsehood. It is to be observed, too, that the telegram is a collection of moral apothegms, which it seems to us very unlikely that General Taylor would pay for sending over the wires. He is a kind of man who would, we should think, transmit by mail any gnomic wisdom he had to distribute. This is as much as saying that we have not implicit faith in Louisiana politicians, not having heard of any recent religious awakening among them. We shall, therefore, suspend our judgment till General Taylor's return from Europe. The *Republican* says "the President's mouth is closed by his position," so that he cannot contradict the story. This may be, but the Honorable Oliver P. Morton's mouth is not closed either by "his position" or anything else. Why does not he utter a few wise saws on the subject?

Another thing that should be recollected in connection with this matter is the fact that in the earlier stages of the Louisiana troubles Mr. Kellogg was reported, on authority never, so far as we know, discredited, to be ready to "fuse" the decent members of his own legislature with a certain number of the McEnery members, and so set up a government that should "make friends of good people"—to use the words of the General Taylor despatch. This, to quote the despatch again, would have been to "act boldly and generously," and would precisely have been to "not listen to small office-holders." Until General Taylor's return to this country and the publication of his own account of the matter, should any such publication ever be made, we for our part shall believe that General Taylor would have been glad to see the McEnery party recognized as the true majority of the Louisiana voters; that his mission to Washington was to exert influence in favor of that recognition; that, failing this, he favored the fusion which Kellogg was understood to be then willing to make, though the "small office-holders" gave him different orders afterwards; that whether or not he ever had the President's promise to support McEnery (and it is our belief that he had), he did have, if the now published telegram be genuine, the President's promise of support for the fusion project.

July is, of all the months in the year, perhaps the most disagreeable in the Southern States. This is not merely owing to the heat of the weather, but to the fact that in July various sums of money—interest on State bonds especially—become due, and there is no money to pay with. All sorts of devices are now being resorted to throughout the South to get over this difficulty. Some time since the Treasurer of the State of Texas gave notice that a number of bonds issued by that State had been abstracted from the treasury, and were in consequence repudiated. Apparently this scheme was too simple, for we hear now that the State has "receded from the position taken." From Louisiana, notice has been sent to Wall Street that the validity of some $250,000 of bonds issued in aid of the construction of a ship-canal is contested, on the ground that the issue was fraudulent and illegal. Meantime, in South Carolina the Supreme Court has under consideration a petition of Morton, Bliss & Co., of this city, filed to compel the State Comptroller to pay the interest on its bonds by levying "a *pro-rata* tax as required by law." Some of the taxpayers, however, have filed a counter-petition, alleging that $7,250,000 bonds have been fraudulently issued, and that the bonds on which Morton, Bliss & Co. claim interest are part of the fraudulent issue. There is also talk of repudiating the entire debt of North Carolina—some $31,000,000. Indeed, repudiation seems in some of the Southern States a foregone conclusion. Property has been taxed to such an extent that no more taxes can be laid on; yet they must be laid on to pay the debts.

A curious document is in circulation in Illinois—a paraphrase of the Declaration of Independence, drawn up by the farmers. The opening paragraphs are very similar to those of the original instrument; but of course, when the farmers come to the grievances they have to complain of, the list is rather different from that drawn up by the signers of the first Declaration. The history of the railroad monopoly in this country, they say, "is a history of repeated injuries and oppression, all having in direct object the establishment of an absolute tyranny over the people of these States unequalled in any monarchy of the Old World." "To prove this, let facts be submitted to a candid world." The facts are—first, that the railroads have, corruptly and for their own gain, secured the control of the legislature, the executive, and the judiciary; they have obstructed the administration of justice for the purpose of striking terror to the hearts of the people; they have brought oppressive suits and made oppressive arrests; they have virtually cut off our trade with distant parts of the world:

> "They have by false representation and subterfuge induced the people to subscribe funds to build roads, whose rates when built are so exorbitant that in many instances transportation by private conveyance is less burdensome. They have procured charters by which they condemn and appropriate our lands without adequate compensation therefor, and arrogantly claim that by virtue of these charters they are absolutely above the control of legal enactments. They have procured a law of Congress by which they have dispossessed hundreds of farmers of the homes that by years of toil they have built up; have induced others to mortgage their farms for roads never intended to be built, and, after squandering the money thus obtained, have left their victims to the mercy of the courts over which they held absolute sway."

These are some of the complaints of the farmers, who now, "appealing to the Supreme Judge of the world" for the rectitude of their intentions, etc., etc., hereby declare themselves

> "absolutely free and independent of all past political connections, and that we will give our suffrage only to such men for office, from the lowest officer in the State to the President of the United States, as we have good reason to believe will use their best endeavors to the promotion of these ends; and for the support of this declaration, with a firm reliance on Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

There is so much exaggeration about this, and so much vagueness as to the remedies proposed, that we fear it is likely to cause amusement out of Illinois. Every one knows that the railroads are extortionate and unscrupulous, but they have not shown any desire to establish a "tyranny" in the United States such as was established in the last century by the English crown. Their aim is a very simple one, and it is the same as that of the farmers. They are trying to make money. No doubt it becomes more and more for the interest of corporations, as they increase in power, to control the State machinery. But as yet they only have attempted to control the State machinery so far as it has been necessary for money-getting purposes. No railroad that we have ever heard of has attempted to levy war on the people, and,

therefore, the pledge of the farmers' lives and fortunes and sacred honors seems rather made for the sake of the pleasing associations connected with the words, than because they anticipate what Washington and his associates had real reason to expect in case of failure. We hear of no other important movements of the farmers except that there are several indications, contained in resolutions passed by local conventions, that they are beginning to wake up to the importance of free trade. In Stark County, for instance, they have resolved that:

"To restore health to our crippled commerce, and to get a reduction of transportation tariffs by land and water to the cheapest basis of economy, it is essential that the carrying interest should have cheap materials and supplies; we, therefore, declare that the tariff duties on all materials used in building and operating ships and railroads ought to be immediately removed, giving free trade in all such commodities."

The Chinese in San Francisco have had a little discussion with the Caucasian Board of Supervisors in that city, in which the latter body has been terribly mauled, and in fact, in the slang of the forum, left without a leg to stand on. It had passed a most injudicious order, which the Mayor to his honor vetoed, directing the hair of the Chinese prisoners in the county jail to be clipped—or, in other words, their pig-tails to be cut off—which is not only about as great an outrage as can be inflicted on a Chinaman, but is of course aggravated by the fact that a pig-tail is the result of years of growth. The appearance of the order called forth a petition from the Chinese merchants in San Francisco, in which they say that it is quite plain that public sentiment to them in this country is hostile, and that the desire to oppress and harass them is strong; but that repugnance of Chinese to the presence of foreigners in their own country is strong also, which has not prevented Europeans and Americans forcing their way into China under treaties won at the cannon's mouth; that if Chinamen supplant white labor in the United States, the introduction of foreign steamers on Chinese rivers has thrown out of employment a whole army of junkmen; while foreigners resident in China are not even subject to Chinese laws, and are bitterly hostile to the country and its institutions. They therefore propose that if Chinamen are so obnoxious to the people of this country that they have to be made the objects of oppressive, discriminating legislation, the present treaties between the United States and China should be abrogated, and each country be allowed to pursue unchecked its own policy towards foreigners, in which case all commercial intercourse between them would be suspended, the Americans would have to withdraw themselves, their trade and steamers, from China, and the Chinese in this country would cheerfully return home. This would relieve the Chinese statesmen from the serious social and political embarrassments with which the question of foreign intercourse threatens the empire, and enable them to return to the ancient ways, and save the Californians all trouble and anxiety about the 15,000 or 20,000 who annually reach their shores, and do so much of their hard work. We doubt whether the Supervisors will be able to provide an answer to this.

The Massachusetts Legislature has adjourned, after a very long session, during which it seems to have earned the contempt and disgust of the people to an unusual degree. To read the jeering insults heaped upon the heads of the unhappy members by the press, one might imagine that a modern legislature was a council of rather imbecile foreign satraps commissioned to govern the people by a distant conqueror. This Legislature distinguished itself by attempting to imitate Congress in the passage of a "salary grab"; but the yeas and nays were too much for the courage of the members, and it was defeated. It passed a bill giving State aid to the Lee and New Haven Railroad, which the Governor at once vetoed, the State having, in the opinion of most people, more right to claim something from the Lee and New Haven Railroad than that corporation had to demand anything of the State. The most important question of the session was that relating to the Hoosac Tunnel. This was settled by killing the State-ownership plan proposed by Mr. C. F. Adams, jr. There is now a fierce contest going on between the Butlerites and the enemies of Butler for the appointment of the United States District Attorney, the office having fallen vacant by the death of Mr. D. H. Mason. The struggle for this bit of spoil is made the more interesting by the fact that the result will be regarded by the smaller politicians as in some sort an omen of the result of the coming contest for the governorship.

The feelings with which a sick horse listens to a congress of buzzards on a neighboring tree may be supposed something like those with which timid Massachusetts men read their last week's *Saturday Evening Gazette*. "On Friday afternoon," says that journal, "fifty-nine gentlemen assembled in the Revere House, and sat down to a sumptuous feast by invitation of Colonel Jonas H. French." On his right was General B. F. Butler, and on his left was Dr. George B. Loring; and, after the cloth was removed, Colonel French called on Colonel Hoyt, of Athol, who made a few remarks. French, by the way, is a business partner of Butler's; Hoyt is the member of the Massachusetts House who was so outraged in his better nature by Mr. Sumner's resolution about the flags of the regular army; and Dr. Loring is known to everybody; or, if not, it is not for any fault of his. Mr. Hoyt's remarks ended with a sentiment which brought up General Butler, who "made quite a long speech, in which he mainly defended his course on the salary grab," saying that he was chosen to present the bill because he was the only member of the Committee on the Judiciary to which it was referred "whose term held over"; that he was not the author of it at all; that he was "at first greatly opposed to it"; that it was not the first bill of the kind, and so forth—all of which is not nearly so lionlike as the three-cent postage-stamp performance with which he set out this spring, when popular dislike of the Salary Bill had not made itself felt, and Butler thought he could be bold with impunity. This defence being over, "General Butler squarely announced himself as a candidate for governor. He would be glad to receive all votes, but should not feel unkindly to those friends who might oppose him, though his heart would beat a little warmer for those who favored him." This is something of a departure from his usual plan, which is to declare that he "never forgets a friend," while as for his "enemies" he splits them down the back and eats them, and is a terrible fellow generally.

Dr. Loring followed Butler. "He said all that he asked and expected was permission to reoccupy the chair of the President of the Senate." This we suppose is to be understood that it is quite a mistake to say that if Butler wants Loring to help him into the State House he must "fix things" in Essex County so that Loring can go to Congress from that District; but we have no exclusive information, and the local journals do not speak with any certainty. The *Gazette* goes on to say of Dr. Loring's remarks that "he fought shy of the governorship, never once mentioning Butler in connection with it"—which to those who know the blunt, manly openness of Loring will seem singular. Among the gentlemen present at this banquet were Judge Sanger, who is said to be urged by the Boutwell-Butler clique for the United States District-Attorneyship; Major Babson, United States Shipping Agent; Mr. R. G. Usher, United States Marshal; Mr. Thomas Russell, the Collector of the Port, "who came out strongly for Butler, and was explicit and sanguine on the subject," as indeed he ought to be, Butler having in one way and another secured the patronage not only of his own District but of one or two others. The meeting adjourned at about seven o'clock, "with three cheers for Ben Butler, the next Governor of Massachusetts," which, as the *Advertiser* thinks, betokens "a rough-and-tumble fight for the control of the State government." It adds that it believes the real reason of the Butler demonstration to be that his friends are anxious to begin work, that they have been waiting for somebody to furnish them a pretext by attacking their favorite, and that, as no one has gratified them in this respect, they have had to take the initiative themselves. "There is a great power in the State," it concludes, "which

does not choose to be dragged into a political scramble at this time, but must be consulted before any arrangements for the fall canvass are completed." This is very true, no doubt; but so it was two years ago, and it did not prevent Butler from very nearly carrying everything before him.

The lamentations of the *Times* over the partial failure of the reform movement in this city, as revealed by Mayor Havemeyer's appointments and a prospect of a reunion of the two Democratic factions, have drawn from the *Tribune* an explanation of the situation of which nobody can deny the correctness, and that is, that the Custom-house publicists have fallen into their own trap. They declared as soon as the Legislature met that the victory at the election had been won by Republicans, and it was the right and duty of Republicans to govern the city. All pretence of non-partisanship with regard to municipal affairs was laid aside. The Republican orators in the Legislature proclaimed openly that the Charter must provide for the establishment of Republican rule, and the *Times'* Albany despatches from day to day laid down the same great doctrine. The Committee of Seventy was accordingly thrust scornfully aside, and Messrs. Bliss, Davenport, and Murphy compounded the great instrument under which the city was to live. Such was their contempt for the enemy that the lobbying of it was left to young Mr. Davenport, who went up and took a permanent seat on the floor of the Assembly. The result has been that they failed in making the Charter just what they wanted, and failed in taking away power from the Mayor, but thoroughly roused his animosity by their crusade against him, and, what is worse, made such an open display of their desire to use the city offices for partisan purposes that they rekindled the partisan fervor of the Democrats also, and furnished them with an excuse for using the municipal offices for the benefit of *their* "great party." So the Police Board, the most powerful electioneering engine in the city, is now in Democratic hands. Tammany and Apollo Hall are said to be about to unite, and nothing is left for Murphy, Bliss & Davenport but to weep. Not only have they lost their game, but they have lost their reputation; for people thought that, if they were nothing else, they were good "managers"; but this turns out a delusion. The *Tribune* not inaptly compares their Charter to the mountain howitzer carried by a jackass, and intended to be fired over his tail, but which was rendered useless by his whisking round whenever the fuse was lighted. We ought to say, however, that we are satisfied that we did injustice to the Custom-house publicists in charging them with having kept "Hank" Smith in office. They did their best to have him left out, but failed even in this, their virtuous confederates in the Senate being determined on retaining the great man's services. He and Charlick must have many a good laugh together at the Police Board.

There is news from Japan which one might have expected for some time past, namely, that the finances have got into such disorder, and the debt become so large, that the ministers do not know how to deal with it, and have resigned. As Japan has been doing, or trying to do, the work of at least half a century in three or four years, remodelling not her institutions only, but her manners, and adopting the most expensive contrivances of Western civilization, and this in a country in which production had already in the most important fields—agriculture, for instance—been carried almost to perfection, it was hardly to be expected by anybody who thought seriously of what such a revolution meant that pecuniary embarrassment could be avoided. Moreover, it has been quite evident for some time that the national mind had been thrown off its balance and had got into the semi-delirious condition which is best described by the phrase "enthusiasm for progress." A good illustration of its effects was afforded by Mr. Arinori Mori's proposal to Professor Whitney, that his countrymen should abandon their language and begin talking English. The *Tribune* correspondent at Yedo, by the way, reports this gentleman as having been disgraced and recalled for irregularities in his accounts and disobedience to orders, and says he has gone to Europe and will probably remain there, being afraid to return home, where hari-kari awaits him. This has been contradicted, however, by later accounts, but there is apparently some foundation for the story at least.

The English papers received by the last mail have been again at work this week at the *Alabama* question, apropos of the publication of a correspondence between Mr. Fish and Mr. Bancroft Davis, in which Mr. Fish takes notice of some of Sir Alexander Cockburn's positions, and declares that the United States will bear them in mind for future use, which the London *Times* thinks absurd and immoral. It is no doubt somewhat absurd to avail yourself of a decision in your favor by a board of arbitrators, and, at the same time, declare that you will probably, at some future day, take advantage also of a contrary opinion expressed by a minority of the court; but it is the natural consequence of that other absurdity of Sir Alexander Cockburn's, in calling himself "in some sense the representative of Great Britain." He ought not to have been in any sense the representative of Great Britain while sitting as an arbiter. We trust Mr. Fish, having now given him tit for tat, the indiscretion on both sides may be forgotten. It is not easy for "the principle of arbitration" to survive such things. Mr. Bancroft Davis declares in his letter that the principal Continental papers approved of the "indirect claims." This is a mistake. No Continental paper of prominence did anything of the kind. Nay, more, we venture to assert that every leading Continental journal condemned them in strong terms, and that a large number of them, unhappily, occasionally use them still as an illustration of the low condition of American morals. Mr. Davis will do well to stop airing the "indirect claims," and calling on mankind to admire them.

Marshal MacMahon has surrounded himself with a highly conservative Ministry, one of them, M. Magne, the Minister of Finance, being an old Imperialist, while the Duc de Broglie takes the Ministry of Foreign Affairs. The Marshal himself has promised to re-establish "moral order" in the country, and to "uphold the principles on which society rests," whatever that may mean. M. Gambetta threw a bombshell into the newly formed Cabinet on the 10th inst., in the Assembly, by producing a circular addressed by M. Beulé, the Minister of the Interior, to the prefects, making minute enquiries about the provincial press, and suggesting the employment of subsidies and other means of corruption in order to control it. Strange to say, the telegraphic reports make no mention of "advertising patronage" as one of the instruments for keeping the press straight, and yet it is one of the most powerful, as our brethren here know, and as M. Beulé might have found out by sending over. M. Beulé, like a frank reactionary that he is, acknowledged the authenticity of the circular in the most unblushing manner; but this was a little too strong, even for the Right, we presume, for he has since resigned. What is in the future is still as uncertain as ever. All sorts of intentions are ascribed to MacMahon, though we believe he will attempt no change of his own motion; but obey the Assembly he undoubtedly will, and, if it resolves on a monarchy, a monarch he will set up, and the monarch he would soonest set up is probably Henri V. The revolution—for such it may be called—has apparently sobered the Left, who are much calmer since Thiers went out. Of course, another trial of a monarchy would be a great misfortune, as it would mark the entrance of the country on another of those dismal cycles which began in 1815, and ended at Sedan; but, until there is a French public active, thinking, and interested in politics, and confident of their ability to manage their own affairs, and willing to do without a great standing army, there can be no permanent republic any more than a permanent monarchy. Prince de Joinville, in a recent speech, says the Government is doing what President Lincoln told him he was doing all through our war, "keeping the tent from blowing down, and driving in the pegs as fast as they are pulled up."

A SUGGESTION ABOUT THE CENTENNIAL EXPOSITION.

WE think the Government, in dealing with what is called "the Vienna scandal," ought to reflect on its possible effects on the great International Exposition by which it is proposed to celebrate the hundredth anniversary of the Declaration of Independence. Preparations for this are already being made on a great scale. A Commission is at work evolving plans and raising money, though we believe, as to the money, with but indifferent success. As yet, but little interest is manifested in the project by the country at large, but this is doubtless owing to the remoteness of the period at which the Exhibition is to take place, for, in our day, three years is a long time. We have little doubt that by next year popular excitement in it will begin to be roused, and the money, from voluntary contributions and stock-taking, begin to come in more freely. But it must be borne in mind that, no matter how much enthusiasm may be roused by the undertaking on this side of the water, its success will depend on the extent to which people of other nations take part in it. An International Exhibition in which foreigners do not exhibit is, *ex vi termini*, a failure. To make it really worthy of the event it is intended to commemorate, it ought to be as near perfection of its kind as the width of the ocean will allow it to be. That is, the building should contain, in great profusion and variety, the products of industry of every civilized country. Unless there is a fair prospect of this, the scheme should, before it is too late, be abandoned for one which can be carried out by American hands alone. There will be something very mortifying in issuing invitations to all the earth to rejoice with Americans over the achievement of their independence, and receiving only a partial or careless response.

Now, we mean to cast no reflection or imputation whatever on the Commission which has charge of the matter when we say that it is not a bit too soon for ostentatious carefulness about its operations to begin. Foreign craftsmen will not send their goods here unless they are assured of fair treatment in all things, and, above all, in the awarding of the prizes, and unless they are satisfied that they will not be made the victims of any species of sharp practice. It is humiliating to have to mention that just now the European public needs to have its faith in American honesty strengthened, but such is the painful truth. With regard to industrial expositions in particular, the American reputation has received a severe blow from this Vienna affair. It is not that people believe the Vienna Commissioners fair specimens of the American citizen, but they see, or think they see, in the "scandal" abundant proof that the American Government does not care what kind of men it puts in official positions. It is true they are used to the indifference to the national reputation displayed in the choice of so many of our foreign representatives; but, in all countries, strange fellows come to the surface in politics and diplomacy, and, at all events, the character and antecedents of a diplomat concern but very few persons in the country to which he is accredited. But when we come to the representatives of our art, science, and industry, it is a different matter. People expect these to be what they pretend to be, men of real distinction, sent abroad to meet other men of real distinction in the same fields. In short, to speak plainly, when the Austrians got up the Exposition, and invited other nations to send their products to it, they expected each nation to have its interests looked after by its leading artists, inventors, manufacturers, scientific men, etc. Common courtesy required that the invitation, if accepted at all, should be accepted under these conditions, and, most of all, by the United States, which makes it its boast and glory that the things it most cares for are the arts of peace, and the men it most honors those who have done most to broaden the horizon of human knowledge and increase the sum of human comforts. We have not armies or great monuments to show, but we do profess to produce the industrial man in great perfection.

The Commission which our Government sent out must, therefore, have greatly astonished the Austrians. That we should not have cared much for their feelings was explicable on various grounds, or if we had declined to have anything to do with the Exposition, that would have been comprehensible too; but that, having made up our minds to take part in it, we should send over the curious band which General Van Buren led into the old city last month, is something which cannot be made plain to the Austrian mind. One would have to take a German in his childhood and instruct him carefully in order to enable him to grasp it, because behind it there lies a view of national life, and of the relations of the Government to the community, of which no German knows anything. It is quite true that there were many very respectable men on the Commission, but there was hardly one well-known name on it, and the oddest thing about it was perhaps the selection of its chief. Mr. Fish's letter of appointment, and the General's own pathetic and somewhat amusing remonstrances on the treatment he has received, reveal clearly the fact that he was chosen for the position because of the services rendered to the Administration on the stump during the last Presidential campaign. He refers to these services himself with the most delightful naïveté, being evidently fully convinced that they gave him an ample claim to his place. That he is a good stump speaker and has a powerful voice there is no doubt; but this no more qualifies him to represent us at an Industrial Exposition than skill in fly-fishing, while connection with American art, science, or industry he had absolutely none; knowledge of European art, industry, languages, or life he had none; judgment or tact or taste his letters suffice to show that he does not possess. It is therefore not at all surprising to find that he surrounded himself with a little party of disreputable German adventurers, and carried them back in triumph to homes that had once been too hot for them, and that they, having at last and perhaps for the first time got a chance at other men's pockets, should seek to provide for a rainy day. It is not necessary to charge General Van Buren with dishonesty to make his appointment appear a sad mistake. It was the result of gross carelessness on the part of the Administration, of which they have repented, and for which they are now seeking to make amends by appointing the men they should have appointed at first. But they have appointed them with as much flurry and haste as if they never before had heard of their existence, as if William T. Blodgett, and Theodore Roosevelt, and Le Grand Cannon, and Jackson S. Schultz were men who had suddenly been discovered, and had unexpectedly produced testimonials showing their fitness to represent America at exhibitions.

There is no denying that the affair has had an unfortunate effect on the American reputation, which the suspension of the old Commissioners does not remove, because it indicates a carelessness, as we have said, in making appointments which foreigners cannot understand, and, unless we take heed, the question will be asked during the next two years, whether it is likely that if we care so little who manages our department in a foreign Exposition, we shall care any more who manages our own; and whether there is not danger that foreign exhibitors coming here will find themselves handed over to the mercies of political sharpers, rewarding themselves for party services in the pending election, and ready to sell medals to home manufacturers in commemoration of imaginary victories over European competitors.

We are repeating here what already begins to be said. In doing so, we mean to cast no imputation on the present managers of the scheme of 1876, but we do mean to utter an earnest warning against even the appearance of jobbing, or the elevation of politicians with "big hearts" and capacious lungs into positions of trust or responsibility. If pains be not taken to guard against this, the whole thing will be a failure.

THE STOKES CASE AND THE NEW LAW OF MURDER.

AT every turn, the case of Stokes becomes more and more singular. Although there are not a dozen people in New York who believe him innocent; although the murder of Fisk was committed in the most open manner in broad daylight, in a place almost as public as the street; and although he has been convicted of murder in the first degree by a jury, his hanging seems almost as far off now as it

must have seemed to himself while he was still deliberating his revenge. The reason of his present respite is even stranger than the respite itself. The Court of Appeals has ordered a new trial, chiefly because the judge, in charging the jury, found it so difficult to explain to them what the crime of murder was that he actually laid it down as law that killing Fisk under the circumstances of the case (these circumstances being the very matter of dispute) was murder, unless Stokes was able to prove it something else. This extraordinary charge the Court of Appeals very justly says may have influenced the minds of the jury improperly, and they direct a new trial on this and other grounds. When we recollect that, ever since the introduction of the offence by Cain, murder in the first degree has been a common crime, it does seem strange that at this late day it should be one of the most difficult things in the world for a man trained by society for the express purpose, to describe it correctly to another in intelligible terms.

When we are not on the bench or on the jury, there is no difficulty about it. Even when we ourselves have killed some one, we generally know whether it was murder or not; probably, if the judge and jury who tried Stokes were now to meet at an informal tea-party, all thirteen of them would take very much the same view of the case that they did at the trial. Yet the judge at the trial charged the jury in a way which was plainly ridiculous. The subject of murder, as soon as it gets into court, is enveloped in a haze of mystery. What with "design," and "intent," and "malice aforethought," to say nothing of the "wilful" character of the act, the definition of the crime seems to be one of those things which no judge can find out.

There are indeed inherent difficulties in the subject, for besides the fact that "malice," as used in definitions of murder, has a meaning entirely different from that which it possesses in ordinary language, it is obvious that there can be no malice of any sort which is not "aforethought," and that any act committed with malice must also be "wilful" as well as intentional. Definitions, however, form but a small part of the difficulties of the subject. Few people not lawyers know the almost incredible confusion into which the law relating to homicide has been thrown by the multiplication of statutes in recent times graduating the penalty according to inferences touching the condition of the homicide's mind drawn from the circumstances attending the act. In New York, one statute after another has been passed, and one decision after another has been made, until a result has been reached which is far enough removed from that which the promoters of the statutory reforms in question intended: in ordinary cases, there is no intermediate offence between murder in the first degree, with the punishment of death, and manslaughter in the third degree, with a punishment of four years' imprisonment. We have not space to examine the statutes and decisions in detail; but the statement may be taken on the authority of Mr. Henry L. Clinton, a well-known criminal lawyer of this city, whose experience has proved to him so conclusively the imbecility of the law that he has just secured the passage at Albany of a new statute introducing important amendments. Mr. Clinton says:

"Juries generally, in cases where the intent to kill (if formed at all) is formed on the instant, have to determine between murder in the first degree, punishable with death, and manslaughter in the third degree, punishable with imprisonment in a State prison for not more than four years. In the latter case, the punishment is so light that it is a mockery of justice; in the former, it is so severe that humanity—as represented in the jury-box—is shocked at its infliction. The result is, juries very often disagree. Then, again, sometimes a jury will convict of murder in the first degree, while another jury, on substantially the same facts, will convict of manslaughter in the third degree. This deplorable uncertainty brings the administration of justice into contempt. In those cases where of all others the result should be most certain, it is most uncertain."

To remedy these evils, the last Legislature passed the law recommended by Mr. Clinton. The principal alteration effected by this amendment is the division of what has been murder in the first degree into two grades, the first of which is to be punishable with death, the second with imprisonment for life. The first of these classes is to embrace all murders "perpetrated from a *deliberate* and *premeditated* design to effect the death of the person killed, or of any human being"; all murders "perpetrated by an act imminently dangerous to others, and evincing a depraved mind, regardless of human life, although without any premeditated design to effect the death of any particular individual"; and all murders "perpetrated, without any design to effect death, by a person engaged in the commission of any felony." Murders in the second degree, under Mr. Clinton's law, are to be such as are "perpetrated intentionally but without deliberation and premeditation." This act is only to apply to offences committed after its passage. The case of Stokes will, therefore, not be affected by it; but in future cases of the same kind it will become of great importance.

The only part of this act which it is necessary here to consider is the distinction between "deliberate" and "unpremeditated" murders. The first doubt which suggests itself with regard to the working of the law is whether juries will be able to discriminate between instantaneous "malice aforethought" and "premeditated" "deliberate" malice. It might obviously be in some cases a very nice question whether the act would fall under one or the other head; in those cases, especially, which have become so common lately, in which the murderer, armed with a pistol—procured, it may be, for murder, or it may be for the fun of the thing—seeks an interview with his victim, and, in the heat of conversation, suddenly noticing a "peculiar movement of the arm," comes at once to the conclusion that the victim is "going to shoot," and, without the slightest deliberation or premeditation, kills him on the spot. This excuse has been made already in the Walworth case, and if it is to make the difference between hanging and imprisonment for life, we may be sure that in the next case of murder there will be plenty of evidence of thoughtlessness on the part of the murderer—that is, supposing it to be true, as Mr. Clinton says it is, that juries still cling to the old notion that men as a rule prefer imprisonment to hanging. If, as Mr. Bovee supposes, murderers always prefer to be hung, the only difference will be that juries, when they have become familiar with this idiosyncrasy, will have a strong predisposition to believe that all murders are done with deliberation.

Every one will admit, however, that the distinction between what is commonly called a "deliberate, cold-blooded murder" and a murder committed in a tumult of passion, is a distinction founded upon a real difference; these two kinds of murders affect the feelings of the public in different ways. The horror which is inspired by a succession of crimes like those committed by the Bender family in Kansas, and the general sense of insecurity caused by such crimes as the attempted assassination of Mr. Dorman B. Eaton, in this city, are very different feelings from those caused by a murder arising out of a quarrel, or prompted by a sense of personal injury and insult, such as that which, during the rebellion, resulted in the shooting of Gen. Nelson by Gen. Davis. Nor is the distinction absolutely new. A statute similar to Mr. Clinton's was passed by the Ohio Legislature in 1835, under the provisions of which a conviction for murder in the first degree cannot be had (except in cases when the homicide is perpetrated by one engaged in the commission of a felony), unless it appears that the killing was done "purposely, and of deliberate and premeditated malice"; and it is also provided that, "if any person shall purposely and maliciously, but without deliberation and premeditation, kill another, every such person shall be guilty of murder in the second degree."

"Juries," Mr. Clinton says, "have no difficulty in understanding the language employed in this statute. Courts have encountered no difficulty in defining the difference between an intention with and one without deliberation and premeditation. In a case under this statute (State *v.* Turner), Judge Wright, in charging the jury, told them that in order to convict of murder in the first degree, they must be satisfied from the evidence: '1st, that the prisoner perpetrated the act *purposely;* 2d, that he did it with *intent to kill;* 3d, that he did it of deliberate and premeditated malice. To constitute deliberate and premeditated malice, the intention to do the injury must have been deliberated upon, and the *design* to do it *formed* before the act was done.' In the same case, Judge Wright charged the jury that, in order to convict of murder in the second degree, it must appear from the evidence: '1st, that the prisoner perpetrated the act *purposely* and maliciously; 2d, with intent to kill; and 3d, without *deliberation* and *premeditation.*' In another case (State *v.* Gardner), the same judge, in reference to

this statute, says: 'The difference between murder in the first and second degree, as expressed in our law, is found in this: to constitute murder in the first degree, the killing must be of deliberate and premeditated malice, while murder in the second degree is the killing *purposely* and *maliciously, but without deliberate and premeditated malice.*"

On the whole, the amended law, inasmuch as it will in a good many cases probably substitute convictions of murder in the second degree for ridiculous convictions of manslaughter in the third degree totally unwarranted by the facts, seems to be an improvement on the law as it was before. Mr. Clinton's act, besides its distinction between deliberate and unpremeditated murder, secures several other amendments, which we have no space to go into here. There is one point, however, which the law does not touch distinctly, and which is yet of daily increasing importance, and that is the practice, to which we just now referred, of carrying concealed weapons. This practice is, as every one knows a very common one, and is daily becoming more so in this city. So far as one can judge from the few cases that get into the courts, pistols are the favorite weapon; indeed, it has been openly stated in the newspapers, and never, to our knowledge at least, contradicted, that in a law passed by the Legislature at Albany in the pre-reform days against the carrying of concealed weapons, pistols were carefully omitted from the list of weapons it was forbidden to carry. The reason assigned for this exception was that it was absolutely necessary for the protection of life that people should be allowed to carry them. The carrying of pistols, however, has not yet had the effect of making life in general in New York secure, and it is capable of such proof as the nature of the subject admits that life in New York would not be any more secure if every man, woman, and child in the city went about their daily avocations all armed to the teeth with the latest and most improved sort of fire-arms. The practice of carrying pistols is peculiarly calculated to enhance the general insecurity, because the pistol is quite as convenient for purposes of attack as for purposes of defence. If a person is going to commit a murder, it is unlikely that in these days he will arm himself with a sword-cane. He is almost sure to purchase a pistol; if he is in the habit of carrying one, this is unnecessary.

The class of people who, in a large city, most commonly carry pistols, is composed of those very people whose habits, and pursuits, and lives predispose them to the commission of crime. Gamblers, youthful rakes who have fond recollections of Guy Livingstone's adventures and intend to better them, "policy" dealers, besides all sorts of thieves and other criminals—these are the people who habitually carry pistols and use them. Now, it cannot be said that a murder committed by one who goes about with a deadly weapon in his constant possession is the same kind of offence, even if it be committed on the spur of the moment, without previous deliberation, as an ordinary homicide. The reason why he carries a pistol is that he knows his habits are very likely to bring him into positions in which it will be convenient for him to take some one's life—not that of a particular individual, but to take life. He may therefore be said to be in a constant state of preparation for murder—a state very dangerous as well as alarming to society. It is obviously just as much for the interest of society to prevent large numbers of people going about armed as it is to prevent the storage of nitro-glycerine in the cellars of hotels. No attempt has yet been made to deal with this class of cases, and we see only one way in which it can be dealt with. When a homicide has been committed with a weapon such as a pistol—in other words, with a weapon habitually used as a deadly weapon—let this be prima-facie evidence of a criminal intent; let it be incumbent upon the person who has committed the act to explain to the jury how, why, and when he became possessed of the weapon, what his object was in carrying it, whether for self-defence or for what other reason. The jury would not then be bound to find him guilty, but might acquit him if he convinced them of the absence of criminal intent. At the same time, juries would be reminded, in a way they generally need, that people are not in the habit of carrying every day on their persons the means of death without at least a vaguely formed desire to take life. Such a law would operate as a wholesome lesson to the pistol-carrying class, and tend to make the carrying of concealed weapons a dangerous business.

REPORT OF THE CHIEF SIGNAL OFFICER, WAR DEPARTMENT, 1872.

THE appearance of the second annual report from the Signal Service was eagerly hailed by all interested in meteorology, and though disappointed at the brevity of its weather summaries, and at many imperfections, they are grateful that so much has been given them in spite of the distractions of official life and the thanklessness of pure information. The aggregates and averages of a year's reports from 64 stations distributed over this continent present some significant and instructive features, better worth considering by persons expecting to change locations for the sake of health, agriculture, or economy than any amount of isolated private information.

Before proceeding to quote from this report, it must be conceded that it contains so many obvious errors that every single statement must be accepted with some uncertainty, and all our conclusions and inferences must be qualified. Thus the latitude of Boston is reported to be 40° 20′, instead of 42° 20′; the longitude of Lynchburg is set down as 86° instead of 79°, and that of Louisville is incorrect by 1°. The average temperature for Oct in San Francisco is given at 65°, against 58° in Sept and 53° in Nov; this looks like an error for 55°. In a report for Mt. Washington on May 10, the barometer is said to have risen "40°" in three hours—a slip for 4-10 of an inch; and on May 20 it is said to have fluctuated between 34° and 37°; here *thermometer* was meant. We may give Gen. Myer credit for frankness in leaving these gross mistakes unamended, because we are thereby enabled to judge of the probability of numbers of lesser errors which cannot be seen with the naked eye. Furthermore, the statements concerning the "prevailing wind" are sadly careless, both in principle and application. The principle on which prevalence is estimated is not stated, but it is evident that pluralities alone are regarded.

An example will show how this method misrepresents. Suppose one wished to obtain testimony from this report as to how far North the trade-wind extended. He looks up two places near each other in latitude 30° to find the prevailing wind. In Lake City, Fla., this is given as SW for the year, and in Jacksonville as NE; yet, compared month by month, the winds are nearly the same in the two places; but in Lake City the trade-wind is scattered between several points of the compass, and thus loses its plurality. Again, in Shreveport, La., the months are nearly evenly divided between E, SE, and S; but S, having a plurality of 1, is termed the prevailing wind, instead of SE. Even the counting is not always correctly done, for in Leavenworth with 4 months SW to 5 NW the prevalence is assigned to the former.

But why waste half the value of an anemometer? For all climatic calculations, the important question is not how many *hours* does the wind blow E or W, but how *much* does it blow, *i.e.*, How many more miles of atmosphere pass one way than the other? Do the oceans affect the continent, or the continent the oceans? Cape May, as here reported, gives an uncertain reply. The anemometer, if consulted, would reply that the Pacific Ocean controls the climate of the land east of it, and that the continent controls the climate of the Western Atlantic; for, multiplying duration by velocity, the prevailing wind is everywhere (north of lat. 30°) from the west. The papers furnish the daily speed of the wind in miles per hour; but cannot the observers add for us the monthly and yearly anemometrical aggregates from each point of the compass? This would be worth knowing; but a mere plurality of months, when the monthly prevalences themselves are fortuitously reckoned, is entertaining reading indeed, but for scientific statistical uses it is a mockery. In the absence of help from the anemometer, the best that can be done with the report is to substitute yearly *averages* for prevalence. To illustrate averaging by some rather complicated instances: in Cleveland the monthly prevalences sum up NW 4, SE 4, NE 1, and SW 3; the first ten of these cancel each other, leaving in the field the 2 SW. Again, in Mobile, lat. 30° 42′, we find NE 2, SW 2, S 3, N 4, and NW 1. The first ten cancel, leaving 1 N and 1 NW, which average NNW. Making similar amendments throughout as a choice of evils, it appears from the report that of the 4 stations south of lat. 30° the 2 in Florida average NE and ENE winds, and the 2 in Texas ESE winds; the noticeable point being that all have north winds in winter.

The three stations in lat. 30° have been quoted. There are none in lat. 31°. In lat. 32° Shreveport and Vicksburg average SE, indicating that the trade current has been here crowded northward by the Cordilleras. Out of 52 other stations north of lat. 31°, only Omaha has an average from

the eastward half of the compass, and this exception, SSE, is undoubtedly the result of irrational counting. The same may be suspected of six places which report an average due south or north, though with several of these the circumstance may be accounted for by the station's being located in a valley running northwards, such as Burlington and Denver. It is to be hoped that the usefulness of the maps of the winds emitted by the Department may not be marred by the irregularities resulting from such cramped localities. Of the remaining 45 stations, 31 average nearly W, 3 decidedly N of W, and 11 decidedly S of W. There is not much that is worth noting about the locality of these. All the stations in the Mississippi Valley and on the lower lakes have their averages somewhat S of W; whereas many places among mountains and on the Atlantic coast record a little N of W. The three Pacific stations average as follows: San Diego W, San Francisco WSW, Portland SW. More important than these yearly averages are the differences between summer and winter, especially on the sea-board; on the Atlantic the winds are NW in autumn and winter, and SW in summer, thus rendering the cold colder and the warm warmer (Cape May is a type of this); on the Pacific the reverse tendency exists, though not so conspicuously, except at Portland, where the wind was reported NW during the 5 warmest months, and S or SE during the 6 coldest (1 month not reported).

A study of the monthly barometric reports discloses a datum more noteworthy from its sureness and universality than from its utility; at all the stations less than half a mile above the sea-level, the barometer averaged higher in winter than in summer (a result corresponding with the doctrine explained in the article on the November Wave [*Nation*, Dec. 26, 1872], that in summer the atmosphere in contact with the continents is constantly ascending, while in winter it is as constantly descending and flowing out over the oceans because then heavier than the air in contact with the water); whereas, at all stations more than half a mile high the barometer averages highest in summer. This suggests a wider law: these higher stations, being above the influence of the surface differences of temperature, are also more susceptible to the changes of pressure prevailing over the entire earth across the mountain barriers; and we infer that the aggregate terrestrial pressure is greatest in our summer, and this for the obvious reason that the sun is then vertical over continents half his circuit, while during the Southern summer he is vertical over oceans all day long, which oceans absorb his heat without increasing the tension of the air; for it must be borne in mind that the name barometer is unfortunate, because the instrument measures two interfused factors—weight, and elasticity or tension. Thus, the weight of the entire atmosphere is always substantially the same, while its elasticity is proportionate to its total temperature, and is greatest while the sun passes over the great deserts which are in the Northern-Eastern continents.

The statistics of rain report the most as having fallen in the Gulf States, which average 60 inches for the year—Mobile heading the list; next most, the stations on the Atlantic coast; thirteen stations on the Lakes average 31 inches; the stations nearest the Rocky Mountains average lowest. The Pacific stations report: San Diego 6 inches (all in winter), Francisco 31, and Portland 41. East of the mountains the most rain falls in the warm months, and the amount diminishes as the latitude increases. West of the mountains the amount increases with the latitude, and is almost exclusively in winter.

Perhaps the most striking exhibit in the report is that of the thermometer. In San Francisco the average temperature for August is less than half a degree warmer than February (56°), showing the uniformity of ocean temperature, as the prevailing wind during both months is SW. In Jan, the only month in the year when the wind there is not westerly, the average was 52°, the warmest month being 60°. The extreme difference between months, here only 8°, increases steadily as we look eastward from the Pacific coast, and attains its maximum just west of the Lakes; Duluth reporting Aug 68° against Dec 8°. Continuing eastward, we find this divergence diminished by the tempering influence of the lake water; thus, at Grand Haven the coldest month, Feb, records 22°, against 69° in Aug. These facts confirm the indication of the anemometer that the atmosphere moves from west to east in our latitude. The coldest average for the year (excluding Mount Washington, 25°) is reported from Duluth, 39°. The warmest yearly average is given at Key West, 78°. Next come Punta Rassa 74°, Jacksonville and Galveston 70°, New Orleans 69°, Lake City 68°, Mobile, Savannah, and Vicksburg 66°, Shreveport and Charleston 65°, Augusta and Wilmington (?) 63°, Memphis 62°, San Diego 60°, Nashville 59°, Norfolk 58°, Cairo and Knoxville 57°, San Francisco, Lynchburg, Louisville, and Cincinnati 56°, St. Louis and Washington 55°, New York 51°, Boston 49°. The warmest average for a single month is Galveston, 85°, in July; the coldest, Duluth, 8° in Dec. On the summit of Mount Washington, the average for Dec was only 5° less than at Duluth.

One of the appendices, 50 pages long, is occupied with statistics from Mt. Washington for the month of May exclusively (would that it were 600 pages long, covering 12 months!) These are curious, and will in several ways be very valuable, chiefly, perhaps, as furnishing crucial problems by which to test hypotheses concerning air-movements. The repeated reversals of direction of winds whose half-hurricane velocity is maintained throughout such apparent fickleness are simply amazing; we must assume that strata of wind blowing in different ways are superposed, and that these strata rise and fall past the summit; if cloud movements gave indications of this, the report should say so. Comparative reports are given for every hour of daylight, between the base and summit; and six times a day the phenomena from Portland are given for comparison of the weather at the sea-level. These tables are the most valuable part of the book scientifically, and would be more so if reports could be obtained from stations at intermediate altitudes, as the summits of Mounts Moosilauke and Starr King. There is one serious omission—the non-statement of two facts essential to interpreting the winds at the base of Mount Washington, viz., the "bearing" of the mountain from the vane, and the direction in which the valley slopes at the spot. Ten pages of diary, kept both at base and summit, are printed entire. They are interesting only from the matchless wildness of the scene attempted to be described with a hopeless lack of method and precision. A few preliminary definitions for the writer's own admonition would have rendered this journal as graphic as one of Turner's paintings of similar storms.

The details of the mountain observations cannot be advantageously generalized here. They must be studied in connection with the tri-daily maps of the baric areas, and interpreted by the movements of those areas. Of the residue of the Report there is not much worth saying. Accounts of expenses and specifications of instruments should only be told to the auditor; the "general public" is not in a situation to judge. In devoting thirty-two pages to a "Manual of Military Telegraphy," General Myer seems to forget that no citizen can co-operate with him without first enlisting. Twelve more pages are spent in exposing the "Cipher used for the Telegraphic Transmission of the Weather Reports." Instead of describing so much red tape (which doubtless saves time and money, and lessens the necessity of good-sense and thoughtfulness), amateur meteorologists (and who is not an amateur meteorologist?) would have preferred to be told what principles of weather-forecasting had proved most successful. We might have ascribed this omission to exalted discretion, had not "Paper N" been inserted, "compiled from various authorities," without comment, though containing the obsolete twaddle about "the great upper current or stratum of warm and moist equatorial atmosphere"—higher than the highest mountains, of course, for there is perpetual *snow* on them and vegetation not strictly equatorial. The reason why no principles of weather-forecasting are discussed in the Report probably is that none are used at the office, unless empiricism is a principle; it is certainly preferable to any principles not exquisitely apprehended, and it has given the Signal Service a high reputation for prophetic accuracy in popular estimation, and an average verification of 77 per cent. according to the Report. The method of prediction appears to be to assume that a storm will "follow its nose," *i.e.*, continue moving in its reported direction (and it usually does), and that it will bend where previous storms have bent. This method is sensible and modest—unless it professes to be scientific, and boasts of a success for which it has to thank the lately deceased discoverer of telegraphy. The mistakes which under an empirical method will always occur whenever circumstances are peculiar, might mostly have been avoided by an application of the laws regulating the movement of areas of low pressure. Two occasions of error have occurred frequently enough to be specified: first, the Office does not know that areas of low pressure are repelled by the isothermal of 32°; and, secondly, it does not realize how strongly the cold surface of the Atlantic attracts such areas in spring and summer; during the past month (May) it has several times predicted that a storm in New York State would travel eastward, bringing over southern New England SW winds and occasional rains. But instead of this, the winds have been easterly and the skies clear, because the storms bent southeasterly over New Jersey, leaving New England outside the area to the northward.

But scientific enthusiasm would be very uncomfortable at Washington, especially in the War Department, and we shall be better contented if we do not expect perfection from our new apparatus. A private enterprise could work at much better advantage. If a president of a large telegraph company should choose to organize a corps of observers and calculators, he could secure more skilful co-operation, and attain a higher degree of success. However, in spite of the blemishes which always accompany political shirking and American thinking, and which are therefore considered no disqualification in an American office-holder, the Report as a whole may be commended as one of the choicest products of modern civilization.

Correspondence.

A REPUBLIC'S INGRATITUDE.

To the Editor of the Nation:

Sir: In your notice of the late Chief-Justice, while contrasting his administration of the Treasury, during the late war, with the financial management of the War of 1812, you say:

"Indeed his action appears titanic, when we contrast it with the feebleness which in 1814 brought the Treasury to absolute bankruptcy, and threw the support of the Western Army upon the charity of a contractor, whose advances by the way have never been repaid to this day, and who paid for his patriotic credulity by being reduced from great wealth to insolvency, and dying in the debtors' prison in Washington, vainly memorializing Congress for justice."

The contrast thus suggested is just, and reflects great and merited honor upon Mr. Chase; but I think there are two historical errors in the above quotation.

From your article, I presume you refer to Colonel John H. Piatt, of Ohio, who on the 26th January, 1814, contracted with the Secretary of War to supply and issue all provisions that should be required for the use of the United States at all points where troops might be stationed within the States of Ohio, Kentucky, and Michigan Territory, from the 1st of June, 1814, to the 31st of May, 1815. Not long after this contract was made, a sudden revolution occurred in the financial affairs of the country which ruinously affected the contract with Colonel Piatt. The suspension of specie payments and other causes increased the price of provisions to more than double the rate of the contract. But Colonel Piatt, at great personal sacrifice, concluded to furnish supplies in accordance with his contract. In the month of December, 1814, two hundred thousand dollars of his drafts were lying dishonored and protested at Washington from the mere inability of the Government to pay. Both in law and in equity he was entitled to a release from his contract by this failure of the Government. But he continued to supply the army according to the letter and spirit of his agreement, though the treatment he received at the hands of the United States is a sad commentary on the reckless neglect with which the Government frequently treats its honest claimants. Still, you are in error in saying that his advances "have never been repaid to this day." An elaborate report was made on the subject by a Committee of the House of Representatives, May 3, 1823, in which the facts were fully set forth, and in the following year a law was passed authorizing the payment of $63,620 48, the balance due to Mr. Piatt's estate, as found by the Committee. Colonel Piatt died here in Washington, in 1820, and, as you say, died insolvent, but I think you are in error in saying that he "died in a debtors' prison."

Very truly yours, J. A. Garfield.

Washington, D. C., June 3, 1873.

[General Garfield correctly states the facts, as we understand them, down to the payment of the $63,620 48, "the balance due to Mr. Piatt's estate." But it is an error to suppose that the payment of that balance was for rations furnished to the *army*. Colonel Piatt had on several emergencies furnished rations for *citizens* and *Indians*, and the payment authorized by Congress in 1824 (the Act to which General Garfield alludes) was for the balance due for those rations exclusively. As to the army rations furnished by Colonel Piatt, Congress has always stood upon the letter of the written contract, although that contract was forfeited on the part of the Government and abandoned by both parties. We make this assertion on the faith of an affidavit we have seen in print by the late Justice McLean of the Supreme Court of the United States, in which he narrates how he, then a member of Congress, accompanied Colonel Piatt to the Secretary of War for the purpose of notifying him that no more rations would be furnished; and how Mr. Monroe disclosed to them the bankrupt condition of the Government, and implored Colonel Piatt not to abandon them, but to furnish the rations absolutely necessary to keep the Northwestern army in the field at any cost, and trust to the honor of his Government to make him whole. Judge McLean (and certainly no man could produce a more scrupulous witness) expressed in this affidavit his own bitter regrets that he had allowed Colonel Piatt to proceed without exacting from Mr. Monroe a formal obligation on the part of the Government. We should add here, that while Colonel Piatt was in extreme penury, the Government brought an action against him on some old account of his as commissary for an alleged balance of about $40,000 and had him arrested in a civil suit, and that Congress did then have the grace to interpose and pass an act (in 1820) allowing a portion of his claim for army rations to be set off against this, and the suit to be discontinued. But the balance then remaining due to Piatt, of about $130,000, as adjusted and settled by the Comptroller of the Treasury, has never been paid. As to his dying in the debtors' prison in Washington, we have no personal knowledge, but we have seen a memorial under oath from his family, which states that he died in Washington while under arrest for debt, and in the custody of the United States marshal.—Ed. Nation.]

THE PLUNDER OF PHELPS, DODGE & CO.

To the Editor of the Nation:

Sir: There has been a very extensive discussion of the Phelps, Dodge & Co. case in your columns upon *one* side of the question, and if possible I would like to agree with your view of their *intentions*. The following point, however, has not been explained satisfactorily. The United States statute concerning fines, penalties, and forfeitures provides that any one who shall have incurred a forfeiture may prefer a petition to the District Judge, setting forth the circumstances of his case, and pray that the same may be mitigated or remitted. Thereupon the "said Judge shall enquire in a *summary* manner into the circumstances of the case"; the facts found are annexed to the petition, and transmitted to the Secretary of the Treasury. "*who shall thereupon have power to mitigate or remit such fine . . . . if in his opinion the same shall have been incurred without wilful negligence, or any intention of fraud in the person or persons incurring the same.*" Although this matter is discretionary with the Secretary of the Treasury, yet the practice is uniform to remit all forfeitures where there is no intent to defraud. I do not believe an exception to this rule can be pointed to. The Secretary is guided as to his facts by what the District Judge has found. Now, every one knows that Judge Blatchford in all cases gives the importer every advantage which the law allows, as he rightly should do. Now, can any sane man, in the face of this, say that Messrs. Phelps, Dodge & Co. felt confident in the innocence of their intentions? Are merchants in the habit of paying $271,000 where they can, if innocent, avoid paying more than $1,500, by submitting to an investigation? They could suffer no inconvenience in their business by doing so, for the papers relating to the matter had been *already seized*, and the proceeding provided for by the Act quoted is a speedy one. Nor can any ignorance on their part be alleged (and this is the excuse put forward for making the settlement), because their attorneys were Messrs. Wakeman and Latting and Judge Fullerton, all of whom are thoroughly conversant with the provisions of the revenue laws. In discussing this matter, let us put aside the character and standing of Messrs. Bliss and Jayne and of the informing clerk. It is low enough, doubtless, but it is indifferent to the question. Nor is the *amount* of the alleged fraud of such importance as would seem. The object in cases similar to these is not so much to defraud the Government as to *undersell the market*, and a very slight undervaluation will accomplish that object in some branches of business. I hope that it may be possible to explain this away, but it must be confessed it has an ugly look. (Statute referred to was passed March 3, 1797, § i. See 1 'Brightly's Digest,' 280.)

Yours, etc. L.

P.S.—I would call your attention to a very dirty trick alleged to have been performed by the Custom-house Ring in this connection. Having a grudge against Judge Davis, they succeeded in putting off the acceptance of Phelps, Dodge & Co.'s offer of settlement until January 2, two days after his term of office ceased. Their friend and co-patriot, Bliss, thus obtained Judge Davis's share of the spoil. So it is currently reported.

New York, May 29, 1873.

[There are various solid objections to the course suggested by our correspondent. The proceeding before the Judge is not a trial in the proper sense of the term, controlled by law; it is a sort of arbitrary enquiry, in which the importer has no rights, and in which, in case the decision goes against him, he has no further remedy. Moreover, the ultimate decision rests, after all, with the Secretary of the Treasury, who may abide by the Judge's finding or not as he pleases; in other words, the only appeal from the Judge's verdict lies to the attacking party himself, and it is a matter of familiar experience that in all these cases the Secretary is sure to stand by his subordinates, and it is the custom of the Judges to decide for

the Government wherever they learn that the Custom-house is desirous that they should do so. In fact, the question of fraud about intent is in practice never submitted to the Judge, except when the Custom-house and the importer have already come to an amicable agreement. It might, perhaps, be safe for one of the ordinary "brood of importers," as Jayne calls them—that is, an obscure or poor man—to go into a process of this kind, and trust to the Secretary's mercy. But Jayne's first report showed clearly that the Custom-house people had determined that the Dodges should not escape—the game was too large. Moreover, Butler and Conkling and other Republican magnates had been retained as "counsel" in the case, and it was clear that Jayne and his confederates meant business. Butler was in the pay of one of the possible recipients of the Dodge plunder, and he was at the same time "working" for Boutwell for the Senatorship in Massachusetts, so that the worthy Secretary was, of course, very doubtful about the wicked importers, and very severe, and would have been very sorry to let them off easy. The agreement to pay so large a sum was, we admit, weak and foolish, as it now appears; but it must be remembered that it was made by men whose nerves were shaken by the sight of the combination against them; who saw their good name perishing day by day; who were in total ignorance of the nature and extent of the charge against them—that is, of the character, or amount, or circumstances of the alleged "frauds"—because the worthy Jayne had filled a wagon with their books and papers half an hour after he made his accusation, and carted them off to a retreat of his own, where he and a few select friends were examining them at their leisure. An indefinite prolongation of this situation would of course have been ruin for any house. It meant the suspension of the business, and Jayne might have prolonged it indefinitely. The Dodges, therefore, did what most nervous men, with plenty of money, would have done under the circumstances, and what men do, in short, when they are carried off by brigands in Greece and Italy. They said, Let us know the amount you will take to give us back our books, and let us out of your hands, and we will pay it.

The notion that a fraud of $1,600 on a business of $30,000,000 would have enabled Phelps, Dodge & Co. "to undersell the market" is simply ridiculous. There is no use in discussing it. "The dirty trick" to which our correspondent alludes we believe was not played. Judge Davis refused to participate in the division of the Messrs. Dodge's property from the beginning. An honorable man can hardly go shares with a detective like Jayne in a job of that sort. We believe and hope that the affair will be investigated in Congress next winter. The act under which these things are done was really drawn up by these New York detectives, who despoil the merchants, and passed by Congress with little consideration. We believe, however, that one of the Senators (of that day) who was most prominent in procuring its passage is now very much ashamed of his work, and means to devote himself heartily next winter to the abatement of the nuisance.

The small amount of attention the subject receives from the public is one of the bad signs of the times. When a French writer or politician is arrested (we are now describing something which happens in Paris nearly every week) for some offence against the Government, his papers are seized and carried off at the same time, and he is locked up without being informed of the charge against him. Often, after weeks of confinement, and prolonged and minute examinations, every day, about his doings and sayings and associations, by a *juge d'instruction*, he is discharged without ever learning of what he was accused, and his papers and letters are restored to him without the slightest hint of what it was supposed they would reveal. No American or Englishman in Paris hears of such cases without a throb of indignation, without thinking of his habeas corpus and his bill of rights and his amendments to the Constitution, with his pocket-handkerchief to his eyes. Nevertheless, the papers and letters seized in this way in France are submitted for examination only to a magistrate sworn to do justice, and paid by a fixed salary, and having no interest in the case but a professional one. Now, the successful resistance to "general warrants" in Wilkes's case is one of the famous incidents in the history of the common law, and the doctrine laid down by the English courts in that case was solemnly embodied twenty years later in the Fourth Amendment to the United States Constitution, which declares that "the people shall be secure in their persons, houses, papers, and effects against unreasonable searches and seizures, and no warrants shall issue but upon probable cause supported by oath or affirmation, and *particularly describing the place to be searched and the persons or things to be seized.*" Jayne, however, executes warrants by the dozen every winter, in which he makes no pretence of describing the things he is to seize. The law allows him to "descend" upon all a man's books and papers without specifying the thing he seeks, but for the mere purpose of hunting up materials for a charge, exactly as the French police do. But this is not all, nor the worst. In France, the papers are examined by a judge—that is, by an educated and generally honorable and, as far as money is concerned, wholly disinterested functionary. In America, they are examined privately by a common detective, assisted by a few other persons of more learning, but all bribed to find out proofs of guilt by a prospective share in the criminal's forfeited property, and who are under no obligation to tell the owner of what it is that they suspect him. We say deliberately that there is nothing like this to be found in the jurisprudence of any civilized country in our day, and that in view of it the apathy of the people is something really alarming.—ED. NATION.]

Notes.

THE American Philological Association will gather together at Easton, Pennsylvania, the seat of Lafayette College, on Tuesday, the 22d of July, at three o'clock in the afternoon. Whoever wishes further information should address himself to one of the following-named gentlemen: Prof. G. F. Comfort, Syracuse, New York, who is the Secretary of the Association; Prof. R. B. Youngman, who is the Secretary of the Local Committee at Easton. The offices held by the two gentlemen indicate the character of the enquiries proper to be put to each.——Not less than four hundred persons have applied for admission to Harvard College at the approaching examinations. This is unexampled in the history of collegiate examinations in this country.——Part 13 of Stieler's 'Hand-Atlas' has been received by Mr. L. W. Schmidt. Greece, the Malayan Archipelago, and a fourth section of the United States (Southern California, Arizona, and New Mexico) make up the usual three maps. Petermann's *Mittheilungen* of May 8 has a timely map of the Russian campaign against Khiva.——We copied a too obvious typographical error of the *Athenæum's* in giving the proportion of readers in the British Museum per 100 instead of per 1,000 in our Notes last week.——The Boston Public Library has just finished, in a supplementary list, its catalogue of the Tosti collection of engravings presented to it by Mr. Thomas G. Appleton. A few copies have been printed on tinted paper.——Scribner, Armstrong & Co. publish in a separate volume the Index to Dr. Charles Hodge's 'Systematic Theology.' It is minute enough to be called a summary of the work in question.

—Mr. Edward Magill, President of Swarthmore College (a Quaker institution near Philadelphia, at which both sexes are educated), being surprised by President Eliot's recent statements concerning coeducation at Oberlin, addressed a letter on the subject to the head of the latter college. President Fairchild's reply has been published, and the substance of it is that he finds President Eliot to be laboring under some misapprehension with regard to Oberlin. He says the special "ladies' course," which by far the greater number pursue, was adopted at the founding of the school, whereas the admission of women to the full college (classical) course was a subsequent matter. Since 1837, when four first entered it, it has been pursued by numbers varying (by no discoverable law) from 10 to 36. "No special influence is used with the young ladies. They select their own course, with such advice as they choose to seek." The story of the matron who said she would not have her own daughter follow the classical course, is denied, on her direct authority, by President Fairchild. It appears to be a fact, however, that the girl did choose the other course. "Several of the professors have given their daughters the classical course, and others are arranging to do the same." But, says President Fairchild, "it should be understood that the ladies' course involves about five years of study, after a common-school education—*i.e.*, four years after one year of preparation." As for

reaction, he sees no sign of it among pupils or teachers at Oberlin or in any of the schools of the West which have adopted the system. At Ann Arbor "one of the professors told me that almost all the professors were opposed to the arrangement at the outset—now, not one."

—Harvard College is not the only place where the portentous woman question thunders at the gates. Indeed, the name of no inhabited place on this planet occurs to us at the moment as being entirely free from some phase of this delightful discussion. The latest news we hear of it comes from Simlah in the northwestern part of British India. In that mountainous region, the objection of some of the sex to being burnt alive, and the determination on the other hand of some of the more conservative sisters that no man should take from them the right to be burnt, long ago plunged Hindu society into convulsions. The result was the abolition of the practice in India, though, with great inconsistency, the Home Government freely permits it in the United Kingdom, as may be seen by the French journals. These periodicals, every month or so, narrate how the young Hindu wife of a distinguished gentleman, just deceased, who formerly was in the employ of the Indian Government, insisted when he died on burning herself at his country-seat in Yorkshire, and that, despite the persuasions of the relatives of the deceased, she caused a pile to be erected, and ascending it with astonishing tranquillity completed the sacrifice. At the present writing, the people of Simlah are deeply excited about what is called the Hindu Widow Unchastity Case. Or, rather, one-half the community is deeply excited, its feeling being one of joy, while the other half is stupefied with grief and affright. This is because the High Court has decided that a Hindu widow who takes a lover does not thereby forfeit her late husband's property. The majority of the court decided that as neither in the Sanskrit Scriptures nor the canon law could they find any absolute and express text commanding the disherison of a widow because of her living an unchaste life, the woman involved in the suit should keep the property in her possession. This naturally occasions the orthodox Hindus to ask of each other the old and oft-repeated questions, "What next? Where will this end?" and to answer them in the customary manner. As the forefathers of these Hindus, when they ordained that the widow should retain the property of the husband, by no means intended that she should enjoy herself with the proceeds of it, but, on the contrary, that she should expend it all in oblations for her husband's spiritual good, it will be seen that the party of order has ground for grave uneasiness. The decision of the court leaves to the lady her money and her lover, and meantime the situation of the unfortunate deceased, destitute of oblations and other ceremonies necessary to his comfort, may better be imagined than described. But, on the other hand, all the members of the party of advanced thought are greatly pleased. They point out that if the lady had remarried, as she ought to have done, and wished to do, she and the second husband, having thus shocked the susceptibilities of the orthodox, might very likely have been proclaimed outcasts with beat of tomtom, and forbidden approach to the sacred tanks; or if not, might have been privately cut off from access to the washerwoman and the barber, and deprived of all society and happiness in life except conjugal—and what degree of bliss the happiest married life could afford without the washerwoman and shaving is fully understood only by a pious Hindu gentleman.

—The relation between Hindu funeral rites (especially widow-burning) and the retrograde course of Hindu legislation in regard to the property rights of married women in India, has been treated of in a recent lecture by Sir Henry Maine, on the early history of these rights among all peoples. For a very interesting summary of this important discussion, we would refer the curious to an article in the *Athenæum* for May 31. "It is a remarkable legal phenomenon that the separate property of a wife seems to have been fully recognized in Hindu law at a period relatively much earlier than among the Romans; but a more anomalous and remarkable phenomenon still is that the institution, instead of having been fostered and developed, as in the West, has been mutilated and dwarfed by the later jurisprudence of the East." This partial emancipation and subsequent relapse (due to priestly influence) Sir H. Maine calls a surprising passage in legal history. To quote his conclusion, in the words of the *Athenæum*:

"Civilized society, in steadily enlarging the personal and proprietary independence of women, and even in granting to them political privilege, is only following out a law of development which it has been obeying for many centuries. Society, which once consisted only of families, recognizing individuality neither in its male nor in its female members, will not have arrived at the condition in which the recognition of individuality is complete, until it has fully and finally assimilated the legal position of women to that of men, and banished from the rights and capacities a classification resting on so unphilosophical a basis as sex; all propositions whatever, as Sir H. Maine observes, respecting classes so large as sexes being philosophically valueless and untenable."

—The *Athenæum* states that the late Mr. Grote was the author of a treatise tending "to invalidate the claims of natural religion to the support of reasonable men," and entitled 'Analysis of the Influence of Natural Religion on the Temporal Happiness of Mankind.' It was published in 1822, under the pseudonym of "Philip Beauchamp." The fact is of interest, taken in connection with the announcement of Mr. Mill's posthumous work on Theism. The *Athenæum* tells also of a correspondence carried on by Mill with Auguste Comte—"the most curious, perhaps, in which the former was ever engaged." Comte held that "the intelligence of women amounted at best to only a small instantaneous sagacity," to which, of course, Mr. Mill could not assent. The discussion lasted for some months, and was conducted in French, "a language which Mill talked and wrote fluently and admirably."

—We learn from the *Pall Mall Gazette* that the statement made forty years ago by Dumont, the disciple of Bentham, that he had aided the great Mirabeau in the production of his speeches, was probably a true statement, although it was scouted at the time. For M. Philippe Plan, a keeper in the Geneva Library, has discovered a series of unpublished papers written by Mirabeau himself which puts the matter nearly beyond doubt. These papers were in the collection of Reybaz, now in the possession of the Geneva Library. Mirabeau's letters to Reybaz make it certain that he received from Reybaz, in a state of complete preparation, many of the orations which, having learned them by heart, he afterwards delivered with all the fire and passion of improvisation. Now, it is well known that, like Reybaz, Dumont was in constant correspondence with Mirabeau and assisted him in journalism, and he was a man of so high character that in reality there has for some time been no uncomfortable degree of doubt as to the correctness of his assertion, and the "find" is welcome rather than necessary.

—The "Claimant" seems to be having rather a hard struggle of it in what he calls his contest "with the government and the purse of the nation." The prosecution have brought forward a number of witnesses by whose testimony it would appear proved that the claimant is in reality Arthur Orton, alias Tom Castro, formerly a humble resident of Wapping, and sometime a butcher in Australia. Besides the moral damage done by this testimony, the claimant's exchequer has suffered heavily during the long litigation, and in fact—were it not for an ingenious device to which he has just resorted—he would by this time have no money at all. Having first applied to the Government to supply him with funds, and his appeal having been naturally refused, he enquired of the judges who are trying him "whether it would be considered contempt of Court if he appeared at some of the theatres and simply read the answer of the Home Office to his memorial," for the purpose of raising money from the curious or sympathetic spectators. The Lord Chief-Justice declined to state in advance what the Court would consider contempt, and the claimant has since appeared at some of the East End theatres with his friend, Mr. Whalley, and has read the cold, heartless letter of the Government to crowded houses amid enthusiastic applause, while crowds have assembled in the streets to cheer him as he drives to and from the theatres. The people evidently regard his attempt to get possession of the Tichborne estates as a praiseworthy effort to break down caste. From the East-End point of view—and it is a point of view of which the East End is not the exclusive owner—the question who is legally entitled to the estates is a matter of little or no consequence. What is of consequence is that Tom Castro, who is one of the people—if not an East-Ender, at least, a butcher—really wants it, and so we may say, speaking *more hibernico*, that he ought to have it because he is not entitled to it. Perhaps those of the East-Enders who are of a more reflective and analytic turn of mind may also consider that as the real Sir Roger is at the bottom of the sea, and some one obviously ought to have the property, it is fairer that Tom should have it than that the antiquated system of rules invented by aristocrats and known as the Law should determine the succession. One of the Wapping witnesses seems to be of this sort. He said that since the commencement of the first trial he had been praying to God daily to give him grace to tell the truth. The truth was that he knew the defendant all along to be Arthur Orton, and, grace having finally been vouchsafed him, he has come out with it.

—It is not difficult, even for an observer three thousand miles off, to apply the term "revolution" to the late change from Thiers to MacMahon. To an observer on the spot, especially to one who had witnessed the siege and the Commune, it was revolution undisguised by its peaceful concomitants. The admirable Paris correspondent of the *Perseveranza*, having had this double experience, fell at once into his siege habit of paragraphic diary, with hourly entries, not knowing how soon he might be thrown back upon carrier-pigeons and balloons for the transmission of his letters. Writing May 25, his first reflection is that yesterday, the day of the change of Government,

was the second anniversary of the taking of Paris by Thiers; that on the 18th of May, 1871, in the suburb of Montmartre, he, the correspondent, had met bands of armed Communists shouting *A bas, Thiers!*—while yesterday afternoon, May 24, 1873, after the news from Versailles, the sergents-de-ville on the boulevards were busy dispersing a radical mob who cried *Vive Thiers!* and *A bas la Droite!* "I went to sleep," he says, "thinking that in this country he who does not become a sceptic in politics, and perhaps in other matters, is a lucky fellow." The morning brought another reflection, which was that hardly three years had elapsed since the surrender at Sedan, and here we have as the issue of a most momentous crisis a general of the Empire at the head of the Government, and a minister of the Empire in the ministry. He concludes that an Imperial restoration seems most probable of all: first, because the Empire by tradition attempted *social* progress; second, because its power was longest exercised, most recent, and most deeply rooted; finally, because its principal leaders are bolder and less scrupulous than those of the other parties.

—Numerous are the stories which begin to be told concerning Manzoni. Those which recall his life-long devotion to the principle of Italian unity are naturally prominent. He was the first *unitario*, and he never would admit of any compromise. Twenty years ago, when the condition of Europe and of the various populations of the Peninsula seemed to point rather to an Italian confederacy, Manzoni opposed it, saying that federation was an ugly utopia (*utopia brutta*), unity a beautiful one. At Milan, as one of the shining lights of Catholicism, he was often visited by French ultramontanes, who found conversation with him all very smooth till they began to "mix politics with religion," as we should say; that is, to argue for the inviolability of the temporal power. A certain French Benedictine priest who was thus denying Italy's right to Rome, was asked by Manzoni if he would have admitted the Pope's right to the temporal dominion of Avignon—of Paris. There was some petulance in the reply: "Oh! that's a different thing! France is France, and Italy cannot—" "But we too, my father," interrupted Manzoni,—"we too were born somewhere!" Long ago, when a young man, he undertook to write a history of the French Revolution, with which no person living had, perhaps, so minute acquaintance in all its details. As he grew older, however, he became more and more critical of his style, and wrote and rewrote almost endlessly, so that of the projected work, or, to speak more accurately, of a comparison of the French Revolution with that of Italy, there remains in a finished condition only the introduction and the first chapter. A hundred pages additional failed to receive the author's final touches; but we presume the whole will soon be published together.

FISHER'S REFORMATION.*

IF we would do justice to this work, we must allow Dr. Fisher himself to explain to us its purpose and methods. As a mere history of the Reformation, it would be too condensed for general readers, but it is intended rather to present to "*intelligent and educated* readers the means of acquainting themselves with the origin and nature, the principal facts and characters, of the Reformation"; while the historical student is guided to further researches by numerous notes and references. The book is also enriched by a good index, a copious chronological table, and a very useful "list of works on the Reformation," both as a whole and as a part of the history of separate European nations. The value of such a catalogue can only be duly appreciated by those who have themselves traversed this wide and intricate region of modern history.

But Dr. Fisher's work is by no means a dry summary of facts and dates, with notes and tables of reference; it is a philosophical commentary, clearly and often eloquently written, upon the causes, the inmost nature, and the permanent effects of that great revolution, at once political and religious, intellectual and spiritual, which not only determined the future of Europe, but laid the foundations of liberty and energy in the New World. The very success of the Reformation has somewhat obscured its own history; it has raised us almost too far above the plane in which the reformers themselves were moving; and it has given to us such a standard of morality, and above all of truthfulness, that we can scarcely do justice even to the very men to whom we are indebted for this standard by which we judge them. One of the most conspicuous characteristics of the sixteenth century was its almost incredible treachery, so that, outside the narrow circle of the reforming *divines*, scarcely one of the great actors in that stirring up could be trusted. The Pope himself could not be trusted to withhold material aid even from Lutherans or Turks when he believed that he could make use of the church's enemies for the purposes of his own ambition. The Reforming princes could never be trusted not to abjure the Reformation and sacrifice their Protestant subjects and allies whenever the Pope, or the Emperor, or the King of France, seemed either dangerously strong or dangerously weak. The most beneficial compromise was the result, not of a spirit of toleration, but of supposed political convenience; and while other opinions and creeds were in a state of perpetual flux and change, this one belief was permanent and invariable—that it is the right and duty of the ruler to persecute all those who refuse to accept the authorized religion. We find it very difficult to do justice to persecuting Reformers and to the statesmen who habitually made use of the awakening love of truth and loyalty to every honest conviction of the soul for the purpose of cloaking their own treachery.

The author has brought into prominence the fact, which was a principal source of the strength and a condition of the success of the Reformation, that it was a political not less than a religious movement. Mere opinions and beliefs, however just and sacred, can become dominant only by means of the organization of society. There were many "reformers before the Reformation," but their influence was unable to secure expression, positive or negative, in the laws and constitutions of states, and was therefore feeble while it lasted and soon came to an end. Moreover, whereas now we are in the habit of regarding the individual as the unit of which the state is a multiple, in the sixteenth century the state was the unit of which the individual was a mere fraction. For evil and for good, kings and emperors, no less than divines, had their share in the Reformation work. "It presents a twofold aspect. On the one hand, it is a transformation in the church, in which are involved contests of theologians, modifications of creed and ritual, new systems of polity, an altered type of Christian life. On the other hand, it is a great transaction in which sovereigns and nations bear a part; the occasion of wars and treaties; the close of the old and the introduction of a new period in the history of culture and civilization."

Dr. Fisher's chapter (chap. ii.) on the rise and decline of the Papal hierarchy is a very able and judicious summary of a long series of events at once connected together and illuminated by clear principles. It is a too conspicuous failing in Protestant historians that, for the most part, they do scanty justice to the vast and most beneficial influence of the Papacy upon Christian civilization. The Bishops of Rome have again and again been unable to perceive the inmost nature of the great work which they were called to perform in the development of the human race; and hence, by the rigidity of their rules, and a jealous adherence to "the letter" when it no longer adequately expressed "the spirit" of Christianity as a social force, they have striven to undo or to neutralize their own achievements. Yet that very same spiritual power which raised the church to supremacy, by which it conquered both the empire and the barbarians, which may be resolved into the practical and constant recognition of the supremacy of the divine law and of the brotherhood and unity of mankind in the divine family, this was the very same power which built up, out of the ruins of the empire, a system of independent nations, with their own territorial boundaries and special work, yet still constituting the larger divisions of one family, the larger members of one body. The church represented by and almost debased into a papacy could not perceive this, and set herself to oppose the growth of nations; therefore she was dethroned, like the primeval gods of the old mythology, by her own children. Yet even in the midst of this great revolution of society, the perils and sufferings of so vast a transition were greatly mitigated, if not by the papacy, by the church. The clergy, and especially the bishops, were the chief agents by whom the exuberant physical force of the barbarians was turned and softened. We may almost be inclined to ridicule the wholesale baptism of a horde of pagans; but it was really, and not only in a technical sacramental sense, a new birth—the symbol of new ideals, and an acknowledgment of the "unresistible might of weakness."

There were other "special causes and omens of an ecclesiastical revolution prior to the sixteenth century" besides the formation and consolidation of nations; such, for instance, as the various sporadic protests against excessive formalism, sacerdotalism, and rigid dogmatism, and also the revival of learning and "humanism." Dr. Fisher has done justice to both these sets of causes, while clearly exhibiting their comparative feebleness, and showing how they often seemed rather to impede than to further the Reformation. Mysticism, especially, is compatible with almost any *form* of religion, and perhaps dreams itself away into spiritual ecstasy most deliciously by the aid of a gorgeous ceremonial saturated with symbolism. "Humanism" was embodied in Erasmus, whose portrait is exceedingly well drawn by Dr. Fisher. "He was a typical latitudinarian," a "time-server on principle." He himself admitted that he could have been an Arian or a Pelagian, if the church had so decreed, and that he was not the stuff of which martyrs are made. His estimate of men and movements was æsthetic, not moral or religious. His aversion to evil scarcely amounted to hatred. He could find matter for mere jesting, as Luther complained, in the troubles of the godly.

*'The Reformation. By George P. Fisher, D.D., Professor of Ecclesiastical History in Yale College.' New York: Scribner, Armstrong & Co. 1873.

He was afraid for a long time even to read Luther's writings, lest he should be required to express an opinion upon them. Yet we must not forget that it is the very spirit of the Reformation—the utter truthfulness and unflinching courage which are its best results—which make it so difficult for us to understand or do justice to Erasmus.

All Dr. Fisher's portraits are good, Luther's especially and Calvin's. These men live for ever. The Reformation is what it is, in no small measure, because Luther was *surprised* into it. His intense longing for peace with God, which was satisfied by that free grace which requires from man nothing more than the response of trust—this emancipated him, of its own accord, from the ghastly tyranny of ecclesiastical pardons and indulgences, with all the dishonesties which were their natural fruit. Moreover, Luther's "justification by faith alone" was not a mere dogma, explaining the conditions on which alone Almighty God could pardon the sinner. It was no attempt—like Anselm's 'Cur Deus homo?'—to answer questions which lie far beyond the reach of human knowledge. The only reason for which Luther sought was to be found in the fact itself; God's love, if it really exists, must be its own justification; and Luther rested in these as ultimate facts of personal religion—the love of God and the responses of faith.

Calvin was a man of an altogether different type, intensely hated by his enemies and even by his merely theological opponents. Stern almost to cruelty, he was one of the most utterly honest and self-sacrificing of all the Reformers. Dr. Fisher admirably sketches his life, his doctrine, his relation to St. Augustine, his rule at Geneva. Calvin's, indeed, is almost the completest sketch in this volume.

The chapter (x.) "on the Reformation in England and Scotland" is perhaps the least satisfactory; partly, it may be, because the knowledge of the bare facts may be largely taken for granted, and the summary of them is therefore too sketchy. More attention, we think, might have been devoted to the reign of Edward VI., especially to its extravagant attempts at reforms for which the people were not prepared, and which rendered the reaction under Mary easier and almost welcome. The influence of extreme Reformers on the Continent is of course admitted; but Dr. Fisher scarcely says enough to explain the undoubted strength of the conviction in the minds of English statesmen and of the bulk of the nation that the objections of the Puritans were frivolous, and that the very bitter opposition to authorized reforms was both schismatic and unpatriotic. This is conspicuously true even of the objections raised by the Puritans at the Savoy Conference to the Book of Common Prayer, which, no doubt, were resented with a very haughty and irritating intolerance, but which could scarcely have been admitted without subjecting the church and its formularies to a very unwise supervision by a small and impracticable minority. In matters indifferent, the indifference itself is an abundant reason for maintaining the *status quo*.

CAMPBELL MORFIT AND HIS PURE FERTILIZERS.*

THIS book is noteworthy in itself, inasmuch as it is probably the first treatise of any magnitude that has ever been published relating to the manufacture of superphosphate of lime from the mineral phosphates. But for the American reader it has special interest, considered as a product of its author.

Campbell Morfit, according to Appleton's Cyclopædia, was born in Herculaneum, Missouri, in 1820. He was educated at Washington and Philadelphia, and became conspicuous in the chemical and manufacturing circles of those cities and of Baltimore, and later of this city. Besides articles in the scientific journals, he has published a number of books, several of which are, on the whole, decidedly creditable performances, making due allowance for the conditions and circumstances which affected the science and industry of this country at the times when they were written. His treatise on the 'Manufacture of Soap and Candles' (1847) in particular, and that on 'Chemical Manipulation' (1848), were well thought of in their day, and so were the 'Encyclopædia of Chemistry' (1848), and a 'Report to the Smithsonian Institution on the Progress of the Chemical Arts' (1851), which he prepared in conjunction with Prof. Booth. From 1854 to 1858 Morfit was professor of chemistry at the University of Maryland. In a word, twelve or fifteen years ago, he was a chemist of acknowledged experience and reputation in this community, to whom opportunities for emolument or advancement could hardly have been wanting. Just what his feelings about secession and the conduct of the war may have been is unknown to us, but it is a matter of public notoriety that, some little time after the war began, he threw up his American connections in disgust, and went to Europe, where, from that time to the present, he has supported himself by the practice of his profession, viz., the application of scientific chemistry to manufacturing practice.

It is impossible for a brother chemist not to sympathize with the career of the man during these years of voluntary exile, for the idea of living by one's wits in Europe in the capacity of industrial chemist was a desperate expedient, which ought to have ended long ago in disastrous failure. The chemical manufacturers of Europe are for the most part trained men well informed as to the scientific bearings of their profession, and it is but natural that such men, when in need of assistance, should prefer candidates who have been schooled at the great scientific centres, and whose practical skill has been gained either at their own works or those of their competitors. It would be hard to conceive a more hopeless task than that of an American chemist of the professorial type seeking to live by his wits in a European manufacturing district. There is the smallest possible chance in such a place of gaining one's daily bread by the "introduction" of "improvements" of problematical value relating to the manufacture of soda-ash, oleic-acid soap, and superphospate, such as in part at least constituted Mr. Morfit's stock-in-trade. But to a man of ability all things are possible, and it appears that somehow, by hook or by crook, he has managed to keep body and soul together by devotion to his profession, and now exhibits his vitality by the publication of a work which commands both sympathy and respect, and a good share of commendation. The book contains some excellent ideas of marked force and originality. It sets forth much sound doctrine and many details of valuable technical information. But the text is spun out unwarrantably by unnecessary repetitions, and by the interpolation of irrelevant matter. The type is absurdly large, and the price ($20) at which the book is sold is preposterously high, to judge either by what is customary in the publication of books relating to kindred subjects, or by the cost of manufacturing in reasonable shape a book which might have contained everything that is new or useful in this one. The reader will have no cause to complain that processes of manufacture peculiar to Mr. Morfit are slighted or given at insufficient length; but however much the details of these processes may try his patience, he will heartily go along with certain leading ideas relating to the propriety and necessity in these days of making absolutely pure fertilizers, and of making them economically for the consumers' as well as for the manufacturers' sake. These ideas are set forth with marked clearness and ability.

Powdered bones, as everybody knows, are an excellent manure, and bones that have been made soluble by sulphuric acid are still better. So, too, fossil bones, and other rocks of similar composition to bone, have great value as fertilizing agents after they have been made soluble by the action of sulphuric acid. In point of fact, the product resulting from the action of that acid upon the native phosphates is manufactured and sold in enormous quantities under the name of superphosphate of lime. But it happens that many of the phosphatic rocks are not easily or fully decomposed by the acid, and that most of them contain a large proportion of worthless and inert materials which not only interfere with the process of manufacture, and add enormously to the cost of transporting and applying the finished product, but open the door, as it were, for the perpetration of the most unblushing frauds; for the fertilizer made from bad materials may closely resemble that made from the best, so that it is in general hardly possible to distinguish between the two kinds of products except by analysis. Hence, it is only too often that the farmer pays out many of his sixpences for pounds of sand instead of the plant-food he asked for.

Mr. Morfit assures us that all this is wrong technically as well as scientifically and morally; and he teaches methods of manufacture by which both the waste and the risk of fraud may be avoided. He describes, by plan and in detail, processes by means of which all the phosphate of lime may be dissolved out from the powdered mineral, no matter how impure it may be, by means of muriatic acid, and then recovered by addition of ammonia gas, which is subsequently recovered in its turn, and used over and over again indefinitely. On treating the pure phosphate of lime thus obtained with sulphuric acid, there is got at once, without trouble, a superphosphate containing say 24 per cent. of soluble phosphoric acid. By slightly varying the process, a precipitate containing less water than the foregoing can be prepared, and from it it is easy to make a superphosphate containing 34 per cent. of soluble phosphoric acid. By leaching these high grade products with water, and evaporating the clear solution, there is obtained a dry soluble monophosphate of lime so nearly pure that it contains almost sixty per cent. of soluble phosphoric acid. There will, of course, be great advantage, both as regards transportation, constancy of composition, and definiteness in fertilizing action, in using such products as these instead of the so-called superphosphates of the American markets, which, as a general thing, contain no more than from 5 to 12 per cent. of soluble phosphoric acid. Since the methods described by Mr. Morfit require the free use of muriatic acid, they can naturally be best carried out at the great alkali works of Europe, where the acid needed for the solution of the rock is formed as a by-product

* 'A Practical Treatise on Pure Fertilizers. By Campbell Morfit.' 8vo; pp. 547. London: Trübner & Co.; New York: D. Van Nostrand. 1872.

incidental to the decomposition of sea-salt, from which the alkali is made, and can therefore be had in any quantity at a merely nominal cost. It will assuredly be a great gain for the farmer when the making of superphosphates in this way is thrown into the hands of a comparatively few large and responsible manufacturers, who will be able to sell the material at the lowest possible price, and be willing to warrant the good quality of their wares.

The idea that the making of superphosphates must be lifted from its present state of brutal empiricism to that of scientific accuracy is the key-note of the book, and the reasoning by which it is sustained is clear, cogent, and convincing. For his own part, Mr. Morfit would prefer in many cases not to go to the length of manufacturing a soluble superphosphate from his pure precipitated phosphate. He would rather seek to sell a pure precipitated di- or tri-phosphate of lime, insoluble indeed in pure water, but, as he urges, tolerably easily acted upon by the saline and acid waters of the soil. There can, indeed, be no doubt that for certain purposes the precipitated phosphate would be worthy the farmer's attention if sold at a sufficiently low price, just as now many farmers prefer to use in certain cases bone meal or even boneblack in place of the more costly superphosphate. But it is an error to suppose that any precipitated product can replace the soluble superphosphate. The merit of the latter undoubtedly consists chiefly, if not solely, in the fact that by virtue of its solubility the farmer is enabled to distribute, mix, and incorporate a phosphatic manure with his soil more thoroughly than can be done in any other way. The experiments of several observers have shown that the soluble superphosphate diffuses itself readily in a soil, and that it is there gradually absorbed and precipitated by the action of certain components of the soil in such wise that every particle of the latter, for a considerable space around each spot where a fragment of the manure was applied, receives and retains some particles of phosphate, precipitated, it is true (and commonly in the form of phosphate of iron or of alumina), but precipitated so finely and universally that the rootlets of the growing plant find everywhere a little of it ready for use. Now, since a dry powdered superphosphate can be distributed by mechanical means in the first place just as thoroughly as a dry powdered precipitated di- or tri-phosphate can be distributed, and since the chemical distribution, so to speak, which has been described comes into play after the mechanical distribution has been finished, it would plainly be impracticable to obtain anything like so complete a distribution by means of phosphates applied in the insoluble state, no matter how finely they may have been comminuted, as is easily gained by the use of the superphosphate. Hence we cannot but regard it as unfortunate that certain manufacturers of superphosphate have endeavored to convince themselves and the public that there is any possible standard of merit applicable to their wares other than the percentage amount of soluble phosphoric acid which is contained in them.

If the manufacturers wish to sell insoluble phosphates at a reasonable price, let them do so by all means. But the precipitated insoluble product should be sold by itself in such form that the farmer may be able to test its usefulness, and determine practically whether it be better or worse for him than the various insoluble bone products which can be bought in every market. But it is clearly improper to attach any but a nominal value to the precipitated product when sold as a contamination of the superphosphate proper. This last is bought by the intelligent farmer solely because of its solubility. It is to the last degree unfair, therefore, that he should be made to pay in this connection for a material which he does not want.

Mr. Morfit's book will do much good directly by teaching farmers and planters what they have a right to expect as regards the purity of superphosphate fertilizers. It can indeed hardly fail of exerting in this respect a powerful influence upon public opinion; and it will undoubtedly do good indirectly by exciting comment and discussion in the foreign scientific journals. The book will thus be the forerunner of other, and it is to be hoped in some respects of better, works.

Motherly Talks with Young Housekeepers. By Mrs. H. W. Beecher. (New York: J. B. Ford & Co. 1873.)—Mrs. Beecher's 'Motherly Talks with Young Housekeepers' is unusually well described by its title. Too many books of the general class to which it belongs talk to the young housekeeper most in need of advice as if she were a prolific young housekeeper, "a mother of six," and tell her after "taking twenty-four eggs" and one dozen quarts of milk and fifteen pounds of flour, to go on and produce some dish which would feed to repletion a household of vast size instead of being cleverly just enough for herself, the householder her husband, and the servant. And it is perfectly well known that if the inexpert young mistress ever attempts to "divide the rule" and take proportional fractions of the flour and eggs and tarragon vinegar and what not, the resultant product is sure to be forlornly unlike the promise of the cook-book. Recipes for uncommon and unrequired dishes, too, as well as for huge ones, the recipe-makers almost always provide in profusion, as if the young married ladies who are trying to supervise their own kitchen, who go to market themselves, and who need instruction about picking out tender fowls and how to know a hen-lobster and how to keep peas green, were the same ladies who have at command the services of French artists and are regularly in the habit of giving dinners of many courses. Mrs. Beecher appears to be of a more practical turn than most of her co-laborers in this field, and she shows as much by keeping it steadily in mind that she writes for young people who have not yet formed good habits, or indeed any fixed habits, of feeding themselves and their husbands; and also by remembering that these young people and their husbands are not persons of opulence and lavish expenditure. If her precepts sometimes seem a trifle too well adapted to families of scanty means, and with a taste for chromo-lithographs which they purchase in the interest of self-culture and patronage of art, why, at least the people whom such precepts will please form a larger class than those whom another sort of precepts might please, and a class whose culinary condition greatly needs ameliorating, and who will heed all that our author says—the good as well as the not so good.

Mrs. Beecher by no means confines herself to the market, pantry, and kitchen. Many miscellaneous details of the household economy she deals with; as, for instance, that there is a right and a wrong way of drying umbrellas; that furs should undergo and endure a certain test before they are purchased; that a certain simple application will remove ink-stains from mahogany; that there is a plain reason why lamps containing inflammable oil should be filled in the morning rather than at any other time of day. Yet these hints and the much more numerous recipes which precede them do not make up the whole of this sensible and useful volume, which in all contains about five hundred pages. A considerable part of it pertains to the moral order of the family, and gives advice as good and doubtless as important as that in reference to the soup and joints and the dishes for breakfast—dishes frequently neglected, but here treated of with faithfulness and respect. "What is a wife worth?" is one of the subjects discussed in this part of the volume—the implication being that a wife is worth our being civil to her, and forgiving her, and so on; and in the body of the essay this doctrine is insisted upon explicitly and at length, and in a way that may perhaps open many eyes now sealed. So of husbands also. "Grumbling" is another such topic; and others are "The Slavery of Fashion"; "Divided Family Government"—a topic so handled as to warn the two parents against being out of accord in their commands to the children; "Securing Good Servants"; how the faults of the parents come to light in the children, and are to be therefore regarded with sorrow as well as anger; "Waste not, Want not," and many others similar.

Altogether, we believe we do not know a better book of its kind than this one, considering the varied purposes which it has in view and the families to which it is addressed. These families are of course American, with the peculiar markets, kitchens, faults, and virtues of the majority of American families; and of course the precepts, culinary and moral, are not all of them calculated for any other latitudes and longitudes than our own, any more than the best of English housekeeping advice is perfectly adapted in all its particulars and principles to any countries but the three kingdoms. We say this, thinking at the moment of the excellent cookery-book by an Englishwoman, the late Mrs. S. O. Beeton, which Messrs. D. Appleton & Co. have republished. It is excellent for its great fulness and variety, its great and plain minuteness, and the sound sense and helpfulness of its advice upon many household matters lying outside the kitchen. There is something a little amusing to the light-minded American reader, and extremely exasperating to the woman's-rights reader of whatever sex, nation, or tribe, in the vigilant zeal which Mrs. Beeton inculcates upon the woman of the house in all matters appertaining to the comfort and happiness of the house's lord and master; and there is an easy air, as of one who has servants obedient to orders, in the English lady's prescriptions in regard to the duties of the cook, the housemaid, the waiting-maid, and so forth, which will fill the American wife's heart with envy if not with incredulity. But not the most light-minded husband, nor the most envious wife, nor very many of the woman's-rights women, would deny that the labor of collecting feasible and admirable recipes in large numbers has been done by Mrs. Beeton in a highly workmanlike and creditable manner.

The Other Girls. By Mrs. A. D. T. Whitney. (Boston: J. R. Osgood & Co. 1873.)—When Miss Anna Dickinson wished to teach us that society is mistaken in objecting to the marriage of white men with black women, she wrote a book in which a white man was represented as marrying a

black woman who, in point of complexion, was rather whiter than alabaster, and who not only had no trace whatever of social and intellectual qualities which are naturally associated in most people's minds with the thought of negresses, but was endowed with gifts and graces which it is not going too far to say would have redeemed a wagon-load of charcoal. This was one way of grappling with the question mooted. So also, when Miss E. S. Phelps wished to teach us that the world is mistaken in its method of dealing with prostitutes who have become repentant, or rather with women who, having lost their virtue, are in consequence not desired in wedlock or for purposes of general society, she adopted in her novel the plan of finding for such a woman a good angel in the person of an elderly lady who takes her into a Christian family circle and thoroughly reclaims her. As a matter of fact, we may say in parenthesis that she was sinned against and not sinning, and hardly needed reclaiming. But just as this result is reached, and we are looking to see what will be the career of the reclaimed one, our authoress makes her dress herself from head to foot in pure white, put up white curtains before her bedroom windows, and white coverings and "tidies" on the chairs, and then, having thus indicated her passionate desire and lament for her lost innocence, she is compelled to die of a broken heart. That this solution of this social problem is—barring the white—pretty much the solution hit upon by society; that "the only art her guilt to cover" is about the same in Miss Phelps's eyes and in Goldsmith's, appears to give Miss Phelps no uneasiness, and to make her not at all less confident than when she set out to redress abuses. Equally with Miss Phelps's and Miss Dickinson's exertions in social philosophy are Mrs. Whitney's exertions adapted to induce sorrow and terror in the hearts of those who desire to look upon "woman" with respect, who believe it a calumny that all women reason in a circle except a few clever ones who reason in an ellipse, and, finally, who think that women should be straightway admitted to the polls under the Fifteenth or some or any other Amendment.

The famous American-servant-girl question as handled by Mrs. Whitney is solved as readily as Miss Dickinson's marriage-with-negroes question, or Miss Phelps's reform-of-the-Magdalen question; but in spite of Mrs. Whitney's courage and good nature, it remains just as ready, we fear, for yet more solutions as the grislier questions raised and settled by her sister doctresses. To do Mrs. Whitney justice, she has not gone quite the length of Mrs. Stowe, who also has philosophized on this subject. Mrs. Stowe's line of argument would seem to have been that if nice-looking young natives would come up against the foreigner to the partial relief of the housekeeper, and would accept the duties and wages of table-girls, at least, if they could not quite put up with kitchen work, the chances were that the son of the house might take a fancy to them and marry them. The reader can imagine the pleasure with which this method of relief was hailed by the mothers of the sons. And perhaps he can imagine the swarms of American table-girls who forthwith thronged the American dining-room. Mrs. Whitney's scheme is set forth something as follows: Miss Bel Bree and Miss Kate Censerbox are two seamstresses who are thrown out of work by a great fire. They are both Americans by birth, and Miss Bel is an American of a very good sort. She decides that she will go out to service, and will secure herself a home better than many hall-bedrooms by helping to make a home for her employers, and she induces Kate to go with her. We shall not tell how, at the first interview with Mrs. Scherman, "Bel got her arm around little Sinsie," and neither Bel nor Kate asked "What's the privileges, mum?"; how the bedroom was not a hall-bedroom, but bigger, and soon was made cosy; how the kitchen was druggeted, and had a lounge put into it; how the nursery became happy for the children, and a rest from labor for the maids, who loved it and liked to be with the baby; how Bel became cultivated, because she saw all the magazines, and because Mrs. Scherman, in Bel's presence, asks questions of her guests about "Tyndall's essays and the spectroscope," which she herself knows all about, but with which she desires Bel to become acquainted.

It is all narrated in the book, and the upshot tells sufficiently how near we are to the new order, and, indeed, what a charming order it would be were it destined to come upon us. Bel becomes very cultivated, and finally a contributor to *First and Last*, a magazine of great refinement, and on the composition of her first poem—a little thing about spring—Mrs. Scherman, seeing that, hired servant though she was, "a lovely soul all alight with thought and gladness met her," bent down and affectionately kissed her brow. Bel has since had great success in *First and Last*, but she still remains with Mrs. Scherman, and as she irons her mistress's "damask table-cloths, and the ivy-leaf or morning-glory pattern comes out under the polish, some beautiful thought in her takes line and shade under the rule of labor," and Mr. Stalworth, editor of *First and Last*, "as benign as brilliant," says that her poems are stamped with her own name, being "breezy" and freshly delicious. Fifteen dollars apiece she gets for them. And as she irons and muses, she reflects on the prejudice which prefers work in the milliner's shop and the dressmaker's to the mutual friendship and concordant culture of the kitchen, the nursery, and the dining-room. Growth, she feels, and genial culture are what she wants, and the cook in a genial family is the woman to get them.

There is a deal of other matter in the book besides this literary servant-girl and civil and respectful mistress. There is the big Boston fire, the love-stories of several couples, the philanthropy and heart-aspirations of some more, much "insight" of a religious character, which we personally do not find edifying, and the main story, which also is a story of love. A curious notion of the Boston that is really educated and cultivated the foreigner must get from "chromos" of this kind, which are numerous. Yet this one represents a considerable circle, and one of much activity; and that it illustrates the thought and taste of this circle with a good deal of what may be called brightness must be admitted. That it should not please countless young girls and boys is inconceivable; and it is good enough to make the maturer reader wish that the certain something which is wanting had not been denied.

The Life of Franz Schubert. By Geo. Lowell Austin. (Boston: Shepard & Gill.)—This is a good-natured attempt to make us better acquainted with perhaps the greatest song-writer that ever lived. As a piece of book-making, it has the usual shortcomings of musical works: 1st. No reference to the sources whence the facts were derived. Whether the book is out of the inner consciousness of the editor, or is based on Kreissle's 'Life of Schubert,' published at Vienna some years ago, we cannot tell. 2d. It has neither table of contents nor index, which is much the same as a man's appearing on the street without hat or boots. 3d. It gives no catalogue of Schubert's works, although several more or less complete editions have lately appeared in Germany. It also fails to give us a lifelike picture of Schubert's way of life, the society in which he moved, or even a general idea of his personal appearance. In the critical résumé of Schubert's "character and works," Mr. Austin would have done better had he betrayed some consciousness of Brendel's able summary in his 'Geschichte der Musik' or Ehlert's picturesque eulogium in the 'Letters on Music,' or the far clearer analysis in Mr. Haweis's 'Music and Morals.' The latter says:

"Works belonging to the highest order of genius depend upon the rare combination of three distinct qualities: (1) Invention; (2) Expression; (3) Concentration. Speaking generally, we may say that Beethoven and Mozart possessed all three; Mendelssohn, the second and third in the highest degree; Schumann, the first and third; Schubert, the first and second. As fast as his ideas arose, they were poured forth on paper. He was like a gardener bewildered with the luxuriant growth springing up around him. He was too rich for himself—his fancy outgrew his powers of arrangement."

As a purely *musical* composer, Schubert was perhaps the peer of Mozart. His pianoforte pieces are in a high degree fresh, picturesque, refined, and poetic. In spite of its faults, therefore, we welcome Mr. Austin's attempt at bringing us nearer to so richly endowed a genius.

LIBERTY, EQUALITY, FRATERNITY.

BY JAMES FITZJAMES STEPHEN, Q.C.

"*We strongly recommend 'Liberty, Equality, Fraternity' to all who are interested in the study of Political Philosophy.*"—Athenæum.

PRICE $2.

HOLT & WILLIAMS,
25 Bond Street, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year beside a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

THE METHOD OF CREATION.
AN EARNEST PROTEST AGAINST
THE DARWINIAN THEORY.

Twelve Lectures delivered by Prof. AGASSIZ before the Museum of Comparative Zoölogy, at Cambridge, Mass., containing a vast amount of new and recondite information concerning Animal Life, printed on a full *Tribune* sheet of eight pages, and illustrated with numerous engravings, will be issued on THURSDAY, June 19, as

TRIBUNE LECTURE EXTRA NO. EIGHT.

This sheet also contains a description of the wonderful Fossils discovered in the Rocky Mountains by the Yale College Expedition.

Price, single copies by mail, 10 cents, two for 15 cents, five for 25 cents. Address

THE TRIBUNE, New York.

Nine Extra Sheets, containing over 50 Lectures and 130 Engravings, and Crédit Mobilier Report and the *Tribune Almanac*, for 50 cents.

CHARLES FOLLEN McKIM,
ARCHITECT,
57 Broadway, New York.

THE MOTHER'S REGISTER: A Tabular Record of the Health of Children, from Birth to Maturity. From the French of Prof. J. B. Fonssagrives. "The Mother records for the Physician to interpret." Cloth, 12mo. A separate volume for Boys and for Girls. Price, singly, 75 cents; for two, $1 25. Sent, post-paid, on receipt of price by the Publisher of the *Nation*.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.
Address HARPER & BROTHERS,
Franklin Square, New York.

HURD & HOUGHTON,
13 ASTOR PLACE, NEW YORK,
The RIVERSIDE PRESS, Cambridge,

THE WRITINGS OF THE CARY SISTERS.

THE LAST POEMS OF ALICE and Phœbe Cary. Edited by Mary Clemmer Ames. In one volume crown 8vo, cloth, $2.

[*Just Published.*

Mrs. Ames's 'Memorial of Alice and Phœbe Cary' contained a few of their recent uncollected poems; but this volume gathers up all, and presents them arranged in a clear and convenient order. None of the poems in this volume have appeared in any previous volume.

ALICE CARY'S BALLADS, Lyrics, and Hymns. Beautifully Illustrated. Popular edition, in cloth, $2 25; in cloth gilt, $2 75.

PHŒBE CARY'S POEMS OF Faith, Hope, and Love. In one volume 16mo, price, in cloth, $1 50; in cloth gilt, $2.

ALICE CARY'S PICTURES OF Country Life. New Edition. In one vol. crown 8vo, cloth, $2.

MRS. AMES'S

A MEMORIAL OF ALICE AND Phœbe Cary, with some of their later poems. Illustrated by Two Portraits on Steel. In one volume crown 8vo, cloth, $2.

"By reading her simple and graphic sketch, we are admitted to the number of the familiar friends of Alice and Phœbe Cary."—*Harper's Monthly.*

RECENTLY PUBLISHED.

OLD NEW ENGLAND TRAITS. Edited by George Lunt. In one volume 16mo, cloth, $1 50.

A lively, readable book of characteristic anecdote and sketches of old-time life. Lord Timothy Dexter and other odd characters are sketched to the life, and for a summer gossipy book it will be found exceedingly entertaining. If any one can match the story of the jugglers, let him produce his witnesses; and if any one disbelieves the witch stories and ghost stories in this book, let him tell more credible ones.

"The writer betrays an elegance and clearness of composition, a delicate appreciation of the aptness of language, which are rare in such books. The stories are, one and all, well told. . . . One who takes up the book will feel inclined to pursue it to the end, and, when he has finished, to regret its rather abrupt ending."—*Boston Post.*

THE ISLES OF SHOALS. A Historical Sketch by John Scribner Jenness. Illustrated with Cuts, Maps, and Vignettes. In one volume 16mo, cloth, gilt top, $1 50.

The increasing interest in this delightful summer resort has led Mr. Jenness to collect for the first time and embody in a careful sketch the curious historical facts about the islands, extending back to the earliest settlement of the coast. The book will be found of peculiar interest to all who have visited the place.

PROTECTION AGAINST FIRE, And the best means of putting out fires in cities, towns, and villages; with practical suggestions for the security of life and property. By Joseph Bird. In one vol. 12mo, cloth, $1 50.

"This book is not taken up with theorizing or with rhetoric. It might fairly be called 'common sense about fires.'"—*Springfield Union.*

"Its pages are crowded with wise suggestions and helpful hints."—*Boston Journal.*

"As interesting to the citizen as it is to the fireman, and to either indispensable."—*Boston Traveller.*

SPECIAL NOTICES.

BOARDING AND DAY SCHOOL for Young Ladies, 226 South Broad Street, Philadelphia. Miss CATHARINE DWIGHT LYMAN, Principal. For circulars, address Miss Lyman. References: Rt. Rev. F. D. Huntington, D.D., Syracuse, N. Y.; Rt. Rev. M. A. De Wolfe Howe, D.D., Reading, Pa.; Prof. Louis Agassiz, Cambridge, Mass.; Henry W. Longfellow, Esq., Cambridge, Mass.; Prof. Charles Short, LL.D., New York; Rev. H. A. Boardman, D.D., Philadelphia, Pa.; Alfred Langdon Elwyn, M.D., Philadelphia, Pa.; Hon. J. I. Clarke Hare, Philadelphia, Pa.

CARLETON COLLEGE, Northfield, Minn., open to both sexes. For information, address Pres. JAS. W. STRONG.

---

*TRAINING-SCHOOL FOR NURS-*es, attached to Bellevue Hospital, New York. Young women wishing to qualify themselves for the honorable position of professional nurses, and willing to devote themselves seriously to a year's preparation of study and hard work, are requested to forward their applications to the Lady Superintendent of the Training-School, at the Nurses' Home, 314 East 26th St., New York, when the rules of the School, and the conditions of admittance, will be sent for their consideration.

UNION COLLEGE.—Alumni Day, July 1; Commencement, July 2; Examinations for admission, June 27, 28, Sept. 8 and 9. Next term begins Sept. 10. Aid rendered to worthy students. For information concerning the departments of Union University, address: *Union College*—E. M. Jenkins, Registrar, Schenectady, N. Y.; *Preparatory School*—Prof. Stanton, Schenectady; *Civil Engineering School*—Prof. C. Staley, Schenectady; *Law School*—Isaac Edwards, Esq., Albany. Term begins Sept. 2; *Medical College*—Dr. J. V. Lansing, Albany. Term begins Sept. 2; *Dudley Observatory*—G. W. Hough, Director. E. N. POTTER, D.D., President.

WELLS FEMALE COLLEGE, Bank of Cayuga Lake, Aurora, N. Y. Reopens September 10. To meet demand, an Academic Course will be added, as per Catalogue.

---

*CHANDLER SCIENTIFIC DE-*partment of Dartmouth College. The general course embraces all the subjects usually taught in our best Colleges, giving prominence to Mathematics and the Natural Sciences, and substituting French and German for Latin and Greek. The special course prepares young men for civil and mechanical engineering. Address Prof. RUGGLES, Hanover, N. H.

SCHOOL OF MINES, Columbia College. For information, address Dr. C. F. Chandler, Dean of Faculty, East Forty-ninth Street, New York.

DE VEAUX COLLEGE, Suspension Bridge, N. Y., near Niagara Falls. Church School for Boys. Cadet organizations. Registers with full details.

WESLEYAN UNIVERSITY, Middletown, Conn. President, Joseph Cummings, D.D., LL.D. For Catalogues or information, address the President or Librarian.

S. AGNES' SCHOOL.—The fourth year will begin, God willing, the third Wednesday of September next. Pupils are received whenever there is a vacancy. Application for admission should be made to Sister Edith, S. Agnes' School, Albany, New York.

ADAMS ACADEMY, Quincy, Mass. William Reynolds Dimmock, LL.D., Master. Applications for admission may now be made for the next school year. A large Boarding-house will be opened in connection with the Academy, under the direction of the Master, who will reside in it. A class preparatory to the Academy, and under the direction and superintendence of the Master, will also be formed of a limited number of boys.

NEWBURGH INSTITUTE, Newburgh, N. Y.—A Family School for Boys. Circulars, references, etc., sent to applicants. Parents invited to visit the school. Henry W. Siglar, A.M. (Yale), John Macnie (Glasgow University), Principals.

FOR SALE. An $800 Piano for $500. Entirely new and of first-class make. Address "Piano," Box 5, *Nation* Office.

POULTRY WORLD. A splendid Illustrated Monthly, devoted entirely to Poultry. $1 25 a year. Send 10 cents for a specimen copy. Address *Poultry World*, Hartford, Conn.

THE WEEK IN TRADE AND FINANCE.

JUNE 16, 1873.

THE foreign news received during the past week was favorable. The Bank of England rate of discount was reduced from 7 to 6 per cent. at the regular weekly meeting of directors on Thursday, the Bank's having gained £421,000 in bullion. The payment of the 250,000,000 francs, on the 5th inst., by France to Germany, was reflected in a decrease of 54,000,000 francs in specie in the Bank of France. The feehng prevails that a permanent change has taken place in the flow of specie from England towards the Continent, and that the Germans are gradually releasing the large amount which they have held for recoinage. From Washington comes an intimation that the payment of $15,000,000 on account of the Alabama claims will be settled by our Government through the medium of the payment in London of the called 5-20's; or, in other words, the coin, which would otherwise have to be sent to this country, will be placed to the credit of the United States in London, and the money paid out in that city to holders of the called bonds. We notice that the Secretary of the Treasury has called in $20,000,000 more 5-20's for redemption, and this call was probably made against the $15,000,000 above referred to, both the indemnity payment and the bonds falling due in September. No official information, however, has yet come to hand regarding the transaction.

The money market has remained very easy, with rates ruling between 3 and 5 per cent.

The weekly bank statement is again favorable, particularly so in the handsome increase of legal tenders, which show a gain of $1,089,000 as compared to the amount held last week. The banks now hold $11,971,150 in specie and legal tenders above the lawful amount required, against $10,815,325 the week previous—a gain of $1,155,825. The following are the statements for the past two weeks:

	June 7.	June 14.	Differences.
Loans	$277,418,800	$277,714,400	Inc. $295,600
Specie	25,984,800	26,967,600	Inc. 982,800
Circulation	27 434.100	27,402,700	Dec. 31,400
Deposits	214,475.800	218,171,100	Inc. 3.695 300
Legal tenders	45,308,000	46,397,000	Inc. 1,089,000

The following shows the relation between the total reserve and the total liabilities:

	June 7.	June 14.	Differences.
Specie	$25,984,800	$26.967,600	Inc. $982,800
Legal tenders	45,308,000	46,397,0 0	Inc. 1,089 000
Total reserve	$71.292,800	$73,364,600	Inc. $2,071,800
Circulation	$27,434.100	$27,402,700	Dec. $31.400
Deposits	214,475 800	218,171,100	Inc. 3.695,300
Total liabilities	$241,909,900	$245,573,800	Inc. $3,663 900
25 per cent. reserve	60.477.475	61,393,450	
Excess over legal reserve	10,815,325	11,971,150	Inc. 1,155,825

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$239,684,900	$38.029,500	$277,714,400
Specie	24 817,900	2,149 700	26,967 600
Legal tenders	40.557,200	5.839,800	46.397,000
Deposits	188,514,800	29,656.300	218,171,100
Circulation	27,359,700	43,000	27 402,700
Percentage of reserve to total liabilities	30 28-100 p.c.	26 90-100 p.c.	29 87-100 p.c.

The week opened with a very weak and bearish feeling in the stock market, which culminated, for the time being at least, in a general decline on Wednesday of from 1 to 4⅝ per cent. The stocks most seriously affected by the drop in prices were C. C. and I. C., Milwaukee and St. Paul common, and Western Union Telegraph, which, as compared to Monday's opening quotations, fell off 3⅝, 4⅝, and 3⅛ per cent. respectively. The balance of the list held up considerably better, but the decline was sufficient to carry Rock Island down to 107¾, Lake Shore to 90¼, Central and Hudson to 100½, and Union Pacific to 26¾. On Thursday the news came from London that the bank rate had been lowered to 6 per cent., and immediately things commenced to improve, with very good buyers in the market. The improvement which took place Thursday continued throughout Friday and Saturday, being most marked in Central and Hudson, Lake Shore, Western Union Telegraph, and Milwaukee and St. Paul. A considerable short interest seemed to have been made at and during the decline in Western Union, and the subsequent covering of this short interest aided materially in sending the price up to the quotations at the close of Friday. Lake Shore, with a five months' dividend earned, selling at about 90, was a temptation to good buyers, who seem to have availed themselves of the opportunity to lay in a supply. There has been, for quite a long time, many doubts expressed as to the Lake Shore road paying its dividend, and these doubts led people to sell the stock short. Now that the earnings of the road show so well ($1,680,968 last month, against $1,471,467 for the same month last year), and that the dividend day is so near at hand, the "shorts" have become alarmed, and have also been among the largest buyers of the stock.

In the investment stocks, such as Chicago, Burlington, and Quincy, and Michigan Central, over which there has been a cloud hovering for the past thirty days, an improved feeling prevails. These two stocks have suffered by reason of the action of the managements for the past five years in "not letting well enough alone," and going on building and leasing new lines of road, which has not met with favor among all of their stockholders. There is no doubt that these new lines or branches have been a drag upon the main roads; indeed, to such an extent as to use up a large amount of the net earnings of the companies. It will be remembered that the Chicago, Burlington, and Quincy and Michigan Central both paid their last dividends in stock instead of cash. At present prices, however, both stocks are not dear, and with good management there is every reason to look for a long period of prosperity.

Delaware, Lackawanna, and Western continues firm at about 106, Delaware and Hudson Canal at 118½ to 119½, and New Jersey Central at 106½ to 107.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending June 14, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's

Government securities have remained strong, with a scarcity of bonds and a constant demand for what are on the market from the foreign bankers. The calling in of $20,000,000 5-20's before noticed has had the effect of strengthening quotations.

State bonds are inactive, with the transactions mostly confined to Tennessees, which are up to 79¾ and 79⅛ for the old and new issues respectively. Mr. Reverdy Johnson will shortly read in Baltimore his opinion as to the legal right of the holders of what are known as North Carolina special-tax bonds to procure the collection of taxes for the payment of the interest upon them.

Railroad bonds of the better class are in good demand at the Stock Exchange, and prices towards the close of the week improved. The default of a number of new railroads in the payment of interest upon their bonds causes more than the usual scrutiny to be exercised by investors in making purchases. The payment of July interest and dividends will cause a strong demand for first-class bonds and securities of all kinds, and the improvement noticed this week will undoubtedly continue for such as are beyond any doubt as regards safety. The New York Central and Hudson River Railroad Company, in anticipation of such demand, have advertised, inviting bids for $2,000,000 of the 7 per cent. currency bonds of that Company until July 2, when the bids will be accepted or declined as suits the interest of the Company. As the $10,000,000 6 per cent. gold sterling bonds are said to have been recently negotiated in London at about 110 in currency, some idea can be formed as to the price which the managers of the Company expect to obtain for the 7 per cent. currency bonds now offered.

The favorable advices received from abroad, in addition to the large recent disbursements of gold by the Treasury, in paying off the called 5-20's, have been too much for the gold clique, who have been obliged to allow the price to drop to 116 against 118, the closing price last week. The falling off in the importations was not looked for; but, on the contrary, the clique, from all that we can learn, confidently expected continued gold shipments during the summer months as a means of paying our foreign debts. They seem to have been disappointed in all their calculations, and are undoubtedly left with more gold on their hands than they can market. It is to be hoped that they will have to keep it. At all events, it will require all the well-known ability of the clique managers to get out of their present position without great loss.

The imports for the week ending June 14 at this port amounted to $6,218,013, and the custom receipts for the week were $1,864,254.

The Nation.

NEW YORK, THURSDAY, JUNE 26, 1873.

The Week.

THE Secretary of the Navy has acted with discretion and promptness in the case of the survivors of the *Polaris* expedition. On subjecting them to examination by a competent board, it appeared that their original story was quite truthful in its main incidents; that Captain Hall's death was a perfectly natural one; and that a suspicion of foul play had no other justification than his evidently delirious utterances during his last illness. The Board exonerates Capt. Buddington, too, from all blame for the separation of the ship's company, and for apparent abandonment of those on the ice, when he clearly must have seen them as they saw the *Polaris*, the day after the catastrophe, both under steam and sail and at anchor. But they give him up as a hard drinker, not fit to be in command. After all the bitter feelings they have entertained, perhaps not unnaturally, Capt. Tyson and his associates, including the Esquimaux, have consented freely to join the expedition in search of their former comrades which has just been despatched by the Navy Department. One of the Esquimaux happily preserved Capt. Hall's writing-desk, and from a despatch found in it, written at the most northern point of his sledge-journey, as well as from the testimony of Meyer and Tyson, the geographical and scientific results of the expedition have been ascertained to be so considerable as to promise to have a decisive influence on future polar exploration. The body of water known as Smith's Sound in its southern expanse has been traced to within six degrees of the pole, and the continent of Greenland to a point between the 82d and 83d parallels. The favorite British plan of a land expedition along the eastern shore of Smith's Sound seems to be greatly strengthened by Capt. Hall's discoveries, and the pressure brought to bear upon the British Government for aid to carry it out will doubtless be redoubled.

The new Civil-Service Commission has made a report to the President prescribing nine additional rules to those laid down by their predecessors. They attempt in these to abolish the practice of direct personal solicitations or recommendations to office on the part either of private persons or of Government officials; to put an end to removals from office "for the mere purpose of making a place for another person"; to make the employment of women as "clerks, copyists, and counters, at $900 a year," dependent on the discretion of the heads of Departments (a modification of the rule expressly providing for their appointment); to examine applicants for anticipated vacancies; and to extend the facilities for entrance into the civil service by holding stated examinations in different parts of the country. All the proposed regulations must be admitted to be useful, and calculated to give greater strength and sincerity to the reform. They have, indeed, largely if not wholly grown out of the experience of the examiners thus far. The ninth rule is perhaps the most important of all. Experience having shown that so long as the examinations are conducted solely at Washington, the Government service must be recruited mainly from the residents of that city and of the neighboring State of Maryland, the Board of Examiners for the Treasury Department in their report last spring recommended substantially the scheme of Mr. Eaton and his associates. This groups the States and Territories into five divisions, adapted to the present state of the population, and in each district semi-annual examinations will be held at convenient centres after due notification by mail to all registered applicants. The result of the examinations will be announced in the same way, thus diminishing, as far as practicable, the expense of travelling and of waiting for the verdict.

On another point, the Commissioners, we dare say from prudence more than from conviction, are less advanced than the Treasury Examiners. The latter declared it to be their opinion that "no measure of reform will meet the evil or secure the remedy which does not ensure fair compensation, reasonable permanency, and a provision for old age." The Commissioners say: "We do not regard the question of the proper duration of the tenure of office or of clerkships as one with which civil-service reform, *as now inaugurated*, has any other than an indirect connection." Both Boards, however, are unanimous as to the good effects of the regulations hitherto enforced. Examinations for consuls were instituted in March of the present year, "and there is every reason to believe that incompetent persons will, in a great measure, cease to urge themselves upon that branch of the public service, and that those who pass the examinations will be competent to serve their country in a satisfactory manner." The Patent Office is also instanced by the Commission as having profited by the competitive system, of which a general consequence has been that the heads of Departments have had more time to attend to the public business.

We are informed by a correspondent that among the causes which contributed to the defeat of Judge Lawrence in Illinois was his answer to an address from the bar asking him to run, which Mr. Craig, by the bye, signed, in which he (Lawrence) plainly intimated his belief that lawyers were better fitted to select judges than farmers or other laymen, which is to a large extent true, but which the farmers took to be insulting. Another was his punishment of the Chicago *Evening Journal* for contempt in publishing an abusive article on him apropos of his conduct of a case then pending in his court. This arrayed a large number of the newspapers of the district in hostility to him. And though last, not least, he was denounced for his "aristocratic airs"—a phrase said to mean that he dresses neatly, and has a dignified manner in court. Craig, on the other hand, it is said, endeavored to meet the views of the electors on this subject by going to a farmers' meeting with a patched coat, and holes in the toes of his boots, but we are unable to say with how much success this device was attended. In the meantime, the railroads are preparing to let the farmers know what the new law means. Free passes and half-fare permits are to be abolished; free returns are to be refused to attendants on religious, literary, and political conventions; trains are to run less frequently, and freight cars are not to leave way stations till they are full, and so on, so that at present the prospect of a restoration of harmony is by no means good.

The new Illinois railroad law goes into operation on the 1st of July. Its effect will be, as shown by the published tariffs, a general increase of rates. The roads being obliged to establish absolutely equal rates for equal distances, and being prohibited from making any discriminations, of course take as a basis of calculation such charges as will be remunerative, and then increase these equally as the distance increases. The Chicago, Burlington, and Quincy Railroad, for instance, has published a schedule, fixing a certain rate per mile for the various classes of freight, and then applying this rate by sections of two miles and a half up to twenty-five miles, and by sections of five miles for distances exceeding twenty-five miles. What the ultimate effect of this new system will be, no one seems to know. The Western papers are full of the most bewildering calculations on the subject, the natural difficulties of which are indefinitely multiplied by the fact that each one of the half-a-dozen States through which any railroad runs may pass a different law regulating freights. The Chicago *Tribune* says that it is a foregone conclusion that Ohio and Indiana will pass a *pro-rata* freight law before long, on prohibitory principles. Heretofore "through" freight passing over competing lines for the East has come through at low rates; if the rates increase with the distance, it will be obviously easy enough for Ohio and Indiana, by passing a law like that of Illinois, to prevent any Illinois grain getting to the East, through

their borders at least, until all their own is taken care of. The *Tribune* says: "If this cut-throat policy is to be tried, it is not at all improbable that it will lead to a demand upon Congress to interpret and establish its right to regulate commerce between the States, which could be exercised in this case only by virtually defeating the *pro-rata* principle as applied to through freights passing over several different States."

A public meeting has been held in New Orleans with a view of effecting a more perfect union between the colored voters and the white, and to this end the white men, under the leadership, as is alleged and again denied, of General Beauregard, have adopted resolutions making the colored man a number of promises, which may be briefly described as an agreement to treat the negro exactly as Mr. Sumner's Civil Rights Bill would have him treated, if that bill could be made a law, and then could be executed. It is proposed that the colored man shall have his half of the offices, of whatever grade; that his children shall go to the same schools as the white man's; that he shall "frequent at will all places of public resort" on the same terms as the white man, and no other; that he shall travel in the public conveyances upon terms of perfect equality with any and every citizen. And the whites, in order to make these rights "live and practical," bind themselves to urge their new views upon the owners and authorities controlling steamboats, railroads, theatres, cemeteries, banks, insurance offices, schools, and manufactories. In the light afforded by similar demonstrations in other parts of the South, these Louisiana overtures towards a new party of conservatism and liberality may best be watched awhile before any extravagant expectations are formed.

We are to have one or two "off-years" in politics, and as a consequence the Prohibitory question, so called, may very likely be in issue in several of our States. This lends particular interest to some statements recently made by the Boston *Journal* in regard to the existing temperance laws of Massachusetts, which are very severe, and very harshly administered by a body of State policemen. It was without any requirement of the constituencies, says the *Journal*, and without any call from public opinion, that the Legislature put all fermented liquors under the ban, as previously distilled liquors had been. Some of the results are curious. Here, for instance, is one, which can gratify few prohibitionists except those who truly hold the doctrine—which some deliberately preach—that, all things considered, the beer-house is not merely an evil, but a greater evil than the rum-shop itself. It is found, says the *Journal*, that the liquor-sellers, who a little while ago were ready to make common cause with the brewers in resisting the law, or were at least ready to receive aid and comfort from the brewers in doing so, have now greatly lost interest in the proposed crusade against prohibition. They think they are well enough off. The reason of this change of intention is, that as the beer-houses and breweries are easily watched and detected in illegality, and the spirit dispensatories can be watched only with difficulty and very imperfectly, the trade in liquors has increased so much since beer was prohibited, that the dealers no longer care to fight the prohibitionists. How long this will last is not predicted, but the immediate effect of the new law is said to be this marked revival of the use of the stronger drinks, and the consequent inevitable increase in crime and misery. The *Journal*, going on with its review of the political field, says that the prohibitionists, by "simply continuing the headstrong intolerance" which gave the State the beer law, can, if they like, make the whole campaign turn upon that one issue, and it foretells that in case they should so decide, prohibition will this autumn be buried beneath an overwhelming majority. And yet we suppose we are within bounds when we say that a good working majority of the voters in Massachusetts are satisfied to see the sale of spirits made very difficult, and probably would be willing to see it made impossible, though we do not believe any great number of them expect the latter. But, as between few sales and such a law as is now on the statute-book, enforced by the machinery used at present in its enforcement, we suppose there is nowhere on the surface of the earth a community of the size of the State of Massachusetts that would deliberately sanction it.

Miss Susan B. Anthony has been tried in the United States Circuit Court at Canandaigua for violating the law in voting at the last Congressional election in the twenty-fifth district. She was defended by Judge Selden, who offered himself as a witness, and testified that she had consulted him as to her right to vote before doing so, and he had advised her "that she was as much a voter as he or any man." He made three points in his argument: that Miss Anthony was legally entitled to vote; that if she believed she was, and voted in that belief, she was not guilty of a criminal offence; that she did believe it, and voted in good faith. Judge Hunt disposed of all this under the rulings in the Bradwell case. The right of voting is a right created by the State, and not by the Federal Constitution. The Fourteenth Amendment does not touch it, except to prohibit the denial of it on certain grounds, of which sex is not one, and the constitution of this State disqualifies women for voting. He also ruled, as might have been expected, that ignorance is no excuse for violating the law, and, as there was no dispute about the facts, directed a verdict of guilty, and sentenced Miss Anthony to a fine of $100, but, unfeeling man that he is, refused to commit her till she paid it. So she is left out in the cold, instead of enjoying martyrdom in jail. The opinion that the Fourteenth Amendment gave women the right to vote was originally propounded by Victoria C. Woodhull, though no credit for it has been given to that eminent jurist in any of the recent arguments. It must be clear to the friends of woman's suffrage now that there is nothing in it, that they had better give up reliance on quirks and technicalities, and devote themselves to working on public opinion. The change they seek is too momentous for them to hope that, even if made, it could long stand, if it were wrought by anything short of deliberate popular consent.

The "science of politics" is apparently getting into rather a foggy condition among some of our contemporaries. A few weeks ago, the *Tribune* denounced the French Assembly as "seditious" because of its opposition to M. Thiers, whom the *Tribune* apparently considered the rightful ruler of France, although it was the Assembly which not only created his office, but put him into it. We were considering how the Assembly could under the circumstances be "seditious," and were hunting the books in vain for a definition of this term which would cover the case, when *Harper's Weekly* plunged us into fresh perplexity by denouncing Marshal MacMahon, whom the Assembly had just appointed to succeed M. Thiers, who had resigned, as a "usurper." We were about to consider under what theory of government this could be, when reading a little further we found, if we rightly understand our contemporary, that the person entitled to supreme power in France to-day is Gambetta, and that he would be justified, if he got a chance, in chastising "the vain, hot-headed, unlearned, and impetuous MacMahon." It appears, too, that Castelar has something to do with the government of France, as a kind of partner of Gambetta, and, in short, the government of France is, as thus described, a perfect puzzle. Who is rebel and who is sovereign it would be hard to say.

The London *Economist*, which is, above all things, a sober and perspicacious paper, spoke last week of the exceeding difficulty, not to say impossibility, of getting at the state of opinion on political subjects among the French people, and the danger, therefore, of arguing from elections that either the Radical or Conservative cause is winning the popular heart. This danger we have ourselves frequently pointed out. There is something positively rattle-brained in talking of elections in the Departments as indications of the drift of popular sentiment, in the same sense and to the same degree as the State or town elections in this country. In France, seventy-five per cent. of the Departmental members are returned

through the favor and support of the local authorities, a fact which accounts for the indignation of the Right with M. Thiers after the late Radical triumphs; and this indignation, under the rules of French party politics, was perfectly justifiable. He retained in office a large number of Radical prefects and other functionaries, and allowed them to "work" for Radical candidates, and with the usual result. The Right determined then that there was nothing for it but to put the wires into the hands of one of their own men, and they now undertake to produce within the next year or two a marked desire for a king on the part of the French people. MacMahon is therefore making a clean sweep in the offices. Every prefect or sub-prefect tainted with Radical leanings is being dismissed. The maires cannot be got at, as all, except those of some of the large cities, are elective, and this will prevent the working of the machine from being nearly as effective as it was under the Empire, but still it will work. Some of the members of the Right are desirous of having the old system of appointing the maires restored, but this will hardly be attempted, and to the plan of restricting the suffrage entertained by others MacMahon is said to be resolutely opposed. But this much is certain, that within a few months, when things have been put in order, we shall see the Right fully as anxious for a dissolution as Gambetta, if not more so. The result may disappoint them, but their confidence in the old plan of manipulation is, like that of all other French parties, unshaken. One of the discreditable and symptomatic consequences of MacMahon's accession to power is the sudden collapse of the Radical orators and journalists. Two months ago their virulence was unbounded; now they are as calm as sages, and rely on pure reason, and cling to "legality" with the most touching fervor. The clink of the Marshal's sabre is evidently too much for them.

The visit of the Shah to Western Europe has a good deal of political importance, at least to Russia and England. The position of his territory in relation to British India has always made it a matter of considerable importance to Great Britain to keep him in the proper mood towards herself; and ever since the beginning of the century she has worked hard for influence at the Persian Court. The earliest diplomatic successes of the East India Company were obtained in overthrowing Napoleon's envoys at Teheran, and ever since then a desperate game of mingled brag and finesse has been going on in the same field between England and Russia, beginning in good earnest with the siege of Herat in 1838, when Russian officers were in the Persian camp aiding in the attack, and an Englishman inside directing the defence. Since then the British have pushed up to the Persian frontier rapidly from the south, while the Russians have made their way as rapidly, and with heavy loss to Persia, from the north. All that can be done by the rivals to impress the Shah's imagination in the East has been done, however, and now they are at their wit's ends to devise means of making an impression on him at home. It is conceded in London that nothing can be done in England to compete with the Russian military reviews, so the most is being made of the navy, of the bigness of London, and of the extent of British industry. The English game is likely to be helped somewhat by the Shah's tastes, which are said to be very pacific; but then there is, as some of the English papers confess ruefully, no way of concealing the fact from him that the Russian battalions can get at him in his capital, while the English fleet cannot.

M. Lesseps, who has lived not only to see the Suez Canal succeed, but to see the English, who opposed its construction most violently, use it more than any other people, is now busy with another enterprise of still greater magnitude—nothing less than the connection of the railway system of British India with the railway system of Russian Tartary; that is to say, he proposes to extend the Russian line from Orenburg to Samarcand, a distance of 1,500 miles, and the British line from Peshawur to Samarcand, a distance of 850 miles; or, in other words, to construct 2,350 miles, which, when finished, would bring Calais into unbroken communication with Calcutta. The length of the entire line between the two places would be about 7,500 miles, which M. Lesseps calculates could be traversed in one week. Now, the distance from here to San Francisco is 3,300 miles, and the journey takes a full week, at about twenty miles an hour. To make the journey to Calcutta in the time set down by M. Lesseps would therefore require forty miles an hour, and this through the wildest country and the most trying climate on the globe, which is not to be thought of. He calculates the preliminary expenses at $600,000, and the time required for surveys at two years. We may add that the surveys would furnish everybody fond of adventure plenty of it, and the climate, in which the thermometer sometimes rises from near zero to 99° in twenty-four hours, would try the finest constitution. But that the scheme is a grand one there is no doubt, and it is feasible enough if the English and Russian Governments can be got to agree about it. General Ignatieff, the Russian Minister at Constantinople, has given it his heartiest approval. M. Lesseps asks the Russian Government to guarantee him the preliminary expenses, and say on what terms a company can be organized. The completion of the work would doubtless settle the dispute between Russia and England, but it would settle it by making the Hindu-Koosh the Russian frontier, for which England is not yet prepared; besides which, the English plan of connecting India by railroad with London is the long-standing and much-agitated Euphrates Valley plan, which M. Lesseps' proposal may stimulate Great Britain into carrying out. The expense of guarding the Lesseps line from the Turkomans would at first be enormous, but they would gradually be brought to accept it.

The accounts of the Khivan expedition which have thus far found their way into the European papers have been very confused, and all but incomprehensible, but there now appears to be little doubt that the two principal columns out of the five, one under the immediate orders of the Commander-in-chief of the expedition, General Kauffman, effected a junction at Shurrakan. Kauffman came across from Djizak, about fifty miles northeast of Samarcand, starting on the 15th of March, and skirting the confines of Bokhara on his way, and receiving, it is said, supplies from the Khan, who is badly frightened. Reaching Khalata, he waited for another column, which came down from the north by the Bukan Hills, and the two, whose united forces were 5,000 strong, are supposed to have effected a junction about the middle of May, and to have then marched along the right bank of the Amu down towards Khiva, and crossed at Shurrakan. The latest news by Cable is to the effect that they had taken Hasarasp, a stronghold on the left bank of the Amu, distant less than forty miles from Khiva. Another column advancing along the western shore of the Sea of Aral, and striking through the Ust-Urt, is said to have received the submission and support of Isset Kutebaroff, the famous chief of the Chaudor Turkomans, and is to meet another column under the command of Colonel Lomakine, coming down along the eastern shore, at Urgu, the southern end of the Sea, and then push on together along the left bank of the Amu. Still another column was to start from Tjakishlar on the Caspian, near the mouth of the Atreck. This one was to follow the route described by Vámbéry as the "middle route," which he traversed himself, first north along the shore of the Sea, and then northeast between the Great and Little Balkan. This one was expected to reach Khiva sooner than any, but there is as yet no news of it. It will thus be seen that the Khan has probably been having a lively spring, and must have had difficulty in knowing which way to turn. The ease with which the various columns, which are said to amount in all to 14,000 fighting men, with seventy guns, are making their way as compared with previous expeditions, and particularly that of Perovski, which perished in the desert in 1838, is said to be due to two important contributions recently made by science to the art of war. One is the pipe-pump, an American invention, first used for military purposes by the British in the Abyssinian war, and which enables an army to draw water from the desert anywhere by a few hours' boring. The other is preserved meats, and other concentrated food, which enables a column to dispense with a large portion of the baggage-train.

BUTLER AND THE REPUBLICAN PARTY.

THE triumph of Mr. B. F. Butler in securing the appointment of Mr. Sanger, his candidate for the District-Attorneyship in Boston, inasmuch as it indicates that he will have the support of the Administration in his struggle for the governorship, is taken by many as conclusive proof that he will get the Republican nomination. Whether he will be elected is a matter on which there are of course two opinions; and it is a matter, let us add, of subordinate importance. If he gets the nomination of the Republican Convention, the event will have a good deal of significance for the whole country; his election, after getting it, would be something which, in the main, would concern Massachusetts only. But it is not yet admitted, by any means, by the shrewd observers in the State that he will get the nomination. The Boston *Journal*, which is a very sound authority on Massachusetts politics, is sure he will not, but the weight of its opinion is somewhat lessened by its belief that Butler was "decisively routed" at the Convention two years ago. That he was not "*decisively* routed" is proved by his reappearance in the same rôle this year, and it must also be said that few lookers-on could see how his defeat could be called a "rout" at all, considering how large a proportion of the Convention voted for him, how respectable was the constituency in which he made his attempt, and how thoroughly disreputable he had become before he made it. He was only defeated, after a canvass of extraordinary mendacity and violence, in a convention representing the Republican party at its very best, by 607 to 460, and this could hardly be looked on by such a man as he as a disaster.

Since then some things have turned in his favor. People have got used to the contemplation of him as a candidate for the governorship, and have grown a little tired of hearing him denounced and held up as a warning example. Moreover, his persistence and energy have naturally made a good many converts for him among those who are not burdened with much love of principle, and respect pluck and success a good deal more than character. Besides this, he has steadily grown in favor with the Administration. In the last session of Congress, he was instrumental in securing for the President a large and doubtless welcome increase of salary, and he unquestionably gained somewhat morally by the damage done to the more respectable Republican leaders by the Crédit Mobilier affair. He managed, too, to secure a hold on Mr. Boutwell by giving him the use of his machinery in procuring his election to the Senate. In fact, the mere continuance of such a man on the stage and in the public eye without apparent loss of hope or activity, is a sort of triumph. Then, too, "politics" have, in a certain sense, been growing up to him. He does not appear so eminent in badness as he did five years ago. Corruption has deepened since then, and corruptionists multiplied, and the money standard, which he makes no secret of using, has come into more general acceptance among politicians.

But then, on the other hand, the spirit of reform has sprung up, and developed a strength and activity unknown when he came back from the war. The memory of his services during the war, too, has grown fainter, and the popular gratitude for such services has become, as might have been expected, dulled by time and the rise of other objects of attention. No more striking evidence of the change could be afforded than the article on him in the *Tribune* the other day. No fiercer denunciation of him, and no more remorseless description of his typical character, as the personification of the coarse greed, the impudent dishonesty, the outspoken disbelief in good motives so prevalent among his contemporaries, has ever appeared anywhere. It says all the *Nation* said six years ago, but more strongly and vividly; but six years ago not a word of it could have found admission either into the *Tribune* or any other paper which supported the war. So that, though the world "inside politics" grows worse, the world outside certainly grows better, and Butler and his kind suffer accordingly.

If, therefore, he should be nominated, and even if he should be elected, we believe it will, as the Chicago *Tribune* has suggested serve the purpose of bringing the Republican party to shoulder fairly the responsibility of existing demoralization. Butler represents nearly everything which popular sentiment at this moment most strongly condemns. He was the prime mover in "the salary grab," on which popular indignation has so strongly fastened, and he is perhaps the foremost living master of the arts of "wire-pulling" and "manipulation," to which there is an almost unanimous inclination to ascribe all the evils of our politics, and which nearly all reformers begin or end by denouncing. He has grown in influence and, let us add, in audacity as the party has declined in moral weight, and as the material influences of the day have penetrated it. It has of late abandoned all pretence of serving any other purpose than of keeping the Democrats out of power, and for that particular business he is just as effective as anybody. Moreover, that disregard of law for which it has made itself remarkable, and in which many of its leading men have indulged, creates an atmosphere in which men of the Butler temper and habits thrive. He is the very embodiment of unscrupulousness, and has found himself carried up to influence by the growing respect for that quality, combined with the growing respect for money. In fact, all the tendencies which have shown themselves most markedly in the Republican party during the last few years have contributed in one way or another to his success. He is a finished Republican politician, the very flower of that *noblesse* which it has been busy ever since the war in producing, and which it is now trying to perpetuate, as a model for young men. The selection of him by the Administration, therefore, as its principal friend and agent in Congress, and in New England, is probably as marked an expression of disregard for the strongest tendency of public opinion as could have been made. If it should be followed by the selection of him for the governorship by a body which stands for the Republican party in a manner so distinctive and peculiar as a Massachusetts State Convention, we should have an end at last of the plan of "reform within the party" which has of late been used so freely to stop reform altogether. It would be no longer possible to throw the blame of abuses on bad individuals, or make high-sounding platforms take the place of real purification. In short, we should at last get hold of somebody who was answerable for the prevailing demoralization. At present this is impossible. As long as the party did not select an arch-rascal for high office, or formally approve of some outrageous piece of fraud or corruption, it has been hitherto impossible to bring it to book, or satisfy its friends that it had outlived its usefulness. If the Massachusetts Republicans should, however, swallow the morsel the Administration offers them, in the person of Butler, a great cloud will be lifted off the public mind, and the nation will at last have a clear idea of what it must do to be saved.

TRIAL BY JURY.

IF there be one institution which has done more than all others in protecting the individual rights and liberties of our Anglo-Saxon race, and in what is pretty nearly the same thing, maintaining the integrity of the "Anglo-Saxon judge," it is most certainly "trial by jury." The mediæval statesmanship which wrote down a safeguard for society at large in *Magna Charta* when it secured the right of representation, was not less profoundly wise when it placed beside this a safeguard for the individual man in the assurance that he should be deprived of life or property only through a verdict of his peers. Indeed, it is not easy to see how without both of these twin safeguards—the one affecting us legislatively, and relating to the mass; the other affecting us judicially, and relating to the individual—our civilization in America and England could be what it is to-day. The two, though apparently disconnected, are in fact component elements of one system—a system which covers generalities and particulars—providing, on the one hand, for the whole of society's rights and liberties; and, on the other, for the rights and liberties of society's smallest parts. The French parliaments of the Bourbons would not have fallen short of what our sense of civil

liberty requires more completely than the French judicial system; and if there are any instances in which more than in others our legislative and judicial systems, when they go astray, grate upon the public conscience or our common instinct of what is just and proper, it is when courts and juries strain the law to meet a particular case, or parliaments and congresses set themselves to administering individual justice. It will some day be more clearly perceived than it is now, that the unconscious philosophy of the Anglo-Saxon race determines that both the making of the law and its final application to the affairs of men shall be confided not to an order or a class or a profession, but to reputable members of society, who in the one case are our chosen representatives in legislative assemblies, and, in the other, our selected jurors in courts of justice.

In this country, we have not had many notable examples of the value of the jury as an agent for maintaining civil liberty. But if any man can doubt it, he has only to glance back a century at the magnificent battles which Erskine fought against the crown, and contrast the stubborn sense of right in the jury-box with the conduct of even great judges like Mansfield and Buller. If they and their predecessors before them had been invested with the absolute power and not less absolute discretion of a French tribunal, where would be the most valuable half of what we now call liberty? The bench, as we term it, the judges' work of our judicial system, is comparatively nothing so long as the solemn fiat, "*Guilty*," "*Not guilty*," "*We find for the plaintiff*," "*We find for the defendant*," can be pronounced only from the jury-box.

Moreover, in this small portion of the earth, the city of New York—a mere speck of the territory which the Anglo-Saxon race controls—though we have had only two or perhaps three judges whom society believed to be corrupt, yet how immense was the disturbance in our social currents here and elsewhere which these three men caused! Their injustice, wrongs, and judicial robbery, how absolutely ruinous were they becoming to our material and moral welfare alike! Yet their power to work mischief was substantially all on the outside of the jury-box. With twelve intelligent, upright men in the box who knew the difference between right and wrong, and were not altogether ignorant of the character of the presiding judge, any man, either as to his liberty or his property, might deem himself substantially safe so far as the trial went. From Bacon to Barnard, from Lord Chancellor Macclesfield to Ex-Justice Cardozo, the peculations of judges will be found to have been on the equity side of the courts. The Ohio and Kansas and Louisiana judges whose impeachments are likely to come before Congress, did not make their money or abuse their official power through the intervention of the jury system. Whatever its abuses or defects, it has proved a prop to hold up the integrity of the judiciary; and to abandon it because of abuses or defects in this day when so many debasing influences are assailing the administration of government, would be as wild as to abandon a representative form of government because the modern Congressman is shameless and ignorant, and has power to make a "back-salary grab."

Nevertheless, the last year witnessed a decided movement in both England and America against, to say the least, the form of the jury system. And now Earl Russell has proposed a similar change for Ireland. So far as form goes, it makes little difference to philosophers, but to the common mind form and substance are often pretty closely connected. The verdict of nine men may be as good as the verdict of any other number, but it will take a generation at least before men will attach to a verdict of nine the sense of finality which they have been taught to accord for generations, and indeed for centuries, to the unanimous verdict of twelve men. The tendency of the present day is not to attach too much importance to verdicts, but too little. It too often happens that society proceeds to retry the convicted criminal, and find extenuating circumstances and interpose doubts of its own, and amiable motives of the prisoner, and finally readmit him to intercourse with respectable men, as though he had never been found guilty by anybody whose decision was entitled to the slightest consideration. The arguments, too, in favor of a change have gone further than form, and are often attacks upon the system itself; and the tendency of the time being to sacrifice everything which seems slow or inconvenient, the jury system, always involving considerable personal inconvenience to somebody, and often seeming to stand in the way of a direct result, may now be in greater danger of being first broken in pieces, and then cast away, than is generally supposed.

It might be inferred from the similarity of the changes proposed on both sides of the Atlantic, and the identity of the time in which they are brought forward, that they are the result of a common discontent. On the contrary, they spring from almost opposite causes. The motive of Sir John Coleridge was simply to lessen the labors of the English juryman. Of erring verdicts and sentimental acquittals and divided juries, he had no complaint to make. They did their work well, but were required to do it too often. Some cases should not be imposed upon them, for such could be better disposed of by an accountant or a board of engineers. In others, the jury was a mere form; for the questions were questions of law, and the jury was detained for hours or days to render at last a verdict directed by the court. The old number of twelve too soon exhausted the jury-lists, and too frequently compelled the juror to lay aside his own affairs and come into court to dispose of other men's. All of the Attorney-General's arguments tended to the conservation of the jury-system, and to freeing it from needless abuses. With Earl Russell the motive is different, and, like the Bar Association of this city, he in effect declares that the old instrumentality stands in the way of the administration of justice. Can it be that in America and Ireland society is too demoralized to be entrusted with the right of trial by jury, and that we must resort to a modified form of it, or fall further back upon Government commissions or courts-martial? Trial by jury is an institution of the Anglo-Saxon race—a race which more than any other that exists excels in the elements of self-government, self-sacrifice, and self-control. In the form in which it has always stood, it throws upon every juror a direct, personal responsibility, which cannot be shaken off or evaded, be the verdict guilty or not guilty, for the plaintiff or for the defendant. There can be no subterfuges, no shifting the responsibility upon the other nine men's shoulders, and the verdict is not only the work of all, but essentially the work of each. Such a system could only be the product of a moral community, that is, of a community intent on justice and right, and able to furnish the jury-box with men of sufficient moral nature to lay aside personal ends and prejudices, and refrain from using their individual power on the jury to defeat a verdict. A community which does not love justice and bow to law, and which cannot furnish from its ranks jurors who can act for the common weal against the prejudices, or wishes, or sympathies of their own mind, cannot maintain trial by jury; and any step which tends toward an evasion of the juror's responsibility, or toward a panel of men unfit for jurors' duty, is simply a step towards giving the system up. The jury system is essentially a part of our system of self-government—that is, of government conducted by society through its representatives, instead of by ordained rules theoretically and practically placed above society to restrain it. And the Latin and Celtic and all other races which act generally upon impulses or sympathies or prejudices, are as unfit for the task of bringing in a verdict as for that of managing a state. Is it possible that the large admixture of these races in our society, particularly in our great cities, has unfitted us for ruling ourselves, and that the jury system is but an index pointing to the general decadence?

The point around which all the arguments against the jury system revolve is that of unanimity; and it is asked whether the truth is any more the truth for being declared by twelve men than by nine, and hinted that the requirement of twelve is nothing better than a bit of mediæval superstition. The men who established trial by jury along with the writ of habeas corpus, and the principle that society shall not be taxed without its own consent, were much too practical in their reforms to have been influenced by any such ab-

surdity. They knew as well as any reformer of the present day that a fact is neither more nor less for being declared such by twelve men than would be the answer to a sum in arithmetic. But they also believed that if a sum in arithmetic were given to twelve men, there would be no valid reason why nine of them should return one answer and three should return another. The theory of the system is that, if a suit be brought by the Government to take away a man's life or liberty, or by his neighbor to take away his money or land, the facts should be so well established beyond all reasonable doubt that the jurors will consent to them, whether the jury consisted of one man or a dozen. If the facts be not established so that any honest, intelligent man can recognize them, then they are not established at all, and it were better that nine guilty men should escape, and the land or the money remain where the plaintiff found them, than that life, liberty, and property should be handed over to a lottery of numbers.

As to the intrinsic merits of trial by jury, no one can deny that it has imperfections any more than he can question whether it be human. At this time and in this country, it is also undeniable that it has degenerated, and that it neither commands the confidence nor does the work that it once did. But these objections will hold against every other instrumentality of government, and they spring from the same abandonment of the duties of citizenship which has allowed the government to pass from the hands of the respectable classes to those of the ignorant and professional politician. We have heard a lawyer speak of the jury system as a third "relic" of barbarism which should have been swept away with slavery and polygamy; but we have heard more eminent members of his profession declare as the result of their maturer judgments, that the verdicts of juries were generally right, and that while men remember the units of those that were extraordinary, they forget the hundreds that are sensible and just. We have heard it asserted that a much larger proportion of referees' findings than of juries' verdicts are against the weight of evidence, and we know that some judges who have had a large experience in determining the facts, believe that when a judge acts as both judge and juror, he insensibly falls into the way of bolstering up his law with his facts, and of patching out his facts with his law. The jury system is indeed one of those checks and balances with which our system of government abounds. It prevents the utter abandonment of the administration of justice, civil and criminal, to a small set of professional men, holding office for long periods and often for life, and it not only circumscribes and defines their power, but it subjects them to the constant criticism of impartial citizens as no other system can. The parties who come before a judge are interested in his decision; the witnesses are more or less flustered by their own part in the proceedings; but the intelligent juror who sits through a trial can generally go home able to give his neighbors a pretty accurate estimate of the merits of the judge.

But let it not be supposed that a dozen ignorant, superstitious, unprincipled men can be made wise and virtuous by the necromancy of being pushed into a jury-box and sworn to render a true verdict according to the evidence, any more than a government confided to cut-throats can be made to promote the interests of mankind by the simple expedient of labelling it a republic. The excellence of trial by jury depends upon the same condition as the excellence of free government—the voluntary sacrifices of all intelligent citizens in the scrupulous discharge of all the duties of citizenship. If the idea continue that the whole duty of man in America is to make money, and his only sacrifice for his country is the paying of exorbitant taxes, then we must sooner or later hand ourselves over to a set of governmental guardians, and it will make little difference whether they be styled kings and emperors and hereditary nobility, or bosses and rings and professional politicians.

FRANCE.—AFTER THE REVOLUTION.

PARIS, June 6, 1873.

THE sudden fall of M. Thiers is one of those dramatic incidents which compose the never-ending history of the French Revolution. So long as the monarchical parties could not compound their differences, it was thought that he could not be removed from office. He was tied to it by the Rivet Constitution, which, theoretically, made his life as long as the life of the Assembly. The whole world was looking with curiosity on the old statesman who led all parties behind him, and who practised all the arts of political coquetry. At the beginning of the session, the *Times* wrote these lines: "Call it monarchy, call it republic, do what you like about a Vice-President, a Second Chamber, or any other constitutional contrivance; so long as M. Thiers lives, all will resolve itself into a government of M. Thiers." The personal government of M. Thiers is, however, come to an end; the "little giant" fell in an instant, without any noise, and it seems almost wonderful now that he could so long have filled France and Europe with the sentiment of his invincibility and his necessity.

France is more quiet now than she has ever been; none of the southern volcanoes—Lyons, Marseilles, Toulouse—has emitted even a single flame. Where are the electors of Barodet? They work quietly in their ateliers; they stop at the photographers' windows on their way home, and, instead of the grim and satirical face of M. Thiers, they study the enigmatic head of MacMahon, with his small, white moustache, and his placid expression. They know that this placid face can sometimes become terribly stern. The legend of MacMahon (for, in his case, history has already become a legend) speaks to the imagination of the people. "Ah!" said once Thiers to some of his friends, "if I only had red trowsers!" MacMahon entered Constantine, on the day of the assault, as a young lieutenant, one of the first. He conducted the column of attack on the Malakoff Tower, and, once in, he remained. Pélissier sent word to him that the bastion was said to be mined. He answered him thus: "J'y suis, j'y resterai"—"I am here, and will remain here." At Magenta, when the Emperor and his guard were on the point of being surrounded and made prisoners, the guns of MacMahon were heard. He had come without orders, and he turned a defeat into a victory. We find him again at Woerth, fighting with one corps against three German corps for a whole day, when he retreated to Châlons; and at Sedan, which was the last station of this way of Calvary, he was spared by fate—a shell struck him, and he could take no part in the last actions which preceded the capitulation. On his return from captivity, he found Paris in the hands of the Commune. He took it, street by street; his army saved the Louvre and its treasures; ever since, he has been living quietly at Versailles, organizing his new army, and almost every day spending a few hours at the Assembly. How often have I watched him there, always sitting in the second row of his box, behind some aide-de-camp, and looking silently on the great sea of politics.

How is it that a secret force has suddenly brought all the Conservative forces to act in his favor? What does he represent? Who is he? What does he mean? In times of great civic troubles, orators, politicians, statesmen are soon worn out; and it always happens that there rises at the end some enigmatic man, who never spoke when everybody spoke, who made engagements with nobody, who never made any promises. MacMahon is this man; his strength lies in this: he is not understood, he has not been fathomed. Some will tell you that, born of a race of princes who once wore a crown in Ireland, he has an unlimited ambition; that he considers the old dynasties of France as worn out, and that he believes that monarchical France needs a new dynasty; some, that he shares the Legitimist feelings of his wife, who is a Castries, and that he will never be satisfied so long as Henri V. is not on the throne. Others will tell you that he has never forgotten the personal kindness of Napoleon III., who made him Duke of Magenta, and that the divisions of the Bourbons and the Orléans fill him with disgust; that he means to be some day the protector of Napoleon IV.; that he hates, above all, the men who made a revolution in Paris when the Prussians were on the French soil. But who knows really? MacMahon never kissed the Blarney-stone; he keeps his own counsel, and has no advisers nor confidants.

In the crisis of fear, when the Commune in the shape of Rane made its appearance in the Chamber, all eyes turned to MacMahon. M. Thiers, blinded by his vanity, would never believe that the Conservatives could be afraid so long as he was in power. He might have saved himself by a few words, but he would never pronounce them. He had so often seen the Chamber rise and then subside, that he could not understand that this time the majority was in earnest. He not only misunderstood the temper of the House, but he did not see that the honor of France had been wounded by the election of Rane. The men who had shot innocent hostages, and killed French generals and priests, while the Prussians were at Saint-Denis, no longer concealed their projects. They said openly that they used M. Thiers as an instrument; he was the horse who should take them up-hill; once on the plain, they would unharness him and take new post-horses. This was openly said a fortnight ago; not only the Communists, but the Radicals

were laughing at M. Thiers's definitions of a Conservative Republic. In the elections, they came before the peasants, and bade them "Vote for us, for we are the supporters of M. Thiers," and the Conservative peasants gave their votes to Radical candidates. The prefects did not dare to denounce these false friends, or else helped them in their canvass, as they thought the Radicals would soon be in power. It had become a byword to say that France was drifting into Radicalism. All this time, M. Thiers was hand-in-glove with all the deputies of the Left, and between his so-called Conservative Republic and the Republic of Rane it was impossible to draw the line. Every electric shock felt at Belleville was felt at the Presidency. The country, and even the deputies of the majority, were slow to understand this dangerous state of things; the eloquence of M. Thiers threw a veil between the reality and public opinion; but the veil was torn by the last elections, and it was felt that the battle had better be fought at once.

The plan of campaign was simple. The Duc de Broglie, in the name of the majority, asked the Government how it was that Radicalism was in the ascendant in the Conservative Republic, and he showed, in eloquent language, the deep connection between Radicalism and the Commune. On the 24th of May, M. Thiers ascended the tribune for the last time as President. He returned to the Presidency, and nobody answered his long speech, which was a long apotheosis of himself. When the vote was taken, M. Thiers was lying alone on a sofa; he received the news by telegraph, as there is a wire between the Palace of the Chamber and the Presidency. So little did he expect the result, that, a few moments before, a telegram had been sent to the eighty-six prefects, thus worded, "Great speech of the President; received with applause; Government feels confident of the majority." M. Thiers thought that the Chamber would perhaps refuse his resignation; he sent it, but it was accepted by a majority of thirty. It was all over; the idea of remaining in power against the will of the majority had never entered his head. He was essentially a parliamentary gladiator, not a Cromwell nor a Bonaparte. What was he without a Chamber, where he could play with human opinions, passions, and feelings? He understood at once that his successor was chosen, even before he had spoken, and that the Chamber was tired of him. He tried, however, to disappoint it once more; he sent for MacMahon, while the urns were going round in the Chamber, and told the old soldier that France would be convulsed with civil war at the news of his defeat; that Germany would take advantage of the new situation. MacMahon was much moved, but said little. He came back to his own house, where the President of the Chamber already waited for him, in order to announce to him his nomination. MacMahon, standing before his mantelpiece, and looking very red, several times said, "No, no; he says that I cannot." "Marshal," said M. Buffet, "it is too late now. You promised us once to do whatever the Chamber should ask you to do. It is your duty to accept." The Marshal accepted.

All this time the Chamber was sitting. It was nearly midnight. Everybody felt that an immediate solution was necessary. The next day was Sunday; and if the power was still in abeyance, if there was no executive, a hundred thousand men would have *manifested* on the boulevards, and a revolution was imminent. As soon as MacMahon had sent in his acceptance, the deputies rushed back to Paris; it is said that as many as a hundred deputies of the Left did not sleep in their own beds. The terror of the journalists of the Left was almost ridiculous; they believed that MacMahon would make a sort of 9th Thermidor, arrest all the leading Republicans, and suppress all their newspapers. Nothing of the kind has happened yet; Paris is quietly enjoying the first fine days of the season. The Radical newspapers are acting like the spring, which comes in like a lion and goes out like a lamb. A sort of era of peace, of good feeling, has begun. The tide which was running in one direction is running now in another. The phantoms of the Commune, of the Red Republic, have vanished out of sight. "Viso milite quies," says Tacitus, in his energetic way. It would be useless to deny it; the Republic, as it happens invariably in France, has again fallen into the hands of a soldier, without any violence this time, without any *coup d'état*, by the legal and regular action of the parliamentary forces. The country seems to breathe more freely; a new page of history has been turned. Our fingers have left the torn page, spotted with blood and ink, rubbed by dirty hands; there is the white, virgin page—what are we to write on it? We don't know yet. The elastic character of the French people does not keep impressions long; it seems already an age since Thiers was in power, ever talking, ever active, irrepressible, ubiquitous. He is forgotten. His habitual courtiers were the very men who hurled him down from his high place. He went to sleep a great man, and he awoke a *brouillon*. Nobody seems to think of the future; "à chaque jour suffit sa peine." The old monarchical instincts of France have triumphed again; if we cannot have a king, let us at least have a marshal; let his *bâton* take the place of a sceptre.

Notes.

J. R. OSGOOD & CO. have collected in a neat volume, as a memorial of the late Stuart Mill, twelve sketches of his life and works by W. T. Thornton, Herbert Spencer, J. E. Cairnes, Henry Fawcett, Frederic Harrison, and other eminent English writers.——We have received from D. Appleton & Co. their 'American Annual Cyclopædia' for 1872. Those who have most occasion to use this work need not be told that it lacks the accuracy and authority of the cyclopædia which it supplements, and indeed that it is edited on totally different principles. For example, the review of literature during the past year is taken bodily (with due acknowledgment) from the *Athenæum's* summary—the work of many writers, whose names are here omitted. We observe in it a few errors not likely to have been made in the original, and infer the presence of others due to a too faithful copying. In short, this annual is a sort of cyclopædic scrap-book, chiefly valuable for the documents which it reproduces in full. Portraits of Greeley, Morse, and Alex. Stephens are bound up with the volume.——The sale of the Perkins library took place, just out of London, June 3–6, and will long be famous, not only for the aggregate amount realized (£25,743 for 865 lots), but for the prices fetched by the choicer books, and especially by the vellum copy of the Mazarin Bible (£3,400, equal to $21,400 in our currency) and the paper copy of the same (£2,690). The Shakespeare first folio brought only £585; Lydgate's 'Siege of Troy' (MS.) £1,300.——Harper & Brothers announce 'Court and Social Life in France under Napoleon.'——Max Müller's 'Introduction to the Science of Religion,' together with his two essays on False Analogies and the Philosophy of Mythology, will be published by Scribner, Armstrong, & Co.——'The Philosophy of Evolution,' by B. Thompson Lowne, is announced by D. Appleton & Co.——Roberts Bros. have in press 'Mokeanna,' by F. S. Burnand.——The proprietors of the New York Directory have purchased the premises No. 11 University Place, corner of Clinton Place, and state in their preface to the Directory for the present year that "among the conveniences of the new office it is proposed to add a complete library of directories, which will contain not only the entire series of the eighty-seven volumes of the New York Directories, but those of all the principal towns and cities of the United States, as well as of many European cities"; and they justly add that "this will be a library of unique character, and of great convenience for reference."

—Some of the prominent Oriental scholars of Paris, MM. de Rosny, Foucaux, Hovelacque, Oppert, and others, have organized an "International Congress of Orientalists," which shall hold a meeting each year in one of the capital cities of Europe. This year's meeting is in Paris, on the 22d of July, and is expected to last a week. The first four days are to be occupied with the discussion of questions relative to Japan—its language, literature, institutions, industry, political condition and prospects, and relations to foreign countries; after that, other Oriental subjects will be in order. The intention is to put forward each year one department of study, or one country, for especial treatment, while at the same time giving opportunity for everything that may be offered. All scholars, of every country, and all persons interested in the objects of the Congress and desirous to forward them, are invited to join the organization. The annual membership fee is only 12 francs; and for this is to be returned the volume of proceedings and papers which will be published after each meeting. The "National Committee of Organization" desire to add to their list of subscribing members as many American names as possible. These may be sent, with the first year's fee, to M. J. Duchateau, the treasurer, at No. 43 Rue Monsieur-le Prince, Paris; or to Prof. W. D. Whitney, of New Haven, who has been authorized to act as correspondent of the organization in this country.

—A correspondent reminds us that in the memorable field-day of the Social Science Association at Boston last month, President Eliot gave a clear though brief account of the work which Harvard College, following the lead of the English universities, is doing in aid of young women desirous of a better education. In the state of excitement into which the more inflammatory scientific ladies and gentlemen were thrown on that occasion, an explanation as clear as crystal and as long as the longitude would have stood no chance of being once looked at, and Mr. Eliot's brief remarks received not a moment's consideration. If we recollect right, not so much as an allusion to them was made in all the subsequent proceedings, and the newspapers, naturally enough, were so much taken up with Mrs. Howe and Mr. Phillips, and the flurry which they caused, *cujus et maxima pars fuerunt*, that they also neglected the subject. Some of them, to be sure, had already set forth the proposed scheme in their columns; but it cannot be too fully mentioned whenever proper occasion is given for bringing it to the notice of those whom it is intended to benefit, and we gladly comply with a request to assist in making public its details: In the last half of next

June, and annually after that date, there will be two examinations, held by examiners authorized by the Harvard Faculty, at which young women who have reached the age of seventeen years may present themselves for examination in various studies, and from which they may bring away, in token of their proficiency, a certificate which will be of the same kind of value as the diploma given to young men at the end of the college course. The preliminary examination will embrace the following subjects: English, French, physical geography, either elementary botany or elementary physics, arithmetic, algebra through quadratic equations, plain geometry, history, and any one of the three languages, German, Latin, and Greek. The certificate will be of the form following: "A. B. has passed (passed with distinction) (passed with the highest distinction) the preliminary examination held at — on the — of —, 1874, under the direction of the Faculty of Harvard College, and is entitled to proceed to the advanced examination." This advanced examination will be divided into five sections, in one or more of which the candidate may present herself. The five are these: Languages, natural science, mathematics, history, philosophy. The young woman choosing to be examined in languages, for example, may offer herself for examination in any two of this following list: English, French, German, Italian, Latin, Greek. So of the candidate for a certificate of attainments in natural science; she may offer herself for examination in any two of the following subjects: Chemistry, physics, botany, mineralogy, geology. Our correspondent sends us a circular, informing us that the examinations which take place in Boston will be in charge of the Woman's Education Association, a body of which the secretary is Mrs. Charles G. Loring, whose residence is at No. 1 Mt. Vernon Place, Boston. From this lady may be obtained copies of the circular just mentioned, and of a little pamphlet, published at twenty-five cents a copy, which contains numerous specimens of examination papers, and which will give intending candidates a very clear notion of the kind of work expected of them. We hear that the fee for the preliminary examination and certificate will be fifteen dollars, and the fee for the advanced examination and certificate ten dollars. The association is prepared to provide board and lodging at a moderate cost for those candidates who need such accommodation, and persons of small means may, by stating their circumstances fully to the secretary, secure such assistance as they need. Notices of intention to apply for examination must be sent in before the 20th of next April, and there are various other necessary requirements, as to all of which information may be had by application to Mrs. Loring.

—Professor Gray, of Harvard, has just performed a labor of love by writing a brief account of the late Professor John Torrey and the late Mr. William Starling Sullivant, two distinguished American botanists with whom his relations had been close and long continued. The pamphlet is printed by Messrs. Welch, Bigelow & Co., of Cambridge, and its contents form a part of the annual report of the Council of the Academy of Arts and Sciences. The death and the services of Dr. Torrey we have already noted in these columns, but as we read the narratives before us, we noted one or two things worth attention. Of these one is a pregnant remark of Dr. Gray's on Dr. Torrey's preparation of his 'Flora of the Northern and Middle Sections of the United States,' the work in which he "first developed his remarkable aptitude for descriptive botany and for the kind of investigation and discrimination, the tact and acumen, which it calls for." "It was the fruit," says Dr. Gray, "of these few but precious years which, seasoned with pecuniary privation, are in this country not rarely vouchsafed to an investigator in which to prove his quality before he is haply overwhelmed with professional or professorial labors and duties." A little further on, Dr. Gray speaks of Dr. Torrey's numerous and valuable collections for the completion of this work, and says that "it remains to be seen whether his surviving associate of nearly forty years [Dr. Gray himself] will be able to complete the edifice. To do this will be to supply the most pressing want of the science, and to raise the fittest monument to Dr. Torrey's memory." To do this will also require money, and one must hope that some of our rich men or rich women, covetous of the graceful tribute which the botanist can confer of naming a new plant or tree after the benefactor of his science, may place the means of publication at the editor's disposal. Dr. Torrey had all his life been working intermittently at this 'Flora.' "Even at the last, when he rallied transiently from the fatal attack, he took in hand the manuscript of an elaborate report on the plants collected along our Pacific coast in Admiral Wilkes's celebrated expedition, which he had prepared fully a dozen years ago, and which, except as to the plates, remains still unpublished, through no fault of his." As for his habit of working at all seasons, Dr. Gray notes that "the ordinary duties of his office [that of United States Assayer] he fulfilled to the last with punctilious faithfulness, signing the last of his daily reports on the very day of his death, and telling his son and assistant that he need not bring him any more." It is gratifying to know that his labors were a pleasure. Returning from Florida with a "grievous cough allayed, he was rallied for having gone to seek Ponce de Leon's Fountain of Youth. 'No,' said he, 'give me the Fountain of Old Age. The longer I live, the more I enjoy life.'" Perhaps to him, as to a clever woman of our acquaintance, the two fountain sseemed one, and "old age" he regarded as a mere "invention and figment of youth."

—Mr. Lewis Tappan, who died in Brooklyn on Saturday, 21st instant, at the age of eighty-five, was a younger brother of the more famous Arthur Tappan, whose biography he wrote in 1871. They were associates in business and in the various philanthropic movements of their day, especially in the crusade against slavery, the one being mobbed in his store, the other (Lewis) in his home in Rose Street, in 1834. The latter's interest in the welfare of the colored people of the United States continued active to the close of his long life, as a member and former president of the American Missionary Association, whose chief work since the war has been the education of the freedmen of the South. Mr. Tappan had accumulated a large and valuable library of works relating to the anti-slavery struggle, and we believe he cherished the intention of bequeathing it to the New York Historical Society.

—It can now not be long before the Government Commission appointed for the purpose last spring will begin to review the labors of the three United States surveys of a route for an interoceanic ship-canal between the waters of the Atlantic and Pacific Oceans. The Tehuantepec and Colombian surveys are closed; the Nicaragua expedition is on its return. We know certainly that the choice of a route lies between the rivers Coatzacoalcos, San Juan, and Atrato, and probably it lies between the two latter. Commander Shufeldt's report on the Tehuantepec survey, submitted to the Forty-second Congress, and since printed with maps and illustrations, prescribes a canal 144 miles long, with 140 locks, along a route (river Coatzacoalcos) which offers "no natural obstacles to the construction of the canal which engineering and liberal capital cannot overcome." The amount of capital needed is not stated further than that the canal "will probably require *national* resources to build it." The summit level would be 732 feet above the ocean, and to feed the canal would involve three miles of tunnelling and some heavy cutting in a work twenty-seven miles long. After all, the stability of both the canal and its feeder would be subject to the liability of earthquakes, which are of constant occurrence in that region, and Commander Shufeldt is obliged to confess that, under the circumstances, the work "can only be deemed practicable to the extent of its political and commercial necessity, measured by the progress of the age." Northers and southers, too, of great violence, menace tribulation to ships in their passage across the Isthmus. And finally, the State of Oaxaca, through which the greater and more costly portion of the canal must run, "has been for years in a condition of revolution and internecine strife," the various factions agreeing only in their distrust and dislike of foreigners.

—Commander Selfridge, whose operations have for two successive seasons been carried on in the territory of the United States of Colombia, appears much more confident of success by his route. Give him $70,000,000, and he will construct a canal connecting Cupica Bay (on the Pacific) with the Atrato River (emptying into the Gulf of Darien) that shall be only twenty-eight miles long, and require only eight locks to the summit level—128 feet. This level could of course be had only by tunnelling. After twenty miles of easily constructed canal, with a rise of only eighty-eight feet, in the valleys of the Napipi and Doguado rivers, tributaries to the Atrato, there will be three miles of open rock-cuttings, and three of boring, the dimensions of which are imposing: 60 feet in width by 124 feet in height. There seems to be no trouble about the water-supply. The descent to the Pacific will be very precipitous—128 feet in 5,000, made by means of a dozen locks. The Atrato appears to be a fine river, every way suited for commerce and for sustaining a large population on its banks.

—In regard to procuring the necessary labor for works of this character, Commanders Shufeldt and Selfridge agree in looking to the Chinese coolies as their only dependence. The former, indeed, seems to hope that the canal would attract from the United States the negro emigration once dreamed of by President Lincoln, and pictures "this land, now so desolate and deserted, peopled by Chinese on the southern slope, and by negroes on the northern, teeming with the products of every climate, and enlivened by human industry from the Atlantic to the Pacific." But "the main body of laborers would probably have to come from China"; and the Isthmus holds out every inducement for them to come—plenty of land, cattle, and fish, a congenial climate, and a sparse native population. The Colombian canal might have some of the preliminary clearing done by the *libros* or free negroes of that country, but for the rest must be constructed by the coolies

already so extensively employed on railroads and other public works in South America. Commander Selfridge thinks a force of 30,000 of them would be needed.

OLD-FASHIONED ETHICS AND COMMON-SENSE METAPHYSICS.*

MR. FITZJAMES STEPHEN, in a note on Utilitarianism appended to his recent volume on Liberty, Fraternity, and Equality, points out an analogy, as he says "often overlooked," between the enquiry into the nature of the difference between right and wrong and kindred questions in the domain of physical science.

"Take, for instance, such words as 'heavy' and 'light,' 'up' and 'down,' 'wet' and 'dry.' No words can seem clearer, yet experience has shown that it is impossible to use them philosophically, or to get any but the most confused, unintelligible results from the attempt to throw them into systems, until they have been interpreted by certain broad, general principles, which show their true relation to each other. For instance, till it was proved that all bodies attract each other under certain conditions, and that the earth is a proximately spherical body, revolving in a certain course, it was impossible to use such words as 'up' and 'down,' 'heavy' and 'light,' in a really scientific manner. The utilitarian answer to the question, 'What is the difference between right and wrong?' is an attempt, successful or otherwise, as it may be, to do for ethics what those who made the great elementary discoveries in physics did for the mass of observed facts, and for the expressive but indefinite words descriptive of those facts, which the unsystematic observation of ages had accumulated about the heavenly bodies and common natural objects."

This analogy, attentively considered, does more to clear up the obscurity which surrounds ethical investigations than any direct argument. A savage brought up without any knowledge of physics would be very much surprised at being told that a body which he was in the habit of considering light might also be considered from another point of view heavy, that the two terms were entirely relative, and that to speak of absolute lightness and absolute heaviness was to talk about that of which we knew nothing. In the same way, or rather in a way analogous to this, the anti-utilitarian, on being told that 'right' and 'wrong' are general terms indicating the instinctive habit of approval or disapproval generated in the minds of mankind by the observation of the effects of particular classes of actions, perceiving at once that the absoluteness of the cherished opposition between 'right' and 'wrong' is gone, jumps to the conclusion that the foundations of morality are threatened—a conclusion quite as illegitimate as would be that of any one who should imagine that because the general physical terms we have just cited are shown by examination not to be absolute, therefore it will be no longer possible to say that iron is heavy, a feather light, that a sponge full of water is wet, and a sandy plain dry, that birds fly up into the sky and swoop down when they seek prey in the sea.

Mr. Thornton is an anti-utilitarian. His old-fashioned ethics are anti-utilitarian ethics; he has no hesitation in ranging himself with those who believe in the intuitive origin of moral judgments, and his explanation of this origin is so much his own that it may almost be said to require an antecedent intuition to grasp it. He is a believer in two fundamental "natural rights," which are the source of all moral obligation, first, "absolute right, except in so far as the same may have been forfeited by misconduct, or modified by consent, to deal in any way one pleases, not noxious to other people, with one's own self or person; second, right equally absolute to dispose similarly of the produce of one's own honest industry, or of that of others whose rights in connection with it have been honestly acquired by one's self." To show the inadequacy of this as an explanation, it is necessary only to observe, first, that an absolute right which can be forfeited by misconduct, is not an absolute right at all; that misconduct means the doing of wrong, and that the meaning of this word "wrong" is the very thing we wish to discover. The limitation imposed by the exception "forfeited by misconduct" cannot possibly have any meaning until we know what misconduct is. Second, that "the produce of one's own honest industry" signifies the produce of industry pursued in subordination to the "rights" of others, and again takes us back to our old enquiry, which the rest of the proposition about the honest acquisition of the rights of others does not seem to us to advance at all. These general terms, "misconduct," "honesty," "rights," do nothing to solve the question propounded by Mr. Thornton; they are the question itself. There is the same difficulty with the phrase "not noxious to other people." The absolute right to do with one's self what one pleases, except so far as it is "noxious to other people," means the right to do with one's self what one pleases except so far as it interferes with the general happiness of other people, which is very much what a utilitarian would say; but Mr. Thornton, being an anti-utilitarian, we are compelled to believe that by "noxious to other people" he means simply "injurious to other people's rights." Any one who will take the pains to substitute the alternative expressions here suggested for Mr. Thornton's, may judge for himself how far these natural rights go to clear up the mystery of the difference between right and wrong.

The more strictly anti-utilitarian part of Mr. Thornton's essay is more valuable than that which is explanatory of his own beliefs. He attacks with considerable vigor the theory which makes the distinction between right and wrong coincident with the distinction between what is useful and what is injurious to the general happiness. An action, Mr. Thornton very truly observes, may be right in three different senses: "It may be right as being meritorious and deserving of commendation. It may be right as being that which one is bound to do, for the doing of which therefore one deserves no praise, and for neglecting to do which one would justly incur blame. It may be right simply as not being wrong—as being allowable—something which one has a right to do, though to refrain from doing it might perhaps be praiseworthy." We may add to this, that the amount of commendation or blame depends partly on the usefulness and partly on the difficulty of resisting the temptations which surround the performance of the action, whatever it may be. It is very useful to the world that each man engaged in the work of production should consume every day a certain amount of food, repairing the waste of tissue caused by his labor, and enabling him to continue the work necessary to keep the machinery of society in motion. No one, however, would think of commending a healthy man for eating three meals a day, because we all know that there is no difficulty in doing it. On the other hand, we do know that the appetite for drink is so strong in some men that considerable strength of will is required to resist the temptation to excess. Temperance, also, is a very useful habit, and accordingly approbation is always given by public opinion to the temperate man, in countries which we call civilized. There are many actions, too, which elicit the approbation of mankind which it is not easy, to say the least, to bring within the category of useful. The devotion of children to worthless parents has always drawn forth sympathy and praise, though it would probably be extremely difficult to convince a thoughtful utilitarian child, of a rational but not affectionate turn of mind, that the devotion of children "of the class" to which he or she belonged to parents of a worthless sort, was on the whole for the greatest happiness of the greatest number. Nor will the utilitarian theory furnish a complete ethical guide or *vade mecum* through the perplexities of life. No ethical theory will do this, because the subject is too intricate and complicated for any single formula. Mr. Thornton imagines a curious test-case, which, as he supposes, demonstrates the utter absurdity of utilitarianism, but which seems better fitted for quite a different purpose.

"Imagine," he says, "three shipwrecked mariners to have leapt from their sinking vessel into a cock boat scarce big enough to hold them, and the two slimmer of the three to have presently discovered that there was little or no chance of either of them reaching land unless their overweighted craft was lightened of their comparatively corpulent companion. Next, imagine yourself in the fat sailor's place; and then consider whether you would feel it incumbent on you to submit quietly to be drowned, in order that the residuum of happiness might be greater than if either you all three went to the bottom or than if you alone were saved. Would you not, far from recognizing any such moral obligation, hold yourself morally justified in throwing the other two overboard, if you were strong enough, and, if need were, to prevent their similarly ousting you?" To show that this is not so clear a case as Mr. Thornton supposes, it may be worth mentioning that two or three clear-headed utilitarians to whom we have put it, have answered, without any hesitation, that it was obviously the duty of the fat sailor to sacrifice himself. But Mr. Thornton does not tell his readers how, under his own system, the fat sailor would be able to reconcile with his ideas of duty an attempt to drown his thinner companions. The case admirably illustrates the dangers of casuistry. Moral rules have owed their origin, according to utilitarians, to the gradual observation of the results of "actions of a class." Thus, theft and murder have gradually become classed as immoral acts by observation of the fact that they led to bad results. This has been the gradual work of centuries of observation. If there had been no murder or thieving in the world, we should have no moral ideas on the subject. For the same reason, there cannot be said to be any moral rule applicable to the case of the fat sailor. Fat sailors have not been in the habit of finding themselves at sea with thin sailors in open boats in the extraordinary predicament suggested by Mr. Thornton. When a sufficient number of such instances have accumulated, the utilitarian would say, no doubt, there would be a moral rule applicable to this "class of cases." Casuistry is a weapon quite out of place for anti-utilitarians. It is only suited for attack upon metaphysical systems of morals, which possess fixed canons set up by the believers in them as the ultimate test of moral truth

* 'Old-Fashioned Ethics and Common-Sense Metaphysics, with some of their Applications. By William Thomas Thornton, author of a treatise 'On Labour.'' London and New York: Macmillan & Co. 1873. 8vo.

The remaining essays in the volume are on the following subjects: "History's Scientific Pretensions"; "David Hume as a Metaphysician"; "Huxleyism"; "Recent Phases of Scientific Atheism"; and "Limits of Demonstrable Theism," part of which last essay is in verse. They do not contain much that is original; indeed, they are rather entertaining than original. It is hardly necessary for us to say that Mr. Thornton does not believe in what he calls "Huxleyism," considers "History's Scientific Pretensions" to be what Cobbett would have called "prime nonsense"; and has an opinion of Hume the character of which we may indicate by a single quotation: "Hume's affectation of profound ignorance on the subject" [of the possibility of a conception by the human mind of divine power] "must have occasioned unusual amusement in a certain quarter. The devil can seldom have had a more hearty grin at his darling sin than when witnessing this peculiar exhibition of the pride that apes humility." This is hardly the proper temper for critical discussion of Hume's merits as a metaphysician, however expressive it may be of Mr. Thornton's opinion as to where Hume is spending his hereafter. The essay on "Recent Phases of Scientific Atheism" contains a naïve confession on the part of Mr. Thornton that he has never read the works of one of the authors—Auguste Comte—whose scientific atheism he proposes to discuss. One noteworthy criticism, nevertheless, is to be found in the essay, apropos of the proposed worship of humanity. It is, as Mr. Thornton says, a chief article of the Comtist creed "that Humanity is in a constant state of progress, so that both the collective mass and the choice specimens of each successive generation of men must always be superior to the corresponding masses and specimens of all previous generations; but not the less is it an imperative injunction of the Comtist rubric that religious homage shall be paid not only to the collective 'grand être' of Humanity, but also to individual worthies of past ages," and the conclusion seems inevitable that inferiors will have to be worshipped by their mental and moral superiors. When we add to this the further difficulty of obtaining within any assignable time any general agreement among mankind as to the propriety of canonization in particular cases—when we consider how wide the difference among men is even in this enlightened age as to the merits of the foremost men of past generations—and when we reflect, too, upon the extraordinary canonizations that have been made in the churches in which canonization is in vogue, there certainly seems good reason to doubt whether the introduction of the religion of Humanity would work practically as Comte hoped; whether, two or three hundred years hence, our saints' calendar, instead of comprising only the names of such men as Comte and those like him would consider great and good—Confucius, Solon, Newton, and the rest—might not contain names of a very different sort. One man has quite as much right to canonization as another, and we may be sure that, after the church was established, there would not only be parties demanding the admission of Confucius, Solon, and Newton to the roll, but strong demonstrations would also be made on behalf of Loyola, Mohammed, and Brigham Young; indeed, if the matter were left, as it clearly ought to be, to popular vote, there would not be wanting places where, with a little wire-pulling and pipe-laying, the Brethren might be induced to bow down and worship before the images of James Fisk or William M. Tweed. It ought to be said, however, that the "religion" proposed by Comte has never been seriously adopted by those who call themselves Positivists.

THE MAGAZINES FOR JULY.

MR. LINCOLN is the subject of noticeable articles in two of the month's magazines—*Scribner's* and the *Galaxy*. In *Scribner's*, the Rev. J. A. Reed, a Western clergyman, discusses certain allegations made in Lamon and Herndon's 'Life of Lincoln'—a book which, more thoroughly even than Mr. John Forster's recent biographical writings, shows how deep and envenomed a wound may be dealt by the hand of a friend. Neither Landor nor Dickens had such cause for rising from his grave as might have moved the victim of Mr. Lamon's tribute of affection. It is within reasonable bounds to say that Mr. Lamon's work begins by endeavoring to prove that Lincoln was born a bastard and that it ends by endeavoring to prove that he died a hypocritical infidel, the middle of it being taken up by an endeavor to show that he loved women he never married, and married a woman whom he never really loved, who made his life wretched and for whom he soon utterly lost all affection. It is with the first two of these singular assertions that Mr. Reed deals, and whatever may be the reader's opinion as to Christianity's, or infidelity's, need of Mr. Lincoln's countenance and support, we think no one will lay down Mr. Reed's article without the conviction that it has effectually disposed of Mr. Lamon's case, and that it has definite historical value. As for the charge that Lincoln was born out of wedlock, Mr. Reed points out that nothing is commoner in the annals of the poor in a wild frontier country than the loss of such documents as records of births and marriages, and that failure to find such evidence of the marriage of Thomas Lincoln and Nancy Hanks was an insufficient basis for Mr. Lamon's ungracious assumption. But Mr. Reed is able to go further, and to produce specific record, of a certain value as evidence, that Mr. Lincoln's father and mother were duly married, so that Mr. Lamon's failure to find any record whatever was because he failed to push his researches far enough. Mr. Reed, hearing that the Hon. J. C. Black had in his possession a number of the Lincoln family papers, addressed him on the subject, and received a reply, which is given in Mr. Reed's article, and is in substance as follows: The record in question was made on a leaf of the family Bible; it was given him with a certificate of genuineness by Dennis Hanks; the record and certificate were sent to the Illinois Historical Society, and are now understood to be in the hands of Mr. Robert Lincoln, son of the President. It is altogether likely that of the total number of the last generation of settlers in the Mississippi Valley, a very large proportion would be troubled to find evidence at all more conclusive than this that they were of legitimate birth. The itinerant preacher, going on his circuit through the scattered clearings, made no memorandum except in his memory of the very informal ceremony by which he bound together a pair of his occasional parishioners; or the justice of the peace coupled two of his neighbors, and no note was taken of the transaction except that, whichever of the parties to it could write, laboriously marked down names and dates on the last leaf of the Apocrypha.

As for the second of Mr. Lamon's charges, Mr. Reed exposes its inaccuracy with much minuteness. We have not space to follow him through all his letters from numerous divines and laymen, friends of Mr. Lincoln, and acquainted with his earlier and later career. It seems plain enough that in his young days Lincoln had read such of the productions of Paine, Voltaire, and smaller authors as were floating about among the men of his acquaintance; that afterwards he became convinced of the inspiration of the Scriptures, apparently on evidence not very different in quality from that which had previously convinced him to the contrary; and that towards the close of his life he was a believer in the divinity of Christ, and had at least considered the advisability of making a public profession of his belief. Incidentally, Mr. Reed mentions that at the moment of assassination Mr. Lincoln was saying to Mrs. Lincoln that he wished to visit the Holy Land; that there was no city he so much wished to see as Jerusalem; and while the last word was half uttered on his tongue the shot was fired, and he became insensible. We do not know if this is anywhere else related.

In the *Galaxy*, the article on Lincoln is by Mr. J. M. Winchell, and gives a short account of three interviews which the writer had with the President. It is readable, but not important. At one of the interviews the President illustrated the sort of flexible firmness, to call it so, which was a marked feature of his character, and illustrated also, we may add, that willingness to spend a great deal of time and labor and suavity in the work of gratifying unreasonable men, whom a man of more decision would have sent to the right-about very quickly, and perhaps without detriment to the public service. More interesting than this narrative is that of the interview in which Mr. Lincoln avowed to the writer his determination to be a candidate for re-election.

Other articles in the *Galaxy* are Mr. Albert Rhodes's "Day with the French Painters"; Mr. Carl Benson's "Casual Cogitations," which is about translation as a proper business for amateur authors, and one in which they are likely to excel their professional brethren; a chapter of General Custer's "Life on the Plains," which in this number is exciting; four chapters of Mr. De Forest's novel; and Mr. Thurlow Weed's account of Lafayette's last visit to America. This last article is curiously redolent of old times, and young men should read it to see how enthusiastically patriotic their grandfathers were and how frankly hero-worship was performed fifty years ago. Mr. Weed tells us that while the Marquis was on board the *Cadmus* coming over, he made the acquaintance of a gentleman from Boston, of whom he enquired "the expense of living at the best hotels, and the expenses of travelling by stages and steamboats, of all of which his secretary made memoranda. From these data the General, aided by the Bostonian, made an estimate of what it would probably cost him to visit and travel a year in America. It is scarcely necessary to add that there was no occasion to refer to these memoranda, for his every wish was gratified, nor was he permitted while he remained among us, unless by stealth, to expend one dollar or one dime of his own money."

In *Scribner's* a fairly good article, illustrated with fairly good judgment, is written by Mr. Edward King. "The Great South" is the title of it, and in this first instalment it describes a trip from Kansas as far as Northern Texas. "Low Life in Berlin" is another article (illustrated), and another which will interest many people inside and outside the churches is one by "an Orthodox Minister" who writes very differently from what his prede-

cessor of twenty-four years ago would have done, and in what will be pronounced a very sensible way. A somewhat morbid interest attaches to Dr. Stephen W. Newell's account of his sojourn as a patient in one of our lunatic asylums.

A singular and pleasing contribution to the *Catholic World* tells a strange tale of the adventures of a South Sea Islander who earned for himself the title of King of Pitt. Pitt is a little islet lying to the eastward of New Zealand and usually uninhabited. The monarch of it earned his title by fleeing to it on several occasions from a life of slavery in his native island of Chatham, which had once been an earthly paradise, but which a band of man-eating New Zealanders had subjugated and ruled mercilessly. A horrid picture is suggested of the cruelties and tremendous miseries of which the smiling Pacific world has been for generations the scene. It is a fascinating subject, and our author is not without skill or rather not without happiness in his way of handling it. His style suggests the directness and accuracy of speech which his profession may have taught him, for he appears to be a naval officer; and also it has touches as of the fine writing with which those skies have inspired many travellers, and which somehow helps the illusion that we are amid the life which it describes. A little confusion and uncertainty in the thread of the narrative also assists this impression.

"Savonarola" is continued in the *Catholic World*, and so is "The Trowel and the Cross," the latter being as severe and orthodox as ever. In the book-notices also, a weak and rambling imbecile or two, heretics and the like, come up for just admonition.

Lippincott's has from the beginning been typographically the best of American magazines, and of late it has become nearly as good in other respects as it is in point of external appearance. Almost all of the July number is very good of its kind and nothing is bad. It opens with the reappearance of our old friends, Paul Flemming and the Baron of Hohenfels and the handsome but cool Miss Ashburton, whose acquaintance we made years ago in Mr. Longfellow's 'Hyperion.' Miss Ashburton, formerly the

"Maiden fair to see,"

as sung by the young German student in green, is now a married woman, having run away with her papa's courier; Paul, who is forty-eight years of age, though he gives himself out for forty-five, has become stout and rather gray; the Baron is not sentimental. Altogether, the young ladies will like the old "Hyperion" better, and the young ladies of twenty years ago will perhaps see more in the new one. The author is Mr. Edward Strahan. We must praise, too, Miss Margaret Howitt's "Home in the Tyrol," Mr. Ralph Keeler's "American Ambulance in Paris," Mr. R. M. Copeland's "From Philadelphia to Baltimore," Miss Margaret Mason's pretty verses, "Charity Cross," Mr. Black's "Princess of Thule," Mr. January Searle's "Passages in Shelley's Early History," which is more to be praised for its news than for its rather muddled way of telling it; Mrs. Davis's "Berrytown," and Mr. Harney's "Strange Sea Industries and Adventures." Evidently, much worse summer reading than this month's *Lippincott* could easily be found.

In *Harper's*, Mr. Benson J. Lossing begins a series of papers, illustrated by fac-simile autographs, on "The Signers of the Declaration of Independence." This first one contains a hitherto unpublished letter from John Adams, in which he sets down in his usual perfectly plain and unmistakable manner his opinion of several of his contemporaries. It was written from Passy on the 7th of December, 1778, at which time Mr. Adams, jointly with Benjamin Franklin and Arthur Lee, was a commissioner of the United States at the French Court. When he succeeded Silas Deane in that office, he found a want of harmony between Franklin and Lee, and, in consequence, he lost no time in advising that Congress should entrust its affairs in France to one person, "perhaps expecting," says Mr. Lossing, "that John Adams would be that person." However that may be, Mr. Adams informs his correspondent at some length of certain patent faults of the great Sage's—as his indolence, his dislike of saying a decisive yes or no as long as he could help it, the dissipation of mind induced by the visits of multitudes of people—faults which Mr. Adams thinks will cause the public business to suffer beyond description should the Sage be left in Paris as sole commissioner. As for Mr. Lee, that gentleman, as well as his colleague, "is in constant opposition to your Old Friend." Moreover, "his Ambition, his Desire of making a Fortune and of promoting his Relations," are all known, while as for Mr. Deane, Mr. Adams thinks it would be better if that gentleman had done less trumpeting of his own fame as "principal negotiator." Such conduct is sure to do no good, he remarks, but rather to sow division and strife; and in this particular case he cannot discover that such boasts have any foundation in fact. Mr. Lossing does not say to whom the letter was written.

"Recollections of an Old Stager" speaks of an affectation once common in Washington, and gives an illustration of it in a trick of Mr. Tom Marshall's, who alway desired his most elaborate speeches to pass for extemporaneous bursts of genius. He would seclude himself for days together, the report being current that he was spending his time in drunkenness; then suddenly he would reappear, and, going to the capital, make a brilliant speech, which would make everybody exclaim what a wonder Marshall would have been but for his unfortunate habits, the fact being that he all the time had been shut up with his books, working hard and hammering out his brilliant extemporaneous effort. Russian policy in Asia, Sicily and the Sicilians, the sailor ashore, the Republican movement in Europe, by Señor Castelar, and General Sherman's recent trip to Europe, are the subjects of some of the other papers in this month's *Harper's*, which misses Mr. Curtis, but otherwise is much as usual.

Life in Danbury. By James M. Bailey, "The Danbury Newsman." (Boston: Shepard & Gill. 1873.)—Within a year or two a small local journal published weekly in a Connecticut town has risen to the dignity of being put on sale at the news-stands in distant cities, and of being copied into the columns of all American newspapers that do any copying at all. This journal is the Danbury *News*, and nobody knowing much about American journalism would need to be told that a gentleman who should secure for his paper so much professional triumph would probably belong to the class of writers known as "American humorists." He has now gathered some of his productions into a volume, and offers himself to be tried by a higher standard than that of the scissors of the "mail reader." Mr. Bailey is, in fact, a genuine humorist. He is not of a rare type, and unless it is worth something to be made to laugh in a good-humored way at the commonplace haps and mishaps of "the neighbors" living in an entirely commonplace New England village community, he is not to be called a humorist of a very valuable or expensive type. If, however, it is worth while to be thus somewhat vulgarly amused, but amused nevertheless, Mr. Bailey's journal must be pronounced a beneficent influence. It is a beneficence similar to that of the jocoseness of the village wit, who is to be found equally "dry" or juicy, in every post-office, and at every country auction, and at every town-meeting, from Eastport to Stamford and from Hyannis Harbor to St. Albans. Most of our readers know this kind of wit and humor. We dare say many of them practise it in some of its varieties. It is sharply observant, as Yankee wit is sure to be; it is apt to be personal, as village wit always is; it is exaggerative, as to be American it must be; it deals with the most familiar incidents, as an untravelled and uninstructed wit must. Each and all of these qualities are illustrated in Mr. Bailey's little volume, and to his native store he adds certain treasures which he perhaps owes to a wide reading of "exchanges." We take for an example of this last an inferential kind of joke, of whose origin we are ignorant, though we first noted it in newspapers not of New England make. It sometimes is extremely brief, and highly inferential, for instance, as thus: "Another girl. Indianapolis this time. It was non-explosive too"—a jotting at first sight puzzling to the uninitiated, but which pointedly refers to the common accident of death caused by the explosion of a kerosene-oil lamp. In Mr. Bailey's book it appears as follows. The subject of discourse is the Danbury horse, an animal which is described as having a reputation above all the beasts of the field, his celebrity being due to the fact that he is an expert in running away. It is so well-founded that no native of Danbury ever thinks of trying to stop him; and, from what follows, we may readily infer what would be the result of such interference: "Once in a while a stranger attempts it, but there is a fund to furnish ice to pack his body with until his friends can come on, so there is no harm done." How cheap a joke often answers the "Newsman's" turn is shown in this same article on the horse, a line or so further on: "In a tight pinch, he would even run away from a position in the New York Custom-house." So, too, the aged Joe about pursuing the downward road till one becomes a New York alderman, or a member of Congress, or a "Christian statesman."

The horse, by the bye, is as much of a favorite with Mr. Bailey as the mule with Mr. Josh Billings. Mr. Bailey's grandfather had a horse, a small white one, which "would get up from a meal at Delmonico's to kick the President of the United States." His father once owned a yellow horse of remarkable kicking powers: "he never stopped to enquire whether a man was worth a million dollars or ten cents when reaching for him. He may have had some curiosity about it afterwards, but he never showed it."

"There was only one person that had anything to do with the animal who came out of that fiery ordeal unscathed. He was the hired man, and he owed his salvation to a misfortune. He was cross-eyed. He was a great source of misery to that yellow horse. The misformation of his eyes was calculated to deceive even smarter beings. The beast kicked at him a few times when he was evidently looking the other way, but that was just the time he was bearing one eye strongly on him, and he missed; and when he really was not looking was just the time the beast thought he was, and so it went

through the entire eight days, both stomach and heels yearning for a morsel of him, but never getting it."

A neighbor, Mr. Stiver, also owns a horse, which occasions the writer a deal of tribulation, and the description of this is entirely characteristic of the most constantly recurring phase of Mr. Bailey's fun-making. With all the vividness of truth, he sets forth the comical side of the thousand-and-one incidents of everyday life, and shows us the fun there is in ordinary things, until we laugh as we laugh when we see a boy slip into a puddle, or a man chasing his hat, or making a wry face over a thumb bruised by a tack hammer. As a perfect specimen, we quote the following picture, recognizable by every one who knows anything of the nature and habits of men, women, and hens. It is entitled "Driving a Hen":

"When a woman has a hen to drive into the coop, she takes hold of her hoops with both hands, and shakes them quietly toward the delinquent, and says 'Shew, there!' The hen takes one look at the object, to convince herself that it's a woman, and then stalks majestically into the coop, in perfect disgust of the sex. A man don't do that way. He goes out of doors and says, 'It is singular nobody in this house can drive a hen but myself.' And, picking up a stick of wood, hurls it at the offending biped, and observes, 'Get in there, you thief.' The hen immediately loses her reason, and dashes to the opposite end of the yard. The man straightway dashes after her. She comes back again with her head down, her wings out, and followed by an assortment of stove-wood, fruit-cans, and coal clinkers, with a much-puffing and very mad man in the rear. Then she skims up on the stoop, and under the barn, and over a fence or two, and around the house and back again to the coop, all the while talking as only an excited hen can talk, and all the while followed by things convenient for handling, and by a man whose coat is on the sawbuck, and whose hat is on the ground, and whose perspiration and profanity appear to have no limit. By this time the other hens have come out to take a hand in the debate, and help dodge the missiles —and then the man says every hen on the place shall be sold in the morning, and puts on his things and goes down the street, and the woman dons her hoops, and has every one of those hens housed and contented in two minutes, and the only sound heard on the premises is the hammering by the eldest boy as he mends the broken pickets."

Almost equally good is this dissertation on the idiosyncrasy of the wheelbarrow:

"If you have occasion to use a wheelbarrow, leave it, when you are through with it, in front of the house with the handles towards the door. A wheelbarrow is the most complicated thing to fall over on the face of the earth. A man will fall over one when he would never think of falling over anything else. He never knows when he has got through falling over it, either; for it will tangle his legs and his arms, turn over with him and rear up in front of him, and, just as he pauses in his profanity to congratulate himself, it takes a new turn, and scoops more skin off of him, and he commences to evolute anew, and bump himself on fresh places. A man never ceases to fall over a wheelbarrow until it turns completely on its back, or brings up against something it cannot upset. It is the most inoffensive-looking object there is, but it is more dangerous than a locomotive, and no man is secure with one unless he has a tight hold of its handles, and is sitting down on something. A wheelbarrow has its uses, without doubt, but in its leisure moments it is the great blighting curse on true dignity."

Of the same kind are the articles on "Waking a Boy," "The Hen" again, "First Sunday in a New House," "Amateur Tree Felling," "One of Man's Great Trials," which relates to shaving, "The New Boots," "The Family Hammer," "Rafting," and a dozen more, whose titles we see as we open the book at random. The last-named essay thus begins:

"Rafting is the prevailing popular amusement with juveniles this month. The boy whose parents own the pond is generally chosen captain of the craft. The raft quite frequently consists of a couple of boards the captain's father has laid away to season."

The book, as the reader will have seen, is not of the highest order of refinement; or, as we may more civilly put the case, it is all of a very honest lack of super-refinement; but of the pictures by Mr. H. L. Stephens, it is to be said that they are not only entirely false to the pictorial aspect of the life depicted, but that their utter vulgarity does Mr. Bailey's work grave injustice.

Walks in Florence. By Susan and Joanna Horner. With illustrations. 2 vols. (New York: Geo. Routledge & Sons. 1873.)—This work will find its place in the tourist's collection beside Hare's 'Walks in Rome,' though in a literary point of view it is a much less successful attempt to avoid the level of the ordinary guide-book. We miss those liberal extracts from poets, travellers, critics, novelists of all nations, which afford, in Mr. Hare's itinerary, such agreeable halting-places. And we should be glad to miss also occasional instances of bad grammar like the following: "He [Arnolfo] left a record of his original intention by still maintaining his six windows, the two last of which he brought nearer together *and are fictitious.*" The authors' industry and thoroughness, however, and the beautiful print of these volumes, merit the reception which is quite sure to await them.

THE DI CESNOLA COLLECTION.

CABINET OBJECTS, STATUETTES, AND TOMB RELICS.

IF the grand variety and startling character of the statuary from Golgoi did not master the attention, there would be ample to fix it in the tomb-furniture obtained at Idalium. The diggings here belong to an earlier date in General di Cesnola's enterprise, having been commenced in the first part of his consulship, in 1866, four years before that luckiest of revelations which makes the year 1870 an epoch to be marked with white in the annals of archæology. The two sites are a few miles apart, in the middle of the island. Idalium, though a city consecrated to Venus, and yielding, as to "Idalian Aphrodite beautiful," a common epithet, has not yet revealed many relics especially characteristic of that goddess or statuary appertaining to her temple. It is the Idalian cemeteries, Greek and Phœnician, which have offered up their wonderful evidence in lamps, pottery, glass, and metal, rather than the shrine of Venus its ornaments. This evidence is still accumulating, according to the measures for continued search taken by the explorer; for, after the eight thousand tombs opened under his eye while the General remained in Cyprus, there is report of many others excavated since his return hither. The contents (amounting to eighteen hundred lamps, five thousand vases, and seventeen hundred specimens in glass) are nearly all at the Museum in this city. These relics are Greek or Phœnician in character, according to their derivation; for the explorer, besides striking upon the Greek necropolis, had the excellent fortune to penetrate below to a Phœnician cemetery (described by his friend, Mr. Hitchcock, as "some feet beneath") developing relics of a far hoarier antiquity.

The Greek glass from Idalium now arranged in the upper northeast room numbers 1,670 objects, and we are told that a hundred additional pieces have lately been accumulated by the consul's force of explorers. The glassware contained in this apartment would certainly be the bright and special attraction of any museum on the face of the globe. Its quantity, nationality, and preservation give it a character of interest which probably pertains to no other collection whatever. But what strikes the eye first, and affords even experienced visitors a new sensation, is its dazzling iridescence. Our memory and eye for comparison must be strangely at fault if any of the European collections can show a brilliancy comparable with that of these vessels, as now displayed in the glory of their fresh cleanliness and new surface. The outer scales of oxidized glass having been carefully removed, what remains is an immaculate exterior, decorated with all the colors which the influences of nature have been working for perhaps thousands of years to produce. The changeable hues of ancient glassware are probably due to mechanical displacement of the laminæ rather than to chemical change in the substance. The effect of decay, by reducing the ware to a finely scaled condition, disposed with a regularity corresponding to the gradual nature of the change, doubtless results in an arrangement of the minute plates like that in the substance of mother-of-pearl, the surface of fish-scales, the sheaths of beetles, and the minutely-plumed wings of Southern butterflies. Of this result, which the modern manufacturer would be but too happy to effect at any trouble and at any expense of fragility, we believe the Di Cesnola collection now offers the best display extant. It can hardly be described to those unfamiliar with the effect in question. The boundless array of objects, reflecting from broad or curved surfaces tints positively outside of all experience, confuse the most accurate observation. Broad dishes, marbled with hues like those of incandescence;

pots and jars and bottles, now plated over with strong surface-color like a coat of burnished metal, now sending light, pearly hints of variegated radiance from elusive depths; or cups fantastically pied with scales of iridescence over their own strong original colorations, are scattered around a considerable apartment, defeating all sense of strict estimation, and cheating the mind with the notion of a possible perfection in the manufacture only compatible, as it seems, with decay. Some of the platters look as if Turner had painted skies on them in his maddest mood, and had been allowed to use flames for colors. The general effect seems to suggest that all the sunsets that have glimmered over Cyprus since these crystals were lost in the earth had sunk into their hiding-place and permeated their substance. In a sober estimation of these remarkable cabinets, it is evident that they cast a strong light on the manufacture of glass by the Greeks in probably rather early times. Though generally devoid of much elaboration, the ware shows in every piece the aristocratic Greek mind, incapable of anything ungraceful, and finding a severe rightness of line even in work so hurried and capricious as glass-blowing. Most pieces are of simple inflated shapes, but by no means all are so. One small bottle, pressed in a square form, has a monogram of three Greek letters relieved on one side, quite like the lettering of modern ware; another discovery, not now in the collection, was a wine-cup with the Greek motto, "Be cheerful and drink well." These inscriptions, with bas-reliefs of Greek heads on others of the pieces, show conclusively the Hellenic origin of the deposit, and give it its lofty rank as a body of evidence to the Greek ability in glass-manufacture. Opaque glass of mingled colors is present in considerable abundance, and it is strange to see a usage of the substance so much like the Egyptian usage applied to elegant little amphoræ and other vessels of forms entirely Greek. Of opaque, twisted colors are the sticks—pistons they might be called—which fit into the bottles and are adapted to stir or draw out the contents. The dried ointment from the perfume-pots is collected in quantity, and still yields a fatty odor when burning.

The Greek necropolis of Idalium, among many other objects, showed a singular sort of stone pedestals two or three feet high, cylindrical and inscribed with mortuary legends, such as "Timon, the Good, Hail"; "Pacicrati, the Good, Hail"; "Artemidoros, the Hunter, the Good, Hail"; and one more metaphysical, "Eukianeos, do not trouble yourself that nothing is immortal!" More than one cippus of this kind has a niche worked into the side of the cylinder, containing a bust. We believe that stones not dissimilar in form to these can be found among the very various shapes in the burying-ground of Pompeii, and that the objects are tombstones. They have been taken, however, by some antiquarians for altars, and indeed the top is always dressed as a table, with a hollow in the centre where offerings might be burnt. These cavities are sometimes filled with large stoppers of ornamental form, and it is a significant fact that the figures of the covers in question are pine-cones. It is thus that the evidence from Cyprus, in our present state of knowledge, is perpetually tripping us up. In a comparatively modern cemetery, apparently subsequent to the time of Alexander, where every other indication is in a pure, daylight Greek, we find this emblem, precisely like the cone-attribute in the hands of the gigantic winged gods from Nineveh, and carrying us back at once to Chaldean observances. The same tantalizing continuities of evidence pursue us through the whole Cyprus collection, inserting a puzzle in the most unexpected places. The sincerity and simplicity with which they present themselves to the student are above all price, on the one hand; on the other, they complicate the data in the most intricate manner. We feel that, after the key is found, a thousand artless little proofs will be ready to assist in the unlocking; but while waiting for the key, anachronisms of the subtlest, most obstinate kind are abundant. The Chaldean sacred pine not only seems to cast its cones upon the tombs of Greek hunters, cynic philosophers, and other human varieties at Idalium; besides this, on the head of the fine colossus with the flying dove of Golgoi, a statue of such distinguished treatment, and which we are so fain to call a hermaphroditic Venus, the sacred tree of Assyria is seen, hardly modified, presenting itself as an embroidery on the front of the head-dress. Another indication, of much value in a dearth of epochal marks, is the coiffure. Among any figures of periods at all historical, this mark of fashion is a plain evidence of date; but here in Cyprus we greatly need it to fix a more radical question—that of sex. This is generally very hard to determine. The Egyptian wig, of many small plaits, is found in some of the figures, one of which, on that or other evidence, is imagined to be a female; the comparative width of hips and shoulders does not help us, all the older figures having a great excess across the chest; as a feminine mark, then, at first sight plain enough, we should therefore be glad enough to settle upon the long, effeminate ringlets, three on each shoulder, the veritable *boucles anglaises* which Doré would use in defining an Englishwoman. These, at first sight, seem incontrovertible. The bearded colossus with the fluttering dove, on the strength of them, is decided to be a female. Again, a ponderous sarcophagus, of which the General brings us only the lid, was found at Citium. It is in marble, is in the style of the Egyptian mummy-case, and corresponds with a few Sidonian coffins to be seen in the Louvre. The upper end is finished as a colossal face. Was it meant for the use of a man or a woman, a king or a queen? The profile is of decadence Greek; the brow is trimmed with enormous frisettes. It had been opened, by the bye, with some damage to the large square knobs or handles left in relief for the management of the lid, and a corpse of late Roman period economically sepultured there. The sex of the original occupant, however, all other indications agreeing, seemed to be decided by the six straying ringlets brought forward and descending quite over the breast, and we might almost imagine the sarcophagus made for the wife of Evagoras. The Phœnician ringlets, in fact, accompany many figures clearly feminine. The fine water-jug, finished with a head of Astarte, and pouring the contents from the two breasts as spouts, is thus coifed. They are found tossing on the shoulders of the spirited little priestess who dances to Venus with all her might, holding a mirror and catching up her skirt, enwreathed, sandalled, and bejewelled. This gay little figure, in white limestone, dancing on a platform supported by human heads, is shown by its free posture, though draped in a fashion imitated from archaic style, to be of late work; but it retains the traditional ringlets, so appropriate to its decorative character, and so essentially feminine. So far, the evidence is consistent, and we cling to the peculiar coiffure with some reliance as a guide to sex; but our confidence is overturned when we find the same straying locks escaping from the very jaws of the Nemean lion to lie upon the shoulders of the great Hercules, the most elaborate, typical, masculine, muscular statue in the collection.

The prehistoric tombs found beneath the Grecian cemetery of Idalium are among the most suggestive remains left us by antiquity, but scholarship is quite staggered in attempting to define their date. The pottery in them, preserved with this collection in opulent abundance, is often of a pattern almost unknown to European museums; some of red or black, with zigzags scratched through the glaze, appears to be of vast antiquity. Two little bottles are of glass, and form the chief prizes in point of archæological interest amongst that ware. Seen by reflected light, they are black; but held up and caused to transmit sunshine they redden, showing an early example of the royal Tyrian purple. A largely represented variety of ceramic is the pale drab pottery, decorated with brown paint, at first in lines, later in figures of birds, fish, and animals, one of which paintings on a bird-shaped vessel is thought to be the earliest known representation of the peacock. It is only kind to inform those gentlemen who seek for old-world influence in our own Peruvian art that coincidences are here for them, both numerous and striking. These animated figures are executed in an Asiatic style; but the vessels geometrically ornamented may be of a period coinciding with the earliest Pelasgic driftings of race. In the same receptacles with these, however, were found urns inscribed with Phœnician letters, one of which is read as the name of Baal. A class of the vases, of later character, is in the most pronounced style of ordinary "Etruscan," with artistic heads and ornaments, offering the antiquarian a terrible problem to get these Italian potters into the centre of an Anatolian island, executing their vases in the fashions that taught the Greeks. The Phœnician lamps are simple saucers, pinched in two places to form a spout. The Greek lamps, large in numbers but simple and cheap, have devices of great elegance in the designs with which they are stamped. Three or four Egyptian bowls, with paintings of bulls, a priestess, etc., are of great interest. Of a number of Babylonian seals cut in intaglio upon a rolling cylindrical bead of meteorolite, only one about an inch long survives shipwreck. The others found, with many gold coins and some beautiful glass, were lost in an Austrian ship, which sunk fifty miles off Tripoli on the tenth day after leaving Beirut.

A variety of painted dolls from the Phœnician part of the Idalian cemetery suggests a strangely simple civilization and a pre-Homeric antiquity. They are of clay, modelled with the fingers and daubed with paint. The subjects are mounted cavaliers, armed with shields, or horses attached four abreast to cars. At first taken to be children's toys, this view was modified when it was noticed that the cavalry subjects were always in adult tombs, surrounded by spear-heads or other arms; it seems probable that they are emblems of the profession of the deceased. One, however, a horse a foot in length, rolling on movable wheels, was found in a diminutive grave, and may have amused some baby in days before Hector parted from his child. As the yield of one grave, we have a procession of marionettes as follows: first, two donkeys carrying panniers; next, a horseman with a pair of amphoræ; a chariot with three musicians; three personages in as many cars; last, a table on which lies a sort of mummy, the face covered with a mask shaped like the head of a cow. This is a piece of representation almost as obvious as the frescoes of Egyptian

tombs, placing before our eyes the burial-rites of this island, with forms borrowed from Phœnicia, and notions of immortality imported from Egypt, at a period before Greek occupation.

Pure Phœnician art, of a quality perhaps as high as it ever reached individually, is to be seen in the bronze patera found at Idalium, with figures *repoussées*, showing eleven damsels doing homage to Isis Astarte, who smells a lotus. The principal heroine resembles the goddess, similarly armed, from Saida, of which M. Renan publishes the delineation in his current article on "Phœnician Art" in the *Gazette des Beaux-Arts*. Other articles in bronze from the site are a fork, perfectly fit for table use, and unique, so far as we recall; a strigil, a sickle, looking-glasses in the shape of covered boxes, a shield, knives, chisels, pincers, ladle, spoons, jewelry, and most of the articles appropriate to a surprised Pompeii, but of a date which makes Pompeii seem of yesterday.

Three inscriptions only, in the native Cypriote tongue, were known up to 1863. This collection shows thirty-six, awaiting the advance of linguistic science. Among the statuettes representing the Cyprian divinity, General di Cesnola discovers two distinct types, evidently both anterior to the earliest represented by Rawlinson, besides quantities of very fine terra-cottas from Citium, showing Artemis and her priestesses, inscribed "to Artemis of the Shore," with bearded Venuses, Cupids, and Cybeles, besides an Egyptian scarab six inches long, with a cartouche translated as of Thothmes III., the Pharaoh who imposed tribute here fifteen centuries before the Christian era.

These specimen curiosities may whet the taste of investigators. For a fuller list, we must direct our readers to await the preparation of the catalogue and the completion of General di Cesnola's personal narrative, which will be one of the most absorbing, as it will certainly be one of the most frank, manly, and genuine records of exploration ever published. As a man uniting culture and practical sagacity, this representative has served the higher interests of America better than any other assignable person could have served them, or than they have ever been served abroad before. We hope some prophetic sense of American appreciation was not wanting to keep up his courage, as, shovelling ancient cities into small baskets with barbarous spades, or sending stone colossi to the shore on a pair of camels lashed together, inspiring his workmen and bullying Turkish pashas, he pursued his heavy labor of science and illumination. That labor, it is for us to remember, has resulted in bringing to this far land the very junction and ganglion of historical fine art, placing in our hands, just as they meet, the clues of every influence that ever directed the progress of Greek plastics.

Franklin Square, New York.

MACMILLAN & CO.'S NEW BOOKS.

Is Rowing injurious?

UNIVERSITY OARS. Being a Critical Enquiry into the After-health of the Men who rowed in the Oxford and Cambridge Boat-Race 1829-69. By John Ed. Morgan, M.D. Crown 8vo, cloth, $3.

LITERATURE AND DOGMA. An Essay towards a Better Apprehension of the Bible. Third Author's English Edition. Crown 8vo, cloth, $2.

THE ROMANCE OF ASTRONOMY. By R. Kelley Miller, St. Peter's College, Cambridge. 12mo, cloth gilt, $1 25.

"Among the topics which the author selects from the field of enquiry are the planets, the moon, the sun, the comets, and the nebulæ, all of which he treats with a glowing eloquence that charms the imagination, while the intellect is fully satisfied with the thoroughness and accuracy of his exposition."—*N. Y. Tribune.*

"It should be read before the study of astronomy, to give a keener zest to that noblest of sciences, and it may be read by the lifelong student with infinite pleasure; both will find it as wonderful as their early impressions of the 'Arabian Nights.' It makes this little book all the more wonderful to know that it is true. Read it."—*The Churchman.*

THE CHILDHOOD OF THE World. A Simple Account of Man in Early Times. By Edward Clodd, F.R.A.S. 12mo, cloth gilt, $1.

"A very clear account is here given of the progress of man. Although primarily intended for the young, it is adapted to the wants of more mature readers who wish to be informed concerning the light which has been thrown by modern research on the primitive condition of man."—*N. Y. Tribune.*

"In a style so simple as to be intelligible to children, the work before us elucidates facts and history worthy of the maturest intellect, captivating by its very clearness. We have never seen the subject of primitive man better set forth."—*Boston Daily Globe.*

"The simplicity of style of the book will commend it to the young, for whose advantage it was written; and its well-narrated facts will prove interesting to adult readers."—*Journal of Applied Chemistry.*

SEWER GAS, AND HOW TO Keep it out of Houses. A Hand-Book on House Drainage. By Osborne Reynolds, M.A. Second Edition. Crown 8vo, cloth, 60 cts.

MACMILLAN & CO.,
38 Bleecker Street, New York.

MR. ROE'S GARDEN, from which, as he tells us in his entertaining book, 'Play and Profit in My Garden,' $2,000 worth of fruit and vegetables were sold in one year beside a large home supply, promises equally well the present season. On the 31st of May, his sales amounted to $257. On the 6th of May, he had seven distinct varieties of vegetables in abundance at his command. The story of this successful garden is told at length in his book, PLAY AND PROFIT IN MY GARDEN, which DODD & MEAD publish.

☞ For sale by all Booksellers, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., Publishers,

715 and 717 Market Street, Philadelphia.

THE WEEK IN TRADE AND FINANCE.

JUNE 23, 1873.

THE week has witnessed no very important changes beyond what were occasioned in the stock market upon the announcement of the death of Mr. Horace F. Clark, whose loss to the several enterprises with which he was connected is a serious blow. He was president of both the Lake Shore and Michigan Southern and Union Pacific R.R. Co., besides being largely interested in the Western Union Telegraph Company and other corporations. The Bank of England rate of interest remains at 6 per cent., while the bank gained last week the handsome sum of £993,000 in bullion, which goes to show that the action of the directors was well advised in reducing the rate of interest from 7 to 6 per cent. at the previous weekly meeting.

The money market has remained in its usual summer condition, with the rate ruling between 4 and 5 per cent. On Wednesday and Thursday there was some little demand for money, which carried the rate up to 6 and 7 per cent. for a time. Commercial paper sells easily at 6½ to 7 per cent. for choice names, with no great amount on the market, while there is a good demand for the best grades.

The weekly bank statement last week was slightly favorable as compared with that of the previous one, the banks having gained $195,225 in their net reserve of legal tenders and gold, and now stand $12,166,375 above the legal amount required.

The following shows the changes for the past two weeks:

	June 14.	June 21.	Differences.
Loans	$277,714,400	$278,903,800	Inc. $1,189,400
Specie	26,967,600	27,398,300	Inc. 430,700
Circulation	27 402,700	27.352.000	Dec. 50,700
Deposits	218,171,100	220,392,500	Inc. 2,221,400
Legal tenders	46,397,000	46,704,200	Inc. 307,200

The following shows the relation between the total reserve and the total liabilities:

	June 14.	June 21.	Differences.
Specie	$26,967,600	$27.398,300	Inc. $430,700
Legal tenders	46,397,000	46,704,200	Inc. 307,200
Total reserve	$73,364,600	$74,102,500	Inc. $737,900
Circulation	27,402,700	27,352,000	Dec. 50,700
Deposits	218,171,100	220,392,500	Inc. 2,221,400
Total liabilities	$245,573,800	$247,744,500	Inc. $2,170,700
25 per cent. reserve	61,393.450	61,936,125	
Excess over legal reserve	11,971,150	12,166,375	Inc. 195,225

The following table separates the National from the State banks:

	National.	State.	Total.
Loans	$240,125,500	$38,778,300	$278,903,800
Specie	25,122,800	2,275.500	27,398,300
Legal tenders	40.753,900	5,950,300	46,704,200
Deposits	189,832,900	30,599.600	220,392,500
Circulation	27,309,000	43,000	27.352,000
Percentage of reserve to total liabilities	30 34-100 p.c.	26 88-100 p.c.	29 91-100 p.c.

We have to chronicle another dull week at the Stock Exchange, with prices irregular. The death of Mr. Clark, before referred to, had for the moment a depressing effect upon the stocks he was supposed to be interested in, such as Union Pacific and Lake Shore; the former sold down to 22, and the latter to 91 on Friday, but the prices remained current for a short time only, and at the close of business on Saturday both stocks were up to the quotations of Thursday. Pacific Mail has been weak, owing to the unfavorable reports as to the condition of the Company, which are said to be set afloat by the directors. Considerable talk has taken place regarding an issue of $6,000,000 bonds for the purpose of paying for the new steamers now building on the Delaware, and which, rumor says, the Company cannot provide money to pay for in any other way. Affairs are represented in the worst possible light, especially as regards the losing business which the Company is doing; and now, to make matters worse, it is reported that Mr. Stockwell proposes to stand on the law as to his obligation to pay the Company some $840,000 borrowed money, which is the balance remaining of the large amount loaned him by Mr. Stockwell, *President*, on the Howe Machine Company mortgage some few months ago. There are few friends apparently of the stock, and if the want of friends is all that is required to make a stock tumble, Pacific Mail has an excellent chance of following in the footsteps of Atlantic Mail, now selling at about one dollar a share.

A number of changes has taken place in the presidencies of leading railroads. Mr. Clark is succeeded for the present by Mr. Augustus Schell in the presidency of the Lake Shore and Michigan Southern, and by Mr. John Duff in the Union Pacific. Mr. John F. Tracy has resigned the presidency of the Chicago and Northwestern, and Mr. Albert Keep (brother of the late Henry Keep) has taken his place.

A dividend of 3½ per cent. has been declared upon both the preferred and common stock of the Chicago and Northwestern Railroad Company. A 4 per cent. dividend was expected, but the death of Mr. Clark (who was to have advanced part of the money) prevented its payment. The reason assigned for borrowing money to pay the dividend is that the net earnings of the road have been absorbed in branch roads and extensions.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending June 21, 1873:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales Sh's
N. Y. C. & H. R.	101⅜ 102	101¼ 101⅝	101⅜ 101⅝	101⅜ 101½	101⅜ 101½	101⅛ 102⅛	21,200
Lake Shore	92⅝ 93	92¼ 92⅝	92⅛ 92½	91½ 92	91 91⅛	92⅝ 93¼	47,000
Erie	64⅛ 64¾	63¾ 64	63 63½	63⅜ 63¾	63¾	64¾ 65⅝	18,300

Pacific Mail	39⅞ 40⅜	39⅝ 40	38⅜ 39⅜	37⅜ 38⅝	37½ 39	38 38¾	78,600

The fall in gold has weakened the currency price of Government bonds, and a dull market has been the result, holders being unwilling to sell at the decline, and the foreign buyers, being governed by the London and Frankfort quotations as well as the price of gold and exchange, of course cannot pay over the prices at which it will pay to ship them. An advance in prices in the foreign markets may be shortly expected to set the market active again, as well as to improve prices on this side of the water.

State bonds have been dull, the transactions being limited as usual to Virginias, Tennessees, North Carolinas, and South Carolinas. The opinion of Mr. Reverdy Johnson, of Baltimore, was read last week at a meeting of the holders of the special-tax bonds of the State of North Carolina, referred to in our last issue. The question was upon the right of bondholders to compel the appropriation of money collected on a special tax to the payment of interest on their bonds, for which the tax was originally levied. Mr. Johnson says:

"In conclusion, then, my opinion is that the bonds in question are obligatory upon the State of North Carolina; that her proper officers are bound to levy the annual tax provided for to meet the interest; and that the holders of the bonds who are not citizens of the State may compel them to do so by a writ of mandamus from the Circuit Court of the United States for the district of that State."

There is a good demand for the bonds of the old railroads in good credit but there is still considerable reluctance manifested in making investments in new railroad bonds, owing to the general belief that the next two or three years will be the turning-point with many of these roads, especially as regards those which have been built upon bonds alone, and are left with various amounts of floating debt contracted for the purpose of equipment and the thousand-and-one things all new roads require.

The gold premium has again yielded, and the price to-day fell to 115 from 116½, the highest point last week. The Treasury anticipates, on the 25th inst., the payment of the July interest, amounting to about $25,000,000 gold, and this, together with the continued falling off in the imports, has given a heavy tone to the gold market. The clique are understood to have been large sellers during the week.

ADAMS ACADEMY, Quincy, Mass. William Reynolds Dimmock, LL.D., Master. Applications for admission may now be made for the next school year. A large Boarding-house will be opened in connection with the Academy, under the direction of the Master, who will reside in it. A class preparatory to the Academy, and under the direction and superintendence of the Master, will also be formed of a limited number of boys.
